5. Compesi, Ronald J et.al: Video field Production and Editing

**SEMESTER-4**

**CORE PAPER – MAJM 41061: Development Communication**

**SYLLABUS**

**Unit 1 – Concept and Models of Development**

Development – Concepts, Causes for under development – Theories and models of development - Alternative Models of Development - New Paradigm of Development - Sustainable Development – Human Development Index, World Development Index - Development dilemmas.

## Unit 2 – Development Journalism

Development Journalism, Origin, Growth, Concept, Case studies - Development News, Development Reporting- Problems of Indian Press in Development Journalism- Case Studies.

### Unit 3 – Development Communication Vs Development Support Communication

Development Communication, Definition, Nature, Scope, Merits and demerits - Case studies - Development Support Communication, Concept, Overview– Development Communication Concepts and case studies

## Unit 4 – Participatory Communication

Participatory development – Community development – Case studies – Multimedia approach to development issues –Case studies

## SEMESTER-4

## CORE PAPER - MAJM 41062 - International Communication

## SYLLABUS

### UNIT 1- Nature and Scope of International Communication

Definition, Nature and Scope of International Communication - Characteristics of International Communication - Objectives of International Communication - Types of International News - Channels of International Communication –

**UNIT 2 – International Media Organizations – Role and Responsibilities**

International Telecommunication Union (ITU) - International Press Institute (IPI), Association of Newspapers and News Publishers (WAN-IFRA), International Association for Media and Communication Research (IAMCR), Asian Media Information and Communication Centre (AMIC). International Federation of Journalist (IFJ), International Center for Journalists (ICFJ), World Global Investigative Journalism Network (GIJN), International Consortium of Investigative Journalists (ICIJ)

**UNIT 3 – International Mass Media Organizations**

International News Papers - The New York Times, The Wall Street Journal, The Times, The Guardian, and People's Daily. International News Agencies- AP, UPI, Reuter, AFP, IPS, TASS, DPA, Interfax News, Kyodo News, CCTV+ - International Magazines-Time, Forbes, Reader's Digest, Fortune, Vogue, National Geographic, ESPN International Radio Broadcasters, BBC Radio, Voice of America (VOA), Radio Moscow, United Nations Radio, International News networks CGTN, CNN, BBC, RT, CNBC, AL JAZEERA, France 24.

**UNIT 4 – Media Regulation – Issues and Trends**

International Communication Policies and Media Regulation, Media Policy and Globalization, Global Media Trends, Media companies -Thomson Reuters, Time Warner, CBS Corporation, Cox Media Group, News Corp, Viacom, Walt Disney Company, 21st Century Fox, Media Moguls- Rupert Murdoch, Richard Branson, Stanley Hubbard, Anne Cox

**Reference Books**

1. V. S. Gupta: International Communication
2. H.D. Fischer and J. C. Merril: International Communication
3. Cees Hamelink: The Politics of World Communication
4. Nerbert Schiller: National Sovereignty and International Communication
5. Robertson: Communication and Third World

**SEMESTER-4**

**CORE PAPER – MAJM 410623 – Communication Research Methodology**

**SYLLABUS**

**UNIT-1 – Development and Scope of Mass Communication Research**

Development of Mass Communication research - Types of Research – Steps in Research Process – Research areas in Print, Electronic, Advertising, Corporate Communications, Internet and Social Media.

## UNIT-2 – Basic Concepts of Research

Basic elements of research – Concepts, Definitions, Types of Variables, Hypothesis – Research designs in Mass Communication,–Levels of Measurement – Types of scales- Reliability, Validity

## UNIT-3 – Sampling Methods

Sampling in communications Research: Types, Applications and Limitations - Tools of data Collection, Interview, Questionnaire, Schedules, Observation and Case study, Applications and limitations of different methods

## UNIT-4 – Statistical Analysis and Data Presentation

Quantitative, Qualitative Research, Descriptive and Inferential Statistics, Parametric and Non-Parametric Statistics - Measures of central tendency, Mean, Median and Mode - Measure of Dispersion - Standard deviation, Chi-Square Test, T- Test –Correlation - Data Presentation

**Reference Books**:

1. Festinger. L .and Katz. D: Research Methods in the Behavioural Science

## SEMESTER-4

## INTERNAL ELECTIVE - 2 – MAJM 41065 (A) – Media Internship

Students have to undergo a three-week internship in any Print, Broadcast or Online news organization of their choice**.** The internship will be conducted **ONCE** in the programme with a specific print internship at the end of the first year and an internship in electronic media at the end of the second year. They have to submit a report on the Internship programme. 100 marks would be awarded based on the work done in the internship, overall opinion of the person

in-charge of media house in which the student has undergone the Internship etc.

In the internship programme the student will be exposed to general overall functioning of a journalist including one week of Editing at the News/Features Desk another week of reporting news and final week in field work. He will submit an Internship report that will be evaluated by the Internal and external staff members for 75 marks. The student will present his experiences in the viva session. There shall be a Viva-voce on the dissertation for 25 marks given by a committee comprising Coordinator of the Department and External examiner drawn from interdisciplinary departments of Yogi Vemana University / other University

## SEMESTER-4

**INTERNAL ELECTIVE - 2 – MAJM 41065 (B) – Photography / PR Apprentice**

Students have to undergo a three-week internship in the month of May / June or December/ January in any Photography / Public Relations organization of their choice they have to submit a report on the Internship programme. 100 marks would be awarded based on the work done in the internship, overall opinion of the person in-charge of media house in which the student has undergone the Internship etc.

In the internship programme the student will be exposed to general overall functioning of a Photographer / Public Relations professional including Assignments / field work and indoor office works. He will submit an Internship report that will be evaluated by the Internal and external staff members for 75 marks. The student will present his experiences in the viva session. There shall be a Viva-voce on the dissertation for 25 marks given by a committee comprising Coordinator of the Department and External examiner drawn from interdisciplinary departments of Yogi Vemana University / other University

## SEMESTER-4

**Multi-Disciplinary Project – MAJM 41066 (A) – Dissertation Project**.

During the fourth semester, all students will submit a Dissertation project on any issues related to Journalism and Mass Communication. The students shall take up research to identify specific issues in the context of journalism and mass communication and submit the report before the

semester- end examination. Dissertation will be evaluated by both internal (Guide) and one external examiner for 70 Marks. There shall be a Viva-voce on the dissertation for 30 marks given by a committee comprising Coordinator of the Department and External examiner drawn from interdisciplinary departments of Yogi Vemana University / other University

## SEMESTER-4

**Multi-Disciplinary Project – MAJM 41066 (B) – Special Interest Reporting**.

Every student has to work on a series of 5 in-depth reports of around 1500-2000 words each under the supervision of the faculty member. The topic chosen for the project should be of considerable social significance and current relevance. Students have to select a topic of current relevance for the study. The written report must explain the relevance of the topic, the approach, planning, and execution. The final project has to be assessed by an internal examiner (who is the project supervisor/advisor working in the university department/college) and an external examiner who is an expert in the subject and type of project. The division of marks to be awarded by the two examiners shall be as 75 marks for the Report and 25 marks for the Viva-Voce

**********

## SEMESTER - I - CORE PAPER

## MAJM11061 – History of Mass Media

## SYLLABUS

### Unit -1- History and Development of Press in India

1.1. Origin of Newspapers in India

1.2. Indian Press and Freedom Movement

1.3. Indian Media in Post-Independence era

1.4. Press and Emergency

1.5. History and Development of News Agencies in India

### Unit-2- History and Development of Radio and Television in India

2.1. Origin and growth of Broadcasting in India

2.2. Origin and Growth of Cable T.V, Satellite T.V in India

2.3 Origin and Growth of F.M. Radio, Community Radio in India

2.4. Present Status of Broadcasting in India

### Unit-3 – History and Development of Social Media

3.1. Origin and Growth of Internet

3.2. Web Journalism, Web Portals

3.3. Online News Papers – e-Papers

3.4 Social Networking Sites – Face book, Twitter

### Unit – 4 – Contemporary issues of Mass media

4.1. Growth of Mass media in India,

4.2. Circulation, TRP's

4.3. New technology and Mass media

4.4. Impact of COVID on Indian Media – Disruptive Communication

## Unit -1- History and Development of Press in India

### Introduction

A newspaper is a publication containing information in the form of news and advertising. General-interest newspapers often feature articles on major events of the day including political, crime, business, sports, entertainment etc. Apart from that most newspapers express their opinion on the happenings in the society in the form of editorial and expert opinions in the form of columns. Newspapers also give supplements in the form of tabloids containing regional / local news. Along with that a wide variety of material in the form of op-eds, obituaries; entertainment features such as crosswords, sudoku, weather forecasts, advice, cartoons etc.

Before the invention of newspapers in the early 17th century, official government bulletins were circulated at times in some centralized empires. In Ancient Rome "Acta Diurna" or government announcement bulletins, were made public by Julius Caesar. They were carved in metal or stone and posted in public places. In China early government-produced news sheets, called "Tipeo" were circulated among court officials during the late Han dynasty in 2nd and 3rd centuries AD. Between 713 and 734, the "Kaiyuan Za Bao" ("Bulletin of the Court") of the Chinese Tang Dynasty published government news; it was handwritten on silk and read by government officials. In Europe concise handwritten news sheets were published. In 1556, the government of Venice first published the monthly *"Notizie Scrittee"* which costed one gazetta. These newsletters shared some characteristics of newspapers, but are not usually considered as true newspapers. However, none of these publications fully met the classical criteria for proper newspapers, as they were typically not intended for the general public and restricted to a certain range of topics.

"Avvisi" were hand-written newsletters used to convey political, military, and economic news quickly and efficiently throughout Europe, and more specifically in Italy, during the period of 1500-1700. Avvisi can be divided into two categories: 'Public Avvisi' and 'Secret Avvisi, though each copy was often written by the same person. The avvisi found their origins, and peaked, in the early modern Italian world - primarily Rome and Venice. The popularity and distribution of the Avvisi was driven by each court's desire to know what the opposing and even the allied courts are up to. News networks spread all across Europe, but the Avissi itself was generally created in either Rome or Venice. Avvisi influenced many aspects of the early modern world including

public opinion, political battles, the nature of propaganda, careers, and historical records. Avvisi helped to develop public opinion by informing, organizing, and providing a voice for the public. They allowed the general public to learn of the secret dealings of the nation's leaders, form a response, and then have that response actually be heard by their fellow citizens - essentially making them new players in the game of politics.

**History of Printing**

The Concept of making an impression with a seal or using a rolling pen like device with carved symbols to impress an image in soft clay was an old one. Even the process of printing a whole page of letters by painstakingly carving them in to a smooth paper or other surface was understood long ago. The Chinese had done it and had printed the “Diamond Sutra”; the World’s first book in 800AD. The Gold Smith of Mainz, Germany Johann Gutenberg found out a unique way to make “type”. After much experimentation he developed the idea of making a steel punch for each letter painstakingly carved in a precise way. Then he could punch the image in to a small square of softer metal such as Brass. He made a little clay mould around the impression so that hot lead could be poured in to it making a casting of the letter. This mold could be used over and over to cast as many individual letters as the printer needed. Then the letters could be lined up in a tray and form words and sentences. Tightly secured they could be pressed down on them. Gutenberg eventually discovered a way to mix lead with other metal in to a kind of alloy that worked instead of lead, which was quite soft.

Gutenberg obtained a big wine press and modified it considerably arranging a platform for the tray filled with letters and a flat surface to press down the parchment or paper. Gutenberg set up the press in Mainz, Germany in 1454-1455 and began printing “Papal indulgences” i.e. the documents authorized by the Pope to grant forgiveness to the sinners for which there was a considerable demand. In 1456 Gutenberg and his assistants printed 300 copies of Bible, which had 42 lines. It was in black gothic lettering and the initial letters were left blank and later ornamented to give the impression that the work had been hand written, as Gutenberg did not want to give away his secrets. But the discovery of the technique could not be long hidden as the technique spread to Italy and in particular to Venice. Gutenberg also faced financial problems in the form of a Lawsuit against his investor John Fust. Gutenberg lost the suite and was forced to abandon his press at Mainz. With the Gutenberg monopoly

shattered and the secrecy of the new technology was compromised and spread to other parts of the world. Gutenberg was left broken.

## The spread of Printing Press

The Gutenberg invention was passed on to other parts of Germany and slowly to other parts of the world. The emigrating German printers, foreign apprentices diffused the technology to other parts of the World. Printers began to device new forms of lettering that were more appropriate to the physical requirements of print. In Venice Nicolas Jenson added the "Lower Case" to the art of printing. In 1498 Aldus Manutius Romanus added a sloping alphabet that came to be called as "Italics" in his publishing's. William Coxton brought printing to England. He learnt the printing in Cologne and recognizing opportunities of this new technique he began business in Bruges. In 1476 he returned to his native land and began printing in West Minister. Until Coxton most books were published for religious purposes and in language of Church i.e in Latin. Coxton translated books in to English so that books could be read widely. In fifteen years, he produced more than 100 books and died in 1491.

In rapid succession, printing presses were set up in middle and western Europe. Major towns, in particular, functioned as centers of diffusion (Cologne 1466, Rome 1467, Venice 1469, Paris 1470, Cracow 1473, London 1477). In 1481, barely 30 years after the publication of the Bible of Gutenberg, the small Netherlands already featured printing shops in 21 cities and towns, while Italy and Germany each had shops in about 40 towns at that time. Germany and Italy were considered the two main centers of printing in terms of quantity and quality.

The near-simultaneous discovery of sea routes to the West by Christopher Columbus in 1492 and East by Vasco da Gama in 1498 and the subsequent establishment of trade links greatly facilitated the global spread of Gutenberg-style printing. Traders, colonists, but, perhaps most, missionaries exported printing presses to the new European oversea domains, setting up new print shops and distributing printing material. In the Americas, the first extra-European print shop was founded in Mexico City by Giovanni Paoli in 1544. In 1638 Rev. Jesse Glover set to sail for America taking the press with him. He died on his way. But eventually the press was set up at Cambridge, Massachusetts by Stephan Day and his son Matthew. The Jesuits started

operating the first printing press in Asia at Goa in1556. Before the end of the fifteenth century printing started in France and Switzerland.

For a long time however, movable type printing remained mainly the business of Europeans working from within the confines of their colonies. Ignorance and religious reasons seemed to be among the reasons for the slow adoption of the printing press by indigenous peoples. Thus, printing remained prohibited in the Ottoman Empire between 1483 and 1727. In the 19th century, the Gutenberg-style press arrived to the shores of Tahiti (1818), Hawaii (1821) and other Pacific islands. It marked the end of a global diffusion process which had begun almost 400 years earlier. At the same time, the 'old style' press was already in the process of being displaced by industrial machines like the Steam powered Press (1812) and the Rotary Press (1833).

**Printing In India**

In India, reports are that Jesuits "presented a polyglot Bible to the Emperor Akbar in 1580 but did not succeed in arousing much curiosity. The English East India Company brought a printer to Surat in 1675, but was not able to cast type in Indian scripts, so the venture failed. In 1711 printing machine was established in Madras. In 1725 Benjaman Shulj of Germany came to India and translated Bible in to Tamil and printed it in 1728. Charles Wilkens of Britan learnt Sanskrit and translated Bhagawad Geeta, Hitopadesham, Sakuntalam into English. He also prepared types to print books in Devanagari Script.

Printing in Telugu language started in Madras and Serampore simultaneously. In 1807 Missionaries of Serampore developed fonts to print books in Telugu. But in 1812 the printing press in serampore was destroyed due to fire accident. But it was started in the same year. William Caries Telegu Grammar book “Telugu Vyakarnam” was printed in 1814. George Crane and Augustus Digranges translated few chapters of Bible in to Telugu Language. The remaining chapters were translated by Edward Pitchet and printed in 1818. Late printing press were established in Machalipatnam, Kakinada, Nellore and Rajahmundry.

**Impact of Printing Press**

“Printing” is considered as one of the greatest human accomplishments. The following are some of the noted influences of Printing press:

**Spread of Literacy:**

Prior to the fifteenth century people reproduced books by “Manu scripti” i.e., copying of existing books laboriously by hand. The process often introduced errors and

also limited the number of books available and severely restricted them for common people. But printing has brought tremendous change as hundreds and thousands of copies of particular book could be reproduced with great precision. It helped to make different categories of books available to common man and in turn helped to increase. literacy.

**Evolution of Mass Press**

The primitive news sheets gave way to the printed News Paper by the influence of printing. They created new form of Mass medium in 16th century, the "Print Medium" i.e., Newspapers, Magazines, Books. They were widely used in the society and were instrumental in bringing great changes in human condition by influencing the patterns of interaction in societies. It brought a sea change in the psychological outlook of the individual also. Gradually the "Mass Press" evolved which had the power to influence public opinion. "Printing" was the basic tool of communication for nearly 500 years and is one of the key elements in the evolution of modern Mass Communication process.

**First step towards Freedom of Press**

Press was a means of increasing and deepening communications. It was regarded as dangerous and subversive by many in the authority. The history of press has always been that of a battle for freedom against those who would stifle the open expression of opinion. In 1644 British Parliament imposed a licensing rule in an effort to curb the proliferation of printing. It was against this system that John Milton published "Aeropagatica" one of the noblest statements of the "freedom of press". In 1695 i.e., after fifty years licensing rule came to an end in Britan. This laid ground for the free expression of will by some of the greatest masters of Journalism like Defoe, Swift, Steele, Addison creating new ground for free exchange of ideas, opinions and ideologies.

**Origin of Newspapers in India:**

The history of the contemporary journalism begins with the establishment of the printing press by Christian missionaries in India. Christian missionaries established printing press at the end of fifteenth century for spreading the messages of Christianity in the country. The first printing press arrived in India on 6th September 1556 and was installed at the college of St. Paul in Goa. English East India Company brought Printing press to Surat in 1675. Printing machines were installed in Bombay, Madras and Calcutta in 1674, 1772 and 1778 respectively. The Christian missionary's set-up

printing press in India at such a time when our country was struggling with several social evils and malpractices like child marriage, sati system, illiteracy, superstitions etc.

## The First's in India

- First printed newspaper of India in English was Bengal Gazette, edited & published by James Augustus Hicky, which came out on 29th January 1780.
- **T**he first Indian language newspaper was Digdarshan. It started in April 1818 by the Serampur missionaries William Carcy, Joshua Marshman & William Ward.
- The first journal in Assamese Language was Amnodaya started in 1846 under the editorship of the Reverend Oliver.T. Cutter.
- The first Gujarati newspaper was Mumbai Samachar. It was established in 1822 by Farduvji Marzaban as a weekly & then became a daily in 1832. It is the newspaper with the greatest longevity in India.
- The first Hindi daily was Sam char Sudhavarshan started in Calcutta in 1854.
- The first Urdu newspaper published was Urdu Akhbar
- Kannada Samachar was the earliest Kannada journal, according to many scholars. But others think that the first Kannada journal was Mangaloora Samachar.
- Darpan was the first Marathi newspaper started on 6 January 1832.
- Induprakash was the first Anglo-Marathi daily established in 1862.
- The first Oriya magazine published was Junaruna the Orissa Mission Press in 1849 under the editorship of Charles Lacey.
- The first printing press in Punjab was established in Ludhiana in 1809.
- The first Tamil periodical was 'Tamil Patrika', a monthly brought out in 1831 by the Religious Tract Society in Madras; it lasted till 1833.

## Birth of Bengal Gazette*:*

James Augustus Hickey has the distinction of launching the first newspaper in India. His "Bengal Gazette" or the "Calcutta General Advertiser" or **"**Hickey Gazette**"** came out on January 29th 1780, in Calcutta as a two-sheet weekly newspaper. There were two rival groups in the council of then Governor- General- one group supporting Warren Hastings, then Governor General and another group led by Philip Francis who himself an aspirant of the post of the Governor General. Phillip Francis patronized

**'**Bengal Gazette**'**. Hickey described the newspaper in the following words "A weekly political and commercial newspaper open to all parties but influenced by none"

It printed items taken from English papers at home, letters from local, mofussil readers, and items of gossip, scandal and items of interest to Europeans. Its contents were non- serious, spicy and sometimes vulgar. Hickey had a column to himself through which he used to address the readers directly and there was a poet's corner also. The paper's witty and scurrilous remarks very soon earned the enmity of the Governor General Warren Hastings, the chief Justice Elijah Impey and the administration in general. The paper personally attacked Hastings and his friends. It had given Warren Hastings several nicknames like 'Mr. Wrong head', 'The great Mogul', 'The Dictator' etc.

Hickey's fortunes began to decline when a rival appeared in "Indian Gazette" in the same year as he began his venture. Indian Gazette was a better newspaper with four pages, each 16 inches long with three columns and well printed. Hastings took action against Hickey for defamation on two counts in June 1781. Hickey was convicted and sentenced to one-year imprisonment with a fine of Rs.2000. The Chief Justice awarded damages to Hastings of Rs.500, but the Governor General waived it. Even though Hickey was jailed the paper continued. Hastings launched another action against Hickey in March 1782. As a result, the types for printing paper were seized. The newspaper survived only for two years. The Bengal Gazette was the forerunner of many more journals and newspapers which appeared in Calcutta. With in six years of Hickey's venture there were four weeklies and one monthly in the city of Calcutta. Hickey is regarded as the 'Founder of the Indian Journalism'.

Approximately 200 newspapers/ journals came into existence between 1780 and 1857 but most of them were closed within short duration of time. Some of the important newspaper started after Bengal Gazette in Bengal Presidency were India Gazette (1780), **Calcutta Gazette (1784), Asiatic Mirror** (1788), **The Calcutta morning post** (1799), **The Oriental star** (1795), The **Calcutta Monthly Journal** (1794) and **The Bengal Harkaru** (1795). In Madras the "Madras Courier", an officially recognized and owned by the Government printer came out as a weekly in 1785. It was followed by the "Hurkaru" edited by Boyd in 1793. The "Hurkaru" ceased publication after one year. Other important newspapers started in Madras presidency were Madras Gazette (1795) and Indian Herald. There was no newspaper in Bombay until Bombay

Herald (1789) was started. It merged into The Bombay gazette in 1791 and became an official publication.

### *James Silk Buckingham*

In the early years of 19th century Calcutta saw the emergence of the first real journalist in India, James Silk Buckingham. With his arrival the real and stable form of journalism came into practice. James Silk Buckingham came to India as the editor of "Calcutta Journal" in the year 1818 started by some Calcutta Merchants to protect their interests and propagate their views. He was the person with true journalistic spirit, abilities and a multidimensional personality. The first issue of "Calcutta Journal" appeared in Calcutta on October 2nd 1818. It had an effective presentation of political, commercial and literary news stories. It was completely away from the cheapness promoted by Hickey's gazette.

Buckingham was a scholar whose studies included anthropology and literature and he had special interest and knowledge about steam navigation, air-filled balloons. He was keen observer of customs and habits of people among whom he lived. His writing style was lucid, simple and easily understandable. His presentation was with full of drawings and charts. He wrote special features and also published the Letters to the Editor. Buckingham laid emphasis on the news of local conditions rather than fashions and the life of people. His editorials touched on the Government's policies and were fearless in exposing their motives. He condemned certain Indian customs like Sati and frequently wrote the failure of Government to stop them.

Buckingham is recognized as the "Father of Indian Journalism". He was the inspiration behind the growth of Indian Journalism. It was with the advent of Buckingham that the press really began to discuss the public questions. Throughout his journalistic career he concentrated on the public conduct of bureaucrats, government attitude towards governance and educating public opinion. Buckingham considered a well-conducted press essential to promote knowledge and dispel ignorance. He was a stout champion of Freedom of press. Buckingham was a close friend of Raja Ram Mohan Roy. Their friendship was a paradox in itself because both belonged to different backgrounds and different ideologies. Roy was essentially a social and religious reformer. Both of them fought for elimination of social evils in Indian society, for the freedom of Indian Press and left an unforgettable impression in the field of the Indian

Journalism. His objective and impartial journalistic approach led to the popularity of the newspaper. Within a short duration of three years the bi-weekly turned to Calcutta's first daily.

Buckingham, despite his British origin did not hesitate to highlight the malpractices of the British administration. His repeated disclosures of official malpractices and his success of securing redressal of grievances proved to be dangerous to the reputation of the East India Company. The immediate provocation for action against him was his exposure of the unusual appointment of the head of the Presbyterian Church, the Reverend Dr. Bryce to the clerkship in an office that supplied stationary items to the Government. Buckingham has antagonized the members of the Governor's general council and other officials with his criticism of their policies. Some top officials of the Government filed libel suit against Buckingham and he appeared in the Court as the defendant. The case fell through but the costs he faced were heavy. Three members of the council of the Governor- General, John Adams, John Fedel and William Butterworth, were staunch opponents of Buckingham back to England. After Hastings, Adams became the Governor-General. Finally after much struggle his opponents were able to deport him on January 13, 1823 under the new press regulations. Jawaharlal Nehru described him as among the earliest champions of freedom of press and one "who is still remembered" in India.

## Early Journalism in Bengal Presidency

The initial forty years of Indian Journalism were entirely controlled by Europeans. Calcutta became the main center of publication of Newspapers and Journals. Calcutta witnessed publication of several Bengali, Persian, Hindi and Urdu Newspapers and periodicals.

- The first newspaper in India i.e. in English "Bengal Gazette" was started in Calcutta.
- Ganga Kishore Bhattacharya along with Harachandra Roy started the first Indian owned English daily "Bengal Gazette" in Calcutta in 1816.
- The first Hindi paper "Udand Marthand "was started in Calcutta.
- The first Hindi daily was "Samachar Sudhavarshan" started in Calcutta in 1854.
- The first Urdu newspaper "Jam-I-Jahannuma" was started in Calcutta under the editorship of Lal Sadasukh Lal in April 1822.

- Serampore Missionaries started the First Vernacular paper in Bengali "Digdarshan" in Calcutta.

The following are the factors, which helped in the establishment of Newspapers in Bengal presidency of in Calcutta particularly.

1. Calcutta was the center of Administration for the entire Indian provinces and the most of the administrative offices were in Calcutta encouraging many Britishers to set up newspapers with the help of officials catering more for officials.
2. The printing press came to Calcutta in 1778 and got proliferated quickly. Most of the other language types were also prepared in Calcutta.
3. English language thrived well in Calcutta and more English-speaking Indians were concentrated in Calcutta, which enabled to the spread of English language papers in Calcutta.
4. The spread of Literacy was fast in Bengal presidency than in other presidencies. Bengal is the birthplace for many types of new ideologies, socio-religious movements in India.
5. British Journalists who came to India were more attracted to the Socio-Economic conditions of Calcutta and hence settled in Calcutta.
6. More intellectual freedom, literary personalities, poets, revolutionaries, resided in Calcutta, which helped n spreading of Ideology.

Amidst controversies and resistance, publication of 49 new newspapers began from Bengal and Bombay between 1831-1833. Out of this, 33 were in English and 16 were in Bengali. Hence very aptly Calcutta is regarded as "birthplace of Indian Journalism".

**Journalism and Social Reforms:**

Calcutta is called as the cradle of Indian Journalism, but Bombay is regarded as a citadel from where Indian Journalism launched social reform movement. Some of the greatest social reformers have launched their campaigns from Bombay and used the press for spreading the reform ideology. Some of them are Dadabhai Naoroji, Kasandas Mulji, Gopalrao Hari Deshmukh, Mahadev Gobind Ranade, Behram Malabari.

Some of the vernacular language newspapers of Bombay were inclined towards social reforms. Bal Shastri Jambhekar began publishing an Anglo-Marathi fortnightly

and a Marathi fortnightly called 'Dig' in the years 1832 and 1842 respectively. Another newspaper 'Prabhakar' also championed the cause of social reforms. Gopal Rao Deshmukh a well-known social worker used to write for the newspaper. He also wrote some other newspapers like "Gyan Prakash", and "Lokhitvarta". His articles were mainly on the social issues. He advocated social reforms with cooperation from the British government. Deshmukh initiated 'Indu Prakash' an Anglo-Marathi daily in the year 1861.

Vishnu shastri Pandit was the editor and Mahagovind Ranade was the columnist in that. Social reform was the main goal of the publication. This was the time when intellectuals from Western India got attracted towards Journalism one-way or other. They looked Journalism as a powerful means of expression. Mahadev govind Ranade used journalism and stage through his life to fight the freedom struggle. He is also known for his campaign for widow marriage. Dadabhai Naoroji, a great nationalist leader became the editor of "Rastgoftar" in 1851, a newspaper started by Khurshedji Cama for promoting social reforms. Apart from that he also preached social reforms in his paper "Voice of India"

Between 1853 to 1870, Karsan Das Mulji, a great social reformer started a journal "Satyaprakash". Karsan Das was practical reformer who was moved with the sufferings of the downtrodden and oppressed in Hindu society. He launched crusade against widow remarriage, education of girls and attacked priest community for their autocratic methods. From 1884- 1891 the well-known social reformer Behram Malabari used the Indian press to raise voice against the evils and malpractices of the contemporary Hindu society. Malabari was trying to uplift the Dalits and marginalized sections of the society by exposing the evils of the traditional Hindu society. He launched a countrywide program for discouraging child marriage. He was the chief campaigner in the movement to pass the age of consent bill. He wanted to bring a legislation to ban people, who perform child marriage from appearing in university examinations. He wanted that bachelors should be given preference in Government appointments. Social reforms of Malabari and Karsan Das went on simultaneously although both had a different methodology of working. Both the reformers were ardent advocates of English language.

"The Hindu" took up the battle of social reforms in the Madras Presidency. "The Hindu" through the valiant efforts of its editor G. Subramanyam Aiyer waged the fight to get rid of the social evils and faced stiff opposition from Hindu orthodoxy. Paper campaigned for Widow remarriage, rising the age of the marriage, abolition of caste, and for uplift of untouchables. The paper began to lose its circulation and advertisements as the orthodox traditional society shunned the paper. Subramanyam Aiyer set a personal example by solemnizing the marriage of his widowed daughter in Bombay in presence of social reformers

Social reformers were successful in having the "Age of consent" bill passed by the Imperial Legislative Council in 1891 in the teeth of opposition of section of Hindus. The bill sought to rise the age of consummation of marriage from 10 years (as fixed in the act of 1860) to 12 years. The bill was opposed vigorously in Calcutta press. In Maharashtra it led to major collision between the forces of Hindu Orthodoxy led by Bal Gangadhar Tilak and the social reformists led by Malabari. The Hindu welcomed the bill and supported it by publishing news items which highlighted the ban of attending the child marriages by progressive Hindus, incidents where widow remarriages were performed etc.

## Role of Press in India's Struggle for Freedom - The Revolt of 1857 and the Press

The Journalism in the initial days was mainly by the Britishers or foreigners who were promoting the interest of East India Company of on Missionary work. Late Indian Journalism emerged as a mission, when the idea of freedom and native rule was ascertained by freedom fighters. At the time of the first war of independence, many papers were in operation in the country. Papers like Bangadoot of Ram Mohan Roy, Rastiguftar of Dadabhai Naoroji and Gyaneneshun advocated social reforms and thus helped arouse national awakening.

The author and play writer Girish Chandra Ghosh established "Hindu Patriot" in 1853. It became popular under editorship of Harish Chandra Mukherjee. The paper is known for its continuous writings on indigo cultivation and the plight of farmers involved in it. Up to 1857, the paper highlighted the difficulties of farmers and began an awakening of farming community in India. The paper played a key role in exposing the motives behind the "Neel cultivation". The impact of the paper can be ascertained as many farmers took part in the revolt of 1857. In 1861 the paper published a play named

“Neel Darpan’ and launched a movement against the British, urging the people to stop the cultivation of the crop to white traders. By the efforts of the “Hindu Patriot” British Government appointed the Neel Commission, which ultimately removed many restrictions over the Indigo cultivation in India. It was in 1857 “Payam-e-Azadi” started publication in Hindi and Urdu, calling upon the people to fight against the British. The paper was soon confiscated and anyone found with a copy of the paper was persecuted for sedition. The Hindi daily “Samachar Sudhavarashan” and two newspapers i.e., “Doorbeen” in Urdu and “Sultan-ul-Akbar” in Persian faced trial in 1857 for having published a 'Firman' by Bahadur Shah Zafar, urging the people to drive the British out of India. The revolt of 1857 gave a great boost to large number of Urdu newspapers. The “Sadiqul Akhbar” played an active role in the revolt. Its editor by Maulvi Mohmmed Baqar was shot and killed for aiding the rebels. The “Delhi Urdu Akhbar” published the news of the revolt and the information regarding the battles taking place at different places. For its role in the revolt its Editor Jamiludin was sentenced to three years imprisonment after the revolt.

The attitude of British Government towards Indian press changed considerably after the revolt. The press in Bengal, Bombay and Madras was not connected with the revolt and there was no mass participation of people in the revolt. The British criticized Lord Canning liberal policies. British press went aggressive after the revolt and presented the revolt as an act of defiance to the crown. The revolt was followed by the notorious Gagging Act of Lord Canning, under which restrictions were imposed on the newspapers and periodicals. In June 1857 Governor General Lord Canning imposed Act No XV, which regulated the establishment of printing press and put a restrain on circulation of printed books and papers. During this period the British crown had taken over the administration from the East India Company. The revolt of 1857 created a divide between the native press and the press run by British in India later known as the Anglo-Indian Press. The gulf widened deeply in later years when the Indian independence moment became strong. The Anglo-Indian press i.e., the English papers published in India by the British or foreign individuals supported the British Government and the Native or the Nationalist press i.e. the papers in both English and Vernacular languages published and owned by Indians supported the freedom struggle. A great transformation came in the official attitude of British administration after the

revolt. The British Government denounced the policy of conciliation with Indian press and kept press under heavy scanner imposing restrictions under press laws. Dr. George Bust who was the editor of Bombay Times at the time of revolution of 1857 strongly recommended the actions against the Indians by the British administration

Various Urdu newspapers were ceased by the administration at the time of 1857 Sepoy Mutiny. In 1861 there were 17 vernacular newspapers that included eleven Urdu, six Hindi and one newspaper by missionaries. Out of these newspapers eight published from Agra, two each from Ajmer and Etawah, one from Ludhiana, Meerut, Jaunpur, Saharanpur, Allahabad and Kanpur. After 1857, the Indian Press especially the Vernacular Press witnessed the atrocities of the British Government. Newspapers like 'Hindu' a weekly by C. Subramanyam Aiyer from Madras, 'Amrit Bazar Patrika' edited by Motilal Ghosh from Calcutta. 'Hindu Patriot' by Harishchandra Mukherjee from Calcutta. 'Indian Patriot' from Malabar Kerala took over the bastion of freedom movement after 1857. The then public opinion of the country was much influenced by the newspapers from Bengal like 'Neel Darpan', 'Shome Prakash', 'Indian Mirror' and 'Bengal'.

## Evolution of Anglo-Indian Press

It is the European owned press. It includes the English papers published in India by the British or foreign individuals. Anglo-Indian press was distributed in all major cities and centers where both the official and Nonofficial European community was strong. The following are the important Anglo-Indian newspapers in important cities of India.

- Calcutta – Englishman, Statesman (1875)
- Bombay – The Times of India (1861)
- Madras – The Madras Times (1860), Madras Mail (1868)
- Allahabad – Pioneer (1861)
- Lahore – The Civil and Military Gazette (1872)

**(Between these Statesman and Times of India changed into Indian hands and survived up to today)**

The Anglo – Indian press is more powerful, more prosperous and more influential than the Indian journals. The Anglo-Indian press had the support of British business community. These papers were run on commercial business mode, as Journalism to British in India was more or less a trade, a means of livelihood. Where as to Indians, Journalism is more earnest, more touching and was inclined towards

national interest and national awakening. Anglo-Indian press was much better produced than the Indian press. They had purposeful and well-written editorials. Their workforce was well organized in structure, exercised and experienced in field, professional and effective in approach. They maintained high standards of production and publication. The Editors were well trained in an established and well-flourished environment of Britan and Europe and were very adept in their craft. These papers paid well. When the doors of these papers were opened for Indians, there was a rush of applicants for places in sub-editing and reporting desks.

## Robert Knight

Robert Knight began his Journalistic career in India in "Bombay Times". He served for some time as editor of "Bombay Times". His editorials were characterized by balance and moderation and very effective. In 1861 he was successful in bringing a merger of "Bombay Times" with "Standard" and "Telegraph" and renamed it as "The Times of India". In 1868 he sold his shares in the "Times of India" to his partner Mathais Mull and started "Bombay Statesman". He again sold the paper after some time and shifted his activities to Calcutta.

In Calcutta he started a monthly Journal "The Indian Economist". He also entered into the Government service as an undersecretary in the Agricultural Department of Bengal Government. He produced the "Agricultural Gazette of India". In both the journals he criticized the famine relief measures of the Government. Questions were raised on the employee of the Government running a newspaper and also criticizing the Government publicly. Robert Knight resigned from service in 1874. In 1875 he started the "Indian Statesman", which was changed into "Statesman" after eight months. Knight also merged "Friend of India", the newspaper started by Serampore Missionaries and merged it with Statesman.

The price of the "Statesman" was kept at One Anna, while the other papers like Englishman, Indian Daily News were priced at four annas per copy. He introduced the Sunday papers in Statesman with features and articles of popular interest and very soon Statesman became the leader of Anglo-Indian press. He was responsible for awakening of public opinion in India. He campaigned for protection of health of Bombay citizens and wrote excessively about the measures to be taken by Government for reducing heavy mortality rate in Bombay. He inspired Anglo-Indian journalists to write on Indian

subjects and believed in bringing Europeans and Indians together. He combined professional competence with public activities.

## The Madras Times, Madras Mail & Pioneer

The Madras Times was started in 1860. In 1868 Madras Mail appeared as evening paper. Madras Times was merged into Madras Mail in 1928. Sir Charles Lawson and Henry Cornish founded Madras Mail and worked as Joint Editors. They broke away from the Madras Mail owing to the differences with the Proprietor over the attitude to the administration and Lord Napier, Governor of Madras. Talented editors including T. Eariewells, A. E. Lawson, William Digby, D. Scott Brenner and A. A. Hayles succeeded the duo. A. A. Hayles was the Madras Mail greatest and last recognized editors. He joined Madras Times in 1921. He became the editor of Madras Mail, when Madras Times merged into Madras Mail in 1928. He held the post even after the paper changed over to Indian hands in 1945. The Paper celebrated its centenary in 1968 and closed down in 1981. Pioneer was started in 1861 in Allahabad in response to a persistent demand from officials for a government newspaper to meet the attacks on the Indian Press. Pioneer in 1868 had the reputation of being an organ of an influential section of officials who wanted to suppress the Indian National Congress formed three years earlier. Pioneer campaigned against the Indian National Congress and vehemently opposed its leaders, actions and policies.

The Civil and Military Gazette came out in Lahore in 1872 and with it merged a number of papers like the Moffussilen of Agra, Lahore Chronicle, Punjab Times and Indian Public Opinion. It had a distinction of having on its staff Rudayard Kipling, the great poet, Novelist and author. He spent seven years in India. He was 17 years old and was working as Assistant to Stephan wheeler, editor of Civil and Military gazette. In 1886, he worked under Kay Robinson. He moved on to pioneer after five years stint in Gazette and continued his literary labors. The Anglo-Indian papers except “Statesman” showed no sympathy to Congress. Many papers especially “Pioneer” ran malicious campaign against Congress. In 1906 Congress proclaimed ‘Swaraj’ for the first time and Anglo-Indian papers like Englishman, Civil and Military Gazette and Times of India criticized it

**Effects of Anglo-Indian Press**

- Anglo-Indian press was having the support of the Government and it enjoyed all the privileges provided to the press in those times.
- Government also provided many facilities to the reporters professionally. Government Secretariat in Bombay opened an editor's room where reporters were given news of public importance and allowed to consult Government records. The office of Naval Commander in Chief of Marine Department provided table and chairs for reporters in the waiting room and allowed reporters to copy news from English papers when the mail arrived from different places.
- In March 1877, a Press Commissioner was appointed to deal with English Press whether owned by Europeans or Indians. The first to occupy the post was Robert Lethbridge followed by C.E.Buckland.
- With the entry of professional editors in to Anglo-Indian papers the standard of Journalism also increased in India.

**Development of Communication facilities & National awakening in India**

Communication and transport facilities had not developed in India until the middle of the 19th century. The newspapers had to be satisfied with the old news and most of the news from outside India or even from other provinces was given very lately. In 1862 it took nine days for a letter to reach Calcutta from Bombay, nine days to Madras, six days to Delhi and four days to Bangalore. Mail from England came at an interval of five weeks. But the advent of telegram made it possible to flash news from Calcutta in thirteen minutes, from Madras in five minutes. Under adverse weather conditions telegrams from Calcutta to Bombay took fifteen hours. But the telegraph charges were heavy.

Newspapers started getting postal benefits. The opening of Suez Canal, steam navigation and introduction of cable service also encouraged quick percolation and dissemination of news in any part of the world. The development of Railways and postal system gave better movement and fast transportation of goods, news and material. Reuter's news cables reached Bombay in 1865 and the first office of Reuters was set up in 1866. Cable cost was one-pound sterling a word with a minimum of 20 words per message. Commercial news was in much demand than the other types of news. Court

cased and public meetings were well reported. Proof reading was poor. The front page of the newspaper was filled with Government notifications and private advertisements.

On the other hand the development of better communication facilities brought Englishman exiled in India closer to homes in England. Introduction of better transport systems like railways knit the European community closer in India. Lot of Europeans settled in India in administrative and journalistic jobs. This led to the widening of gap between the rulers and the subject race. Prestige, position and power began to dominate the thinking of Englishman. In the same manner injustice, tyranny of the British Government, utter want of consideration to native subjects, insolence and pride of Englishman in India both official and unofficial began to hurt the sentiments of Indian people.

In January 1877, Lord Lytton organized an Imperial Assembly in Delhi and proclaimed Queen Victoria as Empress of India. But at that time many provinces in India were under severe drought conditions and people were under stressful conditions. The pomp and show of the British Government in India in organizing the "Delhi Durbar" along with failure of administration in emergency and crisis situations led to wide spread protests in India. Newspapers were full of articles and caricatures representing viceroy as "Nero fiddling while Rome is burning". In 1877, great famine affected vast areas of Bombay and Madras presidencies and in the native states of Hyderabad and Mysore involving a population of 36 million. Large stock of grains was available in Bengal, Burma but there was no adequate transport to carry them to the needy. The lack of administration forethought and complete lack of will to deal with the situation was resented by the people of India.

## Vernacular Press Act

Lord Lytton imposed the Vernacular Press Act in March 1878. It imposed several restrictions on Language Press. The act directed to suppress the vernacular Language press in India as it was becoming more aggressive in comment, criticism and was evolving as a potent medium in the dissemination of new ideas. The immediate reason for imposing the act was the severe criticism of Afghan war in the press.

- The act prohibited vernacular papers from publishing anything, which was likely to excite feelings of disaffection towards the Government.

- The Magistrate was given vide powers to demand security deposits from the printer or publisher of the newspaper.
- Failure to comply would lead to confiscation of property.
- There was no provision of appeal against the decision of Magistrate.

**Impact of Vernacular Press Act**

The act was only applied to vernacular press and the discriminatory treatment evoked widespread protest in the Country. In 1878 there were 200 language papers in the country. Many national leaders like Surendranath Benarjee believed that Vernacular Press Act was the immediate cause for the awakening of political consciousness and the genesis of National movement in the country. Liberals in Britan also opposed the press act. Many vernacular papers turned into English papers to withstand the act. Among them the most important was the "Amrit Baazar Patrika", a Bengali language paper switched to English language overnight. There was severe agitation resenting the Vernacular press act. National leaders like Surendranath Benarjee, Bipin Chandra Pal, spearheaded the agitation. Surendranath Benarjee fought against the law by forming a Native association and mobilized the public opinion through public meetings. He also sent a deputation to Viceroy under Native association demanding to repeal the act. Lord Rippon succeeded Lord Lytton and repealed the Vernacular Press act in 1881. The repealing of the act also coincided with the coming of Liberal Government under Gladstone to power in England.

**Press and the First Session of Congress**

The Editors commanded a very high reputation at the time of the birth of the Indian National Congress. One could measure the extent of this respect from the fact that out of 72 delegates who participated in the meeting one third were Journalists and those who occupied the frontline seats in the first ever Congress session held in Bombay in December 1885 included some of the famous editors of Indian newspapers. The editor of "The Hindu", G. Subramanya Iyer, proposed the first resolution at this Session. In this resolution, it was demanded that the government should appoint a committee to enquire into the functioning of Indian administration. A journalist from Poona, Chiplunkar moved the second resolution in which the Congress was urged to demand for the abolition of India Council which ruled the country from Britain. Dadabhai Naoroji, who was a noted journalist of his time, supported the third resolution.

Dadabhai Naoroji proposed the fourth resolution. Motilal Ghosh of Anand Baazar Parika and Narendranath Sen of Indian Mirror, Calcutta also participated in the first session.

There were many Congress Presidents who had either been the editors or had started the publication of one or the other newspapers. Freedom of press was one of the important issues taken up by Congress In this context, particular mention may be made of Ferozeshah Mehta who had started the "Bombay Chronicle" and Pandit Madan Mohan Malaviya who edited daily, "Hindustan". He also helped the publication of "Leader" from Allahabad. Moti Lal Nehru was the first Chairman of the Board of Directors of the "leader". Lala Lajpat Rai inspired the publication of three journals, the "Punjabi", "Bandematram" and the "People" from Lahore. During his stay in South Africa, Gandhiji had brought out "Indian Opinion" and after settling in India, he started the publication of "Young India", "Navjeevan", "Harijan", "Harijan Sevak" and "Harijan Bandhu". Subash Chandra Bose and C.R. Das were not journalists but they acquired the papers like "Forward" and "Advance", which later attained national status. Jawaharlal Nehru founded the "National Herald".

Indian press also was guiding the congress and setting the agenda of the freedom struggle. The Indian press demand the 'swaraj' long before Congress was founded. In 1870 itself "Amrit Baazar Patrika" demanded the constitution of a Parliament with Indian representation. In 1874 Kristodas Pal demanded 'Home rule' for India and constitution of Government of India in "Hindu Patriot" The Anglo-Indian press except "Statesman" showed no sympathy to Congress. Many papers especially "Pioneer" ran malicious campaign against Congress. In 1906 Congress proclaimed 'Swaraj' for the first time and Anglo-Indian papers like Englishman, Civil and Military Gazette and Times of India criticized it

## Revolutionary Movement and the Press

Lord Curzon partitioned Bengal in September 1905 for administration reasons. The partition evoked severe dissent in Indian masses that looked as a ploy to disturb the Hindu-Muslim unity. The incidents of mass repression by British Government led to the consolidation and strengthening of revolutionary thought in Indian's, especially in Indian youth who were inspired by leaders like Tilak, Aurobindo Ghosh, Bipin Chandra Pal etc.

So far as the revolutionary movement is concerned, it did not begin with guns and bombs but it started with the publication of newspapers. The first to be mentioned

in this context is “Yugantar” publication of which was started by Barindra Kumar Ghosh who edited it also. When the Ghadar party was organized in America, Lala Hardayal started publication of the journal 'Ghadar'. Within one year, millions of copies of this journal were published in Hindi, Urdu, Punjabi, Gujarati, Marathi and English and sent to India and to all parts of the world· where Indians were residing. In the beginning the copies of the journal were concealed in parcels of foreign cloth sent to Delhi. It was also planned to smuggle the printing press into India for this purpose. But then the war broke out and it became almost impossible to import printing machinery from abroad. Lala Hardayal was arrested in America and deported to India. One of his followers Pandit Ramchandra started publishing “Hindustan Ghadar” in English. With the U.S. joining the war, the American Government arrested the Ghadar party workers. When the trail was on, one of the rivals of Pandit Ramchandra managed to obtain a gun and shoot him dead in the jail itself. The death of Ram Chandra led to the closure of this paper.

In 1905 Shyamji Krishna Verma started publication of a journal “Indian Sociologist” from London. It used to publish reports of political activities taking place at the India House in London. In 1909 two printers of this journal were convicted. Shyamji Krishna Verma left England for Paris from where he started the publication of the journal. Later on, he had to leave for Geneva. He continued to bring out the journal from there for two or three years more. In Paris, Lala Hardayal, in collaboration with Madam Cama and Sardar Singhraoji Rana brought out “Vandematram” and “Talwar”. After “Yugantar”, it was “Vandematram” that played a significant role in the freedom struggle. Subodha Chandra Malik, C.R. Das and Bipin Chandra Pal established this journal on August 6, 1906. Its editor, Aurobindo Ghosh, the editor of “Sandhya”, B. Upadhyay and editor of Yugantar B. N. Dutt had to a face a trial for espousing the cause of freedom. So far as the Hindi papers were concerned, they looked to government for support for some time. Bhartendu Harish Chandra was the first to start a journal “Kavi Vachan Sudha” in 1868. Its policy was to give vent to the miseries of the people of India. When the Prince of Wales visited India, a poem was published in his honor. The British authorities were given to understand that the poem had two meanings and that one word used in the poem could also mean that the Prince of Wales should get a shoe beating.

The government aid to journals like Kavi Vachan Sudha was stopped for publishing what was objectionable from the government point of view. Bhartendu Harish Chandra resigned from his post of an honorary Magistrate. His two friends, Pratap Narain Mishra and Bal Krishna Bhatt started publication of two important political journals “Pradeep” from Allahabad, and “Brahman” from Kanpur. The Pradeep was closed down in 1910 for espousing the cause of freedom. The “Bharat-Mitra” was a famous Hindi journal of Calcutta, which started its publication on May 17, 1878 as a fortnightly. It contributed a lot in propagating the cause of freedom movement. The journal exposed the British conspiracy to usurp Kashmir. Several other papers published from Calcutta which played an important role in freedom struggle included Ramanand Chatterjee's “Modern Review” in English, “Pravasi Patra” in Bengali and “Vishal Bharat” in Hindi.

One of the important Hindi Journalist who has earned a name for his patriotism was Ganesh Shanker Vidyarthi. In 1913, he brought out weekly “Pratap” from Kanpur. He made the supreme sacrifice in 1931 in the cause of Hindu-Muslim unity. Krishna Dutt Paliwal brought out “Sainik” from Agra, which became a staunch propagator of nationalism in Western U. P. The noted Congress leader, Swami Shradhanand, started the publication of Hindi journal “Vir Arjun” and Urdu journal “Tej”. After the assassination of Swami Shradhanand, Vidyavachaspathi and Lala Deshbandhu Gupta continued the publication of these journals. They were themselves prominent Congress leaders. In Lahore, Mahashaya Khushal Chand brought out “Milap” and Mahashaya Krishna started publishing Urdu journals which helped a lot in promoting the national cause. In 1881, Sardar Dayal Singh Majitha on the advice of Surendra Nath Bannerjee brought out Tribune under the editorship of Sheetala Kant Chatterjee. Bipin Chandra Pal also edited this paper for some time. Later in 1917, Kalinath Rai joined the paper as its editor.

There is not a single province in India, which did not produce a journal or newspaper to uphold the cause of freedom struggle. A. G. Horniman made the “Bombay Chronicle” a powerful instrument to promote militant nationalism. He himself took part in the meetings where Satyagraha used to be planned. He published vivid accounts of Jallianwala Bagh carnage for which one correspondent of his paper, Goverdhan Das, was sentenced to three years' imprisonment by a military court. Horniman too was arrested and deported to London even though he was ill at that time. Amritlal Shet brought out

the Gujarati journal "Janmabhumi" which was an organ of the people of the princely states of Kathiawad, but it became a mouthpiece of national struggle. Similarly, another Gujarati journal "Saanjvartman" played a prominent role under the editorship of Sanyal Das Gandhi, who played a very significant role in the Quit India Movement in 1942. It was soon after independent formed a parallel Government in Junagarh and forced the Nawab of Junagarh to leave the country. The three editors of the Sindhi journal Hindi Jairam Das Daulatram, Dr. Choithram Gidwani and Hiranand Karamchand, were arrested, their press closed and the property of the paper confiscated. Sachidanand Sinha, who had started the publication of "Searchlight" under the editorship of Murtimanohar Sinha, carried the tradition of national newspapers forward In Bihar. Dev Brat Shastri started publication of "Nav Shakti" and "Rashtra Vani". The weekly "yogi "and the "Hunkar" also contributed very much to the general awakening.

## Indian press act 1910

In 1906, the Viceroy was worried over close connection of Congress with language papers. In December 1906, Minto received information that a direct attempt is made to sow disaffection or revolt in the native army. He believed that the national press was having harmful influence on the native army through inflammatory and seditious articles. Minto began to take action against Indian press in 1906.

- In June 1906, "Punjabee" newspaper from Lahore was prosecuted and editor sentenced to six months imprisonment. There were protests and demonstrations and unrest in Punjab following the conviction of editor of "Punjabee" as Lala Lajpat Rai owned it.
- The editor of "Hindu Swarajya" was arrested and sentenced to six months imprisonment.

The growing discontent among native people forced the Government to draw up regulations for press control. Viceroy realized that the Anglo-Indian press was equally responsible in creating the discontent by writing bitter things about native political organizations. In June 1907, Government published a 'Resolution' warning all newspapers against publishing seditious matter and authorizing local Government to institute prosecution for sedition. In 1907 series of arrests and prosecutions of editors and journalists and confiscation of presses took place.

- June 1907: Editor of "Hindustan" Dinanath was arrested and sentenced for five years imprisonment.
- July1907: Editor of "Yuganthar" of Calcutta was prosecuted for sedition and sentenced for one-year imprisonment. Press was confiscated.
- July 1907: Editor of "Sonar Bangla" of Calcutta was arrested.
- July 1907: Police raided the office of "Bandemataram" and Aurobindo Ghosh was arrested for sedition. Aurobindo escaped and sought asylum in French territory.
- July 1908: Tilak was arrested for sedition and sentenced for six years imprisonment.

The press prosecutions and confiscations became the order if the day in 1907 and in 1908, but did not yield desired results. Hence on *February 8th 1910, Indian Press Act* was imposed and fresh restrictions were formulated. Between 1910 and 1914 several demands were made to the national press. Papers were asked to pay security of Rs.5000 or close down. To resist the oppressive measures and protect the interests of the National press 'Press Association of India' was formed in 1915. The association studied the situation and reported that

- Between 1915-1917:22 papers were asked to furnish security and 18 had shutdown
- Between 1917-1919: 963 newspapers and printing presses, which existed before Press act 1910 had been preceded against the act and action taken. In the same period 173 new printing presses and 129 new papers were not given permission by demanding heavy security.
- Government collected Rs.5 lakhs during the first year of the Press act 1910, through securities and forfeitures. Over 500 publications were preceded under the act.

**Leaders of National Press: Surendranath Benarjee**

Surendranath Banerjee is one of the journalists who revolutionized the politics of Indian Nationalism. He believed in evolution than revolution. He got admitted into Indian Civil Service (ICS) in 1871 and was dismissed from service in 1874. The reason for his removal from service i.e., failing to correct a false report of his subordinate, was very petty reason which an English officer would have got away with a simple departmental reprimand. But this acted as a spark for his entry into political field.

By this time students awakening started in India and students' associations and secret societies also started. The protest against the Vernacular press act for a period of three years brought Indians together. The Indian owned, edited English press was very strong and influential in Calcutta with the "Bengalee", "Amrit Baazar Patrika", "Hindu Patriot" and "Indian Mirror".

Surendranath Benarjee believed that Vernacular Press Act was the immediate cause for the awakening of political consciousness and the genesis of National movement in the country. He galvanized the public support against the British Government by addressing the public at various forums and occasions. Surendranath Benarjee was in forefront of organizing political activity not only in Bengal but also all over the country by undertaking a world tour. In Lahore he persuaded Dayal Singh Majithia to start a newspaper "Tribune" and helped it with supply of machinery and editors. He made special effort to merge various associations all over India to form into an All-India Political Association, the basis for formation of Indian National Congress.

Benarjee was the hero of the anti-partition movement when Viceroy Lord Curzon partitioned Bengal for administration convenience. Benarjee sense of public duty was so great that on the day, when his wife had passed away, he was shaken with grief, he pulled himself up and dictated his usual leading article for his paper. His mastery over style, his vigor of thought and the high moral platform he took always kept in him in a special league.

## Bipin Chandra Pal

He was a born rebel and a product of Brahmo samaj movement in Bengal. He was a persuasive speaker at meetings of the Brahmo Samaj. He started his life as a teacher and worked in many places like Bangalore. His Journalistic career began by starting a Bengali weekly "Paridarsak" in Sylhet in 1880. In 1883 he joined the 'Bengal Public Opinion" in Calcutta as its Chief editorial writer. Its editor was Babu Mohan Das, father of Chittaranjan Das. In 1887, he went to Lahore to join "Tribune" as Sub editor. He was for some time the Calcutta Correspondent of "The Hindu" of Madras. He also founded the English weekly "New India" and another weekly "Bandemataram". Later they passed on to the hands of Aurobindo Ghosh. Later he also took up the editorship of "Independent" but resigned from it owing to differences with Pandit Motilal Nehru in 1921. He went on a lecture tour in USA in 1899. He was at Oxford at the New

Manchester College. For his virulent and potent ideology, he is regarded as “Father of Indian revolution thought”

Pal career started with the birth of Indian National Congress in the year 1883. At the age of 26, he was a delegate to the congress session in 1886 from his own district Sylhet. He had the consummate ability to expressing the most advances extreme views in language, which was not susceptible to legal action. Pal speeches were highly inflammable but not seditious. They never contained incitement to violence and no personal attacks. He had the capacity to express extreme views in polite and civil language. He regarded the national movement as a spiritual one rather than economic and political one. In 1907 he was sentenced to a term of imprisonment for refusing to testify against Aurobindo Ghosh in a sedition case. Aurobindo Ghosh, Bal Gangadhar Tilak and Bipin Chandra Pal formed a powerful extreme group in Congress, which has to dominate the political scene until the advent of Mahatma Gandhi and launch of Non-Cooperation Movement.

**Bal Gangadhar Tilak**

Bal Gangadhar Tilak was born as Keshav Gangadhar Tilak (23 July 1856–1 August 1920) was an Indian Nationalist, teacher, social reformer and independence fighter. He was the first popular leader of the Indian Independence Movement.. The British colonial authorities infamously and derogatorily called the great leader as "Father of the Indian unrest". He is regarded as one of the pioneers of siaffection and a triumphant champion of Hindu orthodoxy. He was also conferred upon the honorary title of “Lokmanya”, which literally means "Accepted by the people (as their leader)". Tilak was one of the first and strongest advocates of "Swaraj" (self-rule) in Indian consciousness. His famous quote, "Swaraj is my birthright, and I shall have it !" is well-remembered in India even today. Bal Gangadhar Tilak was the first champion of Swadeshi movement. Through his speeches and newspapers, he worked on the prejudices and passions of both educated and uneducated.

Tilak co-founded two newspapers with Gopal Ganesh Agarkar, Vishnushastri Chiplunakar and other colleagues: “Kesari”, which means "Lion" in Sanskrit and was a Marathi newspaper, and 'The “Maratha”, an English newspaper in January 1881. It was announced that “Kesari” would deal with the political and economic developments in he country along with world events. It would writ with objectivity and impartiality and truth would be its watchword. In its first editorial “Kesari” compared the newspapers to

'nightwatchman' and said the responsibility of the press is to keep executive office in wholesome fear of public opinion. It declared its intention of improving the social conditions by frankly telling people what was bad and harmful. "Kesari" sought to educate people and promote popular agitation, where as "Maratha" set out to be the authoritative spokesman of educated public opinion in Maharashtra.

In just two years 'Kesari' attracted more readers than any other language newspaper in India. "Kesari" became the largest circulated language newspaper in the country. Tilak's editorials were virile, impassionate filled with lofty patriotism and courage with conviction. They were generally about the people's sufferings under the British. These newspapers called upon every Indian to fight for his or her rights. Tilak's writings were dictated by him and they read like speeches. His style was always direct and his sentences were short and crisp. His expression of ideas was crystal clear and it went direct to the heart of readers. They were full of quotations from the ancient Sanskrit works, popular sayings, historic parallels, apt metaphors filled with forceful and original ideas. He wrote on day-to-day problems, economic questions, philosophical ideas, historical researches literature and art. Tilak used to say to his colleagues: "You are not writing for the university students. Imagine you are talking to a villager. Be sure of your facts. Let your words be clear as daylight." In "Kesari" he almost created new language. In the old Marathi language, there were plenty of writing on devotion and philosophy. But to discuss serious matters of politics to attack and rebut opponents, to crush them with satire and ridicule old Marathi language was of little use and so new terminology was developed and used effectively.

Tilak criticized the inadequate relief measures during the great famine and plague which gripped Maharashtra and other parts of Country in 1896-1897. Through "Kesari" he told the Government to perform their duty and save people from starvation. He warned that peasants might rebel against them if steps were not taken immediately to relieve distress. "Kesari" devoted many columns to news of famine and relief measures. It exposed the high handedness behavior of officials. The famine of 1896 decided the ultimate course of Tilak's course in Indian national movement. Plague epidemic spread from Mumbai to Pune in late 1896, and by January 1897, it reached epidemic proportions. In order to suppress the epidemic and prevent its spread, it was decided to take drastic action, accordingly a Special Plague Committee, with jurisdiction over Pune city, its suburbs and Pune cantonment was appointed under the

Chairmanship of W. C. Rand, I. C. S, Assistant Collector of Pune by way of a government order dated 8 March 1897. On 12 March 1897, 893 officers and men both British and native, under command of a Major Paget of the Durham Light Infantry were placed on plague duty.

Rand used tyrannical methods and harassed the people. The appointment of military officers introduced an element of severity and coercion in the house searches, the highhandedness of the government provoked the people of Pune and some soldiers were beaten in Rastapeth locality. Tilak took up the people's cause by publishing several articles pleading the officials to treat Indians with decency and humility when house searches were carried out. But the harsh methods were persisted by W.C. Rand. Tilak led a citizen's deputation to Rand to protest against harsh methods. After that he wrote inflammatory articles in his paper Kesari, in very harsh language quoting the Hindu scripture, the Bhagavad Gita, *"to say that no blame could be attached to anyone who killed an oppressor without any thought of reward"*. Following this, on 22 June, Rand and another British officer Lt. Ayerst were shot and killed by the Chapekar Brothers and their other associates. Tilak was charged with incitement to murder and arrested. Tilak's trial began on September 8th 1897 and lasted six days. He was sentenced to 18 months imprisonment by Judge Stranchey. In response to the verdict Tilak commented that *"I have constituted myself and my two newspapers as the permanent opposition to Her Majesties Government of India*". When he emerged from prison, he was revered as a martyr and a national hero and adopted a new slogan, *"Swaraj (Self-Rule) is my birth right and I will have it".* He resumed the editorship of "Kesari" in July 1899.

On 30 April 1908 two Bengali youths, Prafulla Chaki and Kudiram Bose, threw a bomb on a carriage at Muzzafurpur in order to kill a District Judge Douglass Kenford but erroneously killed some women travelling in it. While Chaki committed suicide when caught, Bose was tried and hanged. Tilak in his paper Kesari defended the revolutionaries in two articles and called for immediate Swaraj or Self-rule. Most of Anglo-Indian papers like "Pioneer", "Englishman", "Times of India" and "Statesman" criticized the event. Bengal Government put on the blacklist of press containing many papers and started prosecuting them. Upadhyaya the editor of "Sandhya" was arrested.

Tilak was arrested for sedition. He asked a young Muhammad Ali Jinnah to represent him. Tilak's trial of 1908 was the most historic trial. His last words on the verdict of the Jury were such: *"In spite of the verdict of the Jury, I maintain that I am*

*innocent. There are higher powers that rule the destiny of men and nations and it may be the will of providence that the cause which I represent may prosper more by my suffering than by my remaining free".* These words now can be seen imprinted on the wall of Room. No. 46 at Bombay High Court. But the British judge convicted him and was sentenced for six years on July 22nd 1908 as per the incitement to offences act passed in that year. He was imprisoned from 1908 to 1914 in the Mandalay Prison, Burma. While imprisoned, he continued to read and write, further developing his ideas on the Indian Nationalist movement.

## Mahatma Gandhi

Mahatma Gandhiji's ascendancy in Indian politics and has assumption of leadership of the national movement acted as an elixir for Indian Journalism. He was a peerless, fearless, effective and eloquent with his words, Mahatma Gandhi was the most effective mass medium of the 20th century. His journalism belonged to an era when there was neither radio nor television. Such was the power of his *'soul communication'* that whatever he said and wrote reached the farthest corners of this country within days and to the entire world thereon. Mahatma Gandhi, in a journalistic career spanning nearly four decades, edited six journals. But Gandhi's command over the basics of mass communication ensured that his daily "outpourings of heart and soul" reached all.

Before Gandhi became a freedom fighter or a media crusader, he was a journalist. A lawyer by training he went to South Africa to practice. The circumstances in which the people, particularly Indians lived, prompted him to take up their cause. Initially he used friendly newspapers as a forum to express his views through letters to local dailies and interviews. His letters to the editors of South African dailies are an example on how to fight injustice in a country where the laws are loaded against one section of the people, without giving offence to the rulers themselves. A telling example of this trait was his letter dated October 25, 1894 to the *Times of Natal*, which carried a contemptuously worded editorial of Gandhi and his opinion on racial discrimination

After 10 years of relentless crusade, Gandhi realized that the twin tasks of mobilizing public opinion and influencing official decisions given the magnitude of the daunting tasks required a regular newspaper. He decided to take a plunge into journalism by launching his first newspaper "Indian Opinion" in June 1903. The weekly newspaper was to serve the interests of British Indians in South Africa. The power of

language familiar to the people was an obvious realization for Gandhi. The newspaper was published in four languages, English, Gujarati, Tamil and Hindi. The sole aim of a newspaper for the Mahatma was service. Conscious of the power of the medium he believed in control and restraint. The guidelines on policy that he published in the first issue on June 6, 1903 enunciated the advocacy principle in working for the community by asserting their rights and invoking a sense of responsibility among them. He was clear about the nature and content of his newspaper. It would not carry any advertisements nor try to make money. Instead, he sought subscribers who would give donations. It was while writing in *Indian Opinion* that Gandhi stumbled on the concept of *Satyagraha*. Writing on Satyagraha in South Africa, he said: "*Indian Opinion* was certainly a most useful and potent weapon in our struggle and regarded the journal as "a mirror of his own life".

The guidelines on policy for *Indian Opinion* suggests that the paper would serve as the best advertising medium for Indians His stance on not wanting to accept advertising support is explained by the view that, advertisements are inserted by people who are impatient to get rich, in order that they may gain over their rivals. He believed in accepting non-commercial advertisements that serve a public purpose. In *My Experiments with Truth*, he wrote: "Week after week I poured out my soul in its columns and expounded the principles and practice of Satyagraha as I understood it. I cannot recall a word in these articles set down without thought or deliberation or a word of conscious exaggeration, or anything merely to please. Indeed, the journal became for me a training in self-restraint and for friends a medium through which to keep in touch with my thoughts. Pouring his soul in its columns he expounded the principles and practices of Satyagraha. The journal was to him a training in self-restraint and for friends a medium through which to keep in touch with his thoughts. Comparing the power of the press to unchained torrent of water. He was concerned that like the unchained water, which can devastate crops, an uncontrolled pen serves but to destroy. "*Indian Opinion* lasted for 11 years. It more or less forced the South African provincial regimes to modify their repressive laws against Indians.

*"Indian Opinion"* in a significant way laid the foundations for Gandhi's contributions to Journalism after his return to India in 1915 to take up the larger cause of Indian Independence. Seeking time from Gokhale, his mentor, he decided to travel to familiarize himself with his homeland. The Indigo farmers plight in Champaran became

a starting and rallying point for his first Satyagraha in India. He promptly went Champaran, Bihar and investigated the issues, and produced a report that would be the envy of the greatest investigative journalist anywhere in the world. After Champaran it was only a matter of time before the Mahatma took to journalism as his most potent weapon of *Satyagraha*. It was in this context that Gandhi forays into Journalism in India began. The deportation of B.G. Horniman, then editor of Bombay Chronicle who was also a formidable supporter of Satyagraha, provided an opportunity to Gandhi. Fueled by encouragement of his well-wishers and friends he decided to the take up the Editorship of *Young India*, which was then published by the management of the *Bombay Chronicle*. His overarching concern for addressing the communication needs of the General Public became evident when he expressed that English alone could not be a medium of the newspaper. Therefore, along with the editorship of Young India he also took over the editorship of *Navjivan*, a Gujarati monthly that he converted into a weekly

Issue after issue of *Young India* and *Navajivan* carried samples of the Mahatma's journalistic genius, which blended seemingly earnest appeals to the government to do what was "just and righteous". In March 1922, Gandhi was charged with spreading disaffection by writing seditious articles in *Young India*. In his own inimitable manner Gandhi said: *"I hold it to be a virtue to be disaffected towards a government, which in its totality has done more harm to India than any previous system. India is less manly under the British rule than she ever was before. Holding such a belief, I consider it to be a sin to have affection for the system*." He also believed in healthy journalism and avoided poisonous communication: *"My writings cannot be poisonous. They must be free from anger, for it is my special religious conviction that we cannot truly attain our goal by promoting ill will against the rulers or anyone else. My writings cannot but be free from hatred towards any individual because it is my firm belief that it is love that sustains the earth"*

The burden of leading a nation towards freedom and the contingency of having to face trials followed by jail terms, did not stem the flow of writings from Gandhi's pen. There was not a day when he was not writing on some issue or the other in *Young India* and *Navajivan*. To these he added *Harijan*, *Harijan Sevak*, and *Harijan Bandu*, which became the Mahatma's potent media for carrying his message to the weakest sections of India. *Young India* and *Navajivan* folded up in January 1932 when Gandhi was imprisoned for a long spell. Between 1933 and 1940, *Harijan* (English), *Harijan Bandu*

(Gujarati) and *Harijan Sevak* (Hindi) became the Mahatma's voice to the people of India. These newspapers found the Mahatma concentrating on social and economic problems. Caste disparities and such instruments of social deprivation as untouchability and ostracization were the targets of the Mahatma's crusade. Gandhi's assessment of the newspapers of the day was not complimentary.

Extolling the qualities and expectations of an editor he was clear that even when a newspaper writes something that displeases the government, which is nonetheless true, the editor should not apologies. He was categorical in stating that if a newspaper were to run into difficulties as a consequence of publishing truth it should rather close down than buckle. This he felt was a better service to the public. It is wrong to use newspaper as a means of earning a living. There are certain spheres of work, which are of such consequence and have such bearing on welfare that to undertake them for earning one's livelihood will defeat the primary aim behind them. When further a newspaper is treated as a means of making profits, the result is likely to be serious malpractices. He affirmed time and again that the need to educate the people was a primary goal of newspapers.

The power of the government in imposing restriction on printing presses also did not daunt him. He articulated the fact that newspapers could be brought out hand written. He enunciated a situation where if he were to dictate his views to fifty persons at a time and those fifty in turn circulate it the process of duplication and multiplication increases many fold. If necessary and by creating a zeal the contents could in any case reach the masses. Journalism is one noble profession whose power and responsibility he firmly believed. Gandhi was formally associated with six journals-*Indian Opinion*, *Young India*, *Navjivan*, *Harijan*, *Harijanbandhu* and *Harijansevak* and practiced what he believed in**.** More than 75 % of the content in his papers came from his own pen. It is estimated that during his lifetime Gandhi wrote more than 10 million words. That translates into 500 words every day for 50 years. And all his writing was related to personal improvement, and social and political reform. The single factor that helped Gandhi the most in earning the title of 'Mahatma' and the leadership of the masses was his dedication of running the weekly newspapers for nearly 40 years of his life. Journalism was the factor that transformed Ordinary Gandhi into Mahatma Gandhi. Gandhi's work in journalism had a strong influence not only on every newspaper in India but also on the entire literary world of every language in India" He said "My

newspapers became for me a training ground in self-restraint and a means for studying human nature in all its shades and variations. Without the newspapers a movement like Satyagraha could not have been possible"

## Mahatma Gandhi And Mass Media

Apart from being a national leader and social reformer, Gandhi was a great communicator. More than anyone else, he recognized that communication is the most effective tool to shape opinion and mobilize popular support. He was successful because he had a latent skill in communication that surfaced in South Africa where he had gone initially to set up practice as a lawyer. The practice of communication started by him in South Africa gave him the clue to rally millions of his countrymen when he returned to India. According to Chalapathi Raju, himself an eminent editor, Gandhi was probably the greatest journalist of all time, and the weeklies he ran and edited were probably the greatest weeklies the world has known. He published no advertisement; at the same time, he did not want his newspapers to run at a loss. He had gained considerable experience in South Africa, where he had taken over in 1903 the editorship of the 'Indian Opinion' and published it in English, Tamil and Gujarati, sometimes running the press himself.

'Young India' and 'Harijan' became powerful vehicles of his views on all subjects. He wrote on all subjects. He wrote simply and clearly but forcefully, with passion and burning indignation. One of the objects of a newspaper, he said is to "Understand the popular feeling and give expression to it; another is to arouse among the people certain desirable sentiments, and the third is fearlessly to expose popular defects"

Gandhi's papers published no advertisements. They enjoyed wide circulation. His approach to journalism was totally devoid of ambitions. To him it was not a vocation to earn his livelihood; it was a means to serve the public. In the 'Young India' of 2 July 1925, he wrote: "I have taken up journalism not for its sake but merely as an aid to what I have conceived to be my mission in life. My mission is to teach by example and present under severe restraint the use of the matchless weapon of Satyagraha which is a direct corollary of nonviolence."

Gandhi looked upon journalism as a means to serve the people. He said in his autobiography "My experiments with truth" "The sole aim of journalism should be service. The newspaper is a great power, but just as an unchained torrent of water

submerges whole countryside and devastates crops even so an uncontrolled pen serves but to destroy. If the control is from without, it proves more poisonous than want of control. It can be profitable only when exercised from within”

“Indian Opinion... was a part of my life. Week after week I poured out my soul in its columns and expounded the principles and practice of Satyagraha, as I understood it. During 10 years that is until 1914 except the intervals of my enforced rest in prison there was hardly an issue of 'Indian Opinion' without an article from me. I cannot recall a word in these articles set down without thought or deliberation or word of conscious exaggeration, or anything merely to please. Indeed, the journal became for me a training in self-restraint and for friends a medium through which to keep in touch with my thoughts."

Gandhi launched Satyagraha against the Rowlatt Act and the massacre in Jallianwala Bagh. He learnt in South Africa how important the press and public opinion could be in politics and had taught himself how to use the written word most effectively. He was a staunch supporter of Freedom of Press. He said time and again “Freedom of the press is a precious privilege that no country can forgo” To ventilate his views and to educate the public on Satyagraha he used the two journals 'Young India' and 'Navjivan’. In 1933 Gandhi started 'Harijan', 'Harijanbandhu', 'Harijansevak' in English, Gujarati and Hindi, respectively. These newspapers were the vehicles of his crusade against untouchability and poverty in rural areas. These papers published no advertisements even then they enjoyed wide circulation. His note of defiance and sacrifice gave a new stimulus to the evolution of press as a weapon of Satyagraha.

It will be pertinent to point out as to what Mahatma Gandhi considered to be the role of newspapers. He wrote “In my humble opinion, it is wrong to use a newspaper as a means of earning a living. There are certain spheres of work, which are of such consequence and have such bearing on public welfare that to undertake them for earning one's livelihood will defeat the primary aim behind them. When, further a newspaper is treated as a means of making profits, the result is likely to be serious malpractices. It is not necessary to prove to those who have some experience of journalism that such malpractices do prevail on a large scale”

He was of the opinion that “Newspapers are meant primarily to educate the people. They make the latter familiar with contemporary history. This is a work of no mean responsibility. It is a fact, however, that readers cannot always trust

newspapers. Often facts are found to be quite the opposite of what has been reported. If newspapers realized that it was their duty to educate the people, they could not but wait to check a report before publishing it. It is true that often they have to work under difficult conditions. They have to separate the truth from the false in a short time and can only guess at the truth. Even then, I am of the opinion that it is better not to publish a report at all if it has not been found possible to verify it"

In 'Young India' Gandhi once gave a glimpse of the exacting code he had set up for himself. "To be true to my faith, I may not write in anger or malice. I may not write idly. I may not write merely to excite passion. The reader can have no idea of the restraint I have to exercise from week to week in the choice of topics and my vocabulary. It is training for me. It enables me to peek into myself and to make discoveries of my weaknesses. Often my vanity dictates a smart expression or my anger a harsh adjective. It is a terrible ordeal but a fine exercise to remove these weeds."

**Gandhi's canons of Journalism**

Gandhi had been frequently writing on various aspects of journalism. To him editorial independence, adherence to truth and self-restraints were the three over riding considerations for journalism. In his message for the editor of the newspaper, 'The Independent', on 30 January 1919, he wrote: "In wishing you success in your new enterprise, I would like to say how I hope your writings would be worthy of the title you have chosen for your journal; and may I further hope that to a robust of independence you will add an equal measure of self-restraint and the strictest adherence to truth? Too often in our journals as in others do we get fiction instead of fact and declamation in place of sober reasoning? You would make 'The Independence' a power in the land and a means of education for the people by avoiding the errors I have drawn attention to"

"The sole aim of journalism should be service. The true function of journalism is to educate the public mind, not to stock it with wasted and unwanted impressions. The newspapers should be read for the study of facts. They should not be allowed to kill the habit of independent thinking".

On receiving Advertisement support for running a newspaper Mahatma Gandhi wrote: "It is now an established practice with newspapers to depend for revenues mainly on advertisements rather than on subscriptions. The result has been

deplorable. The very newspaper, which writes against the drink evil, publishes advertisements in praise of drinks. In the same issue, we read of the harmful effects of tobacco as also from where to but it. Or we shall find the same issue of a paper carrying a long advertisement for a certain play and denouncing that play as well. Medical advertisements are the largest source of revenue though they have done, and are still doing incalculable harm to the people. These medical advertisements almost wholly offset the services rendered by the newspapers.

I have been eyewitness to the harm done by them. Many people are lured into buying harmful medicines. Many of these promote immorality. Such advertisements find a place even in papers run to further the cause of religion. This practice has come entirely from the West. No matter at what cost or effort we must put an end to this undesirable practice or at least reform. It is the duty of every newspaper to exercise some restraint in the matter of advertisements".

Gandhi's views on values of journalism bring to bear on the profession of journalism the force of ethics and morality. In this context he had said, "It is often observed that newspapers published any matter that they have, just to fill in space. The reason is that most newspapers have their eyes on profits. There are newspapers in the west, which are so full of trash that it will be a sin even to touch them. At times, they produce bitterness and strife even between different families and communities. Thus, newspapers cannot escape criticism merely because they serve the people.'

## *List of important newspapers started by eminent people in India*

| Newspaper | Language | Year | Editor/Founder |
|---|---|---|---|
| Amrit Bazar Patrika | Bengali | 1868 | Motilal Ghosh, Shishir Ghosh |
| Abhyudaya | Hindi | 1907 | Madan Mohan Malviya |
| Bangali | English | 1879 | Surendra Nath Banarjee |
| Bangal Gazette | English | 1780 | James Angustus Hicky |
| Bombay Herald | English | 1789 | Balshastri Jambekar |
| Bangvasi | Bengali | 1881 | Jogindernath Bose |
| Bombay Chronicle | English | 1913 | Firozshah Mehta |
| Common Well | English | 1914 | Annie Basent |
| Denik Hindosthan | Hindi | 1885 | Raja Rampal Singh |
| East India | English | 1829 | Henry Derojio |
| Ghadar | Urdu and | 1913 | Lala Hardayal |
| Harischandra Megazine | Hindi | 1872 | Bhartendu Harischandra M. K. Gandhi |
| Harijan | Hindi Gujarati | 1933 | MK Gandhi |
| Hindu | Hindi | 1878 | Veer Raghavachari |
| Hindu | Hindi | 1881 | Mahadev Govind Ranade |
| Hindu Patriot | Gujarati | 1853 | Harischandra Mukharjee, Girish Chandra Ghosh |
| Hindu Review | English | 1911 | Bipinchandra Pal |
| Hindustan Standard | English | 1899 | Sachchidanand Sinha |
| Hindustan Times | English | 1920 | K. M. Pannicar |
| Indian Review | English | 1920 | GA. Natetion |
| Independence | English | 1919 | Motilal Nehru |
| Indian Mirror | English | 1861 | Devendra Nath Tagore and Manmohan Chosh |
| Somprakash | Bangali | 1859 | Ishwar Chandra Vidyasagar |
| Statesman | English | 1875 | Robert Knight and Sunanda Dutta Re |
| Sudharak | Marathi | 1888 | Gopal Ganesh Agarkar |
| Servants of India | English | 1918 | Srinivas Shastri |
| Times of India | English | 1861 | English Press |
| Tribune | English | 1877 | Sir Dayai Singh Majithia |
| Udant Martand | Hindi | 1826 | Jugal Kishor |
| Young India | English | 1919 | Mahatma Gandhi |

**The era of Nehru and Free India**

In the first flush of freedom the press rode with the current and was sympathetic and co-operative with the National Government. A section of the press how ever had not got over the hangover of colonial rule and indulged in fanning communal passions and hatred and penned scrullious writings. The period became known for Sensational Journalism. Some of the papers adopted "Communal policy" because playing down the riots and disturbances curded the sales. In the early years the Indian editors had had to make up their minds on what attitude they should adopt against Nehru's newly established Government. Since Nehru was not facing any kind of opposition the press should take it upon itself to function as an unofficial opposition outside the parliament exercising the role of responsibility and circumspection. The Government and Nationalist press went loggerheads after just one year of Independence. Press was expected to play a constructive role more detached, more responsible view of its obligations on one hand to the Government of the day and on other hand to the people as a whole.

Jawaharlal Nehru was one of the earliest in the Government to voice his displeasure against the press, in the All-India Newspaper Editors Conference in 1952. In 1959 he also raised the issues in his speeches and attacked the press. Nehru remarked, "Newspapers are enjoying power without responsibility. He looked at the press as a more or less Permanent Opposition. He was very much surprised by the confusion made by the newspapers on the domestic policies initiated by the Government. The situation was same with Sardar Vallabhai Patel and C. Rajagopalachari on various issues. The press went loggerheads and criticized the stand of the Government on various issues and created rift between various Government authorities. Critical editorials on escape of Mir Layak Ali, the ex-Prime Minister of Hyderabad from house arrest, and the introduction of the first press control bill by C. Rajagopalachari, the last Governor General of India was under press scrutiny. Similarly press created differences between the candidates in presidential race i.e., C. Rajagopalachary and Rajendra Prasad. Press exploited the differences of opinion between Dr. B. R. Ambedkar, Sardar Vallabhai Patel and Jawaharlal Nehru and many articles were written about them.

National Government first set up Press Law Enquiry Committee, which submitted its report in May 1948. It favored abolition of laws especially concerning press restrictions. It favored the provisions in Telegraph act, Post office act, Sea customs

act which provided for interception of messages and literature. It recommended the retention of Official secrets act and three sections of Indian Penal Code 124-A, 153-A, and 505 dealing with disaffection, communal hatred and tampering with loyalty of armed forces. C. Rajagopalchari introduced press objectionable mater bill in the Parliament Through this bill power was given to the Government to demand and forfeit security from a newspaper or printing press after judicial decision. Complaints against the printing press have to be made at the session's judge, who after a judicial enquiry with the help of the jury can demand security from the press. The bill, which became the law, was allowed to lapse in 1956.The Government also appointed the first press commission under chairmanship of Justice Rajyadhyaksha, to study the state of press, working conditions of Journalists, freedom of press and machinery for ensuring high standards of journalism. The working Journalist's act was passed in 1955. The Press Council was established in 1965, with Justice N. Rajagopala Iyengar as President. The second press commission was set up in May 1978, under the chairman ship of Justice P. C. Goswami. On his resignation in January 1980, it was reconstituted again under Presidentship of Justice K.K. Mathew. Its report was submitted in 1982.

**Indian Press and Emergency - The timeline and background**

| | |
|---|---|
| 12th June 1975 | The Allahabad High Court found Indira Gandhi guilty of corrupt election Practices and debarred her from the office for a period of Six years |
| 25th June 1975 | National Emergency was imposed by Indira Gandhi on grounds of Internal disturbance and Press Censorship started. Indira Gandhi felt that Certain persons have been inciting the police and the armed forces against the discharge of their duties and their normal functioning". **Emergency was in force for a period of 19 months**. |
| 18th January 1977 | President Fakuruddin Ali Ahmed dissolves the Loksabha |
| 16th to 20th March 1977 | Sixth General elections held in India. |
| 21st March 1977 | Emergency was officially withdrawn |
| 22nd March 1977 | Janata Party and its allies gain absolute majority in Lok Sabha |
| 24th March 1977 | Moraji Desai becomes the Prime Minister of India |

The Emergency was declared in June 1975 by Government of Indira Gandhi under Rule 48 of Defense of India rules and as per Article 352 of Indian Constitution... Indira Gandhi felt that Indian press was misleading about her and her aims and objectives. Indira Gandhi alleged that Jayaprakash Narayan was the chief conspirator intent on provoking full-scale rebellion and encouraged anti- Congress parties to

obstruct not only economic development, but all-round functioning of administration and economy. She said ***"They were inciting people not to work, for non-payment of taxes, preventing farmers from selling their produce to Government, encouraging mass strikes and arousing students to violence. Therefore, emergency was seen as constitutional necessity***". It gave the Prime Minister the much needed right to deal harshly with disruptive elements and to set nation back in the path of progress. Themes like "The Nation on the move", "Emergency ushers in era do discipline", "Marching to a better tomorrow", and "Emergency for a stronger and prosperous future" were splashed in newspapers, posters billboards, and stickers throughout important cities. The arrest and detention of opposition leaders, social activists, Journalists, students and academicians were seen necessary for preservation of democracy. Many political leaders, opposition party workers, intellectuals, Journalists were nabbed in mid-night swoop and jailed. Some organizations and groups were also banned. On 26th June 1975, in her first emergency broadcast on Radio, she said **"I am sure you are conscious of the deep and widespread conspiracy which has been brewing ever since I began to introduce certain programmes, measures of benefit to the common man and women of India. Certain persons have gone on length of inciting our armed forces to mutiny and our police to rebel. How can any Government worth its name stand by and allow the country stability to be imperiled. The actions of the few are endangering the rights of the vast majority".**

Again, speaking in Loksabha on 22nd July 1975, she said **"Whatever we are doing is Pro-India; it is Pro-Indian people and is in the pro- in the direction of future of India**" Addressing the people on the occasion of Independence Day celebrations on 15th August 1975, she said **"We are not happy to declare emergency, but we had to under compulsion of circumstances. Stringent measures were taken just as bitter pills have to be administered to a patient in the interest of his health. No one can prevent India marching ahead".** Indira Gandhi started implementing he "20 – point programme" i.e. the national economic programme aimed at National building. Publicizing the programme Government pamphlets were printed announcing **"The emergency provides us with a new opportunity to go ahead with our economic tasks".** The views and opinions of Indira Gandhi were echoed by praise of Chief Ministers and important dignitaries who proclaimed emergency as a necessary measure, a wise and timely action for development of poor. By 1976 the 20 point

programme was joined by equally and promising five point programme to be implemented by the Youth Congress under the leadership of Indira Gandhi's youngest son Sanjay Gandhi. But by the end of 1976 and the early 1977 the dissenting voices started reflecting from citizens by large sections of Polity. Indira Gandhi decided to calm fears of permanent dictatorship by relaxing censorship and announcing General elections on 21st March. In the elections Janata Party got a massive majority and Moraji Desai became the Prime Minister.

**Impact on Indian Press**

The declaration of emergency was a shocking blow to the Indian press, which was its greatest victim. Worst form of Pre-censorship was imposed on the press during emergency. Indira Gandhi was of the opinion that Press Censorship became a necessity and on 3rd July 1975 said **"I am not happy that we had to impose regulations on newspapers. But some journals had shed all objectivity and independence and allied themselves totally with the opposition and did anything to spread doom and defeatism. For some time they had deliberately distorted news, made provocative comments, hurled allegations all of which had to be stopped in order to restore the climate of trust".**

Arrests, censorship and climate of fear had prevented circulation of alternate views and also cultivated a series of blanks in the information disseminated to the people the electricity supply to major newspapers was terminated for a period of three nights to prevent the adverse publicity in the short term and to impose press censorship in the long term. Censorship prohibited all categories of news, comment and rumor relating to emergency in order to maintain public order. It provided the arrest and detention unless preauthorized in writing by an authorized officer from the Public Information Bureau (PIB) in Delhi or by Director of Information of State Government. No editorials were allowed without scrutiny. It was very difficult for the press to publish the factual news and comments. In the absence of news items newspapers began to publish topics like Ramayana, Mahabharata, Harappa and Mohenjo-Daro. The following guidelines were issued to the press

- Press was asked not to publish or disseminate information which will disturb internal security.
- Press has to suppress the news themselves through moderation.
- It should not publish anything to excite disaffection towards Government.

- It should not promote feelings of enmity between different classes of persons in India.
- It should not publish anything to slowdown or cessation of work in a place.
- It should not reproduce any news item published in a foreign newspaper.
- It should not publish false allegations against leaders or denigrate the institution of Prime Minister.
- It should not publish anything to subvert the functioning of democratic institutions.
- It should not publish any news items related to agitations.

On July 26th, 1975, newspapers Editors received more detailed instructions. On December 8th, 1975 three ordinances were issued banning the publication of "Objectionable matter", abolition of "Press council" and for removing the "Freedom of press" to report proceedings of Parliament. The banning of publication of "Objectionable mater" was made into the law on January 28th 1976.

The press reacted with total submission. A voluntary blackout of the press followed. But the two national newspapers which had successfully withstood censorship restrictions were the Indian Express and Statesman under the table editorship of V.K. Narasimhan and C. R.Irani respectively. They retained their commitment to freedom of press by publishing dissenting voices and views of the public, the hardships faced by the public and the reaction of opposition. The two newspapers were successful in informing the public that Indira Gandhi decided to impose emergency in order to stamp out opposition voices, which she could no longer control by democratic means. These newspapers conveyed the message that emergency was a device to through which Indira Gandhi obtained access to basic tools of dictatorship through which she got the power to ban all meetings, processions and agitations that were organized against her. By imposing pre- censorship, she was able prevent negative propaganda, gag the press, detain and arrest journalists, editors who raised concern and commented on the emergency.

According to V.K. Narasimhan **"Emergency is like a dark night where people lost their basic liberties to a regime of terror and suppression they had not known even under the British".** Foreign correspondents were at fire expected to submit drafts of their articles for inspection by official censors. Later they were permitted to censor their own dispatches according to the official guidelines. **Peter Hazlehurst of**

**the Times, Mark Tully of the BBC, Lewis Simpson of the Washington Post and Loren's Jenkins of Newsweek were among those foreign correspondents who were expelled from India for their controversial reporting.** But the articles and news in foreign newspapers published abroad reached India through underground channels and played a played a key role in motivating public opinion. **"Satyavani"** an underground paper which published in London and New York during emergency contained the writings of foreign Journalists and peoples opinion of India. **"Seminar"** was an intellectual journal which tried to publish the people's voice byte was not brought out due to fear of Government's action.

**Press and the period after Emergency**

The later Prime Minister ship period of Indira Gandhi was filled with political unrest, communal eruptions, administrative problems in the North West and North Eastern States. Indira Gandhi faced the Sikh problem in Punjab, violent agitations in Assam over the nationality question. In Punjab army entered in to the Golden temple to flush out the extremists in the 'Operation Blue Star'. This led to the outbreak of more terrorism activities by the misguided youth. On October 1984, Mrs. Gandhi was shot dead by Sikh Security guards. Rajiv Gandhi was sworn in as Prime Minister. General elections were held in 1985. Congress returned to power. Rajiv Gandhi signed an accord with Akali Leader Santh Longowal, but the accord got delayed. In the meantime, Longowal was killed. Within two years of Prime Minister ship i.e. in 1987 an unprecedented high velocity attack was mounted against Rajiv Gandhi in the Print Media. **During this period Indian newspapers were on a mission mode and riding on a boom due to**

- Politicization of Masses
- New awareness of rising middle class
- Development of Language press
- Growth of Journalism as a profession and joining of more young blood.

The following are some of the important developments in Indian journalism in this period

- The **"Magazine revolution"** started in India in a big way.
- The era of **"Controversial Journalism"** began in full blast and politicians and all parties, VIP's, Film personalities were subjected to severe press scan.
- This resulted in beginning of **"Character Assassination Journalism"**.

- The dependence on official press releases, press conferences slowly gave way to new forms of information collection. The device of Interview was used to extract the information from various personalities.
- The trend of **"Investigation Journalism"** i.e. unearthing the most uncomfortable information regarding an individual or organization, personal relations and corruption issues were given priority. Two newspapers i.e. Indian Express and Statesman were very strong in Investigative reporting.
- Newspapers and magazines involved in **"Peephole Journalism"** in which the issue was aggravated in to a crisis situation by publishing information on personal life's and media watch on Politicians, VIP's increased.

**Example 1**: Indian Express aggregated the situation between **Rajiv Gandhi and the President Zail Singh**. The publication of letter written by Zailm Singh to Rajiv Gandhi contradicting his statement in Parliament about his relations with President increased the friction and strained relations between them.

**Example 2**: Press played a key role in blowing up the **'Fairfax issue'**. Fairfax was an American investigating agency. It was alleged that it was employed by V.P. Singh to detect the economic offenders abroad. Press started various stories that V.P. Singh was using the Fairfax to probe on the economic offences of the Film actor Amitabh Bachhan and his brother who were close family friends to the Prime Minister Rajiv Gandhi. The change of Portfolio of V.P. Singh to defense also added strength to the press charges.

**Example 3**: Once again V.P. Singh as Defense Minister told to the press persons that Indian middle men were paid huge commissions in a **Submarine deal between India and West Germany**. This led to the gossip and rumor in the press about the involvement of Rajiv Gandhi as he was holding the defense portfolio before V.P. Singh.

**Example 4**: The Swedish Radio broadcasted a story of heavy kickbacks were paid to Indian officials and politicians in the **'Bofors Gun deal'** between India and Sweden. V.P. Singh resigned from the Cabinet which incr3esed the media attention on the issue. The Hindu under the editorship of N. Ram and the its Geneva Correspondent Chitra Subramanyam started publishing a series of Investigative stories in the Bofors deal exposing that many was paid to Indian officials and politicians. The Indian Express carried an editorial in the front-page alleging involvement of Rajiv Gandhi in the issue. The image of the Rajiv Gandhi was seriously dented by the exposes.

- In the entire political drama press played a major role in gathering, interpreting and presenting the news to the information hungry Indians. But they were partisan in approach with much disinformation and slant in news presentation. Open accusations were made on highest offices without evidence and on speculative information. The entire episode resulted in increasing the credibility gap between the hard facts and the news published. But ht newspapers and magazines were inclined towards the speculative stories as they were attracting the reader and fetching huge circulation.
- The Government attitude towards the press at both Centre and States during this period has been one of non-interference. There is no sign of benevolence or open hostility. But in Bihar rand Tamil Nādu bills were introduced in the Legislature to curb the freedom of press by the State Government's, but were withdrawn after vehement protests from press by journalist organization and public bodies.

## Trends in Indian Press - Working Journalists Movement

Working Journalists movement spearheaded by stalwarts like **M. Chalapathy Rao** started in India. He founded the **Indian Federation of Working Journalists in 1950** and was its president for three years. He was a member of First Press Commission appointed in 1952. He was instrumental in the Commission's recommendation for the appointment of a wage board for working journalists. The Commission recognized the necessity for fixing a minimum wage for journalist employees.

- Government of India accepted this recommendation and constituted a wage board for working journalists under the chairmanship of **H.V. Divatia in 1957**. Besides fixing minimum wages for all categories of Journalists, the board included **Proof readers and Examiners** within the definition of 'Working Journalist'. The Journalists were assured of a minimum wage, a suitable grade and their hours of work were fixed with as assured weekly rest day.
- Second Wage board was appointed under the Chairmanship of **Justice Palekar in 1977**. But board could not complete its work as the representatives of the newspaper's owners i.e. The Indian and Eastern Newspapers Society and Indian Language Newspapers Society resigned from then wage board following differences. Government of India brought an **ordinance in 1979** appointing Justice Palekar as **one-man tribunal** on Working Journalists wages. He gave his award in 1980. But this award was not completely implemented as it placed

small newspapers and large newspapers on the dame footing and newspapers claimed that they were not able to implement it as it would lead to the closure of units due to financial implications.

- The Third Wage Board was appointed by Government of India under the Chairmanship of **U.N. Bachwat in July 1985.** It presented its interim report in 1986 and gave interim relief of 7.5% on basic pay. On May 31, 1986 Government increased the interim relief to 15%.
- The Fourth Wage Board was set up in August 1994.

The Working Journalists movement in India was unique as it was able to achieve its aims i.e. Protection of the rights of working journalists, a minimum wage and security of service without a struggle. This was largely due to the role played by the Indian press in the Freedom struggle. The Working Journalists movement was led by famous stalwarts in Indian Journalism like M. Chalapathy Rao, J.P. Chathurvedi and T.R. Ramaswami. The Working Journalist act of 1955, which they were able to see through on statue book was unique as there is no similar legislation anywhere World for protection of working journalists.

The Journalistic values went a sea change along with the changes in the Nationalistic values. The Indian Constitution recognized 'right to expression' as a constitutional right of every Indian citizen. India is one of those countries in the world where in citizens are free to express their views. The press is allowed to perform the twin-task of highlighting the weaknesses of the government and the administration and also unearthing the corruption. The contemporary Indian Newspapers have established certain values and guidelines for themselves that include development of a new outlook, conservation and dissipation of the Indian Culture, Promotional of harmony among different Indian languages, encouragement to literary personalities, and information dissemination to the people, their education and their entertainment. The Indian Press had to experience the severity of the government in the past. Apart from a few incidents, the Indian Journalism is peacefully moving on the path of Independent and healthy journalism. The competition due to electronic media has strengthened the roots of the Indian Journalism. The print media has maintained its supremacy amidst cutthroat competition and diversification.

**From 1975-1990**

The declaration of emergency in 1975 was a turning point in the history of Indian Journalism. After the emergency, Indian journalism underwent a revolution not only in style and substance but also in variety, management, circulation, technology, professionalism, marketing and design. Indian press experienced a sea change in production techniques and commercialization.

**Magazine Explosion**

Magazine Journalism started after 1976. The news magazines emerged in a big way in India. The following are the reasons for starting of magazine journalism in India.

- The emergency affected the **politicization of Indian middle class** with the result they wanted to know more about the people ruling them.
- The emergency also left many scandals, gossip and unpleasant stories, which could not be, catered in detail thorough newspapers.
- Magazines catered to those people who did not read the newspapers too carefully and wanted news to be delivered once in a week or fortnight in a glossy easy to digest package.

The following magazines started and flourished in this period.

**India Today**: India Today, was a fortnightly first started in late 1975. It was intended to be a news magazine for Indians living abroad. Madhu Trehan was its founder and editor. He was an Indian resident abroad with a Journalism diploma from American University. The first issue gave an evoking response. After that his brother Arun Purie took over as Editor and put India Today firmly on its feet. By skillful editing and sleek production and presentation style India Today captured the readers. India Today is largest circulated fortnightly and is published in Hindi, Tamil, Telugu apart from English.

**Sunday**: Sunday is a weekly from the Anand Baazar Patrika group and was launched in 1970 under editorship of M.J.Akbar. With the success of Sunday magazine Anand Baazar group also started another English daily "Telegraph" in Calcutta in 1982 with M.J. Akbar as editor.

**Frontline:** Frontline is a fortnightly started from the publishers of "The Hindu" in 1984.

***The Week****: Malayala Manorama" Group from Kottayam, Kerala, published The Week.*

***Illustrated Weekly of India****:* The "The Times of India" group started illustrated Weekly of India under the editor ship of Pritish Nandy. Pritish Nandy soon captured the

imagination of the readers with his startling interviews of politicians, Ministers and VIP's in all walks of life. Illustrated weekly of India ceased its publication in 1993.

**Impact of Magazines**

Magazines caught the imagination and psyche of Indian reader. The investigative scoop, personality profiles of Politicians, Ministers, Film personalities, Gossip, scandals related to them, exclusive photo features, no hold bar interviews, became a rage with the sensation starved Indian readers.

- There was a dramatic jump in circulation of the periodicals and magazines. ***In 1975 there were 225 publications of Newspapers and Magazines with a combined circulation of over 14 million. But by 1985 there were 300 publications with a combined circulation of more than 26 million***.
- The magazines gave birth to the Investigative journalism in India. Many Investigative Journalists like Arun Shorie and N. Ram started their career in reputed Magazines.
- The Magazine journalism provided a fresh approach, a new self-assured and knowledgeful writing style and ushered in an element of educated writing.
- However, in the swing of success the Magazines went all out to provide sensational stories specialized in 'stripping the reputation' placing the premium on sensational crime, wars, dacoit and dirty Politics. The trend was giving more importance to what is going wrong rather than what was right. Conflicts between personalities and issues were highlighted rather than their solutions.
- The Magazines started the "Libelous" or "Defamation Journalism" which included publishing the reports and features having potentially libelous or defamatory statements.
- The period of 80's and 90's called as 'aggressive spirit of the decade' in Indian journalism was confined to Indian news magazines, where as the news papers by and large have been unaffected by it.

**2. Investigative Journalism**

The concept of Investigative Journalism started in India in a big way. The journalists no longer depended on official news and press releases. There was a conscious effort to unearth scams, fan gossip and scandal. The journalists turned into investigators who exploited the conditions to extract information from the Government

officials, politicians and bureaucrats etc. The following are the important Journalists who can be regarded as pioneers in Investigation Journalism

**Arun Shourie**

The Journalist who made the greatest impact on the readers through investigative stories is Arun Shourie. He first wrote for India Today, later he worked as executive editor of Indian Express, which published his investigative stories every day. He exposed the abuse of authority during the emergency in various news articles, special stories and exclusive news items. He received Padma Bhushan from the Indian Government in 1990.

- His investigative story on the misuse of official position for collection of funds created a storm in the Parliament and resulted in the ouster and prosecution of the Chief Minister.
- His investigative stories on two former Prime Ministers, a former Home Minister, a former Loksabha Speaker and a Deputy Prime Minister created sensation in the country.
- His campaign stories on Mandal Commission are widely known for its tenacity and impact in the country.

**Impact of Arun Shourie of Indian Journalism**

- Arun Shourie proved the power of press i.e., Newspapers in particular to the whole country. He altered the entire perception of the profession of Journalism. He had a phenomenal intelligence and unerring grasp of how best to break a story. His strategy was to publish an exclusive investigative story in the front page of every edition when Parliament was in session, in order to take it to the notice of the Government.
- He showed Journalists how to push themselves, how to investigate further and how to document everything.
- He was the first Indian **Campaign and Investigative journalist** known nationally and internationally and inspired many Indian journalists to adopt his strategy and methodology in the country like **Ashwin Sarin** of Indian Express proved by investigation that women were being sold like cattle in Madhya Pradesh. **Arun Sinha** of Indian Express broke the story of blinding of under trial prisoners by the Police of Bihar. **Shiela Barse**, a freelance reporter of Bombay wrote many stories on child prostitution. **Anita Pratap** of Times shocked the

world by taking an interview with the LTTE chief Prabhakaran in his hideout at Jafna, Srilanka. **Sucheta Dalal** was instrumental in exposing the security scam that rocked the country.

**N. Ram**

N.Ram is another Investigative journalist who was honored with Padma Bhushan by the Government. He was the Associate Editor of 'The Hindu' and distinguished himself by his investigative stories on Bofors deal. The documents published by him in association with the Paper's Geneva Correspondent Chitra Subramaniam on Bofors deal created a sensation

**New breed of Reporters & Editors**

The period saw some major changes in the editorial and reporting departments of many newspapers.

- Girilal Jain retired as editor of Times of India after a distinguished record of service and was succeeded by Dilip Padgoankar. The Hindustan Times got a new editor V.K. Narayanan. H.K. Dua joined as Editor-in –Chief of Indian Express.
- Many women reporters occupied high positions in the newspaper hierarchy and also entered into the field of Investigative Journalism with outstanding ability and performance. They included women like Anita Pratap 'Times' correspondent of New Delhi, Rasheeda Bhagat, Chief of News Bureau, Indian Express, Madras, Sucheta Dalal of 'Times of India'.

**Economic Newspapers**

Following the economic reforms and adoption of policy of Liberalization and Privatization in India in the year 1991, there was a spurt of "Economic Journalism". The economic liberalization has created a new executive class in India, who were high salaried people and who wanted to earn more. The growth of capital market increased the demand for business and economic information. There were no daily newspapers exclusively devoted to economic or financial journalism in 1954 as per the first Press Commission report. But by mid-1990's most of the major Newspapers groups started their own economic newspaper.

- "Financial Express"- started by "Indian Express" group
- "Business Standard"- started by "Anand Baazar Patrika" Group, Calcutta.
- "Economic Times"- started by "Bennett & Coleman Ltd".
- "Business Line" – started by "The Hindu" group, Madras.

- "Business Today" - started by "India Today" group, New Delhi.

Business journalists acquired much market value and were drawing fat salaries

**Prominence of Astrological predictions**

A notable trend of Indian press is the prominence given to Astrological predictions. With very few exceptions all the major newspapers, dailies, periodicals carry them as a regular item every week. The first press commission had condemned the practice and said the spread of habit of consultation and reliance on astrological predictions is certain to produce an unsettling effect on the minds of the readers.

The Second Press Commission also endorsed that "We are of the view that editors of general interest and periodicals who believe in promoting scientific temper among their readers and in combating superstition and fatalism should discontinue the publication of astrological predictions". But the publication of astrological predictions has increased and has spread to all major dailies, magazines in both English and vernacular languages.

**Improvement in Pictorial News**

The Indian press used to suffer from a shortage of pictorial news coverage. There was a general lack of understanding of the scope of Photograph's in journalism among newspaper editors. Indian press for a majority years continued as verbal medium. The scenario has improved with the entry of magazine journalism where importance is given for photographs. With the adoption of news techniques in printing technology and the onset of new cameras the standard of Photo Journalism has tremendously improved. The brand of "Photo Journalists" emerged and at present is in great demand.

**Freedom of Editor**

Court Directions and constitutional provisions assured the Freedom of press in India, but the freedom of Editor was left in doubt. Many Indian editors have resigned protesting the proprietarily interference. The Second Press Commission clearly stated, "The interest of owner of newspaper lies in economic success. However commercial consideration ought not to override editorial considerations. The freedom of owner is only a part of freedom of press. But the editor must have sufficient authority to conduct the newspaper in public interest while following ht policy laid down by the owner". Indian press has seen several stalwarts resigning their job protesting editorial interference by proprietors. For example

- Proprietor of Hindustan Times, G.D. Birla dismissed its Editor B.D. Vergheese.

- Kushwant Singh quitted as Editor of Hindustan Times and Illustrated Weekly of India.
- Arun shourie quit as executive editor of Indian Express and joined it after a gap.

The Indian editors were getting low salaries, had to fear the iron chains of British but were strong in opinion during the Pre-Independence period. But the Post-Independence period witnessed a tremendous increase in pay followed by more policy restrictions leading to formation of a controlled opinion. Most editors suffered between prudence of self-interest and had to abandon self-expression due to proprietarily interventions in the form of policy restrictions.

**Ownership Pattern**

Today, in India persons running other business or having strong business links with major industrial groups control major portion of press. Many problems are arising due to the big business ownership of multiple newspapers.

- According to the Registrar of Newspapers in 1984 there were 108 common ownership units. A common owner ship unit is one, which has two or more interest newspapers of which at least one is a daily. These units owned among themselves 374 news interest newspapers i.e., 299 dailies, 63 weeklies and 12 other periodicals.
- Bennett Coleman Company has 15 news interest publications.
- The Express Group has 33 news interest publications.
- The big units dominated not only English language press but also Language journalism.
- Eleven big units published 34 dailies from major metropolitan cities in India.

The Second Press Commission has said, “When newspapers are controlled by other big business, they become vehicles of expression of the ideology of their own owners and the selection and presentation and display of news in such newspapers would be dictated by that ideology. In their hands the newspaper industry involuntarily becomes the cultural arm of other business and industries and takes vested interest in maintaining the existing socio-economic system. The newspapers controlled by b big industrial units may be selective in their presentation of news and views in return for benefits conferred in respect of their business interests”.

## Unit-2- History and Development of Radio and Television in India

### Origin and growth of Radio Broadcasting in India
### From 1921 to 1947

The birth of Radio Broadcasting in India has stated on an experimental basis in the year 1921, when Times of India in collaboration with Post and Telegraphs Department broadcasted a Musical program on request of Sir George Lloyd to the concerned companies. In 1923, a broadcasting conference was held in Calcutta. From 1923 'Radio Clubs' proliferated in India. 'Radio Club Calcutta' was started 1923, followed by 'Madras Presidency Radio Club' in 1924. On March 27th 1925, Government officially gave a notification, inviting applications for setting of broadcasting stations in India.

The idea of regular Radio broadcasting service took shape for the first time in 1926 in the form of an agreement entered between Government of India and a private company called 'Indian Broadcasting Company Limited'. The company was started by a group of businessman, with a meagre capital, inspired by the success of European Broadcasting Under the agreement a license for construction of two stations, one at Bombay and another in Calcutta was granted. The Calcutta station was inaugurated on 23rd July 1927, and Bombay station was inaugurated on 26th August 1927. But in three years they gathered only 7000 listeners and company went into liquidation by 1st March, 1930. In response to the popular demand and lobbying of investors Government decided to acquire the Indian Broadcasting Company Limited on 1st April 1930 and run the Calcutta and Bombay stations experimentally for a period of two years. The name of the company was changed to Indian State Broadcasting Service (ISBS).

After two years on May 1932, Government decided to continue the broadcasting and placed the ISBS under Department of Industries and Labour. But the Government's economizing efforts still reduced the number of listeners. But the starting of BBC's new empire program on shortwave increased the popularity of Radio. There was a rush to buy new Radio sets. Government encashed it by imposing an extra duty on Radio sets. The purchase of 8000 new radio sets earned Government good revenues. The new earning was used to construct new radio station at Delhi, which was inaugurated in 1936.

A separate Department of 'Controller of Broadcasting' was created to take care of broadcasting operations under the Department of Labour in March 1935. On August 30th 1935, Lionel Fielden was appointed as first Controller of Broadcasting in India. The

name of Indian State Broadcasting Service was changed into 'All India Radio' on June 8th 1936. Broadcasting was transferred to the Department of Communication in November 1937 and was later transformed to the Department of Information and Broadcasting in October 1941. The start of World War II catalyzed the growth of radio in India. New high-power transmitters were started and external services division, started in 1941 was strengthened to counter the Nazi propaganda. Most of the News Services and the external services were started during the war years. During the war years 27 news bulletins were broadcasted every day.

**From 1947 to 1990**

When India became independent All India Radio was a separate department under Department of Information and Broadcasting. It had six stations at Calcutta, Bombay, Delhi, Lucknow (02-04-1938), Madras (16-06-1938) and at Tiruchirapalli (16-05-1939). It had a total of 18 transmitters, six medium wave and 12 shortwave transmitters. In 1947, AIR was transmitting programmes in 8 languages i.e., Tamil, Telugu, Gujarati, Marathi, Punjabi, Hindustani, Bengali and in English to 2, 75,000 listeners who were only 11.5% of Indian population residing in 2.5% of total area, predominantly in urban towns. The radio stations located in princely states were taken over by the Government after Independence.

Broadcasting was considered as a key role in the development of the country especially in achieving political integration, economic development and social modernization. Radio was an integral medium of communication and its popularity increased exponentially. From 1957, All India Radio was also called as 'Akashvani'. In the following years All India Radio had a slow but steady development. New broadcasting stations came up in all over India. Radio was instrumental in promoting social change through execution of innovative programmes like Radio rural forums for Agriculture communication in 1960's, promotion of adult literacy in 1980's, Women and legal rights issues in 1990's etc. The advent of regional radio in popularized the medium even more. Local broadcasting reflecting local issues of concern to the community and has taken the Radio to the nook and corner of the Country. By 1990, AIR had 91 broadcasting stations with 167 transmitters, out of which, 130 were of medium wave, 33 shortwave and 4 FM transmitters at Bombay, Calcutta, Delhi and Madras.

**At present**

A present AIR has a three-tier broadcasting system National Service, Regional Service, Local service. National service reflects the broad-spectrum f nation life and acts as complimentary to regional language. The 1000 KW transmitter at Nagpur to which the foundation stone was laid down in 1982 by the then Prime Minister Indira Gandhi along with the Delhi station form the National Channel. The National service was launched on 18th May 1988. National channel broadcasts centrally originated news bulletins in Hindi, English, Music and newsreels. All the existing regional centers form the middle tier. They emphasize the regional programmes in regional languages. The local radio stations form the third tier of broadcasting, catering to the local needs of the community. As on 2010, AIR has 223 broadcasting stations with 358 transmitters including 143 Medium Wave, 54 Shortwave and 161 FM transmitters. AIR covers 91.42% of countries geographic area and caters services to 99.13% of Indian population i.e., 104 million households in 24 languages and 146 dialects. At present there are 111 million radio sets operational in India.

**Origin and growth of Television in India**

The origin and growth of Television in India can be raced in four phases.

**I. The period from 1960's to 70's: The Initial phase**

- Terrestrial television in India started with the experimental telecast starting in Delhi on **15th September 1959** with a small transmitter and a makeshift studio with the grants from **UNESCO** and equipment support from **USA and Phillips (India).**
- The first Television center was started in New Delhi. Television broadcasts started as part of All India Radio's services. Programs were broadcast twice a week for an hour a day on such topics as community health, citizen's duties and rights, and traffic and road sense.
- In **1961** the broadcasts were expanded to include a **school educational television project**. Indian films and programs consisting of compilation of musicals from Indian films joined the program line-up as the **first entertainment programs in 1965**.
- **Programme recording started in 1966** and the first ever programme to be recorded was 'Yuri Gagarin'. A limited number of old U.S. and British shows were also telecast sporadically.

- **The regular daily transmission started in August 1965**. 'Krishi Darshan' programme started for farmers and was telecasted in 80 villages located around Delhi, UP and Haryana.
- By **1965-66 Black and white television sets** entered into the Indian market through Phillips.
- The year **1966 saw the in introduction of 'plays'** in broadcasting like 'Aisa Bhi Hota Hai' and 'Sara Akash'. Apart from that the technical capability were enhanced by taking up the telecasting of **Republic Day parade in the year 1966**. But the lack of trained personnel, good quality software and sufficient entertainment programming halted the development of Television as an effective mass medium.

**The period from 1970's to 80's: The experimentation phase**

- The year **1971** saw the **introduction of news and current affairs programmes in English** language. Later weekly programmes in Hindi like 'Aamne Samne' and 'Desh Videsh' were introduced.
- The first major expansion of television in India began in **1972**, when a second television station was opened in **Bombay**. This was followed by stations in Srinagar and Amritsar (1973), and Calcutta, Madras and Lucknow in 1975. Relay stations were also set up in a number of cities to extend the coverage of the regional stations.
- In **1975**, the government carried out the first test of the possibilities of satellite-based television through the **SITE program**. SITE (Satellite Instructional Television Experiment) was designed to test whether satellite-based television services could play a role in socio-economic development. Using a **U.S. ATS-6 satellite** and up-link centres at Ahmedabad and Delhi, television programs were beamed down for about 4 **hours a day to about 2,400 villages in 6 states**. The programs dealt mainly with in- and out-of-school education, agricultural issues, planning and national integration. The program was fairly successful in demonstrating the effectiveness of satellite-based television in India and the lessons learnt from SITE were used by the government in designing and utilizing its own domestic satellite service INSAT.
- By **January 1976 commercial service was launched** in television broadcasting. The advent of advertising in television in 1976 brought tremendous change in

the revenues. Until that time television had been funded through a combination of television licenses and allocations from the annual budget (licenses were later abolished as advertising revenues began to increase substantially).

- In these early year's television, like radio, was considered a facilitator of the development process and its introduction was justified by the role it was asked to play in social and economic development. Television was institutionalized as an arm of the government, since the government was the chief architect of political, economic and social development in the country. By 1976, the government found itself running a television network of eight television stations covering a population of 45 million spread over 75,000 square kilometres. Faced with the difficulty of administering such an extensive television system television as part of All India Radio, the government constituted **Doordarshan in 1976**, the national television network, as a separate Department under the Ministry of Information and Broadcasting, as an attached office under the Ministry of Information and Broadcasting. By 1979 the total television sets in India reached to 0.9 million with 17 transmitters.

**The period from 1980's to90's: The expansion phase**

- In 1982 television began to attain national coverage and develop as the government's pre-eminent media organization. Two events triggered the rapid growth of television that year. **INSAT-1A**, the first of the country's domestic communications satellites became operational and made possible the networking of all of Doordarshan's regional stations. For the first time Doordarshan originated a nation-wide feed dubbed the **"National Programme"** which was fed from Delhi to the other stations from **August 15th 1982**.
- The possibility of reaching a nationwide audience made television look increasingly attractive to advertisers after the introduction of the "National Programme" in 1982. In turn, Doordarshan began to shift the balance of its programming from educational and informational programs to entertainment programs. The commercialization of Doordarshan saw the development of soap operas, situation comedies, dramas, musical programs, quiz shows and the like.
- In **November 1982**, the country hosted the **Asian Games** and the government introduced **colour broadcasts** for the coverage of the games. To increase television's reach, the government launched a crash program to set up low and

high-power transmitters that would pick-up the satellite distributed signals and re-transmit them to surrounding areas. The inaugural ceremony of Asian games was covered by Outdoor broadcasting vans on 1st November, 1982. More than 22 sporting events were covered from 18 stadia for the Asian games by Doordarshan.

- JCT-Thapar group started manufacturing colour picture tubes from Chandigarh. 'UPTRON' a government of Uttar Pradesh firm started producing colour television sets in India.
- By **1987** Doodrdarshan programming was extended to **morning as well as in noon**.
- By the late 1980s more and more people started to own television sets. Though there was a single channel, television programming had reached saturation. Hence the government opened up another on **September 17th 1984**, which had part national programming and part regional. This channel was known as DD 2 later DD Metro. Both channels were broadcast terrestrially.
- The 80s was the era of Doordarshan with shows like **Hum Log (1984), Buniyaad (1986-87)** and comedy shows like **Yeh Jo Hai Zindagi (1984)**, Mythological dramas like **Ramayan (1987-88)** and **Mahabharat (1989-90)** glued millions to Doordarshan and later on **Bharat Ek Khoj, The Sword of Tipu Sultan and Chandrakanta**. Hindi film songs-based programs like **Chitrahaar, Rangoli, Superhit Muqabla** crime thrillers like **Karamchand, Byomkesh Bakshi**. Shows targeted at children include **Dada Dadi ki Kahaniyan, Vikram Betal, Malgudi Days, Tenali Rama**.
- In 1983 television signals were available to just 28% of the population, this had doubled by the end of 1985 and by 1990 over 90% of the population had access to television signals.
- By 1990 Doordarshan revenues from advertising were about $300 million, accounting for about 70% of its annual expenditure. The total television viewers increased to 8.8 million and transmitters increased to 179 by the end of 90's.

**<u>The period from 1990's to 2000: The satellite television phase</u>**

- By 1991, Doordarshan's earlier mandate to aid in the process of social and economic development had clearly been diluted. Entertainment and commercial programs had begun to take centre stage in the organization's programming

strategies and advertising had come to be Doordarshan's main source of funding. Doordarshan, having a monopoly in Indian market expanded its services and introduced new concepts and programming.

- DD covered the **CHOGAM and NAM** summits and attained international recognition.
- The **Central Production Centre** was started in **February 1989**.
- The **Independence Day of August 15th 1989 was covered live by DD**.
- PAS-1 and PAS-4 are satellites whose transponders help in the telecasting of DD programmes in half the regions of the world.
- An international channel called **DD International was started in 1995** and it telecasts programmes for 19 hours a day to foreign countries-via PAS-4 to Europe, Asia and Africa, and via PAS-1 to North America.
- The year 1991 saw the beginnings of international satellite broadcasting in India and the government launched a major economic liberalization program. Both these events combined to change the country's television environment dramatically.
- International satellite television was introduced in India by **CNN** through its coverage of the **Gulf War in 1991**. Three months later **Hong Kong based Star TV** (now owned by Rupert Murdoch's News Corp.) started broadcasting five channels into India using the ASIASAT-1 satellite. By early 1992, nearly half a million Indian households were receiving Star TV telecasts. A year later the figure was close to 2 million and by the end of 1994, an estimated 12 million households were receiving satellite channels. This increase in viewership was made possible by the 60,000 or so small-scale cable system operators who have mushroomed across the country. These systems have redistributed the satellite channels to their customers at rates as low as $5 a month.
- Taking advantage of the growth of the satellite television audience, a number of Indian satellite-based television services were launched between 1991 and 1994, prominent among them **Zee TV, the first Hindi satellite channel**. By the end of 1994, 12 satellite-based channels were available in India. This number was doubled by the end of 1996, with a number of Indian programmers and international media companies like Turner Broadcasting, Time-Warner, ESPN, and Channel 5 introducing their new satellite television services for India.

**Growth of Cable TV in India**

- Cable TV has its roots in the late seventies. Indian television viewers were looking for entertainment options, apart from what state-owned broadcaster DD was offering. That came their way with the import and manufacture of video cassette recorders permitted domestically. **There was a veritable boom in video cassette recorder sales during this period**. Enterprising individuals in apartment blocks placed a video in their homes or their garages and started offering a cable TV service to people who opted for it. The fare available was Hindi and English movies and pirated western comedies, music and game shows. At this stage, cable TV was restricted to the major metros and towns and the upper crust of society.
- The impetus for its spread came in 1990 with the advent of the Gulf war. **Ted Turner's CNN** started beaming news reports of the bombing of Kuwait by Saddam Hussein and sparked off a demand for satellite dishes. Only the affluent could afford them. Some cable operators who had been running their Hindi and English movie channels added dishes and started relaying CNN into homes. This spurred demand for cable TV, making it a lucrative business and it attracted more individuals to the industry.
- The launch of Star TV and Zee TV further fueled the spread of cable TV. In the first half of 1992, almost 4,500 households were being given cable programmes daily. That figure increased to 9,450 homes daily in the second half of the year. According to a study conducted by market research firm – According to Frank Small survey for Star TV from a mere 412,000 urban households in January 1992, the number of cable homes went up to 11.8 million out of a total of 32.4 million TV owning homes by the end of 1994.
- The business has undergone a transformation too. In the beginning it was small and driven by entrepreneurs. At one time the cable TV operator's population was estimated at a sky high 100,000. In the next three years, large companies have also set up their own cable networks. Among them: In Cable net (managed by the Hinduja group), Siti cable (a joint venture between Zee TV promoter Subhash Chandra and Rupert Murdoch's News Television), Asianet, Hathway Cable & Datcom, Ortel Communications and RPG Netcom (a company promoted by the

RPG group). International cable networking companies such as United International Holdings, TCI and Falcon Cable of the US, have tested the waters: While UIH almost set up a joint venture with the RPG group which did not fructify; TCI/Time Warner discussed possibilities with the Times of India group which were inconclusive. Falcon Cable however, was successful in establishing a joint venture with the Hindustan Times publishing group in New Delhi called India Information Technologies Ltd.

- Following the liberalization of the broadcasting industry, the Hong Kong based Star TV- Network introduced five major television channels into the Indian broadcasting space that had so far been monopolized by the Indian government-owned Doordarshan, MTV, STAR PLUS, Star Movies, BBC, Prime Sports
- Soon after, India saw the launch of Zee TV, the first privately-owned Indian channel to broadcast over cable followed by Asia Television Network (ATN). A few years later CNN, Discovery, National Geographic, BBC made their foray into India. Later, Star TV Network expanded its bouquet with the introduction of STAR World India , STAR Sports, ESPN, Channel V, STAR Gold.
- With the launch of the Tamil language Sun – TV (India) in 1992, South India saw the birth of its first private television channel. With a network comprising more than 20 channels in various South Indian Languages, Sun TV network recently launched a DTH service and its channels are now available in several countries outside India.
- Following Sun TV, several television channels sprung up in the south. Among these are the Tamil-language channel Raj Television and the Malayalam - language network Asianet Communications Limited, both launched in 1993. These three networks and their channels today take up most of the broadcasting space in South India. In Telugu-language, Telugu daily newspaper Eenadu started with its own channel called ETV in 1995 later diversified into other Indian languages.
- Throughout the 90s, along with a multitude of Hindi language channels, several regional and English Language channels flourished all over India. By 2001, international channels HBO and History Channel started providing service. In 1999–2003, other international channels such as Nickelodeon, Cartoon Network, VH1, Disney and Toon Disney entered the market.

- Starting in 2003, there has been an explosion of news channels in various languages; the most notable among them are NDTV, CNN-IBN and Aaj Tak. The most recent channels/networks in the Indian broadcasting industry include UTV Movies, UTV Bindass, Zoom, Colours, 9X and 9XM. There are several more new channels in the pipeline, including Leader TV.

## Conditional Access System

- **CAS or conditional access system is a digital mode of transmitting TV channels through a set-top box (STB)**. The transmission signals are encrypted and viewers need to buy a set-top box to receive and decrypt the signal. The STB is required to watch only pay channels.
- The idea of CAS was mooted in **2001**, due to a furor over charge hikes by channels and subsequently by cable operators. Poor reception of certain channels; arbitrary pricing and increase in prices; bundling of channels; poor service delivery by Cable Television Operators (CTOs); monopolies in each area; lack of regulatory framework and redress avenues were some of the issues that were to be addressed by implementation of CAS.
- It was decided by the government that CAS would be **first introduced in the four metros**. It has been in place in **Chennai since September 2003**, where until very recently it had managed to attract very few subscribers. It has been rolled out recently in the other three metros of Delhi, Mumbai and Kolkata. **As of April 2008, only 25 per cent of the people have subscribed the new technology**. The rest watch only free-to-air channels. As mentioned above, the inhibiting factor from the viewer's perspective is the cost of the STB.
- The information and broadcasting ministry set March 31, 2015 as the deadline for shift from analog to digital systems. Digitization, where the feed will be received through set-top boxes, is expected to be executed in phases and the four metros of Delhi, Mumbai, Kolkata and Chennai have to shift to digital addressability by October 30, 2012. Phase II will include 35 cities with population of more than one million, such as Patna, Chandigarh, Pune and Bangalore by March 31, 2013. All urban areas are expected to digitize by November 30, 2014 and the remaining areas by March 31, 2015.

**DTH:**

- DTH is defined as the reception of satellite programmes with a personal dish in an individual home. As of July 2011, India had roughly 35 million DTH subscribers.
- Cable TV and DTH are two methods of delivery of television content. CAS is integral to both the systems in delivering pay channels. Cable TV is through cable networks and DTH is wireless, reaching direct to the consumer through a small dish and a set-top box. Although the government has ensured that free-to-air channels on cable are delivered to the consumer without a set-top box, DTH signals cannot be received without the set-top box.
- India currently has 7 major DTH service providers and a total of over 35 million subscriber households in mid-2011. Dish TV **(a ZEE TV subsidiary), Tata Sky, Videocon D2H, Sun Network owned ' Sun Direct DTH', Reliance Digital, Bharti Airtel's DTH Service 'Airtel Digital TV ' and the public sector DD Direct Plus** offer DTH services in India. As of 2010, India has the most competitive Direct-broadcast satellite market with 7 operators vying for more than 135 million TV homes. India is set to overtake the USA as the world's largest Direct-broadcast satellite market by 2012. The rapid growth of DTH in India has propelled an exodus from cabled homes; the need to measure viewership in this space is more than ever.

## Origin and Growth of F.M. Radio, Community Radio in India

**FM Radio in India**

The FM broadcasting In India began in 1977, but boomed after 2001 when the privatization of FM broadcasting began. AIR's FM LRS (Local Radio Station) was inaugurated on 1 July 2000 at 06:00 hours in Kodaikanal relaying Madurai programs in the frequency 100.5 MHz. 100.5 was so much popular and LRS was upgraded to a FM Channel in just two months. The channel covered a radius of about 200km due to its location at 2200 meters above MSL at Kodaikanal. KODAI FM, as it is popularly known. It is the biggest individual FM channel in India in both area coverage and listenership.

FM broadcasting began on 23 July 1977 in Chennai, then Madras, and was expanded during the 1990s, nearly 50 years after it mushroomed in the US. The country first experimented with private FM broadcasts in the small tourist destination of Goa and the large metropolitan areas of Delhi, Kolkatta, Mumbai, and

Chennai. These were followed by private stations in Bangalore, Hyderabad, Jaipur, and Lucknow.

Until 1993, All India Radio, a government undertaking, was the only radio broadcaster in India. The government then decided to privatize the radio broadcasting sector.] It sold airtime blocks on its FM channels in Indore, Hyderabad, Mumbai, Delhi, Kolkata, Vizag and Goa to private operators, who developed their own program content. The Times Group operated its brand, Times FM, till June 1998. After that, the government decided not to renew contracts given to private operators. Instead, in 2000, the government announced the auction of 108 FM frequencies across India, opening up the FM broadcasting industry to private competition. Radio City Bangalore, started on July 3, 2001, is India's first private FM Radio station. The Times Group rebranded their radio operations, establishing the Radio Mirchi brand. The first Radio Mirchi station began broadcasting on October 4, 2001 in Indore

Indian policy currently states that these broadcasters are assessed a one-time entry fee (OTEF), for a license period of 10 years. Under the Indian accounting system, this amount is amortized over the 10-year period at 10% per annum. The annual license fee for private broadcasters is either 4% of revenue share or 10% of reserve price, whichever is higher. India's earlier attempts to privatize its FM channels ran into rough weather when private players bid heavily and most could not meet their commitments to pay the government the amounts they owed.

FM radio appeared in India in a limited scale in 1970's. The application of FM started when AIR opened its first local FM radio station at Nagercoil in Tamilnadu in 1984, to generate programming of local relevance through participation of local communities. When FM technology was introduced, it was difficult to buy FM band radios as they were too expensive. FM channel's programming was to address rural, tribal audience but the radio sets were affordable for only rich and upper-class households there by creating a mismatch between the content and the audience. The idea of local community participation became gradually diluted.

Today there are 139 FM transmitters all over India. But the FM radio programming is facing problems due to staffing in local stations. The location and deputation of staff to FM radio stations located in remote areas became very problematic for AIR. The FM scene under the State-run AIR was stagnating when the commercial industry began interest in FM markets. The commercial FM efforts of Times

Radio, and Radio Mid-Day tried to attract younger generations with different music formats. The pressure to open up the FM radio markets increased. The ideology of the post liberalized India also helped in successful entry of private players into the FM market.

The Indian Government took up the expansion of FM market. As it was highly commercial in nature Government imposed hefty license fee apart from a revenue sharing model in which the operator has to share the profits of the business with the Government. The first phase of expansion ran into trouble with some of the bidders going to court and some others defaulting. Out of 108 licenses 86 never went on air. In a bid to revive the expansion scheme, Government recast its policy in September 2005 by announcing a more reasonable one-time entry fee and four percent of revenue sharing arrangement and wanted to give out 339 licenses to private parties. Educational were allowed to seek FM licenses with a bank guarantee of Rs. 50,000. But only very few institutions like Annamalai University, Mudra Institute of Communications have taken licenses and gone on air till date. Reacting to the situation, Government once again referred the FM issue to a group of ministries in October 2005. To provide guidelines for licensing

The first phase of private sector involvement in FM radio broadcasting was launched by Ministry of Information and Broadcasting, Government of India vide its notification in year 1999. The objective behind the scheme was to attract private agencies to supplement the efforts of All India Radio by operationalizing FM radio stations that provide programs of relevance with special emphasis on local content, increase content generation and improve quality of fidelity in reception. During phase-I, total 108 channels were offered to private agencies in 40 cities. One channel in each of these cities was also earmarked for educational content. However, only 21 private channels could get operationalized during this phase. These 21 FM radio channels have large acceptability from the listeners.

Based on the experience of phase I, Government introduced phase II scheme with certain modifications on 13$^{th}$ July 2005. In this phase 337 channels were put on bid encompassing 91 cities. Letters of Intent (LOI) were issued to 245 channels and 136 channels have become operational till now. Recently government vide its notification dated 8$^{th}$ June 2007 invited bids for 93 vacant slots and four new channels in Dehradun.

It is expected that private FM radio broadcasting will soon be extended covering 92 cities in total. Nationally, many of the current FM broadcasters, including the Times of India, Hindustan Times, Mid – Day and BBC are established media institutions in the country, and are making a strong pitch for news on FM, which is currently limited to nationalized stations only. Private FM stations are allowed to rebroadcast news from All India Radio, as long as they do so without any changes or additions. The Supreme Court of India on 17 October 2013 issued a public interest litigation to the central government requesting that the rules should be changed to allow FM stations to broadcast news reports As of December 2018, there are more than 369 operational private radio stations in more than 101 cities and towns across India. The Government of India owned All India Radio has about 450 FM stations covering 39% of the area and 52% of the population of India.

FM Radio is one of the preferred mode of entertainment among youth and adults across the nation. The variety offered by various FM Radio stations in local languages is welcomed by the masses. It has also evolved as a potential medium for local businesses to expand their reach through radio advertisements. Ministry of Information & Broadcasting is also utilizing Private FM Radio as a platform to reach the masses for furthering the developmental agenda of the Government. During the Covid-19 pandemic the private FM Radio stations have made laudable efforts to sensitize the populace on getting vaccinated and on adopting Covid appropriate behavior such as wearing masks, keeping 2 yards distance and practicing hand hygiene etc. The pro-bono campaign by FM radio channels in the fight against Covid-19 by promoting vaccination and sensitizing the masses, especially in the identified high-risk districts, tremendously helped in containing the spread of coronavirus and deserves praise from all quarters. Private FM radio channels have been operationalized in Leh and Kargil of the UT of Ladakh and at Bhaderwah, Kathua and Poonch of the border areas of the UT of J&K. As on March 30, 2022, 386 FM Radio channels are operational in 113 cities across the country spread across 26 States and 5 Union Territories

**Community Radio**:

The expression Community Radio has been defined in different ways. It has been called a local radio, people's radio, democratic radio, and so on.

- According to Lewis (1995): "The community radio is a form of local radio which defines itself as an autonomous entity and relies on the community for its survival without any commercial aims or objects."
- According to UNESCO, Community radio is 'a medium that gives voice to the voiceless, that serves as the mouthpiece of the marginalised and is at the heart of communication and democratic processes within societies'.

Community Radio implies a range of terms like “alternative‟, “radical‟ or citizen radio. Traditionally in sociology, a “community‟ is defined as a group of interacting people living in a common location. Community radio is often built around concepts of access and participation, and so the term “community‟ may be thought of as often referring to geographical communities based around the possible reach of the signal, i.e., the people who can receive the message, and their potential to participate in the creation of such messages. It has come to be known as the 'narrow casting' as opposed to 'broadcasting'. The introduction of the community radio is a milestone not only in reaching out to the remotest area but also persuading the citizen to share in the vision and excitement of development. With the avowed objective of developing itself as community broadcasting, the local radio strives to demolish the division between the broadcaster and the audience and serve as a link between the citizen and the extension agencies. In course of time, these community radio stations would act as a catalytic agent in galvanizing the local community into action for their own development.

Community radio is a type of radio service that offers a third model of radio broadcasting beyond commercial and public service. Community stations can serve geographic communities and communities of interest. They broadcast content that is popular and relevant to a local/specific audience but which may often be overlooked by commercial or mass-media broadcasters. Community radio stations are operated, owned, and driven by the communities they serve. Community radio is not-for profit and provides a mechanism for facilitating individuals, groups, and communities to tell their own diverse stories, to share experiences, and in a media rich world to become active creators and contributors of media. In many parts of the world, community radio acts as a vehicle for the community and voluntary sector, civil society, agencies, NGOs & citizens to work in partnership to further community development as well as broadcasting aims. Modern-day community radio stations often serve their listeners by offering a variety of content that is not necessarily provided by the larger commercial

radio stations. Community radio outlets may carry news and information programming geared toward the local area, particularly immigrant and minority groups that are poorly served by other major media outlets.

In India, this concept can be effectively harnessed keeping in view the variety in region, background, culture, language, education and economic status. Community radio stations can be used to project and reflect the needs, desires, problems, joys and sorrows of a society clearly defined within a limited area. For example, the need to construct a new road, remove stagnant water, put down gang warfare or whatever problem is being faced by the people in a specific area, could be dealt with in a meaningful way, Fruitful negotiations could be held by the affected people with area development workers, local authorities and voluntary agencies. Similar background of, the people facilitate problem solving, and imparting instructions on various development related issues. The mainstream media is unable to cater to the true information needs of the community, as it is primarily market driven and run with profit maximizing motive. Hence, the question of alternative media comes, which definitely has to have space in terms of localization of content, participation and involvement of the community. Generally speaking, after the television appeared on the scene, radio listening has declined all over the world. Hence, radio had to change its style of functioning in order to meet the challenge from television.

A lot of importance is given to broadcasting at the local or the grassroots levels in most countries. Though this local or community radio movement started in the 1960s and the 1970s in western countries, it reached the developing countries only in the 1980s and the 1990s.In India the campaign to legitimize community radio began in the mid-1900s, soon after the Supreme Court of India decreed in 1995 that “airwaves are public property.” All India Radio is the state monopoly broadcasting organization in India. It’s centralized broadcasting and bureaucratic approach prevents people’s large-scale participation in broadcasting. The Chanda and Verghese enquiry committees had suggested the introduction of local radio stations with enlarged participatory approach all over India. However, the Government of India decided to start local radio stations during the sixth five-year plan only. Therefore, in some places, local stations were started on an experimental basis. Community Radio is a new concept in broadcasting in India. Each of the stations serves a small area, providing utility services reaching right into the heart of the community which uses the microphone to reflect and enrich its life

and artistic expression. The first experiment in local/community radio was conducted in Nagercoil, Tamil Nadu. The experiment was launched on October 30, 1984. The main objective of this station is to support the development of socio-economic and cultural objectives of the local people. Besides providing information, education and entertainment this local radio station disseminates information relating to government policies and programmes extensively and motivates the people to participate in the national endeavor for integrated development of the country. Other experiments have been carried out in rural areas of Bangalore, Karnataka and Hyderabad, Andhra Pradesh. Several NGOs use local radio to further their development activities. Chetana (Kolkata) and Ravi Bharati (Patna), for instance records their programmes on adult education, in the field and using local talents.

In 2006, the Government of India notified new community radio guidelines, which permitted NGOs and other civil society organizations to own and operate community radio stations. By 2008, the ministry of Information & Broadcasting, Government of India, had received 297 applications for community radio licenses, including 141 from NGOs and other civil society organizations, 105 from educational institutions and 51 for "farm radio" stations to be run by agricultural universities and agricultural extension centers. Of these, 107 community radio stations were cleared for licensing through the issue of Letters of Intent. Thirteen Grant of Permission Agreements (GOPA) were signed with license applicants under the new scheme. Soon after, there were 38 operational community radio stations in the country. Of these, two are run by NGOs and the rest by educational institutions.

The first community-based radio station, licensed to an NGO was launched on 15th October 2008- "Sangham Radio" in Pastapur village, Medak district, Andhra Pradesh. Sangham Radio, which broadcasts on 90.4 MHz, is licensed to Deccan Development Society (DDS), an NGO that works with women's group in about 75 villages of Andhra Pradesh. The second NGO-led community radio station in India was launched on 23rd October 2008 in Madhya Pradesh. Named „Radio Bundelkhand" after the Bundelkhand region of central India where it is located, the radio station is licensed to the Society for Development Alternatives (DA), a Delhi-based NGO. According to the Ministry of Information & Broadcasting, 47 community radio stations were operational in India by 1st November 2009, including 45 campus- based stations and two community radio stations run by NGOs. By December 2009, the number of community

radio stations run by civil society groups had shot up, including Sangham Radio, Radio Bundelkhand, Mann Deshi Tarang (Satara, Maharashtra), Namma Dhwani (Budikote, Karnataka), Radio Mattioli (Wayland, kerala), Kalanjiam Samuga Vanoli (Nagapattinam, Tamil Nadu).

Today more than 160 community radio stations are functioning in various states of India. By 4th December 2009, the Ministry of Information & Broadcasting had issued GOPA for 62 community radio stations. Most of the GOPAs were issued to educational institutions. For instance, among the campus-based community radio stations started in 2009, SARANG 107.8 is one in Karnataka, when few others have received SACFA (Standing Committee Clearance for Frequency Allocation). SARANG 107.8 is run by St Aloysius College, Mangalore. Symbolically, the name implies "all colours" of Mangalore signifying the union of various social, religious, linguistic communities and their harmonious existence. Community radio in India has many advantages over All India Radio and Private FM. Programmes nearly always in the local languages deal with local issues involving ordinary people so that villagers and town folk understand what they are about. Just hearing themselves on radio is an empowering experience for many of the marginalized sections in society. In India farmers, tribals and women identify strongly with community radio. The local communities of farmers, fisher folk, medical/legal experts, students, workers contribute regularly to this radio. As such health and hygiene, feedback pertaining to agriculture and fisher folk issues, road safety, water conservation, rain water harvesting, folk culture and life, as well as entertainment by local residents and students are the hallmark of this radio.

**Models of community radio**

Philosophically two distinct approaches to community radio can be found though the models are not necessarily mutually exclusive. One stresses service or community-mindedness, a focus on what the station can do for the community. The other stresses involvement and participation by the listener. The service model localism is often prized, as a third tier, can provide content focused on a more local or particular community than larger operations. Sometimes, though, the provision of syndicated content that is not already available within the station's service area is seen as a desirable form of service. Within the access or participatory model, the participation of community members in producing content is seen as a good in itself.

Community radio is confined to a small geographical area. It depends on low power transmission covering not more than 20-30 km radius. It serves a community which uses common resources for livelihood, has common development issues and concerns, which are relatively localized, nevertheless connected to national and regional development goals. The concept of community radio developed in the West as an alternative to or a critique of the mainstream broadcast media. Tracing its origins in Europe in the 1960s and 1970s, McCain and Lowe (1990) found "swashbuckling entrepreneurs boarded the airwaves illegally and seized as much of the audiences as they could carry away from the treasure chest monopolies controlled by the State with its public service model of broadcasting." Thus, pirate stations have been a major factor in motivating governments and national broadcasting systems to introduce legitimate local radio in Europe.

**Advantages of Community Radio**

The community radio projects were mostly associated with externally funded development projects which were influenced by the discussions and inclusive concepts of participatory communication for sustainable development and new understanding of communication as a two-way process rather than just communicating 'to' the listener.. The community was treated as the social space within which participation and two-way communication process would occur. This reinforced the need for planning communication strategies to catalyze development efforts in the immediate communities.

- Communities are not monolithic units. They consist of people with different positions, individual/community priorities and varied approaches to their diverse questions and their solutions. There are also different levels of connectors and catalysts within communities. The community radio provides a platform for all segments of population to discuss common issues from different viewpoints in a positive atmosphere.
- All members of the community have to discipline themselves when participating in the programmes of community radio. They are expected to follow certain norms prescribed by the code of conduct of the radio station. In effect, community radio trains the community members in a very practical way for democratic behaviour.

- The community radio mode provides opportunities to project and discuss the community's common issues, helps promote a sense of belonging among community members and strengthens the community bond among individual members. Thus the objective of community radio programming is to promote democratic discussions and a platform for expression of divergent view points.
- Community radio can facilitate contextualising national development programmes within the immediate community and taking national development goals as close as possible to the intended beneficiaries. Through community radio, members are able to feed-forward on local development concerns, giving an opportunity for development agencies and authorities to get involved in a constructive dialogue on development priorities at local levels.
- Similarly, the community radio provides opportunities to the community to make reiterative evaluation of programme implementation and eventually to make development inputs more relevant and efficient. This transparent process makes the community rely more on an integrated national system in which the degree of power sharing between the centre and the periphery is understood by each other.
- The ability of the communities to be involved in shaping programme implementation at the grassroots levels is well assured. A regular community dialogue and feedback facilitates continuous improvement in programme delivery and makes the radio centre more responsive.
- At the same time, community radio helps facilitate self-reliance by mobilising resources readily available with the community. They can analyse their problems and propose their own solutions. This confidence makes them consider themselves as a part of the system they belong to. The very recognition that they have the possibility to influence national policy implementation at grassroots levels makes them feel a part of an inclusive nationhood.

Community radio operations have distinct characteristics which differ from commercial and national Public Service Broadcasters (PSB) in regard to its mission and service. Community radio does not compete with commercial and PSB, rather plays a complementary role. But primarily, community radio is operated by and for the community and owned by the community itself. It is an empowering tool for the

community. A nation consisting of empowered communities is more secure as they can make an equitable contribution to nation building.

The advent of low-cost low-power EM transmission and downsizing of production equipment and the experiences in different parts of the world provided impetus for community radio. Some initiatives were taken to make Community radio as a potential participatory and two-way communication tool to support development in rural societies of developing countries. UNESCO supported community radio projects in Homa-bay in Kenya, and Mahaweli in Sri Lanka, in the early 1980s are among some of the earlier efforts in this direction. But, given the fact that the countries were not yet ready to relinquish their broadcasting monopolies, these early initiatives had to be carried out within the Government-owned broadcasting systems.

**Mahaweli Community Radio: Sri Lanka**

The first Asian community radio was established at Girandumkotte in Sri Lanka in 1986 under the Mahaweli Community Radio project. In fact, the project was started in 1980 as a community programme service, serving the Mahaweli settlements under which nearly 60,000 families were resettled downstream the Mahaweli River. The purpose of this community radio project was to cater to the needs of the newly-settled families. It aimed to help them exchange their settlement experiences, learn new skills from each other, give timely information on day-to-day activities and help in catalyzing development in the new communities. It was a new experience where both young and mature members of the settlers' families functioned as volunteer broadcasters. They identified various settlement issues, animated the community through their own programmes, much of which also related to cultural expressions which they brought from their place of origins. Lively interaction between settlers and field officers responsible for various settlement administration matters were broadcast over the community radio.

These broadcasts enabled policy makers and senior officials responsible for settlements to learn about problems and prospects of the settlements. It also helped to establish an all-inclusive decisions-making process to solve many important issues such as water distribution, marketing avenues, health, education, etc. The Mahaweli community radio project of Sri Lanka in fact was administratively under the national broadcaster, Sri Lanka Broadcasting Corporation. The unique feature of the Girandumkotte community radio system was the airing of the volunteers' produced

programmes. There were the three expert producers assigned to the station by the Sri Lanka Broadcasting Corporation. They were all fresh recruits, specifically trained for community broadcasting and were therefore not highly influenced with the ideas of the so-called professional broadcasting or commercial programming of the urban centres. They acted as technical consultants and trainers of the volunteer broadcasters.

**Thambuli Community Radio: The Philippines**

The first truly community-owned and operated Asian community radio stations were established in the Philippines with UNESCO-supported Thambuli Community radio project. The "Thambuli Community Radio Project" has set up a management and training team that co-operates with communities to organise independent community radio stations in less developed rural areas. So far, twenty-two community radio stations have been established in different rural communities. In the project, the thrust is on the local communities to build the radio station. Through focus group discussions, they set the guidelines for the broadcasters; they organise the radio team from all sectors of the village. All team members volunteer to share work. The project provides equipment, training, facilitates research and helps in identifying community development schemes. Devoid of commercial or sectarian interests, these small radio stations help strengthen the democratic process by providing access to different viewpoints, build tolerance and help animate the local development efforts. For the communities involved, there is a deep sense of pride of being the masters of their own communication facility that allows correlating their activities with the wider national development goals.

**Radio Sagarmatha: Nepal**

Another independent community radio movement in Asia began in Nepal. Radio Sagarmatha is Nepal's first independent community broadcasting station and represents South Asia's first effort at "independent community radio." The Sagarmatha radio station was established with financial and technical assistance provided under UNESCO's International Programme for the Development of Communication (IPDC). . Under Nepal's National Communication Policy Act (1993), a special task force, Radio Sagarmatha prepared the guidelines for the radio project. Private sector participation in FM broadcasting is one major provision of this act. Radio Sagarmatha has been on air daily on 102.4 FM with its innovative combination of educational, informative and entertaining programming. Radio Sagaramatha's programmes concern vital issues

affecting the everyday lives of the citizens of Nepal's capital Kathmandu and its environments. Radio Sagaramatha's programmes have looked at Kathmandu's growing problems such as air pollution, urbanization and its impact on heritage sites, tourism, threat of HIV / AIDS and garbage disposal. Radio Sagaramatha serves the ethnic, religious and linguistic diversity of over two million people around the Kathmandu valley

Community broadcasting is a relatively new concept in Nepal. Radio Sagaramatha's listeners are mostly urban citizens of Kathmandu which is the nation's social, economic and political center. Thus, the radio is dealing with an intelligent, informed community. This listener profile is both a challenge as well as an opportunity. Getting attention of this audience demands programming that is competitive, comparable and superior to what already exists. It is an opportunity, because Sagaramatha is dealing with a public that has always influenced Nepal's political and economic decision-making. Thus, the community radio is also in a position to influence change. This environment shapes Radio Sagaramatha's mission. Nepal now has a strong community radio movement with nearly six community radio stations in different parts of the country. Some of them have been established by people who have formed in to community co-operative societies, deemed to be a good model to ensure community ownership.

**Community Radio policy in India**

Community Radio Policy in India, guidelines provided by Ministry of Information and Broadcasting, Government of India. In December 2002, the Government of India approved a policy for the grant of licenses for setting up of Community Radio Stations to well established educational institutions including IITs/IIMs. The matter has been reconsidered and the Government has now decided to broad base the policy by bringing 'Non-profit' organizations like civil society and voluntary organizations etc. under its ambit in order to allow greater participation by the civil society on issues relating to development & social change. Basic principles of Community Radio policy guidelines in India are provided by Ministry of Information and Broadcasting. An organization desirous of operating a Community Radio Station (CRS) must be able to satisfy and adhere to the following principles:

- It should be explicitly constituted as a 'non-profit' organisation and should have a proven record of at least three years of service to the local community.

- The CRS to be operated by it should be designed to serve a specific well-defined local community.
- It should have an ownership and management structure that is reflective of the community that the CRS seeks to serve.
- Programmes for broadcast should be relevant to the educational, developmental, social and cultural needs of the community.
- It must be a Legal Entity i.e.; it should be registered (under the registration of Societies Act or any other such act relevant to the purpose).

**Transmission and power range of Community Radio stations in India**

- CRS shall be expected to cover a range of 5-10 km. For this, a transmitter having maximum Effective Radiated Power (ERP) of 100 W would be adequate. However, in case of a proven need where the applicant organization is able to establish that it needs to serve a larger area or the terrain so warrants, higher transmitter wattage with maximum ERP up to 250 Watts can be considered on a case-to-case basis, subject to availability of frequency and such other clearances as necessary from the Ministry of Communication & IT.
- The maximum height of antenna permitted above the ground for the CRS shall not exceed 30 meters. However, minimum height of Antenna above ground should be at least 15 meters to prevent possibility of biological hazards of RF radiation.
- Universities, Deemed Universities and other educational institutions shall be permitted to locate their transmitters and antennae only within their main campuses.
- For NGOs and others, the transmitter and antenna shall be located within the geographical area of the community they seek to serve. The geographical area (including the names of villages/institution etc.) should be clearly spelt out along with the location of the transmitter and antenna in the application form.

## Unit-3 – History and Development of social media

### Origin and Growth of Internet

The Internet started in the 1960s as a way for government researchers to share information. Computers in the '60s were large and immobile and in order to make use of information stored in any one computer, one had to either travel to the site of the computer or have magnetic computer tapes sent through the conventional postal system. Another catalyst in the formation of the Internet was the heating up of the Cold War. The Soviet Union's launch of the Sputnik satellite spurred the U.S. Defense Department to consider ways information could still be disseminated even after a nuclear attack. This eventually led to the formation of the ARPANET (Advanced Research Projects Agency Network), the network that ultimately evolved into what we now know as the Internet. ARPANET was a great success but membership was limited to certain academic and research organizations who had contracts with the Defense Department. In response to this, other networks were created to provide information sharing.

January 1, 1983 is considered the official birthday of the Internet. Prior to this, the various computer networks did not have a standard way to communicate with each other. A new communications protocol was established called Transfer Control Protocol/Internetwork Protocol (TCP/IP). This allowed different kinds of computers on different networks to "talk" to each other. ARPANET and the Defense Data Network officially changed to the TCP/IP standard on January 1, 1983, hence the birth of the Internet. All networks could now be connected by a universal language.

When we think of the Internet we often think only of the World Wide Web. The Web is one of several ways to retrieve information from the Internet. These different types of Internet connections are known as protocols. You could use separate software applications to access the Internet with each of these protocols, though you probably wouldn't need to. Many Internet Web browsers allow users to access files using most of the protocols. Following are three categories of Internet services and examples of types of services in each category.

**File retrieval protocols:** This type of service was one of the earliest ways of retrieving information from computers connected to the Internet. You could view the names of the files stored on the serving computer, but you didn't have any type of graphics and

sometimes no description of a file's content. You would need to have advanced knowledge of which files contained the information you sought.

**FTP (File Transfer Protocol):** This was one of the first Internet services developed and it allows users to move files from one computer to another. Using the FTP program, a user can logon to a remote computer, browse through its files, and either download or upload files (if the remote computer allows). These can be any type of file, but the user is only allowed to see the file name; no description of the file content is included. You might encounter the FTP protocol if you try to download any software applications from the World Wide Web. Many sites that offer downloadable applications use the FTP protocol.

**Web Journalism, Web Portals**

Journalism has changed rapidly in the late 20th and early 21st centuries. The traditional ideal of journalism was for reporters to serve as independent sources, attempting to deliver the news in a fact-based, objective manner. While this tradition remains intact in some news avenues, increased access to technologies has led to the proliferation of citizen and activist journalists who openly have a bias or point of view, but still attempt to promote that perspective through a lens that includes fair framing, editing, and reporting. Some also take advantage of these technologies to advance propaganda under the guise of news. In addition, the internet has allowed for all of us to become authors: Anyone can create a blog and put an opinion out into the world, where it can go viral without any fact-checking or editing. Journalists in the digital age must operate in a world where the news cycle moves faster. As a result, striking a balance between timely and in-depth reporting is often more difficult. o facilitate speedy, accurate reporting, modern journalists use various recent inventions and innovations:

- **Internet:** Before the digital age, reporters had to either call in their stories or drive to the newsroom to type it out, and then submit it to their editors; after that, the story would have to find its way to the printing press. Now, the internet means journalists can file stories on location from a phone or laptop, allowing organizations to get breaking news on their websites within minutes of it happening.
- **Specialty software**: Modern programs and apps allow journalists to do everything from video editing to graphics work, research, and transcription from the comfort of their living rooms.

- **Videoconferencing software:** Applications like Zoom and Google Meet allow journalists to conduct interviews and staff meetings remotely.
- **Smartphones:** Arguably the most important tool in modern journalism is the smartphone, most commonly iPhones and Android devices. Capable of shooting images and video, recording audio, accessing the internet, and more, journalists can produce professional work using nothing other than their smartphones.
- **Social media:** Journalists use social media networks, such as Twitter, Instagram, and Facebook, to promote their work, stay on top of breaking news, seek sources, and interact with the public.
- **Digital recorders and transcription services:** In the early days of modern journalism, reporters had to rely on shorthand to accurately quote a subject, not an easy task when listening to a politician's speech or a star player's postgame interview. Now, recorders that cost less than $100 can easily record, store, sort, and play back dozens of hours of audio on a single charge, and advanced voice-recognition software can generate transcripts from audio files with increasing accuracy.
- **Digital cameras (dual purpose):** When cameras were film-based only, journalistic photography was an expensive, time-consuming practice reserved almost solely for professionals. Now, with the proliferation of digital and smartphone cameras, almost everybody has a dual-purpose device that can take both high-definition photographs and video. Most professionals still rely on more advanced digital single-lens reflex (DSLR) cameras and newer mirrorless digital cameras, which come with interchangeable lens systems that allow the cameras to shoot everything from close-ups to a football field far away.

The web, at the primary stage was used for official and commercial purposes only. But in due course of some time, the commercial web site owners diverted their attention for other services also which includes sending of knowledge. At first, the web browsers started showing some news highlights scrolling on the pc screen, below the foremost themes. In due course of sometime the instant news were highly appreciated by the users and became very fashionable. Therefore the pc elites planned to start out full-fledged newspaper portals which addressed news as their primary product. For this purpose they appointed programmers for sending news items at the internet site, editors to ascertain the contents, reporters for collection of stories and other personnel like technical writers, copywriters and related posts. Thus gave birth to a replacement

kind of journalism mentioned because the online journalism. "The newspaper arrives one morning, but something is missing. There's no delivery person tossing the folded papers into dimly lighted driveways, no familiar think. In fact, there is no paper in the smallest amount. This newspaper is electronic.-a digitalized blend of text, graphics, color photos, sounds and full motioned video dancing across a book-size".

The Internet is known as the web because the virtual route of internet connection is so complex that it's kind of a spider web with plenty of connections and interconnections. There are various nomenclatures of web journalism including the online Journalism, e- Journalism, Online journalism or e-newspaper. The format within the e-newspaper is analogous thereto of the regular newspaper and thus the activities finished input, processing, production and circulation of newspapers online are called web journalism. There are news agencies, reporters, editors and thus the owners, almost like that of a printed newspaper. But in web journalism the owners are called the hosts, the editors are called content writers and thus the content developers, the reporters are called online contributors or online reporters. The news agencies are sometimes same. They also subscribe the regular news agencies, which even have their Internet errs and content services.

Web journalism entered India about twenty two years ago. Initially, it had to affect the pressures posed by the post-liberalization era. The deteriorating plight of web journalism led one to question its very survival. But some companies decided to remain it out, come rain or shine and availed, during the quantity 2000- 2002, the services provided by the search engines like Google. Thereafter, different websites like Yahoo, Google, Indiatimes and similar portals started causation news on-line. The net revolution started shortly thenceforth, with newspapers launching their net editions. With magnified use of computers and broadband, internet journalism has fullgrown by leaps and bounds. People, World Health Organization cannot access TV, radio and newspapers; keep themselves updated through the e-editions of newspapers. With increase in mobile services, that provides property to the web through GPRS, the role of internet journalism has become important. Though the country possesses to beat the barriers expose by inadequate and poor quality power, high rentals related to broadband services, the affordable computers have supported the dissemination of Internet-based news. Foreign majors like Yahoo, Google and MSN additionally compete

the role of anchor. These portals additionally recognized the importance of Hindi and different regional languages.

The regional newspapers have additionally started their portals for the users. Aside from the Hindi language newspapers of just about each scheduled language have their on-line editions. The linguistic purity related to internet journalism remains a debated topic. It ought to be unbroken in mind that news is browse from a newspaper, detected over radio and viewed on electronic media. However with internet journalism we'll browse, hear and take into account news, all at an equivalent time. E-journalism is probably an awfully spectacular medium. However it's not right to infer that internet journalism involves piece of writing and writing of stories alone. If we glance into the contents of these news portals we'll find that, the authorities aren't so serious about the news items. Some portals like Rediff.com and Sify.com are among the few internet sites in India which have some original news contents. But during a number of the portals the primary content is diluted. However, such portals are good within the short run, but are poor players within the top of the day. Websites are assisted by news agencies associated with the print and electronic media. But true websites are peopling that boast of dedicated teams of reporters and journalists

**Online News Papers – e-Papers**

**Online journalism** is defined as the reporting of facts produced and distributed via the Internet . As of 2009, audiences for online journalism continue to grow. In 2008, for the first time, more Americans reported getting their national and international news from the internet, rather than newspapers, and audiences to news sites continued to grow due to the launch of new news sites, continued investment in news online by conventional news organizations, and the continued growth in internet audiences overall, with new people discovering the internet's advantages for convenience, speed and depth However, the professional online news industry is increasingly gloomy about its financial future. Prior to 2008, the industry had hoped that publishing news online would prove lucrative enough to fund the costs of conventional newsgathering. In 2008, however, online advertising began to slow down, and little progress was made towards development of new business models. The Pew Project for excellance in Journalism describes its 2008 report on the State of the News Media, its sixth, as its bleakest ever.

Despite the uncertainty, online journalists are cautiously optimistic, reporting expanding newsrooms. They believe advertising is likely to be the best revenue model supporting the production of online news.

An early leader in online journalism was The News & Observer in Raleigh, noorth Carolina Steve Yelvington wrote on the Poynter Institute website about Nando, owned by The N&O, by saying "Nando evolved into the first serious, professional news site on the World Wide Web -- long before CNN, MSNBC, and other followers." It originated in the early 1990s as "NandO Land". Many news organizations based in other media also distribute news online, but the amount they use of the new medium varies. Some news organizations use the Web exclusively or as a secondary outlet for their content. The online news association founded in 1999, is the largest organization representing online journalists, with more than 1,700 members whose principal livelihood involves gathering or producing news for digital presentation. The Internet challenges traditional news organizations in several ways. Newspapers may losecalssoified advertising to websites, which are often targeted by interest instead of geography. These organizations are concerned about real and perceived loss of viewers and circulation to the Internet.

The Internet has also given rise to more participation by people who are not normally journalists. A research study conducted by Pew Research Center for The People & The Press offer a classification of newspaper readers and the movement of online readers. Around 46% of Americans are classified as Traditionalist. This means these people rely on traditional media sources like TV, newspaper and radio. Those in the Integrator category rely on traditional media as well as increasing internet news. This is around 23% of Americans. This is category is mostly of the baby boomer generation. The category that is now seeing an increase is the Net-Newsers. This is around 13% of Americans who rely mainly on the internet for their news. This category is mainly a younger generation like college graduates and who able to access the internet access easily whether it be a lap top, Blackberry or iPhone. This is where the future of readers and newspapers are headed. Bloggers write on Web Logs or Blogs. Traditional journalists often do not consider bloggers to automatically be journalists. Other significant tools of on-line journalism are Internet forums, Discussion boards and chats, especially those representing the Internet version of official media.

An **online newspaper**, also known as a **web newspaper**, is a newspaper that exists on the World Wide Net or Internet either separately or as an online version of a printed periodical. Going online created more opportunities for newspapers, such as competing with broadcst Journalsim in presenting breaking news in a timelier manner. The credibility and strong brand recognition of well-established newspapers, and the close relationships they have with advertisers, are also seen by many in the newspaper industry as strengthening their chances of survival. The movement away from the printing process can also help decrease costs. Professional journalists have some advantages over blogs, as editors are normally aware of the potential for legal problems. Online newspapers are much like hard-copy newspapers and have the same legal boundaries, such as laws regarding libel, privacy and copyright, also apply to online publications in most countries, like in the UK. Also in the UK the Data Protection Act applies to online newspapers and news pages. As well as the PCC rules in the UK. But the distinction was not very clear to the public in the UK as to what was a blog or forum site and what was an online newspaper. In 2007, a ruling was passed to formally regulate UK based online newspapers, news audio, and news video websites covering the responsibilities expected of them and to clear up what is, and what isn't, an online publication.

News reporters are being taught to shoot video and to write in the succinct manner necessary for the Internet news pages. Many are learning how to implement blogs and the ruling by the UK's PCC should help this development of the internet. Journalism students in schools around the world are being taught about the "convergence" of all media and the need to have knowledge and skills involving print, broadcast and web. Some newspapers have attempted to integrate the internet into every aspect of their operations, i.e., reporters writing stories for both print and online, and classified advertisements appearing in both media; others operate websites that are more distinct from the printed newspaper. In the developing world online publishers are drawing large amounts of traffic and reaping the rewards of online publishing. The Guardian also leads the way with online news with a revolutionary website that trumps many other UK based newspaper websites. The oldest example of a online newspaper or in this case a weekly summary over the weekend's news is The Weekend City Press Review, set up in 1991 this was a pioneer in the online market. Popular in the city, this subscription based service continues to run today. But they are based on hard copy

reports and papers. See 'Hybrid newspapers' section of this page. Truly 'Online Only' newspapers and magazines started much later, with the exception of "News Report", an online newspaper created by Bruce Parrello in 1974 on the PLATO System at the University of Illinois.

Very few newspapers in 2006 will claim to have made money from their websites, which are mostly free to all viewers. Declining profit margins and declining circulation in daily newspapers have forced executives to contemplate new methods of obtaining revenue from websites, without charging for subscription. This has been difficult. Newspapers with specialized audiences such as The Wall Street Journal or The Chronicle of Higher Education, successfully charge subscription fees. Most newspapers now have an online edition, including, *The Los Angeles Times*, The Washington Post USA Today and The NewYork Times. The Guardian experimented with new media in 2005, offering a free twelve part weekly podcast series by Ricky Gervais.. Another UK daily to go online is The Daily Telegraph. In India, major newspapers went online to provide latest and most updated news from them *Times of India*, Hindustan Times, The Hindu, *Indian Express* and The New Indian Express. Some newspapers even provide E-Paper which is regarded as the digital replica of the newspaper. In Australia, some newspapers corporations offer an online version to let their readers read the news online, such as The Australian, Sydney Morning Herald. The Santiago Times operates out of Santiago, Chile and is 100% on line, editions are published in English covering Chilean current events daily Monday through Friday.

The true **online only paper** is a paper that does not have any hard copy connections. An example of this is an independent web only newspaper, introduced in the UK in 2000, called the South Port Reporter. It is a weekly regional newspaper that is not produced or run in any format other than 'soft-copy' on the internet by its publishers. As of 2009, the collapse of the traditional business model of print newspapers has led to various attempts to establish local, regional or national online-only newspapers - publications that do original reporting, rather than just commentary or summaries of reporting from other publications. An early major example in the U.S. is the Seattle Post – Intelligencer which stopped publishing after 149 years in March 2009 and went online only. In Scotland in 2010 Caledonian Mercury was set, as Scotland's first online-only newspaper with the same aims as Southport Reporter in the UK. In the US, technology news websites such as CENT, TechCrunch and ZDNet started as web

publications and enjoy comparable readership to the conventional newspapers. Also, with the ever-rising popularity of online media, veteran publications like the US News & World Report are abandoning print and going online-only.

There are some newspapers which are predominantly an online newspaper, but also provide limited hard copy publishing. An example is annarbor.com, which replaced the Ann Arbor News in the summer of 2009. It is primarily an online newspaper, but publishes a hardcopy twice a week. A news sheet is a paper that is on one or two pages only. Soft-copy sheets are like online newspapers, in that they have to be predominantly news, not advert or gossip based. These sheets can be updated periodically or regularly, unlike a newspaper. They must also like a newspaper be regarded as a news outlet by media groups and governments. The development of electronic newspapers, will very soon be supplementing hard-copy printed papers via electronic paper. In February 2006, the Flemish Daily, De Tijd, Antwerp announced plans to distribute an electronic-ink version of the paper to selected subscribers. This would have been the first such application of electronic ink to newspaper publishing.

**Social Networking Sites – Face book, Twitter**

Social networking was born one day in 1971, when the first email was sent. The two computers were sitting right next to each other. The message said "qwertyuiop'. In 1978, the BBS–or Bulletin Board System, was created. The BBS hosted on personal computers, where users need to dial in via the modem of a host computer, and exchanging data through phone lines to other users. The BBS was the first system that lets users interact with one another through the internet. It was slow, but it was a good start, and only one user could log in at a time. Later that year, the very first web browsers were distributed using Usenet, the earliest online bulletin board of the time. Usenet was created by Jim Ellis & Tom Truscott, where users posted news, articles and funny posts. Unlike the BBS and forums, Usenet did not have a 'central server'. This concept soon inspired the 'Groups' feature we know today; such as Yahoo! Groups, Google Groups and Facebook Groups.The first ever version of instant messaging was around 1988, called IRC or Internet Relay Chat. IRC was Unix-based then, and thus exclusive only to a few people. IRC was used for communications, as well as link and fire sharing. Soon the earliest copies of web browsers were distributed via Usenet.

In 1994, the first social networking site was created, Geocities. Geocities allowed the users to create and customize their own web sites, grouping them into different

'cities' based on the site's content. The following year, TheGlobe.com launched to public, giving users the ability to interact with people who have the same hobbies and interests, and to publish their own content. few years later, AOL Instant Messenger and SixDegrees.com launched in 1997. Instant messaging was born, giving users the freedom to chat with friends, and create a profile. AOL was probably the true precursor to today's social networking sites. The member profiles allowed its users to write a biography and share details about themselves. The profiles were searchable so people could look your profile up. It was the most innovative feature at that time. Other sites followed suit, creating social networking sites such as Classmates, Friendzy, Hi-5, just to name a few. Many were dating sites, while some were more niche driven. For example, Classmates allowed users to reconnect with old classmates, pals, bullies and crushes. It was a hit immediately, and today Classmates still has some 40,000,000 registered users.

SixDegrees.com is one of the earliest social networking sites, but did not gain the same success. The idea is based on the theory that people are separated by no more than six degrees from one another. It also allowed users to create profiles, make groups, search and invite friends. However, they encouraged members to invite more people to the site and had too many membership drives. Many people complained that the membership invitations were spam, filling up their websites with junk. It was sold in 2001 for $125 million but completely shut down the year after. Other niche-driven sites are AsianAvenue–established in 1997. By 1999, BlackPlanet was established and in 2000, MiGente.com for Hispanic servers. In the mid-1990s, the internet was at its full force. Yahoo! was established and Amazon had begun selling books. Every household was getting a PC. The World Wide Web showed no signs of slowing down. The first modern social networking site that we define today is Friendster. It also uses the degree of separation concept similar to SixDegrees, but dubbed it 'Circle of Friends'. Friendster was basically a dating site that wasn't all about dating. In the first 3 months, Friendster was able to amass 3,000,000 users. This means 1 in 126 web users were Friendster members at the time.

Soon MySpace followed suit, who cloned Friendster. It was launched after only 10 days of coding. It soon became more popular than Friendster. MySpace gave users more freedom than Friendster when it came to customization; with music, videos and a hipper online environment. It garnered 90 million registered users–and even if it is no

longer the top networking site in the world, it is still a favorite in the USA. The glory days of Friendster have passed, and its popularity is now surpassed by MySpace and Facebook. Today most of Friendster's traffic comes from Asia, especially Indonesia and the Philippines. Another site with considerable success is LinkedIn. It was established in 2003, and took a more professional and business approach to social networking. Other sites focused on getting dates, having friends, and reuniting with old classmates, but LinkedIn focused on building business contacts and professionals. Today LinkedIn has 30 million registered members.

Facebook came into the social networking scene a little bit later. It was launched in 2004, and the primary intent was to connect US college students. Facebook first began with Mark Zuckerberg's alma mater Harvard. At first it was exclusive, and you could only join in if you had been invited by a member of Facebook. The 'exclusive' feature proved to be a success, and in its first month, over half of the 19,500 Harvard students signed up. Two years later, the campus-only networking site became open to the public. In 2008, Facebook surpassed MySpace and Friendster as the leading social networking site. It now has over 150 million members around the globe.

## Unit – 4 – Contemporary issues of Mass media

### Growth of Mass media in India - Circulation, TRP's

The Indian Media and Entertainment (M&E) sector is expected to grow by 25% in 2021 and is expected to reach INR 1.73 trillion (US$23.7 billion) states **FICCI-EY report 'Playing by new rules'** launched today. With its current trajectory, the M&E sector in India is expected to reach INR 2.23 trillion (US$30.6 billion) by 2023 at a CAGR of 17%. In 2020 while television continued to remain the largest segment, digital media has overtaken print, and online gaming has overtaken a disrupted filmed entertainment segment. The Indian Media and Entertainment sector has degrown by 24% to INR 1.38 trillion (US$19 billion) in 2020. Digital media and online gaming were the only segments that grew in 2020 adding an aggregate of INR 26 billion. Other segments have degrown by an aggregate of INR 467 billion. While M&E as a sector has usually grown and often outperformed India's nominal GDP, the sector fell three times (3x) India's nominal GDP fall by 8% due to the discretionary nature of the spend. Subscription revenues however proved their mettle by holding up better than advertising revenues. The TV industry declined 13% from INR787 billion to INR685 billion in 2020. The largest M&E segment saw a 21.5% fall in advertising revenues in 2020 to INR251 billion on account of highly discounted advertising rates during the lockdown months. Subscription declined 7% to INR434 billion due to the continued growth of free television, reverse migration and a reduction in average revenue per user due to part implementation of NTO 2.0. Regional channels received 27% more ad volumes than national channels in 2020. Major sport leagues got postponed, but IPL provided a much-needed revival push in sports viewership. Smart TV sets crossed the five million mark and grew their base by around a million homes. With people spending more time indoors the overall time spent watching TV increased by 9% over 2019. Television segment revenues are expected to grow at a CAGR of 7% to reach INR847 billion by 2023 driven by increased base of subscribers as households continue to get televised. Growth will be driven by connected TVs which could cross 40 million homes by 2025 and free television could cross 50 million homes by then, thereby making core television a more massified product. The smart television will usher in an era of connected viewing which will enable viewers to interact with each other, as well as the broadcaster, through the content. The importance of regional and sports programming

will increase, driving up both ad rates as well as end-consumer package pricing, subject to regulatory action

In 2020 digital media grew by 6.5% to reach INR235 billion and is expected to grow at 22% CAGR to reach INR425 billion by 2023. Digital subscription grew 49% in 2020 to reach INR43.5 billion as the pandemic and the consequent lockdown reduced fresh content on television, online sports went behind a paywall and the pandemic forced much of the population for longer periods indoors. Paid OTT subscriptions crossed 50 million for the first time in 2020. Digital advertising stayed stable on the back of increased allocation of ad spends by advertisers who accelerated their investments in digital sales channels. SME advertisers continued to increase their spends on digital advertising and experimented more with online e-commerce platforms. Digital advertising is expected to outpace all other ad media by 2024 or 2025. The metrics that matter will change from monthly active users to daily active users, from audience numbers to engagement, loyalty and time spent, leading to platforms focusing on segmented audiences and community ownership. Newspaper digital products will increasingly go behind paywalls and it is expected to generate subscription revenues of INR4 billion by 2023. It is estimated that demand for original content will double by 2023 from 2019 levels to over 3,000 hours per year. The share of regional language consumption on OTT platforms will cross 50% of total time

Print has degrown 36% in 2020 due to the impact of COVID-19. Print's revenue declines were led by a 41% fall in advertising and a 24% fall in circulation revenues. English language and metro newspapers were hit harder and struggled to get back their circulation post the pandemic, while regional language newspapers recovered a larger portion of their lost circulation. Print companies implemented significant cost reduction measures to achieve between 25% and 40% efficiencies, a significant portion of which can continue in the years ahead. Many print companies started conducting digital versions of their popular IPs and entered the high-volume but lower value digital events business. ransformation in the print segment is expected to be in the areas of product realignment, revenue transformation, cost intelligence and digital demarcation. Print will need to focus on growing reach in its existing markets through a combination of identifying new micro-markets which are underpenetrated as well as forging bundle deals with direct to consumer aggregators like television, e-commerce platforms, OTT platforms, etc. Significantly, more industry-level shared services initiatives are expected

to ensure cost efficiencies. Publishers can also implement process automation for productivity improvement across key business processes. The focus will remain on strengthening the print segment's core capability to building communities but with a wider scope of offerings to them apart from just news.

While mass media struggled throughout 2022 to release itself out of disruptions confronted due to Covid-19 pandemic, it is presumed that the year 2023 will be devoted to accommodate in the changed social environment of 'new normal' evolving and implementing new strategies. The long lockdowns during the pandemic affected the media and entertainment sector like any other industry and business. However, three separate reasons contributed to the owes to make the situation complicated. First, unprecedented innovations in the field of technological advancement brought far reaching changes in production and distribution in various fields of mass media and the traditional business models could not accommodate to such developments. The crisis continued for three decades in the markets of developed nations and one to two decades old among the developing nations. The biggest huddle for the shift to digital media was marked by absence of successful revenue generation models. As a result, the urgency demanded by digital-first media policy could not be met.

The prevailing environment compelled consumers shift to digital platforms. Assessment of preferences and adoption pattern of individual consumers employing artificial intelligence and machine learning techniques for management of digital platforms started a new era in the consumer economics. Ordinary people started avoiding newspapers and television channels in presence of round-the-clock service provided by social media. Discarding opinion of the professional commentators on current issues, started relying on analysis by self or friends circle. An era of feudal attitude ended in media and entertainment industry.

Second, all forms of mass media : print, television and digital were developed with the advertisement-dependent business model. The model was evolved accidentally 200 years ago during Penny Press era in the United States for management of media economics solely depending upon advertisement revenue, discarding classic cost-for-value model for products sold in the market place.Rise of popularity in the digital platforms in the developed nations resulted in shift of advertisement spending from print and television into digital. But the problem that caused concern relates to advertisement spending did not reached digital mass media, but about 80 to 85 percent

immersed in social media 'Face Book', search engine 'Google' and e-commerce platform 'Amazon'.

Third, mass media platforms enjoyed supremacy in the spheres of political, cultural and social organizations for a long time and disregarded the essence of communication to be truthful, objective and non-partial. Media products available in different platforms were built with their own perspectives which is against natural justice and media ethics. Neglect to creativity resulted in negative effects in the long run. The standard of media products met with casualty due to inflow of power-brokers, money-minded and sycophant into media landscape. Major change in consumer behavior towards media products resulted during the pandemic. Many expected that the effects of pandemic will be temporary and pre-pandemic order will return within no time in post-pandemic period. But annual statistics for 2022 proved all such predictions wrong.

In a broad view, mass media passed through the first and second steps during 2020-21, while third and fourth steps were crossed during 2022. The last phase will be confronted during 2023. The logic clearly indicates that media and entertainment industry will adopt new models during 'new normal' of 2023. In the process few of the platforms will sink into oblivion, a few will opt for consolidation and others evolve five, ten or twenty-year-long projects employing their resources to overcome the huddles. Thus, 2023 will act as a year of change.

In the contemporary media ecosystem print medium confronted high casualties due to disruption. On one hand, advertisement revenue continue to fall among the newspapers and periodicals while on the other hand, subscription figures registered fast decrease. A researcher quoted newspaper circulation trend in Britain analyzing data gathered by 'Price Water-house Cooper' between 2017 and 2022. The total loss of circulation during past five years has accounted 45 percent and the trend may continue for next five years between 2023 and 2027 to reach 65 percent.

In many geographies it is difficult to collect dependable circulation figures of newspapers and the other print products. In such situations, it is taken for granted that the newspaper market figures of Britain may reflect in other markets with little variation. Data collected through newspaper hawkers in a tire–II city in Odisha showed that the highest circulated language daily decreased circulation from 10,000 copes to 6,500 copies, the second highest circulation reduced from 9,000 to 6,000 copies and the

third largest circulation from 8,000 copies sinked to 4,500 copies. In a rough estimate newspaper market in Odisha may have reduced to 45 percent during the past five years. If one will expect a further fall of circulation of newspaper to 65 percent during next five years, the situation definitely demands urgent intervention.

In the process of change in print media industry which includes newspapers, periodicals and books needs renewed editorial policy formulation which will drive the journey. Readership will increase only when the publications start presenting content those are more relevant, useful, personally important and interesting to the readers. It will require adoption of not only new editorial models, but also presentation and circulation formats. The new content management system has to ensure speed, flexibility, monetization and empowerment of editorial desk to achieve optimum results. It is time to abandon old habits and assumptions. Editorial policy construction will rely more on reader's than editor's perspectives. There is no dearth of patronage for niche content. The new readers will seek content tailored to their needs and desires.

Secondly, the monetization angle in editorial, production and circulation management will gain prominence during 2023. Experts predict that overall advertisement spend during 2023 will remain almost in a similar position compared to 2022, but continue to flow into other than mass media channels. It will result in turbulence, instability and uncertainty throughout 2023. It will compel print publications to concentrate upon reader revenue sources, such as subscriptions, membership, donation and events. Readership engagement will emerge as a new work segment.

Thirdly, the print media will be compelled to seek help of the advanced technological tools in problematic fields which include content generation, content evaluation, subscription sales promotion and print order management. For example, machine learning algorithms can calculate exactly how many copies will sell in news-stands which will protect the publisher from printed copy wastage. Similarly subscription drive, popularity measurement of articles, even content generation and make-up may also gather benefit through use of technology. In the past such type of facilities were inaccessible, but now available online everywhere for a small price on a piece-meal-basis. The trend will be a long term initiative, but publishers may start adoption beginning 2023.

All the available publication platforms may not be interested to fight against the disruptions. As a result, a good number of platforms may close business during 2023. The economic slowdown evident in the post-pandemic period is feared to grow further and the situation imposes restrictions on investments in mass media and entertainment industry.

**New technology and Mass media**

Today, the Media world is experiencing a serious overhaul, a shift in paradigm. The normal way in which people are accessing information, expressing views, forming opinions is changing fast. The usual sources of information like Newspapers, Radio and Television are getting replaced with new forms like Websites, blogs, pod casts, social networking sites etc. Today apart from reading, listening and viewing, people are also browsing, e-Mailing, chatting, networking in various innovative technological applications of Internet. These new forms of interactive communication technologies which evolved in the last part of the 20th century are termed as 'New Media'. New media is an emerging field of different forms of new generation electronic, digital, computerized, networked information and communication systems made possible through the applications of computer technology. The term is in relation to "old" media forms, such as print newspapers and magazines, which are static representations of text and graphics.

New Media can provide information, interaction between persons, groups, organizations virtually anywhere in the world at a low and affordable cost. New Media has evolved as an interconnected network of audio, video and electronic communication that will blur the distinction between Interpersonal and Mass communication. The new media are responsible for formation of virtual communities and groups who have similar interests and ideologies there by changing the patterns of human communication with expanding the interactivity by crossing physical boundaries, religion and nationality. It is a generic term for the many different forms of electronic communication that are made possible through the use of computer technology. The term is in relation to "old" media forms, such as print newspapers and magazines that are static representations of text and graphics. New media includes:

- Websites
- Streaming audio and video
- Ee- mail

- online communities
- Web advertising
- Virtual Reality environments
- Inernet Telephony
- Digital cameras
- Mobile Communication

The term ***broadband*** refers to a telecommunications signal of greater bandwidth, in some sense, than another standard or usual signal (and the broader the band, the greater the capacity for traffic). Different criteria for "broad" have been applied in different contexts and at different times. Its origin is in radio systems engineering, but became popularized after Media One adopted it as part of a marketing campaign in 1996 to sell their high speed data access. The slogan was "This is Broadband. This is the Way". The term has never been formally defined, even though it is used widely and has been the subject of many policy debates, and the FCC "National broadband Plan".

Broadband in telecommunications refers to a signaling method that includes or handles a relatively wide range (or band) of frequencies, which may be divided into channels or frequency bins. The wider or broader the bandwidth of a channel, the greater will be its information-carrying capacity. In radio for example, a very narrow-band signal will carry Morse Code; a broader band will carry speech; a still broader band is required to carry music without losing the high audio frequencies required for realistic sound production. A television antenna described as "broadband" may be capable of receiving a wide range of channels; while a single-frequency or Lo-VHF antenna is "narrowband" since it only receives 1 to 5 channels. In data communications a digital modem will transmit a data rate of 56 kilobits per seconds (kbit/s) over a 4 kilohertz wide telephone line narrowband or voice band.

Broadband in data can refer to broadband networks or broadband Internet and may have the same meaning as above, so that data transmission over a fiber optic cable would be referred to as broadband as compared to a telephone modem operating at 56,000 bits per second. However, a worldwide standard for what level of bandwidth and network speeds actually constitute Broadband have not been determined. Broadband in analog video distribution is traditionally used to refer to systems such as cable television, where the individual channels are modulated on carriers at fixed

frequencies. In this context, baseband is the term's antonym, referring to a single channel of analog video, typically in composite form with separate baseband audio. The act of demodulating converts broadband video to baseband video. However, broadband video in the context of streaming internet video has come to mean video files that have bitrates high enough to require broadband internet access in order to view them. Broadband video is also sometimes used to describe IPTV Video on demand.

**Narrowband** refers to a situation in radio communications where the bandwidth. It is a common misconception that narrowband refers to a channel which occupies only a "small" amount of space on the radio spectrum. The opposite of narrowband is wideband. In the study of wireless channels, *narrowband* implies that the channel under consideration is sufficiently narrow that its frequency response can be considered flat. The message bandwidth will therefore be less than the coherence bandwidth of the channel. This is usually used as an idealizing assumption; no channel has perfectly flat fading, but the analysis of many aspects of wireless systems is greatly simplified if flat fading can be assumed. Narrowband can also be used with the audio spectrum to describe sounds which occupy a narrow range of frequencies. In telephone, narrowband is usually considered to cover frequencies 300–3400 Hz. **Wireless Broadband** is a fairly new technology that provides high-speed wireless internet and data network access over a wide area.

Also called Mobile broadband, wireless broadband technologies include new services from companies such as verizon, Sprint, and AT& T Mobility, which allow a more mobile version of this broadband access. Consumers can purchase a PC Card., laptop card, or USB equipment to connect their PC or laptop to the Internet via Cell phone towers. This type of connection would be stable in almost any area that could also receive a strong cell phone connection. These connections can cost more for portable convenience as well as having speed limitations in all but urban environments

**Broadband Internet access**, often shortened to just broadband, is a high data rate Internet access—typically contrasted with dial –up- process using a modem. Dial-up modems are limited to a bitrate of less than 56 kbit/s and require the dedicated use of a telephone line-whereas broadband technologies supply more than double this rate and generally without disrupting telephone use. Although various minimum bandwidths have been used in definitions of broadband, ranging up from 64 kbit/s up

to 4.0 Mbit/s, broadband is defined as having download data transfer rates equal to or faster than 256 kbit/s,

Streaming is the technique for transferring data such that it can be processed as a steady and continuous stream. Streaming technologies are becoming increasingly important with the growth of the internet because most users do not have fast enough access to download large multimedia files quickly. With streaming, the client browser or plug-in can start displaying the data before the entire file has been transmitted. For streaming to work, the client side receiving the data must be able to collect the data and send it as a steady stream to the application that is processing the data and converting it to sound or pictures. This means that if the streaming client receives the data more quickly than required, it needs to save the excess data in a buffer. If the data doesn't come quickly enough, however, the presentation of the data will not be smooth. There are a number of competing streaming technologies emerging. For audio data on the Internet, the de facto standard is Progressive Network's *RealAudio*.

## Characteristics of New Media

Although there are several ways that New Media may be described, *The New Media Reader* edited by Wardrip-Fruin and Montfort defines New Media by using eight simple and concise propositions:

1. **New Media versus Cybe culture** - Cyber culture is the study of various social phenomena that are associated with the Internet and network communications (blogs, online multi-player gaming), whereas New Media is concerned more with cultural objects and paradigms (digital to analog television, iPhones).
2. **New Media as Computer Technology Used as a Distribution Platform** - New Media are the cultural objects which use digital computer technology for distribution and exhibition. e.g. (at least for now) Internet, Web sites, computer multimedia, Blue-ray disks etc. The problem with this is that the definition must be revised every few years. The term "new media" will not be "new" anymore, as most forms of culture will be distributed through computers.
3. **New Media as Digital Data Controlled by Software** - The language of New Media is based on the assumption that, in fact, all cultural objects that rely on digital representation and computer-based delivery do share a number of common qualities. New media is reduced to digital data that can be manipulated by software as any other data. Now media operations can create several versions

of the same object. An example is an image stored as matrix data which can be manipulated and altered according to the additional algorithms implemented, such as color inversion, gray-scaling, sharpening, rasterizing, etc.

4. **New Media as the Mix Between Existing Cultural Conventions and the Conventions of Software** - "New Media today can be understood as the mix between older cultural conventions for data representation, access, and manipulation and newer conventions of data representation, access, and manipulation. The "old" data are representations of visual reality and human experience, and the "new" data is numerical data. The computer is kept out of the key "creative" decisions, and is delegated to the position of a technician." e.g. In film, software is used in some areas of production, in others are created using computer animation.
5. **New Media as the Aesthetics that Accompanies the Early Stage of Every New Modern Media and Communication Technology** - "While ideological tropes indeed seem to be reappearing rather regularly, many aesthetic strategies may reappear two or three times...In order for this approach to be truly useful it would be insufficient to simple name the strategies and tropes and to record the moments of their appearance; instead, we would have to develop a much more comprehensive analysis which would correlate the history of technology with social, political, and economical histories or the modern period."
6. **New Media as Faster Execution of Algorithms Previously Executed Manually or through Other Technologies** - Computers are a huge speed-up of what were previously manual techniques. e.g. calculators. "Dramatically speeding up the execution makes possible previously non-existent representational technique." This also makes possible of many new forms of media art such as interactive multimedia and computer games. "On one level, a modern digital computer is just a faster calculator; we should not ignore its other identity: that of a cybernetic control device."
7. **New Media as the Encoding of Modernist Avant-Garde; New Media as Metamedia** - Manovich declares that the 1920s are more relevant to New Media than any other time period. Meta-media coincides with post modernism in that they both rework old work rather than create new work. New media avant-garde "is about new ways of accessing and manipulating information" (e.g. hypermedia,

databases, search engines, etc.). Meta-media is an example of how quantity can change into quality as in new media technology and manipulation techniques can "recode modernist aesthetics into a very different postmodern aesthetics."

User-generated content (UGC), also known as Consumer generated media (CGM) or user-created content (UCC), refers to various kinds of media content, publicly available, that are produced by end-users. The term user generated content entered mainstream usage during 2005 having arisen in web publishing and new media content production circles. Its use for a wide range of applications, including problem processing news, gossip, research reflects the expansion of media production through new technologies that are accessible and affordable to the general public. All digital media technologies are included, such as question-answer databases, digital audio blogging, podcasting mobile photography etc. In addition to these technologies, user generated content may also employ a combination of open source free software, and flexible licensing or related agreements to further reduce the barriers to collaboration, skill building and discovery. Sometimes UGC can constitute only a portion of a website. For example on Amazon.com the majority of content is prepared by administrators, but numerous user reviews of the products being sold are submitted by regular visitors to the site. Often UGC is partially or totally monitored by website administrators to avoid offensive content or language, copyright infringement issues, or simply to determine if the content posted is relevant to the site's general theme.

**Impact of COVID on Indian Media – Disruptive Communication**

According to the World Association of Newspapers and News Publishers, Indian publishers are fighting for revenues and drowning their publication houses. Direct ad sales have been affected because of social and physical distancing. A lot of rumors and misinformation related to the Novel Corona virus were spread on social media due to newsprint industries that suffered a lot in distribution to circulation. Newspaper delivery boys or hawkers refusing to step out due to fear of the local authority stopped on roads. According to the tweet of Saching Kalbag (2020) was saying there is no physical edition of the daily Hindustan Times in Mumbai because of tough restrictions aimed at preventing the spread of the contagious Corona virus and that made it difficult for newspapers deliver along with their distribution partners. The Lockdown of transportation of newspapers was a huge reason for slow circulation in the lockdown period. As a result, the print media across the whole country was disrupted. Regional

newspapers & publication houses were fully shutdowns on that time because many registered newspaper editors have not efficient printing press and they published their newspapers by private printing press owners. Readers were getting information available on digital platforms through electronic and web editions.

While the central government of India has declared and included print newspapers as an essential services category which was suffering due to the suspension of traffic. The Ministry of Information and Broadcasting has laid out steps to ensure the operational continuity of print and electronic media during the overall Covid- 19 outbreak. Newspaper industries were already troubling with high production costs before the pandemic Covid-19. Small and medium newspapers suffering to publish newspapers physical copy due to lack of income revenue generate. The print was the second-largest advertising medium in the country but presently huge shares of profit likely to be overtaken by digital forums in 2020. Today's younger generation or millennial loves to read news and information on their digital gadgets like cell phones, laptops, and tablets, etc. The challenge for India's newsprint industry is to keep retains its readers for physical newspaper editions along with digital news web portals. According to the Yash Porwal (2020), Indian newsprint industries are struggling with high-cost production and the central government's new customs duty which all add immense pressure. According to the Indian Readership Survey (IRS) those under 35 years, 56 percent identified as online readers compare to just 16 percent of the print medium. Regional and local publishers of the newsprint industry don't have enough facilities to publish news and incidents online through news portals and subscriptions. Most of the peoples of rural areas don't like to subscribe to regional or local newspaper portals. News portals of regional media firms have not able to get advertisements which are the backbone of income source of any media firm.

During the Covid-19 pandemic all public events, cultural events, and various sports competitions were either suspended or postponed. Pandemic made a standstill situation of the economic cycle which includes real estate, political events, special tournaments had stopped and the newsprint industry faced a huge and unimaginable financial crisis. According to the recent statistics which was released by the Indian Newspaper Society (INS) that newsprint industries have to bear the brunt loss of Rs. 4,5000 crore, in the beginning, two months country's lockdown of March and April 2020. INS also indicated that further losses may up to Rs. 15,000 crore in the upcoming

six to seven months. The prolonged economic slowdown will be decline advertisements revenue and ruin the business model of the newsprint industry. ABP news channel chief executive D.D Purkayastha said that newsprint advertisement revenue which shares 80 percent to 85 percent of total revenue is almost zero after post lockdown. Therefore Indian Newspaper Society (INS) has written a letter requesting the central government of India to waive the taxation which currently has a 5 percent customs duty and give government advertisements to all newspapers including small and medium newsprint industry. According to the Shemin Joy This preprint research paper has not been peer reviewed. Electronic copy available at: https://ssrn.com/abstract=3868829 Preprint not peer reviewed © 2021 IJRAR May 2021, Volume 8, Issue 2 www.ijrar.org (E-ISSN 2348-1269, P- ISSN 2349-5138) IJRAR21B1736 International Journal of Research and Analytical Reviews (IJRAR) www.ijrar.org 62 (2020), INS demands package for the print media in the face of unprecedented Corona virus crisis. INS President Shailesh Gupta has written a letter to Information and Broadcasting Secretary Ravi Mittal and he was saying by his letter that the newspaper industry is facing an "unprecedented crisis" without advertising revenue.

According to INS newspapers have given employment to almost 9-10 lakh peopled directly and 18-20 lakh indirectly. After a decline in advertisement revenue the newsprint companies of India working on how to minimize production costs and gain control over spending. The management authorities of the newspaper company decided to do pay cut-offs and minimum manpower to avoid unnecessary expenses. Many newspapers have suspended special editions and reduced the number of pages to compensate for the costs. 'The Hindu' group in India has suspended the print edition of 'Sportstar' which was the fortnightly magazine published since 1978. As tweeted by Hindustan Times journalist Abhishek Baxi on March, 20 (2020) that HT has put its weekend edition into its main publication. "HT is suspending the print edition for 2-3 weeks because the staff is working from home." According to Amrita Nayak Dutta (2020), The Delhi edition of Hindustan Times now consists only of 14 pages, down from over 20 pages. The Indian Express put its e-paper behind a paywall and has made it temporarily free of cost. Magazines also affected due to the Corona virus. Outlook magazine has temporarily suspended its print edition and only the weekly magazine's e-version is available to readers on its official website. Paper office said that media houses are facing losses of Rs. 5 crores to Rs. 10 crores per day. Mostly National and Regional

newspapers instructed their employees to work from home but thousands of journalists of print and electronic media have to work on the field. They have taken risks of their lives while reporting on Corona virus infection from visiting containment zones to hospitals. There is no insurance policy has given by the government of India for journalists.

All major newspaper groups showed exit doors to their employees and slashed the salaries due to the Covid-19 financial crisis. The Times Group announced salary cuts of its print publication employees. It said there will be a salary reduction between 5 and 10 percent from 1 April. The Hindu announced pay cuts for those employees whose earning above Rs. 6 lakh per year. Those employees earning from Rs. 6 lakh to 10 lakh per year would see a pay cut of 8 percent; Rs. 15 to Rs. 25 lakh is 16 percent; Rs. 35 lakh is 20 percent and the rest those earning above Rs. 35 lakh would see a cut of 25 percent. News channel NDTV too announced salary cuts between 10 and 40 percent from April 1, 2020, for the upcoming three months. The pay cut is applicable for those employees earning more than Rs.50,000 per month. English daily DNA, run by Essel Group had stopped printing after his company. Another English daily Star of Mysore has stopped publishing since 13 April. Raghav Bahal, founder of The Quint and Bloomberg Quint announced that Quint's business news website has terminated its television and sent 45 employees including producers, reporters, and tech support staff on indefinite leave without pay. Along with the print media, electronic media and digital web media have also shaken due to the pandemic. Now newspaper owners have appealed to the central government for help. Newspapers have not received many advertising bills yet from the government and they have demanded that the bills should be paid immediately.

- The newspaper industry has lost over Rs 4,000 crore and is likely to suffer further losses of up to Rs 15,000 crore in the next six to seven months if relief is not provided.
- The prospects of a prolonged economic slowdown and a decline in advertisement revenue have aggravated the weaknesses in the business model of the print industry, which has been hugely dependent on advertisement revenue.
- The news industry survived against all the odds in the past two decades with the digital onslaught and the rise of Twitter and Facebook. But with this crisis, the industry has entered uncharted waters

- India's top newspapers are trying to adapt in real-time, dropping online paywalls and offering free PDF versions of the print publication to try to keep their audiences intact. But none of that's helping earn revenues at a time the economy is in the doldrums and advertising is low.
- After the Great Recession of 2008, ad spending growth decelerated in India, and as in other parts of the world, younger audiences have moved to access their news digitally. But, he says, “the elite and the elderly still like the touch and feel of paper,” and they continue to be drivers of the industry in India. “It's not as if people stopped reading.”That's what makes the corona virus a particularly significant threat. It's the affluent neighborhoods that — fearing the spread from vendors or the newspapers — are turning away. And the elderly — loyal readers otherwise — are the most vulnerable against the virus.
- The main reason the media industry has been affected so severely is over fears of a sharp cutback in advertising expenditure by companies. Our print advertisement revenue, which is 80% to 85% of our total revenue, is almost zero post lockdown," said D. D. Purkayastha, chief executive of ABP.
- The Times of India, among the world's largest circulating English-language dailies, has shrunk to around 16 pages with supplements, compared with 40 plus pages previously, as ads from companies have stopped, said one Times employee.
- According to INS estimates, newspapers provide direct and indirect employment to almost nine to 10 lakh people and over 18-20 lakh people respectively.
- The 88-year-old Indian Express this month also announced pay cuts of up to 30% for some staff and warned of more sacrifices to come. NDTV too announced salary cuts between 10% and 40% from April 1 for three months. The pay cut is applicable for employees earning more than Rs 50,000 per month.
- The Quint has sent almost 50% of its staff on leave without pay besides enforcing pay cuts for the rest.

- The Times this week laid off its entire staff on Sunday magazine team. The Express Group informed its employees that the organization was going for a temporary salary cut.

Our newspapers were eternally on the lookout for short-cuts. Thus, when the economy was thrown open in the 1990s, a couple of them saw it as a great opportunity to grab windfall revenues from a plethora of consumer goods and durables flooding the market. But they needed to rapidly ramp up their subscription base and become more attractive to advertisers. They thus dropped cover price of the newspaper to as low as Re 1. This cheap subscription model, complete with gifts and other incentives gave them an instant boost in circulation. But it also locked the newspaper down to an eternally low cover price. To put this low pricing into perspective, a comparison in pricing of English language newspapers in India's neighborhood is an eye-opener. Dawn's (Pakistan) cover price is Rs 25 while The Island (Sri Lanka) is priced at Rs 30 per copy. Sri Lanka's Sunday Observer sells for a whopping Rs 60. On the other hand, India's market leader, The Times of India, is priced at Rs 4.50.

There is little doubt that this sort of predatory pricing has led to the print media being boxed into a corner. Had it increased its costs gradually, like toothpaste, cigarettes, beer or soft drinks (selling newspapers was often equated with selling toothpaste in the 1990s and 2000s), these papers would not have been in the state they currently find themselves. Any attempt at course correction and suddenly taking the price to a more equitable Rs 25 or 30 will almost certainly wipe out their subscription base. A long newspaper, like The Times of India, has 48 pages. The newspaper is sold for around Rs 5 and about 40 per cent is taken by distributors. The media organisation gets around Rs 2.40. Now each page costs Rs 0.25 to print and printing 48 pages costs Rs 12. A very conservative cost of paying employees and news agencies etc is Rs 3. So if newspapers are produced at Rs 15, how are they sold at Rs 5 and how is profit still generated? The answer is ad revenue. In short, the over-dependence on advertising is deeply encoded and flawed. The print media industry needed to stop depending on advertisements for revenue and, instead, make it a “user-must-pay” model.

Television viewership in India during the lockdown saw an unprecedented growth of 37% to exceed 1.2 trillion minutes 1. Television consumption at this scale hasn't been witnessed or even imagined before. But when the Broadcast Audience Research Council (BARC) declared these massive growth numbers, it did not enthuse

the Rs 78,800 crore industry as it normally would have. Instead, industry CEOs were locked on video calls, deliberating cost cuts, appraisal freeze, pay reduction, and layoffs. The industry is grappling with an existential crisis that it had neither anticipated nor planned for. Even their best strategic planners had not seen this tsunami coming. Combating the menace of COVID-19 has meant separating people from each other, and inevitably, from doing just about everything the industry does to make money. Creating intellectual property (IP) lies at the core of the industry, in the form of scripted and non-scripted shows which are then monetized through advertisement and subscription revenues. The absolute lockdown has impacted both these activities, putting on hold production of hundreds of shows, and wreaking havoc on the networks' development plans. The programming void is filled through repeats of older shows. The complete shutdown of all sports events has been devastating for the broadcast industry, especially networks like Star India and Sony Pictures who have a significant stake in sports broadcasting.

About 26 private sports channels have now been reduced to re-running old tournaments, with no certainty about when and in what form live-sports might resume. The lockdown has thus negated the general assumption that the rise in viewership translates to increased revenues. On the contrary, advertisers across the board have cut back their spends drastically, owing to the overall economic distress and decreased consumer spending. Advertising volumes have witnessed a 26% decline as per BARC data, and spot rates have also understandably crashed. It is believed that total billing has fallen by 70-75% during this period. While 'normal' industry-wide advertising revenue stood at Rs 32,000 crore in 2019, this is a body blow to broadcasters. While all genres have felt the impact, sports have suffered the most as it is almost impossible to derive any economic value from telecasting a tournament when one already knows the outcome. While no data is publicly available, a fall of 85% to 90% in advertisement revenue would be very believable just going by the negligible ad volumes during these repeat telecasts.

Moreover, the suspension of television shows is also bound to impact advertiser interest in GEC channels that are broadcasting reruns with their content banks having run out. Subscription revenue, another source of income for payment networks, is also not bereft of its share of woes, with no significant spike in subscriber numbers. How can a cable/DTH operator or subscriber justify paying the same monthly fee for a sports

channel with no live sports, or for general entertainment with no fresh content. Subscription revenue collected from end-subscribers is completely dependent on cash collections from home and/or monthly recharge at dealer points. The lockdown has severely impacted these collections, which in turn impacts the liquidity of broadcasters.
A longer lockdown will eventually lead to a drop in subscriber numbers of pay channels, in the absence of fresh content. Viewers may find it more economical to downgrade to free-to-air offerings and seek better options with OTT platforms which have hours of fresh content to offer to new subscribers.

Disney+Hotstar's launch during the lockdown, for example, would be able to seize this opportunity and grow subscription numbers, capitalizing on its very popular Disney library. Increasing subscriber churn will put pressure on networks to extend discounts in order to retain viewers and maintain channel reach, which will drive down subscription revenue significantly. The massive hit to overall revenue will inevitably put severe financial stress on margins, with most networks struggling to even cover fixed costs. While larger networks will have to seriously consider suspending operations of some of their channels, smaller networks will find it difficult to survive this onslaught.
Sports networks with no live sports and margins will in all probability be forced to consolidate multiple sports channels. For the English genre, which was already struggling with falling viewership due to the proliferation of OTT platforms, and the new tariff order of the TRAI, the lockdown is a death blow.

The unlocking dilemma is something that businesses across the globe are struggling with and attempting to find the right balance between lives and livelihood.
The challenges of unlocking are unique to the television industry as it relies almost entirely on human resources and creativity to build economic value. How does one resume shooting shows which are dependent on physical proximity and showcasing human expression. Will these shows be as good, or as popular, with scripts that envisage actors keeping their distance and in masks? Lastly, re-imagining and re-designing production protocols and guidelines in itself is a complex exercise that is not only time consuming but will also mean increased cost of production. Sports networks have to deal with an added set of complications arising out of sports rights agreements involving billions of dollars, due to cancellation and postponement of marquee events. These networks not only stand to lose advertising revenues but also take a hit to their

earnings, with no clarity on whether or how much they have to pay for the rights for these games.

While it would be pragmatic for all stakeholders to reach consensus given the gravity of the crisis and its human dimension, eventually it may simply boil down to immutable contractual obligations. In this eventuality, losses and increasing cash flow problems will predictably create frictions down the line. On the positive side, the sports world is hugely interdependent and works on long term relationships. Hopefully, none of the stakeholders would want to risk future relationships by taking hostile legal positions, especially during a calamity of this nature. Some of the broadcasters who in more exuberant times had bid aggressively for sports rights, may also now try to either renegotiate or exit unfavorable deals. In the interim, uncertainties will take a huge toll on the business. The road to recovery looks long and rough, as resuming production of shows and sporting events is just the beginning. The corona virus's greatest impact on television won't stem from the acute shock of suspended production but from the long-lasting consequences of the recession. While marketing and promotional activity is not an immediate priority for advertisers struggling to re-build their own businesses, revenues will remain subdued through the middle of 2021. Pay-TV growth is directly connected to consumer appetite, which will be at its lowest during the recession.

Entertainment is a discretionary expenditure that an average household struggling with unemployment and other financial commitments will try to control at this time. As consumers are forced to make hard choices, OTT platforms and telcos may be able to offer a better proposition in terms of value, quality, and cost, and hence this period may accelerate the pace of cord-cutting. The pay-TV ecosystem will also be influenced by the emerging regulatory landscape, including the New Tariff Order 2.0 by the TRAI. Post-COVID-19, we will witness a new wave of industry transformation, accelerating the pace of consolidation which had begun in 2019. India is home to 918 registered television channels (386 news and 582 non-news).

This proliferation was enabled by India's economic growth from 1991 onwards, with the market generating increased advertising spends, and animal spirits driving the establishment of new channels. Clearly there will be a shakeout in these dire times, with several channels shutting down or moving online. The News Broadcasting Association has appealed to the central government to provide a stimulus package, and also to ensure that the government advertisement over dues are cleared. It will not be long

before the general entertainment channels (GECs) also come under severe financial stress and require stimulus support from the government. Consumer habits could be altered for good by the COVID-19 pandemic and may force television networks to make hard choices between their linear television and OTT businesses. Currently, Indian broadcasters OTTs lack sufficient originals and largely depend on catch up content. It is likely that they will lean harder into their OTT businesses and move more content investments towards fast-growing streaming services.

The market will certainly not be in a position to reward and incentivize a large number of channels. While television may continue to be the primary screen until the data infrastructure in India can meet growing demand, this will hold good only for selected mass entertainment channels, live sports, and news. Which prudent network would see wisdom in investing to rebuild a business that is rapidly losing out to the streaming future? Niche genres like English entertainment, kids, and infotainment will have to accelerate their plans to go "only digital" for better monetization opportunities.
On a positive note, creativity and entertainment have always staged remarkable recoveries after periods of stress. Newton discovered theories of gravity and motion when he was confined during the Great Plague in London in 1665-1666. Similarly, the Black Death (1342- 1553) marked an end of an era in Italy and led to the emergence of the Renaissance, one of the greatest epochs for art, architecture, and science in human history.

# NR- 11062 – PRINT JOURNALISM

## UNIT-1

### Definition of News

According to the Dictionary of Canadian English

- Something told as having just happened: information about something that has just happened or will soon happen.
- A report of a current happening or happenings in a newspaper, on television, radio, etc.

According to Random House Dictionary

- A report of a current event.
- A report on current events in a newspaper or on radio or TV
- Such reports taken collectively.

According to American Heritage Dictionary

- Recent events and happenings.
- A report about recent events.
- New information.

According to Globe Modern Dictionary

- A report of events as given each day by newspaper, radio,
- Information, which was not known before.

According to Oxford Shorter Dictionary

- New things, novelties (1565).
- Tidings, new information of recent events; new occurrences as a subject of report or talk.
- A newspaper.

The following are some of the important Quotations on "News ".

- Churchill (1898): It is better to be making the news than taking it.
- John Bogart (1918): When a dog bites a man that is not news, because it happens so often. But if a man bites a dog, that is news.

### Structure of News

The following are the some of the general components found in a news story. The definition and explanation of the below terms is given the earlier chapter.

- Teaser or kicker
- Headline
- Subheading or deck

- Pointers of bullets
- Super lead
- Credit line
- Date line
- Lead of Intro
- Body

**My Six Servants**

**I keep six honest serving men. They taught me all I knew. Their names are WHAT and WHY and WHEN And HOW and WHERE and WHO - - *Rudyard Kipling***

Rudayard Kipling's "Six honest serving men" i.e. 5'W's and 1 'H', remain as the main tool of information gathering in Journalism. One or more of these questions may be important in a particular story, but together they form a good guide to get all the facts of a news story. These questions drive the search for facts and also help to organize and build a story. The first paragraph of a news story i.e. the lead is written keeping the 5'W's and 1 'H' in mind. The different kinds of leads also follow those six honest serving men.

The concept of 5W's and H has been redefined by the canons of Public or Civic Journalism that emphasizes the fact that the ultimate motive of the press is to support public life as journalism is for the public. The proponents of Public or Civic Journalism gave various approaches to news gathering that journalists cannot live in vacuum as neutral observers, they must listen to all voices not only the loudest. Hence in Public Journalism the reporters should try to answer the 5 W's and H in a different way as follows:

- Who- cares, is affected, needs to be included, has a stake, is missing from this discussion.
- What- are the consequences, does it mean to citizens, would this accomplish.
- When- were things different, can things be different, should the situation lead to action.
- Where – are we headed, is the common ground, is the talk of citizens in the debate.
- Why – is this happening, are things not happening, should we care.
- How - it affects civic life, does my story help, will the public decide.

**ABC of reporting**

- Some principles of news writing you must apply every time in order to put words on paper like accuracy, brevity, clarity, coherence, emphasis, objectivity and unity.

- **Accuracy:** If a writer has to pick one principle that should never be violated, this should be the one. To fall down in this area is to discredit your entire writing effort. A reporter must be working with facts. These facts will involve persons, places and things. They will involve names, ages, titles, rank or ratings, addresses and descriptions. These facts may be familiar and unfamiliar. Hence a reporter can never afford to be casual in his approach to facts. When a reporter files a story to a newspaper, the editor depends on it for accuracy in every fact. A mistake in a news story implies that the reporter is careless and undependable.
- **Attribution:** It relates to accuracy. It means that reporters should name the person who has made the comment or a statement. Good quotations in give life and colour to a story and aid in development of coherence. Attribution also ensures that the reader does not get the impression the statement is writer's personal opinion. However, attribution should never be used in the story merely to flatter a person by publicizing his or her name.
- **Brevity:** A reporter always faces the question, "Should I be brief in my writing or complete?" By all means, be brief, but not at the expense of completeness. The key is to boil down the writing and eliminate garbage. A compact piece of writing is frequently much stronger than a lengthy story.
- **Clarity:** Nothing is more discouraging for a reader than reading an article with confused arrangement and argument. Hence no chance should be given for misunderstanding of readers. Hence every sentence written should be reread for better clarity and to avoid any unnecessary confusion.
- Coherence means sticking together. An article that skips illogically from topic to topic and back again in a jumbled, befuddled manner lacks coherence. Facts should follow facts in some kind of reasonable order. It may be logical order, chronological order, place order or order of importance, depending on the subject, but order of one kind or another is vital.
- **Emphasis:** The writing should emphasize what you want it to convey to the readers. This is assured in news writing by writing the most important fact first. There are other types of arrangements for emphasis that are used in feature stories or in editorials.
- **Objectivity:** In order to report news accurately, a reporter must keep himself detached from the happenings and present an impersonal, unbiased, unprejudiced story. It is not the reporter's job to influence people directly, but rather to tell them what is going on. Hence a reporter must direct the thinking of the readers by presenting unbiased facts there by allowing the readers to think for themselves.

- **Unity:** A news story should deal with one basic topic. There may be many facts and ins and outs to the story, but it is still one story. A story which has more than one line of thought or activity lacks unity. The simple solution is to write two stories, rather than trying to combine a mass of information into one.

**Structure of a news story**

Research has shown that most people spend less than three seconds on scanning a news article and deciding whether to read it or not. So the news writers i.e. reporters have to make special efforts to capture readers interest and provide the main thrust of the story in a limited time. Thus the news story is written in an **'Inverted pyramid style'**. As the name suggests this is a 'top-heavy' format and the most important facts are written at the top followed by the least important ones. This type of writing differs from the other styles of writing i.e. storytelling, feature writing etc. In other styles the important things are presented in the last phase. In the inverted pyramid style of news writing the climax is presented first. This method packs the most important acts together with the barest necessary explanatory material into the first paragraph moves into the detailed portion of the story i.e. the body covering the facts in diminishing order of importance.

**The Inverted pyramid style of news writing**

The inverted pyramid style of writing owes its origin to the early days of the 'Telegraph'. Before that reporters were less direct and used the narrative story telling techniques. When reporters started using Telegraph and wired their stories from remote location on the undependable telegraph lines, then they adapted the new style i.e. the inverted pyramid style. Telegraph made it possible to transmit information as soon as it was received by the reporter, shortening the news cycle considerable and making it possible fro news to travel almost simultaneously from the place of its origin to the place it was read. However the telegraph was not always reliable and lines were often unclear and discontinuous. Hence it was important for the reporter to send the most important information first before the lie broke and gave the other information later. Another important consideration was the cost factor. The telegraph was expensive costing five dollars a word. Hence the reports had to be tightly written in short paragraphs with no wasted words to save the cost. The first paragraph of the story is called the 'Lead'. It contained the gist of the story in a way to create interest and drew the readers. The paragraph was followed by the important background or contextual information. This paragraph

was sometimes referred to as 'nut graf' i.e. the paragraph containing the nuts and bolts. This was followed by the other key facts and opinions presented in decreasing order of importance.

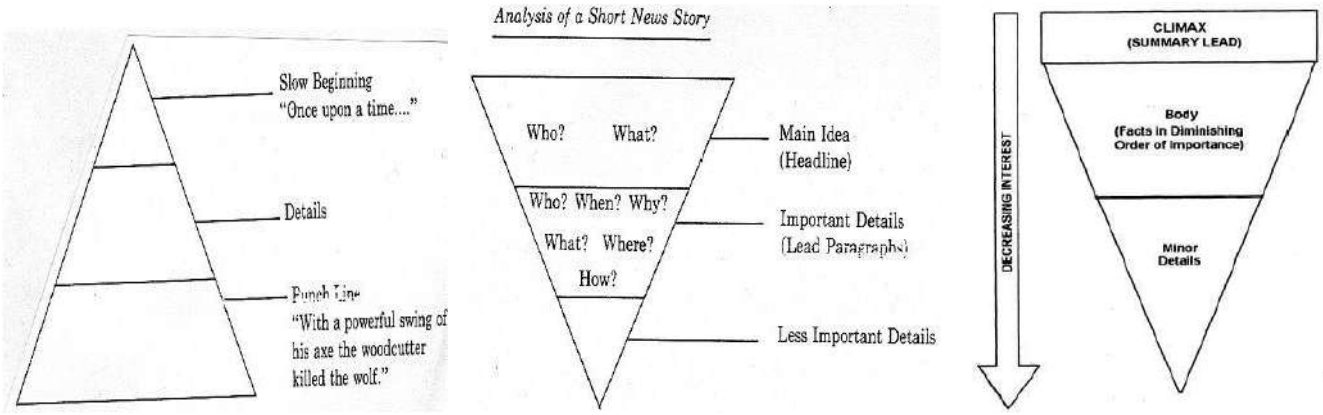

**Figure: Normal Story structure & Inverted pyramid news story structure.**

**Advantages of Inverted pyramid style of news writing:**

The inverted pyramid style offers several distinct advantages in news writing, which are discussed in the following text.

- **Cut-off test:** The presentation of information in the decreasing order of importance gives an advantage for the editor to cut off or edit the story without disturbing the essence of the story. This is possible as the paragraphs following the lead are mere an elaboration or explanation of the same. This is called as the 'cut-off test'
- **Different leads**: The inverted pyramid style of writing has given rise to the different forms of leads that are in use in the present day news writing.
- **The climax is presented first.** This method packs the most important facts together with the barest necessary explanatory material into the first paragraph (the summary lead), then moves into the detailed portion of the story (the body) by covering the facts in diminishing order of importance. This form of news writing is commonly known as the inverted pyramid style because when it is diagrammed, it appears as an upside-down pyramid
- **Presents Pertinent Facts First** Most readers have neither the time nor the desire to read every word of every story in a newspaper. By using the summary lead, the news item focuses the reader's attention on the news, arouses the reader's interest and allows the reader to swiftly skim important facts. In other words, spill the whole story in the first paragraph. The reader can decide whether to continue reading the details or to go on to

something else. But even if the reader stops there, the inverted pyramid form of writing has provided the essential facts.

- **Facilitates Page Layout** The inverted pyramid method of story construction is a valuable tool for page layout. If the story has been written in inverted pyramid form, it becomes a simple matter of cutting lines of type from the bottom of the story until it fits the available space or "jumping" (continuing) the story on another page — all without damage to the important facts that appear at the top.
- **Facilitates Headline Writing** Headlines for news stories should tell the main facts in the briefest form. If a story is written in the proper inverted pyramid style, the copy writer, who writes the headline can find these facts in the first paragraph. The copyreader will not have to search the entire story for headline material.

**Disadvantages of inverted pyramid style of writing**

The following are some of the disadvantages of the inverted pyramid style of news writing.

- The inverted pyramid style presents the most important information in the top, which may prevent the reader to go through the remaining part of the story or a complete reading.
- There is every possible chance that some of the important items may slip away for the top and get explained in the later part of the story.
- The process of important information in the top most part i.e. the lead may result in dumping of heavy information and making it very complex.

**Types of News** –

In newspapers and magazines there are wide variety of articles and features. There are many forms of journalistic writing and different forms of news.

1. **Hard News:** Hard News or straight news is the kind of news that is found in the first page. Most stories in the main section of the news paper and hard news. They are based on tight set of facts, follow a straight forward structure and have no Interpretation apart from what might be provided in the form of quotes from people. Such stories written in the classic inverted pyramid style and usually deal with serious issues like politics, economics, crime, disaster etc.
2. **Soft News:** Soft news or stories are not as crucial as that of the hard news and usually deal with a lighter manner. The soft news usually contains news stories related to entertainment, lifestyle, food, fashion, travel and leisure. Such issues usually do not form the part of the main news spectrum

3. **Features:** Stories that require greater depth and interpretation are presented as features. These are usually found in the special sections or on inside pages and they often carry illustrative elements like photographs, tables, charts and graphs. Practically any topic that requires such treatment can be written in the form of a feature and sometimes specific aspects of hard news is elucidated as a feature article. Some news papers include feature supplements that provide the space and the layout for more creative treatment of topics. Feature writing offers challenge to the writer to explore the given idea in more detail than is possible in a straight news story. Features can be both serious and soft issues.
4. **Editorial:** Journalism is generally considered with facts and analysis based on objective assessment of information. But, there are certain spaces in the newspaper where people can express their opinions on issues and events. Such opinions are also based on facts, arguments built carefully on evidence but there will be certain element of subjectivity. Such opinionated pieces are called as 'Editorials'. In editorials the space is devoted to the newspapers voice on issues of current importance in the form of invited columns Etc.
5. **Some of the other forms of news are as follows:**
    - **Briefs:** They are brief summaries of happening appearing as a list of items along one side if the front page.
    - **Bright:** They are short, humorous or light hearted pieces sometimes carried with photographs.
    - **Sidebar:** It is an item that accompanies a features or a news story and elucidates some aspect of the story such as time line, or a list of milestones or even a short interview profile.
    - **Info graphic:** This is a news item that combines text and numbers in an illustrative and informative manner.

**Source of news**

The depth of information in the story differentiates a good story from a bad one. The wider and deeper the range of facts and views expressed, the better is the analysis and more value it has for the reader. Hence the entire crux of the story depends on the news gathering, as journalism without facts is no different from fiction. Research, fact finding and investigation are the activities that a journalist or reporter has to pursue for gathering information.

**1. Research:** Most news stories begin with some amount of background information collected by research on a particular issue, which gives an understanding of the topic. A reporter start the

research by meeting the experts or people related to the issue or can browse the internet for some preliminary information.

**2. Libraries:** Libraries is one of the best places to get printed information especially on past and old events or incidents. Old news papers can also be accessed in the libraries which can give lot of information on the topic and the angle from which it is covered.

**3. Other Media reports:** Earlier reports on the same topic from other media also give an opportunity for getting valuable information. Searching old media files other than print and Web can pose problems. Old audio and video clips are difficult to be accessed.

**4. Internet:** The information like statistical data, market information, demographic data, product information, research, analysis is available in paid databases in Internet. Great deal of information is also available free for the users. Search on Internet may be richly rewarding or terribly frustrating. There is limitation in the material available on the net as only recent information i.e. from the past 25 years can be accessed through internet.

Brain Brooks et.al classified sources into the following seven different types:

- **Friends:** People, who are inclined to talk, discuss about the topic.
- **Enemies:** People who are against of talking or discussing the issue in general or with a journalist in particular.
- **Losers:** People who are going to lose in some way, if the information is made public.
- **Victims:** people who are affected by the issue and who need to be dealt sensitively and seriously.
- **Experts:** People who have studied the issue and have an educated and expert opinion.
- **Establishment:** The authority, Government, organization, leaders, officials, bureaucrats, officers, groups etc who generally hold the information or are concern with the issue.
- **Actors:** People who are in the centre of the action and who will have impact directly.

**News values**

Decisions about news are governed by a set of priorities that have evolved over the time. These principles are based on what editor's thing "people should know" in order to function as members of society and as citizens of democracy. These priorities are also influenced by what editors think "people want to know". Within this frame work of reader interest and taste there are

certain values for news selection. These news values are in tandem with audience demand or interest. The following some of the most important news values.

1. **Timeliness:** News is something that is just happened and it is related to the newness of facts. The more recent, the event or situation the more likely it is to be news worthy. Editors deciding between two stories that are fairly equal will select the most recent or timely one. Without timeliness a publication will lose readership. An event that has happened a while ago may come into news again because of new development or because something relating to has occurred.
2. **Proximity**: Proximity refers to the closeness or nearness to the event. We pay more attention to what happens around us. If it happens nearby it is usually of more interest than if it happens elsewhere. Proximity or nearness is of two kinds. **Geographic proximity** has to do with the events and issues that happen around us. Hence a newspaper always publishes stories that happen in a local area, which readers are curious to know and interest more the local public. The other form of proximity is the psychological proximity i.e. we are interested in some things and issues even though we are not near to it. Events like disasters, accidents, human stories are of interest to everyone in spite of their geographical distance.
3. **Prominence**: When it comes to news, people are not created equal. The famous, infamous and the eccentric have a special appeal to the public. This element explains why the press follows movie stares, interview politicians, celebrities etc. Famous people make news. Reporters routinely cover the activities of the rich, famous and powerful people of all fields. The term 'Paparazzi' is used to describe photographers who stalk celebrities and is known for its publicity oriented, gossip news papers. Today, media has the power to turn a personality into a celebrity overnight by giving more prominence to their issues or events.
4. **Conflict**: It involves news stories with war, crime, disaster, vendetta which have an element of tension, surprise, suspense and opposing forces. These stories make news because they all have an element of conflict. The famous saying goes 'if it bleeds, it leads'. Conflict is one of the most important values in news. It is often used to peg a story that might peg escape readers interest. A dull and boring story can be made interesting by adding a little spice of conflict into it. Once the reader interest is gained then it becomes easy to give other practical details of the story, which are read by the readers. This type of 'framing' has both positive and negative consequences.

5. **Human - interest**: The stories which make the reader to laugh or cry and emotional can be called as human –interest stories. They cause feelings of sorrow or pity or amazement. Human interest stories deal with qualities like love, hate, compassion, sympathy, curiosity, anger and grief. They are stories about people and events with which the reader can identify. These stories focus on human element behind events that talk about the people's factor in every facet of life that goes beyond the 'hard facts'. The feature supplements of every newspaper contain lot of stories with human angle. Human interest is a value that was not found on the front page news. But this trend is slowly changing in the recent years.
6. **Relevance / Usefulness**: People always want news which they can use i.e. news that helps them to cope up with daily complexities of life. People read the news paper for information regarding important changes in the day to day environment that might have an impact on their own routines and plans. News regarding the price rise, rates of commodities, Government rules and regulations, entertainment details, film timings, weather details etc is published by news paper for their range of applications to different sections of society.
7. **Impact / Consequence**: This element refers to the importance of the event. If what has happened or will happen will have an effect on a large number of people, then it ha more impact or consequence than something that will affect fewer people. Impact / consequence have to do with practical value and are more about the psychological, social, cultural or economic effect. News on budget, price rise, science, health and development are reported due to their vice impact on various consequences.
8. **Magnitude**: Big events make news. Natural disasters like massive earth quakes, floods, drought, terrorist attacks, big sporting events, mega conferences, international awards etc make news due to their magnitude and of common interest to vide range of readers.
9. **Progress**: News about development or progress always makes a good reading whether it is local, national or international. A cure for cancer, completion of new mall, statistics on country's growth, progress of Government policies, programmes in various sectors become news worthy.
10. **Variety**: If the occurrence is unusual, strange or has never happened before, it is likely to be news worthy.

The newsworthiness of a story depends on the strength or intensity of the news elements After gathering material for a news story, we normally find that one or more elements overshadow the others in intensity. These are the **dominant elements.** This is sometimes

referred to as the **news peg.** A news peg is the most significant or interesting fact in a story. It is featured in the first paragraph, and all other facts revolve around it. In other words, it is a foundation around which you construct the facts of your story.

**Definition of Lead**

The opening of a news story or generally the first paragraph is called as the lead. It is usually one paragraph and can be in one or more sentences depending upon the nature and complexity of the news item. The journalist must therefore write a clear, fairly short sentence that reveals the important aspects of the story or the gist of it. The writing of news lead was a direct outcome of the adaptation of the new and changed technology in news paper journalism in 19th century. Because telegraph lines were unreliable and often failed news reporters were transformed into 'headlines', to give the reader the main points of longer stories that followed. The opening paragraphs of the news story called the 'lead' told the most important facts. The rest of the story continued with the other details. If the telegraph line broke during the story, at least the most important part would be getting through to the editor's desk. Thus the inverted pyramid style of reporting was developed. The following are some of the characteristics of a traditional lead.

1. A traditional lead must be tight. An overstuffed first paragraph is not a way to attract the reader.
2. Hard leads are rarely more than one sentence long and almost never longer than two sentences. Leads usually should be less complex and contain simple words. For example: The New York Times on July, 2 1969: 'Men have landed and walked on the moon'. These eight words have captured history.
3. The led must include the most newsworthy elements in the story.
4. The simple formula for writing the lead is to answer '5 'W's and 1'H'.
5. For news stories with a significant background the context of the news is kept in the lead.
6. Among the '5 'W's and 1'H'' the 'what', 'who' and 'Why'' become news leads regularly. The remaining 'W's i.e. 'when' and 'what' rarely dominate the lead except in some extraordinary cases.

A lead normally will answer the '5 'W's and I 'H' as far as possible i.e. who, what, when, where, why and how. Depending on which question is answered first the leads are of the following types

- When the 'who' is featured in the lead, it is called as **'name lead'** Ex: Barack Obama, President of United States is scheduled to visit India in May.
- When the 'what' is featured it is called an '**event lead'**. Ex.: Reducing tensions between the two countries is first priority in the Indo-Pak heads meet to be held at Canada.
- When the 'when' is featured then it is called as **'time lead'**. Ex: Today at 5.00 PM the terrorist group issued a new video from an Afghanistan based Television network.
- When the question 'where' is featured, it is called as **'place lead'**. Ex: The Washington based software company announced its back-off plans from the computer project.
- When the 'why' is featured, it is called a **'cause lead'**. Ex: Because of growing pressures within the party, the Chef Minister announced his resignation.
- When the 'how' is featured, it is called as a **'manner lead'**. Ex: After a decision by the Board of Cricket Control of India, India pulled out from the tournament stating security reasons as the reason.

**<u>Kinds of Leads</u>** –

The lead is the most important part of the story and has to be written carefully. The lead of the story helps in attracting reader's interest and tells the reader the central point of the story without hiding the subject with unnecessary or misleading words and phrases. There are many types of leads. But the most commonly used lead is the summary lead or 'straight lead' and it summarizes the story This type of lead gives the most important information first and deals with hard news so they are also called as 'hard leads'. Hence the lead contains the most news worthy information of the entire story. But today many reporters are increasingly using 'Anecdote', 'Question', 'Quotation', 'Scene Setting', 'Description', leads which provide an interesting information first rather than the important information. Hence such types of leads are called as 'Soft leads' or 'non-traditional leads'. The following are the different types of leads.

1. **The Summary news lead**: Every news story must answer the six questions i.e. who, when, where, why, what and how. However the lead is not the only place to answer all of them. The lead should answer at least one or two questions that are most news worthy and unusual. In news story 'people' and 'what they do' are the most important things and the presentation of these information gives variations in summary leads. They are
    - **The Immediate - identification lead**: It is used when the identities of the major subjects in the story are important and well known.

- **The Delayed - identification lead**: In many stories the names of the main subjects are not as important as what those people did or happened to them. For those stories reporters use leads that withhold complete identification of the people involved until the second or third paragraph.
- **Blind Lead**: Leads that hold back details so the reporter can get to the central point of the article more quickly are called as 'blind leads'. A blind lead does not hold the central point of the story but only that information which does not need immediate reader's attention is withheld.

Summary lead is the most commonly used lead, but today reporters are using many **non-traditional or soft leads or alternate leads**. Sometimes these types of leads run to four to five paragraphs. Usually they have a 'nut paragraph' immediately after the lead. The nut paragraph states the central point of the story and serves the function of a summary news lead. Writing alternate leads requires thought and imagination as well as ability to recognize and convey an interesting idea uniquely. The following are the different kinds of alternate leads:

**1. Buried Lead or Anecdote Lead**: A buried lead is the most common type of lead. It is called as a **delayed lead**. A buried or delayed lead begins with interesting example or anecdote that sets the story theme. Hence this type of lead is also called as anecdote lead. Then a nut paragraph i.e. a third or fourth paragraph summarizes the story and move it from the anecdote to the general issue or the problem.

**2. Multi paragraph lead:** It is written as unit of the thought. The summary lead consists of two or three paragraphs that flow into each other.

**3. Quotation lead**: Sometimes a source or speaker provides quotations that can summarize the entire story, brief and is self explanatory. Such quotes can be used in the first paragraph of the quotation lead. But a quotation lead should be so affective that a reporter should feel that he cannot improve it further.

**4. Question lead**: Questions occasionally make effective leads called as 'question leads'. To be effective the question leads must be brief, simple, specific and provocative. The question lead should contain limited words.

**5. Descriptive lead:** Leads which begin with the descriptive details that paint picture for the reader before moving gradually into the action is called as 'descriptive lead' or 'scene setter'. The description should be colorful and interesting so that it aroused reader's interest. The description should also help summarize the story.

**6. Suspense lead:** Reporters use 'suspense leads' to create suspense and arouse curiosity or raise a question in their minds. By hinting at mysterious developments reporters try to compel the readers to read the story.

**7. Shocking lead:** Shocking leads are used immediately to capture the attention of the reader. It generally includes unusual twist that adds to their effectiveness.

**8. Direct address lead:** Reporters very occasionally use a form of direct address or speak directly to their readers. This type of lead is called as 'direct address lead'.

**9. Phrase leads or Zinger:** Sometimes the lead is started with a phrase that gives a surprise and very effectively in highlights the story. Such type of lead is called as 'Phrase lead or Zinger lead'**.**

**Article:**

A news article discusses current or recent news of either general interest i.e. daily newspapers or of a specific topic i.e. political or trade news magazines, club newsletters, or technology news websites. A news article can include accounts of eyewitnesses to the happening event. An article is a written work published in a print or electronic medium. It may be for the purpose of propagating news, research results, academic analysis, or debate. A news article can include accounts of eyewitnesses to the happening event. It can contain photographs, accounts, statistics, graphs, recollections, interviews, polls, debates on the topic, etc. Headlines can be used to focus the reader's attention on a particular or part of the article. The writer can also give facts and detailed information following answers to general questions like who, what, when, where, why and how.

Quoted references can also be helpful. References to people can also be made through the written accounts of interviews and debates confirming the factuality of the writer's information and the reliability of his source. The writer can use redirection to ensure that the reader keeps reading the article and to draw her attention to other articles. For example, phrases like "Continued on page 3" redirect the reader to a page where the article is continued. While a good conclusion is an important ingredient for newspaper articles, the immediacy of a deadline environment means that copy editing often takes the form of deleting everything past an arbitrary point in the story corresponding to the dictates of available space on a page. Therefore, newspaper reporters are trained to write in inverted pyramid style, with all the most important information in the first paragraph or two. If the less vital details are pushed towards the end of the story, then the potentially destructive impact of draconian copy editing will be minimized.

**Elements of a news article**

- **Headline:** A headline is text above a newspaper article, indicating its topic. The headline catches the attention of the reader and relates well to the topic. Modern headlines are typically written in an abbreviated style omitting many elements of a complete sentence and almost always including a non-copular verb.
- **Byline**: A byline gives the name and often the position of the writer, along with the date.
- **Lead:** The lead (sometimes spelled *lede*) sentence captures the attention of the reader and sums up the focus of the story. The lead also establishes the subject, sets the tone and guides reader into the article. In a news story, the introductory paragraph includes the most important facts and answers the questions: *who*, *what*, *where*, *when*, *why* and *how*. In a featured story, the author may choose to open in any number of ways, often using a narrative hook, possibly one of the following: an anecdote, a shocking or startling statement, a generalization, pure information, a description, a quote, a question or a comparison.
- **Body or running text**: For the news story, details and elaboration are evident in the body or running text of the news story and flow smoothly from the lead. Quotes are used to add interest and support to the story. Most news stories are structured using what is called an inverted pyramid. The *angle* (also called a *hook* or *peg*) is usually the most newsworthy aspect of the story and is specifically highlighted and elaborated upon.[3]

A featured article will follow a format appropriate for its type. Structures for featured articles may include, but are not limited to:

- *Chronological*, where the article may be a narrative of some sort;
- *cause and effect*, where the reasons and results of an event or process are examined;
- *classification*, where items in an article are grouped to help aid understanding;
- *compare and contrast*, where two or more items are examined side-by-side to show similarities and differences;
- *list*, a simple item-by-item run-down of pieces of information;
- *question and answer*, such as an interview with a celebrity etc

**Columns**

Journalism of today finds its most extensive expression through the medium of Column. The writing of a column is an art and an established profession in journalism circles. It is regarded as personal journalism at its best as a columnist communicates individually to the readers.

Normally columnists have by lines and a standard column with a headline. His / Her by line become a trade name and gets associated with type, tone and character of the individual. No journalism has more appeal, a more authoritative influence or a more useful contribution than the column writing.

'Columning' is not a new development. James Franklin wrote many columns from 1721 in 'New England Courant' and later in 'Pennsylvian Gazette'. The 'Federalist Letters' written by Alexander Hamilton, James Madison and Johan Jay under the name 'Publius' in support of the ratification of the constitution published in 'New York Independent Journal' in 1787-1788 are regarded as 'Personal Editorial Columns'

Columnists face the challenge of writing succinctly to a particular space and they must write on deadline. But their writing must never be boring, repetitive. It should be fresh and keep get hooked to the readers interest. Most of the columnists try to write on contemporary issues with an analytical of historical or opinionated background. The steps for writing a column are similar to those writing any opinion piece.

- **Choose a topic of interest to readers**: Write about what is known. Give it a personal touch by adding your experience. Unlike a reporter a columnist may write in first person.
- **Collect facts**: Before writing always do research on the topic and have an understanding of the event.
- **Organize the thoughts**: Here the columnist may differ from the traditional editorial structure. The columnist may find telling a story or personal narrative more effective than the formal ordering of arguments.
- **Revise:** After writing the first draft always revise. Look for your personal voice and your insight to the event.
- **Keep a notebook for ideas**: Columnists always observe, listen, scribble and write.

Column writing is used to inform, influence and entertain. There are great varieties of columns written and published today. They are broadly classified into

- **The Personal editorial or Essay column**: The personal editorial or essay column is an opinion column filled with facts and analysis. The author deals with the topics of the moment or of current interest. Most columnists in this category may be classified as
    - News commentators
    - Political analysts
    - Discursive essayists

- Sports writers
- Advice Commentators

- **Round about - Town department columns**: The round about - town department columns consist of columns which write about gossipy items collected by the columnists for their human interest value. These columns give the 'behind the scenes' glimpses of celebrities or politicians etc.
- **Humor Column**: The Humor column or 'Colyam' is a combination of editorial paragraphs, epigrams, gags, wise remarks, humors and sentimental verses and writing which produce satire on an issue or incident.

**Importance of Columns**

The importance of columns as an integral part of the modern news papers is evident with their presence in the editorial page and in other important pages. The following are some of the important issues related to column writing.

- **Column promotes the intimacy with the reader**: The column answer the need for a closer personal contact between publication, news paper and the reader. The column is one of the best methods to address the reader directly.
- **Columns entertain the readers**: The main purpose of the columns is to present an issue with divergent opinions. But it has to be in an entertaining and informative mode. Once the column ceases to entertain a reader it looses its specialty.
- **Columns must have a new act every day**: The column must be fresh every time it appears. The theme, tone and mode of presentation should be different every time. The issue should be relevant and be people oriented.
- **Columns perform serious function**: Columnist today, particularly news commentators, political analysts etc. do perform serious function by stimulating public discussion of affairs of the day. Their views and comments stir a debate in the public forum and result in forming of a peer pressure of likeminded readers.
- **Columnists need special qualifications**: The most essential quality of a columnist is 'individuality'. Beyond that columnists should have keen sense of observation, an aptitude of analysis and synthesis and experience in public affairs and this must be coupled with writing skills. Originality, creativity, ability and good background knowledge are essential for a columnist. He should also have natural aptitude, varied experiences and good imagination.

- **Resourcefulness in searching the subject matter is needed**: A columnist needs to have skill in eliciting facts from individual incidents or instances. He should be natural collector of information which can be used in his columns.

**Important Columnists of India**

- **Political Columnists**: Sudheendra Kulkarni, Tavleen Singh, Shekhar Gupta, Khushwanth Singh, Bhanu Pratap Mehta, M.J.Akhbar, Swapan Das Guptha, Kuldip Nayyar, Rajdeep Sardesai.
- **Financial Columnists**: M.K.Venu, S.Bhattacharya, Meghanand Desai, Vikram.S.Mehta, Swaminathan Aiyyer, Sucheta Dalal.
- **Internal Affairs**: C.Raja Mohan, Shashi Tharoor.
- **Sports Columns**: Suresh Menon, Sanjay Manjarekar, Sunil Gavaskar, Ravi Shashtri, Hrasha Bhogle, Diana Edilgi, Kapil Dev.
- **Contemporary issues**: Jag Suraiyya, Bachi Karkaria, Shobha De, Soli Sorabji.
- **Media issues**: Sevanti Nenan, Mrinal Sen, Barkha Dutt.

**Feature**

Feature writing is the craft and capturing and chronicling people's life and experience. Feature writers dig for facts and try to capture in detail the emotions of the reader and try to entice them. The line between the news and feature writing blurs in the 21st century journalism. Good feature writing must bring an expanded set of skills to the task of news gathering and writing.

- Good feature writing is impossible without reporting and precise communication. Feature writing needs good research as more details will be needed for good analysis. Feature writing involves more than gathering information i.e. it entails gathering of scenes and selective details that build them. Feature writing needs good quotes and snappy anecdotes.
- The news story stops after presentation of facts and ideas, but the feature story goes further. It explores the background, the birth and growth of event. It conveys to the reader what the writer or a person thinks about the idea or event. It has greater appeal to writer's imagination.
- Feature story is not a recitation or repetition of facts, but rather than a skilful presentation of facts along with associated ideas in a human perspective.
- Feature impacts the readers beyond the realm of the usual news story and appeals human emotions like curiosity, sympathy, skepticism, humor, consternation and amazement etc.

- A feature story apart from giving the facts goes beyond those facts by simplifying them with study, research, interviews and tries to entertain the readers.
- Feature story is a detailed presentation of an interesting timely, seasonal subject in a popular form with a purpose or entertaining readers.

**Characteristics of feature stories**

The following are the important characteristics of feature stories.

- Feature stories must be factual and based on proof and real events. In addition to that feature stories throw new light on different aspects. It tries to explore new background probes of an in depth idea or an event
- Language of a feature stories must be simple with precise words direct sentences, concise short and logically ordered paragraphs.
- Feature stories use 'Non-traditional leads' like zingers, anecdotes, scene setter and quotation leads.
- Feature stories are not written in 'Inverted pyramid style'. These stories are built up with necessary details and conclude with a climax.
- Feature stories make the readers to feel the story. A good feature evokes images that refer to the sensory experiences of readers, bringing the readers virtually to the scene.
- Features discuss the ideas in terms of public and organization in terms of members.
- Feature writing can select different tones touching various human emotions i.e. less serious, humor, drama, emotional, sentimental etc
- A feature writer reacts to the people, situation, events and places and provides good explanatory matter to the story.

**Difference between a news story and a feature story:**

| Sl.No | News Story | Feature Story |
|---|---|---|
| 1 | News is an objective and factual account of events**.** | Feature goes much beyond news. It gives a new dimension to the news. It examines and throws new light on different aspects of news. |
| 2 | Its main purpose is to inform, educate and enlighten the readers. | Its purpose is to inform, entertain and also arouse curiosity, sympathy, humor and other feelings among readers and guides the readers. |
| 3 | The reporter evaluates important news elements and information and places it in the lead. | A feature writer reacts to the people, situations, events, places and on the background and explanatory matter of the story. |

| | | |
|---|---|---|
| 4 | News story deals with recent and current events. | A feature need not be a current subject. |
| 5 | Brevity is the soul of news writing. News story has no place for background or subsidiary material. | There is relatively more freedom to a feature writer. He can to some extent adjust length to his requirements. |
| 6 | Proximity is an important issue in news story. | Feature writer do not have any restrictions of geographical area. |
| 7 | News story is written in an Inverted pyramid style with a summary format. | Features are written in a different style. Features contain a more colorful, entertaining and explanatory style. |
| 8 | Traditional leads are used in the news story. | Non-traditional leads like zinger, anecdote and scene setting are used in feature writing. |
| 9 | News story is limited to a single time and place. It is not always a complete story in itself. | The feature on the other hand is a self sufficient and complete story. |
| 10 | News stories are written in third person with attribution. | Features can be written in first, second or third person. |

**Editorial**

Editorials are meant to influence public opinion, promote critical thinking and sometimes cause people to take action on an issue. In essence an editorial is an opinionated news story.

**Four types of Editorials**

- **Explain or interpret**: Editors often choose these editorials to explain the way the news paper has covered a sensitive or controversial subject.
- **Criticize**: The editorials constructively criticize actions, decisions or situations while providing solutions to the problem identified. Immediate purpose is to get readers to see the problems, not the solution.
- **Persuade**: Editorials of persuasion aim to immediately see the solution, not the problem. From the first paragraph, readers will be encouraged to take a specific, positive action. Political endorsements are good examples of editorials of persuasion.
- **Praise**: Sometimes editorials comment on people and organizations for something done well or executed.

For writing editorials certain kind of preparation and experience is necessary. The following is the procedure to be adopted for a journalist to write an editorial.

- **Find a topic**: A brainstorm on the events which has caught the reader's eye, regionally, nationally and internationally is necessary. The topic of the editorial must be relevant and must be related to an issue of some recent happening.

- **Research**: Professional editorial writers do lot of research before writing the editorial. Computer assisted research, personal interviews, news articles, archives, library documents and other sources are referred to get an adequate background on the subject. The acquisition of knowledge on a particular issue or topic will give clarity of thought and action in the editorial stance taken.
- **Thesis**: The writers of editorials need to take a reasonable approach and deal an issue on hand with a more circumstantial and logical approach. The editorial should be specific and should contain accurate examples and references rather than a vague or passing comment.

The following are some of the essential elements to be kept in mind while writing an editorial.

- **Catch attention**: The editorial should begin with a general statement, which does not indicate the writers stand or controversy.
- **Commit**: The lead should flow naturally into the thesis or the stance taken by the editorial.
- **Concede**: After stating the theses recognize the strongest opposing argument.
- **Counter**: Switch now into a strong argument favouring the thesis.
- **Convince:** Build on your argument and make it stronger by stating facts and enough examples.
- **Clinch**: Save the strongest argument for the last. This discourages rebuttal and leaves the reader with something convincing to ponder.
- **Commit again**: Using different restate your thesis.
- **Cap it off**: Leave the reader with a little something extra i.e. a vision of the future, a revisit to the lead or a call for action etc.

**Human interest stories**

People are interested in other human beings. They are eager to know million different things that make us society of human beings. The human issues range from individualistic, heroic, and innovative to absurd and heart breaking. People like to read about achievements, failures, unusual coincidences, memorable moments and ordinary people dealing with extraordinary situations. These stories focus on human element behind events that talk about people's factor in business, sports or in any fact of life. Such stories depicting an individual angle which interests others are called as 'human interest stories'.

Human interest features are a kind of 'slice of life' stories that tell about the interesting circumstances in people's lives. These stories focus on individual and go beyond 'hard facts'. Any major events always have a human interest angle attached to it. These stories put a human face on

the issue and interpret the numbers, facts in terms of how they affect people in every day real life. The stories find human angle that touches people and has an impact on common people and makes them laugh, wonder or think.

Human interest can be written as hard news, soft news or as features, but these stories need a different approach. Human interest stories can be written on any individual in a group provided the reporter has a new approach and tells something interesting about him, his occupation or his habits etc. The emphasis on these features is on unique views of life and unusual occupations. Human interest stories very often do not find space in the front page, which normally is restricted to hard news. But the trend is changing fast and with the changing reader's tastes, reader's editors are placing the human interest stories in front page as well and carrying human interest stories along with the issue based stories.

**Photos:**

Most print media use a combination of words and pictures to tell the news, but some only use words. If you have ever seen a newspaper with no pictures, you will know that it does not look attractive; it does not make you want to read it. It looks as though it will be hard work, and readers are therefore put off. It is also limited in its ability to tell the news accurately. When we talk about "pictures", we are usually talking about photographs, but there are other kinds of pictures, too. Good drawings, paintings and other graphic work also work well as news pictures. There are three main reasons why newspapers need news pictures.

- **To brighten the page:** A page without a picture is just a slab of grey text. It looks boring and many people will not bother to read what is written on it. That is a pity if some of those stories are well researched and well written, but it is true. The readers who pay money for a newspaper expect their job to be made easy for them. They expect the news to have been sorted out into big stories and little stories, to have been written clearly, and to be presented in a way which is easy to read. Newspapers without pictures do not make the news easy to read. They make life hard for the readers. The newspaper's journalists are not doing their job properly.
- **To tell the news** : News is something which is new, unusual, interesting, significant and about people. It is obvious that **new**, **unusual**, **interesting** and **significant** things **about people** can be communicated by pictures as well as by words. Not all stories will be ideal for pictures. Some will be told more easily in words than in pictures, while other stories may be told with one picture more easily and more clearly than in many words. There is an

old saying in English that "one picture is worth a thousand words". That can be true, but only if it is the kind of story which is suitable to be told by a picture, and only if it is a good picture. We shall look in a moment at what makes a good news picture. Pictures can sometimes tell the news just by themselves, with a caption to say who the people are and where the event is taking place. At other times, the picture may go with a story, to work as a team with the words. In either case, a news picture must always leave the reader knowing more than he did before. It must carry information.

- **To show what it looks like**: Only a very gifted writer can use words in a way which lets the reader visualize exactly what a scene is like. Not every reporter can write as well as that. A picture can let the reader see what a person, or a place, or a building, or an event looks like.

Good news pictures need three qualities:

- to look alive and exciting
- to have a relevant context
- to be meaningful

**Cartoons:**

Cartoon is a simple drawing showing the features of its subjects in a humorously exaggerated way, especially a satirical one in a newspaper or magazine. Cartoons make an integral part of newspapers, conveying messages or expressing public opinion immaculately. They are also considered as the pictorial overture or introduction to any key event or personality and the readers love them. There are various types of cartoons:

**Pocket cartoon:** It is a single-column cartoon having a fixed place on the first page of newspapers. Pocket cartoons deal with something related to the life of common people. They may be compassionate, humorous, or satirical. Such types of cartoons usually contain a single idea or perception. They convey to the readers an added message or information that is not provided by the articles or news stories.

**Editorial cartoon:** It deals with contemporary political developments or events. Political cartoons are traditionally three-column cartoons. They are not always humorous, but rather more critical or sarcastic. Usually, such cartoons appear on page 1, depending on the significance or impact of the event.

**Strip cartoon:** They are comic strips that are used to regale the readers and make the newspaper more appealing and attractive to the common readers, especially the younger generation. They give social messages too

**Purpose of cartoons**

In most cases the purpose of newspaper cartoons is to add humor and sarcasm, hitting an individual or event above or below the belt often in an abysmal manner. Almost every cartoon has a unique character. Cartoons are recognized more by the lines and caricatures rather than by the name of the cartoonist. Most pictures comprise a caption that is apt and relevant to the sketch. Cartoons are also considered as the lighter side of editorial opinion, not in words but through sketches and lines. They are a kind of running commentary on social changes, mistakes, failures, success, accomplishments, and major contemporary events. Cartoonists always pick up news subjects, related to the present on a day-to-day basis. Cartoonists fear none while presenting their opinion on any event or individual.

## UNIT- 2

### Specialized reporting - Crime Reporting:

Crime reporting teaches some of the essential techniques of journalism. You learn how to dig for a story, how to follow leads, how to interview people to extract information and how to write crisp, clear, interesting stories under pressure of a deadline. In small newspapers, radio and television stations, general reporters cover crime stories, while in bigger organisations there may be a specialist crime reporter or team of reporters who cover nothing else but crime. Crime reporting covers all aspects of law-breaking - the police, the criminals and the victims.

### Why report crime?

Crime reporting has long been a central part of news coverage in free press societies, because crime stories are usually newsworthy. There are several reasons why you should report crime and why people want to read about or listen to stories of crime:

- Readers or listeners often want an explanation of why crimes happen. They ask: "Could it happen to me?" They may want to know so that they can prevent a similar thing happening to themselves.
- Your readers and listeners need to know how laws are broken, and how people who break laws are caught and punished. This helps them understand what laws are and what the penalties for breaking them are.
- Most people obey the law, so crime stories are about unusual events - one of the criteria for news.
- Some people are interested in the way criminals get something without much effort. For example, although a gang of crooks may spend weeks or months planning a robbery to net them $100,000, it might take ordinary workers many years of effort to earn that much legally. Some crimes may fascinate people who obey the laws but who wonder what it might be like to break them.
- Criminals take risks and face punishment if they are caught. This may make them fascinating to read about.

### Types of crime

There are many types of crimes, criminals and victims. There are serious crimes and small offences. There are professional criminals and ordinary people who occasionally break the law. There are crimes which have obvious victims and there are the so-called victim-less crimes. It is not always the major crimes which make the most interesting news. Of course, your readers or

listeners will be interested to know about an armed hold-up which netted a million dollars. But they may also be interested in the story of a sneak thief who broke into a poor widow's home and killed her much-loved cat. As with all news, crime stories should be new, unusual, interesting, significant and about people.

- **New** - Crime reporting has to be as up-to-date as possible. This is partly because some crimes depend for their news value on being current. For example, a story about a violent killer on the loose will lose much of its impact (and its value in alerting your audience to danger once he is captured. Also, because in some societies crimes are a regular feature of life, todays break-and-enter quickly replaces yesterdays break-and-enter in the public's attention. Crime stories get stale quickly.
- **Unusual** - Murders or armed robbery are not every day events in most communities, and so have news value. However, less serious crime can also have unusual elements. Someone who sneaks on to a bus without paying or throws rubbish on the street may be breaking the law, but it is not very newsworthy. However, if a person stows away on an international airliner, that free flight becomes newsworthy. If the rubbish someone dumps fills three garbage trucks, that too is newsworthy.
- **Interesting or significant** - As we have said, most law-abiding citizens are interested in people who break the law in big or unusual ways. Crimes which by themselves are ordinary can become significant when placed in context. For example, the car theft can be one of hundreds in a city, but it may become significant if it is the hundredth car to be stolen this year.
- **About people** - Crimes involve people, as criminals and victims. The so-called victim-less crime does not really exist.

Most stories about crimes will have some news value. Exactly how much depends on several factors, which you will have to consider. Seriousness: We usually assume that more serious crimes are more newsworthy. A murder is more important than an armed assault, which is more serious than a break-and-enter, which is more serious than a parking offence. In terms of money, the bigger the amount stolen, the more important the crime. Remember, however, that money has a different value to different people. The theft of $100 will be more newsworthy when it is money taken from a poor widow that when it is stolen from a rich businessman.

- **Unusual nature of the crime**: The more unusual crimes are generally more newsworthy. A break-and-enter at a school may be more newsworthy than a break-in at a home, but a burglary at a crocodile farm may be more newsworthy still.
- **Size of the community**: Crimes are usually viewed as more important by smaller communities. If you are a journalist on a big city newspaper, an ordinary car theft may not be newsworthy at all. If you are a journalist in a small community, a car theft may be the biggest news of the week. Everybody may know the owner - they may all know the car. It is a sad fact that quite horrible crimes do not make the news in a big city because they are so common and because the chances are small of readers or listeners knowing the victims or caring about them.

Crimes become more newsworthy if they involve people who are themselves newsworthy. An ordinary person attacked on the street may not be big news, but if that person is a local chief, that will be very newsworthy. A fraud case becomes more important when it involves a leading politician. A robbery becomes bigger news when police reveal that the robber was an escaped prisoner with convictions for murder and rape. It is generally true that a crime becomes more newsworthy if there is a strong chance of it happening again - usually because the criminal is known and likely to strike again.

**Budget Reporting**

The 'Annual Financial Statement', laid before both the Houses of Parliament constitutes the Budget of the Union Government and annual financial statement laid in the both houses of Assembly constitutes the Budget of State Government. This statement takes into account a period of one financial year. The financial year commences in India on 1st April each year. The statement embodies the estimated receipts and expenditure of the Government of India for the financial year.

With the emergence of Welfare State, Governments have come to look after virtually every sphere of human life. They have to perform manifold functions from maintaining law and order, protecting their territories to implementation of plans for economic and social betterment. Besides, they provide a variety of social services like education, health, employment and housing to the people. Government requires adequate resources to discharge these functions effectively. The necessary funds are mobilized from the country's resources by way of taxes both direct and indirect, loans both long-term and short-term, to meet the Governmental expenditure. In India, the

principal sources of revenue are customs and excise duties and income-tax on individuals and companies.

**Need for Budget**

Since there is a limit to the resources, the need for proper budgeting arises. Budget allocates scarce resources to various Governmental activities. Every item of expenditure has to be well thought out and total outlay worked out for a specific period. Prudent spending is essential for the stability of a Government and proper earnings are a pre-requisite to wise spending. Hence, planned expenditure and accurate foresight of earnings are essential for sound Governmental finance. Preparation of Budget for the approval of the Legislative is a Constitutional obligation of the Government both at the Center and the State levels. Legislative prerogative over taxation, legislative control over expenditure and executive initiative in financial matters are some of the fundamental principles of the system of Parliamentary financial control.

There are specific provisions in the Constitution of India incorporating these tenets. For example, article 265 provides that 'no tax shall be levied or collected expect by authority of law'; no expenditure can be incurred expect with the authorization of the Legislature (article 266); and President shall, in respect of every financial year, cause to be laid before Parliament, Annual Financial Statement (article112). These provisions of our Constitution make the Government accountable to Parliament.

The Budget of the Indian Railways is presented separately to Parliament and dealt with separately, although the receipts and expenditure of Railways form part of the Consolidated Fund of India and the figures relating to them are included in the 'Annual Financial Statement'. The general Budget is presented to Parliament on such date as is fixed by the President. The Budget speech of the Finance Minister is usually in two parts. Part A deals with general economic survey of the country while Part B relates to taxation proposals. General Budget was earlier being presented at 5 P.M. on the last working day of February, but since 1999 the General Budget is being presented at 11 A.M. on the last working day of February, i.e. about a month before the commencement of the financial year expect in the year when General Elections to Lok Sabha are held. In an election year, Budget many be presented twice-first to secure Vote on Account for a few months and later in full. The General Budget is presented in Lok Sabha by the Minister of Finance. He makes a speech introducing the Budget and it is only in the concluding part of his speech that the proposals for fresh taxation or for variations in the existing taxes are disclosed by him. The

'Annual Financial Statement' is laid on the Table of Rajya Sabha at the conclusion of the speech of the Finance Minister in Lok Sabha.

**Guidelines for covering budget**

- Budget reporters in the State as well as Centre need to be in constant touch with the ministry of Finance of respective Governments as and when budget exercises get started.
- The Budget speech is filled with technical and budgetary terms. Hence a reporter must be well aware with the budgetary terminology.
- Budget is all about figures, statistics and comparisons. Hence a reporter has to be sound in remembering figures, percentages and bit of experience in Economics and Maths will help.
- The budget has to be presented in simple and most uncomplicated style to the general reader. The highlights and major allocations can be given graphically than writing in text as it will be more easily understood.
- General public will be anxious to know things like impact on basic necessities, measures taken to control price rise, Income tax, Value added tax exemptions, rates of commodities, consumer items etc. It will be well understood if presented in a more graphic oriented manner.
- As the budget is prepared in stages it is essential for the reporter to start the reporting exercise along with the budget preparations. Special writes ups can be prepared on the Revenue collections, expenditure items of the particular year in respect to various departments.
- The budget deficit is always a debatable and much discussed matter. Hence it is essential for the reporter to concentrate on deficit and the manner in which it is narrowed.
- The allocations for the ongoing programmes as well as the new programmes can be studied discussed and analyzed.
- A reporter has to be vigilant throughout the year and collect the information regarding any new schemes announced by the State or Central Government. By doing this he can analyze the allocations for each programmes depending on the number of beneficiaries.
- A track of previous budget is necessary as it will help in giving comparative accounts of each sector.
- The Economic survey presented earlier than the budget reveals the financial and economic status of the country. Hence it should be followed carefully and reported.

- The budget is for the people and public pulse, opinion, their demands needs to be conveyed to the respective Governments. Hence special reports on what people want as propriety in the budget can be reported in special stories.
- Direct articles giving individual opinion of various classes from all income groups can be presented.

**Sports Reporting**

Sports journalism is a form of journalism that reports on sports topics and events. The sports department in the newspapers has been mockingly called the toy department as sports journalism was not concerned as a 'serious' topic of the news desk. But before the age of ESPN, the internet, and instant replay, it was the sports reporter in the stands writing up the game for the local paper, and, the radio journalist covering it live on radio, who made fans feel like they were right there, cheering on their favorite team, game after game, boll after boll.

Today sports coverage has grown in importance as sport has grown in wealth, power and influence. Sports journalism is an essential element of any news media organization. There are separate newspapers and magazines related to sports journalism like sports illustrated, Sports Star Etc. Today every newspaper has a dedicated sports page entirely to sports reporting. These are international newspapers such as L'Equipe in France, La Gazzetta dello sport in Italy, Marca in Spain, and the Sporting Life in Britain American magazines such as Sports Illustrated and the Sporting News, all-sports talk radio stations, and television networks such as Euro sport, ESPN and The Sports Network (TSN). Neo sports, Ten sports. STAR Sports Etc. Today Sports like Cricket, Tennis, American football, ice hockey, basketball and baseball are the most popular games due to the media coverage and has an excellent commercial relationship in the form of merchandise and advertising.

- In professional and some collegiate sports, it is common practice to allow properly accredited sports reporters into locker rooms for interviews with players and coaching staff after games, while the sports teams provide extensive information support.
- As with reporters on other news beats, sports journalism should involve investigating the story, rather than simply relying on press releases and prepared statements from the sports team, coaching staff, or players. Sports journalists are expected to verify facts given to them by the athletes, teams, leagues, or organizations they are covering.
- Sportswriters regularly face more deadline pressure than other reporters because sporting events tend to occur late in the day and closer to the deadlines many

organizations must observe. Yet they are expected to use the same tools as news journalists, and to uphold the same professional and ethical standards. They must take care not to show bias for any team.

- Since the 1990s, the growing importance of sport, its impact as a global business and the huge amounts of money involved in the staging of events such as the Olympic Games and football World Cups, has also attracted the attention of investigative journalists. These journalists played a key role in breaking some of the most sensational stories like use of banned drugs in sports, racial discrimination in sports, match fixing in cricket etc.
- Major League Baseball gave print journalists a special role in its games. They were named official scores and kept statistics that were considered part of the official record of the league. Active sportswriters were removed from this role in 1980. Although their statistical judgment calls could not affect the outcome of a game in progress, the awarding of errors and wins/saves were seen as powerful influence on pitching staff selections and play lists when coach decisions seemed unusual.
- In the same way most if the retried sports person are now part of the media in the form of specialist, commentators, observes etc. This trend is much observed in games like Cricket where the entire commentary profession is now filled with retired professionals.
- Sports stories occasionally transcend the games themselves and take on socio political significance: Jackie Robinson breaking the color barrier in baseball is an example of this. Modern controversies regarding the hyper-compensation of top athletes, the use of anabolic steroids and other, banned performance enhancing drugs, and the cost local and national governments to build sports venues and related infrastructure, especially for Olympic Games, also demonstrate how sports can intrude on to the news pages.
- Increasingly, sports journalists have turned on long-form writing, producing popular books on a range of sporting topics, including biographies, history and investigations.

**Guidelines for writing sports stories**

To report well on a sport, you must know the sport thoroughly. Check your facts: Sports involve many people, stats and technicalities. The following are some of the guidelines for writing good sports stories.

- **Have a strong lead:** Like any article, the sports article must start with a strong lead, one that encapsulates the available information on "who, what, where, when, why and how." This is basic for how to write articles of any topic. A good lead will get the reader's attention with a strong and but concise summary of the story to follow. Also, note that a lead always places emphasis on an important or interesting aspect of the story. The article would tell the story of the game, but the lead would introduce the game with the most important or interesting fact about it
- **Write clearly and concisely:** Since sports articles can be written in a "literary non-fiction:" lengthy, poetic, story. But most of the stories in daily sports section of the newspaper are concisely written. Sports articles include context and metaphor and technical sports terms, but they're also to-the-point and generally stick to basic vocabulary. Being specific is one of the more basic tips for article writing.
- **Know the context:** Writing a sports article requires a basic working knowledge of the universe on which you're reporting. This may mean not only knowing all about the current players, coaches and standings but knowing some history, as well. This may be requiring some research and study. A sports journalist also has to know about the sport itself including rules, history, current controversies and other information. A sports journalist may need more in-depth knowledge than a casual fan. Many sports teams have press department that will provide journalists with extensive information about their organizations including current players and team history.
- **Give the major play by play:** Obviously, there are many important incidents, happenings in any match or game, and no article will include them all. Your job as a reporter is to report the basic chronology - beginning, middle, and end, of the sports event - with details about the major moments: turning points, big plays, big mistakes, momentum builders. In other words, you're providing something of a verbal highlight reel. This will mean you need to pay careful attention to 'who does what and when' during the event. You then must figure out which moments to include and which to leave out. You have the advantage of hindsight when keeping these events together. A thorough understanding of the game and how it's played will also be important when you are evaluating what events are the key. You will also need to connect the events smoothly as you help your audience to create a mental picture of what happened.

- **Use quotes as possible:** Most sports news articles include quotes from people involved. Most professional sports teams hold post-game news conferences or speak to reporters after the game which gives you good information for writing sports articles. Asking good questions and collecting answers from players and coaches is an important part of writing a sports article.
- **Check your facts:** Also like regular news articles, sports news articles should correctly present the facts. Sporting events usually generate a lot of statistics. They can also be very fast-paced, involve tens of different players and follow rules you might need to double-check if you're going to reference them. A clean, concise sports article will have its facts straight.

**Science reporting.**

Science reporting is a branch of journalism that uses the art of reporting to convey information about science topics to a public forum. A science journalist is a journalist who specializes in writing about science topics, and thus practices science journalism, or popular science. Science journalism conveys reporting about science to the public. The field typically involves interactions between scientists, journalists, and the public. Science values detail, precision, the impersonal, the technical, the lasting, facts, numbers and being right. Journalism values brevity, approximation, the personal, the colloquial, the immediate, stories, words and being right now. Hence the two fields have got antagonistic characters.

The beginnings of science journalism in India languages could be traced back to the articles published in the monthly Digdarshan from Srirampur (Hooghly), West Bengal in April 1888 in Hindi, Bengali and English. These articles dealt with topics like flying in a balloon, steam boat, etc. Other newspapers also started giving scientific information. Science communication activities could not develop sufficiently during nineteenth century; however, a number of publications were brought out in different Indian languages and on various scientific subjects. The science communication was mainly limited to publications of books and scientific journals, except a few popular science articles on latest developments.

In the beginning of the twentieth century, new trends emerged. Science congresses, scientific and industrial exhibitions, seminars, industrial and technological museums, public lectures, popular science magazines, etc. were few among the newer developments towards science communication. But the pace of these activities remained low and no significant effort was

done to popularize science among the people and inculcate a scientific temper amongst them. The same pattern more or less continued till independence.

After Independence, science popularization was being taken up at various levels. The Scientific Policy Resolution of March 4, 1958 has been a guiding factor for development of science and technology in the country. It was the first Prime Minister of India, Pt. Jawahar Lal Nehru, who gave an impetus to scientific pursuits and development of scientific outlook. The Independent India witnessed a rapid growth in the efforts of science communication and popularization. With a view to integrate, coordinate, catalyze and support the efforts of science communication and science popularization in the country, the Government of India established the National Council for Science and Technology Communication (NCSTC) in 1982 as an apex body, which puts more concerted efforts in this direction.

Professional scientific writing differs from the popular science writing in news papers. Professional scientists write about outline research methodology and findings, describe what they observe, critique and respond to their colleagues, and raise questions that encourage further scientific investigations. But their audience is limited to their colleagues, peer and other scientific community. But Science writing from this perspective is different from the writing needed for the news papers where the audience is not professionals and the information has to be toned down in style, character and more of the research outcome has to be presented in the form of application to the society or social life in particular

Popular science writing for masses has to address larger public about the science and technology that shape modern life, as well as broader social issue like nuclear power safety, bioethics, are the environment. It should be on that science which can be writing newsstand magazines, newspapers, popular books, televisions or radios programmes and has a profound influence on the society. This kind of writing has different goals and different audiences that the scientific community's writing, popular science writers must entertain persuade report, describe, and communicate clearly. Part of the difficulty that science journalists and popular science writers face is that the audience's knowledge base is much more diverse, and perhaps limited, than that of the scientific community. Hence popular science writers have to keep explaining things in a subtle manner in a simple language from the significance of scientific facts to the methods by which they can become applicable and simultaneously hold the reader's attention. Science reporting is done in various forms in the media.

- Scientific investigations in progress, research finding and their implications to society.

- New breakthrough technologies in the field of agriculture, space, medicine, health and industrial process.
- Basics science applications to society.
- Any form of writing that encourages spirit of enquiry and research on scientific principles.
- Reports exposing the myths and beliefs in the society become part of scientific news.

Science popularizing is done through 18 regional languages, to penetrate into local populace effectively. Selection of target audience has greatest significance. Our science communication efforts or aimed at various target group, such as, common man, children, students, farmers, women, workers or specialists, etc. various forms for presentation are being used to making science communication more interesting and enjoyable, such as science news, report, article, feature, story, play, poem, interview, discussions, lecture, documentary, docu-drama, scientoon (science+cartoon), satire, etc. The idea is to provide people already interested in science with great insight into how research works

Nav Bharat Times, a leading Hindi daily, started a science column in the year 1948. Today unfortunately, in most of the dailies, weeklies and monthlies we do not see much coverage of science and technology. It is desirably and imperative to introduce science columns in newspapers/magazines. It is desirable to have science correspondents with all newspapers. This would, in due course, help evolve a policy on editing and reporting of contemporary topics on science and technology in different modes of presentation in the media.

One of the reasons for the science reporting to have remained under developed in our country is due to the fact that except for a few dry and drab articles, technical information/news, hardly any other modes of science writing were employed. May be this is why common man could not come to terms with science and technology. If science presented in the form of stories, poems etc, common man not only would be able to read but, also would understand appreciate science. Poetry is a powerful medium for communication, which could be used for communicating science to children and neo-literates. Explaining science in the form of poetry is not as difficult as it may seem. Science drama and skits are also underutilized. Only rarely one comes across science drama and skits in print medium

Upcoming science writers me to give of try to communicating science through theses unconventional modes. Humor and satire are other area still untreated in science reporting. In fact, these modes have not been exploited in science communication at all! Newspapers/ magazines do publish debates on political and science issues, but rarely a science reporter or an

editor has shown interest in publishing debates on any scientific issues. Today, there exit several possibilities of publishing debates on a correct issues based on interviews with scientist and articles based on the same. Apparently, the readers show a keen interest in scientific topics is presented in such an exciting manner. The use of the various modes in science reporting would generate interest in science and can also inculcate scientific attitude into them.

The aim of a science journalist is to render the very detailed, specific, and often jargon-laden information produced by scientists into a form that non-scientists can understand and appreciate, while still communicating the information accurately.

- Science journalists often **do not have training in the scientific disciplines** that they cover. Some have earned a degree in a scientific field before becoming journalists or exhibited talent in writing about science subjects.
- With budget cuts at major newspapers and other media, there are **fewer working science journalists** than before.
- Science journalists regularly come under criticism for **falsely reporting scientific stories**. Very often, such as with climate change, this leaves the public with the impression that disagreement within the scientific community is much greater than it actually is.
- Science is based on experimental evidence, testing and disputation is a normal activity. Science journalism finds itself under a critical eye due to the fact that it combines the necessary tasks of a journalist along with the investigative process of a scientist.
- Science is communication of how the world works. Journalists who become scientists are more likely to find their information based on what's new in the topic field. Journalists without a background and expertise in the topic they write about have a more limited amount of knowledge to communicate.
- One area in which science journalists seem to support varying sides of an issue is in risk communication. Science journalists may choose to highlight the amount of risk that studies have uncovered while others focus more on the benefits depending on audience and framing.

**Environment Reporting**

Environmental issues represent a very low proportion of all stories covered by newspapers and television. These stories also suffer content limitations, typically providing little qualification or support from scientific data, making **vague references to the scientific communication, and emphasizing sensationalist aspects and near-term and personal consequences.**

- No coverage of environmental issues in the popular media is likely to be a straightforward treatment of the "facts," due to many practical constraints, some of which are inherent in the structure and values of modern news reporting. Among these practical influences on media portrayals of climate change are
    - Misreporting or miscommunication
    - Public misunderstanding, low levels of journalistic training
    - Media time and space constraints (especially in television)
    - Commercial pressures on media to be more profitable
    - Event orientation
    - "Technophobia" of many reporters and their editors
    - Confusion over complex scientific terminology
    - Focus on "newsworthy" drama and novelty rather than the Underlying environmental issue
    - Dependence on official sources
- The media's portrayal of environmental issues is too often in **reaction to disastrous events.** As a result, the general public receives information of environmental threats after the fact, so that people are unable to play an influential and proactive role in the political process, particularly with problems relating to public health. Therefore, it is vital that environment policies and practices based on strong scientific information as opposed to the seemingly haphazard and sometimes contradictory information as communicated to the general public through the mass media.
- Media coverage of environmental issues is often a **compromise between scientific evidence and economic interests**. Almost all the newspapers rely heavily on the economic support of their advertisers; it is in their financial interest not to publish articles that conflict with the viewpoints of their primary financial contributors. For example, a recent study conducted on the media coverage of global warming determined that despite scientific evidence identifying global warming as a pressing environmental problem, the validity of this scientific theory continues to be discussed in the media, though rarely among scientists in the field. The authors of the study analyzed the content of 100 articles about the greenhouse effect and determined that the perspectives of big business, in this case the fossil fuel interests comprising the coal, oil, and automobile industries, were discussed at length in nearly all articles, while the scientific viewpoint generally reported to

the public was that of the 1 percent of scientific experts who dispute the claim that global warming is real. Unfortunately, this phenomenon is not limited to global warming but is a common feature of the coverage controversial environmental issues get, especially those issues with economic implications.

- The **media doesn't always provide balanced information**. As a result, the public is confused about the pollution issues. In addition, using mass media for environmental risk communication can be problematic because newspapers are not necessarily sources of balanced information. Because of time pressures, journalists work on the quick turnaround of stories and spend minimal time reviewing technical documents. Instead they rely on their key informants, which can potentially bias their interpretation of the scientific data.

Environmental issues such as global warming, pollution and wildlife preservation have been a concern for the scientific community for decades. However, recent research has shown that **public awareness of such issues is increasing**,. The proportion of Americans who say that global warming is either personally "extremely important" or "very important" increasing from 27 percent in 1997 to 52 percent in 2007. **This can be partially attributed to the changes in the way news media has portrayed these issues, along with other media and real-world events.**

## UNIT-3

### Editing definition

Editing is a prepublication or pre-broadcast practice of correcting mistakes, abridging and rewriting the reporters' stories for maximum clarity, precision, effectiveness, simplicity, accuracy and objectivity.

Every news story is given treatment in terms of language, expression to suite journalistic values in the editing process. Professionals may specialize in the editing of writing, still images, cinema/video, sound recordings and music recordings. All incoming news items submitted by the staff reporters and by the news agencies are collectively called as 'copy', To achieve balance in news presentation news originating within the organization and that pouring in from outside is sorted and sifted. Sorting out and sifting also helps induce parity between the well-written articles and those written by the inexperienced reporters. In the process, the unwanted matter gets weeded out. Only newsworthy stories are finally selected. These are checked for grammar, syntax, facts, figures, and sense, and also clarified for betterment, and are condensed for economy of space. News editing is tailoring news items or a news story to the required shape and size, using the right kind of expressions and symbols. A copy is edited to highlight the "news sense" in a story and to bring uniformity of language and style in an issue of newspaper. The newsroom in a newspaper or a news agency office is the hub of the entire activity in a news organization. The Editorial Desk also known as the Editorial Department or Copy Desk or News Desk) is the nerve centre of a newsroom. It is here that every day the newspaper issues are planned and prepared.

### The Functions of Editing

In any kind of media content production, editing has the following basic functions:

a. **The Reliability & Credibility function**

   Well edited material gains fame and builds a brand image; it multiplies number of customers by adding new ones and also retains old ones. Audiences rely on information from any medium only when they believe that it reports objectively and accurately. Editing can also save the firm from unwanted humiliation.

b. **Commercial Function**

   By shortening and trimming verbose and long stories, editing saves the firm from wasting paper or resources unnecessarily. A well edited matter gains good audience which is in turn crucial in attracting advertisement money. The money enables the institution to survive in competitive environments.

c. **Legal Function**

The editor avoids materials that carry libelous contents from a reporter's story. The editing task includes shaping of stories so that they go with the laws of the land; the editor removes any kind of expression that might end the firm up in a court. By doing so, it saves the firm from unwanted expense and waste of time there by reducing unnecessary pressures from the law.

d. **Beautifying function**

Editing increases the attractiveness of the written material by incorporating basic design inputs. The headline size, grading of stories and the positioning of pictures which are done by the editor add to the beauty of the material. This in turn helps the sale tremendously.

e. **Polishing Function**

Every media institution has its own policy regarding different issues. Every material produced by a firm should go in line with this policy. In addition to this, editors check whether stories and articles are appealing to readers taste. They also evaluate the materials in line with professional standards of journalism. Due to these reasons editors perform polishing functions of media.

f. **Reporters' Function**

Editing helps reporters in several ways:

- Due to the pressure of deadlines reporters end up throwing their stories with out rewriting and verification.
- Reporters may find it difficult to put the correct words together, or may be carried away by own verbal abilities.
- Sometimes reporters get buried in their own information. They collect so many facts and details and lose sight of the main story.
- Some reporters are lousy writers. Their narratives are disjointed and their grammar is appalling.

**Aims and Objectives of Editing**

The editor is basically responsible for:

- Producing a story which is accurate and adequate
- Coming up with a grammatically correct, properly punctuated and capitalized writing in news stories
- Eliminating libelous statements (for legal matters)

- Eliminating editorialized or opinionated contents from the stories
- Reducing verbosity by trimming or shortening stories
- Simplifying, polishing or improving the stories
- Giving headlines, and selecting appropriate picture to stories
- Writing editorials that reflect the opinion of the institution, organization
- Creating balance between business interests and professional values.

**Principles of Editing**:

1. Replace "to be" verbs (is, was, were, etc.) with strong active verbs. Often this entails making your statement in active rather than passive voice. Original sentence in passive voice: The ball was kicked by Bill. Revised sentence in active voice: Bill kicked the ball. This example is easy because the stronger verb is fairly obvious. In other situations, words ending with -tion are often verbs waiting to happen. For example, we can transform "frustration" into "frustrates," and "allocation" can become "allocates."Also, collapsing compound verbs into a single verb ("are able to" into "can") rids your sentences of both dull verbs and a lot of clutter. For example, we can rewrite "I am hopeful that he will recover" as "I hope he recovers."
2. Eliminate strings of prepositions (often a symptom of passive voice).Original sentence: Shakespeare's Hamlet is dominated by a sense of the main character's brooding over the nature of man in society. Notice all the prepositional phrases: by a sense, of the main, over the nature, of man, in society. We may not be able to eliminate them all, but we can tackle a few. Revised sentence: In Shakespeare's Hamlet, the main character constantly broods over man's place in society.
3. Be concise. Eliminate clutter, which often appears in the form of prepositional phrases, but also watch out for the senseless and the redundant moments. Notice how, in the example above, "by a sense of" adds nothing to the meaning of the sentence. And beware of pairs of words, which create a nice rhythm to your prose but say the same thing: "With careless nonchalance, she threw the bag over her shoulder." Clearly, either "carelessly" or "nonchalantly" will serve our purposes, but we don't need both. Also, expletives (there are, it is) often launch weak sentences: "There are many people who find success intimidating." We have a couple options with this sentence: "Success intimidates many people" or "Many people fear success."

4. Vary the structure and length of your sentences. Your prose becomes choppy (and dull) when every sentence begins with the main subject followed by a verb, and when sentences are of uniform length: "I stopped exercising. I gained 50 pounds."We could improve these sentences by combining them: "After I stopped exercising, I gained 50 pounds."
5. Use transitional words and phrases to show relationships between sentences. Notice how, without any transitional words, we cannot be sure what the relationship is between "I stopped exercising" and "I gained 50 pounds." Did the speaker stop exercising because he had gained fifty pounds? Or did he gain fifty pounds because he stopped exercising? Did exercise or the lack thereof have anything to do with the speaker's weight gain? A revision should clarify this relationship

**Duties and responsibilities of editor/ sub editor**

**A. Editor- Duties and responsibilities**

The important functions of the editor are Policy formulation, Public Relations, team building, leadership, planning, organizing the Desk, convening meetings and the coordination techniques

**Qualities needed for Editor**

A good editor shall have the following qualities:

- Penetrating sense of news value/ good nose for news.
- Accuracy, accuracy, accuracy.
- Education is half truth (experience, natural endurance and training are vital).
- Retentive memory is an asset.
- Constructive mind is essential (avoid evil mindedness, cynicism, and extreme pessimism).
- Good command of the language.
- Adaptability (ready to handle any kind of assignment any time).
- Alertness of the mind.
- Must do a wide range of reading, and have a sound general knowledge (a walking encyclopedia).
- Must have the ability to write headlines (needs a hand of a craftsman).
- Must have the ability to make contacts (sociable and friendly).
- He should be an excellent communicator.
- He should be a good planner.
- He should be an efficient administrator.

- He should be an efficient coordinator.
- He should be a delectable leader.
- He should have a sensitive feel for typography, good newspaper design and good photographs.
- He should maintain cordial relations with leaders and public in every walk of life but not succumb to blandishments.

*Editor checks the following:*

- Typographical errors
- End-of-line word divisions and bad breaks (incorrect line or page breaks)
- Spelling errors
- Errors in word usage
- Errors in grammar and syntax
- Errors and inconsistencies in punctuation
- Establish and maintain consistent patterns of mechanics (e.g., capitalization)
- Format of document, text, citations and references according to the appropriate style guide
- Apparent errors in arithmetic and in other facts within the realm of general knowledge
- The styling of tables, graphs, and other art, including their labels, captions, and text mentions
- Conventions such as use of italics, boldface, underlines abbreviations and symbols, the treatment of technical and trademarked terms, and the choice of spelling and punctuation styles.
- Ambiguous vocabulary and syntax
- Redundancies and verbosity
- Jargon that is inappropriate for the intended audience
- Connections and transitions, parallels, and paragraphing
- Consistent style in headings and in captions for tables, figures, and illustrations
- Statements that should be checked for accuracy, and follow up as required.
- Inconsistencies in logic, facts, and details, and query
- Possible legal trouble spots (e.g., libel, plagiarism, missing reprint permissions) or departures from social acceptability (e.g., gender, ethnicity, age, (or other) bias; failure to give sources.

**Responsibilities of the Editor**

- Checking stories for accuracy, adequacy, objectivity, and fairness
- Giving assignments to reporters and photographers
- Creating balance between business interests and professional values
- Eliminating editorialized (opinionated) news stories
- Simplifying, polishing, or improving the story
- Making stories in conformity with the policy of the institution and law and regulations of the country
- Making corrections of grammar, punctuation, capitalization
- Eliminating verbosity by trimming or shortening stories, articles, etc
- Giving headlines to stories and selecting appropriate pictures to them
- Write editorials that reflect the opinion of the newspaper
- Work in conformity with all other departments in the institution
- Create and maintain its contact outside the organization (influence people, policy makers, government bodies, pressure groups, etc)

**B. Duties and responsibilities of Sub-Editor:**

The sub-editor is actually responsible, more than any other person for what the paper looks like and stands for to the readers. There are many ways in which a sub-editor can leave the impression of his personality on the newspaper. The format of a paper is in reality determined by the sub-editor. The sub-editor has the nose for selecting the right type of news

- It is the task of the sub-editor to decide as to what is going in for tomorrow's newspaper and in what form. In fact, the sub-editor with a wide experience in his work is the most suitable person to become the editor in due course of time.
- The sub-editor has to separate the grain from the chaff out of the great number of news material lying on his desk. He should have an eye for accuracy. He must check the facts of a story and look out for the errors, if any.
- If there are certain facts which are missing, he must ask these from the reporters. The sub-editor has to read every story and sometimes contrive to make it interesting and newsworthy.
- The sub-editor has to put all the conflicting accounts into one coherent and wholesome story. If the reports contradict or conflict with each other, then he has to believe the story put in by newspaper's own correspondent.

- It is thus the responsibility of the sub-editor to make the story clear. He should see to it that the news story is based upon facts; it is as complete as possible and is clear from every angle for easy understanding.
- A sub-editor checks the news stories one by one. He goes through every single line of the copy. Then he adds a catch line, if the reporter has not already provided a suitable one. He also writes a suitable headline for the story.
- This is a very important and difficult duty of the sub-editor. After this, he edits the story, cutting the unnecessary matter and trimming the length to the right size according to the space where it has to be printed.
- He checks the spellings of names and places so that these are not printed wrongly. A sub-editor also has to correct errors of grammar, capitalization, punctuation and abbreviations. He cannot afford to allow even the most minor error in the newspaper.
- When a sub-editor feels that the intention of the writer of a story is not clear or the message of the story is very vague, then he can refer the copy back to the reporter and ask him to rewrite the story.
- The sub-editor has to take into consideration the policy of his newspaper before allowing a news item to be published. He has to breathe life into some dead matter lying before him so that the story is made lively. Sometimes, he tones down a story, if it is too dangerous, to make it safe.
- He has also to decide the suitability of the news stories and articles on the merits of their news value to the particular paper.
- He has to reject a superfluous article and prune another to its justified size. He is always on the look out to print a news story which is a scoop, well ahead of his rivals.
- After deciding the main contents of his newspaper, the subeditor has to use his utmost skill in their make-up and display.
- The maximum attention a sub-editor has to pay is to the layout of captions and the main news page. Balance and proportion are the qualities, which should be aimed at before anything else.

**Duties of a Sub-Editor**

Once the news editor selects the reports to be published, the desk chief gives that to sub editors under him to polish, correct, edit, put a headline, select the type phase and add pictures or

graphs if required. These are the main process of editing and duties of a sub editor, described below in detail:-

**Editing a copy**

The first job of a sub editor is to see that the report is in good language and there are no mistakes. There can be spelling mistakes, mistakes in sentence construction, grammar and factual mistakes. If the sub editor finds a portion of the report ambiguous or incorrect or doubtful he has to cross check it with the reporter.

**Adding value to report**

Sub editor must add value to the report. If some background material has to be added, he has to collect it from the library and improve the story. For example, if a report is filed on a train accident killing ten people, the sub editor can improve the story by collecting information about other major train accidents that happened recently. Similarly if a report is filed on the spread of dengue fever in the city, the sub editor should take a backgrounder about the earlier outbreaks of such contagious diseases and the measures taken to check these.

**Give a good heading to a news**

The sub editor has to find a good heading for the story. The heading should be sharp, attractive, crisp and convey the spirit of the story. The heading should compel the reader to stop and read the whole story.

**Managing column spacing**

While writing the heading, a sub editor should know the space available for the story, whether it is one column, two columns or three etc. The heading should fit within that column.

**Formatting**

Sub-editor has to select the type, or font, of the letters in each heading according to the length and width of the column. Thus a sub editor should also know about the font sizes available. Each paper has its fonts and types.

**Suggest a suitable heading**

While writing the heading, it should fit into the mood of the story. A sarcastic heading for a hard story will look odd. Similarly, a hard line heading will spoil the spirit of a humorous piece. The heading should also be suggestive. It should never be a full sentence.

**Improve visual quality of report**

The sub editor now has to see if there is a possibility for including photographs along with the news item. Pictures or graphs can improve the visual quality of a report.

## Condensation

Condensation is a task that the sub editor has to do. Reporters generally file lengthy stories. Only the sub editor will be able to know about the availability of space in the newspaper. If the full story written by a correspondent will not squeeze into the space available, it is the job of the sub editor to condense it by rewriting or editing. If one word can substitute for a number of words that definitely should be done.

## Headlines – Types of headlines

A reader often decides whether to read a story based on what the headline says. A headline tempts the reader to dig into the story. The modern trend in headlines is towards simplicity. Most newspapers now use heads that say what has to be said in a minimum of words. A good headline conveys the news in a story and the significance and meaning behind the story. The headline must give the essence of the story. While explaining the story accurately your headline also must fit into a limited space.

### Headline Functions

A Headline in newspaper or in any other medium has enormous functions for the news producers and consumers. Some of these basic functions are the following:

- As it is the representative of the entire story, it conveys to the reader the gist of the whole story beneath.
- Tells the news to the readers of headline alone.
- It conveys the relative significance of the story to the readers.
- Helps readers to select which story to read (imagine a newspaper with no headlines).
- By lending character and stability to newspaper, headings create favorable recognition value.
- They present accurate and complete information quickly and attractively.
- They help to sell the newspaper at stand by attracting attention and arousing curiosity.
- The headline carries the condensation process a step further. Headline speaks in terms of words .whereas lead speaks in terms of sentences and the body in terms of paragraphs.

### Headline types

1. Full-line or cross-line pattern:

Full-line or cross-line pattern of headline writing is one of the most favorite patterns among newspapers and magazines. In this pattern, the headline starts from the left extreme corner of the

story and extends to extreme right of this particular story. There is a possibility of using one or two lines in this pattern.

2. Centered headline pattern:

This pattern is also very popular among many newspapers and magazines. Here we ensure that the lines do not touch column rules on both sides of the story. There exists equal exists equal amount of white space on either side.

3. Flush line pattern:

Another common news headline pattern is the flush line pattern. The head starts either from left or right corner of the story, but it should end at the center without touching the other corner. There are two types of this pattern, the flush left and flush right. The right flush pattern is not widely used. There can be a 1 line, 2 line patterns. Length of lines is immaterial in these patterns.

4. Pyramid or inverted pyramid patterns:

These patterns are very traditional patterns; however, they are also used widely in current headline writings, and are among the favored ones. Here the maximum number of lines used is 5 and the minimum is 2.The upper or the lower should be longer and so on. The lines are uniformly indented from both sides.

5. Waist line pattern:

This patter can have centered or cross lines at the middle: however, the basic thing is that it forms a waist like shape when created. Here a great variety is possible. The minimum number of lines that form the pattern is there. This pattern is less popular is three. This pattern is less popular than many of the patterns.

6.Step line pattern:

Two and more lines are needed to form this pattern. In indented some spaces from the first and so on. It is a few uses the pattern these days. Especially, the flush left step line head confuses readers very much.

7. Banner/Ribbon/streamer head:

This pattern runs across the whole page (6or7 columns) of the newspaper. As it is used for a very significant story, very big and bold font sizes are used. It usually appears on the front page. Banner heads are used only when a story has national or international significance. As stories of such significance happen rarely, this pattern is also used sparingly.

8. Multi Deck pattern: In this pattern, several decks are used one after the other. The pattern was in the olden days of the newspaper. As it takes a lot of space and it is wordy, it is no more used by the newspapers of today.

# Communication Theory- Unit-1

## 1.1. Definitions of communication

The word communication is derived from the Latin word 'Communus', which means 'common'. It is a process of exchange of facts, ideas, and opinions. It is a means by which individuals or organizations share meaning and understanding with another. In other words it is the transmission and interaction of facts, ideas, opinions, feelings and attitudes. Thus the exact meaning of the word communication is 'to share' or 'to participate'. The dictionary meaning of communication includes

- Communication is the transmission of a message or information by speaking or writing. Communication is giving or exchanging information, signals, messages by talk or gestures or writing.

According to Fred G. Meyer "Communication is the exchange of ideas, opinions by words, letters or messages". Thus holistically communication is defined as "***giving, receiving or exchanging ideas, information, signals or messages through appropriate media, enabling individuals or groups to persuade, to seek information, to give information or to express emotions***"

| | |
|---|---|
| 1 | "Communication is the discriminatory response of an organism to a stimulus" **(Stevens, 1950).** |
| 2 | "Communication is the mechanism by which power is exerted" **(Schacter, 1951).** |
| 3 | "Communication is the process of conducting the attention of another person for the purpose of replicating memories" **(Carrier and Harwood, 1953**). |
| 4 | "Communication is the verbal interchange of thought or idea" (**Hoben, 1954**). |
| 5 | "The connecting thread appears to be the idea of something's being transferred from one thing, or person, to another. We use the word 'communication' sometimes to refer to what is so transferred, sometimes to the means by which it is transferred, sometimes to the whole process. **(Ayer, 1955).** |
| 6 | "Communication is the process that links discontinuous parts of the living world to one another" **(Ruesch, 1957).** |
| 7 | "Communication is the process by which we understand others and in turn endeavor to be understood by them. It is dynamic, constantly changing and shifting in response to the total situation" **(Anderson, 1959).** |
| 8 | "Communication arises out of the need to reduce uncertainty, to act effectively, to defend or strengthen the ego" (**Barnlund, 1964**). |
| 9 | "Communication is the transmission of information, idea, emotion, skills, etc., by the use of symbols, words, pictures, figures, graphs, etc. It is the act or process of transmission that is usually called communication" **(Berelson and Steiner, 1964).** |
| 10 | "Every communication act is viewed as a transmission of information, consisting of a discriminative stimuli, from a source to a recipient" **(Newcomb, reprinted 1966**). |

**Communication Postulates**

The fundamental aspects or conditions can best be surveyed within the framework of a single broadly conceived postulate: *Communication occurs whenever persons attribute significance to message-related behavior.* The following are the basic dimensions or postulates of communication:

***1. Communication is dynamic, not static***

Instead of a mechanistic picture of linear cause and effect, communication is the more complex notion of dynamic change, one in which an indefinitely large number of particulars interact in a reciprocal and continuous manner. Each successively smaller level of activity is itself a composite of interacting elements. "Communication simply is not analogous to a process where something changes as it is "passed" or "transferred" from one person or setting to another. It is less misleading to think of communication as an occurrence, a happening, rather than something that exists in and of itself."

***2. Communication Is Irreversible***

Human experience flows in words as a stream, in a "single direction leaving behind it a permanent record of man's communicative experience". Hence no statement, however repetitious, can be regarded as pure redundancy. Somehow, repetition of even the same signal alters the larger significance of the exchange. Once the transaction begins, there can be no retreat, no fresh start, and no way to begin all over again."

***3. Communication Is Proactive, not passive***

Communication is more than "an exercise in translation" or an "action that ensures agreement between what is said and what is understood". Communication is more than a passive reaction to a stimulus. But too much sensational imagery, reading and hearing is offered to our senses by the media. People become passive and apathetic and compulsively want to react to the overabundance of communications, popularly called as **communication overload.** But human beings have got a tremendous capacity of to select, amplify, and manipulate the signals that assault their senses. It ignores the fact that people engaged in communication are proactive because they enter the transaction totally. Among living creatures man is the most spectacular example of an agent who amplifies his every activity, first in the way he perceives it, and then in the way he modifies his environment."

***4. Communication Is Interactive:***

Communication "cannot be properly understood apart from the constant succession of interacting forces that influence us, both internally and externally" It is not what happens around him that makes a man experienced; it is the successive constructing and reconstructing of what happens, as it happens, that enriches the experience of his life. The term interaction suggests a reciprocal influence.

***5. Communication Is Contextual:***

Communication never takes place in a vacuum; it is not a "pure" process, devoid of background or situational overtones; it always requires at least one's minimal sensitivity to immediate physical surroundings, an awareness of setting or place that in turn influences the ebb and flow of what is regarded as personally significant. To be sure, the context of communication comprises physical characteristics—seating arrangement, color and light, physical space, and the like—but it is much more than the sense of these physical things. It includes the less tangible matter of atmosphere and ambiance, of socio-cultural background."

***6. Communication is grounded in perspective***

It is not events themselves, but how men construct events, that determines what they will see, how they will feel, what they will think, and how they will respond" These differences in perspective account for wide variations in context and culture as well as for many communication failure

**Communication Misconceptions**:

***The following are some of the misconceptions / myths related the concept of Communication.***

***1. Communication is Information Transfer:***

The first myth is that communication is simply the transfer of information, just like a computer. Theodore Roszak in 1986 called it as '*The Cult of Information*', where we assume that human beings behave just like computers as data processing machines. The fact is, we're not machines. Our communicative behavior is much more complex. Part of that complexity is the fact that we do not respond equally to the each message, even to the same message sent at different times in a different context. Communication is not about giving information. It is about exerting influence. Far from being guided by

logic, it is guided by psycho-logic. The goal of communication is not simply telling, but acting, changing another person's behavior through what we say to them.

***2. Communication failures can be solved by restoring the connection:***

If we assume that communication is simply the transfer of information, then all we need to do to solve it if repair the open circuit, plug back into to the network, tune the signal. Once this linear, one-way analogy is accepted, it is almost impossible not to think of communicative difficulties as a result of some malfunctioning that occurs along the line. Even worse, communication tends to be defined in all-or-nothing terms: Either the system works or it does not; the signals arrive at their destination, or they are blocked somewhere along the line."

***3. Communication is either on or off:***

Again, if communication is information transfer, when it fails, it must fail completely. No signals can sneak through a broken network connection. However, human communication can't be turned off so easily. Some messages, perhaps unintentional, still exert some influence. In a sense we can never have a communication failure—some message is communicated even if it is not the one the speaker intended...

***4. Communication is passive****:* If communication is information transfer, it doesn't take much active effort. We have come to regard communication as passive. We simply send our messages and let them take their course, never bothering to reinforce them or check to see if they were received. When we begin to see communication as exerting influence, we can see it is hardly a passive matter. We have to actively attend to the messages we send. We have to be conscious of the unintentional messages we give out that may betray our unguarded intent. We begin to manage our communication strategically, making sure we make the most of the messages we send.

**1.2, Scope**

It is essential for the sender to understand the scope, and for the recipient to understand the purpose of the communication. If this understanding does not exist, then there is little chance for an effective and successful communication. The communication scope refers to the sphere of operations related to the communication. There are two aspects i.e. 'audience scope' and 'subject scope'.

- **Audience scope:** It is very essential for the communicator to clearly identify the target audience of the communication. It will also allow the communicator to

tailor the communication, especially the language used to the particular needs of the audience as well as their cultural background. Most communications are not aimed at specific people, but at groups of people, or more likely, at job functions or users of particular products. It may also be the case that the communication is aimed at 'the general public'. In each case, the communicator must ensure that the target audience is clearly identified.

- **Subject scope:** In order to allow readers to further ascertain whether a communication contains information that they need to know, or that they may be looking for, a communication should always clearly identify the subject scope of the communication. The subject scope is a specification of the information covered by the communication.

**Purpose of Communication**:

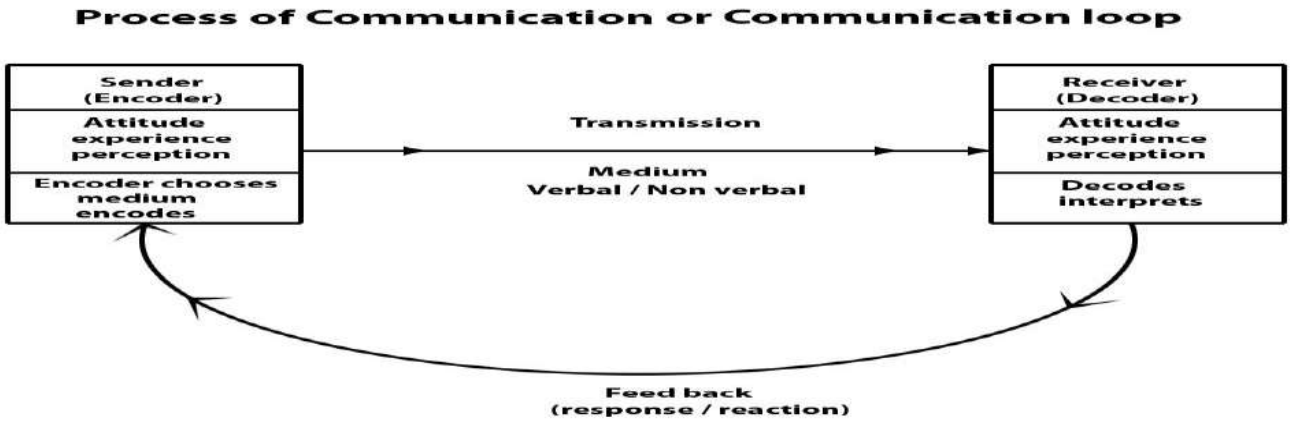

A communication will always have a purpose and the purpose of the communication must be clear to the recipient of the communication. The following list highlights different purposes of communication and describes the way in which the communication might need to differ based on this purpose i.e. To inform, To convey, To persuade, To request, To warn, To reassure etc.

**General Objectives of Communication**

1. **We communicate to persuade**: It means that we want someone to do something and this desire of ours is communicated. The mother patting the child to stop crying, the advertiser displaying a model in a new T-Shirt and the politician haranguing (urging) his audience to vote for him are all having the same objective of persuading, while communicating it differently.
2. **We communicate in order to give or provide information**: The science teacher demonstrating an experiment, the bank announcing a reduction in interest rates and the finance minister, presenting the budget are all communicating to provide information.
3. **We communicate seeking information**: A passer by asking you the way to the post-office, the student asking the teacher for some clarification or the investigating policeman making discreet enquiries are all seeking information by using this communication skill.

4. **We communicate to express our emotions** like courage or fear, joy or sorrow, satisfaction or disappointment with appropriate gestures and words. Some people have unlimited skill to emote, (i.e., to display excessive emotion) to suit the occasion. Our politicians are capable of emoting well, which by itself is a communication skill.

### 1.3. Communication process & Variables

Every bit of message communicated undergoes a certain process involving more than one person. Nobody communicates to a vacuum or wilderness. Communication is considered effective if it receives the desired result, response or reaction. All Communications are related to some context. In any context, a communication loop exists to enable successful communication.

- At one end of the loop is the **sender of a message or information**. He receives a stimulus to send a message across.
- The stimulus may be **external or internal**. There might be an urging from an outside source which is external stimulus. The internal stimulus might be a desire from within the person to send across a message or information.
- He converts the message into a **code**. This process is called **encoding**. The sender is also called the encoder. He chooses the appropriate verbal or non-verbal code and puts the message into that code.
- Then the encoder transmits the coded message through an appropriate **medium**. The sender or encoder chooses the appropriate medium based on several factors such as the receiver, the message, and its urgency or otherwise. He may choose a

non-verbal signal, body language, speech, writing or any other available medium to transmit the encoded message.

- The message gets transmitted to the **receiver**. The receiver decodes the message and perceives it. Unless the receiver is aware of the code and is able to use the medium, he cannot decode it.
- Misinterpretation may arise even if there is interference in the medium. The receiver's response or reaction is the **feedba**ck that the sender gets. The feedback may again be a signal or an action.
- In short communication is related to the context. Context is determined by country and culture generally and the individual's mindset and attitude particularly. Environment and the stimuli, external or internal determine the actual process of communication.
- The sender in response to an external or internal stimulus perceives a message. He puts it into an appropriate code of verbal or non-verbal symbols. He transmits it across to the receiver through an appropriate medium. This act of the sender is conditioned by his mental attitude, his experience and his perception of all the related factors. The receiver, based on his experience, attitude and perception of all related factors decodes the message, interprets it and reacts or responds to it.
- We should remember that the sender and the receiver should share a symbol that will carry the same meaning for both. If they do not, misunderstanding is bound to occur.

**Forging an effective communication loop**

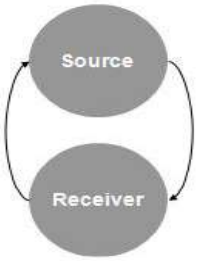

- The message is the core idea a sender wants to communicate. The sender should carefully decide upon the precise message that he wants to communicate and its purpose. He should take into consideration the context of his communication and the attitude of the receiver. Based on these factors, the sender should choose the code and the medium for transmitting the code.
- The receiver should be familiar with the code and be competent to access the medium of transmission. The choice of the medium also depends on the urgency of the message. If the sender wants an urgent feedback, he should choose the oral medium.

### 1.4. Types of communication

Communication means transferring messages from one to another through any medium. There are various levels in communication like Intrapersonal communication, Interpersonal communication, Group communication and Mass communication. Mass communication plays the vital role because it reaches very large number of audience. Basically Mass communication has two forms one is Interpersonal communication and another one is media communication.

**1. Intrapersonal Communication:**

***Intrapersonal communication is a communication which happens yourself***. Here both Source (sender) and receiver is only one. So, the feedback works without any interruption. Example: A person can communicate himself through pain, thinking, feelings and emotion etc.

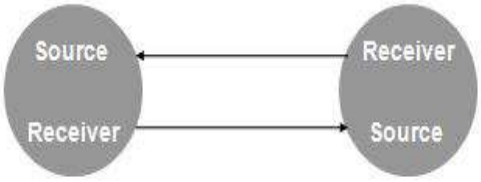

**A. Intrapersonal communication**

**2. Interpersonal or Dyadic Communication:**

In **Interpersonal or Dyadic communication**, two persons are involved in this communication process. Here the Source becomes a receiver and receiver become Source because of dynamic communication process were the feedback's are shared between Source and the receiver. It is an **interactional process** between two people, either **face-to-face or through mediated forms**. It is, in other words, a dialogue or conversation that is personal, direct and intimate. A lot depends on the relationship between the two individuals, their equality of status, the socio-cultural environment in which the exchange takes place etc. When a mechanical device in involved in an interpersonal exchange, it is termed **interpersonal mediated communication**. Feedback is instantaneous and easy to measure.

- **Relational (Qualitative):** Communication in which the roles of sender and receiver are shared by two people simultaneously in order to create meaning.

- **Situational (Contextual):** Communication that occurs between two people in a specific context.
- **Quantitative:** Dyadic interactions, including impersonal communication.
- **Functional (Strategic):** Communication for the purpose of achieving interpersonal goals.

B. Dyadic communication

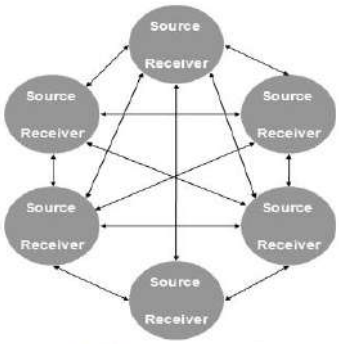

**3. Small Group Communication:**

If there are more than two members involved in the communication process, then it will become a group communication. **If least number of persons is involved in the group communication is called as small group communication**. In this communication process, everyone becomes a Source as well as receiver through sharing information and gives feedback to another. Group Communication is an interactional process that occurs among three or more people interacting in an attempt to achieve commonly recognized goals either face-to-face or through mediated forms. The larger the group, the less intimate and personal is the possibility of exchange. Feedback is the key word here. Feedback is not instantaneous and is difficult to measure.

**Groupthink** is an important aspect in group communication. This occurs when a homogenous highly cohesive group is so concerned with maintaining unanimity that they fail to evaluate all their alternatives. Groupthink members see themselves as part of an in-group working against an out-group opposed to their goals. Groups engaged in groupthink tend to make faulty decisions when compared to the decisions that could have been reached using a fair, open, and rational decision-making process. Group thinking groups tend to:

- Fail to adequately determine their objectives and alternatives,
- fail to adequately assess the risks associated with the group's decision,
- not seek expert advice,

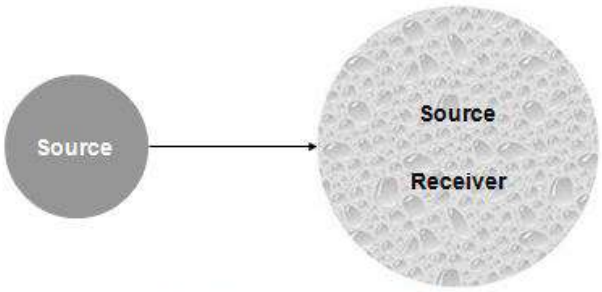

- select and use only information that supports their position and conclusions, and does not make contingency plans in case their decision and resulting actions fail

C. Small group communication

**4. Public Communication:**

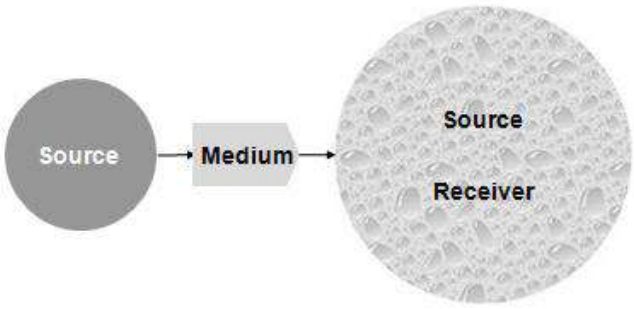

In public communication, Source or messages from a single person will reach or received by huge number of audience. But in this communication there is no mutual feedbacks between source and receiver like small group communication and it's only focused on Speaker

D. Public communication

**5. Mass Communication**

In mass communication there is large number of audience and they all can't group together in one place, so we need certain tool or technology for communication process. In mass communication, there is no direct access with receiver. Mass media include newspaper, radio, television and internet. Here the audience feedback is very less or delayed

E. Mass communication

Mass Communication represents the creation and sending of a **homogeneous message** to a **large heterogeneous audience** through the media. Mass communication studies the uses and effects of the media by many as opposed to the study of human interaction as in other communication contexts. Mass media is termed by **Daniel Learner** as "mobility multipliers" and **Schramm** as "magic multipliers".

**Functions of the Mass Media:** The following are the basic functions performed by the mass media:

- **Information:** Surveillance of the environment relates to news about the happenings in society. The mass media carry out this function by keeping us informed about the latest events in and around the world.
- **Entertainment:** Mass media help us relax with family and friends and pass time. They also fulfil our psychological and social needs.
- **Symbolic Function:** Mass media provide a shared symbolic environment. According to George Gerbner Television is central symbol of any culture and it performs the symbolic function by disseminating political, social and cultural symbols.
- **Development:** The mass media in developing countries of Asia, Africa and Latin America perform the function of facilitators of ˜development communication'' focusing on the socio-economic needs of the backward sections of society.
- **Advertising:** This is a commercial function that helps keep the economic status of a country healthy.

### 1.5. Characteristics print, radio, Television, film & Internet

| Type of Medium | Characteristics | |
|---|---|---|
| | **Medium aspects** | **Institutional aspects** |
| Print Medium | Regular and frequent appearance.<br>Printing Technology.<br>Topicality of Content.<br>Medium has reference value. | Literate audience, Urban focus.<br>Relative freedom with self-censor.<br>In public domain.<br>Commercial basis. |
| Radio medium | Sound appeal, Portable flexible in use.<br>Variable content but music oriented.<br>Has participative potential.<br>Individual and intimate in use.<br>Transient medium.<br>Relatively high involvement. | Relative freedom with self-censor<br>Local and decentralized in concept.<br>Relatively cheaper technology.<br>Subject to legal and social control |
| Television medium | Highly diversified content.<br>Most effective audio-visual medium.<br>Close, personal and domestic nature.<br>Low intensity and involvement.<br>Transient medium. | Complex technology and organization.<br>Subject to legal and social control<br>Relative freedom with self-censor<br>National & international in character.<br>High public visibility. |
| Film medium | Audio-visual channel of reception.<br>Private experience of public content.<br>Extensive and universal appeal.<br>Predominantly a narrative fiction.<br>International in genre and format.<br>High intensity and involvement. | Subjected to social control.<br>Complex organization and distribution.<br>High cost of production.<br>Multiple platforms of distribution.<br>Relative freedom with official censor |
| Internet medium | Computer based technology.<br>Highly interactive & participative.<br>Have private and public functions.<br>Interconnectedness.<br>Ubiquity and de-locatedness. | Low degree of regulation. |

### 1.6. Barriers to Communication

Communication is effective if it flows freely in a communication loop between the sender(s) and receiver(s). Free flow means uninterrupted transmission of the information / the message through an appropriate medium, correct comprehension of the message by the receiver and a relevant and appropriate feedback from him. Misunderstanding, Irrelevant response and undesirable reactions are the consequences of a failed communication exercise. Failure of effective communication results in loss of valuable time, resource, material and even life. Barriers to communications range from the simple distracting noises to the most complex psychological factors. These barriers may cause a simple communication gap or a total failure of communication.

1. Barriers to communication result in undesirable reaction and unfavorable response.

2. The communication exercise fails because the feedback is absent or falls short of expectation
3. Barriers to communication are caused by environmental, physical, semantic, attitudinal and varying perceptions of reality

**I. Environmental and Physical barriers**:

The major environmental / physical barriers are Time, Place, Space, Climate and Noise. These factors may just cause distraction leading to inattentiveness or totally alter the message, causing miscommunication.

**Time**: Time has an important role in a communication process. Every concern has to choose a fast channel of communication with good alternatives. For example

- We have to choose a face-to-face oral communication channel to give instructions to a worker
- Public address system to reach a large member of people scattered over a large area,
- Visual signal in crowd management and
- Courier system to reach clientele spread over and at distance.

All these developments emphasize the importance of 'time' in a communication exercise. Immediacy of the objective usually determines the choice of the medium. In modern times, slow channels of communication are getting replaced by effective fast channels of communication.

**Space**: Space plays an important role in an oral communication situation. It can act as a barrier to communication or act as an aid promoting good communication. Experts classify an oral communication situation on the basis of the distance maintained between sender and receiver as Intimate, Personal, Official and Public.

- **Intimate**: If the distance between the two, the encoder (sender) and decoder (receiver) is less than a **foot and a half (18 inches),** the situation is labeled intimate. The mother coddling the baby, the father and the son, or husband and wife in a familial / private situation communicate at an intimate level of space.
- **Personal**: Friends and peer groups who are in a process of communication maintain a distance of about **two to three feet** which is personal.
- **Official**: In official situation, the space should be at least **four to five feet** depending on the message or information.

- **Public**: The distance between the speaker (the encoder) and the listeners (decoder, in this context an audience) should be **over ten feet**, in a public situation.

Any reduction of these minimum space parameters will lead to awkward and embarrassing situations. Generally, Americans and Europeans do not want violation of their personal space. They refer to their personal body space as the **'body-bubble'** which they do not want to be violated by unwanted intrusions. Asians and people from the Middle East do not attribute importance to space. Space can act as barrier in a cross cultural or trans-national oral communication situation. Overcrowding in elevators, jostling in office corridors and elbowing in public transport systems are all external factors that do affect communication as barriers. Proper maintenance of distance will help overcome this carrier. It will remove miscommunication and prevent distortion of a message or information.

**Place**: The place or the location where a communication process takes place can degenerate into a barrier to effective communication. Factors like inconvenient place, rickety furniture, poor lighting, and inadequacy of space make people irritable / impatient and annoyed. Friction and conflict erupt easily in such places effecting the transaction of business communication. Good ambience and suitably lighted and ventilated places promote effective communication.

**Climate:** Though the word climate refers to the human relations prevailing there, it is no exaggeration to say that the actual room temperature helps people to keep their heads cool! Unfavorable climate can act as a barrier to communication leading to wrong perceptions or decision.

**Noise:** Noise is a physical barrier to effective communication. Noise may have its origin from an external source or may exist even in the communication loop. Effective communication is almost impossible on the factory floor, the bus stand or railway station. No one should try to out shout a machine to achieve successful communication. Instead he should choose a better place with less noise to communicate his message / information. Noise distorts messages and acts as a barrier to effective communication.

**Tips to overcome Physical or environmental barriers**

(a) Time – adopt appropriate fast channels of communication

(b) Space – maintain the distance in the communication exercise as determined by the situation

(c) Place – Avoid overcrowded and ill-lit, ill- ventilated places to achieve effective communication

(d) Medium – Choose the appropriate medium oral / written (sign (audio/visual) medium

**II. Semantic Barriers**:

Every word has a direct meaning called the **denotative meaning**. In addition to its exact or lexical meaning, words also acquire implied meanings **called connotative meanings**. Connotations are understood based only on an individual's experience. If the encoder and decoder do not share the some connotative meaning for a word, miscommunication occurs. If the receiver does not understand the connotation attributed by the sender, miscommunication takes place. But when words are used for denotations alone, not much damage will be done. Semantics is related to meanings of words. It is related to connotative and denotative meanings of words and its study. To overcome the semantic barrier to communication, the communicator should choose the precise and exact word that will carry the same meaning for the receiver in the given context. The meaning of the word is related to context at the connotation level.

**III. Cultural Barriers:**

To avoid the cultural barriers we should understand and accept the cultural variations in individuals and groups. Appreciate them and adopt your communication style to them. In the context of globalization and free trade, business communication has to cut across different cultural identities. These invariably cause cultural barriers that have to be overcome. For example

- The relaxed and leisurely pace of the Easterners, the formal and official style of the Britishers, the casual and matter-of fact nature of the Americans, the thorough nature of the Germans and the extreme courtesy and politeness of expression of the French are all cultural features.
- It is easy for an American to give his opinion even to his boss whereas decisions and opinions are seldom expressed in the presence of elders and seniors in the East.

To overcome any cultural barrier to effective communication one has to possess an understanding of the culture of the receiver(s) / decoder. Even in body language there are variations. The loop formed by tip of the thumb and index finger is a signal of agreement in North America but an obscenity in the Southern states.

**IV. Psychological Barriers**:

Communication is an activity dependent on the flexible nature of the participants. We will send or receive a message and react / respond to it only if we feel that the person who communicates has credibility. Our reaction and response depend on our attitude to the source of information. The sender should consider the receiver's view point as the receiver should overcome his bias against the sender to overcome attitudinal barriers. The information / message should be favorable to the receiver to respond / react to it. Communication exercise is affected by the values opinions and attitudes of the sender and the receiver in a given context. The reaction / response to an unfavorable information / truncated message from a source lacking credibility will always fall short of the expectation and fail to provide the necessary feedback to the sender.

**V. Perception of Reality**:

Perception is the understanding of the world around us. Each one perceives the world in his own unique way and interprets what has been perceived in yet another unique way and interprets what has been perceived in yet another unique way.

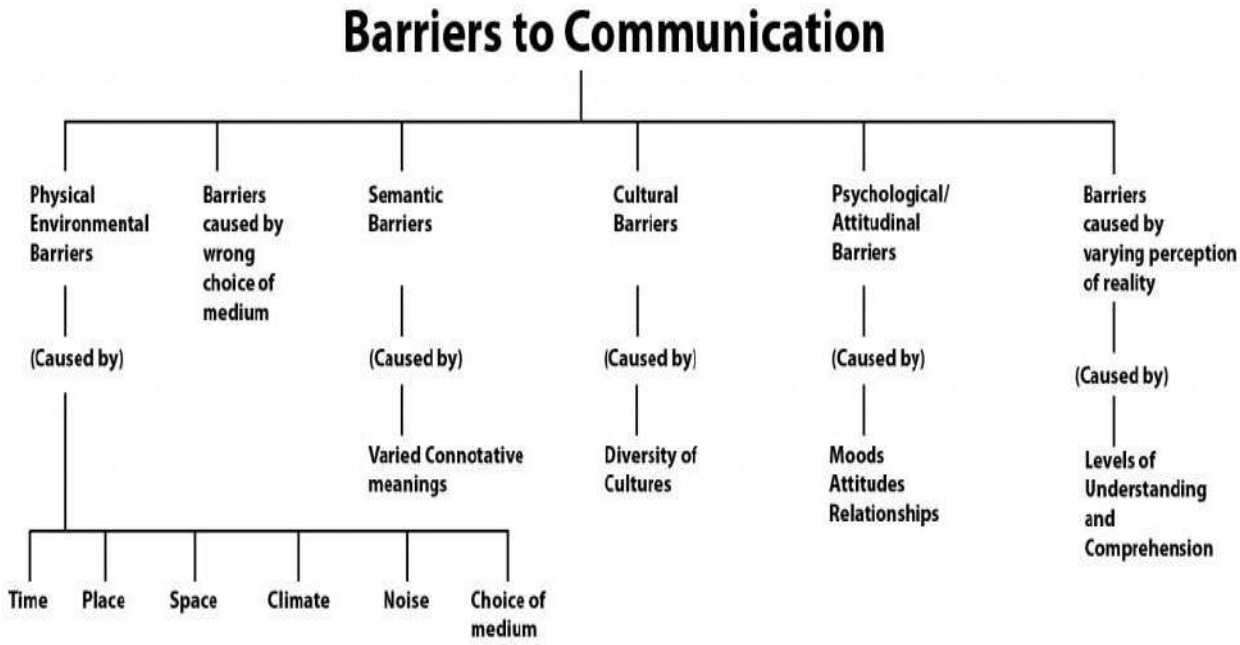

- **Abstraction:** An abstract is a condensation of something. When we communicate, we unconsciously resort to 'abstracting', i.e., keeping to the essentials. We eliminate what we decide to be superfluous. But the receiver may not be competent enough to understand what we have eliminated. Abstracting is necessary for good and effective communication but it should not be done in certain demanding situations. If done it becomes a barrier. For example when you are instructing a lay and illiterate person about cleaning the house, you have to tell literally to sweep, dust and mop. Abstracting at this situation may not prove to be useful. The worker may not understand that you want every step and process to be gone through. But when you give the job to an agency, you can simply say, I want the house "thoroughly cleaned". Good abstracting can remove barriers in communication caused by unnecessary words and details. In a

communication process, if the participants have different levels of perception, abstraction will be a barrier to communication.

- **Slanting:** Slanting is a barrier to communication process. A slanted report is judgmental. News reporters are asked to report news and not give them a slant. A small 'crowd' or a large crowd' is generally slanted expressions giving only relative meanings. Instead, if you say a gathering of about five thousand people you avoid slanting. Communication should also be unaffected by inferences and assumptions. Most inferences and all assumptions are highly subjective. They tend to become barriers if they form the basis of a message or information.

**VI. Medium of Communication – Wrong choice as a barrier**

A wrong medium or an inappropriate medium chosen for communicating a message will act as a barrier to communication. Complementing one medium of communication with another can help overcome communication barrier caused by the medium chosen. An oral reminder in person or over the telephone followed up with a written letter can easily produce the desired response or expected reaction.

## UNIT-2

### 2.1. Development of Communication Models:

The following are the different stages in the development of the Communication models. They are

**A. Action Models:**

- The Action models are sender oriented.
- These models work well with the mediated communication but not well with the inter-personal communication.
- From the action model point of view the communication may fail due to failure of source to structure the message correctly or the listener did not correctly listen to the message.
- **Examples:** Aristotle Model of Communication, Lasswell Model, Shannon & Weaver Mathematical Model, Wendell Johnson Model, Berlo Model, George Gerbner Model, Westley and MacLean Model and Defleur Model.

**B. Interaction Models:**

- The Interaction Model presumes that there must be some form of relatedness between the source and receiver or the speaker and listener.
- The interaction model focuses on the "Control of Communication" i.e. whether the message has intended effect or not.
- The interaction model added the concept of "Linear feedback" to the communication models. In the interaction models the process of listening becomes receiving, decoding, interpreting and acting upon the message.
- When the receiver acts upon the message the behaviour is seen as "feedback". In the interaction models "what is new is information and what is not new is redundancy".

**C. Transaction Models:**

- The transaction models view communication as "simultaneity". That means while 'A' is speaking to 'B' then 'B' is generating messages or feedback in many ways through body postures, facial expressions, eye movements, hand movements etc.
- In transactional models both persons in communication situation are participating simultaneously in the communication process.

- In transactional models the concern is with the pattern of behaviour within the relationship formed between the sender and receiver.

**D. Convergence Models:**

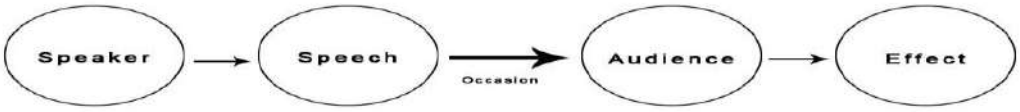

- The convergence models of communication are based on the principle of "Cybernetics".
- The analytical concept of interaction, self generation, mutual exchange of information and mutual understanding explain the human communication in the convergence models.
- Kincaid (1979) developed convergence models which focuses on the concept of "mutual understanding" in the communication process.

## 2.2. Models of communication

### 2.2.1. Aristotle's Communication Model

Aristotle, a great philosopher initiative the earliest mass communication model called "Aristotle's Model of Communication". He proposed model before **300 B.C** in his hook tilted **"Rhetoric".** In the model he identifies the importance of audience role in communication chain.

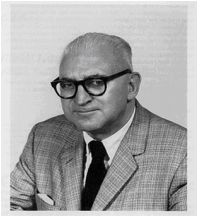

ARISTOTLE'S MODEL OF COMMUNICATION

- Aristotle Model of Communication is simple and linear and has **5 basic elements (i) Speaker, (ii) Speech, (iii) Occasion, (iv)Audience and (v) Effect**.
- Speaker plays an important role in Public speaking. The speaker must prepare his speech and analyze his audience needs before he enters into the stage. His words should influence in audience mind and persuade their thoughts towards him.

- Aristotle advises speakers to build speech for different audience on different time (occasion) and for different effects
- This model focuses more on **public speaking**
- Example: Alexander gave brave speech to his soldiers in the war field to defeat Persian Empire. In this context
    - Speaker – Alexander
    - Speech - about his invasion
    - Occasion - War field
    - Audience – Soldiers
    - Effect - To defeat Persia.

### 2.2.2. Lasswell formula or Lasswell's model - 1948

Harold Dwight Lasswell, the American political scientist proposed the model in **1948** which states that ***"A convenient way to describe an act of communication is to answer the following questions"***

- **Who –** The communication source or the Communicator
- **Says What –** Message or the information disseminated
- **In Which Channel- The** Medium
- **To Whom –** The Receiver
- **With what effect-** The aim of the communication i.e. its effect on audience.

- Lasswell model suggests the message flow in a multicultural society with multiple audiences. The flow of message is through various channels.
- In this model,
    1. Communicator component refers to the research area called **"Control Analysis".**

2. Says what is refers to **"Content Analysis",**
3. In which channel is refers to **"Media Analysis",**
4. To whom is refers to **"Audience Analysis"**
5. With What Effect is refers to **"Effect Analysis"**

- This model is about process of communication and its function to society, According to Lasswell there are three functions for communication:
  1. **Surveillance of the environment**
  2. **Correlation of components of society**
  3. **Cultural transmission between generation**

**Example:** CNN NEWS – A water leak from Japan's tsunami-crippled nuclear power station resulted in about 100 times the permitted level of radioactive material flowing into the sea, operator Tokyo Electric Power Co said on Saturday. Who – TEPC Operator, What – Radioactive material flowing into sea, Channel – CNN NEWS (Television medium), whom – Public, Effect – Alert the people of Japan from the radiation.

**Advantage of Lasswel model**:

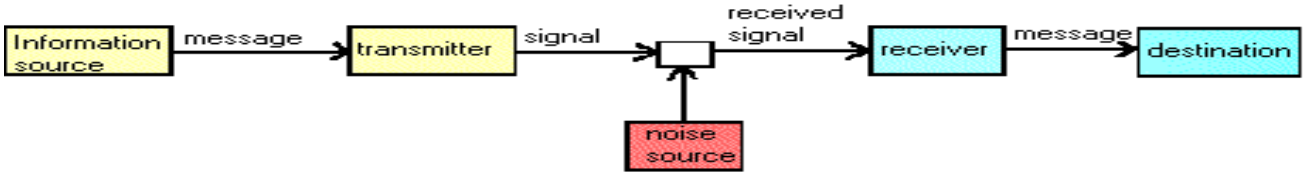

- It is Easy and Simple
- It suits for almost all types of communication
- The concept of Control analysis has given rise to the field of "Communication research".

**Disadvantage of Lasswell model**:

- The concept of Feedback and noise are not mentioned
- The model proposes a linear process of communication, which was later disproved.

### 2.2.3. The Shannon-Weaver Model-1949

**Claude Shannon** and **Warren Weaver** postulated the **Mathematical theory** of Communication or a **general model of communication** in the year **1949**. They both were working on an assignment in Bell Telephone Industries as part of their researching in the field of information theory. The following is the diagrammatic representation of the model.

- The Shannon-Weaver Model (1947) proposes that the communication process must include **six elements**:
    - **a source**
    - **an encoder**
    - **a message**
    - **a channel**
    - **a decoder**
    - **a receiver**

Shannon's model breaks the process of communication down into **eight discrete components**.

**1. An information source**: All human communication has some **source i.e**. the information source may be a person or group of persons with a given purpose. They have a reason for engaging in communication Source creates the message and has intent to disseminate information.

**2. The message**: Message is sent by the information source and received by the destination. Message can be verbal or non-verbal.

**3. A transmitter**: According to Shannon's & Weaver's model a transmitter may be the telephone instrument that captures an audio signal, converts it into an electronic signal, and amplifies it for transmission through the telephone network. Transmission is readily generalized within Shannon's information theory to encompass a wide range of transmitters. For example

- The simplest transmission system like face-to-face communication has two layers of transmission. The first, **the mouth (sound) and body (gesture),** create and modulate a signal. The second layer, which might also be described as a **channel,** is built of the **air (sound) and light (gesture**) that enable the transmission of those signals from one person to another.
- A television broadcast would obviously include many more layers, with the addition of cameras and microphones, editing and filtering systems, a signal distribution network like a satellite and a local radio wave broadcast antenna.

**4. The signal:** Signal flows through a channel.

- There may be **multiple parallel signals**, as is the case in face-to-face interaction where sound and gesture involve different signal systems that depend on different channels and modes of transmission.
- There may be **multiple serial signals**, with sound and/or gesture turned into electronic signals, radio waves, or words and pictures in a book.

**5. A carrier or channel**: In Shannon & Weaver model the channel is represented by the small unlabeled box in the middle of the model. The most commonly used channels include **air, light, electricity, radio waves, paper, and postal systems**. There may be multiple channels associated with the multiple layers of transmission.

**6. Noise**: **The concept of noise was introduced for the first time by Shannon and Weaver.** Noise is described as the form of **secondary signals** that obscure or confuse the original signal carried in the form of message. As Shannon's focus was more on telephone transmission, carriers, and reception his concept of noise is restricted to erroneous signals that obscure some portion of the signal within the channel. This is a fairly restrictive notion of noise. But by current standards, **noise is regarded as all that disturbances that inhibit the original message to be decoded by the receiver.**

- Shannon is generally considered to have been primarily concerned with physical or 'mechanical' or 'engineering' noise in the channel, i.e. unexplained variation in a communication channel or random error in the transmission of information. This interferes with the physical transmission of the message. The **principle of redundancy** i.e. repetition of the message is used to reduce physical noises in interpersonal communication. Everyday examples of **physical noise** are: A loud motorbike roaring down the road while you're in a conversation, Your little brother standing in front of the TV set, Mist on the inside of the car windscreen, Smudges on a printed page etc. In media channels this concept of noise i.e. **Channel noise**, can be identified with the state, operation of technology, social access to channels, purchasing power of consumers etc.
- A second type of interface is the **Semantic Noise**. This occurs when the message is misunderstood by the receiver due to lack of understanding of communicators 'frame of reference'. In these circumstances receiver normally does not attach the same meaning to the message as intended by the communicator or understands only a part of it. Instances like use of difficult words, unknown

terms by the communicator, way of delivering the message, attentiveness, status of the receiver and communicator, their knowledge, awareness or educational levels may cause semantic noise. Semantic noise is reduced when communicator adjusts his vocabulary, tone and format of delivery of message according to the needs, interests and understanding of audiences.

**7. A receiver:** In Shannon's conception, the receiving telephone instrument. In face to face communication, a **set of ears (sound) and eyes (gesture)** act as receivers of message. In television, several layers of receiver, including an antenna and a television set.

**8. A destination**. Presumably a person who consumes and processes the message is regarded as destination of message in the model.

**Importance of Shannon and Weaver model of the communication**:

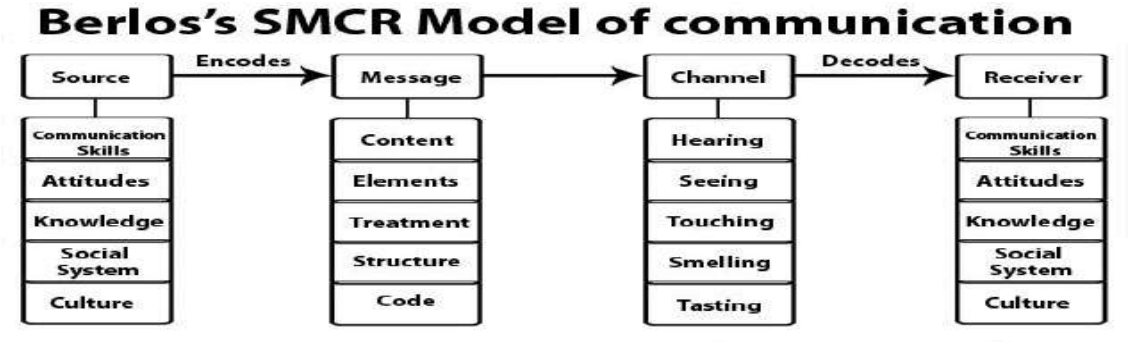

- It is the beginning of the modern field of communication theory as it provided, for the first time, a general model of the communication process that could be treated as the common ground of such diverse disciplines as journalism, rhetoric, linguistics, and speech and hearing sciences.
- The concept of 'Noise' was a major input to the communication process. This model led to technical improvements in the message transmission and it served to bring the scholars from different fields to study the communication process scientifically
- The communication model was successful in structuralize the communication process to a set of basic constituents that not only explain how communication happens, but why communication sometimes fails
- This model that identifies the most important components of communication process and their general relationship to one another.

**Drawbacks of the model**:

- Like all models, this model is also a minimalist abstraction of the communication process. In reality of most communication systems are more complex. Most information sources and destinations act as both sources and destinations.
- The model failed to consider the semantic and pragmatic levels of the communication process.

- Apart from its obvious technological bias, a drawback from off the model is its linearity. It looks at communication as a one-way process
- The model is regarded as a model of the flow of information through a medium, and an incomplete and biased model that is far more applicable to the system it maps, a telephone or telegraph, than it is to most other media.
- The model suggests that communication within a medium is frequently direct and unidirectional, but in the real world of media, communication is almost never unidirectional and is often indirect.
- The communication researches who used this model did not give enough attention to noise and feedback components.

### 2.2.4. Berlo's SMCR Model of Communication-1960's

**David Berlo** model of communication was proposed in **1960's** explains the various components of the communication process. The model postulates four basic components i.e. **Source, Message, Channel and Receiver**. For each of these four components there are five channels there are five channels that need to be considered. The source and the receiver are treated in the same way in the model. The model is not specific to any particular communication.

**1. Source**: The source is where the message originates.

- **Communication skills** – It is the individual's skill to communicate i.e. ability to read, write, speak, listen etc.
- **Attitudes** – The communicators attitude towards the audience, subject and towards oneself.
- **Knowledge**- The knowledge about the subject one is going to communicate. It is not talking about the general knowledge it is all about the knowledge of the subject, so it is the familiarity of what you are communicating.

- **Social system** – The Social system includes the various aspects in society like values, beliefs, culture, religion and general understanding of society. It is where the communication takes place. We can communicate only to the extent that the social system allows, when we communicate take social system into account.
- **Culture**: Culture of the particular society also comes under social system.

According to this model, only if the communicator has the above qualities in adequate proportion then only he will be able to communicate. The information given from the communicator is **encoded** into message and this process is referred as encoding.

**2. Message**

- **Content** – The beginning to the end of a message comprises its content
- **Elements** – It includes various elements like language, gestures, body language etc. Content is always accompanied by some elements.
- **Treatment** – It refers to the packing of the message. The way in which the message is conveyed or the way in which the message is passed on or delivered.
- **Structure**- The structure of the message i.e. the format, arrangement and the structure the message into various parts.
- **Code**- The code of the message means the form and the frame in which it is delivered e.g. language, body language, gestures, music and even culture is a code. Only when the code is proper, the message will be clear, improper use may lead to misinterpretation.

**3. Channel**- It is the five senses through which we use to communicate and receive information i.e. Hearing, Seeing, Touching, Smelling, And Tasting. Communication takes place channels by any of the 5 senses or their combination.

- **Hearing**: The use of ears to get the message for e.g. oral messages, interpersonal etc.
- **Seeing**: Visual channels for e.g. TV can be seen and the message is delivered.
- **Touching**: The sense of touch can be used as a channel to communicate for e.g. we touch and buy food, hugging etc.
- **Smelling**: Smell also can be a channel to communicate for e.g. perfumes, food, charred smell communicates something is burning, we can find out about which food is being cooked etc.

- **Tasting**: The tongue also can be used to decipher e.g. Food can be tasted and reacted.

**4. Receiver**: Who receives the message and decodes is referred to as **decoder** or the receiver. The receiver needs to think like the source. This model believes that for an effective communication to take place the source and the receiver needs to be in the same level in terms of the physical, sociological and psychological frames. For e.g. If the communication skills on source side are good then the receiver should equally have good listening skills. For the effective communication the source should consider the receiver's attributes i.e. Keep the receiver in mind, speak accordingly and give them what they need

**Criticism of Berlo's SMCR model of communication:**

1. The model lacks the components like feedback, noise and does not mention the barriers to communication
2. It is a linear model of communication.
3. Needs people to be on same level for communication to occur but not true in real life

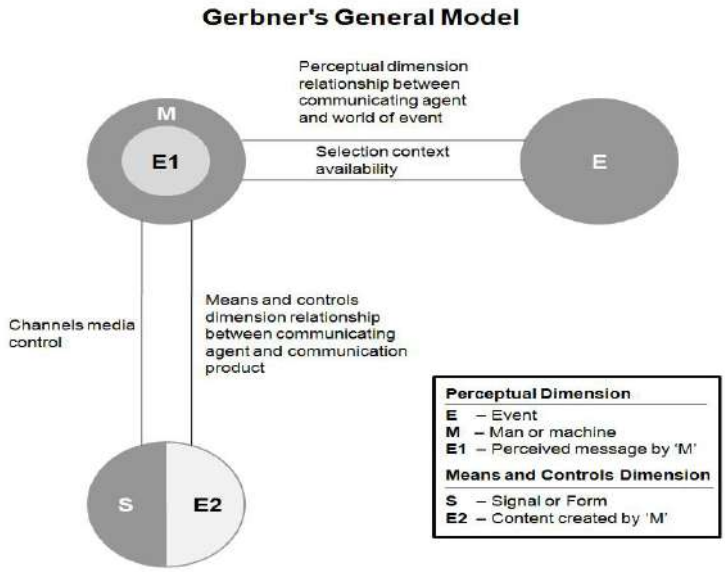

### 2.2.5. George Gerbner's -General Model-1956

Mr. George Gerbner is one of the pioneers in the field of communication research. He worked as a professor and head of the Annenberg School of Communications in the University of Pennsylvania. In **1956**, Gerbner proposed the **general purpose of communication** in his model. He stressed the dynamic nature of communication in his work and also the factor which affecting the reliability of communication. The model indicates that ''if source reacts to an event in a situation through some channel then the content and consequences of the communication act are conveyed in some form and context. Gerbner model emphasizes the presentation of communication content through specific form and context in which receiver perceives the information"

**(i) Perceptual Dimension:**

An 'E' is an event happens in the real life and the event content or message is perceived by 'M' (Man or a Machine). After "M" Perceiving the message from "E" the message transforms into "E1". '**E1' is not same as like 'E'**. Any man or machine can't perceive the whole event but only the part of the event, this is known as "Perceptual Dimension". The 3 factors that are involved in the perceptual dimension are:

- **Selection**: 'M' cannot perceive the entire content of the event "E". So 'M' selects the interesting or needed content from the entire event and filters the other.
- **Context**: The context of the event "E" may be misunderstood or may not be understood at all by 'M'**.** The context may also change due to the 'M's attitude, mood, culture and personality
- **Availability**: 'M' may be completely unaware about the event "E" due to his unavailability in which case he needs to depend on others for understanding about it.

For example, a journalist perceives the messages from the event. He can't focus the whole event so he filters the unwanted or unrelated content from the event. This filtered content is not same or like the actual event content because the journalist edits the content based on his attitude, mood, cultural background and according to the organizations policy.

**(ii) Means and Controls dimension:**

If 'M' becomes the source for communicating about the event 'E' which he has perceived as 'E1' then it is articulated through the means and control dimension. 'M' creates a statement or signals about the message and creates the content as "SE2". Here S indicates the Signal or Form. The content (E2) is structured or formed (S) by 'M' and it is communicated in different ways like channels or media to send the message. The greater or lesser degree of control of 'M' over the channel like his degree of skill in using communication channel, his language and verbal control and his experience in using the

new technology plays a major role in dissemination of the information i.e. SE2. The important effect of the means and control dimension is that the information about the original event 'E' differs from 'E2' in terms of specific context, form and frame. This process can be extended to infinitum by adding on other receivers (M2, M3etc.) who have further perceptions (SE3, SE4 etc.) of the statements about perceived events. **Message at every level is altered or changed.**

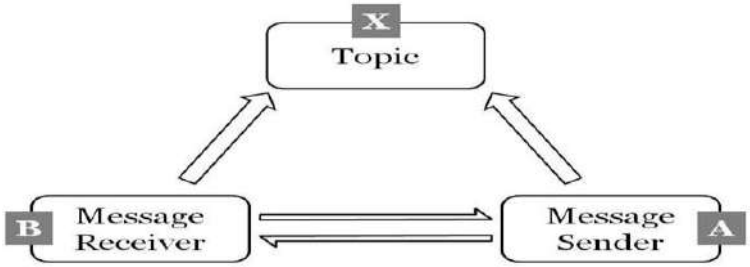

**Example:** In case of news reporting, E can be any event that has happened and the reporter (M) selects a particular part of event (E1) that may be provide his channel higher TRP ratings or the news may boost the particular party which his channel supports. This SE2 is sent through a medium to the mass audience. Then the audience distributes the message to others like his friends i.e. (SE3) by adding his own interpretation and the process continues. **The model has resulted in emergence of various areas of communication research**.

| **Communication Component** | **Research Area** |
|---|---|
| Someone | Audience Research |
| Perceives an Event | Perception research |
| And Reacts | Effectiveness measurement |
| In a Situation | Physical / Social setting research |
| Through some Means | Media investigation |
| To make available Materials | Administration and Distribution |
| In Some Form | Structure / Organization / Style |
| And Context | Communicative Setting |
| Conveying Content | Content Analysis |
| Of some Consequence | Overall changes study |

### 2.2.6. The Newcomb's Model-1953

Theodore M. Newcomb is a great pioneer in the field of social psychology. He worked in the areas of human motivation, perception and learning. He wrote books "Personality and Social Change" (1943), "Social Psychology" (1950). He published a new social approach in field of communication which is called "ABX" system, later it became Newcomb's model and it's published in the name of "An Approach to the Study of Communicative Acts (1953)". The New Comb's model of communication was introduced by Theodore M Newcomb of the University of Michigan in 1953. He gives different

approach to the communication process. The main purpose of this theory is to introduce the role of communication in a social relationship (society) and to maintain social equilibrium within the social system. He does not include the message as a separate entity in his diagram, implying it only by use of directional arrows. He concentrates on the social purpose of communication, showing all communication as a means of sustaining relationships between people. Sometimes it's called as an "ABX" model of communication.

**The Newcomb's Model**

The Newcomb's model works in a triangular format or A-B-X system. A – Sender, B – Receiver, X – Matter of Concern. The relationship between A and B is like student and teacher, government and public or newspaper and readers. Sender and Receiver may work in a same flow but the same time some factor like "X" may affect their flow of relationship. "X" it may be third persons, issue, topic or policy.

**For Example**: Teachers introduce a new policy to increase the college timing from 6 hours to 8 hours.

A – Teachers B – Students X – Policy or issue. If both students and teachers are satisfied with this policy then the communication maintains its equilibrium status between them. Otherwise the flow of communication between "A" and "B" becomes trouble in the social system. If "A" or "B" is not ready to accept the policy then it will directly affect the social system and can't maintain the equilibrium status. Teacher's "A" can convince students "B" as much as possible. Otherwise they have to make some adjustments in the Policy "X" and convince them towards the policy.

### 2.2.7. Westley and MacLean's Model of Communication-1957

Westley and MacLean's model of communication is proposed by Bruce Westley and Malcolm S. MacLean in 1957. Westley served as a teacher at the University of Wisconsin, Madison, between 1946 and 1968. MacLean was director of University of

Journalism School (1967-74) and co founder of the University College at University of Minnesota.

Bruce Westley

Malcolm S. MacLean

In the model the

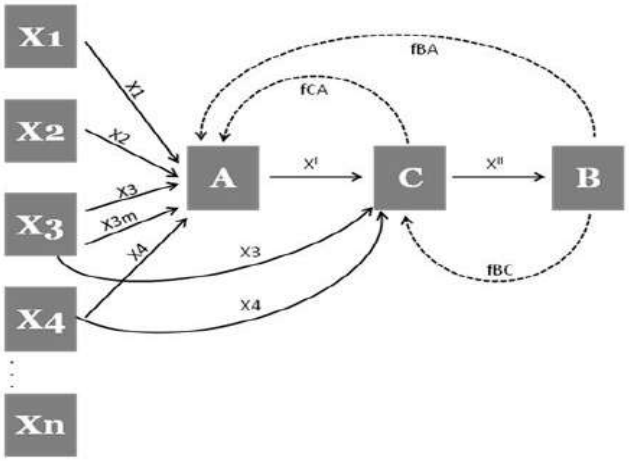

- A's- Represent the institutions like Public Relations, Advertisement agencies, etc. They select and transmit the message **purposively** to modify B's perception about X and perform the **Advocacy role**
- B's- Represent the perceivers and audience members who perform the **Behavioral role.** They respond in terms of their needs and requirement for messages as a means of orienting themselves to the environment.
- C's- Represent the Media / Channels and perform the **Channel role** or **Gate Keeper role**. They select and transmit information to B's **non-purposively**.
- The Feedback is an important component in this model and it is represented in various loops i.e. **multiple feedback.**
- The model postulates that communication does not begin when one person starts to talk, but rather when a person responds selectively to the physical surroundings. This model considers a strong relation between responders and their surroundings in the process of communication. Communication begins only when a person receives message from surroundings. In case the respondents feel to communicate then there can be seen a purposive intent to communicate.
- The Channel / Media institutions perform the gate keeper's filtering the information that enters into the system. The filtering process occurs at different levels and only some information is allowed to disseminate to the receivers.
- Each receiver responds to the message they received based on their object of orientation. This model can be seen two contexts, interpersonal and mass communication. And the point of difference between interpersonal and mass

communication is the feedback. In interpersonal, the feedback is direct and fast. In the mass, the feedback is indirect and slow.

**Example**: A Daily News Papers will receive many Press releases from Public Relations Agencies on behalf of their clients. News paper will publish the selected Press releases due to the space constraints. Then, Readers can directly respond to the client or they can respond to the News daily which published in the Newspaper. If Readers responded to News paper, it will communicate the feedback to concern PR Agency. X1, X2 and X3 — are Press Release, Feedback (f), Clients (A), Reader (B) and Daily News Paper (Gate Keeper) (c)

- 1. Feedback Loop between Reader (B) and News Paper (C) – fBC
  2. Feedback Loop between News Paper(C ) and Client (A)- fCA
  3. Feedback loop between Reader (B) and Client (A)- fBA.

**Westley and MacLean's Model of Communication**

**X1, X2, X3 and X4….—are news articles or information, Feedback (f), Clients (A), Reader or Audience (B) and Gate Keeper (c)**

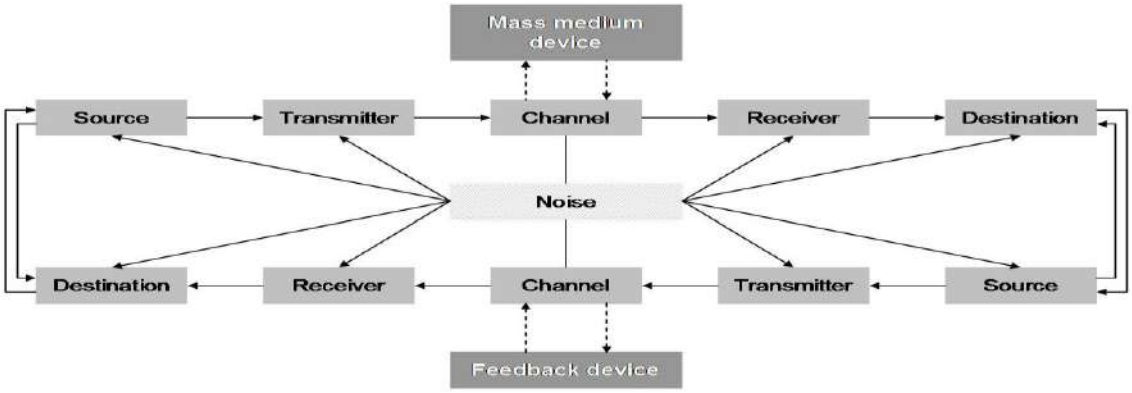

**Merits and Demerits**:

- This model accounts for Feedback and is a Two Dimensional model.
- It can account for different modes of communication, i.e., for both interpersonal communication and Mass communication.
- The model postulates that feedback can occur at multiple levels and it may be direct or indirect, fast of slow.

**2.2.8. De Fleur Model of Communication-1966**

Melvin Lawrence De Fleur is a professor and scholar in the field of communications and Social Psychology. In 1954, he received a PhD from University of Washington in Social psychology for his experimental study "Experimental studies of stimulus response relationships in leaflet communication". He proposed the model in **1966.**

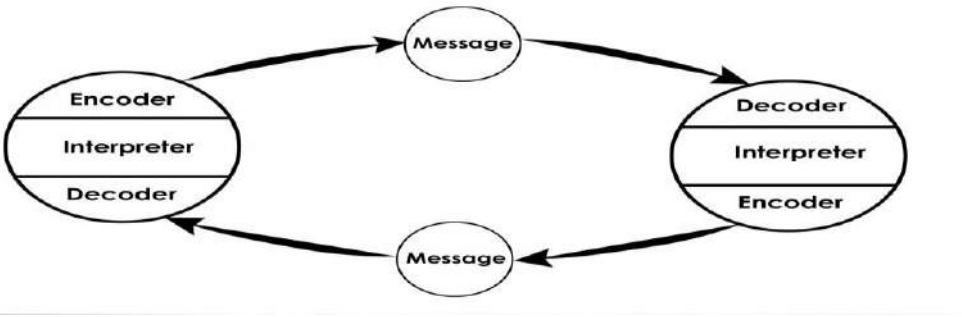

- The De fleur model of communication is **expanded version of Shannon and weaver model of communication**. He also incorporated the concept of "Linear Feedback" from Westley & Maclean model.
- De Fleur proposed his model of communication by inserting the **Mass Media device** and suggested the communication process is circular as well as it gives possible **two way feedback.**
- In this whole communication process, noise may occur and interfere at any stage.

**Defleur Model of Mass Communication System**

- Defleur pictures the source, transmitter, receiver and destination as separate phases of mass communication.
- Defleur's another important suggestion in this model is **"Feedback Device".** This feedback device is helps to analyze the target audience as separate from the receivers. Here, all these receivers are not considering as a target audience because the target audience will make some kind of feedback which will helps to find the target audience by using feedback device.
- One of the important aspects of this communication model is **two way communication process** which is recommended by Defleur and the model is the first one which introduces both **two way feedback and targeted audience** in the communication process.

### 2.2.9. Osgood & Schramm Model

It is a Circular Model, so that communication is something circular in nature.

**Encoder** – Who does encoding or Sends the message (message originates)

**Decoder** – Who receives the message?

**Interpreter** – Person trying to understand (analyses, perceive) or interpret

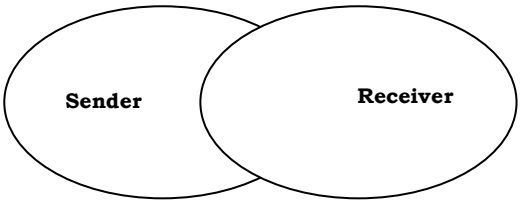

In the model an interpretation is going on from the starting to ending. This model identifies communication in a practical way. Thus each person acts as both sender and receiver and hence use interpretation. The process of encoding, interpreting and decoding takes place simultaneously. The concept of Semantic noise is introduced here as it occurs when sender and receiver apply different meaning to the same message. It happens mostly because of words and phrases for e.g. Technical Language, So certain words and phrases will cause you to deviate from the actual meaning of the communication. When semantic noise takes place decoding and interpretation becomes difficult and people get deviated from the actual message.

**Advantage of Osgood- Schramm model of communication**

1. Dynamic model- Shows how a situation can change.
2. It shows why redundancy is an essential part
3. There is no separate sender and receiver, sender and receiver is the same person
4. Assume communication to be circular in nature and Feedback is its central feature.

**Schramm Field and Experience Model –** This field experience model refers to the accumulated experiences of two individuals trying to communicate with each other. In this model Schramm introduced the notion that only what is shared in the field of experience of both the sources and the destination is actually communicated because only that portion of the signal is held in common to both the source and destination. The field of experience constitutes an individual's experience, knowledge, environment and

socio-cultural background. Consequently, the greater the overlap of the source's and receiver's field of experience, the greater is the probability of successful communication.

**Sender's Field of Experience** **Receiver's Field of Experience**

**Overlap area**

### 2.3. Non-Linear Models of Communication – Convergence Models

The Linear Communication models of 1940's and 1950's laid the foundation for the development of new and significant concepts like 'Non-linear interaction', 'transaction' and 'convergence' in 1980's. The interactive models pointed out that for effective communication both the sender and receiver must be active participants in the communication process and interact through several loops of feedback. Hence communication is 'dialogic' and 'multi -logic'.

**Kincaid (1979)** pointed out seven biases of linear models when applied to human communication. They are

1. Linear models presented a one way act usually vertical and not cyclical or two way process.
2. A source bias based dependency is found in linear models rather than relationship and interdependency between source and receiver.
3. Linear models present the concept of communication in vaccume i.e. isolated from context.
4. Primary focus of communication in liner models is on 'persuasion' rather than on mutual understanding, agreement and collective action.
5. The linear models concentrate on psychological effects of communication on separate individuals rather than the social effects and relationships on individuals.
6. The linear models believe in one way mechanic causation rather than mutual causation.
7. The linear models focus more on 'message' rather than the process.

Kincaid developed the **Concept of Convergence model of Communication in** which he suggests that

- One Cycle of feedback determines the relative position of sender and receiver.
- Two cycles of feedback determines the direction and rate of change of position.
- Three cycles of feedback determines the change in direction and velocity.
- Four cycles of feedback determines the change in acceleration.

Thus the communication is a 'multistage information' and decision process in which all participants may change their relative position overtime , create and share information that can affect their relative position. Thus an effective feedback creates 'Convergence' and ineffective feedback creates 'Divergence'. Thus the convergence and divergence describe a change in the position with respect to pre-determined goals. Mutual understanding is achieved by creating and sharing information. Hence convergence and divergence is a 'Cybernetic Process'.

## Unit-3

### 3. Media Effects Theories

The study of communication and mass media has led to the formulation of many theories:

- **Structural and functional** theories believe that social structures are real and function in ways that can be observed objectively;
- **Cognitive and Behavioural** theories tend to focus on psychology of individuals;
- **Interactionist** theories view social life as a process of interaction;
- **Interpretive theories** uncover the ways people actually understand their own experience.
- **Critical theories** are concerned with the conflict of interests in society and the way communication perpetuates domination of one group over another.

Theories are general statements that summarize our understanding of the way the world works. Theories help to formulate statements or propositions that will have some explanatory power. A theory can be defined as **"a conceptual representation or explanation of a phenomenon".** In a more comprehensive manner a theory can be defined as **"an assumption or system of assumptions, accepted principles and rules of procedure based on limited information or knowledge, devised to analyse, predict or otherwise explain the nature or behaviour of a specified set of phenomenon, abstract or reasoning.**

**Goals of Mass Communication Theories**

The following are some of the goals or objectives of mass communication theories:

1. Explaining the outcome or effect of mass communication
2. Explaining the effect of audience on mass communication
3. Explaining how people learn from Mass Media
4. Explaining the role of mass media in shaping people's values and views.

Thus we have **four basic kinds of mass communication theories**:

**1. Social Scientific Theories**: The theory and its research deal with the nature, working and effects of mass communication.

**2. Normative Theories**: The theories explain how media operates in a specific social, political system and deal with issues related to ownership, laws, press freedom etc.

**3. Operational Theories**: The theories involve how media can present different messages to achieve desired goals.

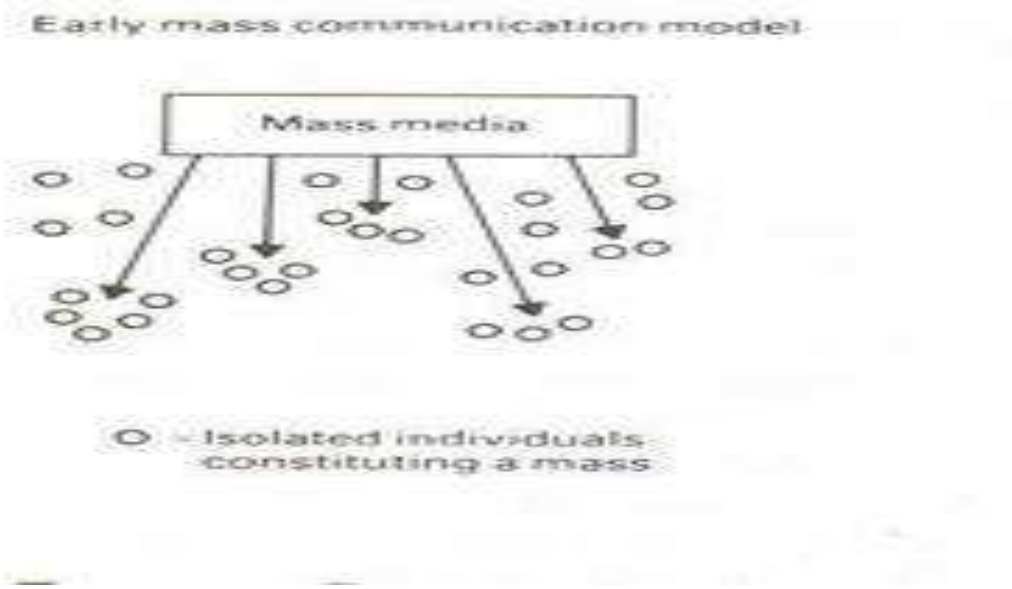

**4**. **Everyday theories**: The theories deal with day to day developments of mass media and its effects on society.

### 3.1. Magic Bullet or Hypodermic Needle Theory of Communication

The **hypodermic needle model** also known as the **hypodermic-syringe model** is a model of communications also referred to as the **"magic bullet"** perspective, or the **transmission-belt model**. Essentially, this model holds that an intended message is directly received and wholly accepted by the receiver. The model is rooted in 1930s **behaviorism** and is largely considered obsolete today. The hypodermic needle theory implied that mass media had a **direct, immediate and powerful effect** on their audiences. The mass media in the 1940s and 1950s were perceived as a powerful influence on behavior change. Several factors contributed to this **"strong effects**" theory of communication, including:

- The fast rise and popularization of radio and television, the emergence of the persuasion industries, such as advertising and propaganda.
- This view of propaganda took root after World War I and was championed by theorists such as **Harold Lasswell** in his pioneering work ***Propaganda Technique in the World War*** **(1927**). He argued that the people had been duped and degraded by propaganda during the war. Lasswell based his work on a **stimulus-response model** rooted in learning theory. Focusing on mass effects, this approach viewed human responses to the media as **uniform and immediate.**
- The **Payne Fund** studies of the 1930s, which focused on the impact of motion pictures on children.
- During second world wars media plays a vital role in both United States and Germany to made influence in the people's mind. The Germany Hitler's Nazi used films for Propaganda and they produced movies about their achievements which made great impact on Germans mind. Later United States also used its own Hollywood and produced films like **"It Happened one night", "It's a wonderful life" and Mr. Smith goes to Washington**" to portrait Germany as Evil force which also made impact in Americans Mind.

The "Magic Bullet" theory graphically assumes that the **media's message is a bullet** fired from the **"media gun"** into the **viewer's "head".** Similarly, the "Hypodermic Needle Model" uses the same idea of the "shooting" paradigm. It suggests that the **media injects its messages** straight into the **passive audience.** This passive audience is immediately affected by these messages. The public essentially cannot escape from the media's influence, and is therefore considered a "sitting duck". Both models suggest that the audience are vulnerable to the messages shot at them because of the limited communication tools and the studies of the media's effects on the masses at the time. The phrasing "hypodermic needle" is meant to give a mental image of the direct, strategic, and planned infusion of a message into an individual. Thus E. D. Martin expressed this approach thus: "Propaganda offers ready-made opinions for the unthinking herd".

But the direct influence effects were not as widely accepted by scholars it was not based on empirical findings from research but rather on assumptions. People were assumed to be "uniformly controlled by their biologically based instincts and react more or less uniformly to whatever stimuli came along. Further research in the area indicated that **media had selective influences on people**.

- In 1930, Newly formed **mercury theater and Orson Wells** join together and created a fake news bulletin about aliens invasion in American city called Grover's Mill, New jersey. They broadcast this news bulletin in between the radio program called **"The War of the Worlds**". The **"Panic Broadcast"** was reached

merely 12 million American people and one million were seriously believed. Due to this broadcast the whole country was in chaos. However, this incident actually sparked the research movement, led by Paul Lazarsfeld and Herta Herzog that would disprove the magic bullet or hypodermic needle theory, and showed that reactions to the broadcast were in fact, **diverse, and were largely determined by situational and attitudinal attributes of the listeners.**

- Lazarsfeld disproved the "Magic Bullet" theory and "Hypodermic Needle Model Theory" through elections studies in **"The People's Choice" in 1944/1968**. Lazarsfeld and colleagues executed the study by gathering research during the election of Franklin D. Roosevelt in **1940.** The study was conducted to determine voting patterns and the relationship between the media and political power. Lazarsfeld discovered that the majority of the public remained unfazed by propaganda surrounding Roosevelt's campaign. Instead, interpersonal outlets proved more influential than the media. Therefore, Lazarsfeld concluded that the media campaign were not powerful to the point where it completely persuaded the audiences. These new findings also suggested that the public can select which messages affect and don't affect them. **Thus Lazarsfeld introduced the idea of the two step flow model of communication in 1944.**
- According to Elihu Katz, Paul Lazarsfeld 1955 the two step flow model assumes that ideas flow from the mass media to opinion leaders and then to the greater public. They believed the message of the media to be transferred to the masses via this opinion leadership. These leaders essentially take in the media's information, and explain and spread the media's messages to others (Katz, 1957). Thus, the two step flow model and other communication theories suggest that the media does not directly have an influence on viewers anymore and interpersonal connections, selective exposure play a larger role in influencing the public in the modern age.

### 3.2. Two-step flow of communication

In 1944 **Paul Lazarsfeld** an American Social Researcher, **Bernard Berelson** and **Hazel Gaudet** introduced The Two-Step Flow of Communication in the book called **“The people’s choice: How the voter makes up his mind in a presidential campaign”.** The purpose of the study was focused on Presidential election Campaign

and the people decision-making process towards the campaign. All three researchers wanted to find out practically whether the mass media messages had any direct influence on the voting decision of the people. Their research indicated that media messages have very less influence than the informal, personal communication on voting behavior. Based on this researched data, The Two Step Flow Communication Theory of Mass Communication was developed by Katz and Paul Lazarsfeld in 1955.

Paul Lazarsfeld (1901 - 1976)

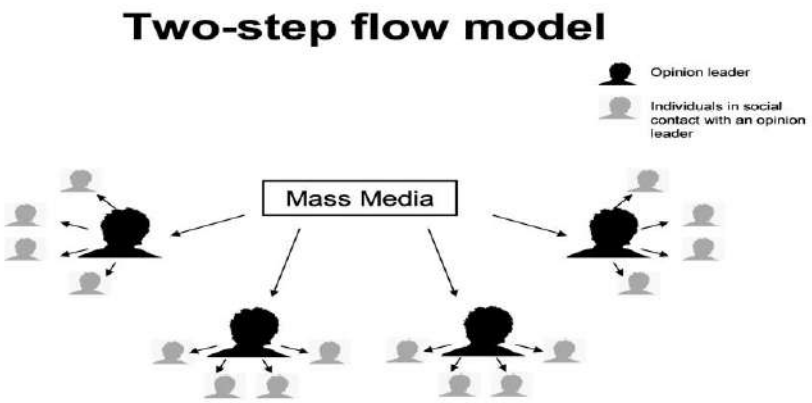

Bernard Berelson ( 1912 - 1979)

Hazel Gaudet

**Theory**

The study revealed that informal social relationships had played a part in modifying the manner in which individuals selected content from the media campaign. The study also indicated that ideas often flowed from the radio and newspapers to certain groups of peoples termed as **"opinion leaders"** and from them to the less active sections of society. Thus, informal social groups have some degree of influence on people and mould the way they select media content and act on it. The opinion leadership consists of the people with more access to media, and having a more literate understanding of media content, explain and diffuse the content to others.

Based on the two-step flow hypothesis, the term **"personal influence"** came to illustrate the process intervening between the media's direct message and the audience's reaction to that message. Opinion leaders tend to be similar to those they influence—based on personality, interests, demographics, or socio-economic factors. These leaders tend to influence others to change their attitudes and behaviors. The two-step theory refined the ability to predict how media messages influence audience behavior and explains why certain media campaigns do not alter audiences' attitudes. This hypothesis provided a basis for the multi-step flow theory of mass communication.

Opinion Leader is a leader for a certain group who gives details and information to lesser active persons in the group. They interpret the information to their own group and are leaders only for their own group, not for all. During the passage or transformation of message, the leaders may add their opinion on the actual content which may affect the low active users. In some cases the Opinion leaders may filter the actual content or get selective.

**Example**:

Carol watching News in ANB Channel they flash the headlines with "Research reveals some toys are leads the children's aggressive and Violent". That day Carol calls her little son and went for shopping and carol warn her son some toys are not good and made skin allergy which leads her son to avoid those toys.

- Opinion leader: Mom
- Audience: Her Son
- Added information in actual content: Skin Allergy

***Criticisms***

- The original two-step flow hypothesis—that ideas flow from the media to opinion leaders and then to less active sections of the population—has been criticized and negated by myriad consequent studies. Findings from **Deutschmann and Danielson** gave evidence that initial mass media information flows directly to people on the whole and is not relayed by opinion leaders.
- Furthermore, the two-step hypothesis does not adequately describe the flow of learning. Everett Rogers' "Diffusion of Innovations" cites one study in which two-

thirds of respondents accredited their awareness to the mass media rather than face-to-face communication.

- However, Lazarsfeld's two-step hypothesis is an adequate description to understand the media's influence on belief and behavior. Research indicates that media exposure starts the first step and introduces the discussion and opinion leaders initiate the second-step i.e. the information flow. These findings also realize opinion leader's decisive role in the **balance theory,** which suggests that people are motivated to keep consistency among their current beliefs and opinions. If a person is exposed to new observations that are inconsistent with present beliefs, he or she is thrown into imbalance. Then the person will seek advice from their opinion leader, to provide them with additional cognitions to bring them back into balance.

**3.3. Opinion leaders / Leadership** Opinion leadership is a concept that arises out of the theory of two-step flow of communication propounded by Paul Lazarsfeld and Elihu Katz. The following are some of the characters of the Opinion leaders.

- The opinion leader is the agent who is an **active media user** and who interprets the meaning of media messages or content for lower-end media users.
- Typically the opinion leader is held in **high esteem** by those that accept his or her opinions.
- Opinion leadership tends to be **subject specific**, that is, a person that is an opinion leader in one field may be a follower in another field. An example of an opinion leader in the field of computer technology, might be a neighborhood computer service technician. The technician has access to far more information on this topic than the average consumer and has the requisite background to understand the information, though the same person might be a follower at another field (for example sports) and ask others for advice.
- Opinion leaders are individuals who obtain **more media coverage** than others and are especially educated on a certain issue. Opinion leaders can change depending on the subject but in general, men tend to be opinion leaders in politics and young women tend to be opinion leaders in fashion for women in general

- In his article "The Two Step Flow of Communication" by Elihu Katz, found opinion leaders to have more influence on people's opinions, actions, and behaviors than the media. Opinion leaders are seen as **trustworthy and non-purposive**. While the media can act as a reinforcing agent, opinion leaders have a more changing or determining role in an individual's opinion or action.

In his article, Elihu Katz answers the question, who is an opinion leader? The three aspects of an opinion leader are related to:

**1) The personification of his/her values (who one is)**

**2) His/her competence (what one knows)**

**3) His/her location (who one knows)**

Example: In a strategic attempt to engage the public in environmental issues and his nonprofit, The Climate Project, Al Gore utilized the concept of opinion leaders. Gore found opinion leaders by recruiting individuals who were educated on environmental issues and saw themselves as influential in their community and amongst their friends and family. From there, he trained the opinion leaders on the information he wanted them to spread and enabled them to influence their communities. By using opinion leaders, Gore was able to educate and influence many Americans to take notice of climate change and change their actions

### 3.4. Multistep Flow Theories – Gate Keeping Theory

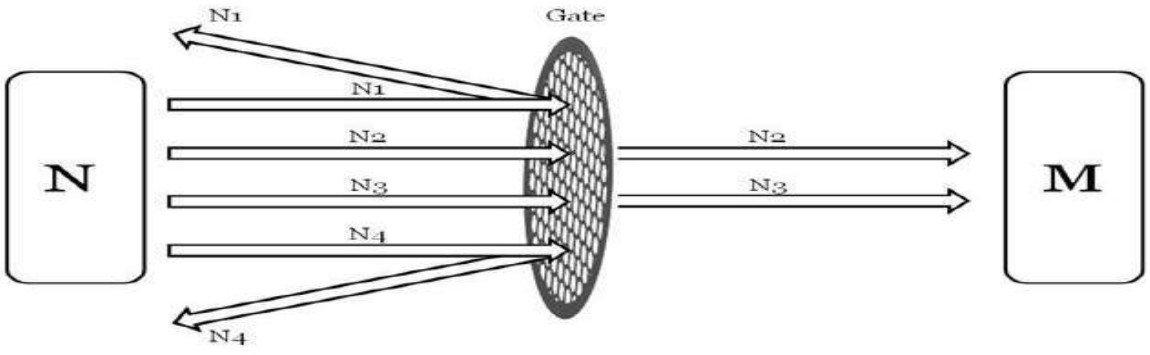

**Kurt Zadek Lewin** (1890-1947), was born in German. He was a great Psychologist and pioneer in Social Psychology. Kurt Lewin coined the word called **"Gate keeping**". It is regarded as the blockage of unwanted or useless things by using a gate. Here the person who makes a decision is called "Gatekeeper". At first it is widely used in the field of psychology and later it occupies the field of communication.

**Concept**:

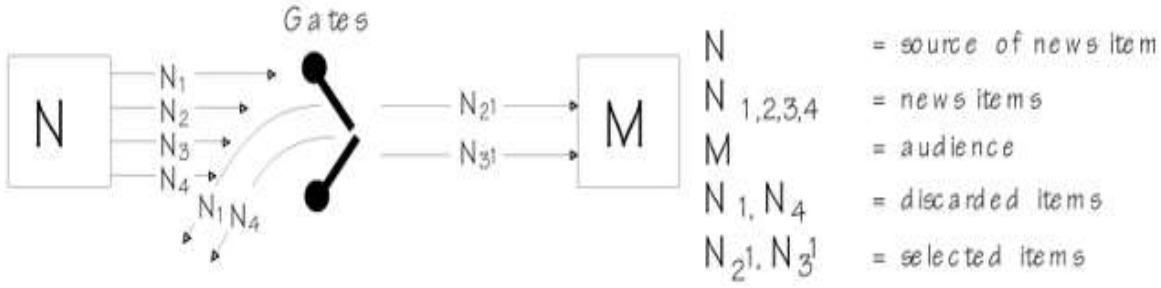

The Gatekeeper decides what information should move to group or individual and what information should not. Here, the gatekeeper are the decision makers who letting the whole social system. The gatekeeper is having its own influence like social, cultural, ethical and political. Based on personal or social influences they let the information to the group. Through this process the unwanted, sensible and controversial information's are removed by the gate keeper which helps to control the society or a group and letting them in a right path.

- Gatekeeper in a social system decides which of a certain commodity – materials, goods, and information – may enter the system.
- Gatekeeper's control the public's knowledge of the actual events by letting some stories pass through the system but keeping others out.
- Gatekeepers can also be seen as institutions or organizations.
- Gatekeepers exist in many jobs, and their choices hold the potential to colour mental pictures that are subsequently created in peoples understanding of what is happening in the world around them.
- The gatekeeper's choices are a complex web of influences, preferences, motives and common values.
- Gate-keeping is inevitable and in some circumstances it can be useful. Gate-keeping can also be dangerous, since it can lead to an abuse of power by deciding what information to discard and what to let pass.

**Gate Keeping Theory**

**White's Selective Gate keeping Model**:

**Source: White (1964)**

**Example**:

An international news channel receives numbers of news items within day like international terror issues, UN discussions, Texas bull fighting and religious abuse on international community. A news channel can't show all those news items to audience because it may affect the channel reputation in public and organizations policy. Here, editor decides the news items especially he can't show the Texas bull fighting because it is not internationally popular story. But the same time the news channel can't show the religious abuses also because it may hurt audience directly and it may affect organizations policy also. But international terror issues and UN discussions are universal common news that won't affect the channel reputation in public and organizations policy. News items: N1: Texas bull fighting, N2: International terror issues, N3: UN discussions, N4: religious abuse on international community

- Gatekeeper: Chief Editor
- Selected News Items: N2: International terror issues, N3: UN discussions
- Discarded News Items: (on popularity): N1: Texas bull fighting.
- Discarded News Items: (on policy): N4: Religious abuse on International community.

In home mother plays the vital role and she has to decide what their kid's needs and what should avoid. In news medium editor play vital role. He has to decide what kind of news items will publish and what should not. Media gate-keeping showed that decision making is based on principles of news values, organizational routines, input structure and common sense. Gate-keeping is vital in communication planning and almost all communication planning roles include some aspect of gate-keeping.

**3.5. Social and Psychological Theories - Diffusion of Innovations Theory**

Multi step flow theory is based on the idea that there are a number of relays in the communication flow from a source to a large audience. Diffusion of Innovations or Multi-step flow theory deals with the adoption of new ideas. Diffusion of Innovations Theory, developed by E.M. Rogers in **1962**, is one of the oldest social science theories. It originated in communication to explain how, over time, an idea or product gains momentum and diffuses or spreads through a specific population or social system. The end result of this diffusion is that people, as part of a social system, adopt a new idea, behavior, or product. Adoption means that a person does something differently than what they had previously i.e., purchase or use a new product, acquire and perform a new behavior, etc. The key to adoption is that the person must perceive the idea, behavior, or product as new or innovative. Adoption of a new idea, behavior, or product is a process whereby some people are more apt to adopt the innovation than others. Researchers have found that people who adopt an innovation early have different characteristics than people who adopt an innovation later. When promoting an innovation to a target population, it is important to understand the characteristics of the target population that will help or hinder adoption of the innovation.

- Diffusion research goes one step further than two-step flow theory and introduces a multi-step flow of communication.
- Diffusion of innovation theory predicts that media as well as interpersonal contacts provide information and influence opinion and judgment. E.M. Rogers proposed that it diffusion is the "process by which an innovation is communicated through certain channels over a period of time among the members of a social system". An innovation is "an idea, practice, or object that is perceived to be new by an individual or other unit of adoption". "Communication is a process in which participants create and share information with one another to reach a mutual understanding".
- It consists of four stages:
    - **Innovation**: It is an idea, practice, or object that is perceived as new by an individual or other unit of adoption.
    - **Communication channels:** It is the means by which messages get from one individual to another.

- **Time:** The innovation-decision period is the length of time required to pass through the innovation-decision process" or the rate of adoption is the relative speed with which an innovation is adopted by members of a social system
- **Social system:** It is the set of interrelated units that are engaged in joint problem solving to accomplish a common goal

**Five stages of the adoption process**

Diffusion occurs through a five–step decision-making process. It occurs through a series of communication channels over a period of time among the members of a similar social system. **Rogers' five stages (steps): awareness, interest, evaluation, trial, and adoption are integral to this theory**. An individual might reject an innovation at any time during or after the adoption process. In later editions of Diffusion of Innovation, Rogers changes his terminology of the five stages to: **knowledge, persuasion, decision, implementation, and confirmation**. However, the descriptions of the categories have remained similar throughout the editions.

| Stage | Definition |
|---|---|
| **Knowledge** | The individual is first exposed to an innovation, but lacks information about the innovation. During this stage the individual has not yet been inspired to find out more information about the innovation. |
| **Persuasion** | The individual is interested in the innovation and actively seeks related information or details. |
| **Decision** | The individual takes the concept of the change and weighs the advantages/disadvantages of using the innovation and decides whether to adopt or reject the innovation. Rogers notes that it is the most difficult stage to acquire empirical evidence due to its individualistic nature. |
| **Implementation** | The individual employs the innovation to a varying degree depending on the situation. During this stage the individual also determines the |

usefulness of the innovation and may search for further information about it.

**Confirmation**

The individual finalizes his/her decision to continue using the innovation. This stage is both intrapersonal and may cause cognitive dissonance and interpersonal, confirmation the group has made the right decision.

**Rate of adoption**

- The rate of adoption is defined as the relative speed at which participants adopt an innovation. Rate is usually measured by the length of time required for a certain percentage of the members of a social system to adopt an innovation.
- The rates of adoption for innovations are determined by an individual's adopter category.
- In general, individuals who first adopt an innovation require a shorter adoption period when compared to late adopters.
- Within the adoption curve at some point the innovation reaches critical mass. This is when the number of individual adopters ensures that the innovation is self-sustaining. Illustrating how an innovation reaches critical mass.

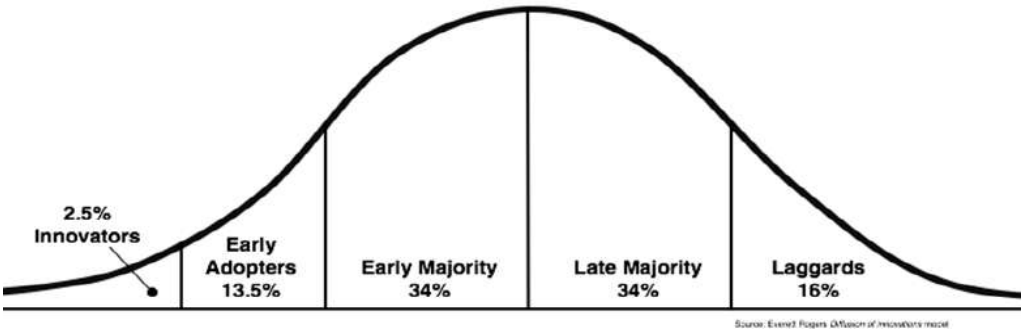

**Diffusion Vs adoption**

- **Adoption is an individual process detailing the series of stages one undergoes from first hearing about a product to finally adopting it.**
- **Diffusion signifies group phenomena, which suggests how an innovation spreads.**

**Adopter categories**

Rogers defines an adopter category as a classification of individuals within a social system on the basis of innovativeness. In the book Diffusion of Innovations, Rogers suggests a total of five categories of adopters in order to standardize the usage of adopter categories in diffusion research. **The original diffusion research was done in** 1903 by the French sociologist **Gabriel Tarde** who plotted the original S-shaped diffusion curve. Diffusion research centres on the conditions which increase or decrease the likelihood that a new idea, product, or practice will be adopted by members of a given culture**.** The adoption of an innovation follows an **S curve** when plotted over a

length of time. The categories of adopters are: **innovators, early adopters, early majority, late majority and laggards**. In addition to the gatekeepers and opinion leaders who exist within a given community, change agents may come from outside the community. Change agents bring innovations to new communities- first through the gatekeepers and then through the opinion leaders, and so on through the community**.**

**The diffusion of innovations according to Rogers indicates that With successive groups of consumers adopting the new technology (shown in blue), its market share (yellow) will eventually reach the saturation level. In mathematics the S curve is known as the logistic function**

| Adopter category | Definition |
|---|---|
| **Innovators** | Innovators are willing to take risks, have the highest social status, have financial liquidity, are social and have closest contact to scientific sources and interaction with other innovators. Their risk tolerance allows them to adopt technologies that may ultimately fail. Financial resources help absorb these failures. |
| **Early adopters** | These individuals have the highest degree of opinion leadership among the adopter categories. Early adopters have a higher social status, financial liquidity, advanced education and are more socially forward than late adopters. They are more discreet in adoption choices than innovators. They use judicious choice of adoption to help them maintain a central communication position. |

| | |
|---|---|
| **Early Majority** | They adopt an innovation after a varying degree of time that is significantly longer than the innovators and early adopters. Early Majority have above average social status, contact with early adopters and seldom hold positions of opinion leadership in a system |
| **Late Majority** | They adopt an innovation after the average participant. These individuals approach an innovation with a high degree of skepticism and after the majority of society has adopted the innovation. Late Majority are typically sceptical about an innovation. They have below average social status, little financial liquidity, in contact with others in late majority and early majority and little opinion leadership. |
| **Laggards** | They are the last to adopt an innovation. Unlike some of the previous categories, individuals in this category show little to no opinion leadership. These individuals typically have an aversion to change-agents. Laggards typically tend to be focused on "traditions", lowest social status, lowest financial liquidity, oldest among adopters, and in contact with only family and close friends. |
| **Leap froggers** | When resistors upgrade they often skip several generations in order to reach the most recent technologies. |

**Characteristics of innovations**

Rogers defines several intrinsic characteristics of innovations that influence an individual's decision to adopt or reject an innovation.

| Factor | Definition |
|---|---|
| **Relative advantage** | How improved an innovation is over the previous generation? |
| **Compatibility** | The level of compatibility that an innovation has to be assimilated into an individual's life. |
| **Complexity or simplicity** | If the innovation is perceived as complicated or difficult to use, an individual is unlikely to adopt it. |

| | |
|---|---|
| **Trialability** | How easily an innovation may be explored. If a user is able to test an innovation, the individual will be more likely to adopt it. |
| **Observability** | The extent that an innovation is visible to others. An innovation that is more visible will drive communication among the individual's peers and personal networks and will, in turn, create more positive or negative reactions. |

**Failed diffusion**

Rogers discussed a situation in Peru involving the implementation of boiling drinking water to improve health and wellness levels in the village of Los Molinas. The residents had no knowledge of the link between sanitation and illness. The campaign worked with the villagers to try to teach them to boil water, burn their garbage, install latrines and report cases of illness to local health agencies. In Los Molinas, a stigma was linked to boiled water as something that only the "unwell" consumed, and thus, the idea of healthy residents boiling water prior to consumption was frowned upon. The two-year educational campaign was considered to be largely unsuccessful. This failure exemplified the importance of the roles of the communication channels that are involved in such a campaign for social change.

**Heterophily & Homophily**

- Lazarsfeld and Merton first called attention to the principles of homophily and it's opposite, heterophily.
- Rogers defines homophily as "the degree to which pairs of individuals who interact are similar in certain attributes, such as beliefs, education, social status, and the like". When given the choice, individuals usually choose to interact with someone similar to themselves, homophilous individuals engage in more effective communication because their similarities lead to greater knowledge gain as well as attitude or behavior change.
- However, most participants in the diffusion of innovations are heterophilous, meaning they speak different languages, so to speak. The problem is that diffusion requires a certain degree of heterophily; if two individuals are identical, no diffusion occurs because no new information can be exchanged. Therefore, an

ideal situation would involve two individuals who are homophilous in every way, except in knowledge of the innovation

**Limitations of Diffusion of Innovation Theory**

There are several limitations of Diffusion of Innovation Theory, which include the following:

- Much of the evidence for this theory, including the adopter categories, did not originate in public health and it was not developed to explicitly apply to adoption of new behaviors or health innovations.
- It does not foster a participatory approach to adoption of a public health program.
- It works better with adoption of behaviors rather than cessation or prevention of behaviors.
- It doesn't take into account an individual's resources or social support to adopt the new behavior (or innovation).

This theory has been used successfully in many fields including communication, agriculture, public health, criminal justice, social work, and marketing. In public health, Diffusion of Innovation Theory is used to accelerate the adoption of important public health programs that typically aim to change the behavior of a social system.

**3.6. Agenda-setting theory**

**Agenda-setting theory** was introduced in **1972 by Maxwell McCombs and Donald Shaw** in their ground breaking study of the role of the media in 1968 presidential campaign in Chapel Hill, North Carolina.

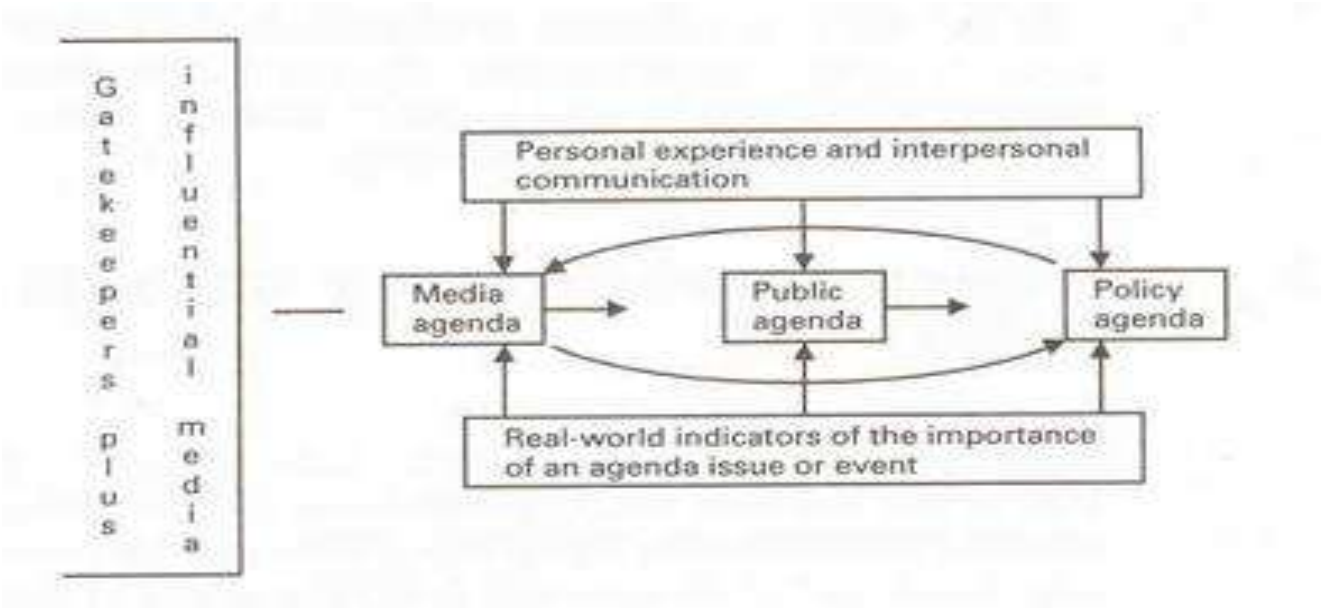

- McCombs and Shaw introduced agenda-setting theory in the *Public Opinion Quarterly*. The theory was derived from their study that took place in Chapel Hill, NC, where the researchers surveyed 100 undecided voters during the 1968 presidential campaign on what they thought were key issues and measured that against the actual media content.
- The ranking of issues was almost identical, and the conclusions matched their hypothesis that the mass media positioned the agenda for public opinion by emphasizing specific topics. The theory explains the correlation between the rate at which media cover a story and the extent that people think that this story is important. This correlation has been shown to occur repeatedly.

The agenda-setting theory is the theory that the mass-news media have a large influence on audiences by their choice of what stories to consider newsworthy and how much prominence and space to give them.

- Agenda-setting theory's main postulate is **salience transfer**. Salience transfer is the ability of the mass media to transfer issues of importance from their mass media agendas to public agendas. The media agenda is the set of issues addressed by media sources and the public agenda which are issues the public consider important.
- The agenda-setting function has **multiple components**:
  - Media agenda are issues discussed in the media, such as newspapers, television, and radio.
  - Public agenda are issues discussed among members of the public.
  - Policy agenda are issues that policy makers consider important, such as legislators.
  - Corporate agenda are issues that big corporations consider important.
  - These four agendas are interrelated.
  - The two basic assumptions that underlie most research on agenda-setting are that the press and the media do not reflect reality, they filter and shape it, and the media concentration on a few issues and subjects leads the public to perceive those issues as more important than other issues.
- The media uses diffusion to spread ideas and aid in its agenda setting. **Opinion Leaders and boundary spanners** are very important to the media at using their networks to pass on the flow of information.
  - An opinion leader is often someone who is thought of by others to know a significant amount of information on a topic or is an "expert". They are often at the center of a social network, more attentive to outside information and capable of influence. Since the opinion leaders are those in a social network who are most likely to watch the news or pay attention to the media, they are an extremely important tool at spreading information to the masses.
  - **Boundary Spanners** are those in a social network who can span across various social networks. They can be essential to the flow of novel

information. Boundary spanners can be used by the media in setting its agenda by getting information and ideas to a variety of social networks, rather than just one.

A study showing the effects of diffusion was *Project Revere*. Sociologists at the University of Washington from 1951 to 1953 would drop leaflets from an airplane onto a town. They then would see how long it would take for the information to pass by word of mouth to those who did not get a leaflet. Their findings showed that children are very effective in the diffusion process, thus proving how easy it is for a child to be affected by the media.

**Levels of agenda setting**

- The **first-level agenda setting** is most traditionally studied by researchers. In this level the media uses objects or issues to influence the public. In this level the media suggest what the public should think about i.e. the amount of coverage.
- In **second-level agenda setting**, the media focuses on the characteristics of the objects or issues. In this level the media suggest how the people should think about the issue.
- There are two types of attributes:
  - **Cognitive** i.e. substantive, or topics and
  - **Affective** i.e. evaluative, or positive, negative, neutral.

- **Inter media agenda setting** involves salience transfer among the media. The theory is used in political advertising, political campaigns, debates, business news and corporate reputation, business influence on federal policy, legal systems, trials, role of groups, audience control, public opinion, and public relations etc.

**Strengths and weaknesses of theory**

- It has an **explanatory power** because it explains why most people prioritize the same issues as important.
- It also has **predictive power** because it predicts that if people are exposed to the same media, they will feel the same issues are important.
- Its meta-theoretical assumptions are balanced on the scientific side and it lays groundwork for further research.
- The theory has **organizing power** because it helps organize existing knowledge of media effects.
- There are also limitations, such as media users may not be as ideal as the theory assumes. People may not be well-informed, deeply engaged in public affairs, thoughtful and skeptical. Instead, they may pay only casual and intermittent attention to public affairs and remain ignorant of the details. For people who have made up their minds, the effect is weakened. News media cannot create or conceal problems, they can only alter the awareness, priorities and salience people attach to a set of problems. Research has largely been inconclusive in establishing a causal relationship between public salience and media coverage.

### *3.7.* Cognitive Dissonance Theory

Early media effects studies postulated by Lazarfled and Berelson showed that political campaigns have very little effect on voters, but instead personal influence like family and friends and cognition plays a major role.

- **Cognition is a term referring to the mental processes involved in gaining knowledge and comprehension, including thinking, knowing, remembering, judging and problem-solving. These are higher-level functions of the brain and encompass language, imagination, perception and planning.**

- The Cognitive effect model found that the media has an indirect influence on an audiences' attitude. A viewer already has set ideas and opinions, the media cannot do much to change those. However by showing certain stories more often than others and shaping the agenda they can shape what an audience puts importance on.
- For example, if the media reports more on the economy than on international news, then people will have more information on the economy and think that the issue is more important than other things that are going on around the world. **Thus the Quote on agenda setting became popular i.e. "The media doesn't tell us what to think; it tells us what to think about"- Bernard C. Cohen (1963)**

Cognitive dissonance is a communication theory adopted from social psychology. The title gives the cognitive is thinking or the mind; and dissonance is inconsistency or conflict. Cognitive dissonance is the psychological conflict from holding two or more incompatible beliefs simultaneously. The theory replaces previous conditioning or reinforcement theories by viewing individuals as more purposeful decision makers; they strive for balance in their beliefs. If presented with decisions or information that create dissonance, they use dissonance-reduction strategies to regain equilibrium, especially if the dissonance affects their self-esteem. The theory focuses on stresses and attitude change. It postulates that behaviours can determine attitudes. **Cognition is defined as an individual's perception of own attitudes, beliefs, behaviours**. Hence Cognitive dissonance is described as the feelings of tension that arise when one is simultaneously aware of two inconsistent cognitions. Most of the Consistency theories hypothesize that, should inconsistencies develop among cognitions, people are motivated to restore harmony.

The following are the key propositions of dissonance theory.

- Dissonance theory says relationships among two cognitions can be consonant, dissonant, and irrelevant. Cognitive dissonance is a noxious state. It produces unpleasant physical arousal.
- Individual will attempt to reduce or eliminate dissonance - and will try to avoid things that increase dissonance. EX: Selective observation.
- Cognitive dissonance can be reduced or eliminated only by

- **Adding new cognitions, or**
- **Changing existing ones**.

EX: Can change our minds. Decide we were wrong. EX: Can "make up" information,

EX: We may seek new information that can restore consonance.

EX: Try to discredit source of dissonance by making up info or seeking counter-evidence.

**Sources of dissonance**

1. **Informational inconsistency**. Receive information that contradicts what they already know or believe. EX: Suppose you believe George Bush did not know about Iran-Contra - and then suppose Oliver North testified that he was the mastermind behind it.
2. **Disconfirmed expectations**. People prepare themselves for an event that never occurs - or even worse, an event whose opposite occurs. EX: You expect to do well on an exam, and you don't. EX: When prophesy fails.
3. **Insufficient justification for behaviour**. People do things which they lack justification.
4. **Post decision dissonance** - after every decision, you feel dissonance because you have rejected some good things and accepted some bad. We tend to become more certain of decisions afterwards.

Not all inconsistencies result in cognitive dissonance. Cognitions may not be important to the individual - hence inconsistency does not produce discomfort. Cognitions may not come in contact with each other - contradictions can go unnoticed. Aversive consequences are not perceived. In order for cognitive dissonance to occur, a product must result from the counter attitudinal behaviour. That product is the bringing about, or possible occurrence, of an aversive event. Aversive event = something that goes against your self interest, or that you would rather not have occur.

**Festigner- Cognitive dissonance:**

Leon Festinger's theory of Cognitive dissonance Explains how people deal with information that is conflicting for them. Cognitive dissonance helps in understanding people's response to persuasive writing. According to Festinger, any two perceptions held by an individual; will have one of three possible responses

- **Irrelevance**. Public relations messages may be irrelevant to some people. Therefore messages must be made relevant for the audience. For e.g.; an overweight person receiving a message from the doctor on TV to exercise more could ignore it and decide it does not concern him and find reason why they cannot exercise decide the message has no credibility as they know several doctors who are overweight.
- **Consonance:** i.e. agreeable to reason in which case the public relations messages reinforcing people's beliefs. Charities for e.g.; regularly issue news releases, annual reports and thank you letters that reinforce the giving behaviour of their donors by explaining how useful their contribution was.
- **Dissonant:** Many PR messages will be dissonant because they seek to change behaviour or attitudes. For e.g. in advertising, which detergent to buy- one that whitens your clothes or one that is colour safe. Dissonant messages may change behaviour or attitude in the direction of the message, but many other things can also happen. People can reduce the dissonance between their life style and message suggesting they change it by avoiding the new information. They seek consonant information to bolster their own position or they can reduce the importance of the overall issue by derogating the message or the message source or by distorting it.

**Example**

1. Consider a driver who refuses to use a seat belt despite knowing that the law requires it, and it saves lives. Then a news report or a friend's car incident stunts the scofflaw into facing reality. Dissonance may be reduced by

   Altering behaviour i.e. start using a seat belt so the behaviour is consonant with knowing that doing so is smart or

   Seeking information that is consonant with the behaviour… air bags are safer than seat belts. If the driver never faces a situation that threatens the decision not to use seat belts, then no dissonance-reduction action is likely because the impetus to reduce dissonance depends on the magnitude of the dissonance held

2. Employees who receive a massage to' work harder' from the management could

   - Ignore the message
   - Decide it doesn't' apply to them

- Find a stronger reason not to work hard ( e.g. health problems, low wages etc)
- Decide the spokesman had no credibility ( because many in the higher ranks do not work hard but are enjoying promotion)

All these tactics will help the workers remain psychologically consistent with the fact that they are not "working harder". Therefore it seems that the chances are limited to achieve an attitudinal change or a behaviour shift. Knowing that people may ignore or distort messages, derogate or down play sources, or seek information that counteracts messages we have to anticipate these behaviours and create messages that minimize the possibility of being ignored or misinterpreted.

**3.8. Cultivation Theory**

The Cultivation theory postulates that Media shapes the concepts of social reality**.** With the decline of hypodermic needle theories a new perspective began to emerge: **the stalagmite theories**. Black et. al. used the metaphor of stalagmite theories to suggest that media effects occur analogously to the slow build up of formations on cave floors, which take their interesting forms after steady dripping of water from the cave ceilings above. One of the most popular theories that fit this perspective is cultivation theory. Cultivation theory sometimes referred to as the cultivation hypothesis or cultivation analysis was an approach developed by Professor George Gerbner, dean of the Annenberg School of Communications at the University of Pennsylvania. He began the 'Cultural Indicators' research project in the mid-1960s, to study whether and how watching television may influence viewers' ideas of what the everyday world is like. **Cultivation research is in the 'effects' tradition. Cultivation theorists argue that television has long-term effects which are small, gradual, indirect but cumulative and significant.**

- Developed by **George Gerbner and Larry Gross** of the University of Pennsylvania, cultivation theory derived from several large-scale research projects as part of an overall research project entitled 'Cultural Indicators'. The purpose of the Cultural Indicators project was to identify and track the 'cultivated' effects of television on viewers.
- Gerbner and Gross (1976) assert that the overall concern about the effects of television on audiences stemmed from the unprecedented centrality of television in American culture. They posited that television as a mass medium of

communication had formed in to a common symbolic environment that bound diverse communities together, socializing people in to standardized roles and behaviors. They compared the power of television to the power of religion, saying that television was to modern society what religion once was in earlier times. Thus television cultivates from infancy the very predispositions and preferences that used to be acquired from other primary sources. The repetitive pattern of television's mass-produced messages and images forms the mainstream of a common symbolic environment"

- Cultivation theory in its most basic form, then, suggests that exposure to television, over time, subtly "cultivates" viewers' perceptions of reality. This cultivation can have an impact even on light viewers of TV, because the impact on heavy viewers has an impact on our entire culture. Television is a medium of the socialization of most people into standardized roles and behaviors. Its function is best described as "**enculturation**". The central hypothesis of cultivation theory is that **"those who spend more time watching television are more likely to perceive the real world in ways that reflect the most common and recurrent messages of the television world, compared with people who watch less television".** The effects of a pervasive medium upon the composition and structure of the symbolic environment is **subtle, complex, and intermingled with other influences.**
- Gerbner argues that the mass media cultivate attitudes and values which are already present in a culture: the media maintain and propagate these values amongst members of a culture, thus binding it together. He has argued that television tends to cultivate middle-of-the- road political perspectives. Gerbner called this effect **'mainstreaming'.**
- Cultivation Theory is a **top down, linear, closed communication model**. It regards audiences as passive, presenting ideas to society as a mass with meaning open to little or no interpretation. The ideas presented to a passive audience are often accepted, therefore influencing large groups into conforming behind ideas, meaning that the media exerts a significant influence over audiences. Audience is seen as very vulnerable and easily manipulated.

- In **1968** Gerbner conducted a survey to demonstrate this theory. From his results he placed television viewers into three categories;
    - **Light viewers (less than 2 hours a day),**
    - **Medium viewers (2–4 hours a day) and**
    - **Heavy viewers (more than 4 hours a day).**
    - There is also a distinction between two groups of television viewers: the heavy viewers and the light viewers. The focus is on 'heavy viewers'. People who watch a lot of television are likely to be more influenced by the ways in which the world is framed by television programs than are individuals who watch less, especially regarding topics of which the viewer has little first-hand experience. Light viewers may have more sources of information than heavy viewers.
- Cultivation theorists distinguish between
    - **'First order' effects** relate to general beliefs about the everyday world, such as about the prevalence of violence and
    - **'Second order' effects** relate to specific attitudes, such as to law and order or to personal safety).
- **'Resonance'** describes the intensified effect on the audience when what people see on television is what they have experienced in life. This double dose of the televised message tends to amplify the cultivation effect.

**Example**

In a survey of about 450 New Jersey schoolchildren, 73 percent of heavy viewers compared to 62 percent of light viewers gave the TV answer to a question asking them to estimate the number of people involved in violence in a typical week. The same survey showed that children who were heavy viewers were more fearful about walking alone in a city at night. They also overestimated the number of people who commit serious crimes. This effect is called **'mean world syndrome'**. One controlled experiment addressed the issue of cause and effect, manipulating the viewing of American college students to create heavy- and light-viewing groups. After 6 weeks of controlled viewing, heavy viewers of action-adventure programs were indeed found to be more fearful of life in the everyday world than were light viewers

### 3.9. Uses and Gratifications theory

The theory gives an explanation media use by the people. The theory originated in 1970 as a reaction to traditional mass communication research that emphasized the sender and the message. The theory focussed on active audience and users and postulated the Psychological orientation taking needs, motives and gratifications of media users. There are three main paradigms in media effects i.e. **hypodermic needle (i.e., direct, or strong effects), limited effects, and the powerful to limited effects**. "Uses and Gratifications" falls under the second paradigm which reached its apex around 1940-1960, when studies helped realize that the first paradigm was inaccurate. Uses and gratifications theory attempts to explain the uses and functions of the media for individuals, groups, and society in general. The following are the core objectives of the theory.

- Uses and Gratifications Theory is a popular approach to understanding mass communication. **The theory places more focus on the consumer, or audience, instead of the actual message itself by asking "what people do with media" rather than "what media does to people" (Katz, 1959).**
- It assumes that members of the audience are not passive but take an active role in interpreting and integrating media into their own lives.
- The theory also holds that audiences are responsible for choosing media to meet their needs. The approach suggests that people use the media to fulfill specific gratifications.
- This theory would then imply that the media compete against other information sources for viewers' gratification.

***Thus the Uses and Gratifications Theory postulates that a medium will be used more when the existing motives to use the medium leads to more satisfaction***.

**Conceptual Model**

- The Uses and Gratifications Theory follows a basic model of an audience-centered approach. When an audience actively seeks out media, they are typically seeking it in order to gratify a need.
- For example, in social situations, people may feel more confident and knowledgeable when they have specific facts and stories from media to add to conversation. **By seeking out media, a person fulfills a need to be informed**.

- Social situations and psychological characteristics motivate the need for media, which motivates certain expectations of that media. This expectation leads one to be exposed to media that would seemingly fit expectations, leading to an ultimate gratification.

Beginning in the 1940s, researchers began seeing patterns under the perspective of the uses and gratifications theory in radio listeners. Early research was concerned with topics such as children's use of comics and the absence of newspapers during a newspaper strike. An interest in more psychological interpretations also emerged during this time.

- In **1974, Katz, Blumler and Gurevitch** realized that most Uses and Gratification studies were most concerned with:

  **1.** ***The social and psychological origins of***

  ***2. Needs which generate***

  ***3. Expectations***

  ***4. Of mass media or other sources, which lead to***

  ***5. Differential patterns of media exposure (or engagement in other activities) resulting in***

  ***6. Need gratifications and***

  ***7. Other consequences, perhaps mostly unintended ones***

- The notion of active audience has conflated an extraordinary range of meanings, including **utility, intentionality, selectivity and imperviousness to influence**.
  - Utility—Mass communication has uses to people.
  - Intentionality—Media consumption is directed by prior motivation.
  - Selectivity—Media behavior reflects prior interests and preferences.
  - Imperviousness—The lessened ability of media to influence an obstinate audience
- In **1948, Lasswell** introduced a **four-functional interpretation** of the media on a macro-sociological level. Media served the functions of surveillance, correlation, entertainment and cultural transmission for both society and individuals. In 1972, Blumler and Brown extended Lasswell's four groups 25 years later. These included four primary factors for which one may use the media:

- **Diversion**—Escape from routine and problems; an emotional release. Personal Relationships—Social utility of information in conversation; substitution of media for companionship.
- **Personal Identity or Individual Psychology**—Value reinforcement or reassurance; self-understanding, reality exploration.
- **Surveillance**—Information about factors which might affect one or will help one do or accomplish something

- **Gurevitch and Haas (1973)** saw the mass media as a means by which individuals connect or disconnect themselves with others. They developed 35 needs taken from the largely speculative literature on the social and psychological functions of the mass media and put them into five categories:
  - Cognitive needs—Acquiring information, knowledge and understanding.
  - Affective needs—Emotion, pleasure, feelings.
  - Personal integrative needs—Credibility, stability, status.
  - Social integrative needs—Family and friends.
  - Tension release needs—Escape and diversion.

**Criticism**

Many people have criticized this theory as they believe the **public has no control over the media and what it produces**. The theory makes the line between gratification and satisfaction blurred calling into question if we only seek what we desire or actually enjoy it. The biggest issue for the Uses and Gratifications Theory is its being non-theoretical, being vague in key concepts, and being nothing more than a data-collecting strategy. Due to the individualistic nature of Uses and Gratification theory, it is difficult to take the information that is collected in studies. Most research relies on pure recollection of memory rather than data

## 3.10. Media Dependency Theory

**Sandra Ball-Rokeach and Melvin DeFleur** proposed the **"Dependency theory" in 1976**. The theory is combined with several perspectives like psycho analytics & social system theory, systematic & casual approach and base elements from uses and gratification theory but less focus on effects. Media Dependency theory is one of the first theory which regards audience as an active part in communication process. The dependency theory is expanded from the theory of Uses and Gratification.

According to this theory, there is an internal link between media, audience and large social system. The audience learning from the real life is limited, so they can use media to get more information to fulfill their needs. An extensive use of media generates dependent relation in audience and also Media can able to creating dependence relationship with target audiences to achieve their goals by using their media power.

**The degree of dependence is directly proportional to**:

- **Individual**: The media have ability to satisfy the audience needs. An individual will become more dependent on media, if the medium satisfy his/her needs. Otherwise the media dependence will become less.
- **Social Stability**: The audience reconsiders their beliefs, practice and behaviors when strong social change, conflicts, riot or election which will force to re-evaluate and make new decisions. During this period media dependency is dramatically increased, because there is a strong need for information, support and advice.
- **Active audience**: In this communication process, the active audience chooses the media dependence on their individual needs and other factors such as economic conditions, society and culture. If alternative source fulfill the audience needs will decrease the media dependence.

**Process of Creating Dependence**:

- Media attracts individuals by offering the content which is able to fulfil the audience needs for understanding, entertainment and information.
- There is different strength in Dependence relationship. Cognitive motivations encourage the individuals to maintain the level of attention and Affective motivation serves the individuals to enhance the level of satisfaction.
- Both Cognitive and Affective motivation are intensifying the audience to higher level of involvement to enable the information process.

**Critics of Media Dependency Theory**:

- It describes the media role during social changes and crisis.
- Theory is more flexible and descriptive.
- Power of media dependency is not clearly described.
- It's difficult to prove scientifically or experimentally.

The media dependency theory has also been explored as an extension to the uses and gratifications approach to media, though there is a subtle difference between the two theories. People's dependency on media proves audience goals to be the origin of the dependency while the uses and gratifications approach focuses more on audience need. Both theories agree that media use can lead to media dependency. The media dependency theory states that the more dependent an individual is on the media to fulfill needs, the more significant the media becomes to that person. DeFleur and Ball-Rokeach illustrated dependency as the relationship between media content, the nature of society, and the behavior of audiences. Littlejohn (2002) also explained that people will become more dependent on media that meet a number of their needs than on media that touch only a few needs.

Dependency on a certain medium is influenced by the number of sources open to an individual. Individuals are usually more dependent on available media if their access to media alternatives is limited. The more alternatives there are for an individual, the less is the dependency on, and influence of, a specific medium. The main idea of the Uses and Gratifications model is that people are not helpless victims of all-powerful media, but use media to fulfill their various needs. These needs serve as motivations for using media.

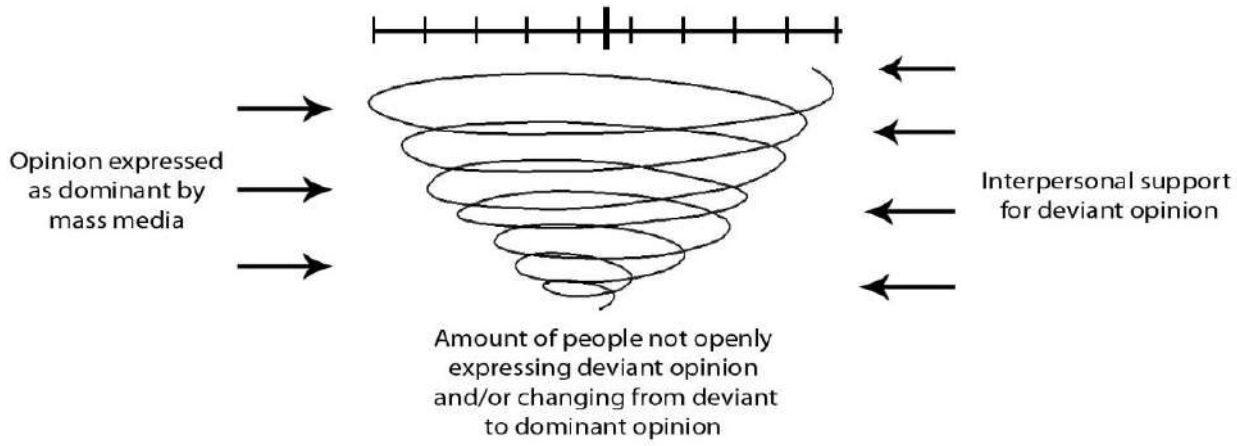

**3.11. Spiral of Silence Theory:**

**Elisabeth Noelle-Neumann (1916 – 2010)**

Elisabeth Noelle-Neumann, the German political scientist contributes the famous model called “Spiral of Silence”. In 1947 Neumann and her husband found “Public Opinion Organization” in German and also she was a President of “World Association for Public Opinion Research” in 1978 to 1980. Through this Spiral of Silence theory Neumann indirectly explains the Jews status during World War II under Nazi’s control.

Here, Adolf Hitler dominated the whole society and the minority Jews became silent due to the fear of isolation or separation. The one view dominated the public scene and others disappeared from the public awareness as it adherents became silent. In other words, the people fear of separation or isolation those around them, they tend to keep their attitudes to themselves when they think they are in the minority. This process is called "Spiral of Silence".

**Elisabeth Noelle- Neumann's Spiral of Silence**

**Example:**

In a company, the managing director decides to increase their working hour from 8 to 10 and send e-mail to all employees. Majority of them accept this time changes and few employees are not satisfied with his decision. But they cannot or ready to express their thought publicly.

**Because**

1. They may feel unsupported by the other employees.
2. "Fear of isolation" like transfer
3. "Fear of Rejection"- Rejecting their personal opinion from the public will help avoiding fight.
4. They may try to save their job by suppressing or avoid personal statement in public.

**Theory frame work based on few assumptions**:

1. Spiral of silence theory describe as a dynamic process, the predication about public opinion in mass media which gives more coverage for the majorities in the society and gives very less coverage for minorities.
2. In this social environment, People have fear of rejection to express their opinion or views and they know well what behaviours will make a better likelihood. It's called "fear of Isolation".
3. Being the part of Minority. People loss their confidence and silent or mute to express their views because of the fear of isolation or they feel alone or unsupported.
4. Sometimes the minorities withdraw their expressed opinion from public debates to secure themselves from the majority.
5. Maximum numbers get more vocal space in the society and lesser number become less vocal space or become silent.

**Advantages and Disadvantages**:

1. Spiral of Silence theory has both micro level and macro level explanatory process.
2. It works well during the public campaign, Senate and Parliament.
3. Spiral of silence theory – which helps to raise question about considering the role and responsibility of media in the society.
4. The theory which is not considering the other explanation of silencing. In some cases the person may feel the majority's ideas or opinion is much better than his own view.
5. It portrait overly negative view of media influence the average people.

### 3.12. Normative Theories

Normative theories were first proposed by **Fred Siebert**, **Theodore Peterson and Wilbur Schramm** in their book called **"Four Theories of the Press" in 1956.** At first the word "Normative Theory" was pronounced in USA during the height of 'cold war' with communism and soviet. Often it called as western theories of mass media. These were termed "normative theories" by **Mc Quail** in the sense that they "mainly express ideas of how the media ought to or can be expected to operate under a prevailing set of conditions and values." Each of the four original or classical theories is based on a particular political theory or economic scenario. A Normative theory

describes an ideal way for a media system to be controlled and operated by the government, authority, leader and public.

These theories are basically different from other communication theories because normative theories of press are not providing any scientific explanations or prediction. At the same these "four theories of the press" were came from many sources rather than a single source. Normative theories are more focused in the relationship between Press and the Government than press and the audience. These theories are more concern about the ownership of the media and who controls the press or media in the country. According to authoritarian theory, the media controlled and censored by the ministries in the country but libertarian is fully free without any intervention of any authority or government, Social responsibility theory – press freedom in one hand but other hand they controlled the press by raising question and Soviet media theory, the whole control of the media is under the leader of the nation.

**The four theories of the Press - 1. Authoritarian theory**

Authoritarian theory stemmed from the **authoritarian philosophy of Plato** (407 - 327 B.C), who thought that the State was safe only in the hands of a few wise men. **Thomas Hobbes** (1588 - 1679), a British academician, argued that the power to maintain order was sovereign and individual objections were to be ignored. **Engel**, a German thinker further reinforced the theory by stating that freedom came into its supreme right only under Authoritarianism.

- Authoritarian theory describe that all forms of communications are under the control of the governing elite or authorities or influential bureaucrats.
- Authoritarians are necessary to control the media to protect and prevent the people from the national threats through any form communication i.e. information or news.
- The press is an instrument to enhance the ruler's power in the country rather than any threats.
- The authorities have all rights to permit any media and control it by **providing license** to the media and make **certain censorship**. If any media violate the government policies against license, then the authority has all right to cancel the license and revoke it.

- The government has right to restrict any sensitive issues from press to maintain peace and security in the nation. A printer was required to get permission and in some cases patent from the monarch or the Government in order to publish. Through the use of **patents, licensing, censorship and self-regulation** through printer's guilds, individuals were prevented from criticizing the Government in power
- In this theory the press supports and advances the Government in power and is regarded as an instrument for furthering Government policy.
- In this system the press may be either be **publically owned or privately owned**.
- The Journalist or any media persons will not have any rights to comment discriminate or stand against the government. The King or the authority has all rights to control the communication and no one can question against the king.

According to this theory, mass media, though not under the direct control of the State, had to follow its bidding. Under an Authoritarian approach in Western Europe, freedom of thought was jealously guarded by a few people (ruling classes), who were concerned with the emergence of a new middle class and were worried about the effects of printed matter on their thought process. Steps were taken to control the freedom of expression. The result was advocacy of complete dictatorship. The theory promoted zealous obedience to a hierarchical superior and reliance on threat and punishment to those who did not follow the censorship rules or did not respect authority. Censorship of the press was justified on the ground that the State always took precedence over the individual's right to freedom of expression. The world has been witness to authoritarian means of control over media by both dictatorial and democratic governments.

**Censorship**:

Censorship is a suppression of any communication which may consider as harmful to the people, King, government and its nation. Especially these censorship methods are much familiar in press which against the freedom of speech and freedom of expression. In some other cases, the censorship helps to protect the rulers and authorities from sensitive issues. There are different types of censors like Political censor, Moral censor, Religious censor, Military censor and corporate censor.

Examples:

- Dictatorship – During the World War II Hitler and Mussolini are the two major authorities who controlled the press in Germany and Italy. Press was under the control of the authority and No press can't question against or publish against these two dictators.
- Few countries blocked wiki leaks website from its country to maintain the internal security because the wiki leaks are not ready to compromise with government censorship and realizing classified documents against the government.

**2. Libertarian theory or Free Press Theory**

This movement is based on the right of an individual, and advocates absence of restraint. The basis of this theory dates back to 17th century England when the printing press made it possible to print several copies of a book or pamphlet at cheap rates. The State was thought of as a major source of interference on the rights of an individual and his property. Popular will i.e. **vox populi** was granted precedence over the power of State.

- Advocates of this theory were **Lao Tzu**, an early 16th century philosopher.
- **John Locke** of Great Britain in the17th century.
- **John Milton**, the epic poet in *Aeropagitica* in 1644, referred to a self-righting process if free expression is permitted ***"let truth and falsehood grapple."***
- **John Stuart Mill**, an essayist ("*On Liberty*") proposed libertarian principles.
- In 1789, the French, in their Declaration of The Rights of Man, wrote "***Every citizen may speak, write and publish freely."*** Out of such doctrines came the idea of a "free marketplace of ideas."
- George Orwell defined libertarianism as "allowing people to say things you do not want to hear".

The theory originally came from libertarian thoughts from 16th century in **Europe**. The theory gained support during the eighteenth century, but was not permitted in the British colonies. The theory was implemented after 1776 with the first amendment.

- Libertarians argued that the press should be seen as the ***Fourth Estate*** reflecting public opinion.
- The libertarian theorists are against the authoritarian thoughts. Liberalism means information is knowledge and knowledge is power.

- Libertarianism is free from any authority or any control or censorship. The libertarianism is an idea of individualism and limited government which is not harmful to another.
- It encourages individual's freedom and free thoughts. It sees people as judges of good ideas from bad.
- The theory says people are rational and their rational thoughts lead them to find out what are good and bad.
- The press should not restrict anything even a negative content may give knowledge and can make better decision whilst worst situation.
- The libertarian thoughts are exactly against or opposite to the authoritarian theory which means the authoritarian theory says "all forms of communication works under the control of government or elite like king".

**Strength and Weakness**:

1. Freedom of press will give more freedom to media to reveal the real thing happening in the society without any censorship or any authority blockades.
2. It gives more values for individuals to express their thoughts in media.
3. Theory excessively positive about media's willing to meet responsibilities which may lead people into negative aspects.
4. Is too positive about individual ethics and rationality.
5. Ignores need for reasonable control of media.
6. Ignores dilemmas posed by conflicting freedoms.

**Example**: Wiki leaks website published all sorts of confidential or restricted files in public space and especially classified documents. These articles are providing brief knowledge about the government and its activities which helps people to identify what is happening in the society and its gives great choices to elect a better president in future.

**3. Communist Media Theory**

This theory is derived from the ideologies of Marx and Engel that **"the ideas of the ruling classes are the ruling ideas"**.

- It was thought that the entire mass media was saturated with bourgeois ideology.

- Lenin thought of private ownership as being incompatible with freedom of press and that modern technological means of information must be controlled for enjoying effective freedom of press.
- The theory advocated that the sole purpose of mass media was to educate the great masses of workers and not to give out information.
- The public was encouraged to give feedback as it was the only way the media would be able to cater to its interests.

After the 1917th revolution, the Soviet Union was restructured with new political system based on the Marxist-Leninist principles. The newly formed communist party by Lenin shows much interest in the media which serves to the working class in the country and their welfares. So the Soviet originates a theory from Marxist, Leninist and Stalinist thoughts, with mixture of Georg Wilhelm Friedrich Hegel ideology is called "**Soviet Media Theory**" is also known as "The **Communist Media Theory**". The same theory was developed and followed by Adolf Hitler's Nazi in Germany and Benito Mussolini in Italy.

- Soviet media theory is imitative of Leninist principles which based on the Carl Marx and Engel's ideology.
- The government undertakes or controls the total media and communication to serve working classes and their interest.
- Theory says the state have absolute power to control any media for the benefits of people.
- They put end to the private ownership of the press and other media.
- The government media provide positive thoughts to create a strong socialized society as well as providing information, education, entertainment, motivation and mobilization.
- The theory describe the whole purpose of the mass media is to educate the greater masses of working class or workers.
- Here, the public was encouraged to give feedback which would able to create interests towards the media.

**Critics of Soviet Media Theory**:

1. Soviet media theory looks similar like authoritarian theory but the core part is different from each other. In authoritarian theory is a one way communication,

there is no feedback allowed from the public but in Soviet media theory is a two way communication at the same time the whole media is controlled or works under the leadership.

2. Private ownership is not allowed which leads the press without any restriction and it can serve people without any authoritative blockades.
3. Soviet media theory allows some restriction based on the nation interest rather than personal.
4. Under communist theories like soviet media theory, the journalist or press should support the leadership rather than a watchdog.

**4. Social responsibility theory**

In mid20th century most of the developing countries and third world nations have used social responsibility theory of press which is associated with "the Commission of the Freedom of Press" in United States in the year 1949. The commission found that the free market approach to press freedom had only increased the power of a single class and has not served the interests of the underdeveloped classes. The theory advocated obligation on the part of the media to society. A judicial mix of self - regulation and state regulation and high professional standards were imperative. Social Responsibility theory thus became the modern variation in which the duty to one's conscience was the primary basis of the right of free expression. Virulent critics of the Free Press Theory like **Wilbur Schramm, Siebert and Theodore Paterson** in their book *Four Theories of Press*, stated "***pure libertarianism is antiquated, outdated and obsolete."*** They advocated the need for its replacement by the Social Responsibility theory.

- Social responsibility theory allows free press without any censorship but at the same time the content of the press should be discussed in public panel and media should accept any obligation from public interference or professional self - regulations or both.
- The theory lies between both authoritarian theory and libertarian theory because it gives total media freedom in one hand but the external controls in other hand.
- The press ownership is private as well as in public sector.

- The social responsibility theory moves beyond the simple “Objective” reporting (facts reporting) to “Interpretative” reporting (investigative reporting with necessary analysis, interpretation and explanations.
- The theory helped in creating professionalism in media by setting up a high level of accuracy, truth, and information.
- The commission of press council also included some tasks based on social responsibility of media, which are as follows:
    1. Formulate the code of conduct for the press.
    2. Improve the standards of journalism.
    3. Safeguarding the interests of journalism and journalist.
    4. Criticize and make some penalty for violating the code of conduct.

**The theory allows** everyone to say something or express their opinion about the media. Community opinion, Consumer action and professional ethics are preferred.

**Two more theories were later added as the "four theories of the press". The two theories are**:

**5. Development Communication Theory**

Development communication is recognizing the power of communication as a catalyst for social development. It is also the utilization of existent communication tools and applicable theories for result-driven strategies for the advancement of society. Development communication is defined as purposive communication intended for a specific target audience that allows for the translation of information into action resulting in a higher quality of life. It is linked with the concept of sustainable development, which can be defined as the improvement of a community using information and technology and the community's ability to maintain created ideal state without compromising its environment and resources. It relies greatly on Community and People Participation, which is the voluntary involvement of a group of people in a development activity with full knowledge of its purpose that will allow them to grow individually and as a community. Development communication is the process of eliciting positive change i.e. social, political, economic, moral, environmental etc. through an effective exchange of pertinent information in order to induce people to action. Development "communication" thus would include:

- Information dissemination on developmental schemes/projects,

- Communication for eliciting positive change,
- Interactivity and feedback on developmental issues,
- Feedback/reverse communication for eliciting change.

**Development support communication** (DSC) can be described as development planning and implementation in which adequate action is taken of human behavioral factors in the design of development project and their objectives. It addresses development planning and the plan of operation for implementation. Development support communication is suggested by UNESCO, UNDP and communication scholars and practitioners worldwide. DSC stands for linking all agencies involved in the planned development works such as political executives, political planners, development administrators, subject specialists, field workers, opinion leaders, media representatives, researchers and the beneficiaries who continue the final delivery points and the consumers of the information. The route of communication envisaged are not only vertical as flowing from upper level to bottom or bottom level to upwards but also horizontal between the institutions and personnel connected with the process of development. Three vital groups are identified in the process.

1. **Innovation or knowledge generators**
2. **Political leaders or government of the state along with the administration**
3. **Users of the knowledge**

A very close interaction is necessary among the three groups as mentioned above, to achieve the success of development support communication. The underlying fact behind the genesis of this theory was that there can be no development without communication. Under the four classical theories, capitalism was legitimized, but under the Development communication theory, or Development Support Communication as it is otherwise called, the media undertook the role of carrying out positive developmental programmes of the State. Hence the theory stresses on "development communication" and "development journalism".

**6. Democratization/Democratic Participant Media Theory**

This theory vehemently opposes the commercialization of modern media and its top-down non-participant character. The need for access and right to communicate is stressed. Bureaucratic control of media is decried. The democratization or democratic participant theory emphasizes and supports the following mentioned thing's

- The media's multiplicity.
- Local nature of media
- Usage of the media in small scale;
- De-institutionalizing media;
- Reciprocal part of recipient or communicator;
- Horizontal media;
- Involvement and interaction.

The principles of the Democratic Participant Media Theories are summarized by Mc Quail, in the year 1987. The principles are mentioned below:

1. Minority-groups and individuals must be capable of enforcing the claims made by them for: Freedom of approaching to media; Freedom of asking for the service against the needs, demanded by them, to the media.
2. Media's organization and message's content should be designed in such a way that it is not affected by the bureaucratic and political control.
3. Media's existence should be proved in respect of the interests and need of the recipients & should not be justified in respect of interests and needs of media entity, professional workers of media or the advertisers.
4. Communities, organizations and groups must own media individually.
5. Participatory, small-scale and interactive types of the media have been considered of more profit in comparison to unidirectional and large-scale media. The later are taken into use by only professional-media-workers.
6. Generally, needs of the society are not taken into consideration by the set media.

Democratic Participant Media Theory considers communication or mass media as very important and should be managed by the professionals. Democratic-participant theory is in the support of following points:

- Freedom to associated local data.
- Freedom for answering back
- Freedom for using new communication means for the purpose of interaction
- Freedom of taking social-action in community, subculture's and interest-group's small-scale settings.

The centralized, uniform, professionalized, commercialized, state-controlled and high-cost media is challenged by this theory. Encouragement should be given to small-

scale, multiple, local, committed or non-institutional media that link the senders with the receivers and favour horizontal interaction. The theory favours alternative or underground press, micro-media's in rural areas, community –cable television, wall posters and media designed for ethnic- minorities and women Interaction and participation are the important concepts of the democratic participant media theory.

## UNIT-4

### 4.1. Major Schools of Communication Studies –

**A. Frankfurt School**

The Frankfurt School was a group of scholars or theorists associated with the **Institute of Social Research** which was located first at the **University of Frankfurt , Goethe (1923-1933), then in Geneva, Switzerland (1933-35), Columbia University in New York (1935-1949), and finally back at the University of Frankfurt, from 1949 to present. Felix Weil** began the Institute of Social Research in **1923**. **Carl Grünberg**, served as director from 1923-1930. **Max Horkheimer** succeeded Grünberg as director and served in that capacity until 1960 and **Theodor Adorno** became director in 1960 until his death in 1969. The **Frankfurt School** was a school of social theory and critical philosophy comprised intellectuals, academics, and political dissidents dissatisfied with the contemporary socio-economic systems capitalist, fascist, communist of the 1930s. The interests of the Frankfurt School theorists in the 1920s and 1930s lay predominantly in a Marxist analysis of social and economic processes, and the role of the individual and the group in relation to these processes. Some of the theorists associated with what became known as the Frankfurt School included

**1. Max Horkheimer 2. Theodor Adorno 3. Herbert Marcuse 4. Walter Benjamin,**

**5. Erich Fromm 6. Leo Lowenthal 7. Friedrich Pollock.**

The **Frankfurt School** is renowned for developing **Critical theory** and popularizing the **Dialectical method of learning** by interrogating society's contradictions. It is most closely associated with the work of **Max Horkheimer**, **Theodor W. Adorno, Erich Fromm, and Herbert Marcuse.** Their particular relevance to communication theory lies primarily in Adorno's idea of the **Culture industry**, and Marcuse's concept of the **"one dimensional"** man.

**B. Birmingham School**

The **Birmingham School popularly known as t**he **Centre for Contemporary Cultural Studies** (**CCCS**) was a research centre at the University of Birmingham England. It was founded in 1964 by **Stuart Hall and Richard Hoggart**, its first director. From 1964 to 2002, the Centre played a "critical" role in developing the field of cultural studies. The Centre was the focus for what became known as the Birmingham

School of Cultural Studies, or, more generally, 'British cultural studies'. After its first director, Richard Hoggart departed in 1968, the Centre was led by Stuart Hall (1969–1979). He was succeeded by Richard Johnson (1980–1987).

The Birmingham CCCS approach to culture and politics evolved from a complex moment within British post-war history: the rise of the anti-Stalinist New Left; the promotion of adult education in Britain after World War II; the "Americanization" of British popular culture and the growth of mass communication in the decades after 1945; the growing multiculturalism of British society; and, the eventual influence within British academia of new critical methods like semiotics and structuralism. Drawing on a variety of influences like feminism, structuralism, Marxism especially the work of Louis Althusser and Antonio Gramsci, sociology, critical race theory, and post-structuralism over the course of several decades the Centre pioneered a variety of approaches to the study of culture, including: ideological analysis; studies of working-class cultures and subcultures; the role of media audiences; feminist cultural research; hegemonic struggles in state politics; and the place of race in social and cultural processes.

Cultural studies can be defined as the study of culture with the intention to understand a society and its politics. Established as a post graduate research institution, the school's main focus was to "contest the cultural elitism of literary theory" and to look deeper into the way culture and the people of society go together. For post-war British democrats, the CCCS provided a "point of focus" for the way the new generation of British democrats interacted with an increasingly affluent culture which was constantly being introduced to new forms of mass media. The teachings here were rooted in the fact that culture was recognized as something that maintained a political order. Other approaches to investigating cultural studies included ideas from Antonio Gramsci, a leader for Mussolini's Communist party who was later jailed by the Fascists and in jail, wrote a book called The Prison Notebooks (1948). In this book he describes the way elites maintain power over society using domination and power to create a sense of obedience and consent among the people. Better known as **hegemony,** this became another main course of study for the CCCS as it turned the focus of study towards mass media and pop culture to study the domination effect that it truly has on society.

**C. Chicago School**

The basic structure of “media studies' were theorised in the Chicago School by the thinkers such as **John Dewey, Charles Cooley and George Mead.** These authors saw American society on the cusp of positive social change toward pure democracy. Mead argued that for an ideal society to exist, a **form of communication must be developed to allow the unique individual to appreciate the attitudes, viewpoints and positions of others unlike himself, and allow him to be understood by others as well**. Mead believed that this "**new media" would allow humans to empathize with others, and therefore moves toward an "ideal of human society.**" Where Mead sees an ideal society, Dewey names it the **"Great Community,"** and further asserts the assumption that humans are intelligent enough for self-government, and that that knowledge is **"a function of association and communication."**

Similarly, Cooley asserts that political communication makes public opinion possible, which in turn promotes democracy. Each of these authors represent the Chicago School's attention to electronic communication as a facilitator of democracy, its faith in the informed electorate, and its focus on the individual as opposed to the mass. The social impact of mass communication has been studied at The New School University in New York since its founding in 1919. The first college course to investigate the motion picture was offered here in 1926. Marshall McLuhan's colleague, John Culkin, brought his Centre for Understanding Media to The New School in 1975 and The New School began offering the Master of Arts degree in Media Studies, one of the first graduate programs of its kind.

One of the great contributions of the Chicago school is **symbolic interactionism** developed by **Mead and expanded by Herbert Blumer in 1969**. Blumer set out three basic premises of the perspective: “Humans act toward things on the basis of the meanings they ascribe to those things.”; “The meaning of such things is derived from, or arises out of, the social interaction that one has with others and the society,” and “These meanings are handled in, and modified through, an interpretative process used by the person in dealing with the things he/she encounters.”

**4. The Toronto School**

**The Toronto School** started with **Eric Havelock and Harold Innis in the 1930s**, and later **added Edmund Snow Carpenter, Northrop Frye and Marshall McLuhan**. After McLuhan’s Understanding Media it evolved into the McLuhan Program

in Culture and Technology. The Toronto School forwarded “the theory of the primacy of communication in the structuring of human cultures and the structuring of the human mind.” It later evolved to focus on communication technologies as key agents in social and historical change. McLuhan famously said **“the medium is the message,”** underscoring the importance of the conveyance of information and the social agency that conveyance, or medium.

**4.2. Role of Ideologies in Understanding Mass Media - <u>A. Critical Theory</u>**

**Critical theory** is an approach to social philosophy that focuses on reflective assessment and critique of society and culture in order to reveal and challenge power structures. With origins in sociology and literary criticism, it argues that social problems are influenced and created more by societal structures and cultural assumptions than by individual and psychological factors. Maintaining that ideology is the principal obstacle to human liberation, critical theory was established as a school of thought primarily by the Frankfurt School theoreticians Herbert Marcuse, Theodor Adorno, Walter Benjamin, Erich Fromm, and Max Horkheimer. Horkheimer described a theory as critical insofar as it seeks "to liberate human beings from the circumstances that enslave them."

In sociology and political philosophy, "Critical Theory" means the Western-Marxist philosophy of the Frankfurt School, developed in Germany in the 1930s and drawing on the ideas of Karl Marx and Sigmund Freud. Modern critical theory has also been influenced by Antonio Gramsci, as well as second-generation Frankfurt School scholars, notably Jürgen Habermas. Concern for social "base and superstructure" is one of the remaining Marxist philosophical concepts in much contemporary critical theory. Max Horkheimer first defined critical theory in his 1937 essay "Traditional and Critical Theory", as a social theory oriented toward critiquing and changing society as a whole, in contrast to traditional theory oriented only toward understanding or explaining it. He described a theory as *critical* insofar as it seeks "to liberate human beings from the circumstances that enslave them."

**<u>Dialectical method</u>**

The Frankfort School reformulated **dialectics into a concrete method of investigation**, derived from the Hegelian philosophy that **an idea will pass over into its own negation, as the result of conflict between the inherently contradictory**

**aspects of the idea.** Hegelian dialectics considers **ideas according to their movement and change in time, according to their interrelations and interactions**. In Hegel's perspective, **human history proceeds and evolves in a dialectical manner**: **the present embodies the rational the synthesis of past contradictions.** Marx inverted Hegel's idealist dialectics and advanced his own theory of **dialectical materialism**, arguing that **"it is not the consciousness of men that determines their being, but that their social being that determines their consciousness**." Marx used dialectical analysis to uncover the contradictions in the predominant ideas of society, and in the social relations to which they are linked – exposing the underlying struggle between opposing forces. Only by becoming aware of the **dialectic i.e. class consciousness)**of such opposing forces in a struggle for power can men and women intellectually liberate themselves, and change the existing social order through social progress. Accordingly, critical theory rejected the historicism and materialism of Orthodox Marxism.

**Culture Industry**

In **1947 Max Horkheimer** and **Theodor Adorno published** *Philosophische Fragmente*, whose title was translated into English in 1972 as ***Dialectic of Enlightenment: Philosophical Fragments*.** One of the sections of this book was concerned with what Horkheimer and Adorno called the **culture industry**. It was their contention that the **culture industry was the result of an historical process that with an increase in technology including mass communication technology there was an increase in the ability to produce commodities, which enabled increased consumption of goods.**

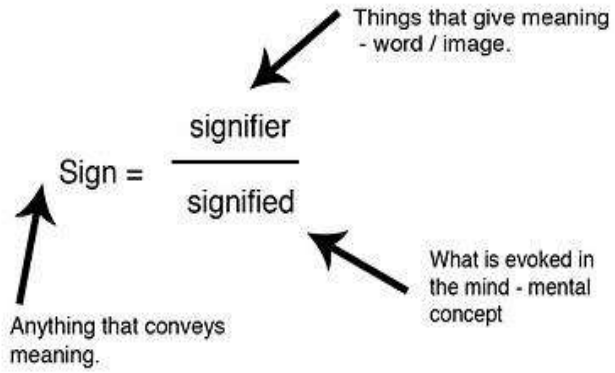

The consumption of mechanically reproduced cultural products—predominantly radio and film—led to formulas of producing them for **entertainment purposes**, and it did not occur to consumers to question the idea that the entertainment presented to them had an **ideological purpose or purposes**. Consumers adapted their needs around these cultural products, and in doing so no longer knew of anything else that they might desire, or that there might be anything else they could desire. **The entertainment that they enjoyed did not reflect their real social, political, or economic interests, but instead blinded them from questioning the prevailing system.** The idea of the culture industry has had an importance in critical theory since its appearance in the

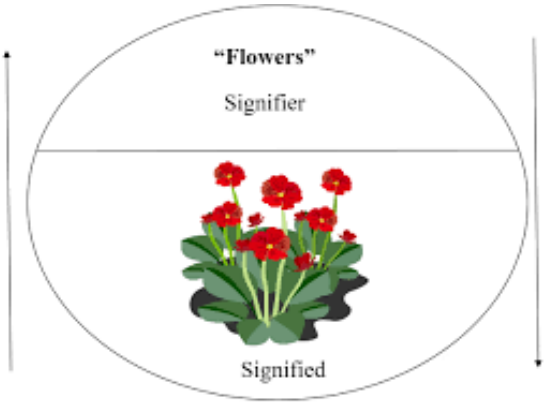

1940s, in that it has led to thought about the **role of mass communications in relation to ideology, and hence, society**.

**B. Structuralism / Post Structuralism**

Structure is made of constituent parts which are sub-serving to the structure as a whole. The constituent parts do not have meaning full existence outside the structure in the same way that it has within. The constituent parts derive their relevance within the structure not because of inherent quality but because of the way they relate to each other. Structures are self-regulated and the relations between constituent parts are guided by the rules that are arbitrary because they are unique to the structure itself and not require any external valuation. Ferdinand de Saussure - 1857-1913 lecture notes was published into a book titled "Course de Linguistics Generale" in 1915 by his students. In this book Saussure posited hat Language operates in a Structure and can be also treated as an aggregate**.** According to Saussure, any language is structured in the sense that its elements are interrelated in non-arbitrary, regular, rule-bound ways; a competent speaker of the language largely follows these rules without being aware of doing so. The task of the theorist is to detect this underlying structure, including the rules of transformation that connect the structure to the various observed expressions.

**Sign:**

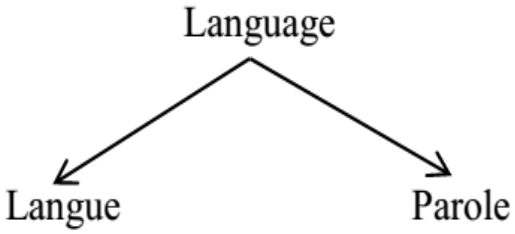

Signifier is able to signify not through its attachment to particular concept or signified but through its relationship with other signifiers within a particular language system. Word sounds derive their meaning through its oppositional relationship with other word sounds. Meaning making ability of the signifier does not depend on the positive relationship with other / outside language structures but with oppositional / negative relationship related to signifier within the language system.

**Diachronic & Synchronic Approach**

A Study of Language would basically mean a study of words as independent entities and how they emerge and change during the course of history – This historical study of language is called – DIACHRONIC APPROACH. Language as a structure is always complete and self-contained at any given point of time. Therefore linguists should study in terms of internal relations that exist at any given moment if time rather than merely in time of its history – This approach is regarded as – SYNCHRONIC APPROACH

**Langue & Parole**

Language has a structure of communication between several individuals. The underlying set of rules and conventions of language that is shared is referred to as LANGUE. The concrete language performance at a given point of time is - PAROLE

**Binary Opposition:**

Structuralism posits the concept of binary opposition, in which frequently-used pairs of opposite but related words (concepts) are often arranged in a hierarchy; for example:

Enlightenment / Romantic, male/female, speech/writing, rational/emotional, signified / signifier, symbolic / imaginary

**Impact of Structuralism on Mass Media**

Structuralism became a major influence particularly on two interrelated forms of media and communication research from the 1960s onward – qualitative textual studies and cultural studies. While research on media texts may be considered the primary inheritor of the analytical principles of Saussurean linguistics, cultural studies incorporated these principles, developing a conception of cultural practices, everyday life, and, indeed, the entire social system *as texts* to be read and interpreted. During the 1960s, literary theory was revitalized by the rediscovery and redevelopment of several linguistic and formalist models of analysis; it was in this shape that literary theory fed into media theory.

- In addition to the work of Saussure, Russian Formalism drove home the point that form carries content – that the structures of narratives and other genres hold meanings. The prototype of such research was offered by Propp (1958) in his study of the constituents and variants of Russian folktales.
- A wide variety of popular media and genres lend themselves to the systematics of formalist analysis, as exemplified by Umberto Eco's (1987) early study of the James Bond stories. Other contributions included A. J. Greimas's structural analysis of semantic units, including those beyond the sentence (Greimas &

Courtés 1982), as well as Roland Barthes's models of meaning and narrative analysis.

- Partly overlapping with the structuralist enterprise, further work in film and other media theory from the 1980s onward explored the interrelations between textual and cognitive structures (e.g., Bordwell 1985).
- As systematic approaches to the texts and genres of media, both structuralist and cognitivist models represented significant advances in *qualitative media text analysis*.
- Summarizing the tradition of *cultural studies*, Hall (1980) identified structuralism as one of its two constitutive paradigms, the other being culturalism. Combining a structural analysis of media texts and a critical, structuralist theory of society with a processual conception of culture, cultural studies has explored the margins of indetermination in the social production of meaning.

**Post - Structuralism**

**Post-structuralism** is a term for philosophical, theoretical and literary forms of theory that rejected the ideas established by structuralism. Post- structuralism emerged in France around 1960. Writers whose works are often characterised as post-structuralist include: Roland Barthes, Jacques Derrida, Michel Foucault, Gilles Deleuze, Judith Butler, Jean Baudrillard and Julia Kristeva etc.

- Post Structuralism rejects the self-sufficiency of structuralism, as well as an interrogation of the binary oppositions that constitute its structures. Accordingly, post-structuralism discards the idea of interpreting media within pre-established, socially constructed structure
- Post-structuralism rejects the structuralist notion that the dominant word in a pair is dependent on its subservient counterpart and instead argues that founding knowledge either on pure experience (phenomenology) or on systematic structures (structuralism) is impossible because history and culture condition the study of underlying structures and these are subject to biases and misinterpretations.

- The poststructuralists attack what they see as a prejudice in favour of presence over absence and speech over writing. We tend to trust speech over writing because of the immediacy of the speaker.
    - But the reason why poststructuralists are in the literary theory business at all is that they see writing, not speech, as more faithful to the metaphysics of true expression.
    - For Barthes, Derrida, and Foucault, writing is better than speech because it is iterable; it is iterable because it is abstract; and it is abstract because it is a **function not of presence but of absence (Metaphysics of Absence) i.e.** the reader's absent when the writer's writing and the writer's absent when the reader's reading.
    - For a deconstructionist, then, a writer's circumstances and intentions are indeed a part of the "context" of a text, but context imposes no real cinctures on the text's meaning because meaning in language requires cultivation of absence rather than presence, involves not the imposition but the erasure of consciousness.

**Impact of Poststructuralism on Mass Media**

In reality, poststructuralist theorists, in particular **Michel Foucault (1926-1984**), proved capable of offering insight that became quite useful to emerging communication theory. Foucault's work concentrated on relationships between discourse, power, and the creation of subject positions. He preferred to analyse speech and writing in terms of their history or genesis—a so-called **"archaeology of knowledge."** Foucault's investigations served to demonstrate how **political power was inextricably intertwined with communication and the development of knowledg**e. Although scorning the concept of an all-embracing theory that would explain reality, Foucault allowed that individual discourses might be understood within their individual social and political contexts.

Even in Derrida's deconstruction of **"logocentrism**" it would not be accurate to conclude that **meaningful communication is utterly impossible**. Derrida does find that the gap between language's signifiers and the meaning that language intends to signify ultimately unbridgeable. Whenever one attempts to track a linguistic sign to its real meaning, he maintains, one finds instead a mere trace of another signifier that had

existed previously. It may be said that establishment of meaning is indefinitely postponed, but not necessarily forever. Language is produced by the constant interaction between differences of spoken and written signs. Derrida calls the on-going negotiating of difference between signs **"arche-writing**." It is this process that makes meaning theoretically possible even if it is concealed.

Poststructuralist philosophy has had an impact upon a broad range of social science and humanities disciplines. Its implications for communication were apparent from its inception, given its interest in language, signification, messages, and meaning. Poststructuralist philosophers addressed these issues as abstract concepts, although rarely venturing into the real world of communicational interaction. Poststructuralism has had a great impact upon the fields of psychoanalysis, cinema, art and art history, linguistics, literature, gender studies, contemporary culture, politics, aesthetics, anthropology, ethnography, sociology, and history.

| Structuralism | Poststructuralism |
|---|---|
| Posits the concept of binary opposition | Rejects the concept of binary opposition |
| Sign is made up of a Signifier and Signified | Reject this notion that dominant word in a pair is dependent on its subservient counterpart |
| Sound or utterance / Speech is given importance | Writing is more important than speech |
| Meaning is stable and constituted through underlying structure or system | Meaning is not stable and is dependent on interpreter rather than structure. |
| There is a single truth / meaning for every sentence | There are multiple truths or meanings for every sentence |
| Search for universal truth and rules governing meaning | Universal truth is not possible and they are interested in differences in truth |

**C. Modernism Vs Post Modernism**

**Modernity** is a time period whereas **modernism** refers to the trends in art, culture and social relations that are characterized by development of a **modern** world. Modern is a word with historic sense. When you do not adhere to values and principles of older times you are regarded as Modern. Hence every generation drifts from previous generations and so every generation in itself is modern. Modernism began in 1910, is a literary and social movement. Modernism is both a philosophical movement that arose from broad transformations in Western society during the late 19th and early 20th centuries. Modernism rejected the certainty of Enlightenment thinking, and the tenants of religious belief. Modernism was essentially based on a utopian vision of human life

and society and a belief in progress, or moving forward. Modernist ideals pervaded art, architecture, literature, religious faith, philosophy, social organization, activities of daily life, and even the sciences.

- Modernism, faced **opposition to the conservatism** that prevailed in the late 19th century and early 20th century, which brought socially progressive trend of thought that encompasses the various culture related movements.
- The reason behind such movement took place in response to the feeling that 'traditional' forms of literature, art, architecture, religion, social and daily life were increasingly **becoming out dated in the new industrialized world.** Set on cultural inclinations towards anything that is modern, be it thought, practice or character, **modernism was a climate of thought**.
- society, valuing cultural works and its makers which was more than a sum of its parts.
- Modernism **questioned all the maxims** which were untouched and were blindly followed, with every aspect of existence, being re-examined ranging from philosophy to commerce including Religion where even the existence of an all-powerful Creator was questioned.
- Modernism saw the rise of the **'self-consciousness'** and this commitment to a principled **self-scrutiny** entailed an exploration of the self. This way of **self - exploration** can be observed in various forms of arts where the attention is on experimenting with the form or on the processes or materials.
- According to modernism, human beings have the power to progress through creating or reshaping the environment through the **use of science, technology and knowledge**.
- Modernism encouraged **impressionism, subjectivity** and focused more on **how perception takes place and not on what is being perceived**.
- Stream-of-conscious writing where words are given to the internal monologue or thoughts of the writer/character are described in detail is an example of this movement. The modernism style of presentation broke away from objectivity that third parties provided or from presenting clearly defined moral positions.
- There was a focus on experimentation, randomness, fragmentation of forms and of narratives that were not continuous. **Formal aesthetics** was rejected as

spontaneity and new discoveries gained importance and **minimalist designs** were embraced.

- The demarcation between **'high' (elitist) and 'low' (popular) cultures** was overcome and there was a cross-over in the production, presentation and consumption of art.

Among the factors that shaped **Modernism** was the development of modern industrial societies and the rapid growth of cities, followed then by the horror of World War. Modernism describes things you do that are contemporary or current. Modernism can describe thought, behaviour, or values that reflect current times, but it can also be used to describe an art and literature movement of the 19th and 20th centuries that intentionally split from earlier conservative traditions.

- Modernism continued to evolve in the 1930s, it influenced the mainstream culture.
- The adoption of technology into the daily life of people in the western society, electricity, and telephone, automobile were all being used.
- The disillusionment that grew out of the **war** contributed to the emergence of **modernism**, a genre which broke with traditional ways of writing, discarded romantic views of nature and focused on the interior **world** of characters
- **Modernist photography** celebrated the **camera** as an essentially mechanical tool. It rejected the soft focus and painterly quality of pictorialism and encouraging straightforward images of modern life.
- Prior to **modernism** in literature, the majority of authors wrote in the third person **perspective**, often utilizing an omniscient narrator. **Modernist** authors, however, preferred to write from a first person **perspective** to get a more personal **view** of the story and tap into the character's thoughts.

**Postmodernism**

Post World War II, modernism started being challenged and criticized.. Modernism shocks its audiences with unpredictable effects so as to counteract normal expectations. The criticism on modernism was **disharmony was used in the modernist music, there were no intelligible plots in movies or books and poetry could not be interpreted clearly**. Modernism slowly slipped from being a revolutionary movement as its institutionalization increased eventually leading to the

birth of **postmodernism.** Postmodernism is a broad movement that developed in the mid-to-late 20th century across philosophy, the arts, architecture, and criticism, marking a departure from modernism. The term has been more generally applied to describe a historical era said to follow after modernity and the tendencies of this era. The term "postmodernism" first entered the philosophical lexicon in 1979, with the publication of *The Postmodern Condition* by Jean-François Lyotard. Postmodernism started in 1945.

The philosophical modernism at issue in postmodernism begins with Kant's "Copernican revolution," that is, his assumption that we cannot know things in themselves and that objects of knowledge must conform to our faculties of representation. Ideas such as God, freedom, immortality, the world, first beginning, and final end have only a regulative function for knowledge, since they cannot find fulfilling instances among objects of experience.

A consequence of achieved modernism is what postmodernists might refer to as **de-realization**. De-realization affects both the subject and the objects of experience, such that their sense of identity, constancy, and substance is upset or dissolved. Important precursors to this notion are found in Kierkegaard, Marx and Nietzsche. Modern society became a network of relations in which individuals are levelled into an abstract phantom known as **"the public**". The modern public, in contrast to ancient and medieval communities, is a creation of the press, which is the only instrument capable of holding together the mass of unreal individuals "who never are and never can be united in an actual situation or organization". In this sense, society has become a realization of abstract thought, held together by an artificial and all-pervasive medium speaking for everyone and for no one. In Marx, on the other hand, we have an analysis of the fetishism of commodities where objects lose the solidity of their use value and become spectral figures under the aspect of exchange value,

The computer age has transformed knowledge into information, that is, coded messages within a system of transmission and communication and analysis of this knowledge calls for a pragmatics of communication insofar as the phrasing of messages, their transmission and reception, must follow rules in order to be accepted by those who judge them. The postmodernism times created a strict inter linkage between the kind of language called science and the kind called ethics and politics" and this inter

linkage constitutes the cultural perspective of the West. Science is therefore tightly interwoven with government and administration, especially in the information age, where enormous amounts of capital and large installations are needed for research.

The postmodernism times resulted in the concept **of Hyper Reality** is regarded as the reality which does not exist. Hyper reality is closely related to the concept of the simulacrum: a copy or image without reference to an original. In postmodernism, hyper reality is the result of the technological mediation of experience, where what passes for reality is a network of images and signs without an external referent, such that what is represented is representation itself

| Modernism | Postmodernism |
|---|---|
| Reaction against Medievalism – 13th, 14th & 15th Centuries and the dominance of Belief, faith Religion & Universal Truth. | Reaction against Modernism. Negated belief of universal truth, role of dominant state, globalised markets, universalization of values |
| Started in 17th Century. Celebrated Humanism – Human being is rational. New Institutions are established in social, cultural and economic areas. | Started from 20th century and continuing till today. Human being is affected by surroundings and situations and can never be rational. Human being gets refined from historical conditions. |
| Heralded an age of Science, Industrial, Constitutional, Human Rights development and concept of Freedom. | Negated the lopsided effects of science, Industrial, Constitutional, Human Rights development and concept of Freedom. |
| Search for solutions of problems – Contradictions must be resolved | Problematize the problem – Contradictions must be encouraged – Multi-ethnicity is welcomed |
| Knowledge and awareness was regarded as key for human development | Knowledge was transformed into information by the digital age and it exploded through different mediums making it superfluous. |
| Projected Reality and truth | Projected Hyper reality and Post Truth |
| Ex: Immanuel Kant – Free and Independent thinking of human being must not be interfered by any external sources | Ex: Faucault: Free thinking is not possible. Human being is a part of the system not the system itself. |

### 4.3. Marshal McLuhan - Medium is the Message

**Herbert Marshall McLuhan** (July 21, 1911 – December 31, 1980) was a Canadian philosopher, whose work is among the cornerstones of the study of media theory. McLuhan studied at the University of Manitoba and the University of Cambridge. He began his teaching career as a professor of English at several universities in the

United States and Canada before moving to the University of Toronto in 1946, where he remained for the rest of his life.

McLuhan coined the expression **"the medium is the message**" and the term **global village,** and **predicted the World Wide Web almost 30 years before it was invented**. Some of McLuhan's main ideas were influenced or prefigured by anthropologist like Edward Sapir and Claude Lévi-Strauss, arguably with a more complex historical and psychological analysis. The idea of the retribalization of Western society by the far-reaching techniques of communication, the view on the function of the artist in society, and the characterization of means of transportation, like the railroad and the airplane, as means of communication, are prefigured in Sapir's 1933 article on *Communication* in the Encyclopaedia of the Social Sciences while the distinction between "hot" and "cool" media draws from Lévi-Strauss' distinction between hot and cold societies.

McLuhan's first book, *The Mechanical Bride: Folklore of Industrial Man* (1951), is a pioneering study in the field now known as popular culture. In the book, McLuhan turns his attention to analysing and commenting on numerous examples of persuasion in contemporary popular culture. *The Mechanical Bride* is composed of a number of short essays that may be read in any order—what he styled the **"mosaic approach**" to writing a book. Each essay begins with a newspaper or magazine article, or an advertisement, followed by McLuhan's analysis thereof. The analyses bear on aesthetic considerations as well as on the implications behind the imagery and text. McLuhan chose these ads and articles not only to draw attention to their symbolism, as well as their implications for the corporate entities who created and disseminated them, but also to mull over what such advertising implies about the wider society at which it is aimed. Roland Barthes's essays 1957 *Mythologies*, echoes McLuhan's *Mechanical Bride*, as a series of exhibits of popular mass culture (like advertisements, newspaper articles and photographs) that are analyzed in a semiological way.

***The Gutenberg Galaxy* (1962)** -

Written in 1961 and first published by University of Toronto Press, *The Gutenberg Galaxy: The Making of Typographic Man* (1962) is a pioneering study in the fields of oral culture, print culture, cultural studies, and media ecology. Throughout the book, McLuhan efforts to reveal how communication technology (i.e., alphabetic writing,

the printing press, and the electronic media) affects cognitive organization, which in turn has profound ramifications for social organization.

McLuhan's episodic history takes the reader from pre-alphabetic, tribal humankind to the electronic age. According to McLuhan, the invention of movable type greatly accelerated, intensified, and ultimately enabled cultural and cognitive changes that had already been taking place since the invention and implementation of the alphabet, by which McLuhan means **phonemic orthography**. Print culture, ushered in by the advance in printing during the middle of the 15th century when the Gutenberg press was invented, brought about the cultural predominance of the visual over the aural/oral. The main concept of McLuhan's argument is that new technologies (such as alphabets, printing presses, and even speech) exert a gravitational effect on cognition, which in turn, affects social organization: print technology changes our perceptual habits—"visual homogenizing of experience"—which in turn affects social interactions—"fosters a mentality that gradually resists all but a…specialist outlook". According to McLuhan, this advance of print technology contributed to and made possible most of the salient trends in the modern period in the Western world: individualism, democracy, Protestantism, capitalism, and nationalism. For McLuhan, these trends all reverberate with print technology's principle of "segmentation of actions and functions and principle of visual quantification."

**Global village**

In the early 1960s, McLuhan wrote that the visual, individualistic print culture would soon be brought to an end by what he called "electronic interdependence:" when electronic media replaces visual culture with aural/oral culture. In this new age, humankind will move from individualism and fragmentation to a collective identity, with a "tribal base." McLuhan's coinage for this new social organization is the *global village*. The term is sometimes described as having negative connotations in *The Gutenberg Galaxy*, but McLuhan was interested in exploring effects, not making value judgments:

Instead of tending towards a vast Alexandrian library the world has become a computer, an electronic brain, exactly as an infantile piece of science fiction. And as our senses have gone outside us, Big Brother goes inside. So, unless aware of this

dynamic, we shall at once move into a phase of panic terrors, exactly befitting a small world of tribal drums, total interdependence, and superimposed co-existence…. Terror is the normal state of any oral society, for in it everything affects everything all the time….In our long striving to recover for the Western world a unity of sensibility and of thought and feeling we have no more been prepared to accept the tribal consequences of such unity than we were ready for the fragmentation of the human psyche by print culture. Key to McLuhan's argument is the idea that technology has no *per se* moral bent—it is a tool that profoundly shapes an individual's and, by extension, a society's self-conception and realization:

Print is the extreme phase of alphabet culture that detribalizes or decollectivizes man in the first instance. Print raises the visual features of alphabet to highest intensity of definition. Thus print carries the individuating power of the phonetic alphabet much further than manuscript culture could ever do. Print is the technology of individualism. If men decided to modify this visual technology by an electric technology, individualism would also be modified. Though the World Wide Web was invented almost 30 years after *The Gutenberg Galaxy*, and 10 years after his death, McLuhan prophesied the web technology seen today as early as 1962: "The next medium, whatever it is—it may be the extension of consciousness—will include television as its content, not as its environment, and will transform television into an art form. A computer as a research and communication instrument could enhance retrieval, obsolete mass library organizations retrieve the individual's encyclopaedic function and flip into a private line to speedily tailored data of a saleable kind". Furthermore, McLuhan coined and certainly popularized the usage of the term *surfing* to refer to rapid, irregular, and multidirectional movement through a heterogeneous body of documents or knowledge. McLuhan's *The Gutenberg Galaxy* won Canada's highest literary award, the Governor-General's Award for Non-Fiction, in 1962.

***Understanding Media* (1964)**

McLuhan's most widely-known work, *Understanding Media: The Extensions of Man* (1964), is a seminal study in media theory. Dismayed by the way in which people approach and use new media such as television, McLuhan famously argues that in the modern world "we live mythically and integrally…but continue to think in the old, fragmented space and time patterns of the pre-electric age." McLuhan proposed

that media themselves, not the content they carry, should be the focus of study—popularly quoted as **"the medium is the message."** McLuhan's insight was that a medium affects the society in which it plays a role not by the content delivered over the medium, but by the characteristics of the medium itself. McLuhan pointed to the light bulb as a clear demonstration of this concept. A light bulb does not have content in the way that a newspaper has articles or a television has programs, yet it is a medium that has a social effect; that is, a light bulb enables people to create spaces during night time that would otherwise be enveloped by darkness. He describes the light bulb as a medium without any content. McLuhan states that "a light bulb creates an environment by its mere presence." More controversially, he postulated that content had little effect on society—in other words, it did not matter if television broadcasts children's shows or violent programming, to illustrate one example—the effect of television on society would be identical. He noted that all media have characteristics that engage the viewer in different ways; for instance, a passage in a book could be reread at will, but a movie had to be screened again in its entirety to study any individual part of it.

**"Hot" and "cool" media**

In the first part of *Understanding Media*, McLuhan states that different media invite different degrees of participation on the part of a person who chooses to consume a medium. Using a terminology derived from French anthropologist Lévi-Strauss' distinction between hot and cold societies,[49][50] McLuhan argues that a **cool medium** requires increased involvement due to decreased description, while a **hot medium** is the opposite, decreasing involvement and increasing description. In other words, a society that appears to be actively participating in the streaming of content but not considering the effects of the tool is not allowing an "extension of ourselves." A movie is thus said to be "high definition," demanding a viewer's attention, while a comic book to be "low definition," requiring much more conscious participation by the reader to extract value:[68] "Any hot medium allows of less participation than a cool one, as a lecture makes for less participation than a seminar, and a book for less than a dialogue." Some media, such as movies, are *hot*—that is, they enhance one single sense, in this case vision, in such a manner that a person does not need to exert much effort to perceive a detailed moving image. Hot media usually, but not always, provide complete involvement with considerable stimulus. In contrast, "cool" print may also occupy visual

space, using visual senses, but requires focus and comprehension to immerse its reader. Hot media creation favour analytical precision, quantitative analysis, sequential ordering, as they are usually sequential, linear, and logical. They emphasize one sense (for example, of sight or sound) over the others. For this reason hot media also include film (especially silent films), radio, the lecture, and photography.

McLuhan contrasts *hot* media with *cool*—specifically, television of the 1960s i.e. small black-and-white screens which he claims requires more effort on the part of the viewer to determine meaning; and comics, which, due to their minimal presentation of visual detail, require a high degree of effort to fill in details that the cartoonist may have intended to portray. Cool media are usually, but not always, those that provide little involvement with substantial stimulus. They require more active participation on the part of the user, including the perception of abstract patterning and simultaneous comprehension of all parts. Therefore, in addition to television, cool media include the seminar and cartoons. McLuhan describes the term *cool media* as emerging from jazz and popular music used, in this context, to mean "detached."

***The Medium Is the Massage* (1967)**

*The Medium Is the Massage: An Inventory of Effects*, published in 1967, was McLuhan's best seller, eventually selling nearly a million copies worldwide. Initiated by Quentin Fiore, McLuhan adopted the term "massage" to denote the effect each medium has on the human sensorium, taking inventory of the "effects" of numerous media in terms of how they "massage" the sensorium.

Fiore, at the time a prominent graphic designer and communications consultant, set about composing the visual illustration of these effects which were compiled by Jerome Agel. Near the beginning of the book, Fiore adopted a pattern in which an image demonstrating a media effect was presented with a textual synopsis on the facing page. The reader experiences a repeated shifting of analytic registers—from "reading" typographic print to "scanning" photographic facsimiles—reinforcing McLuhan's overarching argument in this book: namely, that each medium produces a different "massage" or "effect" on the human sensorium. In *The Medium Is the Massage*, McLuhan also rehashed the argument—which first appeared in the Prologue to 1962's *The Gutenberg Galaxy*—that all media are "extensions" of our human senses, bodies and minds. Finally, McLuhan described key points of change in how man has

viewed the world and how these views were changed by the adoption of new media. "The technique of invention was the discovery of the nineteenth [century]", brought on by the adoption of fixed points of view and perspective by typography, while "[t]he technique of the suspended judgment is the discovery of the twentieth century," brought on by the bard abilities of radio, movies and television.

***From Cliché to Archetype* (1970)**

Collaborating with Canadian poet Wilfred Watson in *From Cliché to Archetype* (1970), McLuhan approaches the various implications of the verbal cliché and of the archetype. One major facet in McLuhan's overall framework introduced in this book that is seldom noticed is the provision of a new term that actually succeeds the global village: the ***global theatre*.**

Another theme of the Wake [*Finnegans Wake*] that helps in the understanding of the paradoxical shift from cliché to archetype is **'past time are pastimes.**' The dominant technologies of one age become the games and pastimes of a later age. In the 20th century, the number of 'past times' that are simultaneously available is so vast as to create cultural anarchy. When all the cultures of the world are simultaneously present, the work of the artist in the elucidation of form takes on new scope and new urgency. Most men are pushed into the artist's role. The artist cannot dispense with the principle of 'doubleness' or 'interplay' because this type of hendiadys dialogue is essential to the very structure of consciousness, awareness, and autonomy. McLuhan relates the cliché-to-archetype process to the **Theatre of the Absurd:**

Pascal, in the seventeenth century, tells us that the heart has many reasons of which the head knows nothing. The Theatre of the Absurd is essentially a communicating to the head of some of the silent languages of the heart which in two or three hundred years it has tried to forget all about. In the seventeenth century world the languages of the heart were pushed down into the unconscious by the dominant print cliché. The "languages of the heart," or what McLuhan would otherwise define as oral culture, were thus made archetype by means of the printing press, and turned into cliché.

The satellite medium, McLuhan states, encloses the Earth in a man-made environment, which "ends 'Nature' and turns the globe into a repertory theatre to be programmed." All previous environments (book, newspaper, radio, etc.) and their

artefacts are retrieved under these conditions ("past times are pastimes"). McLuhan thereby meshes this into the term *global theatre*. It serves as an update to his older concept of the global village, which, in its own definitions, can be said to be subsumed into the overall condition described by that of the global theatre.

***The Global Village* (1989)**

In his posthumous book, *The Global Village: Transformations in World Life and Media in the 21st Century* (1989), McLuhan, collaborating with Bruce R. Powers, provides a strong conceptual framework for understanding the cultural implications of the technological advances associated with the rise of a worldwide electronic network. This is a major work of McLuhan's as it contains the most extensive elaboration of his concept of *acoustic space*, and provides a critique of standard 20th-century communication models such as the Shannon–Weaver model.

McLuhan distinguishes between the existing worldview of *visual space*—a linear, quantitative, classically geometric model—and that of *acoustic space*—a holistic, qualitative order with an intricate, paradoxical topology: "Acoustic Space has the basic character of a sphere whose focus or centre is simultaneously everywhere and whose margin is nowhere." The transition from *visual* to *acoustic space* was not automatic with the advent of the global network, but would have to be a conscious project. The "universal environment of simultaneous electronic flow" inherently favours right-brain Acoustic Space, yet we are held back by habits of adhering to a fixed point of view. There are no boundaries to sound. We hear from all directions at once. Yet Acoustic and Visual Space are, in fact, inseparable. The resonant interval is the invisible borderline between Visual and Acoustic Space. This is like the television camera that the Apollo 8 astronauts focused on the Earth after they had orbited the moon.

**Beyond existing communication models**

"All Western scientific models of communication are—like the Shannon–Weaver model—linear, sequential, and logical as a reflection of the late medieval emphasis on the Greek notion of efficient causality." McLuhan and Powers criticize the Shannon-Weaver model of communication as emblematic of left-hemisphere bias and linearity, descended from a print-era perversion of Aristotle's notion of efficient causality. A third term of *The Global Village* that McLuhan and Powers develop at length is The Tetrad. McLuhan had begun development on the Tetrad as early as 1974.[97] The tetrad an

analogical, simultaneous, four-fold pattern of transformation. "At full maturity the tetrad reveals the metaphoric structure of the artefact as having two figures and two grounds in dynamic and analogical relationship to each other." Like the camera focused on the Earth by the Apollo 8 astronauts, the tetrad reveals figure (Moon) and ground (Earth) simultaneously. The right-brain hemisphere thinking is the capability of being in many places at the same time. Electricity is acoustic. It is simultaneously everywhere. The Tetrad, with its fourfold Möbius topological structure of enhancement, reversal, retrieval and obsolescence, is mobilized by McLuhan and Powers to illuminate the media or technological inventions of cash money, the compass, the computer, the database, the satellite, and the global media network.

**4.4. Jugan Habermas – Public Sphere**

The term was “Public Sphere” originally coined by German philosopher Jürgen Habermas who defined the public sphere as **"made up of private people gathered together as a public and articulating the needs of society with the state". Thus t**he **public sphere** is an area in social life where individuals can come together to freely discuss and identify societal problems, and through that discussion influence political action. Such a discussion is called **public debate** and is defined as the expression of views on matters that are of concern to the public—often, but not always, with opposing or diverging views being expressed by participants in the discussion. **Public debate takes place mostly through the mass media, but also at meetings or through social media, academic publications and government policy documents.** Communication scholar Gerard A. Hauser defines it as "*a discursive space in which individuals and groups associate to discuss matters of mutual interest and, where possible, to reach a common judgment about them*".[3] The public sphere can be seen as "*a theater in modern societies in which political participation is enacted through the medium of talk*" and "*a realm of social life in which public opinion can be formed*".

- Describing the emergence of the public sphere in the 18th century, Habermas noted that the public realm, or sphere, originally was "***coextensive with public authority***" while "*the private sphere comprised civil society in the narrower sense, that is to say, the realm of commodity exchange and of social labor*". Whereas the "sphere of public authority" dealt with the state, or realm of the police, and the ruling class, or the feudal authorities i.e. church, princes and nobility)

- The "authentic 'public sphere'", in a political sense, arose at that time from within the private realm, specifically, in connection with literary activities, the world of letters. This new public sphere spanned the public and the private realms, and "through the vehicle of public opinion it put the state in touch with the needs of society". "This area is conceptually distinct from the state: it is a site for the production and circulation of discourses that can in principle be critical of the state."
- The public sphere "is also distinct from the official economy; it is not an arena of market relations but rather one of the discursive relations, a theater for debating and deliberating rather than for buying and selling". The people themselves came to see the public sphere as a regulatory institution against the authority of the state. **The study of the public sphere centers on the idea of participatory democracy, and how public opinion becomes political action.**

The ideology of the public sphere theory is that the government's laws and policies should be steered by the public sphere and that the only legitimate governments are those that listen to the public sphere. Much of the debate over the public sphere involves what is the basic theoretical structure of the public sphere, how information is deliberated in the public sphere, and what influence the public sphere has over society.

Jurgen Habermas claims "We call events and occasions 'public' when they are open to all, in contrast to closed or exclusive affairs". This 'public sphere' is a "realm of our social life in which something approaching public opinion can be formed. Access is guaranteed to all citizens ". This notion of the public becomes evident in terms such as public health, public education, public opinion or public ownership. They are opposed to the notions of private health, private education, private opinion, and private ownership. The notion of the public is intrinsically connected to the notion of the private. Habermas stresses that the notion of the public is related to the notion of the common. Habermas defines the public sphere as a "society engaged in critical public debate". Conditions of the public sphere are according to Habermas:

- The formation of public opinion
- All citizens have access.

- Conference in unrestricted fashion (based on the freedom of assembly, the freedom of association, the freedom to expression and publication of opinions) about matters of general interest, which implies freedom from economic and political control.
- Debate over the general rules governing relations.

Most contemporary conceptualizations of the public sphere are based on the ideas expressed in Jürgen Habermas' book *The Structural Transformation of the Public Sphere – An Inquiry into a Category of Bourgeois Society*. Habermas stipulates that, due to specific historical circumstances, a new civic society emerged in the eighteenth century. Driven by a need for open commercial arenas where news and matters of common concern could be freely exchanged and discussed—accompanied by growing rates of literacy, accessibility to literature, and a new kind of critical journalism—a separate domain from ruling authorities started to evolve across Europe. In his historical analysis, Habermas argued that the bourgeois society cultivated and upheld these criteria. The public sphere was well established in various locations including coffee shops and salons, areas of society where various people could gather and discuss matters that concerned them. The coffee houses in London society at this time became the centers of art and literary criticism, which gradually widened to include even the economic and the political disputes as matters of discussion. In French salons, as Habermas says, "opinion became emancipated from the bonds of economic dependence". Any new work, or a book or a musical composition had to get its legitimacy in these places. It not only paved a forum for self-expression but in fact had become a platform for airing one's opinions and agendas for public discussion.

The emergence of a bourgeois public sphere was particularly supported by the 18th-century liberal democracy making resources available to this new political class to establish a network of institutions like publishing enterprises, newspapers and discussion forums, and the democratic press was the main tool to execute this. The key feature of this public sphere was its separation from the power of both the church and the government due to its access to a variety of resources, both economic and social. As Habermas argues, in due course, this sphere of rational and universalistic politics, free from both the economy and the State, was destroyed by the same forces that initially established it. This collapse was due to the consumeristic drive that infiltrated society,

so citizens became more concerned about consumption than political actions. Furthermore, the growth of capitalistic economy led to an uneven distribution of wealth, thus widening economic polarity. Suddenly the media became a tool of political forces and a medium for advertising rather than the medium from which the public got their information on political matters. This resulted in limiting access to the public sphere and the political control of the public sphere was inevitable for the modern capitalistic forces to operate and thrive in the competitive economy.

Thus a new sort of influence, i.e. media power, which is used for purposes of manipulation, once and for all took care of the innocence of the principle of publicity. The public sphere, simultaneously restructured and dominated by the mass media, developed into an arena infiltrated by power in which, by means of topic selection and topical contributions, a battle is fought not only over influence but over the control of communication flows that affect behavior while their strategic intentions are kept hidden as much as possible. The public sphere was long regarded as men's domain whereas women were supposed to inhabit the private domestic sphere. A distinct ideology that prescribed separate spheres for women and men emerged during the industrial revolution

The concept of **heteronormativity** is used to describe the way in which those who fall outside of the basic male/female dichotomy of gender or whose sexual orientations are other than heterosexual cannot meaningfully claim their identities, causing a disconnect between their public selves and their private selves. Michael Warner made the observation that the idea of an inclusive public sphere makes the assumption that we are all the same without judgments about our fellows. He argues that we must achieve some sort of disembodied state in order to participate in a universal public sphere without being judged. His observations point to a homosexual counter public, and offers the idea that homosexuals must otherwise remain "closeted" in order to participate in the larger public discourse.

Habermas' argument shows that the media are of particular importance for constituting and maintaining a public sphere. Discussions about the media have therefore been of particular importance in public sphere theory. According to Habermas, there are two types of actors without whom no political public sphere could be put to work: professionals in the media system and politicians. For Habermas, there

are five types of actors who make their appearance on the virtual stage of an established public sphere:

(a) Lobbyists who represent special interest groups;

(b) Advocates who either represent general interest groups or substitute for a lack of representation of marginalized groups that are unable to voice their interests effectively;

(c) Experts who are credited with professional or scientific knowledge in some specialized area and are invited to give advice;

(d) Moral entrepreneurs who generate public attention for supposedly neglected issues;

(e) Intellectuals who have gained, unlike advocates or moral entrepreneurs, a perceived personal reputation in some field (e.g., as writers or academics) and who engage, unlike experts and lobbyists, spontaneously in public discourse with the declared intention of promoting general interests.

**YouTube**

Habermas argues that under certain conditions, the media act to facilitate discourse in a public sphere.[53] The rise of the Internet has brought about a resurgence of scholars applying theories of the public sphere to Internet technologies. For example, a study by S. Edgerly et al. focused on the ability of YouTube to serve as an online public sphere. The researchers examined a large sample of video comments using the California Proposition 8 (2008) as an example. The authors argue that some scholars think the online public sphere is a space where a wide range of voices can be expressed due to the "low barrier of entry" and interactivity. However, they also point at a number of limitations. Edgerly et al. say that the affirmative discourse presupposes that YouTube can be an influential player in the political process and that it can serve as an influential force to politically mobilize young people. The authors mention critiques that say YouTube is built around the popularity of videos with sensationalist content. The research by Edgerly, et al. found that the analyzed YouTube comments were diverse. They argue that this is a possible indicator that YouTube provides space for public discussion. They also found that YouTube videos' style influences the nature of the commentary. Finally, they concluded that the video's ideological stances influenced

the language of the comments. The findings of the work suggest that YouTube is a public sphere platform.

**Limitations of media and the internet**

German scholars Jürgen Gerhards and Mike S. Schäfer conducted a study in 2009 in order to establish whether the Internet offers a better and broader communication environment compared to quality newspapers. They analysed how the issue of human genome research was portrayed between 1999 and 2001 in popular quality newspapers in both Germany and the United States in comparison to the way it appeared on search engines at the time of their research. Their intention was to analyse what actors and what sort of opinions the subject generated in both print and the Internet and verify whether the online space proved to be a more democratic public sphere, with a wider range of sources and views. Gerhards and Schäfer say they have found "only minimal evidence to support the idea that the internet is a better communication space as compared to print media". "In both media, communication is dominated by (bio- and natural) scientific actors; popular inclusion does not occur". The scholars argue that the search algorithms select the sources of information based on the popularity of their links. "Their gatekeeping, in contrast to the old mass media, relies mainly on technical characteristics of websites". For Gerhards and Schäfer the Internet is not an alternative public sphere because less prominent voices end up being silenced by the search engines' algorithms. "Search engines might actually silence societal debate by giving more space to established actors and institutions". Another tactic that supports this view is **astroturfing**. ***The Guardian*** **columnist George Monbiot said that Astroturfing software** "has the potential to destroy the internet as a forum for constructive debate. It jeopardizes the notion of online democracy".

There has been an academic debate about how social media impacts the public sphere. The sociologists Brian Loader and Dan Mercea give an overview of this discussion. They argue that social media offers increasing opportunities for political communication and enable democratic capacities for political discussion within the virtual public sphere. The effect would be that citizens could challenge governments and corporations' political and economic power. Additionally, new forms of political participation and information sources for the users emerge with the Internet that can be used, for example, in online campaigns. However, the two authors point out that social

media's dominant uses are entertainment, consumerism, and content sharing among friends.

Loader and Mercea point out that "individual preferences reveal an unequal spread of social ties with a few giant nodes such as Google, Yahoo, Facebook and YouTube attracting the majority of users". They also stress that some critics have voiced the concern that there is a lack of seriousness in political communication on social media platforms. Moreover, lines between professional media coverage and user-generated content would blur on social media. The authors conclude that social media provides new opportunities for political participation; however, they warn users of the risks of accessing unreliable sources. The Internet impacts the virtual public sphere in many ways, but is not a free utopian platform as some observers argued at the beginning of its history.

**Mediated publicness**

John Thompson criticises the traditional idea of public sphere by Habermas, as it is centred mainly in face-to-face interactions. On the contrary, Thompson argues that modern society is characterized by a new form of **"mediated publicness"** whose main characteristics are:

- Despatialized - People can see more things, as they do not need to share the same physical location.
- Non dialogical - unidirectional. For example, presenters on TV are not able to adapt their discourse to the reactions of the audience, since they are visible to a wide audience but that audience is not directly visible to them. However, internet allows a bigger interactivity.
- Wider and more diverse audiences. The same message can reach people with different education, different social class, different values and beliefs.

**The public service model**

Examples of the public service model include BBC in Britain, and the ABC and SBS in Australia. The political function and effect of modes of public communication has traditionally continued with the dichotomy between Hegelian State and civil society. The dominant theory of this mode includes the liberal theory of the free press. However, the public service, state-regulated model, whether publicly or privately funded, has always been seen not as a positive good but as an unfortunate necessity imposed by the

technical limitations of frequency scarcity. From Garnham's critique, three great virtues of Habermas's public sphere are mentioned. Firstly, it focuses on the indissoluble like between the institutions and practices of mass public communication and the institutions and practices of democratic politics. The second virtue of Habermas's approach concentrates on the necessary material resource base for ant public. Its third virtue is to escape from the simple dichotomy of free market versus state control that dominates so much thinking about media policy.

**4.5. Noam Chomsky- Manufacturing of Consent**

***Manufacturing Consent: The Political Economy of the Mass Media*** is a 1988 book by **Edward S. Herman and Noam Chomsky**. It argues that the mass communication media of the U.S. "are effective and powerful ideological institutions that carry out a system-supportive propaganda function, by reliance on market forces, internalized assumptions, and self-censorship, and without overt coercion", by means of the propaganda model of communication. The title refers to consent of the governed, and derives from the phrase "the manufacture of consent" used by Walter Lippmann in *Public Opinion* (1922).

Herman was a professor of finance at Wharton School at the University of Pennsylvania, and Chomsky is a linguist and activist scholar, who wrote many other books, such as *Towards a New Cold War*. Before *Manufacturing Consent* was published in 1988, the two authors had collaborated on the same subject before. Their book *Counter-Revolutionary Violence: Bloodbaths in Fact & Propaganda*, a book about American foreign policy and the media, was published in 1973. According to Chomsky, "most of the book [*Manufacturing Consent*]" was the work of Edward S. Herman. The main elements of the propaganda model were discussed briefly in volume 1 chapter 2 of Herman and Chomsky's 1979 book *The Political Economy of Human Rights*, where they argued, "Especially where the issues involve substantial U.S. economic and political interests and relationships with friendly or hostile states, the mass media usually function much in the manner of state propaganda agencies." The book introduced the propaganda model of communication, which is still developing today.

The propaganda model for the manufacture of public consent describes five editorially distorting filters, which are applied to the reporting of news in mass communications media. These five filters of editorial bias are:

1. ***Size, ownership, and profit orientation***: The dominant mass-media outlets are large profit-based operations, and therefore they must cater to the financial interests of the owners such as corporations and controlling investors. The size of a media company is a consequence of the investment capital required for the mass-communications technology required to reach a mass audience of viewers, listeners, and readers.
2. ***The advertising license to do business***: Since the majority of the revenue of major media outlets derives from advertising not from sales or subscriptions, advertisers have acquired a "de facto licensing authority." Media outlets are not commercially viable without the support of advertisers. News media must therefore cater to the political prejudices and economic desires of their advertisers. This has weakened the working class press, for example, and also helps explain the attrition in the number of newspapers.
3. ***Sourcing mass media news***: Herman and Chomsky argue that "the large bureaucracies of the powerful *subsidize* the mass media, and gain special access to the news by their contribution to reducing the media's costs of acquiring and producing, news. The large entities that provide this subsidy become 'routine' news sources and have privileged access to the gates. Non-routine sources must struggle for access, and may be ignored by the arbitrary decision of the gatekeepers." Editorial distortion is aggravated by the news media's dependence upon private and governmental news sources. If a given newspaper, television station, magazine, etc., incurs dis-favour from the sources, it is subtly excluded from access to information. Consequently, it loses readers or viewers, and ultimately, advertisers. To minimize such financial danger, news media businesses editorially distort their reporting to favour government and corporate policies in order to stay in business.
4. ***Flak and the enforcers*****:** "Flak" refers to negative responses to a media statement or program (e.g. letters, complaints, lawsuits, or legislative actions). Flak can be expensive to the media, either due to loss of advertising revenue, or due to the costs of legal defence or defence of the media outlet's public image. Flak can be organized by powerful, private influence groups. The prospect of eliciting flak can be a deterrent to the reporting of certain kinds of facts or opinions.

5. ***Anti-communism/war on terror*:** Anti-communism was included as a filter in the original 1988 edition of the book, but Chomsky argues that since the end of the Cold War (1945–91) anticommunism was replaced by the "war on terror" as the major social control mechanism.

   In 2006, Fatih Tas, owner of the Aram editorial house, along with two editors and the translator of the revised, 2001 edition of *Manufacturing Consent* were prosecuted by the Turkish government for "stirring hatred among the public" (per Article 216 of the Turkish Penal Code) and for "denigrating the national identity" of Turkey (per Article 301). The reason cited was that the introduction to this edition addresses the 1990s' Turkish news media reportage of governmental suppression of the Kurdish populace. The defendants were ultimately acquitted.

**4.6. Walter Lipmann – Public Opinion and Democracy**

**Walter Lippmann** was an American writer, reporter and political commentator. With a career spanning 60 years he is famous for being among the first to introduce the concept of **Cold War,** coining the term "**stereotype"** in the modern psychological meaning, as well as critiquing media and democracy in his newspaper column and several books, most notably his 1922 book *Public Opinion*. Lippmann won **two Pulitzer Prizes**, one for his syndicated newspaper column **"Today and Tomorrow" and one for his 1961 interview of Nikita Khrushchev**.

**He has also been highly praised with titles ranging anywhere from "most influential" journalist of the 20th century, to "Father of Modern Journalism" as his book *Public Opinion* is considered as "the founding book of modern journalism" and also "the founding book in American media studies"**. Public Opinion is a book by Walter Lippmann, published in 1922. It is a critical assessment of functional democratic government, especially of the irrational and often self-serving social perceptions that influence individual behaviour and prevent optimal societal cohesion.

- Though a journalist himself, Lippmann did not assume that news and truth are synonymous. For Lippmann, the **"function of news is to signalize an event, the function of truth is to bring to light the hidden facts, to set them in relation with each other, and make a picture of reality on which men can act."**

- A journalist's version of the truth is subjective and limited to how they construct their reality. The news, therefore, is **"imperfectly recorded"** and too fragile to bear the charge as "an organ of direct democracy."
- To Lippmann, democratic ideals had deteriorated: voters were largely ignorant about issues and policies and lacked the competence to participate in public life and cared little for participating in the political process.
- In *Public Opinion* (1922), Lippmann noted that modern realities threatened the stability that the government had achieved during the patronage era of the 19th century. He wrote that a "governing class" must rise to face the new challenges.
- The basic problem of democracy, he wrote, was the **accuracy of news and protection of sources**. He argued that **distorted information** was inherent in the human mind. People make up their minds before they define the facts, while the ideal would be to gather and analyze the facts before reaching conclusions.
- By seeing first, he argued, it is possible to sanitize polluted information. Lippmann argued that interpretation as stereotypes (a word which he coined in that specific meaning) subjected us to partial truths.
- Lippmann called the notion of a public competent to direct public affairs a "false ideal." He compared the political savvy of an average man to a theater-goer walking into a play in the middle of the third act and leaving before the last curtain.
- Lippmann was an early and influential commentator on mass culture, notable not for criticizing or rejecting mass culture entirely but discussing how it could be worked with by a government licensed "propaganda machine" to keep democracies functioning.
- In his first book on the subject, *Public Opinion* (1922), Lippmann said that mass man functioned as a "bewildered herd" that must be governed by "a specialized class whose interests reach beyond the locality." The élite class of intellectuals and experts were to be a machinery of knowledge to circumvent the primary defect of democracy, the impossible ideal of the "omni-competent citizen". This attitude was in line with contemporary capitalism, which was made stronger by greater consumption.

- Later, in *The Phantom Public* (1925), Lippmann recognized that the class of experts were also, in most respects, outsiders to any particular problem, and hence not capable of effective action. Philosopher John Dewey (1859–1952) agreed with Lippmann's assertions that the modern world was becoming too complex for every citizen to grasp all its aspects, but Dewey, unlike Lippmann, believed that the public (a composite of many "publics" within society) could form a "Great Community" that could become educated about issues, come to judgments and arrive at solutions to societal problems.
- From the 1930s to the 1950s, Lippmann became even more skeptical of the "guiding" class. In *The Public Philosophy* (1955), which took almost twenty years to complete, he presented a sophisticated argument that intellectual elites were undermining the framework of democracy. The book was very poorly received in liberal circles.

The main point of "Public Opinion" is to demonstrate the **problem facing democracy** in its original form **"because the pictures inside people's heads do not automatically correspond with the world outside"** and to suggest a remedy based on **organized intelligence and "representation of the unseen facts" of public affairs.**

- Walter Lippmann supports his argument by discussing how public opinions consist of pictures inside men's heads and why the picture "so often misleads men in their dealings with the world outside".
- He reveals how **stereotypes affect public opinions** and how these individual opinions "are crystallized into what is called Public Opinion". Public opinions are the pictures inside men's heads, "the pictures of themselves, of others, of their needs, purposes, and relationship". Public Opinion consists of those pictures collectively acted upon. The world people deal with politically is **"out of reach, out of sight, out of mind".**
- Fictions and symbols become an important part of human communication in a world of complex, distant and unseen events. Man's behavior becomes his response to a pseudo-environment, the environment as he knows it in pictures inside his head. People form mental images of events they do not experience and attach emotions to those images. Casual facts combine with a man's creative imagination and his will to believe to create the fictions on which he acts.

- The analyst of public opinion must thus begin **"by recognizing the triangular relationship between the scene of action, the human picture of that scene, and the human response to that picture working itself out upon the scene of action".** Indirect, imagined, symbolic and stereotyped pictures of facts form the basis of public opinion.

In Part two, Lippmann explores the factors that limit people's access to facts and thus the accuracy of the pictures inside their heads.

- **Censorship and privacy intercept information at its source**, forming barriers between the public and events. **Physical and social barriers, monopolies, low incomes and lack of interest limit the circulation of ideas. Language becomes a limiting factor** as words elicit different mental images and have different meanings for different people. Time constraints, distractions of urban life, emotional conflicts and fatigue also limit access to facts.
- These limitations "combine with the obscurity and complexity of the facts themselves to thwart clearness and justice of perception, to substitute misleading fictions for workable ideas"

In Parts three and four, Lippmann explores how stereotypes and self-interest guide public opinion, how images, preconceptions and prejudices affect incoming messages from the outside.

- People use their prejudices to interpret and fill out these messages. The observer of the outside world is selective and creative, bringing stereotypes and expectations to scenes such that his account of an event "is really a transfiguration of it",
- In a complex world, people perceive events and other people in forms stereotyped for them by their culture. They accept stereotypes as mental shortcuts in order to minimize effort of thought and defend their positions in society and their self-respect.
- Moral codes, social philosophies and political agitations contribute to the stereotyped shapes that influence perceptions. People see those facts that fit their moral philosophy, support their stereotypes and compliment their variable interests.

- Lippmann suggests that public opinion is a “moralized and codified version of the facts” that is personal and variable in each individual.

In part five, Lippmann explores the question of how “great numbers of people feeling each so privately about so abstract a picture” could develop a common will, a collective Public Opinion.

- He discusses the role of vague ideas and universal symbols in uniting deeply felt individual opinions. Public figures use symbols such as Americanism and Progressivism to “amalgamate the emotion of conflicting factions”.
- Lippmann equates this harmonization to a hierarchy of symbols. A higher order symbol collects more diverse ideas into a common emotional response while sacrificing concrete intellectual substance. Each individual gives the symbol his or her own private meaning. As authoritative figures begin to wield uniting symbols, men choose less between true and false and more between trustworthy and untrustworthy. They exercise their independence not through self-sufficiency but in controlling which authorities they listen to. Common symbols and issues constructed from a multitude of private notions limit the direct action of the public to assent or dissent, the simple expression of “yes” or “no.”
- Lippmann writes, “because of its power to siphon emotion out of distinct ideas, the symbol is both a mechanism of solidarity, and a mechanism of exploitation”.

In Part six, Lippmann analyzes democratic theory of public opinion in its traditional and reformed forms. He concludes that in the absence of a simple self-contained community and reliable pictures of the world, democracy suffers from the problem of “turning a self-centered opinion into a social judgment” and good government.

- In popular government, men act without reliable pictures of the world. Lippmann points out that, despite hopes, the press will not provide the spontaneous knowledge of truth and self-governing ability required of the individual in a representative government. The source of the problems of representative government, industry and the press alike is “the failure of self-governing people to transcend their casual experiences and their prejudice, by inventing, creating, and organizing a machinery of knowledge”.

- Lippmann proposes a separate system of intelligence as a remedy to the limitations of the press, a "social organization based on a system of analysis and record". Lippmann proposes that a re-education based on objective methods of expert reporting and information organization "will help to bring our public opinions into grip with the environment".

**4.7. James Bryce – Power of Public Opinion**

In the 1880s, Lord James Bryce travelled extensively throughout the United States to study and write about the American democracy. As part of his multivolume work, he developed a **theory of the nature and power of public opinion** with a central role for the media (newspapers). Today, new communications technologies vastly increase the exposure of politicians and voters to each other, resulting in an increase in the **power of public opinion**. Bryce's theory is formalized into 12 propositions and a theorem is derived that has significant implications for society in the contemporary age of multiple channels of communication. **Democracy is viewed as an elite rule carried out according to the interests of the citizens, and public opinion is viewed as a sum of individual preferences of the voters.**

Public opinion is a nebulous concept that Bryce works to tease out, first by focusing on its creation within an increasingly growing population.

- Bryce describes the first step of one's initial foray into any topic as beginning with a set of **vaguely related impressions** that are formed as one learns about the issue at hand. These are essentially **created on the spur of the moment** and are fleeting notions put together as our mind struggles to make connections between the incomplete data we are presented with and the thoughts we have concerning a variety of other issues.
- Next, as **we gather more details and are permitted the time to reflect upon these**, what was at first fluid and ill-defined comes to be more determined and concrete. One is better able to fit the given issues into a broader context as time and further analysis of details allow for more definite connections, both within our own minds and in the wider social framework in which we operate. This stage also **includes interactions with others and a crystallization of one's own opinion.**

- Bryce's third stage in the formation of public opinion is characterized by **wider interaction with others** as one is in the process of forming their opinions on an issue, it is likely that many others are doing so as well. The internal debate takes on new shapes externally as a more or less widespread discussion in the public sphere. This continues as battle lines are drawn and adherents pick their sides. Despite the more solidly defined positions on an argument, the debate still maintains some fluidity as still further details are discovered and insights are produced.
- Bryce describes something of a definite end to the process when a citizen votes on a given issue. Election day may be a somewhat arbitrary breaking point, especially with newer issues and the increasing use of polling techniques, but by this day, the individual citizen is to have taken stock of all they have gathered on the topic, studied how each side impacts other issues he cares about, and undertakes a definite action to support one particular point of view over all the others. There is a finality of sorts in the fourth stage.
- Elites of various stripes, including political, social, religious, and popular figures, play an integral role in creating the parameters of discussion insofar as they are able to function as a unifying figure. Bryce is careful to again argue that opinion is formed in a **circular manner**. While it may be the case that terms of debate are largely set by elites, they are in turn informed by the types of response they receive from the general population. That which decides whether a speaker stands on a stage or a soapbox is the size of their audience.

This interaction between elites and non-elites is ongoing. As an issue gains attention, individuals work to understand it in relation to their circumstances and world-view. Once beyond the first stage in the formation of public opinion, elites and non-elites work with one another to better comprehend the issue, its context, possible responses, and their ramifications.

Individuals constantly re-evaluate their opinions in light of the changing circumstances, experiences, and insights. Bryce sees the need for an "elite" or "upper" class of individuals who have the time and talents to serve as a source for the distillation of opinions and insights as described above. He sees merit on the part of the general population who looks to those with greater abilities to understand the parameters of a

given issue for guidance and advice because each group, regardless of their degree of comprehension on a given issue, is nonetheless given equal worth when called upon to voice their opinion during an election.

### 4.8. Manual Castles – Networked Society

**Information** has been a central theme in 21st century research, just as capital was in the 20th century. It is frequently said that society is now living in an **information age**, which has provided various information technologies (i.e. the Internet and cellular phones). However the "information age" is also referred to as information society, global village, digital society, wired society, post-industrial society, and network society. Among the numerous scholars trying to define this new society, Manuel Castells is the most foremost and unique.

- He has written over twenty books, published over one hundred academic journal articles, and co-authored over fifteen books. He was a professor of Sociology and City and Regional Planning at the University of California, Berkeley. He has also served on many national and international organizations such as: the Advisory Council to the United Nations Task Force on Information and Communication Technology, the International Advisory Council to the President of South Africa on Information Technology and Development, the United Nations Secretary General's High Level Panel on Global Civil Society and the United Nations, and UNESCO.
- Castells has become one of the most influential theorists over the past thirty years since his wide array of works has provided a unique and critical framework for examining contemporary society. Castells has been called the first great philosopher of cyberspace for his work on the information economy.
- His trilogy published between 1996 and 1998 is recognized as a compendium of his theory about the information age. In the trilogy, consisting of ***The Network Society*****, *The Power of Identity*, and *End of Millennium*,** Castells' analysis of the new economy colligates several strands of the new society: new technological paradigms, globalization, social movements, and the demise of the sovereign nation-state.
    - Network Society deals with the new techno-economic system

- The Power of Identity discusses social movements and politics resisting or adapting to the network society.
- *End of Millennium*, the last work of the trilogy, describes the results of the previous two factors in the world.

- His critical viewpoint toward networks and the information economy has made him more unique than other information economists and sociologists. Castells believes that the dark side of a new economy is embedded in the intrinsic characteristics of new technologies. Thus, Castells maintains a deterministic view of technology, whereas the Utopians regard information technologies as instruments for human evolution.
- **Manuel Castells** defines the network society as a society whose social structure is made up of networks powered by micro-electronics-based information and communications technologies

**Network society** is the expression coined in 1991 related to the social, political, economic and cultural changes caused by the spread of networked, digital information and communications technologies. According to Castells, networks constitute the new social morphology of our societies. According to Castells "network society is a society where the key social structures and activities are organized around electronically processed information networks. So it's not just about networks or social networks, because social networks have been very old forms of social organization. It's about social networks which process and manages information and is using micro-electronic based technologies." The diffusion of a networking logic substantially modifies the operation and outcomes in processes of production, experience, power, and culture. For Castells, networks have become the basic units of modern society.

The network society goes further than the information society that is often proclaimed. Castells argues that it is not purely the technology that defines modern societies, but also cultural, economic and political factors that make up the network society. Influences such as religion, cultural upbringing, political organizations, and social status all shape the network society. Societies are shaped by these factors in many ways. These influences can either raise or hinder these societies. The space of flows plays a central role in Castells' vision of the network society. It is a network of communications, defined by hubs where these networks crisscross. Élites in cities are

not attached to a particular locality but to the space of flows. Castells puts great importance on the networks and argues that the real power is to be found within the networks rather than confined in global cities.

Social networking sites such as Facebook and Twitter, instant messaging and email are prime examples of the Network Society at work. These web services allow people all over the world to communicate through digital means without face-to-face contact. This demonstrates how the ideas of society changing will affect the persons we communicate over time. Network society does not have any confinements and has found its way to the global scale. Network society is developed in modern society that allows for a great deal of information to be traded to help improve information and communication technologies. Having this luxury of easier communication also has consequences. This allows for globalization to take place. This benefits users who have access to the internet, to stay connected at all times with any topic the user wants. Individuals without internet may be affected because they are not directly connected into this society. People always have an option to find public space with computers with internet. This allows a user to keep up with the ever changing system. Network society is constantly changing the "cultural production in a hyper-connected world." Social Structures revolve around the relationship of the "production/consumption, power, and experience." These conclusively create a culture, which continues to sustain by getting new information constantly.

Our society system was a mass media system where it was a more general place for information. Now the system is more individualized and custom system for users making the internet more personal. This makes messages to the audience more inclusive sent into society, ultimately allowing more sources to be included for better communication. Network society is seen as a global system that helps with globalization. This is beneficial to the people who have access to the internet to get this media. The negative to this is the people without access do not get this sense of the network society. These networks, that have now been digitized, are more efficient of connecting people. Everything we know now can be put into a computer and processed. Users put messages online for others to read and learn about. This allows people to gain knowledge faster and more efficiently. Networked society allows for people to connect to each other quicker and to engage more actively.

## 4.9. Digital Convergence

**Digital Convergence** is the **priming** of underlying digital technology components and features such as **voice, texts, video, pictures, broadcasts, presentation, streaming media, global connectivity** and **personalized services**; the combination of all of these features and abilities from multiple electronic systems into a simplified, converged and computer-mediated communication system to enable individuals interact, play, communicate, collaborate and share information in many new and different ways.

Today the world of communications is characterized by the evolution of new technologies which are innovativeness, fast paced, adaptive, rapidly changing and dynamic. The recent years can surely be described this way as witnessed with convergence in technology which has in many ways revolutionized mass media and communication. The rise of digital communication has made it possible for media organizations to deliver video, audio and text material via the same wired, wireless or fibre-optic connections. Today, the world of communications is surrounded by a multi-level convergent media wherein the various modes of information and communication are increasingly integrating into one in order to adapt to the enduring demands of technologies. Convergence of technologies is increasingly changing the way in which we create, consume, learn and interact with one another.

Where the mention of the word "convergence" appeared in the 1980's and early 1990's, it was always in connection with Sculley and Apple. It also appeared in a few of the articles. For example, in 1994, the New York Times, while reporting on the San Jose Mercury News online edition on AOL, had a subheading with the term "media convergence" which forecasted that technological changes were increasingly leading to convergence of all forms of media into one. With the World Wide Web emerging in the mid-1990s, the notion of media convergence was getting more popular and by the time a merger between AOL and Time Warner was announced in the early 2000, the term "convergence" had become a buzzword which was associated with electronic content delivery

- Digital convergence can be defined as the coming together of information content from voice telephony, sound broadcasting, television and print media; into a single application or service (Simpson & Weiner 1989).

- Convergence can also defined as the merging of industries, for example, the merging of traditional media companies with internet companies, such as Time Warner and AOL (Jenkins 2001).
- Ithiel de Sola Pools (1983), coined the term "convergence" to describe a single integrated common carrier that met all the needs of the media.

In the past, communications media were separate and they provided distinct services. Voice telephony, broadcasting and online computer services operated on different platforms. With digital convergence, a new epoch of multimedia has been ushered in where in voice, images and data can be brought together to form a single network that renders more efficient and effective services to the users of information content. This convergence has been made possible through digitization which represents all forms of information in the same abstract form, in digital binary formats. Digitization enables all forms of the media to escape their traditional means of transmission (analog) and be translated into one another, as computer bits migrate merrily. The digital technology is increasingly blurring the boarders between broadcasting, telecommunication, television, publishing and computing services. Digital convergence has become the key factor of change in communication media with it rendering better, more efficient and innovative services to the users of information content. Digital convergence has made it possible for consumers to access content and services regardless of the connection type.

Open standard-based technologies such as IP; radio technologies such as cellular, DVB and WLAN; middleware technologies such as HTML, WAP, MMS, Symbian, XHTML, PoC, Java and DRM; and connectivity technologies such as the Blue tooth, USB 2.0, RFID, and universal plug and play; have all made it possible for consumers to access information content and services without having to worry about interoperability issues

Much of the content that is created today is in the form of a digital format, which give users a range of options to choose from for the content that they want to consume. For example, standardized content formats such as MP3 and MPEG4 can be consumed on a video player, TV or on a smartphone Digitization is increasingly changing the way content is distributed by media organizations. The mass media content is no longer distributed through traditional channels and instead digital content is now delivered via the internet, satellite and through a host of other digital technologies. The content has

been made available 24 hours a day, with media organizations updating their content continuously and reaching out to a worldwide audience.

Convergence of mass media, which has been facilitated by digitization, has become the focus of media organizations. Today, various forms of mass media are converging into a digital nexus with increasing speed. This increasing integration of technologies of computing, telecommunications, broadcasting and print media into a single digital environment is quickly revolutionizing media and journalism.

- Convergent media can thus be seen as a cross-plat form media, one which was conventionally associated with a certain platform or device but through digital convergence can now be accessed and distributed through another platform of device. This convergence represents more than just a one-dimensional technological question as it also incorporates structural changes in the economic field where information services play a significant part and the convergence of industries as well
- Digital convergence is enabling companies to merge and produce much better and efficient services. For example, in 2000, Time Warner, an American film and publishing conglomerate merged with AOL, an internet service provider to become the largest media corporation in the world. The coming together of these two companies represented a new level of convergence of the industrial and economic organization of media production and distribution.
- From the electronic media perspective, digital convergence significantly transforms media communication and changes the way, in which we create, consume, learn and interact with one another. A good example of this digital convergence can be seen with the Mobile TV. Nokia, for example, has produced a range of smartphones embedded with Real One video player, which enables operators and service providers to offer both streaming and live video content such as news, short films, music videos and sports to their customers
- Digital convergence has also enabled the expansion of mobility into the areas of imaging, games, music and media by enabling content to be accessed anytime and from anywhere. Having multiple functionalities such as MP3 players, digital cameras, and PDA functionality in one device (smartphone) brings significant

benefits as consumers need only a single device to perform a number of functions instead of several different ones.

- Digital convergence is also playing an important role in the area of imaging. For example, Nokia is collaborating with imaging industry leaders to create a total imaging experience for its customers. Its collaboration with Hewlett Packard will enable for easier printing of pictures via Bluetooth wireless technology. Nokia is also collaborating with Kodak to enable easy picture sharing with embedded Kodak picture applications in its smartphones (Anon 2004).
- There is no doubt that the increasing convergence of the various modes of information and communication has changed the way in which we interact and communicate with one another. Traditionally, information was communicated via analog mass communication. This was largely one way of reaching out to the audience. The process of analog mass communication was characterized by a relatively large, heterogeneous and anonymous audience. Audiences had relatively fewer means of communicating directly with each other on a mass scale and neither did they have a direct means of communicating with the creators and publishers of the content of mass communication. With digital convergence, communication has become easier and quicker as audiences can communicate directly with each other and with the creators and publishers of mass media content via email, online forums and other interactive media.
- Additionally, the audience can create mass communication content themselves and reach far larger audiences at a relatively lower cost than with the traditional media

Digital convergence is also transforming and setting the course of future of journalism. Among journalists, the idea of reporting a story using multiple media tools has generated a heated debate especially with the print reporters, who often don't carrying audio recorders and video cameras while at work. Due to these concerns, a mobile journalist workstation has been developed by engineers, which strap on to the back of a reporter and which enables him/her to capture multiple types of content from a news event.

- This idea of a backpack journalist, however, did generate strikingly different views. For example, Jane Ellen Stevens, who had worked as a video producer and

newspaper reporter was proud of the idea of a backpack journalist. She opposed against hiring reporters that were computer illiterate and cited an example of Preston Mendenhall of MSNBC.com who spent a substantial amount of time traveling to Afghanistan and sending back written articles.

- It is clear that the number of multimedia reporters will increase in future, and in many ways, the course of journalism is being set by the increasing convergence of the media. Some of the journalists are already gathering information in multiple formats. They are expected, for example, to write news, shoot and edit videos themselves.
- This is in sharp contrast to the traditional media where in reporting, video editing, and news photography were discrete professions. It is feels safe to predict that greater changes are on the way and the future of journalism lie with convergence of all forms of mass media. At minimum, journalists need to have the basic knowledge and understanding of the unique capabilities of different communications media.
- It is however important to note that this convergence doesn't necessarily imply that a single journalist ought to do all the work from reporting, writing, shooting videos and editing them as well taking pictures and presenting their stories on the web. We will always need to have specialists in these specific fields. But in the converged media organizations, journalists who are well equipped with the basic know-how of multiple media are the ones who are most successful and drive the greatest innovations and are the leaders of tomorrow.

Digital convergence conflates the integration of technologies of broadcasting, telecommunications, computing and printing. This concept has in many ways transformed the very nature of mass communication and is quickly revolutionizing media and journalism as various forms of mass media increasingly converge into a digital nexus. The convergence of all forms of mass media is not only setting the course of media and journalism, but is also changing the way in which we create, consume, learn and interact with one another.

**SEMESTER I**

**NR 11065- Computer Applications for Mass Media**

**Unit – 1 Computer:**

Computer is an electronic devise which is used to perform arithmetic and logical operations. The computer treats all data as electronic pulses or changes. They may include numerical data (0-9), alphabetic data (A-Z) and special character data(*,+,_,) represented as pulses in the computer system.

Essentially, a computer performs three functions.

1. It receives data (input)
2. It process *data* by various computations (Processing)
3. It emits data (output)

It accomplish these functions, programmer gives to the computer a program consisting of a set of statement. In the modern digital computer, programmes data are stored held inside the system in the form of electronic pulses while the mathematical operations are being performed the ability to store programmes or instructions internally is the reason for calling it stored computer programmed.

The digital computer may be defined as tool for solving. controlling and instructions internally is the reason for calling it a stored computer program.

A digital computer may be defined as tool for solving. Controlling and investigation any problem, process or concept, which can expressed mathematically.

**History of Computers**

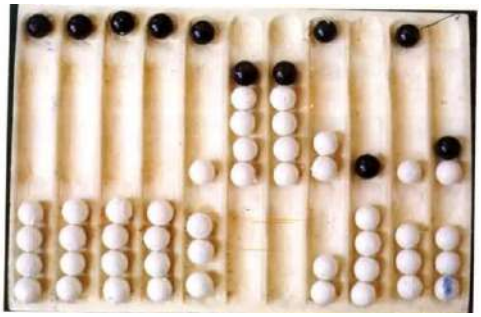

**Abacus**

•An **abacus** is a mechanical device used to aid an individual in performing mathematical calculations.

•The **abacus** was invented in Babylonia in 2400 B.C.

•The abacus in the form we are most familiar with was first used in China in around 500 B.C.

•It used to perform basic arithmetic operations.

Earlier Abacus Modern Abacus

**Napier's Bones**

•Invented by **John Napier i**n 1614.

•Allowed the operator to **multiply**, **divide** and **calculate square** and **cube roots** by moving the rods around and placing them in specially constructed boards.

Napier's Bones

**Slide Rule**

•Invented by **William Oughtred** in**1622**.

•Is based on Napier's ideas about **logarithms**.

•**Used primarily for**

multiplication, division, roots, logarithms, Trigonometry

•Not normally used for **addition** or **subtraction**.

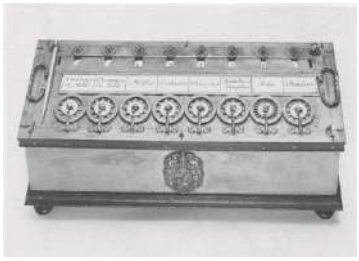

Slide Rule

**Pascaline**

•Invented by **Blaise Pascal** in 1642.

•It was its limitation to addition and subtraction.

•It is too expensive.

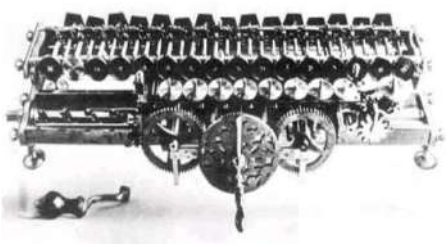

Pascaline

**Stepped Reckoner**

•Invented by **Gottfried Wilhelm Leibniz i**n 1672.

•The machine that can add, subtract, multiply and divide automatically.

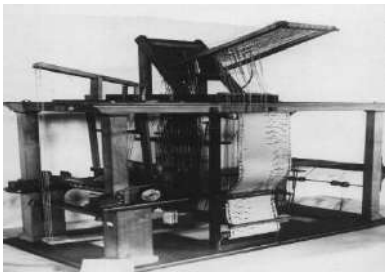

LeibnizStepped Reckoner

**Jacquard Loom**

•The **Jacquard loom** is a mechanical loom, invented by **Joseph-Marie Jacquard** in 1881.

•It an automatic loom controlled by punched cards.

Jacquard Loom

**Arithmometer**

•A mechanical calculator invented by **Thomas de Colmar**in 1820,

•The first reliable, useful and commercially successful calculating machine.

•The machine could perform the four basic mathematic functions.

•The first mass-produced calculating machine.

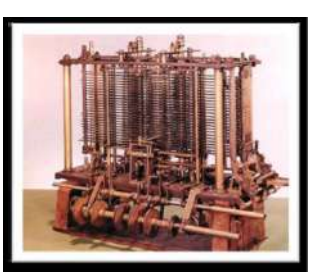

Arithmometer

**Difference Engine and Analytical Engine**

•It an automatic, mechanical calculator designed to tabulate polynomial functions.

•Invented by **Charles Babbage** in**1822 and 1834**

•It is the first mechanical computer

Difference Engine Analytical Engine

**First Computer Programmer**

•In 1840, **Augusta Ada Byron** suggests to Babbage that he use the binary system.

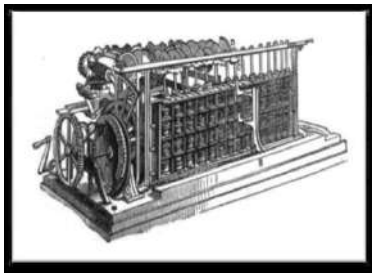

•She writes programs for the **Analytical Engine**.

**Scheutzian Calculation Engine**

•Invented by **Per Georg Scheutz** in 1843.

•Based on Charles Babbage's difference engine.

•The first **printing calculator.**

Scheutzian Calculation Engine

**Tabulating Machine**

•Invented by **Herman Hollerith**in 1890.

•To assist in summarizing information and accounting.

Tabulating Machine

**Havard Mark 1**

•Also known as IBM Automatic Sequence Controlled Calculator (ASCC).

•Invented by **Howard H. Aikenin** 1943

•The first electro-mechanical computer.

Mark 1

**Z1**

•The first programmable computer.

•Created by **Konrad Zuse**in Germany from **1936 to 1938.**

•To program the Z1 required that the user insert punch tape into a punch tape reader and all output was also generated through punch tape.

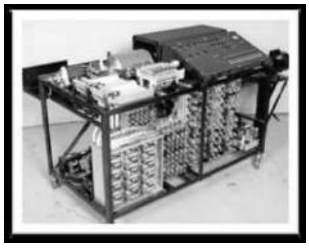

Z1

**Atanasoff-Berry Computer**(**ABC**)

•It was the first electronic digital computing device.

•Invented by **Professor John Atanasoff** and graduate student Clifford Berry at Iowa State University between 1939 and 1942.

AtanasoffAtanasoff-Berry Computer

**ENIAC**

•**ENIAC**stands for **Electronic Numerical Integrator and Computer**.

•It was the first electronic general-purpose computer.

•Completed in 1946.

•Developed by **John Presper Eckert**and **John W. Mauchl**.

ENIAC

**UNIVAC 1**

•The **UNIVAC I**(**UNIV**ersal **A**utomatic **C**omputer 1) was the first commercial computer.

•Designed by **J. Presper Eckert** and **John Mauchly.**

UNIVAC 1

**EDVAC**

•**EDVAC** stands for **Electronic Discrete Variable Automatic Computer**

•**The First Stored Program Computer**

•Designed by Von Neumann in 1952.

•It has a memory to hold both a stored program as well as data.

EDVAC

**The First Portable Computer**

•**Osborne 1**–the first portable computer.

•Released in 1981 by the Osborne Computer Corporation.

Osborne 1

**Generation of Computers**

There are five generations of computer:

•**First generation**–1946 -1958

•**Second generation**–1959 -1964

•**Third generation**–1965 -1970

•**Fourth generation**–1971 -today

•**Fifth generation**–Today to future

**The First Generation**

•The first computers used **vacuum tubes**for circuitry and **magnetic drums** for memory, and were often enormous, taking up entire rooms.

•They were very expensive to operate and in addition to using a great deal of electricity, generated a lot of heat, which was often the cause of malfunctions.

Vacuum tube

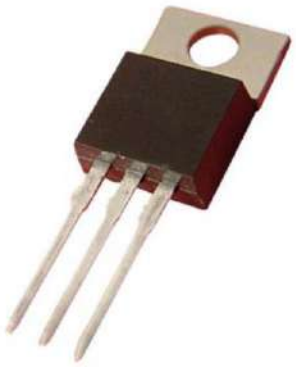

First generation computers relied on machine language, the lowest-level programming language understood by computers, to perform operations, and they could only solve one problem at a time.

•Input was based on punched cards and paper tape, and output was displayed on printouts.

**Examples:** Universal Automatic Computer (UNIVAC), Electronic Numerical Integrator and Calculator (ENIAC), Electronic Discrete Variable Automatic Computer (EDVAC),

**The Second Generation**

•Transistors replaced vacuum tubes and ushered in the second generation of computers.
•One transistor replaced the equivalent of **40 vacuum tubes**.
•Allowing computers to become smaller, faster, cheaper, more energy-efficient and more reliable.
•Still generated a great deal of heat that can damage the computer.

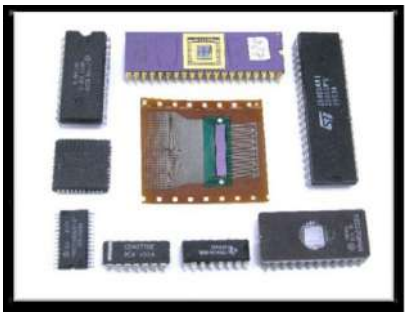

Transistor

Second-generation computers moved from cryptic binary machine language to symbolic, or assembly, languages, which allowed programmers to specify instructions in words.
•Second-generation computers still relied on punched cards for input and printouts for output.
•These were also the first computers that stored their instructions in their memory, which moved from a magnetic drum to magnetic core technology.

**Examples: PDP – 8, IBM 1401, CDC 1604,**

**The Third Generation**

•The development of the **integrated circuit** was the hallmark of the third generation of computers.
•Transistors were miniaturized and placed on silicon chips, called semiconductors, which drastically increased the speed and efficiency of computers.
•Much smaller and cheaper compare to the second generation computers.
•It could carry out instructions in billionths of a second.

Integrated Circuit

Users interacted with third generation computers through keyboards and monitors and interfaced with an operating system, which allowed the device to run many different applications at one time with a central program that monitored the memory.
•Computers for the first time became accessible to a mass audience because they were smaller and cheaper than their predecessors.

**The Fourth Generation**

•The **microprocessor** brought the fourth generation of computers, as thousands of integrated circuits were built onto a single silicon chip.
•As these small computers became more powerful, they could be linked together to form networks, which eventually led to the development of the Internet.
•Fourth generation computers also saw the development of GUIs, the mouse and handheld devices.

Microprocessor

**The Fifth Generation**

•Based on Artificial Intelligence (AI).

•Still in development.

•The use of parallel processing and superconductors is helping to make artificial intelligence a reality.

•The goal is to develop devices that respond to natural language input and are capable of learning and self-organization.

•There are some applications, such as voice recognition, that are being used today.

**TYPES OF COMPUTERS**

There are four types of computers. They are 1.Super Computers 2. Main- frame Computers 3. Mini Computers 4.Micro Computers. These computers are differe in their size and speed.

**1.Super Computers :**

1.These are very large in size.

2.These computers have multiple processors.

3.Super Computers are fastest computers.

4. Super Computers are very expensive

5. These computers are kept only in large air conditioned rooms.

**Uses of Super Computers:** used only in scientific and research purposes like weather forecasting, Nuclear weapon testing, space exploration, earthquake studies.

**2. Main- frame Computers :**

1.Main – frame computers are used in large processing of data.

2. It supports multiple processing simultaneously.

3. These computers are expensive.

4. Main – frame computers are faster computers.

**Uses of Main- frame Computers:** Main frame computers are processing power and used by large organizations like census data processing, consumer statistics, enterprise resource planning, online transaction processing.

**3. Mini Computers:** These computer like between the main frame and micro computers in terms of efficiency, speed, cost and memory. So mini computers are called mid range computers.

**Uses of Mini Computers:** These computers are designed to support large number of users and used database servers, web servers,

**4. Micro Computers:** These computers are used for single user. They are made up of single processor and single memory, minimum input and output devices. These are affordable for personal use.

**Examples:** Desktop, laptop, Notebook PC, Smart T.V., Smart Watches, Smart phones etc.

**An overview of Computer System**

A computer system primarily comprises a central processing unit (CPU), memory, input/output devices and storage devices. All these components function together as a single unit to deliver the desired output. A computer system comes in various forms and sizes. It can vary from a high-end server to personal desktop, laptop, tablet computer, or a smartphone.

**Central Processing Unit (CPU)**

It is the electronic circuitry (route, path) of a computer that carries out the actual processing and usually referred as the brain of the computer. It is commonly called processor also. Physically, a CPU can be placed on one or more microchips called integrated circuits (IC). The ICs comprise semiconductor materials.

The CPU is given instructions and data through programs. The CPU then fetches (get, obtain) the program and data from the memory and performs arithmetic and logic operations as per the given instructions and stores the result back to memory. While processing, the CPU stores the data as well as instructions in its local memory called

registers. Registers are part of the CPU chip and they are limited in size and number. Different registers are used for storing data, instructions or intermediate results.
Other than the registers, the CPU has two main components — Arithmetic Logic Unit (ALU) and Control

Unit (CU). ALU performs all the arithmetic and logic operations that need to be done as per the instruction in a program. CU controls sequential instruction execution, interprets instructions and guides data flow through the computer's memory, ALU and input or output devices. CPU is also popularly known as microprocessor.

**Input Devices**

The devices through which control signals are sent to a computer are termed as input devices. These devices convert the input data into a digital form that is acceptable by the computer system.

**Examples of input devices: keyboard, mouse, scanner, touch screen, etc**.,

Specially designed braille keyboards are also available to help the visually impaired for entering data into a computer. Besides, we can now enter data through voice, for example, we can use Google voice search to search the web where we can input the search string through our voice.

Data entered through input device is temporarily stored in the main memory (also called RAM) of the computer system. For permanent storage and future use, the data as well as instructions are stored permanently in additional storage locations called secondary memory.

**Output Devices**

The device that receives data from a computer system for display, physical production, etc., is called output device. It converts digital information into human understandable form.

**Examples of output devices: Monitor, projector, headphone, speaker, printer, etc.**

**Units of Memory :** A computer system uses binary (duel, double) numbers to store and process data. The binary digits 0 and 1, which are the basic units of memory, are called

bits. Further, these bits are grouped together to form words. A 4-bit word is called a Nibble. Examples of nibble are 1001, 1010, 0010, etc. A two nibble word, i.e., 8-bit word is called a byte, for example, 01000110, 01111100, 10000001, etc.

**Measurement units for digital data**

KB (Kilobyte) 1 KB = 1024 Bytes PB (Petabyte) 1 PB = 1024 TB
MB (Megabyte) 1 MB = 1024 KB EB (Exabyte) 1 EB = 1024 PB
GB (Gigabyte) 1 GB = 1024 MB ZB (Zettabyte) 1 ZB = 1024 EB
TB (Terabyte) 1 TB = 1024 GB YB (Yottabyte) 1 YB = 1024 ZB

**Types of Memory**

Computers have two types of memory — primary memory and secondary memory.

***Primary Memory***

Primary memory is an essential component of a computer system. Program and data are loaded into the primary memory before processing. The CPU interacts directly with the primary memory to perform read or write operation. It is of two types viz. (i) Random Access Memory (RAM) and (ii) Read Only Memory (ROM). RAM is volatile (unstable), i.e., as long as the power is supplied to the computer, it retains the data in it. But as soon as the power supply is turned off, all the contents of RAM are wiped out. It is used to store data temporarily while the computer is working. Whenever the computer is started or a software application is launched, the required program and data are loaded into RAM for processing. RAM is usually referred to as main memory and it is faster than the secondary memory or storage devices.

On the other hand, ROM is non-volatile, which means its contents are not lost even when the power is turned off. It is used as a small but faster permanent storage for the contents which are rarely changed. For example, the startup program (boot loader) that loads the operating system into primary memory, is stored in ROM.

***(B) Cacshe Memory***

RAM is faster than secondary storage, but not as fast as a computer processor. So, because of RAM, a CPU may have to slow down. To speed up the operations of the CPU, a very high speed memory is placed between the CPU and the primary memory known as *cache*. It stores the copies of the data from frequently accessed primary

memory locations, thus, reducing the average time required to access data from primary memory. When the CPU needs some data, it first examines the cache. In case the requirement is met, it is read from the cache, otherwise the primary memory is accessed.

***Secondary Memory***

Primary memory has limited storage capacity and is either volatile (RAM) or read-only (ROM). Thus, a computer system needs auxiliary or secondary memory to permanently store the data or instructions for future use. The secondary memory is non-volatile and has larger storage capacity than primary memory. It is slower and cheaper than the main memory. But, it cannot be accessed directly by the CPU. Contents of secondary storage need to be first brought into the main memory for the CPU to access.

Examples of secondary memory devices include Hard Disk Drive (HDD), CD/DVD, Memory Card, etc., However, these days, there are secondary storage devices like SSD which support very fast data transfer speed as compared to earlier HDDs. Also, data transfer between computers have become easier and simple due to the availability of small-sized and portable flash or pen drives.

## UNIT-2

### MS- OFFICE

**Microsoft Office**, or simply **Office**, is a discontinued family of client software, server software, and services developed by Microsoft. It was first announced by Bill Gates on August 1, 1988, at COMDEX in Las Vegas. Initially a marketing term for an office suite (bundled set of productivity applications), the first version of Office contained Microsoft Word, Microsoft Excel, and Microsoft PowerPoint. Over the years, Office applications have grown substantially closer with shared features such as a common spell checker, Object Linking and Embedding data integration and Visual Basic for Applications scripting language. Microsoft also positions Office as a development platform for line-of-business software under the Office Business Applications brand.

It contains a word processor (Word), a spreadsheet program (Excel) and a presentation program (PowerPoint), an email client (Outlook), a database management system (Access), and a desktop publishing app (Publisher). Office is produced in several versions targeted towards different end-users and computing environments. The original, and most widely used version, is the desktop version, available for PCs running the Windows and macOS operating systems. Microsoft also maintains mobile apps for Android and iOS. Office on the web is a version of the software that runs within a web browser.

Since Office 2013, Microsoft has promoted Office 365 as the primary means of obtaining Microsoft Office: it allows the use of the software and other services on a subscription business model, and users receive feature updates to the software for the lifetime of the subscription, including new features and cloud computing integration that are not necessarily included in the "on-premises" releases of Office sold under conventional license terms. In 2017, revenue from Office 365 overtook conventional license sales. Microsoft also rebranded most of their standard Office 365 editions as "Microsoft 365" to reflect their inclusion of features and services beyond the core Microsoft Office suite. In October 2022, Microsoft announced that it will phase out the Microsoft Office brand in favor of "Microsoft 365" by January 2023. The name will continue to be used for legacy product offerings.

**Core apps and services**

- **Microsoft Word** is a word processor included in Microsoft Office and some editions of the now-discontinued Microsoft Works. The first version of Word, released in the autumn of 1983, was for the MS-DOS operating system and introduced the computer mouse to more users. Word 1.0 could be purchased with a bundled mouse, though none was required. Following the precedents of LisaWrite and MacWrite, Word for Macintosh attempted to add closer WYSIWYG features into its package. Word for Mac was released in 1985. Word for Mac was the first graphical version of Microsoft Word. Initially, it implemented the proprietary .doc format as its primary format. Word 2007, however, deprecated this format in favor of Office Open XML, which was later standardized by Ecma International as an open format. Support for Portable Document Format (PDF) and OpenDocument (ODF) was first introduced in Word for Windows with Service Pack 2 for Word 2007.
- **Microsoft Excel** is a spreadsheet editor that originally competed with the dominant Lotus 1-2-3 and eventually outsold it. Microsoft released the first version of Excel for the Mac OS in 1985 and the first Windows version (numbered 2.05 to line up with the Mac) in November 1987.
- **Microsoft PowerPoint** is a presentation program used to create slideshows composed of text, graphics, and other objects, which can be displayed on-screen and shown by the presenter or printed out on transparencies or slides.
- **Microsoft OneNote** is a notetaking program that gathers handwritten or typed notes, drawings, screen clippings and audio commentaries. Notes can be shared with other OneNote users over the Internet or a network. OneNote was initially introduced as a standalone app that was not included in any Microsoft Office 2003 edition. However, OneNote eventually became a core component of Microsoft Office; with the release of Microsoft Office 2013, OneNote was included in all Microsoft Office offerings. OneNote is also available as a web app on Office on the web, a freemium (and later freeware) Windows desktop app, a mobile app for Windows Phone, iOS, Android, and Symbian, and a Metro-style app for Windows 8 or later.

- **Microsoft Outlook** (not to be confused with Outlook Express, Outlook.com or Outlook on the web) is a personal information manager that replaces Windows Messaging, Microsoft Mail, and Schedule+ starting in Office 97; it includes an e-mail client, calendar, task manager and address book. On the Mac OS, Microsoft offered several versions of Outlook in the late 1990s, but only for use with Microsoft Exchange Server. In Office 2001, it introduced an alternative application with a slightly different feature set called Microsoft Entourage. It reintroduced Outlook in Office 2011, replacing Entourage.
- **Microsoft OneDrive** is a file hosting service that allows users to sync files and later access them from a web browser or mobile device.
- **Microsoft Teams** is a platform that combines workplace chat, meetings, notes, and attachments.

**Windows-only apps**

- **Microsoft Publisher** is a desktop publishing app for Windows mostly used for designing brochures, labels, calendars, greeting cards, business cards, newsletters, web sites, and postcards.
- **Microsoft Access** is a database management system for Windows that combines the relational Access Database Engine (formerly Jet Database Engine) with a graphical user interface and software development tools. Microsoft Access stores data in its own format based on the Access Database Engine. It can also import or link directly to data stored in other applications and databases.
- **Microsoft Project** is a project management app for Windows to keep track of events and to create network charts and Gantt charts, not bundled in any Office suite.
- **Microsoft Visio** is a diagram and flowcharting app for Windows not bundled in any Office suite.

**Mobile-only apps**

- **Office Lens** is an image scanner optimized for mobile devices. It captures the document (e.g. business card, paper, whiteboard) via the camera and then straightens the document portion of the image. The result can be exported to Word,

OneNote, PowerPoint or Outlook, or saved in OneDrive, sent via Mail or placed in Photo Library.

- **Office Mobile** is a unified Office mobile app for Android and iOS, which combines Word, Excel, and PowerPoint into a single app and introduces new capabilities as making quick notes, signing PDFs, scanning QR codes, and transferring files.
- **Office Remote** is an application that turns the mobile device into a remote control for desktop versions of Word, Excel and PowerPoint.

## UNIT - 3

### Photoshop

Adobe Photoshop is a software application for image editing and photo retouching for use on Windows or MacOS computers. Photoshop offers users the ability to create, enhance, or otherwise edit images, artwork, and illustrations. Changing backgrounds, simulating a real-life painting, or creating an alternative view of the universe are all possible with Adobe Photoshop. It is the most widely used software tool for photo editing, image manipulation, and retouching for numerous image and video file formats. The tools within Photoshop make it possible to edit both individual images as well as large batches of photos. There are several versions of Photoshop, including Photoshop CC, Photoshop Elements, Photoshop Lightroom and Photoshop Express, a version of Photoshop for iOS with reduced features.

### How is Photoshop Used?

Adobe Photoshop is a critical tool for designers, web developers, graphic artists, photographers, and creative professionals. It is widely used for image editing, retouching, creating image compositions, website mockups, and adding affects. Digital or scanned images can be edited for use online or in-print. Website layouts can be created within Photoshop; their designs can be finalized before developers move on to the coding stage. Stand-alone graphics can be created and exported for use within other programs.

### What is Photoshop CC?

Adobe Photoshop CC is the Creative Cloud version of Photoshop, available by subscription. It is considered to be the professional-level version of the Photoshop family of products. Photoshop CC is available together with Photoshop Lightroom, or as part of a larger Creative Cloud subscription. Photoshop CC is an advanced imaging software used by designers, web professionals, video editors, and photographers to alter or manipulate digital images. Photoshop is primarily used to edit 2D images, although it does offer some 3D image editing functionality. Photoshop includes image analysis functionality, and can be used to prepare images for use online or in-print.

### Uses of Photoshop?

- Manipulating the color of an image.
- Cropping images.
- Repairing flaws, such as dust on the lens or red eyes.

- Drawing on an image with a pen or pencil.
- Adding text to images.
- Removing people or objects within an image.
- Organizing photos for quick access.
- Publishing images online or send via email.

**Applications of Photoshop**

- Image Writing. Photoshop is named Photoshop for a reason… it's a superb tool for writing photos. ...
- Website Designing. Photoshop is the most popular tool for several net designers. ...
- Project Layout. ...
- Graphics Creation. ...
- Pattern and Texture Styles. ...
- Politics and Social Media. ...
- Brand Style. ...
- Business.

**Adobe Photoshop uses in daily life**

- **Image editing:**

We can use Adobe Photoshop to retouch our scanned or digital photographs. We can improve the color tone and brightness of the pictures into a fresh style. We can also remove the unwanted dots using blur tool, photo filter, and color lookup. In Adobe Photoshop, we can remove or change the backgrounds of our photographs. Changing the color of clothes, hair, and eyes is very simple when you use this software. We can add a person to the photograph and make it look like an original one. Adobe Photoshop helps us to retouch, sharpen and enhance the photos in high quality.

- **Graphic designing:**

Adobe Photoshop is one of the most popular tools for website designers. We can also use it in product photography. We can edit lifestyle and product images which are very helpful for e-commerce websites and online stores. We can also use it to draw maps, satellite views of rivers, grounds, etc. It is most popularly used for creating the graphics and views of the gaming world. By using Photoshop, a web designer can slice up graphics into a set of pictures. In Adobe Photoshop, it is much easier to design individual components like buttons, social media icons, and backgrounds. 3D editing and Video editing are also its main components.

- **Layout of projects:**

Adobe Photoshop is not just for photographs. Layouting of the projects becomes very easy with its help. Editing of patterns and textures work becomes easier with Adobe Photoshop. Designing text, images, and background is much effective in it. The designing of the project layout helps the project team to plan the development of the project.

- **Photoshop uses in social media:**

We see many funny and animated images on social media. Most of these images are designed and edited in Adobe Photoshop. Photoshop harnesses the graphic power of images. It helps us to create promotional material for social platforms.

**Photoshop in brand style and logo design:**

Logo designing for the branding of companies can be done by using Adobe Photoshop. Almost all logo designers use Adobe Photoshop. It also helps in improving the pixels and resizing the logo for various applications.

- **To create passport/stamp size photos at home:**

Using this software we can easily print passport/stamp size photographs at home using a camera of a smartphone and a printer. Cropping, coloring or background replacement of images is much easier in Adobe Photoshop.

**Photoshop in business, career, and jobs:**

We can make different design templates that can be used to promote the business. Graphic designing is continuously in demand. We can easily get online and offline classes. A career in graphic designing is very interesting and challenging. It's important to analyze the market demand and prepare ourselves according to time. Another Adobe Photoshop career opportunity is that good graphic designs can be sold online. We can also provide graphic designing services to customers online in exchange for money. It is also used in the printing industry. Photoshop replaced the 'cut and paste process' in the printing industry. In Adobe Photoshop, we can save images in various formats such as png, .jpeg, .gif, etc.

**Disadvantages of Photoshop**

- Being a high-end software, it may be difficult for some beginners to navigate through the user interface at first. As there are a wide variety of features and functionality, you may want to first identify your purpose in learning Photoshop and then learn features that fulfill your needs.

- Running Photoshop software requires large space in the memory, and has updated system requirements. Photoshopped pictures also require large space for storage. There are performance issues and time lag when the system requirements do not match the graphics needed.
- Continuous untested updates, which sometimes cause errors and bugs, are released which adds an element of uncertainty to the workflow.
- Progress monitoring bars are missing in some features of Photoshop. This affects the productivity of the user.
- Working with vector graphics is sometimes difficult as Photoshop is not compatible with all vector formats.
- It is expensive software and may not fit the budget for many. Moreover, Adobe Creative Cloud is a subscription-based model which means you pay as long as you want to take their service.

## PageMaker

PageMaker is one of the first Desktop Publishing (DTP) software introduced three decades ago. It is a page layout application, commonly used in the Print Media, Publication Industry, Advertising, Graphic Designing and every other domain where paper printing is a common practice. With the help of PageMaker application, complex multiple page books, brochures, and other printable materials can be easily handled by bringing the whole paper layout on a single sheet that dissolves the confusion of managing hundreds of pages. With this publishing, a Text Book, Magazine, Novels or even a single page printable publications or brochures and business cards can be easily handled.

PageMaker leverages our capacity to gain a high-quality output on almost every size of a printer ranging from a personal printer on your desk to the four color publishing printers. You can also save the PageMaker files as HTML documents or PDF documents for further use in the Digital domain. The software provides you optimum control while preparing your designs for print through giving you micro level perfection in the readily available International Paper sizes. Through this advantage, you will know what is the sheet size your document will occupy, eventually you will plan to use the rest of the sheet for your convenience.

**Adobe PageMaker Used For?**

Adobe PageMaker is a software program used to create brochures, flyers, newsletters, reports and a variety of other professional-quality documents used for business or educational purposes. The program makes it easy for users to format documents, adjust their layouts and alter various design details, such as graphics and fonts, prior to printing and distributing the document.

**Disadvantage of PageMaker**

The following are the disadvantages of Adobe PageMaker are:

- only one undo command is possible
- no spreadsheet support
- the Import of Adobe PDF is only possible as a graphic
- the Spell-Checker works in the text mode window only
- generating of bad HTML source code

About the work area: When you create a publication, PageMaker opens a publication window that contains an empty page centered on the pasteboard. The page and pasteboard, where you lay out text and graphics, are similar to the work space used in traditional paste-up

A. Pointer tool to select, move, and resize text objects and graphics.
B. Rotating tool to select and rotate objects.
C. Line tool to draw straight lines in any direction.
D. Rectangle tool to draw squares and rectangles.
E. Ellipse tool to draw circles and ellipses.
F. Polygon tool to draw polygons
G. Hand tool to scroll the page, or to preview and test hyperlinks.
H. Text tool to type, select, and edit text.
I. Cropping tool to trim imported graphics.
J. Constrained line tool to draw vertical or horizontal lines.
K. frame tools to create placeholder shapes.
L. zoom tool to magnify or reduce an area of the page

## UNIT - 4

### QuarkXPress

**QuarkXPress** is a computer application for **creating and editing complex page layouts** in a WYSIWYG environment. It runs on Mac OS X and Windows. It was first released by Quark, Inc. in 1987 and is still owned and published by them.It is noted for its precise typographic control and advanced text and graphics manipulation.The most recent version is QuarkXPress 8 and it allows publishing in English and 36 otherlanguages, including Arabic, Chinese, French, Japanese, Korean, Russian, Spanish and others.

QuarkXPress is used by individual designers and large publishing houses, primarily to produce any kind of layout, from flyers to complex page layouts required by magazines, newspapers, catalogs, and similar printed materials. It is one of two products (the other being Adobe InDesign) that dominate the market space.

### History

The first version of QuarkXPress was released in 1987 for the Macintosh. A Microsoft Windows version followed in 1992. In the 1990s, QuarkXPress quickly became widely used by professional page designers, the typesetting industry and printers. In particular, the Mac version of 3.3 (released in 1996) was seen as stable and troublefree, working seamlessly with Adobe's Postscript fonts as well as with Apple's TrueType fonts.

QuarkXPress early on incorporated an application programming interface called XTensions which allows third party developers to create custom addon features to the desktop

application. Introduced in 1989, Xtensions, along with Apple Computer's Hypercard, were the first examples of a developer allowing others to create software add-ons for their application.

Having gained a marketshare of approximately 90% in the 1990s, Quark was criticized f or having overly long innovation cycles and being too expensive, which encouraged Ado be to launch Adobe InDesign in 1999.

.**Use and features**

- QuarkXPress allows the user to define areas of a document (called "boxes") whic h are to be filled with either text or graphics. Although they are called boxes, they can be created in a wide variety of shapes. The boxes can be reshaped, layered, a nd given varying levels of transparency and runaround.
- The content placed in the text version of the boxes is provided with an array of ty pographic controls as required by professional typesetting businesses. In additio n to the basic functionality of font, alignment, spacing, and color, the package also provides its users with professional level typesetting options like kerning, curvi ng text along a line, and ligatures.
- As the only layout package QuarkXPress offers vertical tracking.The software allo ws both box positioning and graphic or text positioning within a box with an acc uracy of one-thousandth of an inch. Color control allows the full-use of printing press standard Pantone or Hexachrome inks, along with a variety of other color space options.
- Draft output can be printed on conventional desktop printers. For printing-press purposes CMYK separated films can be produced with relative ease. Quark XPress also offers the ability for composite workflows, both with Postscript and PDF output.
- Version 6.5, released at the end of 2004, added enhanced support for the Photos hop format (PSD). The PSD integration and picture manipulation features led to QuarkXPress received number of awards, such as the "Macworld" Editor's Choice for 2004.
- Version 7 added support for OpenType, Unicode, JDF and also PDF/X-export. QuarkXPress 7 also added unique features, such as native transparency a t the color level.QuarkXPress' composition zones feature makes it the only deskt

op application with multiuser capabilities by allowing multiple users to edit diffe rent zones on the same page.

- Composition Zones pushes collaboration a step further than just simultaneous te xt/picture as possible with QuarkCopyDesk since 1991), as it allows also layout a nd graphic elementsto be edited outside the layout application.
- QuarkXPress also allows the ability to preflight a document. It is unique as it wor ks within the layout application itself and allows the user to jump directly to the conflicting object. Also the userdefined rules, output specs and layout specs can a lso be used for intelligent templates and enables resource sharing (e.g. server-based style sheet definitions).
- The current version, QuarkXPress 8, offers a completely otpimized user interface, support for drag and drop, PDF 1.7 import, AI Import and a global file format. De sign grids can be assigned to pages and boxes to allow unlimited baseline grids. Hanging characters cannot only be applied but also customized by character and amount to hang outside the box.
- QuarkXPress 8 is available for Mac OS X v10.4 ("Tiger"), Mac OS X v10.5 ("Leopar d"), Windows XP SP2 and Windows Vista, 32 and 64 Bit. The Mac version is a uni versal binary which runs natively on PPC- and Intel-based Macs.

**CorelDRAW**

CorelDRAW is a vector-based graphics editor, similar to other softwares like Illustrator and photoshop. You can draw pictures in it, edit or color them. CorelDRAW, used for designing a lot of things, is great for vector drawings/designs. From creating beautiful brochures to books, logos, invitation cards, booklets, and flexes, you can draw anything you want in it. It is also for creating illustrations for children's books.

CorelDRAW or Corel graphics suite 1st version was invented around 30 years ago and released in January 1989. **Pat Bernie and Michel Bouillon** developed this software. Its latest version, released in March 2021, includes features like multi-page views, replace colors, perspective drawing, multiple views, multiple asset export, etc. It is available on iPad, web, Windows, and Mac.

**Important tools in CorelDRAW**

1. Pick Tool. This tool allows you to pick or select **the** object and transform it.
2. Shape Tool.
3. Free Transform Tools.

4. Crop Tool.
5. Zoom Tool.
6. Curve Tools.
7. Artistic Media Tool.
8. Rectangle Tool.

- **Pick Tool:** It is actually a select tool and behaves like the Move Tool in Photoshop, to the tool's bottom right corner, you will find various options like freehand pick and free transform. These options let you resize the image that broadens it or narrow it or even create a mirror image with a mouse.
- **Shape Tool:** On the selected image, shape or even text, this tool will give nodes and handles. So once the nodes are selected, that part of the object can be curved into different textures like a smudge, smear, twirl, etc.
- **Freehand Tool:** This tool is where most of the magic happens. This tool has a number of drawing options that let you create and draw any design. So this tool plays a very important role in the first stage of graphic designing.
- **Crop Tool:** As the name suggests, it will help trim the selected image, shape or text. It will also let you cut the image like a knife (divide the shape into different slices that can be separately edited) and even erased (using Eraser).
- **Zoom Tool:** Let's you zoom to any minute part of the shape or text that is being created or edited so that the designer can correct the discrepancies accordingly.
- **Artistic Media Tool:** This tool is like a freehand brush or spray or a pen. So in case, you wish to create Calligraphic Text or Graffiti, this tool will be useful.
- **Rectangle Tool:** This tool will help create the shape of a rectangle. It also has an option of 3 point rectangle. This only means a quick rectangle can be created by simply dragging the mouse once two nodes of a rectangle are drawn.
- **Ellipse Tool:** This tool lets you create an elliptical shape like a circle. It also helps with quick shape making using 3 points Ellipse like the one in the rectangle tool.
- **Polygon Tool:** Basically, the polygon tool is used to create shapes with more than 4 sides. But Corel Draw lets you create a number of readymade shapes like a banner shape, star, spiral shape, arrows, graph paper grid under the same heading.
- **Text Tool:** The text tool here will help create text characters and text boxes. You can edit them using the properties and formatting options displayed in the

toolbar. You can also directly add a table with this tool in case you need to create text in a tabular form.

- **Parallel Dimension Tool:** A lot of civil engineers and architects use Corel Draw. So here's a ready tool to display dimensions in various shapes like this.
- **Straight-line connector Tool:** This tool will help connect different sides in any shape between sides or right angles while keeping the sides separated.
- **Drop shadow Tool:** This is the effect giving tool. It will bevel, emboss, drop shadow, extrude, etc., any part of the selected shape or the text that is being designed.
- **Eye Dropper Tool:** This is the usual color picker tool. The cool part here is the Attributes Eyedropper. So you can also pick thickness, size and all other effects and attributes of the shape and directly copy it into your shape.
- **Interactive Fill Tool:** This is pretty much like a normal fill tool, but options like gradient and all can be applied here, hence the name. This also has a Mesh tool. This tool will create grids around the shape, and then each grid can be colored in case complex coloring or shading is required, for e.g., in a fruit or a scenery painting.
- **Smart Fill Tool:** This tool will help fill color in a shape that is a closed path. Very quick to use. Very similar to the paint bucket tool in MS Paint.

**Features of Corel Draw**

One of the major features, in Corel Draw, is that it provides a friendly User Interface (UI) that can be learned to use quickly, so for beginners can expand their creativity, and professionals can make some awestruck designs and layouts. It has live versatile tools like node shaping and mesh fill etc., which come in handy almost everywhere in designing. Being a vector graphics software does not pixelate its designs which guarantees high-quality printing. Hence many high definition printers are programmed to accept Corel format files for printing. Other features include accepting many file formats to edit, capable of running on all processors and so on.

**USES OF CORELDRAW**

People or businesses who are in the advertising and marketing field use CorelDRAW a lot. They use it to create newsletters, brochures, business cards, etc. Printing media also uses this software a lot for newspapers, magazines, comics, and art

books. Also, working on it is easy as it has a user-friendly interface which lets beginners work on it easily compared to other softwares.

**1. To convert raster images into vector images.**

Raster or bitmap images are pixel-based, which means if you zoom them too much, you can see the pixels, or it starts pixelating. Whereas; vector images are mathematical formulas and, you can zoom them as much as you want. They will not pixelate. If you want to convert your raster image into a vector one, you can use CorelDRAW.

**2. Banners**

Banners are made in softwares like CorelDraw or Illustrator first. Everything from the size to its design and printing. In CorelDRAW, you can select the size, colors, designs, pictures. You can do everything in it.

**3. Business card templates**

Business cards are a must if you are starting or have a small business. It makes people. And on top of that, CorelDraw has business card templates. You can choose any template you like and put in all your details like your company name, contact number, logo, address, any images you want to add, and you are done.

**4. Page layouts**

Page layout is a design of a page. There are different types of page layouts like magazine page layout, comics page layout, landing page layout, the home page layout of a website, yearbook page layouts. You can design these layouts in CorelDraw.

**5. Infographics**

Infographics are a visual representation of data. They are easier to understand and pleasing to the eyes. If you have a website or your business requires explaining a lot of information, then infographics are the way to go. You can select the colors, typography(font or letter) and make it catchy and easy to understand or learn. You do not forget to leave negative space.

**6. Cards and Menus**

You can even make different cards in CorelDraw. Either be it; Birthday cards, Wedding cards, Thank you cards, any kind of invitation card. You can even make menus if you have a restaurant, cake, or coffee shop.

**7. Social Media Graphics**

Creating graphics for your website can be an easy experience with this software. You can make twitter headers or your Facebook cover, website icons, memes, quotes. There

are different file format options like gif, png, jpg. Once you get the hang of the basic tools like shape, pen, color, freehand, polygon, shadow, eyedropper, smart fill, you can design many things like posters, brochures, logos, cartoon stickers, emojis, etc.

**8. Logos and Letterheads**

Logos are a must if you want to create a different identity for your brand and stand apart from your competitors. And the best thing about CorelDraw is that it is easier than Illustrator. Letterheads are also really easy. You just have to select the size letter, add your logo on the top and other text, and tada you are done!

**9. Improve perspective/quality of any image**

With CorelDRAW, also we can improve the quality of the image. You do not need to have photoshop software. Also, it is easier to use than other adobe softwares. You just have to click on the picture – Go to Bitmap – Click on remove jpeg artifacts.

**10. Program page design and QR code**

Corel DRAW has many uses other than designing magazine covers, logos, and illustrations. You can design page layouts, business cards, invitation cards, bulletins, and handouts. On top of these, you can also generate QR codes for your products.

**Disadvantages of CorelDRAW**

1. First of all, the speed is very slow. For example, it takes about half an hour to open a 170m album.
2. High and low version format compatibility is not ideal. Some exports of higher versions cannot be opened in lower versions, while others are the opposite.
3. The color processing is not ideal. Some colors are different from what you see on the monitor. The printed colors have poor smoothness, and the colors are not bright enough.
4. Large file processing speed is slow and unstable. Sometimes when designing a large area image of about 10m, it takes a long time to process each operation. For example, it takes 1 to 10 minutes to get a shadow, and it is easy to collapse.

## Desktop Publishing (DTP)

### Introduction

**Desktop Publishing** (DTP) is the creation of electronic forms of information such as documents, presentations, brochures, books, or even website content using computer programs. DTP has evolved to be an important component of creating and disseminating information as it allows an amalgamation (merger) of various tasks that

are generally performed independently at printing presses such as layouts, typesetting, graphic design, etc.

**Desktop publishing** was pioneered by **Paul Brainerd in 1985** when he released the software Aldus Pagemaker for the Macintosh computer. Desktop publishing is the use of a computer to produce high-quality documents containing text and graphics formatted for a single-page publication. For example, desktop publishing is utilized to create printed material, such as book covers, brochures, catalogs, flyers, magazines, and posters.

**Evolution of DTP Software**

Earlier, DTP was specifically meant to cater to printed matter but modern DTP allows for even more forms of electronic content. A modern DTP software can be your word processor, graphic design tool and publishing tool, all rolled into one package. With the explosive growth of smartphones and mobile PCs, the way people consume information has changed dramatically over the last decade. Modern DTP software enables content output that caters dynamically to all screen sizes, without the need to republish the same for each device or form factor.

**Types of DTP Content**

The content created by DTP software can be broadly classified into two categories –

- Electronic Pages
- Virtual Pages

**Electronic pages** commonly refer to websites, manuals, eBooks, digital archives, presentations, etc. which are normally not printed but are shared digitally. This tutorial is an example of an electronic page which can be opened in a browser.

**Virtual pages** on the other hand are electronic pages created in the DTP software which are eventually published as printed pages. Virtual pages allow the author to visualize exactly how the printed page will look and can help in easy editing. The process is called **WYSIWYG** which stands for, **'What You See Is What You Get'**. This means all the changes and formatting that are made will be exactly replicated in print.

**Features :**

1. It is Dynamic in size.
2. It enables (allow) content output.
3. It helps in printing publications exclusively.
4. It assists the various form of original content.

5. It is better for complex page layouts.

**Uses and Applications of desktop publishing**

Desktop-publishing software can be used to create the layout for a wide range of different publications, such as:

- newspapers and magazines
- brochures, posters, flyer, leaflets and catalogues
- books and e-books
- PDF
- web pages
- banner
- newsletter
- design of resume

**Importance of Desktop Publishing:**

It has become a very important software for creating and disseminating information which helps in allowing the amalgamation of other various tasks like designs, graphics, layouts, typesetting, etc. Desktop Publishing software is being used to create documents like newsletters, brochures, etc. Desktop publishing software is important because it increases productivity, helps in enhancing the appearance of all produced documents, minimized the production cost, easy customization of all kinds of projects, and also in a way to manage the presentation as well as its content. They are potently used to produce physical media like magazines, product designs and packaging, business cards, marketing materials, and outdoor signs as well.

**Functions:**

All of the Below mentioned features help in the creation of a professional document.

1. Formatting the pages
2. Adding the page numbers,
3. Inserting the various illustrations
4. Well organized text columns and rows
5. Header and footer options are available
6. Content indexing and table inclusion are also there.

**Advantages:**

- Helps in increasing productivity,
- It helps in minimizing the production cost,

- It allows in enhancing the appearance of our documents
- It just improves the level of creativity
- It helps in reducing the time taken for producing and printing the documents
- They are frame-based software
- DTP software is very easy to import
- They work in column, frames, and pages
- This software can be set to the automatic restructuring of the other elements around the frame

**Disadvantages:**

- Use Outsourcing to professionals
- These are kind of expensive tools.
- They have a Lack of large scalability.
- Includes high complex projects.

**Aplications of DTP**

Desktop publishing software (DTP) is used to **create documents like leaflets, brochures and newsletters**. Modern word processors have the basic features of DTP software but features such as templates and frames make DTP software better for complex page layouts

**What is an example of DTP software?**

Common examples of desktop publishing software include **Adobe FrameMaker, Adobe PageMaker, Adobe InDesign, Corel Ventura, CorelDraw, Microsoft Publisher, PageStream, and QuarkXPress.**

# NR 11066 - Telugu Journalism

## Origin and development of Telugu press

### Printing in Telugu

The first printing machine in Madras was established in 1711. Printing in Telugu started in Madras and Serampore simultaneously. In 1807, Missionaries of Serampore developed fonts to print Telugu books. But in 1812, the printing press in Serampore was destroyed due to fire accident. But it was restarted in the same year. Danish Father Benjamin Shuij was the first man to print books in Telugu Language. William Carrie's Telugu grammar book "Telugu Vyakaranamu" was printed in the year 1814. In 1805 Missionaries of London namely George Crane and Augustus Digranges came to Visakhapatnam and learnt Telugu. Digranges and after his death Edward Pitchet completed the Translation of bible into Telugu and printed it in the year 1818. Later printing presses were established in Machalipatnam, Kakinada, Nellore, and Rajahmindry. This increased the publication of many books in Telugu. Some of the important books published at that time were

- Telugu Dictionary written by Charles White in 1793.
- Mamidi Venkaiah published "Andhra Deepika" in 1812.
- English version of Yogi Vemana Telugu Poetry printed by C.P. Brown in 1839

### Beginning of Telugu Journals

There were very few towns in Telugu Districts with printing pressed in the first half of nineteenth century. But Bellary and Visakhapatnam were the exceptions. Bellary had its first printing press in 1835 and Visakhapatnam had it in 1854. The Bellary Tract Society published many from 1835 in the Mission Press, Bellary. At least 22 small tracts were published from Bellary. It is estimated that First Telugu Journal was published in Bellary in 1835 by Missionaries and named it as **"Satyadoota"**. It is said that it was published in Colloquial language and had only news and some articles related to the propagation of Christianity.

There is strong evidence related to the publication of Telugu journal **"Vrittantini"**. It was published in Classical Telugu around 1838 by a group of reputed and prominent people under the Editorship of **Mandigala Venkataraya Sastri**, a scholar probably from Cuddapah. The journal is also mentioned in **"Vardhamana Tarangini"** a journal launched in 1842. An article of "Vritantini" related to an article attacking the practice of engaging notch parties, as part of wedding festivals was

included in **"Gadyachintamani"** an anthology of Telugu prose edited by **Gidigu Rammoorthy Pantulu**.

"Syed Rahamtullah" started the journal **"Vardhamana Tarangini"** on **8th June 1842.** It adopted a popular style and carried many features and had many readers. Rahmatullah published the journal from his own press. He wrote that the proprietors and agents of the journal are not very rich and many associates had to incur their personal money to gather the tools and types for the journal. The Christian Missionaries started a monthly Journal **"Hitavadi"** in Machalipatnam, under the edtorship of **Edmond Sharkey** an Anglo-Indian of 27 years age. He ran the monthly journal for 14 years up to 1862. The journal was printed from Madras and published from Machalipatnam. Edmond Sharkey wrote stories in the journal.

**"Dinavarthamani"** a journal started in Tamil in 1855 and was extended in to Telugu in 1856 under the editorship of **Peter Percyval**. It was a weekly published from Madras from Saturdays and lasted up to 1872. The Editor Peter Percyval, who was also a Professor in Presidency College, Madras carried out news on scientific matters, English literature and essays in colloquial Telugu. It was like News digest but basically aimed at propagation of religious news. The journal got financial support from the Government.

**Period from 1863 to 1900**

The period was dominated with journals relating to social issues and literature. The period can be called as the **"Veeresalingam era"** in Telugu journalism. The period saw the rising of social awakening and development of firm resistance against social evils through the movement spearheaded by Kandukuri Veeresalingam pantulu. The period witnessed great ideological battles fought on the social and literary front through the medium of Magazines. The magazines became a means for spreading the new revolutionary ideas like social reforms and the language used in magazines itself became a matter of contention between the reformists like Veeresalingam and orthodox front. The period also witnessed the starting of the first Political Journal in Telugu, a trend that became prominent in the coming period. Some of the important magazines started in this period are as follows.

- **"Sreelakshmi"** a fortnightly was started in 1863, in Bellary with **Tyagaraja Mudali** as Editor.

- **"Sujanranjani"**the first ever-Telugu literary journal started under the proprietorship of Telugu people was started in 1864. B.Seetaramacharyulu and V.Krishnamacharyulu jointly edited it. It was closed in 1867.
- **"Tatvabodhini"** a monthly journal was started by Madras Health Samajam, which later came to be known as "brahmo Samahjam". It fought for social cause and propagated the principles of Brahmosamaj and social reforms. For the first time in history of Telugu Journalism a serried of articles on Widow Remarriage titled "Stree punarvivaha Vishayakopanyasamulu". These articles motivated Kandukuri Veeresalingam to take up social reforms.
- **"Godavari Vidyaprabodhini"** a monthly journal was started in Rajahmundry in 1870 by **Barrow**, the district High school Headmaster of Rajahmundry. Veeresalingam contributed a portion of 'Naishadam' in its pages.
- **"Andhra Basha Sanjeevini"** a monthly journal was started by **Kokkonda Venkataratnam Pantulu** on November 28th 1871. The journal was printed from Sabdaratnakara Press of Madras and published articles on literature, social and political matters apart from literary criticism. The journal used the classical language and the Telugu equivalents of English and technical terms were coined specially. Special supplements with literary articles were published. A portion of Veeresalingam's Mahabharatam's 'Sabha Parvam' was published in it. The journal stopped publishing in 1883. Later differences between Veeresalingam and Venkataratnam Pantulu arose on matters like widow reforms, women's education on social front and on the use of classical language on literary front. The journal was again started in 1892 to counter Veeresalingam's Vivekavardhini.
- **"Purushartha Pradayani"** a monthly magazine was published from Machalipatnam in 1872, under the editorship of **Umaranganayakulu Naidu**. The journal described itself as a compilation of facts and news and intended to be a concise Telugu record of Sciences, Arts, Literature, Mythology, History, Relegion and other human-interest features.
- **"Salalavidyabhi Vardhini"** a journal published from Visakhapatnam by **Paravastu Rangacharya** started in 1875. It published the first translation of 'Sakuntalam' of Kalidas. The journal also published articles on astronomy and medicine.

- **"Janavinidhini"** an educational monthly published from Madras by V.Krishnamacharyulu as editor, started children's literature for the first time in the history of Telugu journalism.
- **"Amudritha Grandha Chintamani"** a monthly journal from Nellore started by **Pondla Ramakrishaniah**. This literary magazine serialized old classics apart from book reviews and contemporary literature. This existed for 20 years.
- **"Andhra Prakasika"** the first political magazine in Telugu, supporting Congress, started in 1885 by A.P.Partha Sarathy Naidu from Madras. It continued for four decades.

**3.2.Period from 1901 to 1947-Telugu press and Freedom Movement**

The period from 1901 to 1947 saw the starting of Political press in Telugu language a trend, which gained strength with the arrival of Mahatma Gandhi in to the National freedom struggle. The period witnessed tremendous growth in Telugu press as new technological advances in printing were adopted and more committed and trained people entered into the profession. The period saw the starting of the great journals in Telugu language like **"Andhra Patrika"** and **"Krishna Patrika"** which later turned in to daily newspapers and laid a firm foundation to Telugu Journalism. The period is known for the starting of the Communist newspapers like **"Prajashakthi"** and **"Visalandhra"**. The period witnessed some of the greatest Telugu origin editors like **Narla Venkateswara Rao, Mutnuri Krishna Rao, M.Chalapathy Rao and Khasa Subba Rao**, who dominating the Telugu and English Language Press. The period saw the rise of Telugu journalism in Telangana region with the arrival of papers like **"Golconda Patrika"** and **"Sujatha"** Some of the important journals, which started during this period, are as follows

- **"Krishna Patrika"**, a weekly journal started from Machalipatnam in 1902 on behalf of Krishna District Association by **Konda Venkatappaiah** and his friend **Dasu Narayana Rao**. They were its first editors. Konda Venkatappaiah took up the responsibility and ran the journal up to 1907. His articles on corruption and criticism on Government policies especially during the Vandemataram movement raised high patriotic fervor in the public. In 1907, **Matura Krishna Rao** took over as the Editor. Under his able editorship Krishna Patria rose to one of the greatest journals in India.

- **"Andhra Patrika"** is a weekly started by **"Kasinadhuni Nageswara Rao"** from Bombay in 1908. Later the publication was transferred to Madras in 1914 and was changed in to a daily newspaper. The paper has the distinction of playing a notable role in the struggle for independence and also in the formation of separate state of Andhra Pradesh. After the formation of the State of Andhra Pradesh the paper was published from Vijayawada. The paper was edited some of the most talented and great editors like **Gadicharla Hari Savothama Rao** and **Challa Seshagiri Rao.**
- **"Bharati"** is a Magazine started by **"Kasinadhuni Nageswara Rao"** from Bombay in 1923. It was devoted to art, culture, literature, culture and history and edited by renowned Telugu scholar **Shivalenka Shambu Prasad**.
- **"Andhra Sachitra Vara Patrika"** is another popular weekly started by **"Kasinadhuni Nageswara Rao"** from Chennai. The magazine serialized popular novels and published many short stories.
- **"The Congress"** a weekly started from Rajahmundry in 1921 by **Madduri Annapoornaiah, Madduri Siva Rama Kistaiah, and Kandrevula Ramachandra Rao, Dronam Raju Chinna Kameswara Rao** and other members of Andhra Yuvajana Swarajya Sabha, a small organization of students who gave up their education during non-cooperation movement. Madduri Annapoornaiah edited the paper. He was prosecuted for Sedition under Section 124-A of Indian Penal Code for an inflammatory article written in "The Congress" and sentenced for one and half years of rigorous imprisonment.
- **"Andhra Prabha"** a sister publication from the Indian Express group of papers, started in 1938 in Madras by **"Ramanatha Goenka"**. It was edited some of the greatest editors in Telugu Journalism like **Khasa Subba Rao** and **Narla Venkateswara Rao.** After the formation of the State of Andhra Pradesh, the paper was published from Vijayawada.
- **"Prajashakthi"** is a Communist weekly, started by Madduri Chandrasekhar Rao in 1941. It was converted into a daily in 1945. The paper was proscribed in 1948. It started again in the year 1951 as a bi-weekly. From 1952 the paper title was changed in to **"Visalandhra"** and published from Vijayawada. Later "Prajashakthi" and "Visalandhra" were published as separate newspapers.

**Period from 1948 to 2000**

The period witnessed the formation of the State of Andhra Pradesh, for which many newspapers gave their support. At the time of formation of the State of Andhra Pradesh it had Seven Telugu Dailies, Fifty-seven Weeklies, Ninety-one Monthlies, Twenty-seven fortnightlies, Two Bi-Weeklies, One Tri-Weekly and Two quarterlies. The period saw the development of Telugu Press into an Industry. New technologies in reporting, editing as well as in printing were introduced. The number of publications also increased during this period. Many path breaking daily newspapers, which are still published **like "Andhra Jyothy", Andhra Bhoomi" and "Eenadu"** were started in these years. The period also witnessed the diversification of Telugu Media as news publications catering to different sections of society were started. The Circulation wars between the dailies started during this period. The paper was published from many centers to cater more regional news and gain readers in order to increase the circulation

- **"Andhra Janata"** a daily newspaper published by **Andhra Pradesh Congress Committee** was started in 1950. It functioned as a mouthpiece of Andhra Pradesh Congress Committee. P.Nageswara Rao edited it.
- **"Andhra Bhoomi"** the daily newspaper published by the owners of "The Deccan Chronicle" was started in 1960 with Gora Sastry as its editor.
- **"Andhra Jyothi"** a daily newspaper was started by **K.L.N.Prasad** with Narla Venkateswara Rao as editor in 1960
- **"Eenadu"** a Telugu daily started from Visakhapatnam, by **C.H.Ramoji Rao** was started in 1974.
- **"Udayam"** the Telugu Daily newspaper started from Hyderabad, by the famous film personality **Dr.Dasari Narayana Rao** in the year 1984.
- **"Vaartha**" daily newspaper started by Sanghi Industries from Hyderabad started in ……with A.B.K. Prasad as editor.
- **Andhra Jyothi** daily news paper was started again by **Vemuri Radha Krishna**

**Telugu News Papers and Social Reforms:**

Telugu Press was forefront in fighting for social reforms. Many great social reformers like Kandukuri Veeresalingam Pantulu, Mir Shujaath Ali etc have used the newspaper to propagate their ideology and strengthen social reforms. It is to be noted that Telugu press became a breeding ground for various news papers which were run to

further a special cause like literary service, language movements as well as religious and social movements.

- The first newspaper started for promoting social reform was '**Vivekavardhini'**. It was stated in 1878 by Kandukuri Veeresal Lingam Pantulu at Rajahmundry. But Kandukuri Veeresalingam also used to write articles in **'Andhrabasha Sanjiviani'** and '**Purusharda Pradayani'**.
- To counter the propagation of Women's education by Kandukuri Veeresalingam through 'Vivekavardhini', Kokkonda Venkataratnam Pantulu stated 'Hasysvardhini'. In reaction to that Veeresalingam stated 'Hasyasanjivini'
- Mir Shujath Ali, a friend of Veeeresaalingam started **'Vidwaanmanoharini'** from Narasapur, but merged it with Vivekavardhini after one year. Veeresalingam used to write in Telugu and Mir Shujath Ali used to write in English. People used to like the articles of both these writers and slowly these papers gained popularity. Once 'Hasysvardhini' lost circulation and was stopped then Veeresalingam merged 'Hasyasanjivini' also in 'Vivekavardhini'.

Vivekavardhini ran for 20 years and was popular among Telugu readers. Veeresalingam used Vivekavardhini to fight against social evils, corruption of officials and to promote language. Hence Vivekavardhini was instrumental in socio-language reforms. Many papers like 'Hindudesabhivardhini' were started to counter social reforms propagated by Vivekavardhi but were failed miserably. The period also witnessed tremendous upheaval in social and religious structure as well as in India as well as in Andhra. Social reforms started and propagated by reformers backed by missionaries were resisted by sections of society. They also started many newspapers to oppose as well as protect the native and colloquial language.

- **'Strutidharma Snajivini'** was started in Vijayawada by Sivapurapu Veerabhadrapakayaji with a motive to protect the Vrnasrama Dharma. The newspaper promoted self inspection and self correction of various dharmas and suggested people not to hate each other religion and to live in harmony.
- **'Kalavathi'** was started in Madras in 1889 by Sripada Krishnamoorthy Sastry. It was started to propagate the richness of Telugu language in the Dravidian areas. The newspapers published Telugu literary classics, drama, stories, history of Telugu Kings as well as astronomical and jyotishya details. It urged people to detest the colloquial language and use the traditional language.

- **Janavani** was the newspaper started by Tapi Dharmarao. It published articles, news and features on various issues in the colloquial language which was unique in that time. Tapi Dharma Rao also started **'Kondegadu'** and **'Kagada'** which ushered in a new era of colloquial language journalism in Telugu press.
- The first and second part of 20th century the evolution of newspapers prophesying social reforms especially cast reforms. Various newspapers like **Samadarshini**, **Reddyrani, Sujatha** were started which wrote against dominant Brahmanism and need for caste reforms.

**Political News Papers in Telugu**

There were very few political newspapers in Telugu in the 19th century. Papers like '**Andhra Prakasika', Desopakary** were a few political newspapers. But the beginning of 20th century ushered in new form of political journalism. Doyens of freedom struggle started many news papers to fight against British imperialism. But most of them did not lost long due to financial problems and pressure from the ruling Government. Some of the important Telugu newspapers which have a small life span were **Desamatha** started by **Chilakamarthy Lakshmi Narasimham**, **Matruseva** by **Gadicherala Harisarvaothamarao**, and **Guntur Patrika by Unnavalakshminarayana**. Newspapers like **Andhravani, Andhrajanani, Andhramata, Andhra Kesari, Andhra Ranjani, Swarajya, Swatantra** were selected for supporting the national cause for freedom. But three newspapers which have completed a century among political newspapers include **Krishna Patrika** started by **Desabhaktha Kondavenkatappaiah, Jameen Ryothu** started by **Venkatarama Naidu** and **Grandhlaya Saraswam.**

Krishna Patrika was started in 1902 by Konda Venkatappaiah Pantulu and his associate Dasu Narrayana Rao in Guntur of Krishna Distict. Mutnuri Krishna Rao joined Krishna Patrika as an Assistant Editor in 1903. Krishna Rao was helped by Bhogaraju Pattabhiseetaramaiah in the early days of his editorship. Krishna Rao became a mouthpiece of Telugu Journalism and played a major role in political awakening of masses in Andhra. Krishna Patrika became a platform for famous writers political writers like Kolavenu Rama Koteswara Rao, Ravuru Satyanarayana Rao, Kmalakar VenkatRao. The editorials of Krishna Patrika were liked by Telugu readers and were a source of awakening, debate and discussions in that period. Krisha Patrika played a

major role in popularizing Gandhian Philosophy especially by analyzing them in public, explaining its importance in the freedom struggle.

Jameen Ryotu was started in **1930 in Nellore District**. It evolved out of the **Farmers association (Ryotu Sangaham)** and their fight against the zamindari system. The Venkatagiri ryotu association was formed in October 1929 and in 1930 Jameen Ryotu was started in Nellore by **Venkatadri Naidu** to protest against the tyranny of zamindars over farmers. He faced many problems to run the paper due to lack of financial and human resources. The paper supported Congress especially N.G.Ranga, who was a popular leader of the farmers movement. After Independence Congress Government abolished zamindari system and the Jameen Ryotu played a major role in creating awareness about the farmer's role in it. Jameen Ryotu inspired farmers all over India to fight farmer's rights. The paper was run successfully by Rama Naidu, later by Sri Rama Murthy. Jameen Ryothu was a paper which adopted and adhered the principle of Journalism in true spirit. It had moral, ethically and emotionally attached and committed editors, reporters and other staff.

'Grandhalaya Saraswam' was started as a **Tri-monthly** newspaper in **1915**. The newspaper catalyzed the **Library Movement** and led it in Andhra**.** The Library movement started in Andhra regionally under the great leader Ayanki Venkata Ramanaiah, The first Library was started in Rajahmundry in 1839 by the then Judge James Thomas. But according to the resources the first Library was started in Visakhapatnam in 1886 by Manthena Adinarayana Moorthy. By 1913 there were 123 libraries in the entire Andhra region. 'Sri Krishna Deva Raya Basha Nilayam' was started in Hyderabad by Kommaraju Lakshman Rao in the first half of 20$^{th}$ century. It played a critical role in bringing political and cultural awareness in Andhra Region. The library movement turned into the language movement and spread all over Andhra region. The movement tried to present the uniqueness of Telugu language by highlighting its cultural and historic importance. In 1925 'Andhra Desa Grandhalaya Sangham' was formed which was changed into 'Andhra Desa Grandalaya Sangaham'. The sangham started Gandhalaya Saraswam as atrimonthly paper, later was a monthly newspaper. The newspaper helped to popularize Andhra Culture, Telugulanguage and Adult Education. Famous leaders like Gadicherla Hari SarvaottamRao, Poturi Nagabhushanam, Vavilala Gopalkrishnaiah etc wrote many articles in 'Grandhalaya Sarasvamu'.

## Personalities in Telugu Journalism

### 1. Kandukuri Veeresalingam

**Kandukuri Veeresalingam** known as **Kandukuri Veeresalingham Pantulu** (16 April 1848 - 27 May 1919) was a social reformer of Andhra Pradesh. He was born in an orthodox Andhra family. He is widely considered as the man who first brought about a renaissance in Telugu people and Telugu literature. He was influenced by the ideals of Brahmo Samaj particularly those of Keshub Chunder Sen. He got involved in the cause of social reforms. In 1876 he started a Telugu journal and wrote the first prose for women. He encouraged education for women, and started a school in Davaleswaram in 1874. He started a social organization called **Hitakarini Samajam**. Son of Subbarayudu and Punnamma, he was born on 16 April 1848 in a Brahmin family at Rajahmundry. When he was six months old, he suffered an attack of small pox, a killer disease in those days, but he survived. His father died when he was four years old and he was adopted and brought up by his paternal uncle, Venkataratnam, as his own son. After a basic grounding in the Indian classics, he joined an English school and attracted attention as a keen scholar with an analytical mind. He was unanimously elected as the best student of the school and was exceptional in his behavior. He mastered both English and Sanskrit. His first job was that of a teacher in Korangi village in 1872. After serving as a teacher and later as the head master for two year at Koranki, he moved on to Davaleswaram as head master in an English medium school. In 1861, he was married to Bapamma Rajyalakshmi. He was then 13 and she was only eight years old. When she grew up, she played an important role in his life, sharing his progressive ideas and extending support to him in his difficult days.

### Newspapers and Journalism

The newspapers / Magazines played a key role in the life of Kandukuri Veeresallingam especially as a tool for fighting against social evils and for disseminating his ideas of social reforms which were considered as revolutionary during his period.

- It is said that Veeresalingam was inspired by series of articles on widow remarriage titled “Stree punarvivaha Vishayakopanyasamulu” published in **“Tatvabodhini”** a monthly journal was started in Madras.
- He also contributed his literary works to many newspapers. He contributed a portion of his novel ‘Naishadam’ to **“Godavari Vidyaprabodhini”.**

- A portion of Veeresalingam's Mahabharatam's 'Sabha Parvam' was published in **"Andhra Basha Sanjeevini".**
- He started a monthly magazine named "**Vivekavardhini"** (Knowledge Improver) at Davaleswaram, in 1874. In this he wrote about women's uplift, criticized superstitious beliefs among people and rampant corruption among officials. Initially he used to get it printed at Chennai but when the magazine picked up in popularity, he set his own press at Rajahmundry. He converted it into a weekly and ran it for 20 years. It soon developed into a powerful weapon to fight many battles including social evils, tyranny of officialdom etc. Unfortunately he had to close Vivekavardhini in **1890**. The journal created history and was instrumental in spreading his message and also mustered big opposition from orthodox people.
- Kokkonda Venkataratnam pantulu, a fierce opponent of Veeresalingam's social reforms started **"Hasya Vardhini"** against **"Vivekavardhini"**. To counter it Veeresalingam started **"Hasya Sanjivini".**
- In 1883, Vereesalingam also launched "**Satihitabobhini"** a special magazine for women. Through it, he enlightened women about their rights and advocated women's education.
- Kasibhatla Ramaiah Sastry, another antagonist of Veeresalingam started **"Aryamata Sodhini"** in Kakinada. In response to that Veeresalingam started **"Satya vardhini".**
- Veeresalingam also inspired many people to start magazines for propagation of his ideas and also collaborated with many other magazines through his writings and helping in editing etc. For some time he edited **"Jamana Patrika"** started by Rayasam Venkata Sivudu.
- He also started **"Chintamani"** in 1881; with Vavilala Vasudeva Sastry was Editor.

**Literature**

Veeresalingam panthulu is popularly called Gadhya Thikkana. He wrote about 100 books between 1869 and 1919 and introduced the essay, biography, autobiography and the novel into Telugu literature.

- His **Satyavathi Charitam** was the first social novel in Telugu.
- He wrote **Rajasekhara Charitamu** inspired by Oliver Goldsmith's The Vicar of Wakefied.

To him literature was an instrument to fight social evils. He was a poet of considerable renown. He was also one of the members of the first Indian National Congress meeting held in 1885. He died on 27 May 1919. A statue of his has been installed on Beach Road, Visakhapatnam.

**2. Kasinadhuni Nageswara Rao**

Kasinadhuni Nageswararao, better known as Nageswara rao pantulu was rare combination of a journalist, nationalist, politician, a staunch supporter of Khaddar movement and an enthusiastic pioneer in library movement in Andhra. His participation in Indian independence movement and in Indian National Congress Party was historical. He was one of the Andhra veterans who took part in Mahatma Gandhi's Civil Disobedience movement through salt satyagraha. It is no wonder that his life-long exertions in such diverse fields in the service of the nation has earned him the honorific prefix '**Desoddharaka'** conferred on him by the people of Andhra Pradesh as a mark of their great respect and appreciation of his services to Andhra and to India and the special title of Kalaprapoorna (doctor of Literature) which was conferred on him by the Andhra University in 1935.

Nageswararao Kasinadhuni, popularly known as Nageswararao Pantulu, was born on May 1, 1867 in Elakurru village, pamarru mandal in Krishna district of Andhra to a Brahmin couple Bucchaiah and Shyamalamba. He received his early education in his native place and later at Machilipatnam. He graduated from Madras Christian College in 1891. There he was under the stewardship of that great educationist, Dr. Rev. Miller, whose ability, high standards and rigid discipline made it a premier institution of the South. Kandukuri Veeresalingam's articles in vivekavardhini Journal influenced him. After a brief stint in business in Madras, he went to Calcutta to work in an apothecary for some time. Later, he went to Bombay to work in an office. But, he couldn't stick around there. He was interested in starting his own business. He founded Amrutanjan Limited in 1893 and invented Amrutanjan pain balm. Within a short time Amrutanjan pain balm became very popular medicine.

**Contribution to journalism**

Sri Nageswara Rao's entry into the challenging field of journalism has taken place at a time when journalism, in this country was undergoing a silent transformation and the then Government did not look upon the 'Native Press' with any sympathy. It needed a competent and fearless man to not only mirror the heritage of the nation but

also interpret the day-to-day political trends. He approached Telugu people in Mumbai, associated with them and worked for the welfare of Telugu people. He attended the National Congress meeting in Surat in 1907 and joined the freedom movement. He recognized the need for a Telugu language journal to campaign effectively for the freedom struggle.

- He took up the challenge and launched **"Andhra Patrika"**, a weekly from the metropolis of Bombay in September, 1908.
- Within a short time Andhra Patrika gained popularity among Telugu speaking people. His publication thrilled the readers, while his forewords reflected scholarship and keen insight into and appreciation of public affairs.
- The papers annual supplements were with plenty of illustrations and with special articles on literature, culture and politics.
- The paper also stood for robust nationalism and played a leading part in the Indian freedom struggle and also in the struggle for formation of the State of Andhra Pradesh.
- In 1914 when the First World War broke out, it was clear that the clamor for political emancipation was gathering momentum. Sri Nageswara Rao wanted to interpret the trends of the time in their own language to the Andhra people, so that they may have an opportunity of playing their role in molding India's future. With this aim in view, he converted Andhra Patrika into a **daily and the first copy was rolled out of the press on April 1, 1914 from Madras.**
- After the formation of the State of Andhra Pradesh, the paper was published from Vijayawada.
- Later, in 1969, Andhra Patrika established its own office in New Delhi with senior Telugu Journalist from Chennai T.V.Krishna taking the lead to set up an office there.
- Andhra Patrika was served by exceptionally talented editors like Gadicherla Harisarvottam Rao, Challa Seshagiri Ra and Nageswara Rao himself for some time. With his undaunted ability he maintained the tempo and made the paper an institution of repute.
- A decade later in January, 1923, he launched a Telugu journal **"Bharati"** which rendered service to the literary and cultural advancement of the Andhra. The magazine was edited by renowned scholar Shivalenka Shambu Prasad.

- He also started a popular illustrated weekly **"Andhra Sachitra Vara Patrika"** from Chennai. The magazine serialized popular novels and published a number of short stories with other interesting features.

**Contribution to Telugu Literature**

His interest in Telugu language, literature and science was quite evident in his untiring efforts in publishing journals such as **Bharati** and **Andhra Patrika**, publications like **Andhra Grandhamala** (garland of Andhra books), and **special editions for Ugaadi** (Telugu New Year).

- Through Andhra Grandhamala, he introduced various texts on language, literature and science and was instrumental in spreading science and literature.
- He published various ancient texts like Basava Puranamu, Panditaradhya Charita, Vijayanagara Charitra, Tanjavoorandhra Rayakula Charitra, and modern texts like Malapilli, Mahatma Gandhi Amakatha, etc.
- He wrote several essays on various topics and introductions and prefaces to various books.
- He also published Komarraju Lakshmana Rao's three volumes of Andhra Vignana Sarvasvamu in 1938.

**Andhra Grantha Mala:**

Besides being a journalist, Sri Nageshwara Rao was also a Telugu literature of repute with a razor sharp intellect and a publisher. In 1926 he launched a publishing house known as the Andhra Grandha Mala. This institution published as many as 20 books besides reproducing many Telugu classics as well as modern writings. With a view to placing the fountain-head of knowledge within easy reach of the common man, he priced his publications very low. Sri Nageswara Rao can be regarded as the **Father of the Library Movement in Andhra**. Because of his exertions during the first two decades of the century, as many as 120 libraries came into being in Andhra districts.

**Desoddhaaraka:**

He was one of the founders of Andhra movement for a separate Andhra state from the Madras Presidency. He published several articles on the need for a separate Andhra state. He was the author of many of these articles. In recognition of his untiring efforts for the all-round development of Andhra nation, Andhra language, and Andhra culture, Andhra people have honored him with title, **desoddhaaraka** (savior of the nation).

**3. Kotamaraju Rama Rao**

Kotamaraju Rama Rao is one of the famous names from the yester years of Indian Journalism. Gandhi called him "My fighting Editor" and Jawaharlal Nehru considered it a privilege to be associated with him for number of years when he was the editor of "National Herald". In a foreword of K.Rama Rao's book Nehru wrote "He struck me as a man of ideals and a mission. He was an outstanding figure in Indian Journalism". He has a rare distinction of working in diverse cultures throughout in India in different languages, which earned him respect for his professionalism in his forty years long journalistic career. Born in a small village Chirala on 9th November 1896 in Andhra Pradesh with mother tongue Telugu, he worked as a journalist in Sindh, Pakistan with Sindhi as local language, in Madras with Tamil as local language, in Bombay with Marathi as local language, in Patna, Lucknow, Delhi where Hindi is spoken in different shades. He had the unique experience of working in both the Anglo-Indian press and the National press, which had two different shades of culture. In his adventurous journey of Journalism Rama Rao worked in more than 25 news papers in different languages, different cultures like Pioneer, Leader, Bombay Chronicle, Indian Daily Mail, Advocate of India, Indian News Chronicle, Times of India, Swarajya, National Herald etc. and injected a spirit of freedom and vitriolic thought to the readers through his blunt and out spoken editorials.

His journalistic career began in "Humanity", a Brahmo Samaj weekly brought out by his brother Kotamaraju Punnaiah in Madras. Rama Rao was helping his brother in advertisement, circulation and in management departments. He also helped in preparing the copy to the press and in editing process. He then joined in "The New Times" at Karachi in 1919, a paper started by T.L. Jaswani as Proprietor-Editor, where he learnt the mastery over the copy editing process by the great practioner of the trade F.E.Holsinger, the then Chief Sub-Editor of the paper. After that he worked in the European owned "Times of India" and in "Evening News of India" and evening newspaper, where he got the opportunity to work with great editors like Sir Francis Low. He worked there for four years and four months i.e. from June 1923 to September 1927. Later he joined "Pioneer" published from Allahabad in July 1928 and worked under the editorship of F.W.Wilson. Rama Rao moved to "Indian Daily Mail" in Bombay as News Editor along with F.W.Wilson in May 1930. But "Indian Daily Mail" was closed in 1931. Rama Rao's joined in Free Press Journal in 1932-34 ran by S. Sadanand. Then

he moved to “Swarajya” founded by T.Prakasam and worked in it for 100 days. He worked with “National Call” in 1934 and for a brief period of six months in “Hindustan Times”

The most important period in Rama Rao’s career was from 1938 to 1946, when he was the Editor of the “National Herald” founded by Jawaharlal Nehru and published from Lucknow. Under his able editorship “National Herald” turned into a symbol of nation’s fight against tyrannies and exploitation and voiced against repression and denial of human rights. His fierce patriotism reflected in his writings. Rama Rao was a crusading Editor. He always wrote with passion and played a key role in arousing masses to follow leadership of Gandhi in the freedom struggle. He exposed abuse of power and Police brutality of a jailer towards the Satyagrahi prisoners. Officials involved him in a defamatory case when the Jailor of the prison filed a libel case against his editorial. He was convicted and sentenced for six months imprisonment His article titled “Gods or Gins?” written on the restrictions on travel to Pashupatinath temple resulted in a warning from the then Press Advisor to Government Desmond Young. In 1940 “National Herald” stopped publishing editorials protesting against the pre-censorship and restrictions on press. Rama Rao had the rare distinction of covering the August 1942 Congress session in Bombay that passed “Quit India” resolution. After the session the mass arrests followed and the National Heralds paper was raided. But before that, Rana Rao was able to publish the editorial headed “Vandemataram”. Police raided his office and seized the machinery. For his writings Rama Rao was put in jail for five months. After Independence, Rama Rao worked in the Congress party journal for some time and joined “Search Light” published from Patna in 1948. He also became a member of upper house of Indian Parliament.

**4. Khasa Subba Rao**

Some of the India’s greatest Journalists have come from the State of Andhra Pradesh. One among them was Khasa Subba Rao. He was a freedom fighter and served in many papers like ‘Swarajya’, Free Press Journal and Indian Express. He was a fire brand Journalist. His editorial was known for emotional and touching language and tone. He did not mince words while criticizing the British Government which resulted in financial loss and frequent forfeitures of newspapers in which he has worked. He switched to different papers in his untiring journalistic career. He actively wrote and participated in Salt Satyagraha and was beaten by Police in Madras.

Khasa Subba Rao was known for his contradictions. He was never afraid of changing opinions about issues and people. If circumstances required he was willing to change his stand but was never away from honesty and truth. In spite of passion for controversy he made many friends and few enemies. When Khasa Subba Rao passed away in June 1961, Rajaji said in a tribute "The world of journalism in India has lost one of the bravest and best veterans. He was a refreshing and rejuvenating personality. H lived every moment of his life. His life is an example for a demonstration of complete surrender to the divine, with a complete affection towards his duty and his goals.

**5. Tapi Dharma Rao**

Tapi Dharma Rao is a luminary in the fields of literature, journalism as well as in films. He served all this fields with dignity and decorum and brought laurels to these fields. His essays like 'sahitya mormoralu', Rallu-rappallu', Kottapali etc are well known in literary world. His scripted films like 'Mohini Rukmanganda' in 1937 to 'Bhishma' in 1963 including 'Ryotu Bidda;, 'Malapilla' are known to be super hits in film industry. He also has a unique distinction of starting papers like 'Janavani', 'Samadarsini' and 'Kagada'. He is considered as one of the first film journalist and had laid down a firm base for film journalism.

**6. Mutnuri Krishnarao**

The political newspapers were not seen in Telugu language in the early years of 19th century. But the final years of 19th century and the beginning of 20th century witnessed beginning of many political newspapers in Telugu Journalism. Among them the most important and the one which had the biggest impact on the readers was 'Krishna Patrika'. It was started in 1902 by Konda Venkatappaiah Pantulu and Dasu Narayana Rao in Guntur of then Krishna District. Mutnuri Krishna Rao joined 'Krishna Patrika' as Assistant Editor in 1903. He was a freedom fighter and writer. He had close relations with many national leaders especially with Bipin Chandra Pal. He participated in many agitations, meetings in Bengal along with Bipin Chandra Pal. He was instrumental in arranging Bipin Chandra Pal's visit to Andhra. By 1907 Krishna Rao became the Editor and owner of Krishna Patrika. Krsihna Patrika was helped by bhogaraju Pattabhi Seetharamaiah in the early days of his editorship. In 1908 Krishna Patrka published an article with the heading 'Tellavanini tupakulato kalchta' i.e. firing the Englishmen with guns, which resulted in the ire of the district collector. The

collector warned Krishna Rao to step down as editor of krisha Patrika. Then Krishna Rao stepped down as Editor and later took the editorial responsibilities in 1911.

Krishna Rao is known for his astute political remarks and is regarded as a guide for running the political news paper in Telugu journalism. He made Krishna Patrika as a public platform and a people's voice by making many of the great leaders to write articles in it and also reflecting people's voices and aspirations. Krishna Patrika created political writers like Koalvennu Ramakoteswara Rao, Ravuri Satyanarayana Rao, Kamalakara Venkata Rao etc. The editorials of Krishna Patrika were liked by Telugu readers and were a source of awakening, debate and discussions in that period. Krishna Patrika played a major role in popularizing Gandhian philosophy especially by analyzing them to the public, explaining its importance in the freedom struggle. Krishna Rao's writing style was popular among the readers and as well as writers. Ravuru Venkata Suryanarayana Rao, the contemporary of Krishna Rao described his writing style as a 'Pearl Design' of ideas, thoughts coupled with a firm and unique action in it. Chella Pilla Venkata Sastry described Krishna Rao as a 'saint and invisible poet'. Krishna Rao made Krishna Patrika as a moputh piece of Indian Freedom Struggle as well as Andhra Struggle. He first used to write in colloquial language, later shifted to the contemporary language. He remained as editor of Krishna Patrika until his death in 1945.

**7. Narla Venkateswara Rao**

The famous editor Khasa Subba Rao called Narla Venkateswara Rao as the "Journalist who knows the world and is renowned in the world". Such was the impact of the Narla Venkateswara Rao popularly called as Narla by his associates and friends. He was a through professional with mastery over his craft and regarded as a literary genius in the Journalism front. He has written dramas, poems, autobiographies, analysis, books and even translated literary articles and stories. Narla was born to Mahalakshamma and Lakshman Rao on December 1st 1908 at Jabalpur, Madhyapradesh. Their family returned to Andhra and settled in Kautaram Village of Krishna District. His father was a Hindi teacher and the entire family sustained with hardly on his income and was struggling every day for sustenance. Narla has his elementary education started in Kautaram village elementary school. With the help of his maternal uncle Narla completed his final year in Guntur High School. In his schooling days Narla developed a liking towards reading and read life histories of 'Veerabrahmam', 'Eeshwara Chandra Vidyasagar' and got influenced by Brahmo Samaj. Narla joined Intermediate in Kakinada

College and studied sciences. Due to lack of interest in sciences he then persuaded History and Economics in Noble College, Bundar. More than is education Narla attained good experience and mastery over English Language by studying different books in library. He was influenced by 'Brahmosmaj' in his childhood days after reading several books written by Eswara Chandra Vidya Sagar. He used to read magazines like 'The Modern Review', 'The Indian Review' and several national and International news papers.

Narla went to Madras in 1935 and met several people like Mutnuri Krishna Rao, Acharya N.G.Ranga, Sivalenkashambu Prasad for a job in the newspaper. His good contacts with the Justice Party associates got him a pet-time job in **'Samadarsini'** newspaper. But his previous background and pressure from Government resulted in Justice Party removing him from the job. On February 25th 1936, he joined 'Swarajya' newspaper as siub-editor and worked under the great editors like Khasa Subba Rao. Under the guidance of Khasa Subba Rao, Narla enriched his experience in reporting, proof reading and editing. When Khasa Subba Rao was arrested he along with his associates used to manage the editorial responsibilities of **'Swarajya'** news paper. But the financial problems of the paper made him leave it. On August 5th 1936 he joined **'Janavani'** a newspaper started by Peoples Party. Soon the paper was closed as People's Party went for the elections and lost the elections. Later Narla joined a Telugu Weekly '**Prajamitra'** started by Gudavalli Ramabrahmam and worked in it up to July 1938. On August 1938, he joined as sub-editor of **Andhra Prabha**. He became the editor of Andhra Prabha in **1942** at the age of 33 years. Due to differences with the owner Ramnath Goenka, Narla left Andhra Prabha and started **Andhra Jyothi** with the financial help pf K.L.N.Prasad in 1960.

Narla turned Andhra Jyothy into a people's voice and it became popular among Telugu readers. Andhra Jyothy became known for its accurate and dispassionate caoverage of news and alos for its high quality literary content. The Sunday supplement carried the serialized novels written by famous writers like Kodavaganty Kutumbarao, Acharya Arudra etc. After tasting tremendous success Narla started a weekly magazine 'Andhra Jyothy Sachitra Vara Patrika' and handled the editorial responsibilities of both the newspaper and magazine. Narla popularized science features in the weekly magazine. He published the famous writings of Nanduri Ram Mohan Rao in the form of a serial.

**Narla's Contribution to Journalism**:

Narla's contribution to Telugu Journalism can be assessed with the remarks made by his contemporaries with whom he worked. Tapi Dharma Rao with whom Narla worked as Sub-Editor wrote in 'Janavani' about him in the following way.

> **"With his nose for news, his gift for apt headlines, his flair for page-makeup, his readiness to learn from everything and everybody and his zest for life was unique"**

Khasa Subba Rao, under whom Narla worked as Sub-Editor in 'Swarajya' news paper commented in the following way about him.

> **"He had two distinct attributes, intellectual and moral, probity and perseverance in the spirit of work. Narla was devil at work and enjoyed his profession in every moment."**

Analysts say the greatest advantage of Narla was that he was a ***Writing Editor.*** He brought with him the power of argument and beauty of words. In him there is a militancy of a crusader and the mellowness of craftsmen. Narla was influenced by Mutnuri Krishna Rao and Khasa Subba Rao with whom he worked and also greatly by British Editors Thomas Bornz, J.A.Spender, W.H.Mmassingaam and C.P.Scott. Narla adopted their attitude, morals and working pattern and evolved his own style. According to Narla Himself, he adopted the following guidelines from Thomas Bornz:

1. The newspapers should not act like a trumpet to Government or its ministers.
2. Newspapers should reflect public opinion and safeguard people's welfare.
3. If necessary the editorial content can be harsh and hard.
4. An editor should have the capability to change and adapt to new values and ideas in changing circumstances.

Narla was also inspired by the work style of J. A .Spender, Editor of the 'West Minister' and has adopted the following from him

1. News writing style should be simple. Language should be clear and natural.
2. An Editor should be firm in expression of ideas and not depend on too many if's and buts'.
3. Any hard news can be given to the public but in small episodes and gaps.
4. Simple language should express complex feelings and convey clear thoughts.

5. Whatever is written should be based on truth and character.

The influence of the great British as well as Indian Editors made Narla a versatile Editor, whose pen wrote volumes of editorials with the same vigor, style and effectiveness. A compilation of Narla editorials from 1944-1974 reveals the following editorial qualities

1. Unique style and lucid expression are part of his editorials.
2. The material used for editorial will be taken from anything ranging from his experiences to an ordinary incident.
3. An elegant analysis of Science and Society can be observed.
4. His editorials reflect truth and prevailing circumstances very harshly.
5. Fearlessness, straight forwardness, logic, humanitarian values are reflected in his writing.
6. Ability to apologize when issues go wrong.

**8. M.Chalapathy Rao**

Manikondala Chalapathy Rao was an eminent editor of India, who stands out as the champion of the Working Journalist movement, for whom he strove to secure the basic rights. He was an uncompromising fighter of free and independent press. M. Chalapathy Rao started his journalism career in 1936 by joining in "Peoples Voice". Later he joined National Herald in 1938. With his phenomenal talent he rose to the number two position in the newspaper. When "National Herald" was closed in 1942, he worked for some time in "Hindustan Times". He was appointed as the Editor of "National Herald" when it was reopened in 1945 and worked for a period of 30 years. He spent almost his entire career in the "National herald".

He had an absolute control and command over language excelled in its mastery. He wrote in heavy granite- like style untouched by poetic feeling. He expressed his opinion with vigor and precision and quoted elusively from literature and history. He was a great journalist and through professional who laid down the basic tenants of Indian Journalism. He was a complete personality with public acumen, flexible outlook, and good character above the reach of opportunities, determined and dedicated to team effort and fought relentlessly to the cause of Indian freedom. According to him "Indian journalism has been one of many forms of expressiveness of Indian nationalism" and has always been a "Fleet street of Ink, a street of adventure and also a street of

perils". M. Chalapathy Rao was an expert in foreign politics. His Sunday articles reviewing the progress of World War II were acclaimed as outstanding pieces. Under his stewardship National Herald contributed its might to the freedom struggle and also played a constructive role in process of Constitution making, integration of the country, in the task of nation building and in the political, economic and cultural integration of people of India. He was deeply committed to the philosophy of Jawaharlal Nehru. The relationship of Nehru and Chalapathy Rao can be regarded as a model of how a political leader and a journalist of integrity should interact in a democracy. Indira Gandhi referred to Chalapathy Rao as "Conscience keeper of Nehru".

He believed in free press and a press free from birth external and internal pressures. Editorial freedom does not only mean the freedom of the editor, but also the freedom and independence with which the editor's staff share with him. Working Journalists will remember him for the dedication with which he worked to gain then a decent wage and recognition. As a member of the First Press Commission, he was instrumental in bringing necessary changes in the working conditions of the journalists. He founded the Federation of Working Journalists in 1950 and was it President for three terms. He said, "Journalism is not a matter of wages and benefits. It is a matter of craft and craftsmanship and journalists are expected to possess not only professional skills but professional pride as well". He led the working journalist's movement not only as a platform to protect the working conditions of Indian journalists but also an organ to defend the freedom of press from proprietor and other vested interests. Chalapathy Rao passed away in 1983 in a road accident.

**Contemporary Telugu Newspapers**

**The History** of newspapers and journals in Telugu, as in other languages, is a saga of sacrifice and devotion to nationalist ideals. Profit or other commercial aspects never were dominant considerations. Even the rare example of a financially successful venture like the Andhra Patrika can be said to have done so more due to the affection of the Andhra people to the newspaper than any other consideration.

**ANDHRA PATRIKA** :

There were some journals earlier but Andhra Patrika, started as a periodical (Publishes every wednes day at 2 Rs cost , Postal charges of 13 annas) in Bombay in 1908 soon became popular because the founder, P. K. Nageswara Rao Pantulu, himself an eminent scholar, sent copies free to libraries and reading rooms all over Andhra. The contents of

the periodical reflect the history of Telugu during the 20th century. The Patrika was shifted to Madras in 1914 and became a daily(7000 loyal subscribers) . On Nageswara Rao's death in 1938, his son-in-law, Sambu Prasad, took over. In 1965 it was again shifted to Vijayawada. The paper was dominant in spreading Gandhiji's ideals in the nooks and corners of Andhra. The memory of Andhra Patrika remains a matter of pride to Telugus.

Apart from nationalist ideals, one other subject that occupied the attention of the founders of Telugu newspapers was the style of the language. There were simple styles as in Vemana's verses or the Sumathi Satakam. Even Pothana's Bhaghavatham can be said to be in a simple style of Telugu, compared to poets like Nannaya, or Srinatha. But grammarians, especially during the 19th century, locked up the language in an ununderstandable literary straight jacket that caused a large-scale revolt in the early 20th century. The most notable of the scholars who led this movement were Gurjada Apparao and Gidugu Ramamurthi. Their main rival was the Parishat Patrika, in which such eminent scholars as Jayanti Ramayya Pantulu, Veeresalingam, Vedam Venkatraya Sastri and others stoutly opposed what they felt was debasing the language in the name of simplification. Their fears to some extent have been justified by the success of the votaries of ``as we speak we write''. Some sort of poetic justice can be seen in the writings of these people which, submerged in an ocean of colloquialism, make little sense to Telugu readers themselves and can be understood only if translated into better Telugu or even into English.

There have been many other newspapers and periodicals that came to prominence in the first half of the 20th century. Some of these are - Krishna Patrika, Golconda Patrika, , Andhra Sahitya Parishat Patrika, and Bharathi (monthly). Nearly a hundred names are to be found in the list of the newspapers and periodicals of the 20th century. It was the Market leader till 1960, 2 place up to 1976,(Andhra Prabha replaced first), lost 2 place with Eenadu in the same year, and in 1978 it lost it s 3rd place to Andhra jyothi. And finally it had been Closed in 1991. In fact some of the newspapers of those days had to be closed for want of funds.

**ANDHRA PRABHA**

Andhra Prabha Daily blossomed on 15th of August, 1938, by Ramnath Goenka which means the glory of the andhras. It's a strange coincidence that exactly after 9 years the tricolour flag of Indian Independence unfurled in the unblemished skies of

free India. Andhra Prabha has been synomous for unbiased news, impartial criticisms and extensive analysis. Andhra Prabha emerged as an ideal example for fearlessness by publishing sensational but factual news. While keeping up its glorious and perennial traditional values, Andhra Prabha has been attaining the most modern trends to blend and amalgamate our ancient culture with the contemporary patterns of the world humanity.

Famous Freedom Fighter, Sri Khasa Subba Rao was the first Editor of the radiant matchless and exquisite Andhra Prabha. This itself denotes the National devotion and dedication of the dazzling Andhra Prabha. Andhra Prabha has always been standing for and in favour of its esteemed and endless readers. In fact, the very name Andhra Prabha was indicated, suggested and proposed by a reader hailing from BELLARY. The then management of Andhra Prabha had awarded him with an auspicious sum of Rs. 116/- in token of their gratitude for suggesting an ever beaming name. Thus, Andhra Prabha has always been placing the people's opinion on the high pedestal by inviting invaluable suggestions from the learned readers. Stalwarts and doyans of Telugu Journalism such as Sri Narla Venkateswararao, Sri Sri, Sri Mallavarapu Visweswararao, Sri Nyayapathi Narayana Murthy, Sri Neelamraju Venkata Seshayya, Sri Vidwan Viswam, Sri Panditaradhyula Nageswararao, Sri Kuchimanchi Satya Subrahmanyam, Sri G. Krishna, Sri Potturi Venkateswararao, had adorned the annals of torch bearing Andhra Prabha and enriched its fame and name. Andhra Prabha has ever been on the forefront to extend moral, social and financial support to the victims of natural calamities like floods, famines etc., by voluntarily raising bulk and hafty

***Contributions** :*

Andhra Prabha, which was lit with the nectar hands of Steel Man of Journalism, Sri Ramnath Goenka, has been successfully steered now by Sri Mootha Gopalakrishna. Indeed, he has injected adrenalin in to the veins of Andhra Prabha and made it Invigourating and youthful. Actually, he has selflessly rededicated Andhra Prabha to the millions of Telugu People

**ANDHRA JYOTHI**

Andhra jyothi started in the year of 1960 from Vijayawada, which means the light of andhra. It has a circulation of over 5,00,000 across Andhra Pradesh and neighbouring states.It has a distinct and unique place of its own in Telugu journalism. It stands aloft on the pedestal of high values and rich professional standards. Andhra

Jyothy was bankrupt once and was shut down in 1999. Vemuri Radhakrishna, who was a journalist in the then team, ventured to buy the bankrupt newspaper and finally could run it into success. Andhra Jyothi editor is K. Srinivas and its Managing Director is Vemuri Radhakrishna

A newspaper wakes you up. A vibrant newspaper shakes your conscience. The need of the hour is beyond this simplification. Hence, the re-launching of, in a way the rebirth of, Andhra Jyothi. Only those who race with the changing times, who use cutting-edge technologies to deliver the goods, and who peep into the distant futures with proper perspectives are the ones who could really strum out the arrows with precision. They are the people who have the ability to hit the bull's-eye. Andhra Jyothi has such greatly committed, well-groomed, exceedingly professional soldiers. They have the guts, and we are proud that they are our commanders who have taken the decisive positions. As you may have noticed the loaded guns of our lieutenants have already triggered off the alphabets that zoomed past like the unfailing bullets. And we assure they will continue to do so.

As has ever been, it will be a battle fought every day on behalf of the people. The essence of any newspaper is to wage that battle rightly. And in a rightful and judicious manner too. If unchecked, half-truths, naked lies and true-lies will sweep the society away into wilderness. If the news smells bias, it only signals the death knell. When a newspaper is suspected of becoming a pamphlet for one group or the other, the scenario becomes gloomy with the readers losing trust. It spells doom. Taking out the arrows, Andhra Jyothi has made its presence against this background on Dasara 2002. On the auspices Aayudha Puja day, it has taken the oath that it would commit itself to every 'letter' that it prints, in true letter and spirit. The true journalistic adage "without fear or favour" is put to test in no uncertain words only to be proved right. As has already been proved, it is a newspaper with renewed energy and vigour. It is a warrior taking on the invisible enemy. It wields sword. In the same breath it plays with fire. Destined by the changing times and the history, Andhra Jyothi is here to create history.

A proven entrepreneur with wisdom. His personality is embedded with adventure, a trait he borrows from his vast experience as a senior journalist. As the Managing Director, the dynamic leadership of this young industrialist is doubtlessly a shot in the arm of the vibrant Andhra Jyothi that is filled with the young blooded journalists. While establishing himself as the force to reckon with, in leading a

hydropower project, he powered Andhra Jyothi, only to help it glow brighter. A man of untiring efforts, and a man with abundance of life-experience, he reaps rich harvest. Uprightness is his quality. Understanding-nature is his special quality. Put together is the secret behind his continued successes.

**ANDHRA JYOTHI a new beginning**

It was just a four-edition strong newspaper before the re-launch. We promised to grow into a sixteen-edition strong when we re-launched the paper with nine editions. We are glad that we could accomplish the task in less than three years and what's more? We are now eighteen-edition strong. Thanks to the continued strong support extended by the people of Andhra Pradesh. Ours is one of the strongest computer networks connecting every nook and corner. We disseminate instant information. As of now, the daily has 20 editions, 18 of which are published from Andhra Pradesh and one each from Bangalore and Chennai. The latest IRS 2006 (R1) figures show Andhra Jyothi to have registered the highest growth in number of readers in the language in Andhra Pradesh. From a base of 21.56 lakh readers in 2005 R2, the daily has added 2.38 lakh readers in the current study.

**ANDHRA BHOOMI**

***Andhra Bhoomi*** is started in the year of 1960 with the publishers of Deccan chronicle (1938), which means land of andhra. It Covers whole of Andhra Pradesh with editions from Hyderabad, Vijayawada, Visakhapatnam, Rajahmundry, Anantapur, Karimnagar, Nellore etc. It also comes with Monthly Magazine named Andhra Bhoomi Sachitra Vaara Patrika. With a circulation of 3,65,794 Covers whole of Andhra Pradesh and some parts of South India with Bangalore(manily). Andhra Bhoomi is a paper from Deccan Chronicle(DC) ,a leading English Daily of Andhra Pradesh.It is the telugu version of English daily Deccan Chronicle.Both newspapers are owned by T Venkatarami Reddy who is the cousin of Congress MP T Subbirami Reddy.

It is generally biased towards congress and slightly against non congress parties like TDP and PRP.In Andhra usually all newspapers are biased.While Deccan Chronicle,Asian Age,Sakshi,Andhra Bhoomi,Vaarta and Andhra Prabha favor Congress other newspapers like Eenadu,Andhra Jyothy etc favor non congress parties.

**EENADU**

***Eenadu*** , headquartered in Hyderabad, India, is the largest circulated Telugu news daily in the state of Andhra Pradesh. According to NRS (National Readership

Studies) 2005 it has got a readership of 1,13,49,000 and is the second most read daily in India, third most circulated regional language daily and 10th most circulated daily in India. *Eenadu* (meaning "Today" in Telugu) was founded by the Indian media baron Cherikuri Ramoji Rao in 1974. It has played a role in both crowning or dethroning governments in Andhra Pradesh. It has also successfully adapted the latest publishing and communication technologies into the Telugu language.

As with any other publication, Eenadu too had its share of struggles. When launched in Vishakhapatnam, it wasn't able to sell more than 3,000 copies a week. Eenadu found itself struggling to become a daily publication ranked amongst other popular rival publications. By 1975, Eenadu managed to achieve its target of becoming a daily publication. However, it was popular in regions and rivalry was still an issue. In a period where the company needed vision to drive and expand it any further. Eenadu hired a new set of directors to be part of its key decision and management group which drove it towards what it is today.

Though Eenadu has brought in lot of changes in telugu media and its functioning, it is accused of being anti-congress and credited to have piloted TDP to attain power in Andhra Pradesh in 1984. Eenadu is often seen as a mouthpiece for the Telugu Desam party even though the newspaper critically panned the party on certain issues in the past. The heart and soul of Andhra Pradesh, it enjoys a circulation of 11, 76,028 copies (July - Dec 2007) per day and is published simultaneously from 23 printing centers. Making it one of the largest circulated newspaper in the country

**A helping hand to the cyclone-hit**

When floods devastated Diviseema, A.P., in 1977, and when the cyclone put an end to many a life in A.P. in 1996, or for that matter when Orissa was devastated by a super cyclone in 1999, and when the Gujarat earthquake brought to halt the human pulse, Eenadu contributed its mite.

**Good Quality**

When it comes to quality, Eenadu has very high standards of commitment and responsibility. This is best illustrated through its Quality Cell. A division whose responsibility is to monitor quality on a daily and ongoing basis.

**About Ramoji groups:**

Apart from the paper, it has the following group of companies.

- **RFC**

The 1666-acre Ramoji Film City, established by the Ramoji Group amid the alluring grandeur of Nature, is the world's largest integrated film studio complex and one of Asia's most popular tourism and recreation centers. For the discerning filmmaker, RFC offers comprehensive and international-standard pre-production, production and post-production resources.

- **Rainbow Colour Lab of Ramoji Film City wins National Film Award.** Rainbow Colour Lab, Ramoji Film City's state-of-the-art film processing lab has been awarded the National Award for the category of best cinematography for film processing for the Bangla film Bhalo Theko.

The Honourable President of India Dr. A.P.J. Abdul Kalam presented the award at the 51st National Film Awards function to Smt. Nirmala Rani, General Manager Post-Production, Ramoji Film City.

**UDAYAM**

This was started by By Dasari Narayana Rao and Kondapalli Ramakrishna Prasad, grand son of freedom fighter Gottipati Brahmaiah were the chairman and managing director respectively in Dec 29 of 1984. Udayam means morning in Telugu. Due to many reasons it had been closed in 1995.

**VAARTHA**

The National Telugu Daily from Hyderabad Created history in the Media world in a very short span of time compared to any other newspaper. It was inaugurated by PV Narasimha Rao prime minister of India, on January 25, 1996.

*Vaartha* means "News" in Telugu. Vaartha is the firstly daily in Andhra Pradesh to have facilitated Information Technology in publishing all the news that broke as late as 4 a.m in the morning.

This National Telugu Daily is one of the few responsible and fearless Newspapers in India. It is the fastest provider of the happenings across the globe and has always

been in the forefront in providing firsthand news to its readers across the country. Path breaking news, scams, scoops, investigative stories etc... are the forte of Vaartha.

The Quality, layout and design of the newspaper have received many compliments from the reader community. It has been literally proved to be a well-wisher of both people and the government, by pinpointing the defaults in the defaults in the governance and by suggesting measures for the effective working of the government. All these have prompted the newspaper readers to choose Vaartha as the official provider of quality news.

**PRAJASAKTI**

**Prajasakti** started as a daily news paper in the year 1981 with Vijayawada as the centre. Currently it is being published from 9 editions at Hyderabad, Vijayawada, Visakhapatnam, Thirupati, Khammam, Kurnool, Rajahmundry, Srikakulam and Karimnagar. It has got a wide network of over 100 primary news gathering centres across the state. Prajasakti has grown up in leaps and bounds and is the largest circulated progressive daily in the Telugu newspaper industry. On the 20th anniversary of Prajasakti it has gone online and came much nearer to all those who are not within the reach in this global world.

Prajasakti is committed to the cause of oppressed people. At its very inception it was with the peasants struggle in 1981. Prajasakti has always spearheaded the propaganda for secular and progressive values in the society. It strives for the democratic values, and upholds the ardent struggle for democracy and a just living waged against the one sided imperialist globalisation. It comes out with a scientific analysis on all the contemporary, national and international issues. Prajasakti stands for the projection of all the just values and relentlessly fights anti peoples policies, corruption, communalism and many issues that make the life of the poor and middle class worser.

Prajasakti was a borne child of the freedom struggle. It had its inception in the year 1942 and was published as a daily from the year 1945. No sooner it was subjected to repression by the British and banned in the year 1948. It started as a weekly journal in the year 1969 and took the form of a daily in the year 1981 with vijayawada as the edition centre. It had grown in leaps and bounds in the last decade and won the hearts of the toiling masses, workers and the middle class.

It is important to note that Prajasakti forged ahead in an atmosphere when all progressive and democratic forces were facing an uphill task of struggling the onslaughts by imperialism. The second edition started in the year 1997 from Hyderabad, the third edition in 1997 at Visakhapatnam and the fourth edition in 2001 at Thirupati, the fifth edition at Khammam in July 2003 and the sixth edition at Kurnool in Nov 2003, the Seventh Edition at Rajahmundry in May 2005, Eighth Edition at Karimnagar in September 2005,and the Ninth Edition at Srikakulam in 2006.

Prajasakti daily is a part of the Prajasakti Sahithee Samastha with its head quarters at Hyderabad. It has a strong team functioning democratically with hundreds of journalists and professionals from the advertisement team, circulation department, technical department and the editorial board headed by S.Vinay Kumar as editor and V.Krishnaiah as general manager. Prajasakti daily is published at the Prajasakti daily printing press that caters the print requirement. Prajasakti daily extends its support to the Prajasakti Book House and the Prajasakti Publishing House which are the centres for progressive literature.

**SURYA**

**Surya** headquartered in Hyderabad. This newspaper is being promoted by Nukarapu Surya Prakash Rao. This telugu newspaper is being published from seventeen cities in India. Surya -is striking New Standards with an intention to give tough fight to Eenadu and Andhra Jyothi.

**SAKSHI**

**Sakshi** news paper is a telugu daily published in Andhra Pradesh as well as its surrounding states. It is a widely popular news paper that is the rare of its kind. It is still the most successful and popular telugu news paper since its first day of publication.

**YS Jaganmohan Reddy**, son of Andhra Pradesh Ex chief minister Y S Rajasekhara Reddy, has decided to launch a Telugu daily, Sakshi. This new daily – expected to launch in February 2008 – will offer competition to the current market leader, Eenadu.

**Grand launch on - 24 March 2008, Started with a Bang!**

Sakshi is the finest example of a news paper business that is not the rags-to-riches type but the pre-planned and well-executed type of startup business. Governor N.D. Tiwari launched Telugu daily 'Sakshi' brought out in 23 multi-coloured editions by Jagati Publication of which Y.S. Jagan, son of Chief Minister Y.S. Rajasekhara Reddy, is chairman, at an impressive function at HICC on Sunday.

Besides the Chief Minister, B.V. Raghavulu (State CPI-M secretary), K. Narayana (CPI secretary), Bandaru Dattatreya (BJP president), Asaduddin Owaisi, Majlis MP, were among the political leaders who attended. B. Ramalinga Raju, chairman, Satyam Group, launched the daily's web edition. M. Veerappa Moily, AICC general secretary in-charge of Andhra Pradesh, megastar Chiranjeevi, Akkineni Nagarjuna, N. Srinivasan, Vice-chairman and managing director of India Cements, Pullela Gopichand and Mithali Raj launched the political, glamour, women's, business and sports pages respectively of the newspaper. An impressive laser show and a choreographic presentation on evolution of newspapers over the centuries were highlights of the function. Congratulatory messages from Sachin Tendulkar and V.V.S. Laxman were shown on video screen.

The Daily is coming up with flying colors and latest technology used for this purpose. The management is aiming **at No.1 position** for their daily among Telugu readers

Partly this success can be attributed to two things. One is that there was a monopoly by the most popular telugu news paper Eenadu at that time. People are ready to welcome another news source but a big one to compare with Eenadu. Another reason was that the editor of Sakshi paper was the son of Chief Minister of Andhra Pradesh. Being the son of a ruling party minister he had lot of flexibilities and options to launch his new paper in a grand manner. The Sakshi telugh news paper is well received by telugu audience from day 1 and it has been continuing to do so. Its subscription base is also wide across in Andhra Pradesh as well as surrounding states like Karnataka, Maharashtra etc. Sakshi came about in the last one and half year.

## UNIT -2

### Contemporary Telugu News Papers

Andhra's first successful daily paper the Andhra Pathrika, it was started as a weekly from Bombay in 1908 by Kasinadhuni Nageswara Rao Panthulu. He moved the weekly to Madras in 1914 and after few years, converted it in to a daily. After the death of Nageswara Rao in 1938, the pathrika was managed by a trust. It shifted to Vijayawada in 1965 after Andhra province was formed. Latter it started publishing from Hyderabad too. A popular rival of Andhra Pathrika was the Andhra Prabhha, first published in 1938 by the Epress group. The first editor was Khasa Subba Rao, N. Narayana Murthy followed his as the editor. Narla Venkateswara Rao was the most famous editor of Andhra Prabha, who set a high bench mark for Telugu journalism. He loved his freedom. He resigned from the Andhra Prabha and became the editor of Andhra Jyothi. Which was started in 1960 by K.L.N. Prasad at Vijayawada.

The formation of Andhra Pradesh state in 1953 another two dailies started that is Andhra Bhoomi and Vishalandhra. Visalandra daily newspaper established on 22nd June 1952 in Vijayawada. Prajashakti news daily was born child of the freedom struggle. It had its inception in 1942 and was published as a daily from 1945. The Eenadu was launched in Visakhapatnam 10th August 1974 and year later in Hyderabad. Ch. Ramoji Rao, the publisher of Eenadu, single handedly changed way of journalism was practiced in Telugu media. Eenadu daily newspaper is the largest circulated Telugu newspaper in the state of Andhra Pradesh and the state of Telangana of India. Vartha, a daily newspaper was published in 1993 by the Sanghi Group. However, Vartha compensated and filled the Vaccum and void created by the fading out of Udayam at the time.

Then in recent times, 'Sakshi' was launched on 24th March 2008. The first regional newspaper designed by the world-renowned newspaper designer, Mario Gracia, with its colorful get up and makeup of every page broken all the earlier records of circulation. It is the second largest circulating newspaper in Telugu states. Today media is not only giving news but also participating in national development, creating awareness to the society, give the progress policies of Government and eradicating the social evils including other related areas. How Media should give a progressive direction with aspects of Sociologically, Politically, educationally, culturally to the society. In this connection, I would be observed of Telugu press successfully played the role of a watch

dog of the government functionaries and has also aided in participatory communication with special interest.

**Telugu Newspapers and Social Resposiblity**

In Andhra Pradesh, many Telugu language news dailies, corporate media organizations con- ducting many awareness programs, campaigns, rallies and socially responsible activities. For example, in water harvestment, ban to alcohol related issued are enhanced by Telugu news largest daily "Eenadu". It conducted many awareness programmes about above areas. And also, mosquito eradication, abolish of different diseases also take a major responsibility by Eenadu daily. It's taken a role of duty, about Right to information act, it educated to the public through awareness programs entitled "mundodugu".

Another Telugu news daily "Andhra Jyothi" conducted the awareness camps and programmes on AIDS and social evils. This paper wrote slogans, printed by wall posters, arranged the flexi boards in various city junctions. Many Telugu papers, corporate media organizations are participated in different social activities. It plays a key role in the protection to language, culture, traditions of Telugu people. Telugu media has conducted special programs and events like Rangoli, painting festivals. The newspapers like Eenadu, Andhrajyothi, Sakshi, Andhrabhoomi, Vaartha, Visalaandhra, Prajashakthi, Andhra Prabha, Surya, etc., media groups organized programmes for protecting the traditions and culture.

And also, many Telugu newspapers conducting at the time of Gujarat earth-quake, Odissa hurricane, konaseema floods, Krishna floods, Hudhud cyclone. Telugu media groups actively participated and served the suffers and also gathered the amount, cloths, food, medicines from readers and people, and distributed to victims of national calamites. In these incidents, media again proved its social responsibility. Many social problems like sanitation, dowry, raging issue, career development, rural health, girl-child education, road safety, swatch bharat, civil libraries, human rights, and basic facilities and eradicating the bad habits in the society, the Telugu press is working in various useful and inspirable directions.

**Cross-media Ownerhip and Corporitazation in Telugu Press**

The changing face of media ownership has provided several options for political leaders, realtors, businessmen and capitalists. Media organizations in the state of Andhra Praesh and Telangana are often controlled by corporate bodies, real estate

agents, political party leaders, businessmen, chit fund companies, liquor barons and seed companies; societies, trusts, sometimes stockholders and rarely journalist-managers. In India there are no cross-media ownership restrictions; anyone can start and own newspapers, television news channels and FM radio stations.

In India's media landscape, it is said that the number of publications, radio stations, television channels, and internet websites are a guarantor for plurality, diversity, and consumer choice. There were over 82,000 publications registered with the Registrar of Newspapers as on 31 March 2011. There are over 250 FM radio stations in the country though India is the only democracy in the world where news on the radio is still a monopoly of the government. The Ministry of Information & Broadcasting has allowed nearly 800 television channels to uplink or downlink from the country, including over 300 which claim to be television channels broadcasting "news and current affairs". There are also an unspecified number of websites for social media in India. Thus in this country, which is still home to the largest number of illiterates, poor and malnourished on earth, the proliferation of mass media is impressive.

Has this expansion and power of media been translated into the greater public good? Is our democracy more mature now? Is there more informed public discourse on account of the media? Are media still a part of the solution as perceived for decades, or have they become a part of the problem? Are there signs of self-correction/ regulation and growing public-spiritedness or is there more decay and crass consumerism at the cost of rational discourse and public good? Such persistent questions have become relevant. Advertisement revenues in the South Indian states in media industry (FICCI and KPMG; 2012) are: in Tamil Nadu Rs 1,170 crores, in Andhra Pradesh Rs 800 crores and in Karnataka Rs 560 crores. In comparison with the national media (Hindi and English have reached stagnation) the regional languages markets in the South are booming.

Political parties and leaders with political affiliations are increasing their ownership and control of large sections of the television media in Telugu regions. In the case of Ushodaya Enterprises (Eenadu TV Networks) owned by business magnate Ramoji Rao there are on and off alliances with the Telugu Desam Party and significant involvement in its economic interests. Eenadu since it began in 1974 has editorially never been very friendly towards the Congress. Before it supported TDP (formed in 1982) the newspaper was more oriented toward the Kamma dominated communist

party. The Emergency declared during the Congress regime was another anti-Congress rallying point for Ramoji Rao. The paper had championed prohibition in the State in opposition to the Congress that had control of the liquor business. The movement did result in a prohibition policy, but there was no critical reaction from the same newspaper when this policy was lifted by the TDP.

The other important media player with a clear political agenda is the current chief minister K. Chandrasekhara Rao and his son K. Taraka Rama Rao who hail from the Velama community. They own and control and the television channel T-News. The Telangana Rashtra Samithi chief KCR and his family control the channel through the holding company, Telangana Broadcasting Private Limited. TV 5 and N TV management came from the real estate and power businesses. These channels were formed by capitalists with the idea that if they had a television channel in their hands, they could force the government do things that would benefit them. I News channel was established by MRI educational institutions. Studio N channel was backed by a major political party. Recently, the left party, CPI(M), established the TV10 news channel to show their party activities and protests led by them. CPI also started TV99 television news and current affairs channel.

When ETV and MAA TV began, their beginnings were modest starting with one television channel. Soon, they became networks, expanding into other regions. Now their presence in the market has induced them to merge with big companies, turning them into big business corporations, as if following the Rupert Murdoch business model, and having trans-national presence and influencing politics in various regions where they have their business stakes. The case of MAA TV ownership is interesting. Though this is not a news channel, it has stakes in other businesses and political affiliations. The families of the actors Chiranjeevi and Akkineni Nageswara Rao, and Nimmagadda Prasad Rao are stake holders of MAA TV. The film industry and business groups have influenced the growth of the channel and the channel has merged with Sony Pictures Television network. Nimmagadda has shares in Sakshi TV and also other business firms. TV9 has also been in the news for merger with bigger corporations, but so far this has not materialized.

In India and in the world, large media corporations are today clearly playing a bigger role in the political economy as part of forward and backward linkages plans. In India large international television broadcast networks including Turner/CNN,

Viacom/MTV, RIL/ Network 18 and Sony are acquiring or partnering with regional networks. Moreover, a fair degree of consolidation and convergence has already taken place in general across the country and in Telugu regions too. For Example in 2015 Star TV Networks has acquired all MAA TV broadcasting channels.

According to the experts the affordability/low cost will help in widening the media reach. Now one can set up a channel with just 10 crores to 150 crores. Content is primary thing, more important than the technology; the content should be diverse and attractive. But there are always hurdles in reaching the public, and now the distribution system is under the control of a few media houses. We should see the media organisations as business enterprises and so we cannot expect social responsibility from them. In 2014 General Elections, the media's impact on public was 100 percent whereas it was 30 percent in 2009 elections. Now, I think there will be no such influence on the public in the next election to be held in 2019 as the number of channels have increased in AP. There is no chance of deceiving the public. This is good for democracy".

He experts also opinion that diverse views are expressed by Vijay Narra about television journalism in AP, "there is a difference between past and present journalists. Presently, journalists are owned and controlled by media barons and everything goes according to the owners' will in covering the news or its presentation. Journalists freedom is snatched from their control and they do not have right to cover the news at will. Moreover, they have to work as per the policies and principles of the owners"

Regarding cross media ownership:"If there is an information monopoly situation, there is something to worry about. Today Eenadu is a very high ranking newspaper maintaining first position, whereas E TV it is not doing so well. TV9 and TV5 does not have a newspaper but they are doing well in TV Industry and Market. The problem comes when two or three channels get together in support of one political party. That is called information cartelization" said one of the academecians. Explaining cross-media ownership and its impact on the society Madhusudan Pamidikalva says, "Cross-media ownership is always a threat and danger to society in the long run. In the present day scenario, establishing a television channel requires a minimum of 20 crores rupee investment. To start a print media house, 400-600 crores are needed. This can't be done by an individual journalist or even by a group of them where as an MNC or a business syndicate can. When they gain control over three segments of the media i.e TV, radio and news paper, the people have less options to choose from.

**Cross Media Ownership of Media Organisations in Andhra Pradesh**

Source: Table based on Ministry of I & B, field data and secondary sources

On the other hand a few channels like Vissa TV, Zee 24 Gantalu, HYTV, RVS, RK News are using satellite and have incurred financial losses. Asianet, Sitara TV, Satya TV and Tulasi TV have not yet done so. These channels are well supported and can run for 1-2 years in case of the loss but when such channels when a situation arises, they usually tie-up with one of the political parties. Raj TV, N TV, Studio N etc, are channels that may not sustain themselves if become fully commercial. In all our television networks, Zee network is the most profitable one—but as a news channel it is a failure. It is now running on contract basis for a political party. No one can guess the future of the Zee News once the agreement is over. So overall, starting a television channel has become viable and affordable

The corporatization of media and cross-media ownership is a dangerous trend in India. It is a weapon in the hands of corporations for vertical and horizontal spread across the fields in India. Cross-media conglomeration reduces competition and denies entry to newcomers and small entrepreneurs. A report1 recommending restriction on cross-media ownership says there is an "ample evidence of market dominance" in specific media markets and argues in favour of an "appropriate" regulatory framework to enforce cross-media ownership restrictions, especially in regional media markets where there is "significant concentration" and market dominance in comparison to national markets (for the Hindi and English media).

The Standing Committee on IT, headed by Congress MP Rao Inderjit Singh, stressed the critical need for restrictions on cross-media ownership. It urged the Ministry to "formulate" its stand on the issue in coordination with TRAI "after taking into account" international practices. There has been strong resistance on the part of media groups to the idea of restrictions on their sector, arguing that regulation would stifle growth, and that the multiplicity of media and the highly fragmented nature of the Indian market prevents monopolization and further that regulation of the sector amounts to an impingement on the Constitutional right to freedom of speech. However, with this trend, alternative perspectives and media outlets vanish from the mainstream. Media coalesce into a seamless, pervasive, and increasingly homogenized cultural environment that has drifted out of democratic reach. The data suggests that there is a need of broadcast regulation or self-regulation for television in India.

## UNIT-3

## History and Development of Radio and Televison in Telugu

### Television News Channels In Telugu

Most of the private satellite news channels were not able to start news programs sue to the unavailability of unlinking facilities. The first satellite channel to start the up linking facility and to record the news was SUN TV. ETV used to record the news for 'Andhravani' in Chennai and sent the cassettes to Colombo for up linking it to satellite. Later the up linking facility was started in Chennai by Videsh Sanchar Nigam Limited (VSNL). Utilizing this facility ETV used to uplink the programs from Chennai to Colombo and down linked it at Colombo, further up linking it to satellite from Colombo. Gemini TV started news from February 1998. News bulletins were prepared by a private network called APT TV. Gemini TV started own news production from May 1st 1998. Gemini TV used to uplink the program from Chennai to Singapore, down linking it in Singapore and later up linking the same to satellite.

As the non-linear editing facility was not available during that period 4 to 5 types of news items were inserted in one cassette and sent for teleporting to VSNL facility. ETV used its large network of print reporters for preparing news items at Delhi and Chennai. Two news readers used to read the news at Delhi and Chennai separately. Later Government allowed every channel to build its own earth station along with the up linking facility. ETV news returned to Hyderabad where as Gemini TV, Teza News used to record in Chennai up to 2003 and uplinked from Chennai. Teza news shifted to Hyderabad once Satellite News Gathering (SNG) facility became full proof. MAA TV started news in October 2003. ETV became the first Telugu news channel to telecast live news. The onslaught of the 24 hour news channels started as the up linking facility from India became available. ZEE news was started by ZEE television in 1995. ETV-2 was started in December 2003 followed by TV9 in the same month. TV5 was started n 2007, followed by NTV in the same year. ThE YEAR 2009 witnessed the starting of a plethora of 24 hour Telugu news channels like HMTV,ITV, ZEE 24 GHANTALU, SAAKSHI TV, MAHA TV, STUDIO N, TVI and ABN Andhra Jyothi.

In the regional level the early private satellite project in the courntry was Asianet, sponsor by K. Sasikumar,aired entertainmnet programs in Malayalam. The two biggest networks in regional news channel industry are Sun network and ETV network.Sun network has its presence south Indian languages Sun News - Tamil

nadu,Gemini News-Malayalam,Telugu and Udaya News -Kannada.The other major network from south is ETV from EEnadu group.This group first started a Telugu channel and soon spread wings in several North Indian languages. Today offers more than 10 regional language news channels. Another group is TV9 group, promoted by Srini Raju, which spread its network to regional level.

Table1: Management pattern of Telugu Television News Channels

The above table shows different management pattern of investors entered in the media industry. The political parties, , NRI's, media persons, Business entities launched News Channels in Telugu states in order to support their businesses or to promote their political party ideology. At present, there are nearly fifty plus Current Affairs and Non-Current Affairs Satellite channels operating from Hyderabad area. It become common scene in hyderabad that journalists are not well paid, irregular salaries, deprive of basic facilities. Even Major Journalists Associations(Andhra Pradesh Union of working Journalists-APUWJ,Andhra Pradesh Journalist Federation- APJF, Telangana Union of

Working Journalists-TUWJ) unable to solve this issues.. As Television industry come under working Shops & Factories, and Establishment act 1988, the Labour Department, issued notices to the Television managements but delayed salaries practice continues. There are instances that News channels removed journalists without any notice. Many news channels on the rolls to sell their equity or share/channels. The Increase competition, deleting advertising revenue, no upward flow of subscription amount, huge channel carriage fee management attitude, all these factors contribute to incur losses..

## UNIT-4

### Basics of Telugu Translation

At its core, translation is when you transfer the meaning of a written text from one language to another. While the translator will choose just one method for the whole text, there are a number of techniques that can be used for individual words and phrases. By carefully choosing the right technique, the translator can convey each linguistic element in the most accurate way.

Here are ten common translation techniques that we can use to translate your document and achieve the best translation.

**Direct Translation Techniques**

These translation techniques are used when the concepts and structure of the source language can be used in the target language.

**1. Borrowing**

Borrowing is where words or expressions are taken directly from the source text and carried over into the target language. This technique is often used when there is no target language equivalent, such as food or clothing, and can help to preserve the cultural context of the source text.

English is filled with borrowed words that have become part of our everyday language. If the borrowed term has yet to enter common usage, it's usually written in italics.

Example: Café (French), hamburger (German), kimono (Japanese) and kimchi (Korean).

**2. Calque (loan translation)**

This is the literal translation of a phrase from one language into another, coining a new term in the target language. In other words, this is the literal translation of a borrowed word.

Example: The English term 'skyscraper' is translated as 'gratte-ciel' in French.

**3. Literal Translation**

When using literal translation, each word is translated directly. The target text must be idiomatic and retain the same word order, meaning and style as the source text.

This technique can miss the nuances of the original text, and is only possible with languages and cultures that are extremely close.

Example: The English 'I want a glass of water' would be translated literally as 'Je veux un verre d'eau' in French.

**Indirect Translation Techniques**

Indirect or oblique translation techniques are used when the two languages and cultures are further apart. These techniques change structural and conceptual elements in order to preserve the meaning and nuance of the text.

**1. Transposition**

Transposition involves a shift from one grammatical category to another, while still preserving the meaning. This translation technique is often necessary between languages with different grammatical structures**.**

Example: The French sentence, 'Je l'ai vu avant la rentrée' can be rendered in English as 'I saw her before school started.' This changes the noun 'la rentrée' into a verb.

**2. Modulation**

This involves a change of perspective, adjusting what has been written in order to express the same idea and preserve the meaning. This translates the text in a way that conforms to the natural patterns of the target language.

Example: A French speaker will talk about the 'dernier étage' [literally; last stage] of a building, while an English speaker will refer to the 'top floor'.

**3. Equivalence/Reformulation**

Similar to modulation, this allows you to preserve the meaning of an expression, name or proverb by finding a target language equivalent.

Example: The phrase 'être sur son 31' [literally; to be on one's thirty-one] would be the French equivalent to the English phrase 'to be dressed up to the nines'.

**4. Adaptation**

Also known as cultural substitution, cultural elements of the source language are replaced with an equivalent cultural element of the target language. This makes the text more familiar and easier to understand, especially with units of measurement.

Example: Cyclisme (French) = football (UK) = baseball (US).

**5. Compensation**

This technique compensates for being unable to translate a nuance or phrase in one specific place by expressing the information at another point in the document.

Example: While the English language only has one way of saying 'you', French has both 'tu' (informal) and 'vous' (formal). By making specific word choices elsewhere in the text, the translator can compensate for the loss of nuance.

**6. Reduction**

When using reduction, the translator chooses to remove any words forming the original text which are considered redundant in the target language.

Example: The French 'sciences politiques' [literally; political sciences] can be rendered in English as just 'politics'.

**7. Expansion**

The opposite of reduction, this is when words are added in order to preserve meaning. This can be due to differences in sentence structure, grammar or terminology.

Example: The reverse of reduction, 'politics' in English would be rendered as 'sciences politiques' in French. Since French also uses gender articles, expansion is natural when translating from English into French.

**Choosing the right techniques for the best translation**

The right technique will vary on a case-by-case basis, taking into account the text type, target reader and end purpose of your translation. Our team of professional translators will use their experience and expertise in both languages to choose the right technique for your text, giving you the most accurate translation possible.

The Core elements of translation

(i) written texts

(ii) transfer or mediation

(iii) from one natural language to another

It is important to stress that translation deals with the transfer of written text. When the text or the medium is oral, however, the term used is interpreting or interpretation. In lay circles, one can sometimes hear the terms translation and translator being used to refer to interpreting and interpreter, with no distinction being made with regards to medium. In other areas, also, Translation with a capital "T" can be used to refer to both translation and interpreting as forms of mediation, whereas translation with a lower-case "t" means translation. This book follows common usage in T&I, in which the oral vs. written medium establishes a distinction with regard to field and practice. In translating, the language from which a text is translated is known as the source language (SL) and the language of the translated product is the target language (TL). What is also referred to as the original text is generally known as the source text (ST) and the translated text is the target text (TT). For instance, in a translation of Shakespeare's Hamlet into Spanish, the ST would be the English original text and the Spanish translation the TT (see Exercise 3 for more examples of ST and TT). Practice 1.1 contains an example with commentary that will help you test your understanding of the notions SL, TL, ST and TT.

The four most common types of translation services that we see are:

- Literary translation
- Professional translation
- Technical Translation
- Administrative translation

Below, we explain all of these in further detail, so you can get a better understanding of what they are.

### Literary Translation

As the name Literary translation may suggest, this type is all about translating literary works like stories, poems, plays, etc. This type of translation is often considered the hardest or most comprehensive, as the translator not only needs to get the meaning of the words right, but also the context, sound, and feeling behind the words. By this, we're also talking about knowing the culture of both languages well enough to translate any humor, emotions, and any types of similar elements of a piece of work. As you can imagine, this requires extensive knowledge and experience. Plus, it can still be hard even then, as in some cases, there are no suitable translations. For example, in poetry, when the rhyming of words or puns is used for additional wordplay, it often does not work in the target language.

### Professional Translation

The next type of translation is professional translation. Any type of translations that are used for professional purposes, we would usually fit into this category. Some common examples would be a medical translation or a legal translation. Here, the main goal is usually to get all the information translated as accurately as possible. Unlike with a literary translation, documents won't have any wordplay such as puns or rhymes, making it a little easier for the translator. However, accuracy is crucial for any type of professional translation, especially for industries where the consequences of inaccuracies could be huge, such as medical or law with medical translation and legal translation. Like the ones named above, more complex industries will often also require a specialist to ensure accuracy. Of course, this does depend on the subject matter, but the more complex the source language, the more educated the translator must be. This is especially the case if there is a lot of business jargon used or a certified translation required.

### Technical Translation

Technical translations are also technical, as the name suggests. Here, we're usually talking about translating technical content for businesses such as:

- Engineering Documents
- Instruction Manual
- User guides

- Technical Training

These types of documents will usually need technical translation services because the translator has to understand the topic well to ensure that they can tell the user what they should do accurately. Not only this, but they also have to understand the formatting requirements, and sometimes the images have to be changed so that they can be understood in the target language. If you require a technical translation, it's also crucial that you choose a company or transcriptionist who is comfortable and is experienced with your particular industry. The content of a technical translation is usually quite complicated, so if your business ever needs some documents like the ones mentioned above translated, this is the translation type you'll be looking for.

### Administrative Translation

The administrative translation is a translation type used for the documents and management texts of organizations like corporate or regional businesses.

Administrative translations can be considered a sub translation type of professional translations. However, not all professional translations are administrative, so it doesn't quite work, vice-versa.

### Other Types of Translations

As mentioned at the beginning of this article, there are endless ways you can break down the world of translation into different types. Here are some other translation types that we have not yet mentioned but are also quite common:

- Machine translation
- Judicial Translation
- Website Translation
- Script Translation
- Multimedia Localization
- Financial translation
- Commercial Translation (Also overlaps with professional translation)
- Legal translation
- Medical translation

NR – 21061 – RADIO JOURNALISM

UNIT - 1

Unit-1: Definition of Radio*:*

Radio is the wireless transmission of signals by modulation of electromagnetic waves with frequencies those of light. Radio Technology is called as Wireless technology or 'Wireless'. Edward Branly in 1897 used the word 'Radio' for the first time as 'Radio Conductor'. But the Radio word used as noun is coined by Walden Warren, an advertisement expert in 1907. The word Radio was adopted in United States Navy in 1912. Radio Frequency emissions include T.V, Radio, RADAR, cell Phone

- Radio waves are a form of Electromagnetic Radiation created by an electron and acceralating through radio frequency which is a portion of electromagnetic spectrum – 10 Hz to 100 Hz.
- The acceralation is caused by Alternating Current (AC) in the antenna.
- The Electro-magnetic spectrum involves Infrared, Visible Light, Ultra -Violet, x-Rays, Gamma Rays, Radio Frequencies.
- Radio frequencies travel by means of oscillating Electro-Magnetic fields that pass through air and vaccum of space equally and does not require medium of transport.
- When radio waves pass through electrical conductor the oscillating electric or magnetic field induces AC current and voltage in the conductor. This will be transformed into audio or other signals that carry information.

*2. Brief History of Radio Broadcasting in India*

*A. From 1921 to 1947*

The birth of Radio Broadcasting in India has stated on an experimental basis in the year 1921, when Times of India in collaboration with Post and Telegraphs Department broadcasted a Musical program on request of Sir George Lloyd to the concerned companies. In 1923, a broadcasting conference was held in Calcutta. From 1923 'Radio Clubs' proliferated in India. 'Radio Club Calcutta' was started 1923, followed by 'Madras Presidency Radio Club' in 1924. On March 27th 1925, Government officially gave a notification, inviting applications for setting of broadcasting stations in India.

The idea of regular Radio broadcasting service took shape for the first time in 1926 in the form of an agreement entered between Government of India and a private company called 'Indian Broadcasting Company Limited'. The company was started by a

group of businessman, with a meagre capital, inspired by the success of European Broadcasting Under the agreement a license for construction of two stations, one at Bombay and another in Calcutta was granted. The Calcutta station was inaugurated on 23rd July 1927, and Bombay station was inaugurated on 26th August 1927. But in three years they gathered only 7000 listeners and company went into liquidation by 1st March, 1930. In response to the popular demand and lobbying of investors Government decided to acquire the Indian Broadcasting Company Limited on 1st April 1930 and run the Calcutta and Bombay stations experimentally for a period of two years. The name of the company was changed to Indian State Broadcasting Service (ISBS).

After two years on May 1932, Government decided to continue the broadcasting and placed the ISBS under Department of Industries and Labour. But the Government's economizing efforts still reduced the number of listeners. But the starting of BBC's new empire program on shortwave increased the popularity of Radio. There was a rush to buy new Radio sets. Government en cashed it by imposing an extra duty on Radio sets. The purchase of 8000 new radio sets earned Government good revenues. The new earning was used to construct new radio station at Delhi, which was inaugurated in 1936.

A separate Department of 'Controller of Broadcasting' was created to take care of broadcasting operations under the Department of Labour in March 1935. On August 30th 1935, Lionel Fielden was appointed as first Controller of Broadcasting in India. The name of Indian State Broadcasting Service was changed into 'All India Radio' on June 8th 1936. Broadcasting was transferred to the Department of Communication in November 1937 and was later transformed to the Department of Information and Broadcasting in October 1941. The start of World War II catalyzed the growth of radio in India. New high power transmitters were started and external services division, started in 1941 was strengthened to counter the Nazi propaganda. Most of the News Services and the external services were started during the war years. During the war years 27 news bulletins were broadcasted every day.

*B.. From 1947 to 1990*

When India became independent All India Radio was a separate department under Department of Information and Broadcasting. It had six stations at Calcutta, Bombay, Delhi, Lucknow (02-04-1938), Madras (16-06-1938) and at Tiruchirapalli (16-05-1939). It had a total of 18 transmitters, six medium wave and 12 shortwave

transmitters. In 1947, AIR was transmitting programmes in 8 languages i.e. Tamil, Telugu, Gujarati, Marathi, Punjabi, Hindustani, Bengali and in English to 2, 75,000 listeners who were only 11.5% of Indian population residing in 2.5% of total area, predominantly in urban towns. The radio stations located in princely states were taken over by the Government after Independence.

Broadcasting was considered as a key role in the development of the country especially in achieving political integration, economic development and social modernization. Radio was an integral medium of communication and its popularity increased exponentially. From 1957, All India Radio was also called as 'Akashvani'. In the following years All India Radio had a slow but steady development. New broadcasting stations came up in all over India. Radio was instrumental in promoting social change through execution of innovative programmes like Radio rural forums for Agriculture communication in 1960's, promotion of adult literacy in 1980's, Women and legal rights issues in 1990's etc. The advent of regional radio in popularized the medium even more. Local broadcasting reflecting local issues of concern to the community and has taken the Radio to the nook and corner of the Country. By 1990, AIR had 91 broadcasting stations with 167 transmitters, out of which, 130 were of medium wave, 33 shortwave and 4 FM transmitters at Bombay, Calcutta, Delhi and Madras.

*C. At present*

A present AIR has a three tier broadcasting system National Service, Regional Service, Local service. National service reflects the broad spectrum f nation life and acts as complimentary to regional language. The 1000 KW transmitter at Nagpur to which the foundation stone was laid down in 1982 by the then Prime Minister Indira Gandhi along with the Delhi station form the National Channel. The National service was launched on 18th May 1988. National channel broadcasts centrally originated news bulletins in Hindi, English, Music and newsreels. All the existing regional centres form the middle tier. They emphasize the regional programmes in regional languages. The local radio stations form the third tier of broadcasting, catering to the local needs of the community. As on 2010, AIR has 223 broadcasting stations with 358 transmitters including 143 Medium Wave, 54 Shortwave and 161 FM transmitters. AIR covers 91.42% of countries geographic area and caters services to 99.13% of Indian population i.e. 104 million households in 24 languages and 146 dialects. At present there are 111 million radio sets operational in India.

SWOT Analysis of All India Radio

Strengths:

- Recently, the government has agreed upon revenue-sharing model, which is 4 % for the growth of the radio stations. So that they can develop themselves well because this industry is still in an introduction stage. The success of private FM stations, and reveals that radio listenership habits have changed considerably; not only are listeners tuning into it more often but also sticking to radio for longer hours every day. The advertisers, who would depend on word-of-mouth, pamphlets, brochures or ads in local supplements of newspapers, are welcoming the opportunity.
- Radio is considered as a background medium; because people can listen to radio anytime and anywhere they want.
- It is also a free medium. 90% of India has access to radio which is unmatched by any other media. Radio also reaches to uneducated village folk who do not read print publications. At the places where the literacy rates are low where people hardly read newspapers and radio is the only medium that they can understand. They can‘t afford a TV set. Therefore radio is more popular. Radio is the least cost medium and it helps to reach mass audience with various backgrounds. Radio offers its reach frequency and selectivity at one of the lowest costs per thousand and radio production is relatively inexpensive.
- Radio is considered as a medium where the ―Proximity to purchase‖ is very high. Radio is a complement to another media. Therefore, other media or the advertisers or agency can use this medium for brand recall.

Weakness:

- One of the major weaknesses of Radio is that there is very less differentiation in the programs that are aired. Most of the stations plays much of the music that is played consist of Hindi Film songs, and therefore it is difficult to differentiate between the programs of the different channels.
- Fragmented Audience - the large number of the audience in India is fragmented in various remote places and therefore, the percentage of listener tuned to anyone station is likely very small.
- No proper research available - research is very important for any advertising segment. Research is the main base to attract client and get more revenue. But, in India there is

no proper research is available. Many stations are conducting their own research which can be biased.

- Radio-only nature of radio communication is a tremendous creative compromise. An advertiser whose product depends on demonstration or visual impact is at a loss when it comes to radio. And like its radio message creates a fleeting impression that is often gone in an instant. Many advertisers think that without strong visual brand identification the medium can play little or no role in their advertising plans.
- Increase in listenership numbers but no increase in ad revenue. This is the situation that every radio channel is facing.

Opportunities:

- Getting copyright licenses from the government for running mega events which are aired on the AIR radio station and have been restricted to be aired on other private stations.
- Launching a radio station with 24-hour news channel Tie-ups with BEST or railway authority for playing the FM in train and in bus.
- The launch of Private Radio FM has managed to create a set of New Listeners' for the medium The new radio stations which will come in future they can have venture with the college or university campuses. And can play their station which will exclusively provide with the information relating to that university/college campus. With the coming of the many more new players in the radio industry each channels can position themselves quite different from others, like, if some station is targeting the health conscious people then their programming strategy will vary accordingly. And then it is easier for the advertisers also to decide on which channel to advertise.
- Allowing private FM players to start news and current affairs programs. One has to constantly innovate, and that is the challenge. Brand building is thus much more difficult. At the same time, we are very bullish, and gung-ho about this whole enterprise. Leaves huge scope for innovation in local market

Threats

- The biggest threat to private radio industry players is ALL INDIA RADIO. AIR is the biggest player in India because of its reach, low charges, government channel etc… Because of the new government policies there will be more number of stations and then competition will also increase. This is one of the biggest threats it faces. With no particular differentiation in the music. So, there is a fear of losing its brand loyalty.

*Objectives of All India Radio*

Broadcasting in India is a National service. It constitutes the most powerful medium of mass communication. It plays a significant role as a medium of information and education in a developing country like India, where the reach of other communicating media is not extensive. The following are the objectives of All India Radio.

1. All India Radio keeps the people all over the country informed quickly about Government policies, plans, programmes, and achievements through the medium of sound broadcasting by a variety of programmes.
2. It keeps the people informed of the important news and current events of topical interest and provides an appreciable amount of entertaining programmes.
3. Through its broadcasting AIR seeks to promote education, national integration and also develop various aspects of Indian culture.
4. It also gives timely assistance to public and Government departments by quick dissemination of information during national calamities.
5. It helps in promoting sales of goods and services through advertisements from its commercial services.

All India Radio informs, educates and entertains people in different languages through a variety of programmes on cultural, educational, scientific, agricultural, health, hygiene, fine arts, socio cultural themes etc and in turn earns substantial revenue for the Government through commercial broadcasting.

*Characteristics of Radio*

The following are the characteristics of the Radio

1. *Radio is the Medium for Hearing*: The most striking attribute of Radio is that it is an auditory medium. It has no visuals. It is blind. Listeners cannot see its messages. With Radio they can only hear and imagine objects, actions and ideas.
2. *Radio is a mass medium*: It addresses a many at the same time. With distance the contact becomes less personal than in face to face communication. The chance of being misunderstood is great. Also the feedback is not immediate.
3. *Radio lacks permanence*: The audience may not read and re-read messages as the print medium. Radio is a transient medium.
4. *Radio has no Visuals*: There is no image or text in the radio. The receivers cannot see the sender or broadcaster as they do on television or film. Radio is purely auditory i.e. a

predominantly a speech, music, sounds, silence or an auditory medium. The occasion of being misunderstood or of complete communication failure is very high. To use Radio effectively much effort must be expended in order to compensate for lack of visuals.

5. *Radio stimulates imagination*: The listeners or Radio supply the visual data for themselves. They picture the messages suggested by voices, words, sound effects.
6. *Radio is personal and intimate*: Real voices, emotions are passed through radio impulses. Warmth, compassion, anger, pain and laughter rare conveyed more adequately in an audio medium. With accent, pause, hesitation and a variety of emphasis and speed the voice report is able to convey far more than the printed speech. The fact that the radio often reaches the listener during his or her situation of solitude or privacy adds to the intimate character of radio.
7. *Radio listeners do other things*: Radio listeners can be working, travelling, driving, washing or doing other things when listening to Radio. Hence the audience will be half listening and much of the message could be missed. Ignored or misunderstood. The radio cannot command the full attention of the from the listener.
8. *Radio is an inexpensive medium*: Being portable and inexpensive it is an affordable medium to common people than the print or Television medium. The less educated, persons having difficulty in reading or illiterate persons are easily attracted to the radio.
9. *Radio negates geographic or physical boundaries*: Radio reaches the radio listener who could anywhere without any geographical limitations and can bring commonality between people living in different regions, having different cultures, learning and status.
10. *Instantaneous Message Delivery:* The messages given in the Radio are sent to listeners with a speed of light.
11. *Radio can suffer from interference:* The printed page is received exactly in the form in which it is printed but radio is always subjected to interference. What leaves the studio is not exactly what is heard. The intrusion of other stations signals, atmospheric noise, distortions of sound, fading signals all add to the infidelity of the message.

The Basic Elements of Radio

Radio is a medium of sound. While people might hear without trying, they generally do not listen without being stimulate. Hence Radio must stimulate them and trigger their imagination so they can picture the event being described. To do this, a combination of the following three basic elements: Voice, Sound, and Music are used.

- VOICE: The most important element of radio is voice, because it is generally the one used specifically to reach the listener with the desired information.
- SOUND: When used on radio, sound must be distinguished easily so the listener is able to interpret the sound and understand what is being conveyed. The roar of a jet engine and the muffled sounds of other flight deck activity will help the listener to visualize the scene.
- MUSIC: Music has a great suggestive power because it plays on human emotion and colours scenes. It touches the heart and mind and sets a desired mood.

When properly used, these elements should accomplish the following three distinct purposes:

- Attracting immediate interest
- Maintaining that interest through a particular presentation
- Satisfying the audience's attention and curiosity

*Listening to the radio Vs watching television*

The radio is one of the oldest kinds of popular media, widely available since the early 1920s. Today however, television is the most popular form of broadcasting. Despite this, radio has many advantages over T.V. which are easily overlooked.

- The first of these is obvious: cost. Every viewer has to pay more to watch television than a radio.
- Radio caters to a wide variety of tastes, from literature to gardening to all genres of music.
- One obvious drawback of radio is that it cannot provide visual information. However, this is not necessarily a disadvantage: a radio programme allows the listener to carry on with other tasks safely. For example, it would be extremely dangerous to watch television while driving. Listening to the radio is unobtrusive and does not impinge on the driver's observation, making it no less safe to listen to the radio while driving than listening to a favourite album of music.
- Radio is an entirely different medium to television. In some ways it is more demanding: for example, listening to a radio play requires a far greater use of imagination than watching the same performance being acted out.

The medium of radio has frequently been called the *''theatre of mind''*. Radio is

also described as the most pervasive medium of all, reaching more households than any other single medium. Radio is with us every day, whether at home, at the office or in the car. The two factors that contribute to the effectiveness of the spoken word are that the mind holds the spoken word in mental storage much longer and that the tone of the human voice gives words emotional impact that no picture can achieve. The main advantage of radio over other media lies in its accessibility.

Benefits of using radio as a medium:

1. Relatively low cost - It is relatively inexpensive to produce voice commercials for radio.

2. Selectivity - Radio stations broadcast in different formats, ranging from talk radio. This allows for a large degree of selectivity in media planning.

3. Flexibility - Radio has probably got the shortest lead time for material, enabling advertisers to change their messages at the last minute before going on air. In some instances, where disk jockeys read the advertising messages, the message may even be changed to studio.

4. Potential for mental imagery - Back to the concept of the theatre of mind. One of many benefits from using radio in the sense that the listener is able to use his or her imagination when listening to a radio commercial.

5. Integrated marketing opportunities - Many radio personalities and radio stations are used by advertisers in their involvement in local markets and as part of their overall marketing and advertising campaigns.

6. The ability to reach segmented audiences - Owing to the fact that radio comes in so many formats and is sometimes specifically focussed on regional or lifestyle audiences, the potential for successfully reaching specific audiences is greatly enhanced.

Writing for Radio

The writing for Radio differs from other forms of writing as radio is predominantly an audio dominated medium and does not have the support of visual. The following are the characteristics of the Radio

- The radio programming and writing follows a linear pattern i.e. chronological order is followed in describing events, incidents etc.
- Radio production requires special equipment and technical knowhow.
- The radio production equipment is relatively inexpensive.
- The cost for distribution of radio programmes in quite inexpensive.

- Radio is a transient medium i.e. it cannot be paused, playback when necessary.
- The radio programmes has low reference value.

  Writing for Ear

  Writing for radio is regarded as 'writing for ear' as it is predominantly an audio medium. A radio news copy is written for the ear, its style must reflect that fact. In contrast to writing done for the printed page, radio writing is more conversational and informal.
- Elaborately constructed sentences containing highly sophisticated language may effectively communicate to the reader but create problem to the listener, who must digest the text while it is being spoken.
- Whereas the newspaper reader has the luxury of to move along with his or her own pace, the radio listener must go along with the newscaster or miss out on information.
- Radio writing must be accessible and immediately comprehensible
- Moat widely used words need to be used in the radio text as the listener will not have time to consult the dictionary while listening.
- Simple and direct and short sentences, concise and conversational writing is adopted for radio script writing.
- Titles and number should be round off in the script to make it easy for listening.
- The writing for the ear must take care of the visual cues and the writer must get the description of the scene in a simple and understanding language.
- Clarity is utmost importance in the radio writing as there are many sources of disturbances and distractions.

  Radio Reporting

  In addition to getting all the basic information of a story, radio reporters have to make sure they record interesting audio to play in the newscasts. The audio comes in two varieties. write out the name of the news maker who was speaking will be included.

  Actualities:

  Here the actual voice of the newsmakers is recorded. They pass on expert knowledge, subjective comments or eye witness reports. Actualities are recorded for 15-25 seconds. Radio reporters select them from interviews they have recorded with newsmakers either in person or on the phone. The phone recorded voices are called as 'Phoners'. Actualities recorded in the field are often transmitted back to the studio. Then

they are transformed to the newsroom server so that they are played in the newscast. Sometimes these recording are called as 'Carts'. Before an actuality can be played on the newscast a lead is written to introduce it. Then a write out is needed to conclude the story. In the

Voicers:

Here it is the reporters own voice that is heard from the scene of a news event. The voicer may feature a detailed description of the event, analysis or explanation of an event. Voicers are generally 20 to 50 seconds long. They may be recorded at the scene or recited from notes on the phone. Voicers do require lead-in to introduce the story but in most cases do not require write outs.

Radio News releases

News on the radio stations is commonly presented in a ten minute or fifteen minute blocks and aired at the top of bottom of the hour. Sometimes special news bulletins are given for a period of fifteen minutes of half an hour depending on the importance of the event. Usually the ten or fifteen minute news bulletins are divided into segments to accommodate presentation of specific information. Every station has a fixed format that allows for a specifically timed local, regional, national and international story. Usually the sports and weather information is place last in the story. Every newscast has a 30 or 60 second commercial break and it is counted as part of newscast.

The number of the stories in a news cast depends on the information received and the importance of the events. The significance and scope of the stories is taken into account before fixing the slots. Generally each story will be given a fixed time i.e. 15 to 25 seconds and the most important and significant stories will be given more time. Stories are arranged according to their rank of importance with the most important story occupying the top slot. The assembling of the newscast takes skill, speed and accuracy. Stories will be up dated for their last minute developments. The on the scene 'voicers' and 'actualities' received from the news services are slotted in the news cast according to the stories selected. Then the stories along with the script containing the lead-in and write-out are handover to the production for recording or live relay.

Radio Writing Techniques

Radio writing techniques are designed to capture and hold the audience's attention until you have delivered your message. The six techniques which are used as follows:

- Aural sense appeal
- Rapid getaway
- Power of suggestion
- Pacing and timing
- Freedom of movement
- Conflict

Aural Sense of Appeal: Radio depends entirely on the ear; it must work completely on the listener's mental image inspired by sound waves coming from the radio speaker.

RAPID GETAWAY Radio material must capture the attention of the audience within the first few moments of presentation or listeners will be lost. The material must present a challenge, a promise, a suggestion or a conflict to arouse the listener's attention.

POWER OF SUGGESTION The human mind is a vast storehouse of scenery. The radio writer suggests to the audience what the scene should be, and listeners — through their mind's eye — can see anything from a pinhole to Waikiki Beach.

PACING AND TIMING You must prepare the material for delivery within a definite time frame. Within this timeframe, the changes in quality, emotion, thought or feeling of the material are controlled.

FREEDOM OF MOVEMENT As the radio writer, you can take listeners from one point on earth to another, or even into outer space with words, sound effects or the appropriate music.

CONFLICT Radio writers call conflict the backbone of interest in radio writing. Conflict is the ageless formula of hero against villain, good against evil, the fight for survival and the solution to difficult problems.

Radio News Writing

Radio news style, while dictated by the need for getting and holding the attention of an audience, differs from station to station. It is alive and constantly changing along with the broadcast industry itself. As with most areas of journalism, there are few absolutes.

When scripting broadcast copy, you will face many subjective choices that can only be made by using your own common sense. The guidelines presented in this chapter are intended to be consistent with the style recommended by he Associated Press and United Press International. However, keep in mind that these guidelines are just that — guidelines. For your copy to serve any worthwhile purpose, it must be the kind of spots and releases the individual radio stations in your geographical area desire and are able to use. Most local broadcast stations have individual preferences regarding their newscasts and announcements. Broadcast writing is highly personalized — far different from writing for the print media. Broadcast copy is written and designed for the ear. It is personal and has a sense of immediacy. The listener becomes involved and feels as though he is a part of the event being reported. THE SIX Cs: Broadcast copy must measure up to the following six Cs:

- Clear
- Concise
- Complete
- Conversational
- Current
- Correct

Clear:

Clear copy is written in a simple, easy-to- understand manner. It is developed in a logical way, flows smoothly and is easy for the listener to follow. Even the simplest story may be misunderstood on the basis of one hearing. The listener's attention may be divided between any numbers of distractions. Therefore, radio news story should be perfectly clear to avoid misinterpretation Hence jamming of too many thoughts or numbers into one sentence should be avoided. Generally, sentences that are more than 25 words contain more than one thought and should be rewritten into separate sentences. The same principle applies to dependent and independent clauses. Commonly accepted literary techniques, un- usual words and complex phrases, also tend to obscure sentence meaning and you should avoid the use of such. In broadcast writing, simple words say it best. Choose words that everyone will understand the announcer as well as the listener. Do not ignore colourful or descriptive words. However, steer clear of flowery phrases and trite expressions that simply take

up time and are of no value. Avoid slang and always translate military, technical, legal and foreign terms into simple language.

Concise

A concise copy can be written when all unnecessary words have been trimmed away and only those words essential to convey your thoughts remain. It cannot be overemphasized that broadcast writing is writing for the ear. Listeners do not have the opportunity of "rehearing" your copy, so your sentences should be direct and crystal clear. If your copy is long and involved, you put a strain on the listener and hinder comprehension. This does not mean broadcast writing should be kept at a fifth grade level — but given the choice of being complex or simple, you should choose the latter. Your obligation is to put information into meaningful terms that the "average audience" will understand, and more important, want to hear.

Complete

For the broadcast story to be complete, you must include in it at least four of print journalism's five "Ws." Obviously, you will normally state what happened in your lead sentence. Then you will tell to whom it happened, when it happened and where it happened. Why and how generally are not critical, although to be complete, some stories will require this information.

Conversation

Like good conversation, broadcast writing is informal and free-flowing. Write the way you talk. Let the story tell itself. This may sound easy, but it will take some effort in the beginning. A common pitfall is to write a story as it may have been required for an English composition or a print journalism assignment. Broadcast copy is read aloud by the announcer. It is not read by the listener. The twofold objective of the conversational tone is that first, it allows the announcer to pick up the drift of the story and second, it makes the copy sound "right" to the audience. A good broadcast writer "listens" to the story being written. When you have finished writing your copy, take it out of the printer and read it aloud to make sure it sounds conversational. Make sure there are no hard-to-pronounce words or combinations of words that are awkward to the ear. Rid your copy of words that might be unfamiliar to your listeners.

Current

If your story is not current, you do not have "hard" news. News of a perishable nature is usually hard news. If you have a story of immediate news value, you should expedite its completion and delivery to the media. By the same token, if there are new facts or circumstances relevant to your initial release, an update of the initial story should be provided and marked as an update). This will help ensure currency. It is also helpful if the new or changed elements of the story are identified to reduce possible confusion with information in the original release. You will feel the pressure of meeting deadlines, but remember your credibility is on the line.

Correct

The hallmark of journalism as a writing art — either print or broadcast is the accurate presentation of facts. Your finished product must correspond accurately with the facts of the story. In the field you will follow every possible lead to get the facts as well as report them.

Special Audience Programmes

Music Programmes

Akashvani Sangeet Sammelan concerts were organized at 24 Stations of AIR across the country on 20th and 21st October 2007 featuring artists of both Hindustani and Carnatic music. AIR introduced regional Folk & Light Music Festival at par with Akashvani Sangeet Sammelan. The purpose of this regional folk & Light Music Akashvani Sangeet Sammelan is to project, promote & propagate the rich folk cultural heritage of our country. To scout new talent, All India Radio organizes All India Music Competition. AIR music competition is a regular feature of AIR to reach & hunt new talent among youth. This year a number of new talents in the category of Hindustani/Karnatic Music have been added.

External Services Division

External Services Division of All India Radio rank high among the External Radio Network in the World both in reach and range covering about 100 countries in 27 languages, 16 of them Foreign and 11 Indian, with an enormous Programme output of about 70 hrs 30 minutes everyday. All India Radio through its external broadcast keeps the overseas listeners in touch with the Ethos of India and things that are Indian, reflecting the ideas and achievements of India as an open society.

The Foreign languages are Arabic (3 hrs. 15 meters) Baluchi (1 hr) Burmese (1 hr. meters.) Chinese (1 hr. 30 meters) Dari (i hr 45 meters). French (45 Mts) Indonesian

(1 hrs) Nepali (4 hrs) Persian (1 hr. 45 meters.) (Pushtu (2 hrs) Russian (1 hrs) Sinhala (2 hrs 30 meters Swahill (1 hr.) Thai (45 Mts.) Tibetan (1 hr. 15 meters) and English (GOS) (8 hrs. 15 Mts.) The Indian Languages are Hindi (5 hrs. 15 Mts.) Tamil (5 hrs. 30 Mts). Telegu (30 Mts.) Bengali (6 hs. 30 meters) Gujarati (30 Mts.) Punjabi (2 hrs.) Sindhi (3 hrs. 36 Mts.) Urdu ( 12 hrs. 15 Mts.) Saraiki (30 meters) Malayalam (1 hrs.) Kannada (1 hr.) The broadcasts follow a composite partners and generally comprise of News Bulletin, commentaries, current Events and Review of the Indian Press. Besides Newsreel Magazine programme on sports and literature, talks and discussions on social economic, political, historical, scientific and cultural subjects, features on development activities, important events and institutions, classical, folk and modern music of India's diverse regions, form a major part of total programme output.

External Services Division projects the Indian view on matters of national and international importance and stimulates interest in the culture, heritage and socioeconomic milieu of India through its broadcast. The dominant theme of all programmes in External Services Division continue to present the reality of India as a strong Secular Democratic Republic, vibrant, forward looking and engaged in the task of rapid economic, industrial and technological progress. The facts of India's large technical manpower and its achievements and ecological balance, its commitment to restoration of human rights and international peace and its contribution to the creation of a new world economic order are frequently discussed.

External Services Division continues to supply recordings of music, spoken word and composite programmes to about 24 foreign broadcasting organizations under the existing Cultural Exchange programme. External Services Division's transmission directed to SAARC countries, West Asia, Gulf and South East Asian countries continue to carry the 9.00 p.m. National bulletin in English, originally meant for Home Services. This apart, External Services Division continues to beam all across the globe commentaries on contemporary and relevant issues and press reviews in all its transmissions.

Farm & Home Broadcasts

The commitment of All India Radio to the rural audience dates back to more than 50 years. All stations of All India Radio broadcast Farm & Home programmes directed at rural audience. In fact, special programmes have been designed to cater to the day to day seasonal needs of the farming community. To broadcast the latest technology and information for agricultural output is a continuous process of its Farm & Home

programme. These programmes not only provide information about agriculture but also create awareness about the ways and means to improve the quality of their lives. The programmes are broadcast daily in the morning, noon and evening. The average duration of Farm & Home broadcast is 60 to 100 minutes per day. Farm & Home programmes also include programmes for rural women, rural children and rural Youth.

All India Radio provides extensive programmes on land and water conservation, sustainable agriculture, biotechnology, integrated pest management in crops, crop insurance schemes, environment protection, disaster management and role of panchayats in rural development etc. These programmes are produced with the help of subject matter experts. All India Radio maintains a very close liaison with the Ministries and Departments of agriculture & rural development of central and state governments. The programmes are mounted in local and dialect from different stations. Local Radio Stations also broadcast regular programmes on rural development in different formats. Dialogues, discussions, talks, interviews, features, serials, dramas, slogans, jingles, phone-in-programmes, musical features and farm school on AIR etc. are used to convey the message through radio.

AIR has stepped up its activities of Agriculture Broadcast with the launch of exclusive project Mass Media Support to Agriculture Extension with the title Kisan Vani for AIR from 15th February, 2004 in collaboration with Ministry of Agriculture to inform local farmers the daily market rates, weather reports and day to day activities in their area at micro level. Presently, "Kisan Vani" is being broadcast from 96 FM stations of AIR.

Environment Programmes

Keeping in view the importance of the subject, all the AIR stations are broadcasting daily programmes on Environment for 5 to 7 minutes duration and weekly programmes of longer duration for more than a decade. The importance of protecting environment is being discussed in our other programmes i.e. health/ women/ rural women/ youth and children programmes also for making people aware of this serious issue. The AIR stations are broadcasting programmes on the subject on the basis of instructions and guidelines issues by the Directorate. In order to inform and educate the listeners, living both in urban and rural areas, for creating environmental consciousness among them on preservation of environment through development of forest, afforestation, social forestry, far forestry etc., these programmes are mounted in

interesting and imaginative way. All AIR stations in their local languages are broadcasting these programmes in different formats like talks, discussions, features, news, items, sports, serials etc. AIR Stations have been advised and reminded from time to time to intensify and include the programmes on Environment in their schedules.

**Family Welfare Unit**

AIR, with its vast network of about 225 Radio Stations, broadcast programmes on health and family welfare. All AIR Stations broadcast family welfare programmes in the regional languages/ dialects of our country. AIR Stations broadcast maximum number of programmes on health and family welfare. The programme cover general topics as well as special audience programmes in various formats like talks, discussions, features, quiz, jingles, spots, short stories, drama, success-stories, phone in programmes etc. Apart from this rest of AIR stations, including local Radio Stations are also mounting programmes on the theme regularly.

National communication strategy has been sent to all major stations as a resource material to highlight the new communication strategy. Fresh instructions have been issued to all AIR stations to concentrate more on importance of small family size, methods of prevention of pregnancy, sterilization, broadcast of field based programmes (interviews with beneficiaries of family planning), importance of nutrition in food, child care, immunization, breast feeding and rising the age of marriage etc.

Women's Programmes

All Stations broadcast programmes for rural women as well as urban women at the timings convenient for listening by the respective target groups. The programme directed to women listeners cover subjects related to socio- economic development of women, health and family welfare, food and nutrition, scientific home management, women entrepreneurship, education, including adult education, gender issues etc. These Programmes also aim at creating wide social awareness about rights and privileges of women through the propagation of legal literacy.

All India Radio strives, through its programmes, to seek to raise the social consciousness of the country in regard to attitude towards women. Different traditional folk forms are used to communicate specially with the rural women audience.Besides the issue of women forming the main part of the women's programmes, the problems in general faced by women and the need for change in social attitude towards women also forms an integral part of the general broadcast. Special programmes as well as general

audience programmes are being broadcast focusing on the issue to change social attitude and behavioural practices towards women.

**Children's Programmes**

All AIR Stations broadcast programmes for children on regular basis. In the programmes addressed to women and general audiences, stress has been laid on programmes regarding health and care of mother and the child. Programmes dealing with immunization and primary health education form a regular part of our broadcasts.

Programmes are planned keeping in mind the following action points:-

- Protection of rights of children, specially, regarding child labour
- Care and support to disabled children.
- Care and support to children under difficult circumstances.
- Equal status of girls and equal rights to women.
- Universal access to basic education to children and more attention to girl's education.
- Safe motherhood, planning of family size,
- Providing safe and supportive environment to children.
- Improvement in the economic condition of family and self reliant society.
- National and international cooperation for better future of a child.
- Safe drinking water facility and sanitary means of excreta disposal.

Special programmes focusing on the status and importance of the girl child in various formats such as discussion, comparing, talks, short stories, jingles, spots etc. are being broadcast during the transmission on a continuous basis at regular intervals throughout the year to create social awareness. AIR broadcast programmes from almost all its stations for children of three categories, viz. programmes for children between the age of five to seven years & eight to fourteen years and special programmes for rural children. Some of the programmes are broadcast on weekly basis. Plays, short stories, features, choral songs, interviews, stories from epics etc. are part of these broadcasts.

International Relations Unit

International Relations Unit of DG; AIR remained quite active during 2008 in carrying out and coordinating international activities and commitments concerning All India Radio. A number of AIR official participated in the international events abroad. IR Unit also coordinates exchange of radio programmes with other broadcasting organizations of different countries under CEP Agreements signed between Govt. of India and other countries. There are 41 countries at present with whom Government of

India has ongoing 'Cultural Exchange Programmes Agreements' figuring cooperation in the field of Radio' broadcasting. Many high level delegations from many countries visited AIR during the period with the aim to explore avenues for better cooperation with AIR /Prasar Bharati. Many organizations is other countries have also shown interest in AIR 's broadcast comment to use the same in their networks.

5. Radio Bridge:

Radio Bridge is a radio programme based on Information Technology format. Today Radio has taken giant leaps in field of Information technology application in its broadcasts. Radio Bridge means connecting different stations throughout the length and breadth of the country using Phone in technique. In this technique, an expert sitting in one place i.e. in a central radio station interacts with the other news presenters, readers, and common man in other radio stations across India by dialling them and recording their voice or connecting them live. This format was first used by All India Radio for covering election campaigns and results.

Radio Bridge is basically an interactive programming where the listener and the presenter talk to each other through telephone. Their talk goes on air instantly. Such presentation needs advanced publicity, so that the listeners can get ready to air their grievances, queries or requests. They dial up the announced telephone number at a stipulated and get their problems discussed with experts in the studio. Today the phone in format is being used to wide range of programmes like request for film based songs, health related programmes, rural broadcasts etc. The Radio Bridge gives a unique opportunity to interact live with many people in a specified time and place. It is now extensively used during opinion surveys, election programmes as well as during major social and sports events.

Advantages of Radio Bridge:

- The programme gives satisfaction to the listener as his voice is being listened and replied immediately. It installs a sense of participation among the listeners.
- Radio Bridge is regarded as one of the best interactive programming format among the entire range of radio programmes.
- With the increasing telephone density in the country large populations having phone facility can be included in the format making it more participative and interactive.

- Radio Bridge is an immediate feedback device and one of the best methods to dissipate any kind of public information

Disadvantages:

- Radio Bridge is a highly technical oriented programme where in the technical crew needs to be on high alert during programme to avoid any hick ups and breaks.
- It needs good advance publicity and detailed planning to connect various stations in a given specific time period.
- The programme needs to show case varied divergent opinions, issues; otherwise it can become boring and stale.
- The presenter needs to have expertise in dealing with various listeners and behave tactfully in interacting with them keeping the time constraints.

**Trends in Radio Broadcasting**

Broadcasting encompasses much more than transmission of programmes from a radio transmitter. The rapid advancements in technologies and the ever extending areas of broadcasting are leading to a review of the nature, style and content of programming. The entire focus now is on the content presentation in a technologically advanced style, with efforts to see that the message reaches the audience in an interesting way. Broadcasting has evolved from the past many years by adapting to the various innovations and changes brought about by the modern technology, changing tastes of the audiences and requirements. The following are the changing trends observed in the areas of broadcasting.

- Changes in structures
- Changes in regulations.
- Changes in mode of transmission.
- Changes in programme concepts.
- Changes in production and presentation.

**A. Changes in structures:**

The renowned communication specialist Marshal MacLuhan observed that the world has become a 'Global Village'. With the use of technology such as Printing press, high power transmitters and satellites communication has become overly centralised. This has led to the unidirectional flow of messages and the system became immune to the diversified audience and reflecting their opinions. However during the last few

years the trend is seeing a reversal and the communication is now focussed on the local audience and catering to their interests. This trend is also evident in radio broadcasting.

- Broadcasting structures in India has changed from centralised to decentralised structures.
- Five local stations were first established by AIR during the sixth plan. (1980-1985) on an experimental basis. The local radio stations scheme received a massive push from the Government as the experimental stations proved extremely popular.
- Three types of local radio stations were generally conceptualised depending on the type of funding
    1. Public service local radio station catering public service funded by Government.
    2. Commercial local radio station funded by advertisements and commercial ventures.
    3. Community local radio station, a non profit radio station dedicated for providing programming specifically designed to a community with distinct geographical, cultural and linguistic pattern.

**B. Changes in Broadcasting Regulations**:

Broadcasting became a regulated affair in every country and every country started to make its own legislations depending upon its context and need.

- In Germany broadcasting is governed by public law and inter-state agreements.
- In U.K, BBC works under royal charter while the private radio stations were under the control of Independent Broadcast authority.
- In US, the Federal Communications Commission (FCC) was set up under the commission act of 1934 for supervising broadcasting.
- In China it is governed by the Article 22 of the constitution of People s Republic of China.
- In India the Indian Telegraph Act, 1885, Article 19(1)a of Indian Constitution and Prasar Bharati Act regulate the broadcasting.

Apart from regulations many noticeable deregulations were also made to make the system more accessible and to undertake more commercial activities.

- In Japan the Amendment of 1950 broadcast law provided the broadcasting units to take up auxiliary services.

- BBC made necessary changes in its regulations in order to accept commercial advertisements in some of its radio services.
- AIR commercial services which were once limited to Vividh Bharati, now extend to various primary channels.

**C. Changes in mode of transmission**

Medium Wave transmissions supplemented by the shortwave were the preferred mode of transmission in most of the counties. The trend has changed to as transmission in FM mode and further new technological innovations like use of satellites and digital technology had contributed to more advanced form of transmission systems.

- FM Radio: FM is the frequency modulated system of transmitting radio programmes and can reach about 70 kilometres with better audio quality than AM. FM technology was developed in 1933 but the system of broadcasting stabilized in 1960. In India FM radio broadcasts started in 1977 at Madras (Chennai). Large scale expansion of FM broadcasting took place in the VII five year plan.
- Sky Radio: AM and FM technologies are land-based and terrestrial broadcasting systems. Sky radio refers to satellite broadcasting system. The programmes are uplinked to satellite from a central radio transmission centre and the same can be downloaded at the relaying centres using devices for down linking.
- Digital Audio Broadcasting: The method of 'Analog' broadcasting has shifted to 'Digital'. In the analog broadcasting the series of sound waves closely resembling the original sound waves are broadcasted. In digital mode the collection of samples of original sound is translated into a binary computer language. Digital sound enhances the quality of the original sound.

**D. Changes in programme concepts:**

There has been marked change in the approach in programming particularly in area specificity and in participation of listeners in programming process.

- The concept of local radio has introduced an element of participative nature in the programming long with reduced the gap between the broadcasters and public. A down to earth character focussing local news vies and opinions found place in the programming. Ample coverage was given to local events, festivals, fairs, meetings etc.

- With vast and rapid developments in technology, radio reached to the doorsteps of listeners through interactive programming. Programmes like 'Phone –in-radio' 'Radio-on-demand' etc have increased the two way communication between the listener and radio broadcasters. Programmes which provide advices, information, suggestion on a given topic of common interest like health, agriculture, culture etc became very popular in radio. Extending the techniques of 'Phone-in–services' radio stations started to organize 'Radio bridges' i.e. programmes in which the expert placed in studios of different radio stations with a moderator in Delhi can discuss the subjects of importance and also clarifies doubts of listeners in any part of the country by involving them directly into the discussion through phone.
- A new form of conveying the social message i.e. the 'drama format' was started in radio.
- The trend of news reading evolved into news presentation in which the news is analysed and made more understandable to public by discussing all possible angles and sharing opinions.
- New value added services like 'Radio Data System' were started in which programme associated date is presented in the form of text.

**E. Changes in production and presentation**:

- The conventional way of recording and editing was done using cassette recorders, ultra-portable and portable recorders etc. Lately computer hard disc-based recording, editing and playback systems are being introduced to enhance the efficiency and quality of programme production.
- Portable digital news gathering equipment is [provided to the news correspondents to enable them to feed the news from anywhere in the country apart from enhancing the speed and quality of news coverage.
- TRACT (Transportable Communication Terminal) with direct access facility to the satellite is available with the radio networks. This facilitates instant coverage of festivals and happenings, live commentaries of sports and games etc.
- The earlier 'formal', announcement type of radio presentation has given way to a more informal presentation in which the radio presenter discusses the issues with the listeners.

- The news reading concept transformed into ‘compering’ in which news anchors will announce and also establish personal rapport with the listener by involving him in the discussions.
- The presentation has become more of a ‘chat type’ in which two or more presenters discuss the issue.
- The advent of FM channels has created new professions like Disc Jockeys, aho present music with a free style. They provide entertainment inter spread with information on various issues like traffic, weather etc. They personally interact with the listeners over phone and play the music of listener choice adding interesting snippets on music or a joy full comment.

**Community Radio:**

The expression Community Radio has been defined in different ways. It has been called a local radio, people's radio, democratic radio, and so on.

- According to Lewis (1995): "The community radio is a form of local radio which defines itself as an autonomous entity and relies on the community for its survival without any commercial aims or objects."
- According to UNESCO, Community radio is 'a medium that gives voice to the voiceless, that serves as the mouthpiece of the marginalised and is at the heart of communication and democratic processes within societies'.

Community radio is a type of radio service that offers a third model of radio broadcasting beyond commercial and public service. Community stations can serve geographic communities and communities of interest. They broadcast content that is popular and relevant to a local/specific audience but which may often be overlooked by commercial or mass-media broadcasters. Community radio stations are operated, owned, and driven by the communities they serve. Community radio is not-for profit and provides a mechanism for facilitating individuals, groups, and communities to tell their own diverse stories, to share experiences, and in a media rich world to become active creators and contributors of media. In many parts of the world, community radio acts as a vehicle for the community and voluntary sector, civil society, agencies, NGOs & citizens to work in partnership to further community development as well as broadcasting aims. Modern-day community radio stations often serve their listeners by offering a variety of content that is not necessarily provided by the larger commercial radio stations. Community radio outlets may carry news and information programming

geared toward the local area, particularly immigrant or minority groups that are poorly served by other major media outlets.

7.1 Models of community radio

Philosophically two distinct approaches to community radio can be found though the models are not necessarily mutually exclusive. One stresses service or community-mindedness, a focus on what the station can do for the community. The other stresses involvement and participation by the listener. The service model localism is often prized, as a third tier, can provide content focused on a more local or particular community than larger operations. Sometimes, though, the provision of syndicated content that is not already available within the station's service area is seen as a desirable form of service. Within the access or participatory model, the participation of community members in producing content is seen as a good in itself.

Community radio is confined to a small geographical area. It depends on low power transmission covering not more than 20-30 km radius. It serves a community which uses common resources for livelihood, has common development issues and concerns, which are relatively localised, nevertheless connected to national and regional development goals. The concept of community radio developed in the West as an alternative to or a critique of the mainstream broadcast media. Tracing its origins in Europe in the 1960s and 1970s, McCain and Lowe (1990) found "swashbuckling entrepreneurs boarded the airwaves illegally and seized as much of the audiences as they could carry away from the treasure chest monopolies controlled by the State with its public service model of broadcasting." Thus, pirate stations have been a major factor in motivating governments and national broadcasting systems to introduce legitimate local radio in Europe.

**Advantages of Community Radio**

The community radio projects were mostly associated with externally funded development projects which were influenced by the discussions and inclusive concepts of participatory communication for sustainable development and new understanding of communication as a two-way process rather than just communicating 'to' the listener.. The community was treated as the social space within which participation and two-way communication process would occur. This reinforced the need for planning communication strategies to catalyse development efforts in the immediate communities.

- Communities are not monolithic units. They consist of people with different positions, individual/community priorities and varied approaches to their diverse questions and their solutions. There are also different levels of connectors and catalysts within communities. The community radio provides a platform for all segments of population to discuss common issues from different viewpoints in a positive atmosphere.
- All members of the community have to discipline themselves when participating in the programmes of community radio. They are expected to follow certain norms prescribed by the code of conduct of the radio station. In effect, community radio trains the community members in a very practical way for democratic behaviour.
- The community radio mode provides opportunities to project and discuss the community's common issues, helps promote a sense of belonging among community members and strengthens the community bond among individual members. Thus the objective of community radio programming is to promote democratic discussions and a platform for expression of divergent view points.
- Community radio can facilitate contextualising national development programmes within the immediate community and taking national development goals as close as possible to the intended beneficiaries. Through community radio, members are able to feed-forward on local development concerns, giving an opportunity for development agencies and authorities to get involved in a constructive dialogue on development priorities at local levels.
- Similarly, the community radio provides opportunities to the community to make reiterative evaluation of programme implementation and eventually to make development inputs more relevant and efficient. This transparent process makes the community rely more on an integrated national system in which the degree of power sharing between the centre and the periphery is understood by each other.
- The ability of the communities to be involved in shaping programme implementation at the grassroots levels is well assured. A regular community dialogue and feedback facilitates continuous improvement in programme delivery and makes the radio centre more responsive.

- At the same time, community radio helps facilitate self-reliance by mobilising resources readily available with the community. They can analyse their problems and propose their own solutions. This confidence makes them consider themselves as a part of the system they belong to. The very recognition that they have the possibility to influence national policy implementation at grassroots levels makes them feel a part of an inclusive nationhood.

Community radio operations have distinct characteristics which differ from commercial and national Public Service Broadcasters (PSB) in regard to its mission and service. Community radio does not compete with commercial and PSB, rather plays a complementary role. But primarily, community radio is operated by and for the community and owned by the community itself. It is an empowering tool for the community. A nation consisting of empowered communities is more secure as they can make an equitable contribution to nation building.

**Community Radio Initiatives**

The advent of low-cost low-power EM transmission and downsizing of production equipment and the experiences in different parts of the world provided impetus for community radio. Some initiatives were taken to make Community radio as a potential participatory and two way communication tool to support development in rural societies of developing countries.

UNESCO supported community radio projects in Homa-bay in Kenya, and Mahaweli in Sri Lanka, in the early 1980s are among some of the earlier efforts in this direction. But, given the fact that the countries were not yet ready to relinquish their broadcasting monopolies, these early initiatives had to be carried out within the Government-owned broadcasting systems.

**Mahaweli Community Radio: Sri Lanka**

The first Asian community radio was established at Girandumkotte in Sri Lanka in 1986 under the Mahaweli Community Radio project. In fact, the project was started in 1980 as a community programme service, serving the Mahaweli settlements under which nearly 60,000 families were resettled downstream the Mahaweli River. The purpose of this community radio project was to cater to the needs of the newly-settled families. It aimed to help them exchange their settlement experiences, learn new skills from each other, give timely information on day-to-day activities and help in catalysing development in the new communities. It was a new experience where both young and

mature members of the settlers' families functioned as volunteer broadcasters. They identified various settlement issues, animated the community through their own programmes, much of which also related to cultural expressions which they brought from their place of origins. Lively interaction between settlers and field officers responsible for various settlement administration matters were broadcast over the community radio. These broadcasts enabled policy makers and senior officials responsible for settlements to learn about problems and prospects of the settlements. It also helped to establish an all inclusive decisions-making process to solve many important issues such as water distribution, marketing avenues, health, education, etc. The Mahaweli community radio project of Sri Lanka in fact was administratively under the national broadcaster, Sri Lanka Broadcasting Corporation. The unique feature of the Girandumkotte community radio system was the airing of the volunteers' produced programmes. There were the three expert producers assigned to the station by the Sri Lanka Broadcasting Corporation. They were all fresh recruits, specifically trained for community broadcasting and were therefore not highly influenced with the ideas of the so-called professional broadcasting or commercial programming of the urban centres. They acted as technical consultants and trainers of the volunteer broadcasters.

**Thambuli Community Radio: The Philippines**

The first truly community-owned and operated Asian community radio stations were established in the Philippines with UNESCO-supported Thambuli Community radio project. The "Thambuli Community Radio Project" has set up a management and training team that co-operates with communities to organise independent community radio stations in less developed rural areas. So far, twenty two community radio stations have been established in different rural communities. In the project, the thrust is on the local communities to build the radio station. Through focus group discussions, they set the guidelines for the broadcasters; they organise the radio team from all sectors of the village. All team members volunteer to share work. The project provides equlipment, training, facilitates research and helps in identifying community development schemes. Devoid of commercial or sectarian interests, these small radio stations help strengthen the democratic process by providing access to different viewpoints, build tolerance and help animate the local development efforts. For the communities involved, there is a deep sense of pride of being the masters of their own

communication facility that allows correlating their activities with the wider national development goals.

**Radio Sagarmatha: Nepal**

Another independent community radio movement in Asia began in Nepal. Radio Sagarmatha is Nepal's first independent community broadcasting station and represents South Asia's first effort at "independent community radio." The Sagarmatha radio station was established with financial and technical assistance provided under UNESCO's International Programme for the Development of Communication (IPDC). . Under Nepal's National Communication Policy Act (1993), a special task force, Radio Sagarmatha prepared the guidelines for the radio project. Private sector participation in FM broadcasting is one major provision of this act. Radio Sagarmatha has been on air daily on 102.4 FM with its innovative combination of educational, informative and entertaining programming. Radio Sagaramatha's programmes concern vital issues affecting the everyday lives of the citizens of Nepal's capital Kathmandu and its environments. Radio Sagaramatha's programmes have looked at Kathmandu's growing problems such as air pollution, urbanisation and its impact on heritage sites, tourism, threat of HIV / AIDS and garbage disposal. Radio Sagaramatha serves the ethnic, religious and linguistic diversity of over two million people around the Kathmandu valley

Community broadcasting is a relatively new concept in Nepal. Radio Sagaramatha's listeners are mostly urban citizens of Kathmandu which is the nation's social, economic and political centre. Thus, the radio is dealing with an intelligent, informed community. This listener profile is both a challenge as well as an opportunity. Getting attention of this audience demands programming that is competitive, comparable and superior to what already exists. It is an opportunity, because Sagaramatha is dealing with a public that has always influenced Nepal's political and economic decision-making. Thus, the community radio is also in a position to influence change. This environment shapes Radio Sagaramatha's mission. Nepal now has a strong community radio movement with nearly six community radio stations in different parts of the country. Some of them have been established by people who have formed in to community co-operative societies, deemed to be a good model to ensure community ownership.

**Community Radio policy in India**

Community Radio Policy in India, guidelines provided by Ministry of Information and Broadcasting, GoI. In December 2002, the Government of India approved a policy for the grant of licenses for setting up of Community Radio Stations to well established educational institutions including IITs/IIMs. The matter has been reconsidered and the Government has now decided to broad base the policy by bringing 'Non-profit' organisations like civil society and voluntary organisations etc under its ambit in order to allow greater participation by the civil society on issues relating to development & social change. Basic principles of Community Radio policy guidelines in India are provided by Ministry of Information and Broadcasting. An organisation desirous of operating a Community Radio Station (CRS) must be able to satisfy and adhere to the following principles:

- It should be explicitly constituted as a 'non-profit' organisation and should have a proven record of at least three years of service to the local community.
- The CRS to be operated by it should be designed to serve a specific well-defined local community.
- It should have an ownership and management structure that is reflective of the community that the CRS seeks to serve.
- Programmes for broadcast should be relevant to the educational, developmental, social and cultural needs of the community.
- It must be a Legal Entity i.e. it should be registered (under the registration of Societies Act or any other such act relevant to the purpose).

Transmission and power range of Community Radio stations in India

- CRS shall be expected to cover a range of 5-10 km. For this, a transmitter having maximum Effective Radiated Power (ERP) of 100 W would be adequate. However, in case of a proven need where the applicant organisation is able to establish that it needs to serve a larger area or the terrain so warrants, higher transmitter wattage with maximum ERP up to 250 Watts can be considered on a case-to-case basis, subject to availability of frequency and such other clearances as necessary from the Ministry of Communication & IT.
- The maximum height of antenna permitted above the ground for the CRS shall not exceed 30 meters. However, minimum height of Antenna above ground

should be at least 15 meters to prevent possibility of biological hazards of RF radiation.

- Universities, Deemed Universities and other educational institutions shall be permitted to locate their transmitters and antennae only within their main campuses.
- For NGOs and others, the transmitter and antenna shall be located within the geographical area of the community they seek to serve. The geographical area (including the names of villages/institution etc) should be clearly spelt out along with the location of the transmitter and antenna in the application form.

Although letters of intent have been issued to 233 applicants and grant of permission signed with 102, only 71 community radio stations (CRS) are presently functioning in the country. This is a marginal increase over the 57 channels functional by March. A total of 727 applications have been received by the Information and Broadcasting Ministry, of which 264 were from educational institutions. A total of 105 applications were rejected while 389 were under process. Of the operational channels, 52 are educational institutions, 15 are non-governmental organizations, three are Krishi Vigyan Kendras, and one is a State-level Agricultural University. Tamil Nadu leads the country with 13 CRS, followed by Uttar Pradesh with 9, Maharashtra with 7, Karnataka with six and Delhi with five. Sixteen other states have one to four CRS each.

8. FM Radio in India

FM radio appeared in India in a limited scale in 1970's. The application of FM started when AIR opened its first local FM radio station at Nagercoil in Tamilnadu in 1984, to generate programming of local relevance through participation of local communities. When FM technology was introduced it was difficult to buy FM band radios as they were too expensive. FM channel's programming was to address rural, tribal audience but the radio sets were affordable for only rich and upper class households there by creating a mismatch between the content and the audience. The idea of local community participation became gradually diluted.

Today there are 139 FM transmitters all over India. But the FM radio programming is facing problems due to staffing in local stations. The location and deputation of staff to FM radio stations located in remote areas became very problematic for AIR. The FM scene under the State run AIR was stagnating when the commercial industry began interest in FM markets. The commercial FM efforts of Times

Radio, and Radio Mid Day tried to attract younger generations with different music formats. The pressure to open up the FM radio markets increased. The ideology of the post liberalized India also helped in successful entry of private players into the FM market.

The Indian Government took up the expansion of FM market. As it was highly commercial in nature Government imposed hefty licence fee apart from a revenue sharing model in which the operator has to share the profits of the business with the Government. The first phase of expansion ran into trouble with some of the bidders going to court and some others defaulting. Out of 108 licences 86 never went on air. In a bid to revive the expansion scheme, Government recast its policy in September 2005 by announcing a more reasonable one time entry fee and four percent of revenue sharing arrangement and wanted to give out 339 licences to private parties. Educational were allowed to seek FM licences with a bank guarantee of Rs. 50,000. But only very few institutions like Annamalai University, Mudra Institute of Communications have taken licences and gone on air till date. Reacting to the situation, Government once again referred the FM issue to a group of ministries in October 2005. To provide guidelines for licensing

The first phase of private sector involvement in FM radio broadcasting was launched by Ministry of Information and Broadcasting, Government of India vide its notification in year 1999. The objective behind the scheme was to attract private agencies to supplement the efforts of All India Radio by operationalising FM radio stations that provide programs of relevance with special emphasis on local content, increase content generation and improve quality of fidelity in reception. During phase-I, total 108 channels were offered to private agencies in 40 cities. One channel in each of these cities was also earmarked for educational content. However, only 21 private channels could get operationalised during this phase. These 21 FM radio channels have large acceptability from the listeners.

Based on the experience of phase I, Government introduced phase II scheme with certain modifications on 13$^{th}$ July 2005. In this phase 337 channels were put on bid encompassing 91 cities. Letters of Indent (LOI) were issued to 245 channels and 136 channels have become operational till now. Recently government vide its notification dated 8$^{th}$ June 2007 invited bids for 93 vacant slots and four new channels in Dehradun.

It is expected that private FM radio broadcasting will soon be extended covering 92 cities in total.

FM radio broadcasting due to its versatility is considered as main medium to provide entertainment, information and education. The issue is being raised that benefit of such advancements should also be extended to other smaller areas not covered so far. Moreover, demand of the local content is increasing. India is a vast country with mixed population. Demand for additional FM radio channels is picking up. In addition to country wide spread of FM, the subjects relating to FDI, permitting News and current affairs, networking in FM broadcasting, and reduction of license fee in certain identified areas also need to be addressed.

The Union Cabinet is expected to take up the matter soon, and once the green signal is given by it, the bidding process for over 700 new stations, most of which would be located in smaller towns, will begin. Even though the first two phases of FM radio expansion have taken place several years ago, the third phase of the process has been lying in a limbo due to primarily opposition from the industry to certain norms prevalent currently, including royalty to be paid to music companies. Finally, the process has got the green signal from a high level panel appointed to look into the pros and cons of the process. Incidentally, the move forward has happened just days after the Telecom Regulatory Authority of India (TRAI) recommendation that the FDI ceiling in the FM radio sector be increased from the current 20 to 26 per cent, down from its earlier suggested 49 per cent.

The most important development during the third phase expansion will, however, be the permission to the private FM stations to broadcast news, albeit with certain pre-conditions, such as the news content having to be sourced from the All India Radio and Doordarshan. Over 250 FM stations are operational in various parts of the country at present, set up under the first and second phases of FM radio expansion, and the third phase thus would see a much larger expansion than the second which saw licences for over 250 stations in 91 cities given out in 2006. The phase 3 expansion is also expected to see certain changes in the norms, such as permission to private stations to set up their own transmission facilities, unlike the now mandatory co-location of such facilities on Prasar Bharati infrastructure.

It is also likely to see relaxation in the 15 per cent limit on the number of channels an entity can own in the case of Jammu & Kashmir and the North-East.

Third phase of FM Radio to be cleared by Govt this month The new FM Radio policy for phase III, which is going to be cleared this month after a long delay, proposes to allow private FM Radio to generate news content on sporting events, weather and traffic.

For all other news, they will have to draw from All India Radio and Doordarshan.

The broadcasters had made strong bid for being allowed to generate general news, and the Telecom Regulatory Authority of India(TRAI) had in fact recommended that they should be allowed to carry news from national news agencies like UNI and PTI, but the Government rejected the TRAI recommendations on the ground that news was a sensitive matter, and it would be difficult to monitor the content of hundreds of FM Radio that would come up after the Phase III was rolled out. The Foreign investment limit in the sector is also likely to be raised from 20 to 26 per cent, sources in the Ministry of Information and Broadcasting told UNI.

The FM Phase III is coming to the Cabinet by end of this month and auctions would take place in the second part of the year, the sources said. The new policy was likely to reduce by half the annual licence fee for operators in Jammu and Kashmir and the Northeast. This exemption would be for a period of three years. Also these regions have been given some exemption in the number of channels that an entity can own. There will be a limit of 15 per cent at the national level, but in the case radio channels in Jammu and Kashmir and Northeast, one entity can own over and above this cap. The TRAI recommendations had been given in November,2008, after the Ministry sought its fresh response on several issues. Trai's first set of recommendations on the third phase of FM radio had come in February,2008. Currently, there were over 200 private FM radio stations operational in the country, but after the Third phase, the number was likely to reach around 1000. The third phase would focus on small cities and towns, which are uncovered so far.

**FM Radio Industry – Risk Factors**

**1. Decreasing Advertisement Revenues**:

The FM radio industry derives almost all its revenues from advertisements. The radio stations are free to air and do not garner any subscription revenues, thus making them totally dependent on advertisement revenues. Advertising is a discretionary

expenditure and is the first one to be pruned in case of an economic slowdown. Thus, the major marketers advertising on radio may cut their ad budgets in case of an economic downturn. This would adversely affect the radio industry.

**2. Lack of variety in programming content:**

The content played on different FM radio stations is very similar in nature. Most of them play popular film and pop music and very few cater to the niche audience such as English rock music lovers or Indian classical music lovers. This is happening because one player is allowed to own only one station in every city. Thus the FM radio operators are not willing to take a risk by not catering to the mass segment. This is hurting the growth of the FM radio industry as people who prefer niche music genres are not tuning into FM radio. Besides this, people frequently switch between stations leading to listenership fragmentation.

**3. Competition from satellite radio**

Many of the restrictions that apply to FM radio broadcasters do not apply to satellite radio broadcasters. At present, multiple channel ownership by a FM broadcaster in the same city is not permitted; however, the current satellite broadcaster in India is offering multiple channels. FM broadcasters cannot broadcast news and current affairs 24 hrs a day whereas satellite broadcasters can do so through a dedicated station. FM radio is limited to a small range around the transmission site while the satellite signals cover the entire country. Satellite radio broadcasters do not have to pay any license fee whereas FM radio broadcasters have to pay 4% of their gross revenues as license fees. This favourable treatment meted out to satellite broadcasters may adversely affect the growth of the FM radio industry.

However, the satellite radio broadcaster World Space operating in India has not been able to meet with much success. In fact, in India, World Space lost 8,713 net subscribers during 3QFY07, ending the period with 164,902 subscribers. Besides this, satellite radio has high subscription charges whereas FM radio is free to air.

**4. High music royalties**

FM radio broadcasters have to pay high royalties to the music companies for the music content procured from them. However the broadcasters can enter into a voluntary agreement with Phonographic Performance Limited and The Indian Performance Right Society Limited at high rates or under the rates determined by the courts of law to minimize their expenses.

**5. Threat from digital technologies:**

Digital broadcasting technologies like Satellite/Digital Audio Broadcast (DAB) using the FM band and Digital Radio Mondial (DRM) using the AM band are becoming popular worldwide. There is efficient utilization of spectrum in case of digital broadcasting, enabling the broadcast of multiple radio stations. The quality of digital broadcast is better than analog transmission. However, digital receivers are more expensive than analog receivers. In Western Europe, a few countries are looking at a total switch off of analog broadcasting (FM/AM) by 2020 or so. Norway is the only country that has formally announced a cut off date. But with analog TV likely to be switched off in India in the next 5-7 years, radio's turn could come in the next 10-15 years.

**6. Intense competition**

There is intense competition between the FM radio operators operating in the same city. All of them are clamouring for the same advertisers, listeners and need to procure similar content. The number of FM radio stations has increased dramatically leading to a proportionate increase in the demand for trained personnel. Due to this attrition and poaching have become wide spread.

**Future positive trends:**

**1. Growing Indian Economy**

The radio industry recorded a growth of nearly 58% in 2006. The share of radio in the total advertising industry increased from 2.4% to 3.1% during the same year. This is further expected to increase to 5.5% by 2011 as per the FICCI-PwC report on the Indian entertainment and media industry. The size of the radio industry is projected to increase at a CAGR of 28% from Rs 5 bn in 2006 to Rs 17 bn by 2011. The major advertisers on radio are the entertainment channels, real estate firms and retailers. All these industries are expected to witness robust growth in the years to come. More than 90 channels across various languages and genres are being launched this year. Radio industry should be a major beneficiary of the high growth in these sectors.

**2.Demographics**

The target listeners for the radio industry are the youth. 55% of the India population is below 25 years leading to an increase in the audience of the radio industry. The content on radio primarily comprises of film music. The Indian film

industry is getting more organized and receiving more institutional funding. The quality of music produced is improving which enhances the growth of the radio industry.

**3. Reduction in license fees:**

The Phase I policy for the privatization of FM radio had a very high fixed license fee structure with an annual escalation of 15%. In the phase II policy, a revenue sharing formula was introduced whereby radio companies had to pay a fixed annual license fee of 4% of gross revenues or 10% of the reserve OTEF (One Time Entry Fee) whichever is higher. The reserve OTEF was 25% of the highest valid bid for that city.

**4. Availability of listenership data:**

Leading TV viewership research company, TAM, has recently ventured into radio audience measurement through a study called RAMS (Radio Audience Measurement). The study is currently restricted to the cities of Delhi, Mumbai and Bangalore. Research may cover larger number of cities in the years to come. Availability of listenership reports is bound to support and attract larger spends from marketers. Marketers generally wait for adequate research data to emerge before committing large spends to any medium.

**5.Local advertising Globally:**

The local retail segment constitutes a large part of radio's advertising income. As per the CII-KPMG report, while local advertising contributes 70% of radio revenues in the United States of America, in India, the share of local advertising is only about 8% of radio revenues. Ideally, a localized medium like radio can be effectively used for local-level promotions apart from being bundled as part of cross-media promotion strategies. Thus there is huge potential for the radio industry to benefit from an expected increase in the share of local advertisements.

Phase III policy

It is expected that after the completion of Phase II Policy, the Government will open up as many as 700 channels in the Phase III. This phase will witness licenses being awarded in smaller towns. This could result in radio getting a larger share of the advertising spends. Though the radio industry has many growth drivers, there are various risk factors also that could derail the growth of the radio industry.

1. Red FM:

- Red FM is an Indian FM14 radio brand, with stations broadcasting at 93.5 megahertz in the cities of Mumbai, Delhi, Kolkata and Pune in addition to Bhopal, Gwalior, Jabalpur, Indore, Nashik, Aurangabad, Nagpur, Bangalore, Mysore, Mangalore, Gulbarga, Kochi, Trivandrum, Trissur, Kannur, Kozhikode, Hyderabad, Vijayawada, Vizag, Warangal, Rajahmundry, Tirupathi, Ahmedabad, Rajkot, Vadodara, Lucknow, Kanpur, Allahabad, Varanasi, Jaipur, Bhubaneswar, Asansol, Siliguri, Gangtok, Guwahati, Jamshedpur, Shillong and Aizwal.
- It was launched in 2002, playing a mix of Hindi and English songs. However, the programming is now 100% exclusively Hindi.
- The channel is owned by Kalanidhi Maran, with a 48.9% stake, as well as minority holdings of Hyderabad-based IT company Value Labs, NDTV, Astro. It was acquired from India Today promoter Living Media in January 2006.
- Their punch line is 'Bajaate Raho' (Keep Playing). The most widely broadcast shows include "Morning No.1", "Dilse", "Mumbai Local", "One Two ka Four", "Mera Wala Gana", "Superhits Music Show", "RDX", "Indore Beats" and "Nomoshkar Kolkata".

2. Radio Indigo 91.9

- Radio Indigo 91.9 FM15 - The color of music, Soul of Bangalore is the country's first and only international hit station.
- This is a Jupiter Capital venture. Radio Indigo is the only radio station in the country that plays contemporary international music. Playing all the hits all the time, Radio Indigo caters to Bangalore and Goa's long-standing tradition and a vibrant community of music aficionados. The station plays a vibrant array of genres like pop, classic rock, hip-hop, jazz, world music and much more. Having headquarters in Bengaluru.
- The station has today become a house-hold name and those who have grown to love the station are sneaking it in their homes, cars and office. Radio Indigo 91-9 has evolved to brilliance through bigger promotions & prizes.

3. AIR FM Rainbow:

- AIR FM Rainbow, run by All India Radio16 is a national radio station, heard all across India. This government owned enterprise, features Hindi and regional

language songs and occasional English songs along with hourly news bulletins in English, regional language and also in Hindi.

- In Bhopal, it operates on 102.1 megahertz in Hindi and English language covering more than 12 districts of Madhya Pradesh and 21 Suburbs in Bhopal City. In MP, it is also known as "Rainbow FM". In Delhi, it operates on 102.6 megahertz and AIR FM Rainbow Delhi is the only FM Channel to be aired in as many as ten cities. In Mumbai, it operates on 107.1 megahertz. In Lucknow, it uses the 100.7 MHz slot. In vizag, it operates on 102 megahertz. In Hyderabad, it operates on 101.9 megahertz and in Vijayawada it operates on 102.2 megahertz. It operates in Bangalore as well with a frequency of 101.3. It was earlier called FM Metro; the name was changed to FM Rainbow in 2002. The signals of this station are very strong and it catches till the far villages.
- The channel plays various genres of music unlike private channels; it does not stick to music of just one language. It plays ghazals, soundtracks as well as English songs, a rare occurrence in Indian radio channels.
- Rainbow is one of very few Indian radio channels which air Western Music and the western music slots are really popular with listeners. It has many western music programs like Time Out, Take off, Matchless music hours, Live wire Plus, Wicked Hour, Footloose, You asked for it, Just for you, Radio pet house, not only this it also has classical music shows.
- Almost all the radio jockeys on private FM channels once started with FM Rainbow.

4. FEVER 104 FM:

- In 2006, FEVER 104 FM17, India's youngest, and most happening Radio Station that plays more music than any other was launched.
- Fever 104 FM is owned by HT Media Limited. The company entered the private FM radio market in the four main cities of Delhi, Mumbai, Bangalore and Kolkata with the brand Fever 104 FM.
- Fever 104 FM is a contemporary hits music station that plays a mix of regional, national and international hits. It plays the latest hits, all day, all the time across the cities of Delhi, Mumbai, Bangalore and Kolkata, with its signature property of 40 minutes non-stop music.

- Fever 104 FM with its tagline “It's all about the music!” entered the FM radio market in key Indian cities. It is available in Delhi (since October‘06), Mumbai (since January ‘07), Bangalore (since March _07) and Kolkata (January _08). In a short span of three years, the channel's rise has been meteoric. It has gained the No. 1 position in Mumbai and Bangalore leaving behind all the other FM channels in these cities.
- In terms of TSL, Fever 104 FM has surged ahead with a total time spent listening of 386 minutes. It is No.2 FM station in Delhi on the popularity charts.

5. Radio One:

- Radio One18 is a radio station in India. It was launched on June 8, 2006 in Mumbai before going national in 6 more cities.
- It is a joint venture between Mid-day Multimedia and BBC Worldwide and operates in 7 metros namely Mumbai, Delhi, Bangalore, Kolkata, Chennai, Pune and Ahmadabad. Soon the service of Radio One will also be started in Bhopal, Indore, Jabalpur and Jaipur.
- The station broadcasts at 94.3 MHz in all cities except in Ahmadabad where it broadcasts on 95.0 MHz‘s. It was known as Go 92.5 FM and was broadcast on 92.5 MHz in Mumbai till 2006.
- In the city of Bangalore, Radio One and the Bangalore Traffic Police, launched a carpooling drive which is has involved celebrities like Robin Uthappa, and Rahul Dravid encouraging the public to carpool. The initiative got a good response, and by the end of May 2009, 10,000 people are said to have car pooled in the city.

6. Radio Mirchi:

- Radio Mirchi19 is a nationwide network of private FM radio stations in India. It is owned by the Entertainment Network India Ltd (ENIL), which is one of the subsidiaries of The Times Group. it is promoted by Bennett, Coleman & Co. Limited (BCCL) which is one of the largest media and entertainment companies in India, operating in various media segments such as print media and television broadcasting.
- The original avatar of Radio Mirchi was Times FM. Radio Mirchi began operations in 1993 in Indore. The Times Group operated its brand, Times FM, till June 1998. After that, the government decided not to renew contracts given to private operators.

- It's the largest private FM Radio operator in the country in terms of number of operational stations and revenue. As per the Radio Audience Measurement Reports (RAM), Radio Mirchi has been dominating in Delhi & is the leader in Mumbai and Kolkata.
- Playing contemporary hits songs Radio Mirchi has always been the No 1 choice of listeners. IRS 2009 reiterates the same as Mirchi has more than 41 million listeners across 32 stations. Its lead over its nearest competitor is more than double. Its market share in revenue terms remains in excess of 40% of the private FM industry.
- Radio Mirchi is the number 1 radio brand in the private FM space. During the year, it won a plethora of awards. It has been recognition of the brand popularity and the creative talent behind the brand.
- Mirchi was voted the No. 1 media brand, ahead of iconic brands like The Times of India and Star Plus. This unique honor was bestowed on Mirchi by the Pitch-IMRB group's survey of the top service brands of the country. This endorses the vote of trust that the brand has built amongst its listeners.
- As per Brand Reporter October 2009 issue Mirchi was recognized as one of the game changers of the decade in the radio industry. The survey was conducted by Metrix Labs and AC Nielsen. The survey had 1.5 million participants. The success of the website reflects the overall popularity of Mirchi, the brand.
- Over the years Mirchi have established two important landmarks i.e.: The Mirchi Kaan Awards acknowledges and honours the contribution of individuals and organizations that have led the way in developing clutter busting radio advertising. The awards have been instituted to encourage continued creative focus on radio advertising.
- As a part of its CSR Mirchi initiated a program to improve the quality of life of the visually impaired and the company came up with an initiative i.e. —audio books. This initiative has already reached hundreds of schools across the country.

7.Radio City:

- Radio City20 is a FM radio station in India. It broadcasts on 91.1 (earlier 91.0 in most cities) megahertz from Mumbai, where it was started in 2004, Bangalore started first in 2001, Lucknow and New Delhi.
- It plays Hindi songs, English and regional songs.

- It was launched in Hyderabad in March, 2006, in Chennai on July 7th 2006 and in Vishakapatnam October 2007.
- Radio City recently forayed into New Media in May 2008 with the launch of a new mega music portal - PlanetRadiocity.com that offers music related news, videos, songs, and other music-related features.
- Radio City has launched Fun Ka Antenna - Online Radio Station which plays hits across genres including International, Bollywood, Indipop and Sufi among others.
- Radio City Bangalore is India's first private FM radio station and was started on July 3, 2001. It launched with presenters such as Rohit Barker, Darius Sunawala, Jonzie Kurian and Suresh Venkat. Over the years, the station had been steadily losing popularity with the launch of newer stations in Bangalore. The station has been criticized for multiple format changes and presenter line up.
- The Radio station currently plays a mix of Hindi and Kannada music. Recently as of July, 2006 it has announced plans to invest Rs. 700 to 800 million in the current fiscal year to set up 16 FM (Frequency Modulation) stations across India. The Chief Executive Officer is Ms Apurva Purohit.

8. BIG FM 92.7:

- BIG FM 92.7 is a nationwide private FM radio station in India owned by Indian businessman Anil Ambani. It broadcasts at 92.7 MHz (92.7FM). Currently, it covers 45 cities.
- This is the only private FM radio station which is being broadcast from Srinagar and Jammu in Jammu & Kashmir state. It has made an announcement to invest Rs. 4,00 crores dedicated to transmission equipment, infrastructure and licensing; which would make the proposed network the largest ever.
- From July 1, 2008, BIG FM included Singapore, the first city outside India, in its broadcasting network. It broadcasts its programs daily from 5 to 8pm on XFM 96.3, under the name of 'BIG Bollywood 96.3FM‘. Its main tagline is "Suno Sunao, Life Banao".

9.Radio Active:

- It is owned by Jain Group of Institutions is a conglomerate of 35 mission driven institutions that spans the gamut of education, from primary to higher education,

and charitable schooling to professional courses. Its founder and Chairman Mr. R Chenraj Jain.

- The Vision behind Radio Active is to empower every individual in society to become a winner and an achiever by harnessing and nurturing human potential; to sensitize society to global, national and local issues; to use technology and human enterprise in tandem to help create a meaningful and proactive social ambience where interdependence becomes mutually supportive and to focus on a universally responsive India.

In keeping with its tradition of promoting the welfare and betterment of society, JGI has taken the initiative to launch a community radio station serving the cause of progress and development of the community at large. The community radio station, Radio Active will seek to reach out to Bangalore‘s masses on issues concerning health, environment, development, scientific awareness, women, social issues etc, in turn seeking

# NR 21062 - Television Journalism

## Evolution of Television

- The word television is a hybrid word, created from both Greek and Latin. Tele- is Greek for "far", while -vision is from the Latin meaning "vision" or "sight".
- The invention of television is the result of long-term efforts of several men.
- The origins of what would become today's television system can be traced back to the
    - **Discovery of the photoconductivity of the element selenium by Willoughby Smith in 1873**
    - **Invention of a scanning disk by Paul Nipkow in 1884.**
    - **Vladimir Zworykin, and Philo Farnsworth** is associated with the concept of **electronic scanning of images** which forms the bases of modern day television. Both Zworykin and Farnsworth had applied for a patent of the same during the year 1923 and 1927 respectively. But as **Zworykin has filed the patent earlier, he is often termed as the 'father of television'.**
    - In the year 1926 the first demonstration of the mechanical television as given by **John Logie Baird** revealed that the images displayed on the television lacked outlines, were blurred and were also quite small in size.

The history of television can be divided into Mechanical Television era, which primarily comprises a period prior to 1935, and the Electronic Television era, which is the post 1935 period

## Mechanical Television

- The German student **Paul Nipkow** proposed and patented the central elements of electromechanical television systems in 1884. **Nipkow's spinning disk design** is credited with being the first essential step towards practical television.
- **Constantin Perskyi** had coined the word television in a paper read to the International Electricity Congress at the International World Fair in Paris on **August 25, 1900**.
- **John Logie Baird:**

- On **March 25, 1925 Scottish inventor John Logie Baird** gave a demonstration of televised silhouette or still images at Selfridge's Department Store in London.
- On **October 2, 1925** he gave the world's first public demonstration of a working television system to members of the Royal Institution. Baird's vertically scanned image, using a scanning disk embedded with a double spiral of lenses, had only 30 lines, just enough to reproduce a recognizable human face.
- In **1927** Baird transmitted a signal over **438 miles of telephone line between London and Glasgow**.
- In **1928** Baird's company (Baird Television Development Company / Cinema Television) broadcast the **first transatlantic television signal, between London and New York**, and the **first shore to ship transmission**. He also demonstrated an electromechanical colour, infrared (dubbed "Nocto vision"), and stereoscopic television, using additional lenses, disks and filters. In parallel he developed a video disk recording system dubbed **"Phono vision"**.
- Baird continued to refine this system over the next few years, and despite the low number of scan-lines, improved his system to the point where it produced clear and distinct images of various performers, such that by **1930** it could be used to transmit the first television drama, **The Man With a Flower in his Mouth**, by the BBC.
- In **1931** he made the first **live transmission, of the Epsom Derby**. The Baird Company eventually moved beyond its original electromechanical system, switching to an "intermediate film" process in which cine film was scanned electronically, and achieved a peak of 240 lines of resolution on BBC television broadcasts in 1936 before being discontinued in favour of EMI's 405 line all-electronic system.

- In the U.S. **Charles Francis Jenkins** was able to demonstrate on **June 13, 1925**, the transmission of the **silhouette image of a toy windmill** in motion from a naval radio station to his laboratory in Washington, using a lens disk scanner with 48 lines per picture, 16 pictures per second. The low definition silhouettes were the best Jenkins could do, since his bandwidth was limited to 10 kHz, but he

later obtained permission to move to a carrier frequency to 4.95 MHz with a bandwidth of 100 kHz. Jenkins employed a rotating mirror drum rather than a Nipkow disc.

- **AT&T's Bell Telephone Laboratories** transmitted gray scale images of transparencies in May 1925. But Bell Labs gave the most dramatic demonstration of television on April 7, 1927, when it field tested reflected-light television systems using small-scale (2 by 2.5 inches) and large-scale (24 by 30 inches) viewing screens over a wire link from Washington to New York City, and over-the-air broadcast from Whippany, New Jersey.

**Electronic television**

- On September 7, 1927, **Philo Farnsworth's 'Image Dissector camera tube'** transmitted its first image, a simple straight line, at his laboratory at 202 Green Street in **San Francisco.**
- In 1929, the system was further improved by elimination of a motor generator, so that his television system now had no mechanical moving parts. That year, Farnsworth transmitted the first human images by television system, including a three and a half-inch image of his wife with her eyes closed.
- Farnsworth gave the world's first public demonstration of a complete all-electronic television system in **August 1934**, at the **Franklin Institute in Philadelphia, Pennsylvania**. Farnsworth was the first to coordinate both electronically scanned television cameras and electronically scanned television receivers, and present live, moving, gray scale images with them.
- Another engineer in Europe, Russian **Vladimir Zworykin**, was experimenting with the cathode ray tube to create and show images. In **1931** he and his team created the first successful electronic camera tube, dubbed the Iconoscope.
- Later **Isaac Shoenburg** used Zworykin's idea to develop the **Emitron tube**, which formed the heart of the cameras they later designed for the BBC.

**TV as medium of communication**:

- Television as a medium of communication has the most 'massive' reach, and is labeled as a **major medium of entertainment**. It is considered to be the **main source of news and information** and plays the role of a **credible and trusted public informer**. It has also played the role of an educator by facilitating as a **medium for instruction**.

- Television as a medium of communication has made tremendous contribution towards the **integration of technology, culture, commerce and politics**. Television reflects culture or the society through audio-visual codes. I.e. Television through verbal, non-verbal and symbolic codes project elements of culture like artifacts, food, clothing etc. Apart from that it also projects various ideas related to ethos, values, attitudes, belies, politics, religion etc.
- Television has become instrumental in **blurring the geographical and political boundaries**. The growth of television has marked the stage of integration of technology where in the growth of mass medium attained its peak by reaching the households directly.

The following are the key aspects of Television as a medium of communication

- **Very diverse types of content**
- **Audiovisual Channel with high impact.**
- **Close, personal and domestic association with the viewers.**
- **Low intensity and involvement with high entertainment value.**

**Origin and growth of Television in India**

The origin and growth of Television in India can be raced in four phases..

**The period from 1960's to 70's: The Initial phase**

- Terrestrial television in India started with the experimental telecast starting in Delhi on **15th September 1959** with a small transmitter and a makeshift studio with the grants from **UNESCO** and equipment support from **USA and Phillips (India).**
- The first Television centre was started in New Delhi. Television broadcasts started as part of All India Radio's services. Programs were broadcast twice a week for an hour a day on such topics as community health, citizen's duties and rights, and traffic and road sense.
- In **1961** the broadcasts were expanded to include a **school educational television project**. Indian films and programs consisting of compilation of musicals from Indian films joined the program line-up as the **first entertainment programs in 1965**.
- **Programme recording started in 1966** and the first ever programme to be recorded was 'Yuri Gagarin'. A limited number of old U.S. and British shows were also telecast sporadically.

- **The regular daily transmission started in August 1965**. 'Krishi Darshan' programme started for farmers and was telecasted in 80 villages located around Delhi, UP and Haryana.
- By **1965-66 Black and white television sets** entered into the Indian market through Phillips.
- The year **1966 saw the in introduction of 'plays'** in broadcasting like 'Aisa Bhi Hota Hai' and 'Sara Akash'. Apart from that the technical capability were enhanced by taking up the telecasting of **Republic Day parade in the year 1966**. But the lack of trained personnel, good quality software and sufficient entertainment programming halted the development of Television as an effective mass medium.

**The period from 1970's to 80's: The experimentation phase**

- The year **1971** saw the **introduction of news and current affairs programmes in English** language. Later weekly programmes in Hindi like 'Aamne Samne' and 'Desh Videsh' were introduced.
- The first major expansion of television in India began in **1972**, when a second television station was opened in **Bombay**. This was followed by stations in Srinagar and Amritsar (1973), and Calcutta, Madras and Lucknow in 1975. Relay stations were also set up in a number of cities to extend the coverage of the regional stations.
- In **1975**, the government carried out the first test of the possibilities of satellite based television through the **SITE program**. SITE (Satellite Instructional Television Experiment) was designed to test whether satellite based television services could play a role in socio-economic development. Using a **U.S. ATS-6 satellite** and up-link centres at Ahmedabad and Delhi, television programs were beamed down for about 4 **hours a day to about 2,400 villages in 6 states**. The programs dealt mainly with in- and out-of-school education, agricultural issues, planning and national integration. The program was fairly successful in demonstrating the effectiveness of satellite based television in India and the lessons learnt from SITE were used by the government in designing and utilizing its own domestic satellite service INSAT.
- By **January 1976 commercial service was launched** in television broadcasting. The advent of advertising in television in 1976 brought tremendous change in

the revenues. Until that time television had been funded through a combination of television licenses and allocations from the annual budget (licenses were later abolished as advertising revenues began to increase substantially).

- In these early years television, like radio, was considered a facilitator of the development process and its introduction was justified by the role it was asked to play in social and economic development. Television was institutionalized as an arm of the government, since the government was the chief architect of political, economic and social development in the country. By 1976, the government found itself running a television network of eight television stations covering a population of 45 million spread over 75,000 square kilometres. Faced with the difficulty of administering such an extensive television system television as part of All India Radio, the government constituted **Doordarshan in 1976**, the national television network, as a separate Department under the Ministry of Information and Broadcasting, as an attached office under the Ministry of Information and Broadcasting. By 1979 the total television sets in India reached to 0.9 million with 17 transmitters.

**The period from 1980's to90's: The expansion phase**

- In 1982 television began to attain national coverage and develop as the government's pre-eminent media organization. Two events triggered the rapid growth of television that year. **INSAT-1A**, the first of the country's domestic communications satellites became operational and made possible the networking of all of Doordarshan's regional stations. For the first time Doordarshan originated a nation-wide feed dubbed the **"National Programme"** which was fed from Delhi to the other stations from **August 15th 1982**.
- The possibility of reaching a nationwide audience made television look increasingly attractive to advertisers after the introduction of the "National Programme" in 1982. In turn, Doordarshan began to shift the balance of its programming from educational and informational programs to entertainment programs. The commercialization of Doordarshan saw the development of soap operas, situation comedies, dramas, musical programs, quiz shows and the like.
- In **November 1982**, the country hosted the **Asian Games** and the government introduced **colour broadcasts** for the coverage of the games. To increase television's reach, the government launched a crash program to set up low and

high power transmitters that would pick-up the satellite distributed signals and re-transmit them to surrounding areas. The inaugural ceremony of Asian games was covered by Outdoor broadcasting vans on 1st November, 1982. More than 22 sporting events were covered from 18 stadia for the Asian games by Doordarshan.

- JCT-Thapar group started manufacturing colour picture tubes from Chandigarh. 'UPTRON' a government of Uttar Pradesh firm started producing colour television sets in India..
- By **1987** Doodrdarshan programming was extended to **morning as well as in noon**.
- By the late 1980s more and more people started to own television sets. Though there was a single channel, television programming had reached saturation. Hence the government opened up another on **September 17th 1984**, which had part national programming and part regional. This channel was known as DD 2 later DD Metro. Both channels were broadcast terrestrially.
- The 80s was the era of Doordarshan with shows like **Hum Log (1984), Buniyaad (1986-87)** and comedy shows like **Yeh Jo Hai Zindagi (1984)**, Mythological dramas like **Ramayan (1987-88)** and **Mahabharat (1989-90)** glued millions to Doordarshan and later on **Bharat Ek Khoj, The Sword of Tipu Sultan and Chandrakanta**. Hindi film songs based programs like **Chitrahaar, Rangoli, Superhit Muqabla** crime thrillers like **Karamchand, Byomkesh Bakshi**. Shows targeted at children include **Dada Dadi ki Kahaniyan, Vikram Betal, Malgudi Days, Tenali Rama**.
- In 1983 television signals were available to just 28% of the population, this had doubled by the end of 1985 and by 1990 over 90% of the population had access to television signals.
- By 1990 Doordarshan revenues from advertising were about $300 million, accounting for about 70% of its annual expenditure. The total television viewers increased to 8.8 million and transmitters increased to 179 by the end of 90's.

**The period from 1990's to 2000: The satellite television phase**

- By 1991, Doordarshan's earlier mandate to aid in the process of social and economic development had clearly been diluted. Entertainment and commercial programs had begun to take centre stage in the organization's programming

strategies and advertising had come to be Doordarshan's main source of funding. Doordarshan, having a monopoly in Indian market expanded its services and introduced new concepts and programming.

- DD covered the **CHOGAM and NAM** summits and attained international recognition.
- The **Central Production Centre** was started in **February 1989**.
- The **Independence Day of August 15th 1989 was covered live by DD**.
- PAS-1 and PAS-4 are satellites whose transponders help in the telecasting of DD programmes in half the regions of the world.
- An international channel called **DD International was started in 1995** and it telecasts programmes for 19 hours a day to foreign countries-via PAS-4 to Europe, Asia and Africa, and via PAS-1 to North America.
- The year 1991 saw the beginnings of international satellite broadcasting in India and the government launched a major economic liberalization program. Both these events combined to change the country's television environment dramatically.
- International satellite television was introduced in India by **CNN** through its coverage of the **Gulf War in 1991**. Three months later **Hong Kong based Star TV** (now owned by Rupert Murdoch's News Corp.) started broadcasting five channels into India using the ASIASAT-1 satellite. By early 1992, nearly half a million Indian households were receiving Star TV telecasts. A year later the figure was close to 2 million and by the end of 1994, an estimated 12 million households were receiving satellite channels. This increase in viewership was made possible by the 60,000 or so small scale cable system operators who have mushroomed across the country. These systems have redistributed the satellite channels to their customers at rates as low as $5 a month.
- Taking advantage of the growth of the satellite television audience, a number of Indian satellite based television services were launched between 1991 and 1994, prominent among them **Zee TV, the first Hindi satellite channel**. By the end of 1994, 12 satellite based channels were available in India. This number was doubled by the end of 1996, with a number of Indian programmers and international media companies like Turner Broadcasting, Time-Warner, ESPN, and Channel 5 introducing their new satellite television services for India.

**Growth of Cable TV in India**

- Cable TV has its roots in the late seventies. Indian television viewers were looking for entertainment options, apart from what state-owned broadcaster DD was offering. That came their way with the import and manufacture of video cassette recorders permitted domestically. **There was a veritable boom in video cassette recorder sales during this period**. Enterprising individuals in apartment blocks placed a video in their homes or their garages and started offering a cable TV service to people who opted for it. The fare available was Hindi and English movies and pirated western comedies, music and game shows. At this stage, cable TV was restricted to the major metros and towns and the upper crust of society.
- The impetus for its spread came in 1990 with the advent of the Gulf war. **Ted Turner's CNN** started beaming news reports of the bombing of Kuwait by Saddam Hussein and sparked off a demand for satellite dishes. Only the affluent could afford them. Some cable operators who had been running their Hindi and English movie channels added dishes and started relaying CNN into homes. This spurred demand for cable TV, making it a lucrative business and it attracted more individuals to the industry.
- The launch of Star TV and Zee TV further fuelled the spread of cable TV. In the first half of 1992, almost 4,500 households were being given cable programmes daily. That figure increased to 9,450 homes daily in the second half of the year. According to a study conducted by market research firm – According to Frank Small survey for Star TV from a mere 412,000 urban households in January 1992, the number of cable homes went up to 11.8 million out of a total of 32.4 million TV owning homes by the end-1994..
- The business has undergone a transformation too. In the beginning it was small and driven by entrepreneurs. At one time the cable TV operator's population was estimated at a sky high 100,000. In the next three years, large companies have also set up their own cable networks. Among them: In Cable net (managed by the Hinduja group), Siti cable (a joint venture between Zee TV promoter Subhash Chandra and Rupert Murdoch's News Television), Asianet, Hathway Cable & Datcom, Ortel Communications and RPG Netcom (a company promoted by the RPG group). International cable networking companies such as United

International Holdings, TCI and Falcon Cable of the US, have tested the waters: While UIH almost set up a joint venture with the RPG group which did not fructify; TCI/Time Warner discussed possibilities with the Times of India group which were inconclusive. Falcon Cable however, was successful in establishing a joint venture with the Hindustan Times publishing group in New Delhi called India Information Technologies Ltd.

- Following the liberalization of the broadcasting industry, the Hong Kong-based Star TV Network introduced five major television channels into the Indian broadcasting space that had so far been monopolized by the Indian government-owned Doordarshan: MTV, STAR Plus, Star Movies, BBC, Prime Sports and STAR Chinese Channel.
- Soon after, India saw the launch of Zee TV, the first privately-owned Indian channel to broadcast over cable followed by Asia Television Network (ATN). A few years later CNN, Discovery Channel, National Geographic Channel and BBC made their foray into India. Later, Star TV Network expanded its bouquet with the introduction of STAR World India, STAR Sports, ESPN, Channel V and STAR Gold.
- With the launch of the Tamil-language Sun TV (India) in 1992, South India saw the birth of its first private television channel. With a network comprising more than 20 channels in various South Indian languages, Sun TV network recently launched a DTH service and its channels are now available in several countries outside India.
- Following Sun TV, several television channels sprung up in the south. Among these are the Tamil-language channel Raj Television and the Malayalam-language network Asianet Communications Limited, both launched in 1993. These three networks and their channels today take up most of the broadcasting space in South India. In Telugu-language, Telugu daily newspaper Eenadu started with its own channel called ETV in 1995 later diversified into other Indian languages.
- Throughout the 90s, along with a multitude of Hindi-language channels, several regional and English language channels flourished all over India. By 2001, international channels HBO and History Channel started providing service. In

1999–2003, other international channels such as Nickelodeon, Cartoon Network, VH1, Disney and Toon Disney entered the market.

- Starting in 2003, there has been an explosion of news channels in various languages; the most notable among them are NDTV, CNN IBN and Aaj Tak. The most recent channels/networks in the Indian broadcasting industry include UTV Movies, UTV Bindass, Zoom, Colours, 9X and 9XM. There are several more new channels in the pipeline, including Leader TV.

**Conditional Access System**

- **CAS or conditional access system is a digital mode of transmitting TV channels through a set-top box (STB)**. The transmission signals are encrypted and viewers need to buy a set-top box to receive and decrypt the signal. The STB is required to watch only pay channels.
- The idea of CAS was mooted in **2001**, due to a furore over charge hikes by channels and subsequently by cable operators. Poor reception of certain channels; arbitrary pricing and increase in prices; bundling of channels; poor service delivery by Cable Television Operators (CTOs); monopolies in each area; lack of regulatory framework and redress avenues were some of the issues that were to be addressed by implementation of CAS.
- It was decided by the government that CAS would be **first introduced in the four metros**. It has been in place in **Chennai since September 2003**, where until very recently it had managed to attract very few subscribers. It has been rolled out recently in the other three metros of Delhi, Mumbai and Kolkata. **As of April 2008 only 25 per cent of the people have subscribed the new technology**. The rest watch only free-to-air channels. As mentioned above, the inhibiting factor from the viewer's perspective is the cost of the STB.
- ***The information and broadcasting ministry set March 31, 2015 as the deadline for shift from analog to digital systems. Digitization, where the feed will be received through set-top boxes, is expected to be executed in phases and the four metros of Delhi, Mumbai, Kolkata and Chennai have to shift to digital addressability by October 30, 2012. Phase II will include 35 cities with population of more than one million, such as Patna, Chandigarh, Pune and Bangalore by March 31, 2013. All urban areas are expected to digitize by November 30, 2014 and the remaining areas by March 31, 2015***.

**DTH:**

- DTH is defined as the reception of satellite programmes with a personal dish in an individual home. As of July 2011, India had roughly 35 million DTH subscribers.
- Cable TV and DTH are two methods of delivery of television content. CAS is integral to both the systems in delivering pay channels. Cable TV is through cable networks and DTH is wireless, reaching direct to the consumer through a small dish and a set-top box. Although the government has ensured that free-to-air channels on cable are delivered to the consumer without a set-top box, DTH signals cannot be received without the set-top box.
- India currently has 7 major DTH service providers and a total of over 35 million subscriber households in mid 2011. **Dish TV (a ZEE TV subsidiary), Tata Sky, Videocon D2H, Sun Network owned ' Sun Direct DTH', Reliance Digital TV, Bharti Airtel's DTH Service 'Airtel Digital TV' and the public sector DD Direct Plus** offer DTH services in India. As of 2010, India has the most competitive Direct-broadcast satellite market with 7 operators vying for more than 135 million TV homes. India is set to overtake the USA as the world's largest Direct-broadcast satellite market by 2012. The rapid growth of DTH in India has propelled an exodus from cabled homes; the need to measure viewership in this space is more than ever.

**TAM & INTAM**

- In 1994, claiming a heterogeneous and fragmenting television market ORG-MARG introduced **INTAM (Indian National Television Audience Measurement).** Ex-officials of DD (Doordarshan) claimed that INTAM was introduced by vested commercial interests who only sought to break the monopoly of DD and that INTAM was significantly weaker in sample size, rigor and the range of cities and regions covered.
- In 1997, a joint industry body appointed TAM, backed by AC Nielsen as the official record keeper of audience metrics. Due to the differences in methodology and samples of TAM and INTAM, both provided differing results for the same programs.
- In 2001, a confidential list of households in Mumbai that were participating in the monitoring survey was released, calling into question the reliability of the

data. This subsequently led to the merger of the two measurement systems into TAM. For several years after this, in spite of misgivings about the process, sample and other parameters, TAM was the de-facto standard and monopoly in the audience metrics game.

**Characteristics of Television**:

- Television is an Audio-Visual mass medium.
- Television is a transient medium.
- Television is most personal and intimate medium.
- It negates geographical and physical boundaries.
- Television as a medium of communication has an instantaneous message delivery.
- Television suffers from Interface.
- Television is one of the best medium for entertainment, education and dissemination of information.
- Television effects audience psyche, cognosis and mental makeup.

**Stages in TV programme production:**

The four main stages of programme production are as follows**:**

**I. Pre-production**

**1.Research**

**A. Identify the Purpose of the Production**

If there is no clear agreement on the goals and purposes of a production, it will be impossible to evaluate its success. Is the purpose to instruct, informs, or entertain? or maybe to generate feelings of pride or express a social, religious, or political need? Is the real purpose to create a desire in the audience to take some action? The primary goal of most broadcasting is simply to hold the interest of an audience through the intervening commercials. Most productions have more than one goal and we'll elaborate on some of these later

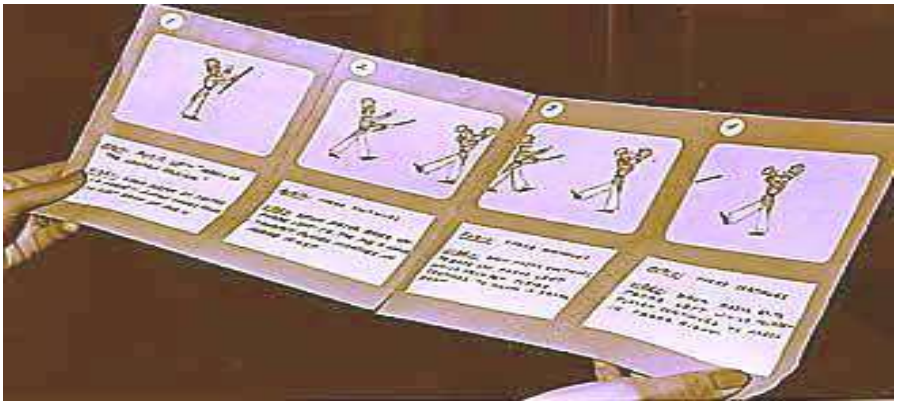

**B. Analyze Your Target Audience**

Based on such things as age, socioeconomic status, and educational level, program content preferences will differ. The audience characteristics are referred to as demographics. The regional demographic variations i.e. the differences in local programming in various areas of the country must be clearly analyzed.

**2. Script writing and storyboard**

**A. Develop a Treatment or Production Proposal**

The treatment and program proposals i.e. the written summaries of proposals are finalized. After the program proposal or treatment is approved, the next step is to write and submit a full script. It will be at this point that any remaining research on the content will be commissioned.

**The Script:**

The script is the most important document produced by the production company as it provides the core upon which the whole production process is based. It will be used throughout the whole production being the most important source of reference. A 'two-column script' is most often used in production i.e. one column containing the visual elements and the other column for the audio content and dialogue. A script can also be of great importance to you as it provides you with a point of quality control.

**The Storyboard:** The storyboard provides a more visual representation of the corporate video It comprises of a series of sketches showing what the shots will look like that make up the video. The storyboard is also a working document which can be referred to when developing the shooting script and even when setting up props and organizing talent on location. It clearly depicts where talent and props should be and also shows the flow of action. Although it can be very useful to have a storyboard to refer to later in the production process, actually developing the storyboard itself is very time consuming.

The first version of a script is often followed by numerous revised versions. Throughout the rewriting process, a number of story conferences or script conferences typically take place. During these sessions audience appeal, pace, and

problems with special interest groups, etc., are discussed. Finally, a script version emerges that is more or less acceptable to everyone. Even this version, however, will probably not be final. In many instances, scene revisions continue right up to the time the scenes are shot. Typically, in a dramatic film production / T.V. series each new script version is issued on a different colour paper so that the cast and crew won't confuse them with earlier versions. Depending on the production, a storyboard is developed. A storyboard consists of drawings of key scenes with corresponding notes on elements such as dialogue, sound effects, and music

**3. Planning i.e. shooting schedule**

**A. Develop a Production Schedule**

Generally, broadcast or distribution deadlines will dictate the production schedule. Schedule is the written timetable listing the time allotted for each production step. Not planning things out carefully might cause you to miss a critical deadline, rendering the production useless. Bring on board the remaining above-the-line production personnel. In addition to the producer and writer, above-the-line personnel include the production manager, director and, in general, key creative team members. Below-the-line personnel, generally assigned later, include the technical staff. If you're not shooting in the studio, *decide on key locations.* In a major production, such as the type we are outlining in this discussion, you will hire a location scout or location manager to find and coordinate the use of the locations suggested by the script. Although it might be easier to shoot in a TV studio, it's been shown that audiences like the authenticity of "real" locations, especially in dramatic productions. Most major cities encourage TV and film production and maintain *film commissions* that supply photos and videotapes of interesting shooting locations in their area. They'll also provide information on usage fees and the names of people to contact. It's often necessary to make changes in the on-location settings. For instance, rooms may have to be repainted or redecorated and visible signs changed.

**B. Select Key Production Personnel**

Depending on the type of production, auditions may take place at this point as part of the casting process i.e. selecting people for the various roles. Once completed, you'll negotiate and sign contracts. Once you decide on the talent, you can begin wardrobe selection. These are suggested by the script, coordinated with the look of the sets and locations, and ultimately approved by the director. After a set designer is hired, he or

she will review the script, possibly do research, and then discuss initial ideas with the director. Once there's agreement, sketches of the sets can be made for final approval before actual set construction starts -- if there *is* any construction. Today, many sets exist only in computers and the actors are electronically inserted into them. If this is the case, the set sketches will be given to a computer artist. Rehearsals are scheduled from initial table readings to the final dress rehearsal. Once the sets are finished, the final blocking and dress rehearsals can get underway.

**C. Decide on the Remaining Production Personnel**

At this point hiring of the key technical personnel, equipment, and facilities is finalised. This includes the rental of both equipment and production facilities. Transportation, catering and on-location accommodations for any overnight stays are arranged.

**4. Securing locations, acquiring permissions**

Obtaining Permits, Insurance, and Clearances is done in this phase**.** In major U.S. cities and in many foreign countries it's not possible just to go to the location of your choice, set up your tripod, and start filming. Except for spot news and short documentary segments, you must *arrange access permits, licenses security bonds, and insurance policies*. Many semi public interior locations, such as shopping malls, require filming permits. Depending on the nature of the production, *liability insurance* and *security bonds* may be necessary because accidents can happen that can be directly or indirectly attributed to the production. In some locations the controlling agency will limit exterior production to certain areas and specific hours. In a street scene where traffic will be affected you'll need to arrange for special police.

## II. Production:

**A. Select Video Inserts**

Arrange to shoot or acquire video and film inserts, still photos, and graphics. To reduce production costs the existing stock footage in film and video libraries around the country is verified and checked. This is generally background footage, such as general exterior scenes of an area that will be edited into the production.. The important decisions on music, including working out copyright clearances and royalties for music and visual insert are finalized

**B. The shoot**

Depending on the type of production, rehearsals may take place either minutes or days before the actual shooting. Productions shot live-on-tape i.e. without stopping, except

for major problems - whether recorded on videotape or another medium will be settled before recording starts. This includes early walk-through rehearsals, camera rehearsals, and one or more dress rehearsals. Productions that are shot single-camera, and recorded one scene at a time

**C. Principal photography**

Principal photography is the actual filming of the episode. Director, actors and crew gather at a television studio or on location for filming or videoing a scene. A scene is further divided into shots, which should be planned during pre-production. Depending on scheduling, a scene may be shot in non-sequential order of the story. Conversations may be filmed twice from different camera angles, often using stand-ins, so one actor might perform all their lines in one set of shots, and then the other side of the conversation is filmed from the opposite perspective. To complete a production on time, a second unit may be filming a different scene on another set or location at the same time, using a different set of actors, an assistant director, and a second unit crew. A director of photography supervises the lighting of each shot to ensure consistency

## III. Post-production

**A. The Post-production stage** Once we have the footage we begin with the post-production. This is probably the most time-consuming part of the whole production process. This will be taken into consideration at the time of scheduling the production. Editing is one of the important post production works. Below are some of the main activities undertaken when editing process is done. The order in which they are completed may vary from one production to another.

**B. Assembly of the rushes:** Once we have all the footage work will begin on one of our edit suites. Assembling the rushes refers to viewing the footage and deciding on the shots to be used. They are assembled in the order they will be viewed in preparation for the editing to commence.

**C. Animations, graphics and titles:** The use of animations, graphics and titles will be placed as discussed in the beginning of the production process.

**D. Music and sound-effects**

There are three main categories to choose from:

- Commercial recordings of popular or classical music requiring copyright clearance.

- Library music where you may suggest the style of music you would like and we can select music fulfilling your requirements from the large selection available.
- Music written for your corporate video according to your specifications.

Once the music is decided then works on soundtrack, checking levels and monitoring the quality using ppm meters and audio vector scopes is done. At Peak Vision TV we have our own recording facilities enabling us to record our own sound effects to add to the sound track on your programme to enhance the images and add to animations where necessary. A good soundtrack is essential to add life and vitality to images, no matter how excellent the images.

**E**. **The voice-over:** We have a variety of voice-over artists available for our corporate productions. The right voice is chosen for every

**F. Rough cut:** This is a rough version of the video with music, sound effects, animation and voice-over. However, it will not look very different from the end product. At this stage there will be an opportunity for feedback and any last small changes to be made to the programme.

**G. Final cut:** Having completed the final edit making any small changes and putting the finishing touches to the production, the Final Cut will be shown for your final approval before beginning work on duplication

**H. Budgets and revenues**

Most television networks throughout the world are 'commercial', dependent on selling advertising time or acquiring sponsors. Broadcasting executives' main concern over their programming is on audience size. Once the number of 'free to air' stations was restricted by the availability of channel frequencies, but cable TV (outside the USA, satellite television) technology has allowed an expansion in the number of channels available to viewers (sometimes at premium rates) in a much more competitive environment.

**I. Deficit financing** is the term used to describe how many scripted network television shows in the Unites States are financed. A studio finances the production cost of a show and a network pays a license fee to the studio for the right to air the show. This license fee does not cover the show's production costs, leading to the deficit. Although the studio does not make its money back in the original airing of the show, it retains

ownership of the show. This ownership retention allows the studio to make its money back and earn a profit through syndication and DVD and Blu-ray disc sales.

**J. Distribution**

After production, the show is turned over to the television network, which sends it out to its affiliate stations, which broadcast it in the specified broadcast programming time slot. If the Nielsen ratings are good, the show is kept alive as long as possible. If not, the show is usually canceled. The show's creators are then left to shop around remaining episodes, and the possibility of future episodes, to other networks.

## 1.6. Duties of the TV crew

Television crew positions are derived from those of film crew, but with several differences.

**Casting Director**: The duty of a casting director is to spot talent and cast. Usually one of the first crew members attached to the project. In fact, when a television pilot is initially cast the Executive Producer and Casting Director are often the only crew members.

**Costume designer**: The Costume Designer makes all the clothing and costumes worn by all the Actors on screen, as well as designing, planning, and organizing the construction of the garments down to the fabric, colors, and sizes. They greatly contribute to the appearance of the production, and set a particular mood, time, feeling, or genre. They alter the overall appearance of a project with their designs and constructions, including impacting on the style of the project, and how the audience interprets the show's characters.

**Director:** A Television Director is usually responsible for directing the actors and other filmed aspects of a television production. The role differs from that of a film director because the major creative control will likely belong to the Producer. In general, the Actor and other regular Artists on a show will be familiar enough with their roles that the Director's input will be confined to technical issues. The Director is responsible for all creative aspects of a movie. The Director would most likely assist with hiring the cast (and possibly the crew). The Director helps decide on the locations, creates a plan of shooting, and sets a mental layout of shot by shot in their minds eye. During shooting, the Director supervises the overall project, manages shots, and keeps the assignment on budget, and schedule. Although the Director holds much power, they are second in command after the Producer, who ultimately hired the Director (unless the Director holds both positions). Some Directors are also the Producers of their television

program, and, with the approval of the funding studio, have a much tighter grip on what makes the final cut than Directors usually have.

**Associate Director (AD)**: An Associate Director in television production is usually responsible for floor directing in the studio and ensuring that the sets, props and technical equipment are safe, ready to use and positioned correctly before filming. Associate Directors are also responsible for communications with the audience and any guests, for example ensuring they are seated in good time, and assisting the Director with production. In scripted television series, an Associate Director will occasionally serve as the episode's Director, in which case someone else will sub for the AD. Until the mid 2000s in the United States, Associate Directors were usually credited as "Technical Coordinators" for most sitcoms were shot on film; ADs are usually not used on drama programs.

**Location Manager**: The Location Manager finds and manages film locations. Most pictures are shot in the controllable environment of a studio sound stage but occasionally, outdoor sequences call for filming on location.

**Make-up artist**: A professional Make-up artist is usually a cosmetology beautician, and applies makeup to anyone appearing on screen. They concentrate on the area above the chest, the face, the top of the head, the fingers, hands, arms, and elbows. Their role is to manipulate an Actor 's on screen appearance whether it makes them look more youthful, larger, older, or in some cases monstrous. There are also Body makeup artists who concentrate their abilities on the body rather than the head. Make-up itself is substances to enhance the beauty of the human body, but can also change the appearance, disguise, or costume someone. Along with the Make-up artists, the Hair stylists, Costume designers, and Dress technicians all combine their effort into transforming an Actor into a character, or a person into a presenter.

**Production designer**: The Production Designer is the person with the responsibility of the visual appearance of a production. They design, plan, organize, and arrange set design, equipment availability, as well as the on screen appearance a production will have. A production designer is often referred to also as the set designer, or scenic designer. They are trained professionals, often with Master of Fine Arts (MFA) degrees in scenic design. The set designer is responsible for collaborating with the Theatre Director to create an environment for the production and then communicating the details of this environment to the Technical Director, charge scenic artist and Property

Master. Scenic Designers are responsible for creating scale models of the scenery as well as scale drawings. The set designer also takes instructions from the Art Director to create the appearance of the stage, and design its technical assembly. The Art Director, who can also be the Production Designer, plans and oversees the formation of settings for a project. They are fully aware and conscious of art and design styles, including architecture and interior design. They also work with the Cinematographer to accomplish the precise appearance for the project.

**Researcher:** Researchers research the project ahead of shooting time to increase truth, factual content, creative content, original ideas, background information, and sometimes performs minor searches such as flight details, location conditions, accommodation details, etc. It is their task to inform the Director, Producer, and Writer of all ideas, and knowledge related to what task is being undertaken, or what a scene/ event/prop/ or backdrop needs to be included to make the show factual and ultimately more believable.

**Set designer**: The scenic designer is responsible for collaborating with the Theatre director and other members of the production design team to create an environment for the production and then communicating the details of this environment to the Technical director, Production manager, Charge artist and Property master. Scenic designers are responsible for creating scale models of the scenery, artistic rendering, paint elevations and scale construction drawings as part of their communication with other production staff.

**Television Producer**: In the entertainment industry, a Television Producer (compare to film producer) is generally in charge of, or helps to coordinate, the financial, legal, administrative, technological and artistic aspects of a production. In television, a television producer can be given one of the following titles:

**Associate Producer**: The Associate Producer performs limited producing functions under the authority of a Producer; often in charge of the day-to-day running of a production. They are frequently a connection between everyone making shooting possible (the production team) and the people involved after filming to finalize the production, and get it publicized (the Post-production team). Occasionally credit for this role is given to the product's financial backer, or the person who originally brought the assignment to the Producer.

**Assistant Producer (AP):** The Assistant Producer is the closest role to that of a film director. An Assistant Producer often doubles as an experienced Researcher, and takes direct charge of the creative content and action within a programme. The title of Television director is usually reserved only for dramatic programming productions and those which bear most similarity to films, or for those who control a multi-camera set up from the *Gallery*.

Co-producer: Typically performs producing functions in tandem with one or more other Co-Producers (working as a team, rather than separately on different aspects of the production).

**Executive producer**: He supervises one or more producers in all aspects of their work; sometimes the initiator of the production; usually the ultimate authority on the creative and business aspects of the production (except to the extent that a Film Director retains creative control). If the title is designated correctly, the Executive Producer would arrange for the project's financial backing and attempt to maintain a well production budget. Far too often, the Executive Producer's role is given falsely to a power player in the equation - sometimes an actor, an actor's agent, or someone else who aided in the production of the project.

**Line producer**: Supervises the physical aspects of the production (not the creative aspects), including personnel, technology, budget, and scheduling. The line producer oversees the project's budget. This involves operating costs such as salaries, production costs, and everyday equipment rental costs. The Line Producer works with the Production manager on costs and expenditure.

**Segment producer**: Produces one or more components of a multipart production.

**Supervising producer**: Supervises one or more producers in some or all aspects of their work; usually works under the authority of an Executive Producer.

**Writer:** The Writer creates and moulds an original story, or adapts other written, told, or acted stories for production of a television show. Their finished work is called a script. A script may also have been a contribution of many writers, so it is the Writers Guild of America's (WGA) task to designate who gets the credit as being 'the Writer'. 'Written By' in the credits, is a Writers Guild of America assigned terminology meaning "Original Story and Screenplay By". A screenplay or script is a blueprint for producing a motion picture, and a teleplay is the replica for a television show. Writers can also come under the category of screenwriters. Screenwriters (also called "script writers"), are

authors who write the screenplays from which productions are made just as a writer does. Many of them also work as script doctors, attempting to change scripts to suit directors or studios; Script-doctoring can be quite lucrative, especially for the better known writers. Most professional screenwriters are unionized and are represented by organizations such as the WGA.

**Head writer:** A head writer is a person who oversees the team of writers on a television or radio series. The title is common in the soap opera genre, as well as with sketch comedies and talk shows that feature monologues and comedy skits, but in prime time series this function is generally performed by an Executive Producer.

**Screenwriter:** Screenwriters or scenarists or scriptwriters are people who write/create the short or feature-length screenplays from which films and television programs are based.

**Story editor**: Story editor is a job title in motion picture filmmaking and television production, also sometimes called "Supervising Producer". A story editor is a member of the screenwriting staff who edits stories for screenplays.

**Production**: Everything while the shooting of the film is in progress is part of the so called “production” stage. The crew of people involved in this stage of production include the Cinematographer, Production Manager, the Technical Director, the Boom Operator, the Gaffer, the Dolly grip, the Key Grip and the Stunt coordinator.

**A2: An A2 (or Audio Assistant**) is a person responsible for placement and interconnection of audio devices, such as microphones and intercom, from the Television Production truck to the venue. Typically in larger productions, there are two or more A2s.

**Boom operator**: The Boom Operator is an assistant of the Sound Engineer or "production sound mixer". The main responsibility of the Boom Operator is microphone placement, sometimes using a "fish pole" with a microphone attached to the end and sometimes, when the situation permits, using a "boom" (most often a "fisher boom") which is a special piece of equipment that the operator stands on and that allows precise control of the microphone at a much greater distance away from the actors. They will also place wireless microphones on actors when it is necessary. The Boom Operator is part of the sound crew, who manages to keep the microphone boom, near to the action, but away from the camera frame, so that it never appears onscreen, but allows the microphone to pursue the actors as they move. They work closely with the

Production Sound Mixer, or Sound Recordist, to record all sound while filming including background noises, dialogue, sound effects, and silence.

**Camera Operator/Cinematographer/Videographer**: As the head member of the camera crew, the camera operator uses the camera as coached by the Director. They are accountable for maintaining the required action is correctly filmed in the frame, and needs to react instinctively as the proceedings take place. If the Camera Operator is also a Cinematographer, they also help establish the theme and appearance of the show. The Cinematographer or Director of photography (DP) regulates the lighting for every scene, is responsible for framing some shots, chooses the lenses to be used, decides on film stock and guarantees that the visual appearance of the project follows to the directors initial foresight. However, the Cinematographer would usually not maneuver the camera on the set, as this is usually the exclusive role of a Camera Operator.

**Floor Manager**: The Floor Manager is the Director's representative on the studio floor, and is responsible for giving instruction and direction to crew, cast and guests. It is closest to the role of an Assistant Director, as the job frequently entails barking orders to keep a production moving to schedule. The Floor Manager is always in direct contact with the Director via *talkback* in the gallery. Also checks that the floor is clear and safe for the performance required; checks that any scenery or set piece is ready to be used as required; turns on the appropriate lights; gives announcements to staff and audience; helps to maintain the set quiet and in order; calls cues to begin the action and prompts talents as required.

**Assistant Floor Manager:** An Assistant Floor Manager (frequently abbreviated to AFM) is responsible for setting a stage and prompting contributors on the studio floor and ensuring that everyone knows their place in the script, freeing the Floor Manager for other duties. They often oversee a team of Runners. Increasingly, Assistant Floor Managers are being asked to assist with the design and preparation of props, as well as setting and resetting the action on the studio floor.

**Graphics Coordinator:** The Graphics coordinator (GC) decides what graphic content should be displayed on-air - such as on a full page (a full-screen graphic) or a lower third (a bar graphic appearing in the lower third of the screen). The GC should not be confused with the Character Generator (CG) Operator, who usually operates a CG and is part of a television crew, or a Broadcast designer who physically creates the graphics.

**Stage Manager:** Stage management is the practice of organizing and coordinating a theatrical production. It encompasses a variety of activities, including organizing the production and coordinating communications between various personnel (e.g., between director and backstage crew, or actors and production management). Stage management is a sub-discipline of stagecraft**.**

**Gaffer:** Gaffer is the head Electrician at the production set, and is in charge of lighting the stage in accordance with the direction of the Cinematographer. In television the term Chief Lighting Director is often used instead of Gaffer, and sometimes the Technical Director will light the studio set. The Gaffer reports to the Director of Photography (DoP), Lighting Director (LD) or Lighting Designer, and will usually have an assistant called a Best Boy and a crew of electricians**.**

**Production Manager:** The Production Manager performs deals concerned with business about the crew, and organizes the technical needs of the production. This would involve many things ranging from gaining the correct equipment with the exact technical requirements; to arranging accommodation for the cast and crew. The Production Manager reports their expenses and needs to the Line Producer**.**

**Production Assistant:** Commonly referred to simply as the *PA*, the Production Assistant assumes a prompting role in the Gallery or Control Room. They are responsible for communication with the broadcasting channel during a live television show, counting down the time before transmission aloud to the crew via the studio microphone. They also count down time remaining for sections of a programme, such as an interview or an advertising break. Prior to a production, the PA is responsible for preparing and timing the script, noting pre-recorded inserts, sound effects and suchlike, and for clearing copyright and other administrative issues.

**Stunt Coordinator:** Where the programme requires a stunt, and involves the use of stunt performers, the Stunt Coordinator will arrange the casting and performance of the stunt, working closely with the Television director**.**

**Technical director:** In a production control room (PCR), the Technical Director (TD) has overall responsibility for the operation of the production. The Technical Director is responsible for the proper working of all the equipment in the PCR. They also match the quality and the output of all the cameras on the studio floor through the camera control units (CCU) (Vision Engineering). It is the responsibility of the TD to supervise all the other crew members working in the PCR. The Technical Director also coordinates the

working of the whole crew and looks into any technical problem which arises before, during or after the shooting of a project.

Television director **-** Unlike the film counterpart, a Director in television usually refers to the Gallery (or Control Room) Director, who is responsible for the creative look of a production through selecting which shots to use at any given moment. The Director views the action on the studio floor through a bank of screens, each one linked to one of the professional video cameras, while issuing instructions down to the Floor Manager. They also control the Gallery area, calling for sound rolls, digital on-screen graphics (*Astons*) and video rolls video tape recorder (*VT's*). Some directors also work more closely with on-camera talent and others also act as both Producer and Director.

**Video Control Operator/Vision Engineering**: A Video Control Operator (typically credited under the title "video control", and sometimes referred to simply as a "Video Engineer" or, a "Video Operator") is responsible for controlling the video console to regulate transmission of television scenes, including test patterns and filmed and live telecasts. Video Control Operators view the action on set through video monitors and sets switches and observes dials on the video console to control contrast, framing, brilliance, color balance, and the fidelity of the transmitted image. They also monitor the program to ensure the technical quality of the broadcast, and review the shot program to determine that the signal is functioning properly and that it will be ready for transmission at the required time. Video Control Operators and Video Tape Operators are used only in television productions recorded on video tape because the growing use of broadcast automation with video servers.

**Video Tape Operator**: The Video Tape Operator (also known as a VT Operator or VTR Operator), cues and prepares video inserts into a program. A VT Operator sets up and operates the video tape equipment to record and play back the program, reads the program log to ascertain when the program will be recorded and when it will be aired. They also select the source, such as satellite or studio, from which the program will be recorded, and selects the videotaping equipment on which it will be recorded. Heavily used in sports programming (though they are used in all videotaped productions, including television news programming, and sometimes sitcoms, if they are shot on video tape), they are also responsible for action replays and quickly editing highlights

while a show is in progress. As the title suggests, video tape operators only are used in videotaped productions.

**Vision Mixer**: The Vision Mixer or Technical Director (TD) in the United States is responsible for the actual switching between different video sources, such as camera shots and video inserts. They also maintain color and contrast balance between the studio cameras. A Vision mixer (Video Switcher) is, confusingly, also the name of the equipment which the Technical Director operates.

**Post-production**: Everything after the shooting of the film is post production. People involved in this stage of production include the Film editor for film editing, the Video editor for video editing the Publicist for publicity, the Sound Editor, the Foley artist, the Composer, the Title Sequence Designer, and the Specialist editors.

**Composer**: A Composer is a person who writes the music for a production. They may also be the conductor of an orchestra who plays the music, or part of the orchestra. The Composer is the originator of the music, and usually its first performer. The Composer occasionally writes the theme music for a television show. A television program's theme music is a melody closely associated with the show, and usually played during the title sequence and end closing credits. If it is accompanied by lyrics, it is a theme song.

**Editor**: The Editor works in tandem with the Director in editing the film that has been shot. The Director has the ultimate accountability for editing choices, but often the editor has substantial contribution in the creative decisions concerned in piecing together a finalized product. Often, the Editor commences their role whilst filming is still in process, by compiling initial takes of footage. It is an extremely long process to edit a television show, demonstrating the importance, and significance editing has on a production. Gradually more Editor are beginning to work on a non-linear editing system (NLE), limiting physical touching of the actual film, decreasing film corruption due to touch. The Editor follows the screenplay as the guide for establishing the structure of the story and then uses their talents to assemble the various shots and takes for greater, clearer artistic effect. There are several editing stages. In the first stage, the Editor is supervised by the Director, who spells their vision to the Editor. Therefore, this first rough cut is created during "Offline editing". After the first stage, the following cuts may be supervised by one or more Television producers, who represent the production company and its investors. Consequently, the final cut is the one that most closely

represents what the studio wants from the film and not necessarily what the Director wants during "Online editing".

**Foley artist**: The Foley artist on a film crew is the person who creates and records many of the sound effects. Foley Artists, Editors, and Supervisors are highly specialized and are essential for producing a professional-sounding soundtrack, often reproducing commonplace yet essential sounds like footsteps or the rustle of clothing. The Foley artist also fabricates sounds that can't be correctly recorded while filming, much like the Sound editor does with digital sound effects.

**Publicist**: A Publicist or advertiser has the task of raising public awareness of a production, and ultimately increase viewers and sales of it and its merchandise. The publicist's main task is to stimulate demand for a product through advertising and promotion. Advertisers use several recognizable techniques in order to better convince the public to buy a product. These may include:

- Repetition: Some advertisers concentrate on making sure their product is widely recognized. To that end, they simply attempt to make the name remembered through repetition.
- Bandwagon: By implying that the product is widely viewed, advertisers hope to convince potential buyers to "get on the bandwagon."
- Testimonials: Advertisers often attempt to promote the superior worth of their product through the testimony of ordinary users, experts, or both. For example using film critics or media personalities. This approach often involves an appeal to authority such as a doctor of media science.
- Pressure: By attempting to make people choose quickly and without long consideration, some advertisers hope to make rapid sales, and a sense of urgency to watch or buy a product.
- Association: Advertisers often attempt to associate their product with desirable things, in order to make it seem equally desirable. The use of attractive models, picturesque landscapes, and other similar imagery is common. "Buzzwords" with desired associations are also used.
- Imagery: Using advertising slogans, logos, or a common image increases familiarity, trust, and personality of a production, and the ability for the show to be remembered.

The Publicist ensures the media are well aware of a project by distributing the show as a trial run, or a “sneak preview”; through press releases, interviews with members of the cast or crew, arranging exclusive public visits onset of the production, and creating media kits, which contain pictures, posters, clips, shorts, and trailers and brief descriptions on the show and the plot.

**Sound editor**: In television, the Sound Editor deals with audio editing, adjusting and fixing of the soundtrack. They usually have a major decision-making and creative role when it comes to sound and audio. A Sound Editor also decides what sound effects to use and what effects to achieve from the sound effects, edits and makes new sounds using filters and combining sounds, shaping sound with volume curves, and equalizing. A Sound Editor takes the Foley artist's sounds and puts them in place so it works with the picture and sounds natural, even if the sound is *un*natural. In many cases, a Sound Editor uses a sound effects library extensively, either self-compiled, bought or both, as many of the sounds don't get enough focus if they were taken straight from the shoot of the show.

**Title sequence designer**: A title sequence, in a television program, is shown at the beginning of the show; which displays the show name and credits, usually including Actors, Producers and Directors. A montage of selected images and a theme song are often included to suggest the essential tone of the series. A title sequence is essential in preparing the audience for the following program, and gives them a sense of familiarity that makes them trust, and feel comfortable with the film. It is up to the Title Sequence Designer to achieve this very goal, and make it catchy, entertaining, and appealing to increase the audiences feeling of positivity towards the show.

**Specialist editors**: **ADR editor**: Automatic dialogue replacement (ADR) is the process of replacing dialogue that was recorded incorrectly during filming, with the actors voices recorded and put into place during editing. The ADR editor oversees the procedure and takes the corrupted dialogue, and replaces it with newly recorded lines to the actor's mouth on film to make it lip sync correctly.

**Blue screen Director/Matte Artist:** Blue screen is the film technique of shooting foreground action against a blue background, which is then replaced by a separately shot "background plate" scene by either optical effects or digital composting. This process is directed and co-ordinate by the Blue screen Director. The matte artist is a part of the special effects department who assists in making scenery and locations that

do not exist. They assemble backgrounds using traditional techniques or computers that mix with the footage filmed to create a false set. Both are fairly alike, but blue screen technology is more modern and more widely used.

**Special effects coordinator**: Special effects (SPFX) are used in television productions to create effects that cannot be achieved by normal means, such as depicting travel to other star systems. They are also used when creating the effect by normal means is prohibitively expensive, such as an enormous explosion. They are also used to enhance previously filmed elements, by adding, removing or enhancing objects within the scene. The Special effects Coordinator implements these effects, and directs them with the help of the visual effects art director. The task of the Effects coordinator differs frequently, and can range from extensive over-the-top special effects to basic computer motion graphics animation

**TV News**

Television news refers to the dissemination of current events via the medium of television. The news programmes are called as 'News Bulletins' or 'News Casts'. They range from seconds to hours and provide updates of worlds, national and regional or local news events. Television News is very much a image based, showing videos of many events as they are reported. Hence T.V news is predominantly visual oriented. News is provided in regular intervals are scheduled programmes, whereas latest information of at most importance is provided as 'news flash'. News broadcasts generally contains various news events and incidents of the day related to the fields like political, financial, crime, sports, weather, traffic movements etc. Apart from that news analysis and commentary on important news is also given as special programmes. The news items are analyzed in the form of debates, panel discussions or informatory features etc. Many private cable networks have started giving news like B.B.C, Al Jazeera, STAR News, and Fox News. Many specialized news reporting channels like ESP News for sports reporting, The Weather Channel for weather news, CNBC, Bloomberg, Fox Business Network are giving financial news.

**Cable News**

Cable news refers to the channels which are devoted to current events and news programming 24 hours a day. The originator of this format is CNN i.e. Cable News Network. In contrast, the traditional television networks broadcasting news is called 'Network News'. Television channels presenting news 24 hours a day such as CNN, Fox

News in U.S, and B.B.C in U.K are also called as 'Rolling News Channels'. Television news is presented in the form of various packages and formats. Packages are generally prerecorded reports lasting form five minutes to half an hour. News reporters gather news, collect interview clips visuals along with their own 'P to C' i.e. Piece to Camera. These stories are edited and a script matching the visuals is written. A voice – over may also be recorded to explain the pictures and to link various elements together. The bits or news items are presented in various formats like 'fast snippet news' with visuals and voice over or in a 'news magazine' format using Anchor, Visuals, Voice over, P to C. Important news items can also be given in 'live' by the reporter directly from the field where in the visuals along with natural sound from the scene can be directly telecasted.

**Evolution of Television News in India**

Television news started in Doordarshan in the year 1965-66, as a 15-20 minute news bulletin in the daily one hour broadcast programme. As a public broadcaster Doordarshan presented news in generalized manner. All controversial issues were pushed under the carpet and ruling government had a strong hold as news was started as to suit party in power. Later New Delhi Television Limited (NDTV) started the programme "The World This Week" in 1988, telecasted on Friday night. The news magazine programme gained popularity and credibility through its presentation and varied coverage on international and national events. In 1989 NDTV produced India's live coverage of countries general elections. The commercial success of the coverage set new standard for Indian Television.

Television became transnational in character through the coverage of Gulf War by CNN. The launch of STAR PLUS and its beaming into Indian sub-continent started the proliferation of satellite channels in India. In October 1992, Zee Television was started by Subhash Chandra followed by Sony and ETV. But majority of the satellite channels were entertainment channels. Due to increased market pressure and to sustain the influx of satellite channels Doordarshan started improving its news programs by outsourcing them to private producers under sponsored category. In February 1995, NDTV became the first private producer of national news titled "News Tonight". Gradually the current affairs programs like 'TV Today' in DD Metro, 'Aaj Tak' presented by Late S.P.Singh, 'Aankhon Dekhi' presented by Nalini Singh and 'The India Show', 'India Business Report' started by Television 18 were started which became very popular. Doordarshan became a popular and most looked out channel for news

programs. The success of television programs in Doordarshan forced the satellite channels to launch news programs and ZEE TV was first to fall in line with the starting of ZEE news in 1995 with a tag line 'Sabse Pehle' meaning 'always first'. Later STAR TV and NDTV entered into a five year contract for starting STAR news in 1998.

The fallout of Kargil conflict made the Indian audience look out for latest and happening news in the war front and television became the major source of war news. 'War time journalism' gave the much needed impetus for television news channels and television journalists like Barkha Dutt became a house hold name. In November 1999, TV 18 entered into joint venture partnership with CNBC to launch CNBC India channel. TV Today group launched the 24 hour Hindi news channel 'Aaj Tak' in December 2000. Within 11 months of the launch Aaj Tak became the number one news channel and was awarded the best news channel in India Television Academy Awards. Mega events like Kandhahar hijack, September 11th attacks, Afghanistan War, attack on Parliament, Iraq war, Godhra riots kept Indian TV news channels busy. As the five years contract of NDTV with STAR TV was over in 2003, NDTV launched the 24 hours English news channel NDTV 24X7 and Hindi news channel NDTV India. The power of television journalism reached its peak with the sting operations like Operation West End and 'casting couch case' involving film actor Shakthi Kapoor.

Sahara Indian Parivar launched 24 hours national Hindi channel 'Sahara Samay' in March 28, 2003. It was the first ever city centric satellite news channel covering 31 cities in India with the city news bulletins. DD Metro was converted into 'DD News' on October 3rd 2003 in which both English and Hindi news were telecasted. 'India TV' was launched by May 20th 2004 by Raj kumar Ilyasi and Tarun Tejpal. NDTV Profit 24 hour business news channel was started in January 17th 2005. CNBC and TV18 launched a 24 hour Hindi consumer information channel 'Awaaz' which gives market and investment news. Jagaran TV Private Limited started Channel 7 on 27th March 2005.

**Some of the Indian prominent news channels are as follows**:

**Doordarshan (DD) News:** DD is the grand old dame of Indian TV news. It was once every Indian's only source of national and international news but its viewership in the metros has fallen since the satellite **Popular shows**: *The News* (8.30pm).

**NDTV 24/7:** NDTV joined forces with both DD and Rupert Murdoch's STAR network before striking out on its own as NDTV 24/7. It was the first channel to introduce western elements such as expert panels, audience polls, exposés, campaigns, and

personality driven news. But most importantly, NDTV was the first real voice of the English-speaking urban middle class. A generation of Indians has grown up watching Prannoy Roy –the mild-mannered, bearded psephologist who founded the channel with his wife to make sense of election results. **Popular shows**: *India Decides @ 9* (9pm on week nights) is good for a news roundup. We The People (8pm, Sunday) is an audience-based show tackling current issues hosted by award-winning journalist Barkha Dutt.

**Times Now:** Brought to you by the same people that publish *The Times of India*, the channel was part of the new wave of private broadcasters that launched after NDTV 24/7. It's known for a loud, brash style and often provokes extreme reactions. You either love it or hate it. A lot of this has to do with the channel's editor-in-chief, Arnab Goswami. His combative style of interviewing and presenting the news is hard to ignore. If you're a 'breaking-news' junkie, Times Now is for you. On the other hand, more delicate viewers will quickly overdose on the constant flashing graphics on screen. What's more, the channel isn't shy of telling you what to make of headlines. **Popular shows**: *Newshour* (9pm, Monday-Sunday) is a nightly round-up of the day's news hosted by Arnab Goswami. Its debates are lively, but can often descend into shouting matches between the anchor and guests.

**CNN IBN:** A US/Indian partnership brings you a channel closely modelled on CNN, with a distinct Indian flavour. Fronted by ex-NDTV anchor Rajdeep Sardesai, it has a good mix of regular news reports along with some offbeat formats including a citizen journalist show and even a spoof news show. **Popular shows**: *Devil's Advocate* (8.30pm, Sunday). Veteran journalist Karan Thapar grills politicians, actors, and other public figures but he often doesn't let guests have their say. *Face The Nation* (Monday - Thursday, 10 pm). Host Sagarika Ghose interviews experts and viewers on a host of current topics. But be warned: the host often dominates her guests.

**Headlines Today:** Part of the India Today group, this channel has a youthful feel and a relatively young team of anchors. It also has a 'hard sell' when it comes to presenting news – dramatic background music accompanies reports and crime re-enactments are common. **Popular shows**: *Grand Stand* (8.30 pm, Monday – Friday

**News X:** The newest kid on the block, News X was created by the INX Network and was recently bought by Indi Media. Visually, it's a refreshing change from its rivals because of a relatively clean look – you won't be straining your eyes while looking at a busy screen. The channel's yellow and black colour scheme also differentiates it from

competitors. In keeping with this tone, the news is also presented in a laid back manner. **Popular shows**: *India Inc* (6.30pm, Sunday) - a business slot that showcases local entrepreneurs and their success.

**Television News Channels In Telugu**

Most of the private satellite news channels were not able to start news programs sue to the unavailability of unlinking facilities. The first satellite channel to start the up linking facility and to record the news was SUN TV. ETV used to record the news for 'Andhravani' in Chennai and sent the cassettes to Colombo for up linking it to satellite. Later the up linking facility was started in Chennai by Videsh Sanchar Nigam Limited (VSNL). Utilizing this facility ETV used to uplink the programs from Chennai to Colombo and down linked it at Colombo, further up linking it to satellite from Colombo. Gemini TV started news from February 1998. News bulletins were prepared by a private network called APT TV. Gemini TV started own news production from May 1st 1998. Gemini TV used to uplink the program from Chennai to Singapore, down linking it in Singapore and later up linking the same to satellite.

As the non-linear editing facility was not available during that period 4 to 5 types of news items were inserted in one cassette and sent for teleporting to VSNL facility. ETV used its large network of print reporters for preparing news items at Delhi and Chennai. Two news readers used to read the news at Delhi and Chennai separately. Later Government allowed every channel to build its own earth station along with the up linking facility. ETV news returned to Hyderabad where as Gemini TV, Teza News used to record in Chennai up to 2003 and uplinked from Chennai. Teza news shifted to Hyderabad once Satellite News Gathering (SNG) facility became full proof. MAA TV started news in October 2003. ETV became the first Telugu news channel to telecast live news. The onslaught of the 24 hour news channels started as the up linking facility from India became available. ZEE news was started by ZEE television in 1995. ETV-2 was started in December 2003 followed by TV9 in the same month. TV5 was started n 2007, followed by NTV in the same year. ThE YEAR 2009 witnessed the starting of a plethora of 24 hour Telugu news channels like HMTV,ITV, ZEE 24 GHANTALU, SAAKSHI TV, MAHA TV, STUDIO N, TVI and ABN Andhra Jyothi.

**1.8. New telecast techniques**

The following are the different types of telecasting techniques:

**1. Terrestrial television**

Terrestrial television is a mode of television broadcasting which involves radio waves through transmitting and receiving antennas or aerials. The term is more common in Europe, while in the United States it is referred to as **broadcast television** or sometimes **over-the-air television**. Terrestrial television broadcasting dates back to the very beginnings of television as a medium itself with the first long-distance public television broadcast from Washington, D.C., on April 7, 1927. The BBC began broadcasting television to the public in 1929, and had a regular schedule programmes in 1930 through terrestrial television broadcasting.

**2. Digital terrestrial television**

Digital Terrestrial Television (DTTV or DTT) is the technological evolution and advance from analogue terrestrial television, which broadcasts through the land based (terrestrial) signals. Digital terrestrial television is characterized by reduced use of spectrum, more capacity than analogue, better-quality picture, and lower operating costs for broadcast. A terrestrial implementation of digital television technology uses aerial broadcasts to a conventional antenna (or aerial) instead of a satellite dish or cable connection. Competing variants of digital terrestrial television technology are used around the world.

- Advanced Television Standards Committee ATSC is the one used in North America and South Korea.
- ISDB-T is used in Japan, with a variation of it used in most of South America.
- DVB-T is the most prevalent, covering Europe, Australia, New Zealand, Colombia and some countries of Africa.
- DMB-T/H is China's own standard including Hong Kong.
- Several European countries have switched from Analogue to Digital terrestrial television, with the rest hoping to have completed the switchover mostly by 2012.

DTTV is transmitted on radio frequencies through terrestrial space in the same way as standard analogue television, with the primary difference being the use of multiplex transmitters to allow reception of multiple channels on a single frequency range such as a UHF or VHF channel. The amount of data that can be transmitted (and therefore the number of channels) is directly affected by the modulation method of the channel. The modulation method in DVB-T is COFDM with either 64 or 16 state Quadrature Amplitude Modulation (QAM). In general a 64QAM channel is capable of

transmitting a greater bitrate, but is more susceptible to interference. 16 and 64QAM constellations can be combined in a single multiplex, providing a controllable degradation for more important programme streams. This is called **hierarchical modulation**. DTTV is received either via a digital set-top box, or integrated receiving device, that decodes the signal received via a standard aerial antenna.

**Advantages**

- Digital presentation tends to be better overall, particularly with a good signal, due to the elimination of visible interference and other effects such as ghosting.
- With a weaker signal there is little perceptible difference in digital presentations.
- It is easier to obtain the optimum digital picture than the optimum analogue picture.
- Many more channels can fit on the same spectrum under digital transmission.
- Interactive services can be provided.

**Disadvantages**

- It can be quite difficult to adjust the antenna, because of the lack of feedback that would be provided by a gradually degraded analog picture. The picture is usually either totally on or totally off, providing no information about which direction to move the antenna. A signal meter provided on most tuners helps considerably with this problem, but some televisions lack a signal meter. The same problem can also make it very difficult to select and test antennas.
- New equipment (Set-top box) may be required.
- Increased electricity consumption by the digital receiving equipment if both TV and additional set-top box is plugged.
- An upgraded antenna installation may be required.
- Analogue requires lower signal strength to get a viewable picture. By extension, digital does not degrade as gracefully as analogue. This is because digital signal transmission suffers from the cliff effect; meaning that once the signal degrades beyond a certain point the receiver fails to decode the signal and cannot present the expected output.
- Switching channels is slower because of the time delays in decoding digital signals.

## 3. Satellite television

Satellite television is television delivered by the means of communications satellite and received by an outdoor antenna, usually a parabolic mirror generally referred to as a satellite dish, and as far as household usage is concerned, a satellite receiver either in the form of an external set-top box or a satellite tuner module built into a TV set. In many areas of the world satellite television provides a wide range of channels and services, often to areas that are not serviced by terrestrial or cable providers. Direct broadcast satellite television comes to the general public in two distinct flavors - analog and digital. This necessitates either having an analog satellite receiver or a digital satellite receiver. Analog satellite television is being replaced by digital satellite television and the latter is becoming available in a better quality known as high-definition television.

The first satellite television signal was relayed from Europe to the **Telstar satellite** over North America in 1962. The first geosynchronous communication satellite **Syncom 2** was launched in 1963.The world's first commercial communication satellite called **Intelsat I nicknamed Early Bird**, was launched into synchronous orbit on April 6, 1965. The first national network of satellite television, called **Orbita**, was created in Soviet Union in 1967, and was based on the principle of using the highly elliptical Molniya satellite for re-broadcasting and delivering of TV signal to ground downlink stations. The first commercial North American satellite to carry television was Canada's geostationary **Anik 1**, which was launched in 1972. **ATS-6** the world's first experimental educational and Direct Broadcast Satellite, was launched in 1974. The first Soviet geostationary satellite to carry Direct-To-Home television, called **Ekran** was launched in 1976.

### Technology

Satellites used for television signals are generally in either naturally highly elliptical **Molniya orbit or geostationary orbit 37,000 km (22,300 miles)** above the earth's equator. Satellite television, like other communications relayed by satellite, starts with a transmitting antenna located at an uplink facility. Uplink satellite dishes are very large, as much as 9 to 12 meters (30 to 40 feet) in diameter. The increased diameter results in more accurate aiming and increased signal strength at the satellite. The uplink dish is pointed toward a specific satellite and the uplinked signals are transmitted within a specific frequency range, so as to be received by one of the

transponders tuned to that frequency range aboard that satellite. The transponder 'retransmits' the signals back to Earth but at a different frequency band i.e. through a process known as **translation**, used to avoid interference with the uplink signal, typically in the **C-band (4–8 GHz**) or **$K_u$-band (12–18 GHz)** or both. The leg of the signal path from the satellite to the receiving Earth station is called the downlink.

A typical satellite has up to **32 transponders for Ku-band** and up to **24 for a C-band.** Typical transponders each have a bandwidth between **27 MHz and 50 MHz.** Each geo-stationary C-band satellite needs to be spaced 2 degrees from the next satellite to avoid interference. For $K_u$ the spacing can be 1 degree. C-band transmission is susceptible to terrestrial interference and is adversely affected by ice crystals in thunder clouds, while $K_u$-band transmission is affected by rain as water is an excellent absorber of microwaves at this particular frequency. The down linked satellite signal, quite weak after traveling the great distance can be collected by using a parabolic receiving dish, which reflects the weak signal to the dish's focal point. Mounted on brackets at the dish's focal point is a device called a **feed horn**. This feed horn is essentially the flared front-end of a section of waveguide that gathers the signals at or near the focal point and 'conducts' them to a probe or pickup connected to a **low-noise block down converter or LNB**. The LNB amplifies the relatively weak signals, filters the block of frequencies in which the satellite TV signals are transmitted, and converts the block of frequencies to a lower frequency range in the L-band range. The amplified signal was then fed via coaxial cable to an indoor receiver.

**Standards**

Analog television distributed via satellite is usually sent scrambled or unscrambled in NTSC, PAL, or SECAM television broadcast standards. The analog signal is frequency modulated and is converted from an FM signal to what is referred to as baseband. This baseband comprises the video signal and the audio subcarrier(s). The audio subcarrier is further demodulated to provide a raw audio signal. If the signal is a digitized television signal or multiplex of signals, it is typically QPSK. In general, digital television, including that transmitted via satellites, is generally based on open standards such as MPEG and DVB-S or ISDB-S.

**Categories of usage**

There are three primary types of satellite television usage: reception direct by the viewer, reception by local television affiliates, or reception by head ends for

distribution across terrestrial cable systems. Direct to the viewer reception includes direct broadcast satellite or DBS and television receive-only or TVRO, both used for homes and businesses including hotels, etc.

**Direct broadcast via satellite**

Direct broadcast satellite, (DBS) also known as "Direct-To-Home" can either refer to the communications satellites themselves that deliver DBS service or the actual television service. DBS systems are commonly referred to as "mini-dish" systems. DBS uses the upper portion of the $K_u$ band, as well as portions of the $K_a$ band. Modified DBS systems can also run on C-band satellites and have been used by some networks in the past to get around legislation by some countries against reception of $K_u$-band transmissions. Most of the DBS systems use the DVB-S standard for transmission. With Pay-TV services, the data stream is encrypted and requires proprietary reception equipment. While the underlying reception technology is similar, the Pay-TV technology is proprietary, often consisting of a Conditional Access Module and smart card. This measure assures satellite television providers that only authorized, paying subscribers have access to Pay TV content but at the same time can allow free-to-air (FTA) channels to be viewed even by the people with standard equipment (DBS receivers without the Conditional Access Modules) available in the market.

**Direct to Home television**

Many satellite TV customers in developed television markets get their programming through a direct broadcast satellite (DBS) provider. The provider selects programs and broadcasts them to subscribers as a set package. Basically, the provider's goal is to bring dozens or even hundreds of channels to the customer's television in a form that approximates the competition from Cable TV. Unlike earlier programming, the provider's broadcast is completely digital, which means it has high picture and stereo sound quality. Early satellite television services broadcast in C-band - radio in the 3.7 Giga Hertz (GHz) to 4.2 GHz frequency range. Digital broadcast satellite transmits programming in the $K_u$ frequency range (10 GHz to 14 GHz. Programming sources are simply the channels that provide programming for broadcast. The provider (the DTH platform) doesn't create original programming itself. The broadcast center is the central hub of the system. At the broadcast center, the television provider receives signals from various programming sources, compresses these signals using digital compression (encryption if necessary), and sends a broadcast signal to the proper satellite

**Digital television (DTV**) is a system of producing, transmitting, storing, and displaying television programmes in digital codes. Until the late 1980s it was considered impossible to convert a TV signal into digital code because of the amount of information needed to represent a visual image. However, the development of data compression techniques made it possible to develop a digital technology in the 1990s that offered sharper and wider pictures with superior image quality. A common world standard for DTV, the MPEG-2, was agreed in April 1993 at a meeting of engineers representing manufacturers and broadcasters from 18 countries. The advent of DTV constitutes a revolutionary overhaul of television, making a wider variety of programming available and improving the quality of image and sound. It is expected that DTV will have superseded the analog television system by 2006. By this time, industry experts hope, 'multiplexing' (where more than one television program can share the same bandwidth) of both HDTV and SDTV (standard definition) programs will have been widely adopted, as will the broadcast of non television data, such as Web content and stock-market information.

Traditional television broadcasts since the inception of the television have been "**Linear**." A person viewing a linear broadcast has no control over what is being viewed other than to be able to change channels and adjust the volume and display settings. Everyone watching a particular linear broadcast will see the same thing at the same time. To this day, the majority of television broadcasts are linear.

**Pay TV** is a form of linear broadcast channel that is only available to paying customers. Pay TV channels are available to cable and Satellite customers on top of their basic channels, for an additional subscription fee (on top of whatever fee they may be paying for their basic access. A new technology called "**Pay Per View**" (PPV) or "**Conditional Access"** was first introduced in the 1970s and became commonly available on cable and satellite networks in the early 1990s. Pay per View allows the viewer/customer to select a particular show and watch it on their television set for a fee. The channel containing the Pay per View feed is then unlocked, permitting the viewer/customer to watch the broadcast for a limited amount of time (generally the running time of the broadcast). In all other aspects, Pay per View is in fact a linear broadcast, with a set broadcast schedule.

**Video on Demand** (VOD), is a newer technology first introduced in 1990 and only available on digital cable and satellite networks. VOD works similarly to PPV such that

viewers/customers may select a particular show and watch it on their television for a fee. Unlike PPV, VOD is however not a linear broadcast, the viewer may select when the showing will begin, they may pause, rewind and fast-forward the viewing. VOD networks typically operate on one of three business models, or a mixture of these.

- Free on Demand is a free offering from your cable provider, it may or may not be ad sponsored like regular broadcast TV.
- Subscription VOD (SVOD) costs a flat monthly fee regardless of how many shows you watch. Similar to pay TV.
- Transactional VOD charges a viewing fee for each show that a viewer "purchases." Similar to pay per view.

Some networks charge both a subscription fee and viewing fee. However, most VOD providers permit the viewer to view a show as many times as they want during a 24-hour period, while PPV only permits one viewing.

**1.9. Programs for special audience - women - youth - children - farmers – students**

**The various programming content in television i.e. scripted entertainment are as follows.**

- Animated
- Award shows (partially scripted)
- Drama—which includes:
    - Action-adventure or Thriller
    - Comedy-drama
    - Family drama
    - Legal drama
    - Medical drama
    - Police procedural
    - Political drama
    - Science-fiction / Fantasy / Horror / Supernatural drama
    - Serial drama
    - Soap opera
    - Teen drama
- Miniseries and Television movies
- Comedy
    - Mockumentary

- Satire
- Sitcom
- Sketch comedy

**Unscripted entertainment**

- Game shows
- Reality
- Talk shows

**Informational**

- Infomercials—paid advertising spots that are up to an hour long
- News programs
- Documentaries
- News magazines—dealing with current affairs

**Panel discussion interviews**

Some panels crackle with energy, elicit fresh ideas, and bring the audience into the discussion. Others plod along, and by the fifteen-minute mark the audience is checking Blackberries and thumbing through the program.

**Length and panel size:** The ideal length for a panel discussion is 45 minutes to one hour. The ideal number of participants is 4-5, plus moderator.

**Choosing a moderator:** Every panel discussion needs a strong moderator. The role of the moderator is very different from the role of a panelist. The best moderator is someone who has moderated panels in the past, understands the subject matter, knows a bit about the panelists, and realizes that he / she is there to guide the conversation - not to impress the audience with her brilliance. The moderator is there to make the speakers look good and make sure that they connect with the audience. Moderators also need an innate sense of pacing i.e. how long each panelist should talk, and how long she should dedicate to each topic before moving on and a smooth approach to weaving in questions from the audience.

**Panelist guidelines and advance preparation:** Once a panelist has signed on, send a confirmation for agreeing to be part of the event, along with the date/time/location of the event. The communication must also inform the panelist's details about the topics/themes of the session, and what you hope to achieve.

**Everyone needs a microphone:** It can be a clip-on lavalier mic, or a handheld, or a mic perched on an adjustable stand, but forcing everyone to share a single mic means that

there will be long stretches of dead air as your panelists hand the mic back and forth. This slows down the pace of the discussion, and often it prevents panelists who have something to say from jumping in, because someone else will hijack the mic while it is traveling down the line. The best option is to having mics for everyone.

Panel discussions on Indian television have come a long way from the sleepy and monotonous sessions of the Doordarshan era. Back then, the static camera and uninspired presentation of views actually killed the informed arguments of the panelists. With the media boom, the picture has changed considerably. Apart from the lively involvement of audience and the eloquence of media-savvy panelists, technology also ensured the involvement of speakers from across time zones, promising a deeper, broader and more enlightened discourse on issues. Not only are today's newsmakers and commentators seemingly more open to instant reactions to their views, they are also well versed - in varying degrees - with the dynamics of live media. First, television news, as the cliché goes, is no more just news today. It is entertainment. It is competition. It is also often a direct response mechanism that gives panelists the first taste of public sentiments. Given this scenario, most Indian panelists – very often regular fixtures on particular channels – look to make the most out of their 30-60 minute daily airtime quota to ensure that they are heard. For such a desperate lot, it is irrelevant whether a fellow-panelist is making a pertinent point, answering specific questions or stating facts that could give the discussion a fresh perspective.

## Television technology

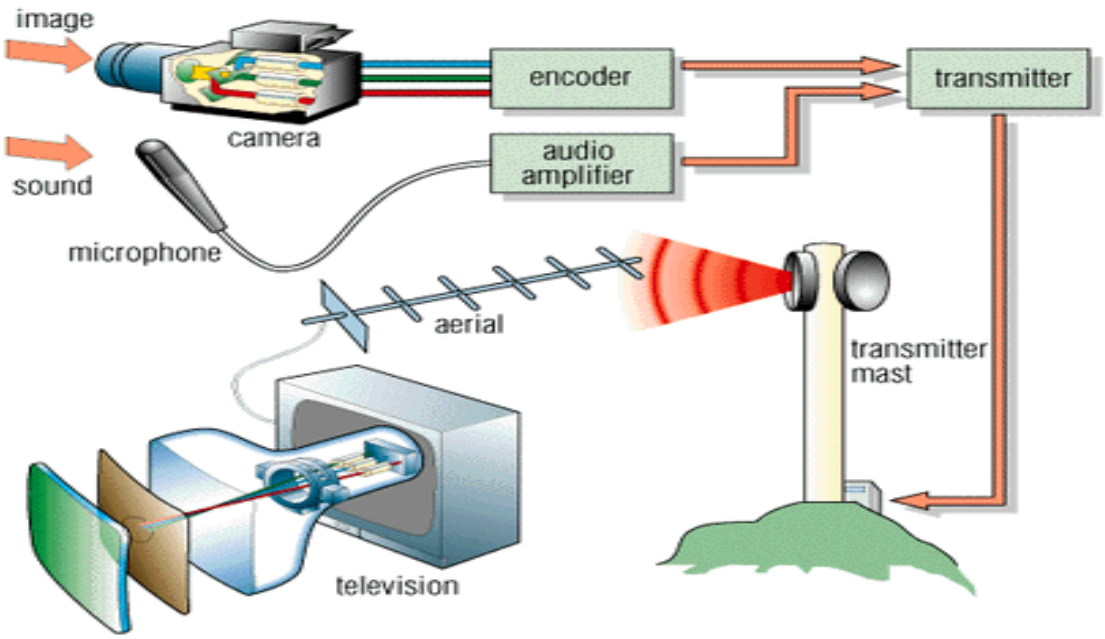

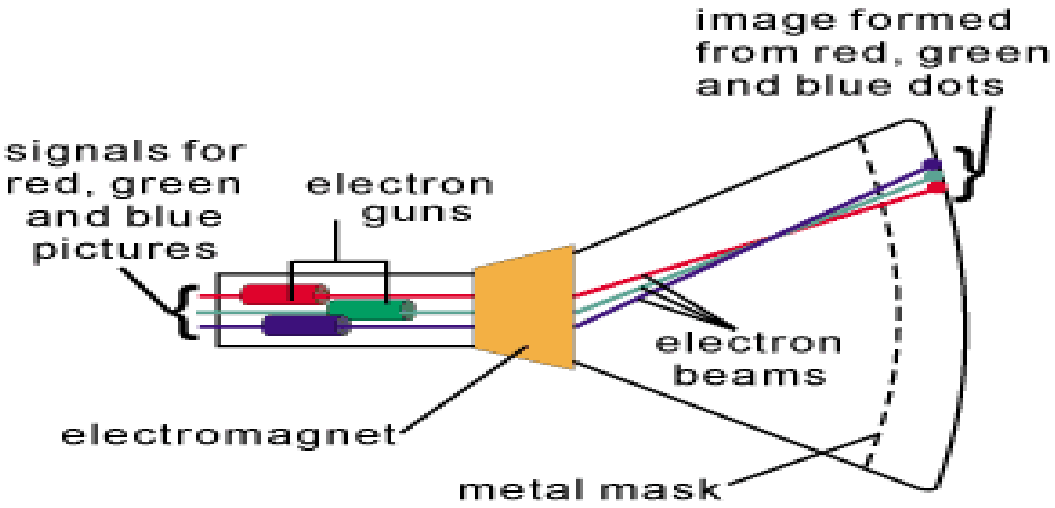

**Diagram of a color television system – transmitting and receiving**.

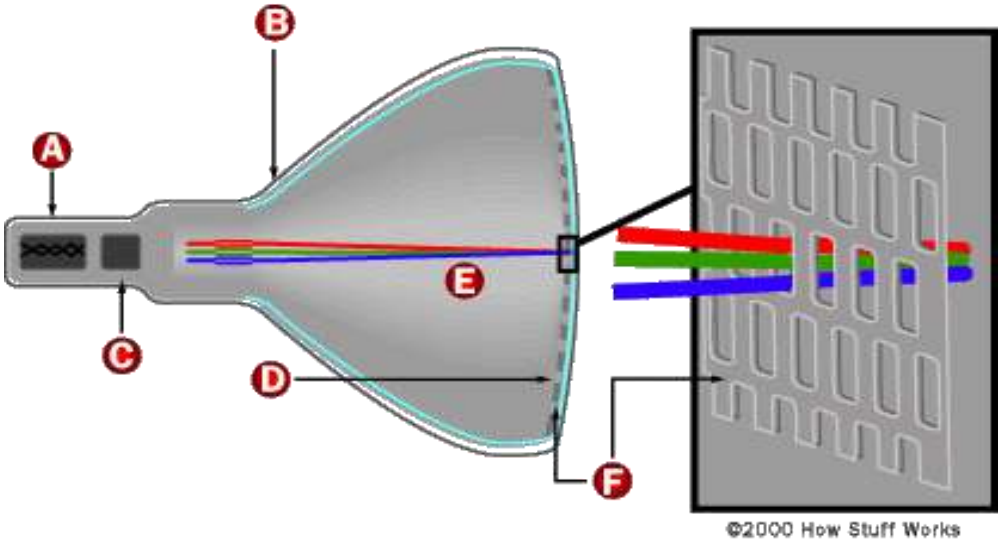

- The camera separates the picture into three colors – red, blue, green – by using filters and different camera tubes for each color.
- The audio signal is produced separately from the video signal. Both signals are transmitted from the same aerial using a special coupling device called a **diplexer**.
- There are four sections in the receiver: the aerial, the tuners, the decoders, and the display. As in the transmitter, the audio and video signals are processed separately. The signals are amplified at various points.
- For transmission, a television camera converts the pattern of light it takes in into a pattern of electrical charges. This is scanned line by line by a beam of electrons from an electron gun, resulting in variable electrical signals that represent the picture. These signals are combined with a radio carrier wave and broadcast as **electromagnetic waves**.
- The receiving 'aerial' or antenna or satellite dish picks up the wave and feeds it to the receiver i.e. TV set. This separates out the vision signals, which pass to the display device.

- A television itself is a **cathode ray tube**, with three electron guns at the back, ejecting electrons to the screen. The color we see on the screen with our naked eyes is a mixture of red, green and blue. There are three different fluorescence powders on the screen corresponding to the three colors. When electrons are ejected to the fluorescence powder, light is given out, forming a visible image.
- The electrons are ejected to their suitable fluorescence powder, for example, an electron that represents blue will only hit blue fluorescence powder but not the red one, or else a strange color will appear. This is done by placing a specially made **metal mask** between the screen and the electron guns. As the electron guns eject electrons in different directions, the electrons will reach different fluorescence powders after passing through the metal net. The result is a recreation of the pattern of light that entered the camera

**Human Vision**:

- Both television and computer screens as well as newspaper and magazine photos rely on this fusion-of-small-colored-dots capability in the human brain to chop pictures up into thousands of individual elements. On a TV or computer screen, the dots are called **pixels**. If you divide a moving scene into a **sequence of still pictures** and show the still images in **rapid succession**, the brain will **reassemble** the still images into a **single, moving scene**. By putting together 15 or more subtly different frames per second, the brain integrates them into a moving scene. Fifteen per second is about the minimum possible -- any fewer than that and it looks jerky.

A Cathode
B Conductive coating
C Anode
D Phosphor-coated screen
E Electron beams
F Shadow mask

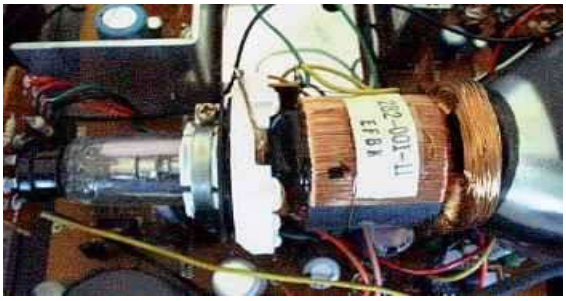

**The Cathode Ray Tube:**

- Almost all TVs in use today rely on a device known as the **cathode ray tube**, or **CRT**, to display their images.
- The terms **anode** and **cathode** are used in electronics as synonyms for positive and negative terminals. The "cathode" is a heated filament placed is in a vacuum created inside a glass "tube." The "ray" is a stream of electrons that naturally pour off a heated cathode into the vacuum. Electrons are negative. The anode is positive, so it attracts the electrons pouring off the cathode.
- In a TV's cathode ray tube, the stream of electrons is focused by a focusing anode into a tight beam and then accelerated by an accelerating anode. This tight, high-speed beam of electrons flies through the vacuum in the tube and hits the flat screen at the other end of the tube. This screen is coated with phosphor, which glows when struck by the beam.

**TV Steering Coils**:

- The steering coils are simply copper windings. These coils are able to create **magnetic fields** inside the tube, and the electron beam responds to the fields.
- One set of coils creates a magnetic field that moves the electron beam vertically, while another set moves the beam horizontally. By controlling the voltages in the coils, you can position the electron beam at any point on the screen.

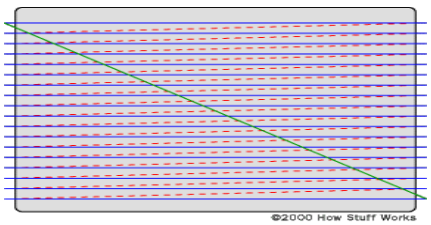

**The large black electrode hooked to the tube near the screen is connected internally to the conductive coating.**

**TV Phosphors**

- A **phosphor** is any material that, when exposed to radiation, emits visible light. The radiation might be ultraviolet light or a beam of electrons. Any fluorescent color is really a phosphor -- fluorescent colors absorb invisible ultraviolet light and emit visible light at a characteristic color.
- In a CRT, phosphor coats the inside of the screen. When the electron beam strikes the phosphor, it makes the screen glow. In a black-and-white screen, there is one phosphor that glows white when struck. In a color screen, there are three phosphors arranged as dots or stripes that emit red, green and blue light. There are also three electron beams to illuminate the three different colors together.

**The Black-and-White TV Signal**

- In a black-and-white TV, the screen is coated with white phosphor and the electron beam "paints" an image onto the screen by moving the electron beam across the phosphor a line at a time.
- To "paint" the entire screen, electronic circuits inside the TV use the magnetic coils to move the electron beam in a "**raster scan**" pattern across and down the screen. The beam paints one line across the screen from left to right. It then quickly flies back to the left side, moves down slightly and paints another horizontal line.

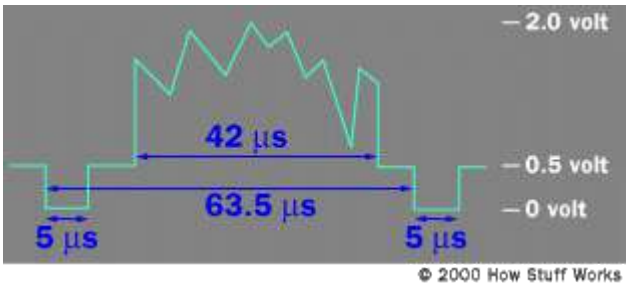

- In this figure, the blue lines represent lines that the electron beam is **"painting"** on the screen from left to right, while the red dashed lines represent the beam flying back to the left. When the beam reaches the right side of the bottom line, it has to move back to the upper left corner of the screen, as represented by the green line in the figure. When the beam is "painting," it is on, and when it is flying back, it is off so that it does not leave a trail on the screen. The term **horizontal retrace** is used to refer to the beam moving back to the left at the end of each line, while the term **vertical retrace** refers to its movement from bottom to top.
- As the beam paints each line from left to right, the intensity of the beam is changed to create different shades of black, gray and white across the screen. Because the lines are spaced very closely together, your brain integrates them into a single image.

**Painting the TV Screen**

- Standard TVs use an **interlacing** technique when painting the screen. In this technique, the screen is painted half of the lines per frame. The beam paints every other line as it moves down the screen -- for example, every odd-numbered line. Then, the next time it moves down the screen it paints the even-numbered lines, alternating back and forth between even-numbered and odd-numbered lines on each pass. **The entire screen, in two passes, is painted 30 times every second.**
- The alternative to interlacing is called **progressive scanning**, which paints every line on the screen 60 times per second. Most computer monitors use progressive scanning because it significantly reduces flicker.
- The TV station or VCR therefore sends a well-known signal to the TV that contains three different parts:
    1. **Intensity information** for the beam as it paints each line
    2. **Horizontal-retrace signals** for moving the beam back at the end of each line
    3. **Vertical-retrace signals** for moving the beam from bottom-right to top-left
- A signal that contains all three of these components -- intensity information, horizontal-retrace signals, and vertical-retrace signals -- is called a **composite video signal**.

## Black and White T.V.Signal

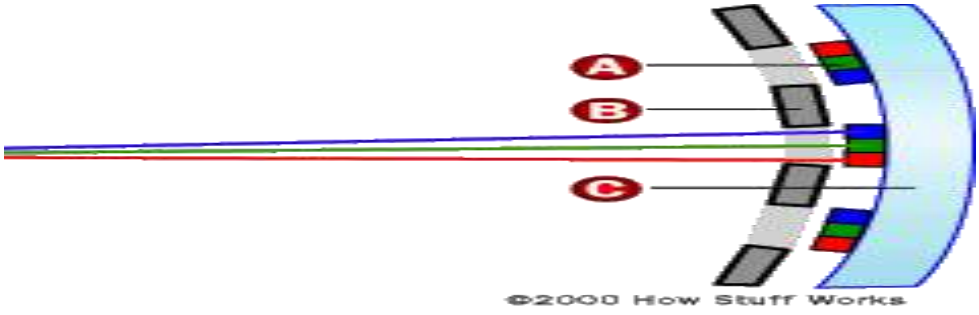

- The horizontal-retrace signals are **5-microsecond pulses** at zero volts. The actual signal for the line is a varying wave between 0.5 volts and 2.0 volts, with 0.5 volts representing black and 2 volts representing white. This signal drives the intensity circuit for the electron beam. In a black-and-white TV, this signal can consume about **3.5 megahertz (MHz)** of bandwidth, while in a colour set the limit is about **3.0 MHz**.
- A vertical-retrace pulse is similar to a horizontal-retrace pulse but is 400 to 500 microseconds long. The vertical-retrace pulse is **serrated** with horizontal-retrace pulses in order to keep the horizontal-retrace circuit in the TV synchronized.

## Color TV Screen

A color TV screen differs from a black-and-white screen in three ways:

- There are three electron beams that move simultaneously across the screen. They are named the red, green and blue beams.
- The screen is not coated with a single sheet of phosphor as in a black-and-white TV. Instead, the screen is coated with red, green and blue phosphors arranged in dots or stripes. If you turn on your TV or computer monitor and look closely at the screen with a magnifying glass, you will be able to see the dots or stripes.
- On the inside of the tube, very close to the phosphor coating, there is a thin metal screen called a **shadow mask**. This mask is perforated with very small holes that are aligned with the phosphor dots (or stripes) on the screen.

Ⓐ Phosphors
Ⓑ Shadow mask
Ⓒ Glass

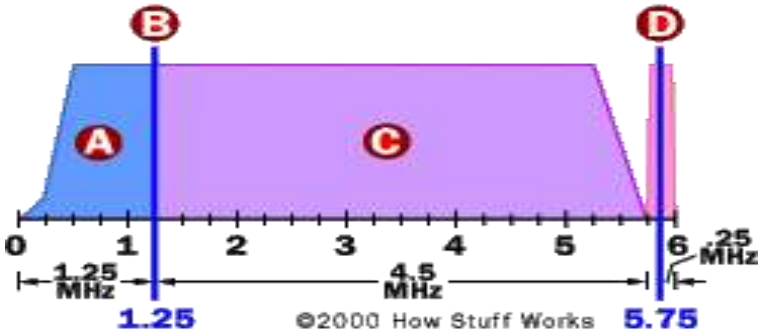

- When a colour TV needs to create a red dot, it fires the red beam at the red phosphor. Similarly for green and blue dots.
- To create a white dot, red, green and blue beams are fired simultaneously -- the three colours mix together to create white.
- To create a black dot, all three beams are turned off as they scan past the dot.
- All other colours on a TV screen are combinations of red, green and blue.

**Color TV Signal**

- A colour TV signal starts off looking just like a black-and-white signal. An extra **chrominance** signal is added by superimposing a 3.579545 MHz sine wave onto the standard black-and-white signal.
- Right after the horizontal sync pulse, eight cycles of a 3.579545 MHz sine wave are added as a **colour burst**.

- The composite video signal is amplitude-modulated into the appropriate frequency, and then the sound is frequency-modulated.

Ⓐ Vestigial picture sideband
Ⓑ Video carrier
Ⓒ Fully transmitted picture sideband
Ⓓ Sound carrier

- To the left of the video carrier is the **vestigial lower sideband** (0.75 MHz), and to the right is the full upper sideband (4 MHz).
- The sound signal is centred on 5.75 MHz.

- For example, if a program is transmitted on channel 2, it has its video carrier at 55.25 MHz and its sound carrier at 59.75 MHz.
- A typical TV signal 4 MHz of bandwidth. By the time the sound, is added as a **vestigial sideband** and a little buffer space, a TV signal requires **6 MHz of bandwidth**.

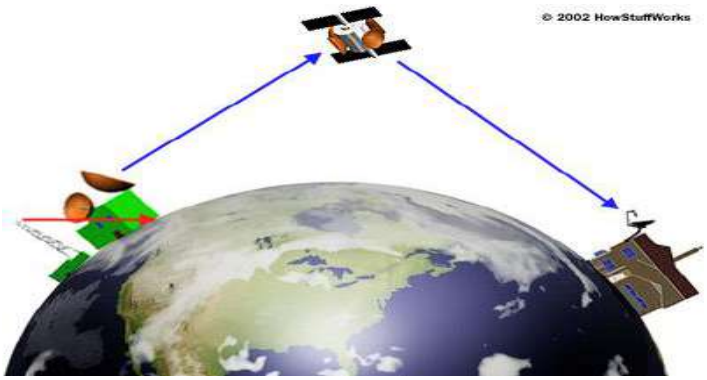

**TV Broadcasts**

There are five different ways to get a signal into your TV set

- Broadcast programming received through an **antenna**
- Cable TV arriving in a **set-top box** that connects to the antenna terminals
- Large i.e. 6 to 12 feet satellite-dish antenna Small (1 to 2 feet) satellite-dish antenna arriving in a set-top box that connects to the antenna terminals

**Satellite TV Signals**

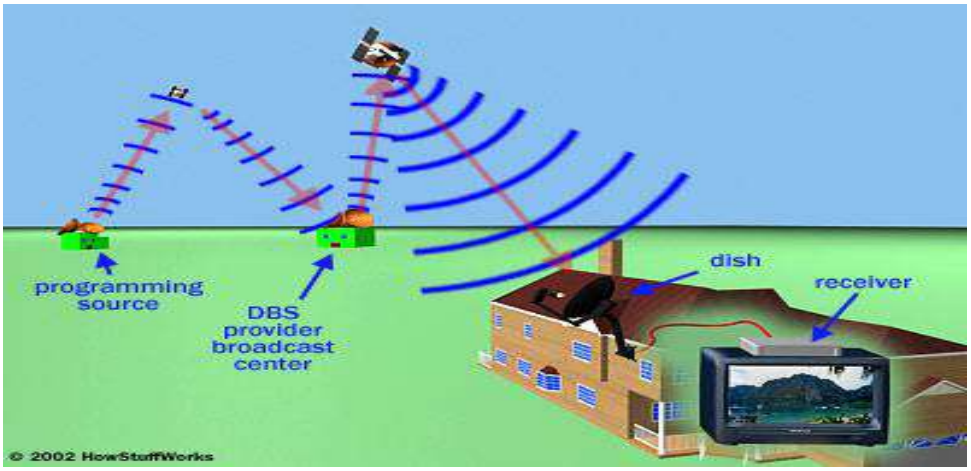

- Satellites are high in the sky, there are a lot more customers in the line of sight. Satellite TV systems transmit and receive radio signals using specialized antennas called **satellite dishes**.
- **Large-dish satellite antennas** pick off un encoded or encoded signals being beamed to Earth by satellites. First, the dish to a particular satellite, and then a particular channel is selected for transmitting.
- The set-top box receives the signal, decodes it if necessary and then sends it to channel..
- The TV programs are encoded in MPEG-2 format and transmitted to Earth. The set-top box decodes MPEG-2, then converts it to a standard analog TV signal and sends it to TV

**Satellites are higher in the sky than TV antennas, so they have a much larger line**

**of sight range.**

- The TV satellites are all in **geosynchronous orbit** i.e.they stay in one place in the sky relative to the Earth. Each satellite is launched into space at about 7,000 mph (11,000 kph), reaching approximately 22,200 miles (35,700 km) above the Earth. At this speed and altitude, the satellite will revolve around the planet once every 24 hours -- the same period of time it takes the Earth to make one full rotation.
- Today, most satellite TV customers get their programming through a **direct broadcast satellite** (DBS) provider, such as DirecTV or DISH Network. The provider selects programs and broadcasts them to subscribers as a set package.
- Early satellite television was broadcast in **C-band radio** -- radio in the 3.7-gigahertz (GHz) to 6.4-GHz frequency range. Digital broadcast satellite transmits programming in the **Ku frequency range** (11.7 GHz to 14.5 GHz ).

There are five major components involved in a **direct to home** (DTH) or **direct broadcasting** (DBS) satellite system: the **programming source, the broadcast center, the satellite, the satellite dish and the receiver.**

- **Programming sources** are simply the **channels** that provide programming for broadcast.
- The **broadcast center** is the central hub of the system. The broadcast center receives signals from various programming sources and beams a broadcast signal to satellites in geosynchronous orbit.
- The **satellites** receive the signals from the broadcast station and rebroadcast them to Earth.

- The viewer's **dish** picks up the signal from the satellite and passes it on to the receiver in the viewer's house.
- The **receiver** processes the signal and passes it on to a standard TV.

Satellite TV providers get programming from two major sources: International or transnational channels, national **channels** and various **local or regional channels**.

**Satellite TV Signal**

- Satellite signals contain such high-quality digital data, it would be impossible to transmit them without **compression**. Compression simply means that unnecessary or repetitive information is removed from the signal before it is transmitted. The signal is reconstructed after transmission.
- Satellite TV uses a special type of video file compression standardized by the **Moving Picture Experts Group (MPEG)**. With MPEG compression, the provider is able to transmit significantly more channels. There are currently five of these MPEG standards, each serving a different purpose.
- Some of the major satellite TV providers once used **MPEG-2**. In this the 270-Mbps stream is reduced to about 5 or 10 Mbps depending on the type of programming. MPEG-2 is better equipped to analyze static images, like those you see on a talk show or newscast, than moving, dynamic images.
- At present **MPEG-4** compression is used. Because MPEG-4 was originally designed for streaming video in small-screen media like computers, it can encode more efficiently and provide a greater bandwidth than MPEG-2. MPEG-4 can produce a better picture of dynamic images through use of spatial (space) and temporal (time) compression. This is why satellite TV using MPEG-4 compression provides high definition of quickly-moving objects that constantly change place and direction.

**MPEG Standards**

- MPEG-1: the original standard for encoding and decoding streaming video and audio files.
- MPEG-2: the standard for digital television, this compresses files for transmission of high-quality video.
- MPEG-4: the standard for compressing high-definition video into smaller-scale files that stream to computers, cell phones and PDAs

(personal digital assistants).

- MPEG-21: also referred to as the Multimedia Framework. The standard that interprets what digital content to provide to which individual user so that media plays flawlessly under any language, machine or user conditions.

**Satellite TV Encoding and Encryption**

- At the broadcast centre, the high-quality digital stream of video goes through an MPEG encoder, which converts the programming to MPEG-4 video of the correct size and format for the satellite receiver in your house.
- Encoding works in conjunction with compression to analyze each video frame and eliminate redundant or irrelevant data and extrapolate information from other frames. This process reduces the overall size of the file. Each frame can be encoded in one of three ways:

1. As an **intra frame**, this contains the complete image data for that frame. This method provides the least compression.
2. As a **predicted** frame, which contains just enough information to tell the satellite receiver how to display the frame based on the most recently displayed intra frame or predicted frame. A predicted frame contains only data that explains how the picture has changed from the previous frame.
3. As a **bidirectional** frame, this displays information from the surrounding intraframe or predicted frames. Using data from the closest surrounding frames, the receiver **interpolates** the position and color of each pixel.

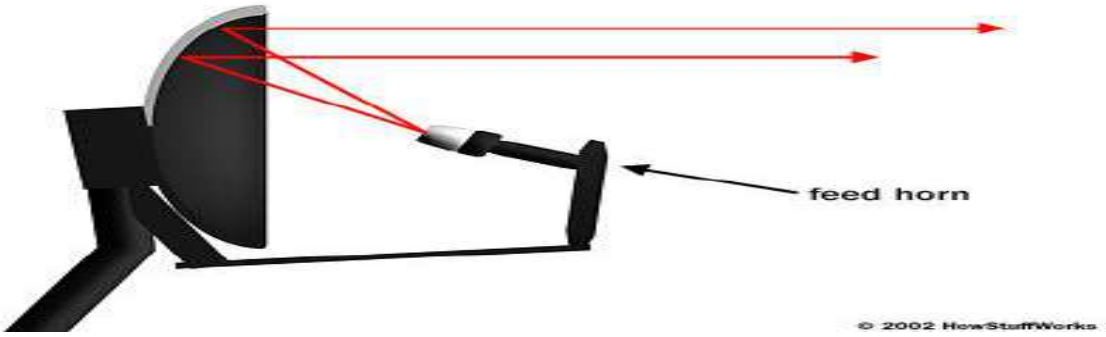

- After the video is compressed, the provider encrypts it to keep people from accessing it for free. Encryption scrambles the digital data in such a way that it can only be **decrypted** i.e. converted back into usable data only if the receiver has the correct decryption algorithm and security keys.
- Once the signal is compressed and encrypted, the broadcast centre beams it directly to one of its satellites. The satellite picks up the signal with an onboard dish, amplifies the signal and uses another dish to beam the signal back to Earth.

**Satellite Dish**

- The signal is captured by the satellite dish. A satellite dish is just a special kind of antenna designed to focus on a specific broadcast source. The standard dish

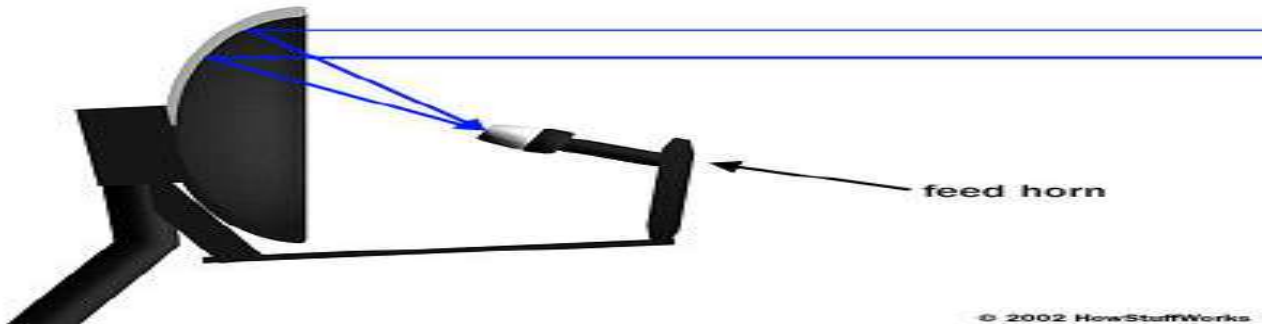

consists of a **parabolic** (bowl-shaped) surface and a central **feed horn**. The central element in the feed horn is the **low noise block down converter**, or **LNB**. The LNB amplifies the radio signal bouncing off the dish and filters out the **noise** i.e. those radio signals not carrying programming. The LNB passes the amplified, filtered signal to the satellite receiver inside the viewer's house.

- To transmit a signal, a controller sends it through the horn, and the dish focuses the signal into a relatively narrow beam.

**Transmitting Dish: Dish reflects energy from the feed horn, generating a narrow beam.**

- The dish on the receiving end can't transmit information; it can only receive it. The receiving dish works in the exact opposite way of the transmitter. When a beam hits the curved dish, the parabola shape reflects the radio signal inward onto a particular point, just like a concave mirror focuses light onto a particular point.

**Receiving Dish: Dish focuses incoming radio waves onto the feed horn.**

**Satellite Receiver**

The end component in the entire satellite TV system is the **receiver**. The receiver has four essential jobs:

- **It de-scrambles the encrypted signal.** In order to unlock the signal, the receiver needs the proper decoder chip for that programming package. The provider can communicate with the chip, via the satellite signal, to make necessary adjustments to its decoding programs. The provider may occasionally send signals that disrupt illegal de-scramblers as an **electronic counter measure** (ECM) against illegal users.
- **It takes the digital MPEG-2 or MPEG-4 signal and converts it into an analog format that a standard television can recognize.**
- **It extracts the individual channels from the larger satellite signal.** When you change the channel on the receiver, it sends just the signal for that channel to your TV. Since the receiver spits out only one channel at a time, you can't tape one program and watch another. You also can't watch two different programs on two TVs hooked up to the same receiver.
- **It keeps track of pay-per-view programs and periodically phones a computer at the provider's headquarters to communicate billing information.**

Most local stations don't transmit their programming to satellites. As the provider includes local programming in a particular area, they will have a small local facility consisting of a few racks of communications equipment. The equipment receives local signals directly from the broadcaster through **fibre-optic cable** or an antenna and then transmits them to the central broadcast centre. The broadcast centre converts all of this programming into a high-quality, uncompressed digital stream. At this point, the stream contains a vast quantity of data at about **270 megabits per second (Mbps**) for each channel. In order to transmit the signal from there, the broadcast centre has to **compress** it. Otherwise, it would be too big for the satellite to handle,

With emerging technologies in each service, the hardest decision in TV viewing is no longer just what channel to watch -- it's what service to choose.

- **Cable advantages:** Advancements in digital cable provide improved audio and picture quality with additional channels at a lower cost than satellite. You can also access cable channels from multiple rooms in your house fairly easily.
- **Cable disadvantages:** Cable has limited access in rural areas, and you should prepare for increased service costs as your provider updates its equipment. Your service costs are also

subject to local taxes.

- **Satellite advantages:** Satellite offers movie-quality audio and picture display with hundreds of channels. This service is readily available in rural and urban areas and provides access to more digital and high definition programming.
- **Satellite disadvantages:** It is expensive to purchase all the equipment at the outset (and you can't typically rent it). If you want to access satellite TV in multiple rooms, be prepared for extra fees. Also, satellite TV is subject to weather-related malfunctions.

**Analog Television**:

- A video camera takes a picture of a scene. It does this at a frame rate of 30 frames per second.
- The camera **rasterizes** the scene. That is, the camera turns the picture into rows of individual dots called pixels. Each pixel is assigned a color and intensity.
- The rows of pixels are combined with synchronization signals, called **horizontal sync** and **vertical sync** signals, so that the electronics inside a TV set will know how to display the rows of pixels.
- This final signal, containing the colour and intensity of each pixel in a set of rows, along with horizontal and vertical sync signals, is called a **composite video signal**.
- Sound is completely separate. When you look on the back of your VCR and you see the yellow plug, that's the plug for composite video. Sound is either a white plug or a red plug and a white plug.

The main problem with the Analog television is the **resolution**.

- The resolution of the TV controls the crispness and detail in the picture you see.
- The resolution is determined by the number of **pixels** on the screen.
- An analog TV set can display 525 horizontal lines of resolution every 30th of a second. In reality, however, an analog TV displays half of those lines in a 60th of a second, and then displays the other half in the next 60th, so the whole frame is updated every 30th of a second. This process is called **interlacing**.
- The lowest-resolution computer monitor displays 640 x 480 pixels.
- Because of the interlacing, the effective resolution of a TV screen is perhaps 512 x 400 pixels.

**Digital TV**

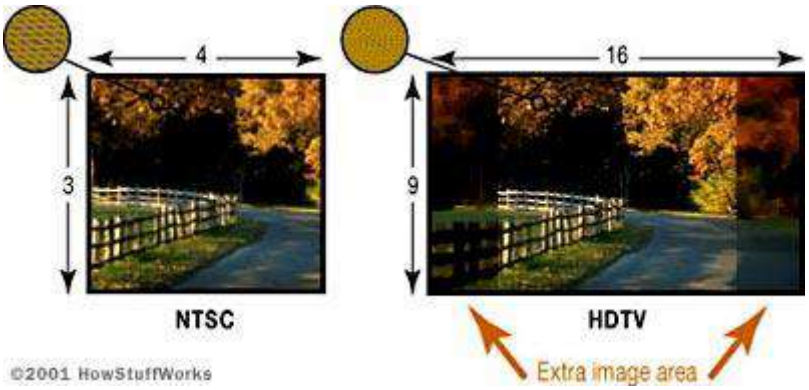

- **Digital TV**, also known as DTV or HDTV (high-definition TV). True digital TV is completely digital and involves:
    1. **Digital cameras** working at a much higher resolution than analog cameras
    2. **Digital transmission**
    3. **Digital display** at a much higher resolution
- DTV uses MPEG-2 encoding just like the satellite systems do, but digital TV allows a variety of new, larger screen formats. The formats include:
    1. **480p** - 640x480 pixels progressive
    2. **720p** - 1280x720 pixels progressive
    3. **1080i** - 1920x1080 pixels interlaced
    4. **1080p** - 1920x1080 pixels progressive

**Advantages of Digital television**:

- A digital TV decodes the MPEG-2 signal and displays it just like a computer monitor does, giving it incredible resolution and stability.
- The digital channel carries a 19.39-megabit-per-second stream of digital data that your digital TV receives and decodes.
- Each broadcaster has one digital TV channel, but one channel can carry multiple **sub-channels** if the broadcaster chooses that option. On its digital channel, each broadcaster sends a 19.39-megabit-per-second (Mbps) stream of digital data. Broadcasters have the ability to use this stream in several different ways. For example:
    1. A broadcaster can send a single program at 19.39 Mbps.
    2. A broadcaster can divide the channel into several different streams like four **streams of 4.85 Mbps each**. These streams are called **sub-channels**, and this type of broadcasting is called **multicasting**. For example, if the digital TV channel is channel 53, then 53.1, 53.2 and 53.3 could be three sub-channels on that channel. Each sub-channel can carry a different program.
- The reason that broadcasters can create sub-channels is because digital TV standards allow several different **formats**. Broadcasters can choose between three formats:

1. **480i** - The picture is 704x480 pixels, sent at 60 interlaced frames per second (30 complete frames per second).
2. **480p** - The picture is 704x480 pixels, sent at 60 complete frames per second.
3. **720p** - The picture is 1280x720 pixels, sent at 60 complete frames per second.
4. **1080i** - The picture is 1920x1080 pixels, sent at 60 interlaced frames per second (30 complete frames per second).
5. **1080p** - The picture is 1920x1080 pixels, sent at 60 complete frames per second.

- The "p" and "i" designations stand for "progressive" and "interlaced." In a progressive format, the full picture updates every 60th of a second. In an interlaced format, half of the picture updates every 60th of a second.
- The 480p and 480i formats are called the **SD** (standard definition) formats, and 480i is roughly equivalent to a normal analog TV picture. When analog TV shows are up converted and broadcast on digital TV stations, they're broadcast in 480p or 480i.
- The 720p, 1080i and 1080p formats are **HD** (high definition) formats.
- The HD formats of digital TV have a different **aspect ratio** than analog TVs. An analog TV has a 4:3 aspect ratio, meaning that the screen is 4 units wide and 3 units high. For example, a "25-inch diagonal" analog TV is 15 inches high and 20 inches wide. The HD format for digital TV has a 16:9 aspect ratio, as shown below:

- If a station wants to broadcast a sporting event, where there is lots of movement in the scene at 1080i, the entire 19.39 megabits per second is needed to get a high-quality image.
- On the other hand, a newscast showing a newscaster's head can use a much lower bit rate. A broadcaster might transmit the newscast at 480p resolution and a 3-Mbps bit rate, leaving 16.39 Mbps of space for other sub-channels.
- It's very likely that broadcasters will send three or four sub-channels during the day and then switch to a single high-quality show that consumes the entire 19.39 Mbps at night. Some broadcasters are also experimenting with 1- or 2-Mbps data channels that send information and Web pages along with a show to provide additional information.
- **Aspect ratio** - Standard television has a 4:3 aspect ratio -- it is four units wide by three units high. HDTV has a 16:9 aspect ratio, more like a movie screen.
- **Resolution** - The lowest standard resolution (SDTV) will be about the same as analog TV and will go up to 704 x 480 pixels. The highest HDTV resolution is 1920 x 1080 pixels. HDTV can display about ten times as many pixels as an analog TV set.
- **Frame rate** - A set's frame rate describes how many times it creates a complete picture on the screen every second. DTV frame rates usually end in "i" or "p" to denote whether they are interlaced or progressive. DTV frame rates range from 24p (24 frames per second, progressive) to 60p (60 frames per second, progressive).

**The 18 Primary DTV Standards**

| | Resolution | Aspect Ratio | Frame Rate (i = Interlaced, p = Progressive) |
|---|---|---|---|
| HDTV | 1920 x 1080 | 16:9 | 24p, 30p, 60i |
| | 1280 x 720 | 16:9 | 24p, 30p, 60p |
| SDTV | 704 x 480 | 16:9 | 24p, 30p, 60i, 60p |
| | 704 x 480 | 4:3 | 24p, 30p, 60i, 60p |
| | 640 x 480 | 4:3 | 24p, 30p, 60i, 60p |

**Working of Cable Television:**

- Today, cable systems deliver hundreds of channels to millions of homes. The earliest cable systems were, in effect, strategically placed **antennas** with very

long **cables** connecting them to subscribers' television sets. Because the signal from the antenna became weaker as it travelled through the length of cable, cable providers had to insert **amplifiers** at regular intervals to boost the strength of the signal and make it acceptable for viewing.

- In a cable system, the signal might have gone through 30 or 40 amplifiers before reaching your house, one every 1,000 feet or so. With each amplifier, you would get noise and distortion and if one of the amplifiers failed, you lost the picture.
- The addition of **CATV** (community antenna television) stations and the spread of cable systems ultimately led manufacturers to add a **switch** to most new television sets. Later, when the growing popularity of television necessitated additional channels, frequencies in the **ultra-high frequency** (UHF) portion of the spectrum were allocated
- Cable equipment is designed to **shield** the signals carried on the cable from outside interference, and televisions are designed to accept signals only from the point of connection to the cable or antenna; but **interference** can still enter the system, especially at connectors. When the interference comes from the same channel that's carried on the cable, there is a problem because of the difference in broadcast speed between the two signals.
- Radio signals travel through the air at a speed very close to the speed of light. In a **coaxial cable** like the one that brings CATV signals to your house, radio signals travel at about two-thirds the speed of light. When the broadcast and cable signals get to the television tuner a fraction of a second apart, you see a double image called "**ghosting**."
- Later cable system in Wilkes-Barre, PA, began offering the first "pay-per-view" channel. The customers would pay to watch individual movies or sporting events. The cable systems receiving the signals used dish antennas 10 meters in diameter, with a separate dish for each channel. With the beginning of satellite program delivery to cable systems, the basic architecture of the modern cable system was in place. As the number of program options grew, the **bandwidth** of cable systems also increased. Early systems operated at 200 MHz, allowing 33 channels. As technology progressed, the bandwidth increased to 300, 400, 500 and now 550 MHz, with the number of channels increasing to more than 100. Two additional advances in technology -- fiber optics and analog-to-digital

conversion -- improved features and broadcast quality while continuing to increase the number of channels available.

- In 1976, a new sort of cable system debuted. This system used **fibre-optic cable** for the **trunk cables** that carry signals from the CATV head-end to neighbourhoods. The **head-end** is where the cable system receives programming from various sources, assigns the programming to channels and retransmits it onto cables. The great advantage of fibre-optic cable is that it doesn't suffer the same signal losses as coaxial cable, which eliminated the need for so many **amplifiers**. In the early fiber-optic cable systems, the number of amplifiers between head-end and customer was reduced from 30 or 40 down to around six.
- Another benefit that came from the move to fibre-optic cable was greater **customization**. Since a single fibre-optic cable might serve 500 households, it became possible to target individual neighbourhoods for messages and services. In the 1990s, cable providers found this same neighbourhood grouping to be ideal for creating a local-area network and providing Internet access through cable modems.

**LCD, LED and Plasma TV**

- LCD stands for **Liquid Crystal Display**. An LCD TV has liquid crystal between the display panel of the TV, which gets activated when an electric current is supplied to it.
- The LED TV works on the same liquid crystal platform, but **light-emitting diodes** (LED) are used as the back-light for this TV, while the normal LCD TV uses a CCFL back-light.
- A plasma TV works on a completely different platform. A plasma TV has a sheet of individual plasma cells, which get activated when electricity is passed to the TV.

**Working of Plasma TV**:

Plasma technology uses a rectangular array of gas plasma cells, with electrical voltages that are precise, to create a crystal clear picture. In Plasma TVs, the display is a wide range of rich colors, with a low-luminance black. In this technology, the pixels are individually lit, which allows you to attain a higher contrast ratio.

- The display panel of a plasma TV implements a kind of flat panel display. Several tiny cells located between two glass panels hold a mixture of noble gases. This inert mixture is converted electrically into plasma. It excites phosphors, thus emitting light.
- The numerous cells placed between two glass plates contain **xenon and neon**. Long electrodes are placed in front of and behind the cells. The control circuitry produces a charge on the electrodes resulting in a potential difference. The difference in voltages causes the gases to ionize and form plasma. When the gas ions move towards the electrodes and collide, photons are emitted.
- Plasma displays have a wide color gamut and a low luminance black level. The amount of power consumed by plasma displays is comparable to that used by CRTs. However, brighter scenes take up more power than the darker ones. Plasma screens generally consume 400 watts for a 50-inch screen.
- The modern-day plasma displays are expected to remain functional for a period of around 27 years, assuming a daily use of 6 hours. At the end of this period of life expectancy, the picture brightness is estimated to decline to half of its original value.
- The secret of the refined picture quality of plasma displays lies in its technology. A thin screen, production of bright images and a wide viewing angle are among the other advantages of plasma TVs.

  Over the years, this technology has become increasingly popular in large HDTVs.
    - **PROS**: Apart from the contrast ratio, screen sizes in plasmas can be very large, which are useful in very large houses. Viewing plasmas from different angles in a room is a treat. The aspect of wide angle viewing is an enjoyable feature in plasma technology. Plasmas produce deep rich color and brightness. Due to the high contrast ratio, the darkest and brightest part of an image is realistic in terms of appearance. The display of the color black is vivid in Plasmas.
    - **Cons**: Although the picture quality in this technology is astounding, the life of a plasma television is less as compared to LCDs. If the screen size is very large, wall mounting becomes difficult. These television sets use glass in their screen makeup, which can reflect light and make viewing

problematic. Moreover, glass screens are fragile and need to be handled with care.

**LCD TV:**

**Liquid Crystal Display**, commonly known as LCD, is popular among most users all over the world. It consists of layers of liquid crystal, sandwiched between two glass plates. The images created, depend on the amount of electrical charge applied. LCDs are preferred by individuals for their sharp picture and low consumption of power.

- **Pros**: In a room with lots of light, LCDs help in reducing the glare, which in turn makes viewing easy. The life span of these televisions is longer as compared to plasmas. LED-back-lighting in the form of 'direct' and 'edge' back-lighting, has significantly improved images in LCDs. Screen burns which result in ghost images, occur when an image is left for a relatively long time. This is a common problem with plasmas, which is not the case with LCDs.
- **Cons:** Viewing LCDs from different angles can be a pain, as images sometimes appear to be dark and hazy. This can cause a problem when large families scattered in different areas of a room view television. The level of brightness in LCD is less, compared to a Plasma. The response time in these televisions is longer as compared to Plasmas. Objects moving at a rapid speed exhibit a blur in this technology. Another drawback in some LCDs is, the inability to display very low resolution, due to scaling limitations. Although LCDs are less expensive than Plasmas, the features included are less as compared to their counterparts.

**LED TV:**

The LED TV is simply an LCD TV with LED back-lights. When the first Liquid Crystal Display (LCD) TV came out, a lot of questions were asked about the display output that it gave, the contrasts and their display of blacks and brighter colors. The LCD TV came with what was known as the CCFL back-light which left much to be desired, when it came to the display brighter colors and more contrast. **LED is the acronym for light-emitting diode**. This is a popular technology when it comes normal lighting and when the LED lights was inserted in place of the CCFL back-lights, the result being fabulous. LED back-light was quite the panacea which the existing LCD TV owners were looking for. Thus, the Plasma and LCD technologies are completely different, while the difference between the LCD and LED is only the back-light, which they use.

- The LED TV comes at a pretty high price as it does not enjoy the economies of large scale production. While, the normal LCD TV is produced on quite a large scale, which gives it a price advantage. But the LED back-lit one is still in its nascent stage, which is not much in demand, and hence is produced less, which makes it a more expensive TV. LED is almost twice as expensive as its CCFL back-lit counterpart.
- The other problem with the LED TV is that it comes in a very large size. Most LED TVs produced are above 40" and hence are too large and too expensive for many people. The normal LCD TV on the other hand comes in all sizes.

**LCD Vs LED**:

- On the **display** parameter, LED completely outstrips the competition. The LED back-light shows great sense when it comes to blacks, and twists the crystals into a closed position, giving a more realistic black color and better overall contrast.
- When it comes to **color** display, one cannot see too much of a difference between the LCD and the LED TV.
- **Viewing angle** was another drawback which the LCD TV suffered from but it has been corrected to a good measure. But still, the LED TV gives a much better display when viewed from odd angles.
- **Looks**: An LED TV is slimmer and lighter, making it beautiful to the eyes and much lighter in weight.
- The **power consumption** of the LCD TV is also higher than the LED TV because CCFL lights consume more electricity than LED back-lights

**LCD vs. LED vs. Plasma Debate**

**Point #1: Contrast Ratio:**

A contrast ratio is the ability of the TV to show the high-contrast areas on the screen. The high contrast areas are the blacks and the whites in the picture. If a TV has a good contrast ratio, it means that it shows the differences between the darker and lighter areas of the screen remarkably well. The acid test of a TV's contrast ratio is in the dark scenes, where it needs to differentiate the shades of black.

- It's a well accepted fact that plasma TV's generally have better contrast ratios than LCD and LED TVs. This is because plasma TV's has individual plasma cells, which automatically turn themselves off on the darker parts of the screen.

- LCD TV's on the other hand have a single liquid crystal and when the TV has to show the dark pictures, the CCFL back-light of the LCD only dims itself and hence the blacks aren't very convincing.
- LCD TV's powered with an LED back-light have a slight edge as the individual LEDs twist themselves into an 'off' position in the dark parts of the screen thus giving a more convincing black than the LCD TVs.

**Verdict**: On the contrast ratio parameter, the plasma TV clearly has the upper hand. The LED TV comes next in the race and the LCD TV comes last.

**Point #2: Viewing Angle:**

A viewing angle is the angle from which the image on the TV can be viewed. All TVs can be viewed when you are right in front of it, but since all viewers cannot sit right in front of the TV and have to sit around it, the viewing angle parameter becomes very important.

- The winner for this point again is the plasma TV. The image of the plasma TV remains good and solid for viewers at almost any angle.
- LCD TVs fall back in the race again as there is often a loss of color and detail, when the TV is viewed from an odd angle.
- The LED TV minimizes this problem faced by the LCD TV due to its decentralized back-lights and hence has a much wider viewing angle.

**Verdict**: On the viewing angle parameter, the plasma TV is the winner again, followed by the LED TV in second place and the LCD TV in the last place.

**Point #3: Color**

It is pretty clear that good and bright colors of the TV will be an important consideration in the mind of the TV buyer. But there is no clear winner on this parameter as all the TVs seem to show a good quality picture, when it comes to the color. Differences may exist between two TV models of the same type or two different TV brands - a higher priced model showing better colors - but the picture quality remains largely similar.

- It is said that if the LED TV has a colored back-light, it will show the best picture of them all, but this point remains contentious.

**Verdict:** All the TVs rank similar on this point, but the discussion may be given a twist by introducing the colored back-lit LED TV in the mix.

**Point #5: Power Consumption**

- The plasma TV comes out to be the clear winner in this debate, but this is one of its most telling fall-points. The plasma TV consumes a lot more power than the LCD TV, as every sub-pixel on the screen needs to be lit.
- The LCD TV needs much lesser power to light up the back-light.
- But the LED TV is the clear winner for this point as its LED back-light is more power efficient and needs lesser electricity to light up.

**Verdict:** The LED TV is the winner on this point, followed by the LCD and the plasma.

**Point #6: TV Lifespan:**

- The quality and brightness of the plasma screen takes a beating in a very short time.
- The lifespan of the LCD and the LED TV depends largely on the lifespan of its back-light, but on an average the lifespan of these TVs is supposed to be more than that of the plasma TV.
- Another point to consider for TV lifespan is screen burn-in. Here again, the plasma TV has had a few problems, as there is a higher rate of screen burn-in in these TVs..

**Verdict:** On this point, the LCD TV has been a winner, while the lifespan of the LED back-light remains untested, as it's a relatively new technology. But the plasma is trying to extend its lifespan to somewhere close to that of the LCD TVs.

**Point #7: Price:**

- The plasma has enjoyed a much lower price as compared to the LCD, but as the production size and demand for the LCD increases, the price of the LCD is set to become more and more competitive with the plasma.
- The LED TV is a clear loser on this point as it is one of the most expensive TVs around; with some models priced at almost double that of LCDs of the same size. This is because the LED is a new technology and it is not produced at the same volume as the LCD.

**Verdict:** Plasma is number 1 at the moment, but faces fierce competition from the LCD in the future. LED is still very far behind in the pricing race**.**

**Analog broadcasting standards – PAL – NTSC-SECAM**:

There are three main analog television standards in use around the world,

- PAL (Phase Alternating Line)
- NTSC (National Television System Committee) and

- SECAM (Sequentiel Couleur Memoire—Sequential Color with Memory).

Digital television broadcasting standards, such as **ATSC, DVB-T, DVB-T2, and ISDB**, have superseded these analog transmission standards in many countries.

**NTSC**:

**NTSC**, named for the **National Television System Committee**, is the analog television system that is used in most of **North America**, parts of **South America.** The following countries still has NTSC system: **Canada, Chile, Costa Rica, Cuba, Dominican Republic, Ecuador, Japan, Mexico, Nicaragua, Panama, Peru, Philippines, Puerto Rico, South Korea, Taiwan, Myanmar**.The first NTSC standard was developed in **1941** and had no provision for color television. In **1953** a second modified version of the NTSC standard was adopted, which allowed color television broadcasting compatible with the existing stock of black-and-white receivers. NTSC was the first widely adopted broadcast color system and remained dominant where it had been adopted until the first decade of the 21st century, when it was replaced with digital ATSC. NTSC is the video system or standard used in North America and most of South America. In NTSC, 30 frames are transmitted each second. Each frame is made up of 525 individual scan lines. The National Television System Committee was established in **1940** by the United States **Federal Communications Commission (FCC)** to resolve the conflicts that arose between companies over the introduction of a nationwide analog television system in the United States. In March 1941, the committee issued a technical standard for black-and-white television that built upon a 1936 recommendation made by the Radio Manufacturers Association (RMA). Technical advancements of the vestigial sideband technique allowed for the opportunity to increase the image resolution.

- The NTSC selected **525 scan lines** as a compromise between RCA's 441-scan line standard and Philco's and Du Mont's companies desire to increase the number of scan lines to between 605 and 800. The standard recommended a frame rate of **30 frames (images) per second**, consisting of two interlaced fields per frame at 262.5 lines per field and 60 fields per second. Other standards in the final recommendation were an **aspect ratio of 4:3**, and frequency modulation (FM) for the sound signal.
- In January 1950, the Committee was reconstituted to standardize color television. In **December 1953**, it unanimously approved what is now called the ***NTSC* color television standard** (later defined as RS-170a). The "compatible

color" standard retained full backward compatibility with existing black-and-white television sets. Color information was added to the black-and-white image by adding a color subcarrier of approximately 3.58 MHz to the video signal. To reduce the visibility of interference between the chrominance signal and FM sound carrier required a slight reduction of the frame rate from 30 frames per second to approximately 29.97 frames per second, and changing the line frequency from 15,750 Hz to approximately 15,734.26 Hz.

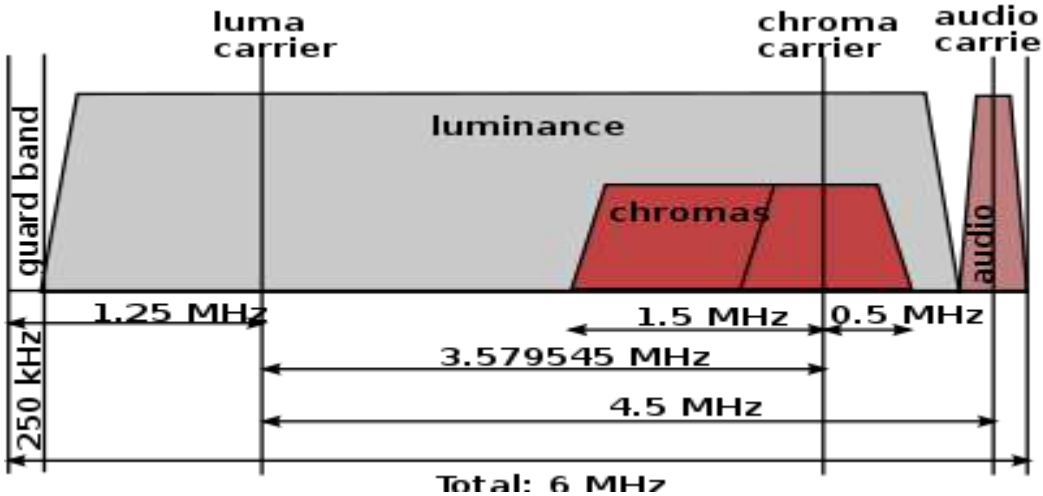

- The NTSC standard has been adopted by other countries, including most of the Americas and Japan. With the advent of digital television, analog broadcasts are being phased out. Most NTSC broadcasters were required by the FCC to shut down their analog transmitters in 2009.

**Lines and refresh rate**

- NTSC color encoding is used with the television signal, which consists of 29.97 interlaced frames of video per second.
- Each frame is composed of two fields, each consisting of 262.5 scan lines, for a total of 525 scan lines. 483 scan lines make up the visible raster. The remainder is used for synchronization and vertical retrace. This blanking interval was originally designed to simply blank the receiver's CRT to allow for the simple analog circuits and slow vertical retrace of early TV receivers. However, some of these lines may now contain other data such as closed captioning and vertical interval time code (VITC).
- The NTSC field refresh frequency in the black-and-white system originally exactly matched the nominal 60 Hz frequency of alternating current power used in the United States. Matching the field refresh rate to the power source avoided inter modulation (also called *beating*), which produces rolling bars on the screen. When color was added to the system, the refresh frequency was shifted slightly downward to 59.94 Hz to eliminate stationary dot patterns in the difference frequency between the sound and color carriers, as explained below in "Color encoding". Synchronization of the refresh rate to the power incidentally helped kinescope cameras record early live television broadcasts, as it was very simple to synchronize a film camera to capture one frame of video on each film frame by using the alternating current frequency to set the speed of the synchronous AC

motor-drive camera. By the time the frame rate changed to 29.97 Hz for color, it was nearly as easy to trigger the camera shutter from the video signal itself.

**Transmission modulation scheme**

- An NTSC television channel as transmitted occupies a total bandwidth of 6 MHz. The actual video signal, which is **amplitude-modulated**, is transmitted between 500 kHz and 5.45 MHz above the lower bound of the channel.
- The video carrier is 1.25 MHz above the lower bound of the channel. Like most AM signals, the video carrier generates two sidebands, one above the carrier and one below. The sidebands are each 4.2 MHz wide.
- The color subcarrier, as noted above, is 3.579545 MHz above the video carrier, and is **quadrature-amplitude-modulated** with a suppressed carrier.
- The audio signal is **frequency-modulated**, like the audio signals broadcast by FM radio stations in the 88–108 MHz band, but with a ±25 kHz maximum frequency swing, as opposed to ±75 kHz as is used on the FM band. The main audio carrier is 4.5 MHz above the video carrier, making it 250 kHz below the top of the channel.

**Phase Alternating Line**

**PAL**, short for **Phase Alternating Line**, is an analogue television color encoding system used in broadcast television systems in many countries. In PAL, 25 frames are transmitted each second. Each frame is made up of 625 individual scan lines. The following countries follow the PAL system: Afghanistan, Algeria, Argentina (N),Austria, Australia, Bangladesh, Belgium, Brazil (M), China, Denmark, Finland, Germany, Hong Kong, Iceland, **India**, Indonesia, Iraq, Ireland, Israel, Italy, Jordan, Kenya, Kuwait, Liberia, Malaysia, Netherlands, Nigeria, Norway, New Guinea, Pakistan, Singapore, South

Africa, South W. Africa, Sudan, Sweden, Switzerland, Thailand, Turkey, Uganda, United Kingdom, United Arab Emirates, Yugoslavia, Zambia.

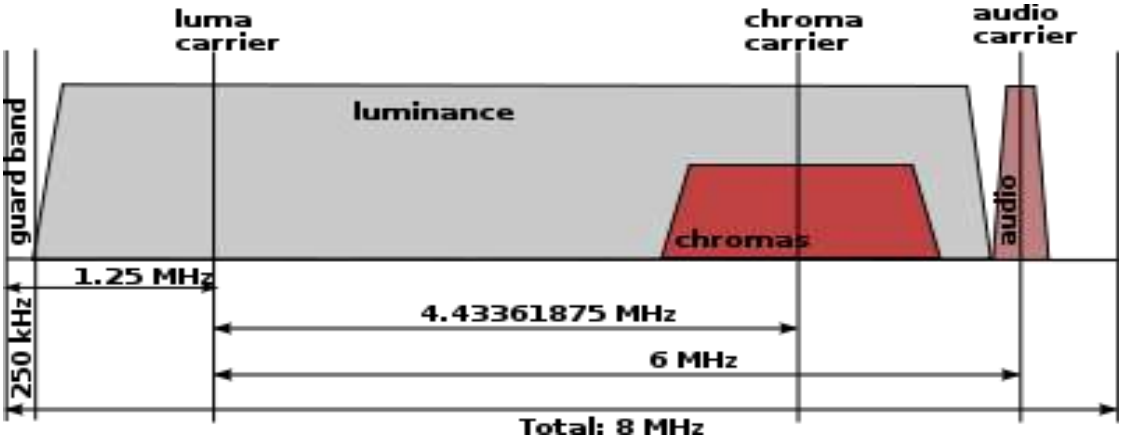

- In the 1950s, the Western European countries commenced planning to introduce color television, and were faced with the problem that the NTSC standard demonstrated several weaknesses, including **color tone shifting** under poor transmission conditions.
- To overcome NTSC's shortcomings, alternative standards were devised, resulting in the development of the PAL and SECAM standards. **The goal was to provide a color TV standard for the European picture frequency of 50 fields per second (50 hertz), and finding a way to eliminate the problems with NTSC.**
- PAL was developed by **Walter Bruch at Telefunken in Germany**. The format was unveiled in **1963**, with the first broadcasts beginning in the United Kingdom and West Germany in 1967, the one BBC channel initially using the broadcast standard was BBC2 which had been the first UK TV service to introduce "625-lines" in 1964.
- Telefunken PAL color 708T was the first PAL commercial TV set. It was followed by Loewe S 920 & F 900. Telefunken was later bought by the French electronics manufacturer Thomson.
- Thomson also bought the *Compagnie Générale de Télévision* where **Henri de France** developed SECAM, the first European Standard for color television.
- **The term PAL is often used informally and somewhat imprecisely to refer to the 625-line/50 Hz (576i) television system in general, to differentiate from the 525-line/60 Hz (480i) system generally used with NTSC**.

**Color encoding**

- Both the PAL and the NTSC system use a **quadrature amplitude modulated** subcarrier carrying the chrominance information added to the luminance video signal to form a composite video baseband signal.
- **The frequency of this subcarrier is 4.43361875 MHz for PAL, compared to 3.579545 MHz for NTSC**. **The SECAM system, on the other hand, uses a frequency modulation scheme on its two line alternate color subcarriers 4.25000 and 4.40625 MHz.**
- The name "Phase Alternating Line" describes the way that the phase of part of the color information on the video signal is reversed with each line, which

automatically corrects phase errors in the transmission of the signal by cancelling them out, at the expense of vertical frame color resolution. Lines where the color phase is reversed compared to NTSC are often called PAL or phase-alternation lines, which justifies one of the expansions of the acronym, while the other lines are called NTSC lines.

- Early PAL receivers relied on the human eye to do that cancelling; however, this resulted in a comb-like effect known as **Hanover bars on larger phase errors**. Thus, most receivers now use a chrominance delay line, which stores the received color information on each line of display; an average of the color information from the previous line and the current line is then used to drive the picture tube. The effect is that phase errors result in saturation changes, which are less objectionable than the equivalent hue changes of NTSC.
- A minor drawback is that the vertical color resolution is poorer than the NTSC system's, but since the human eye also has a color resolution that is much lower than its brightness resolution, this effect is not visible. In any case, NTSC, PAL, and SECAM all have chrominance bandwidth (horizontal color detail) reduced greatly compared to the luminance signal.

The 4.43361875 MHz frequency of the color carrier is a result of 283.75 color clock cycles per line plus a 25 Hz offset to avoid interferences. Since the line frequency (number of lines per second) is 15625 Hz (625 lines × 50 Hz ÷ 2), the color carrier frequency calculates as follows: 4.43361875 MHz = 283.75 × 15625 Hz + 25 Hz. The original color carrier is required by the color decoder to recreate the color difference signals. Since the carrier is not transmitted with the video information it has to be generated locally in the receiver. In order that the phase of this locally generated signal can match the transmitted information, a 10 cycle burst of color subcarrier is added to

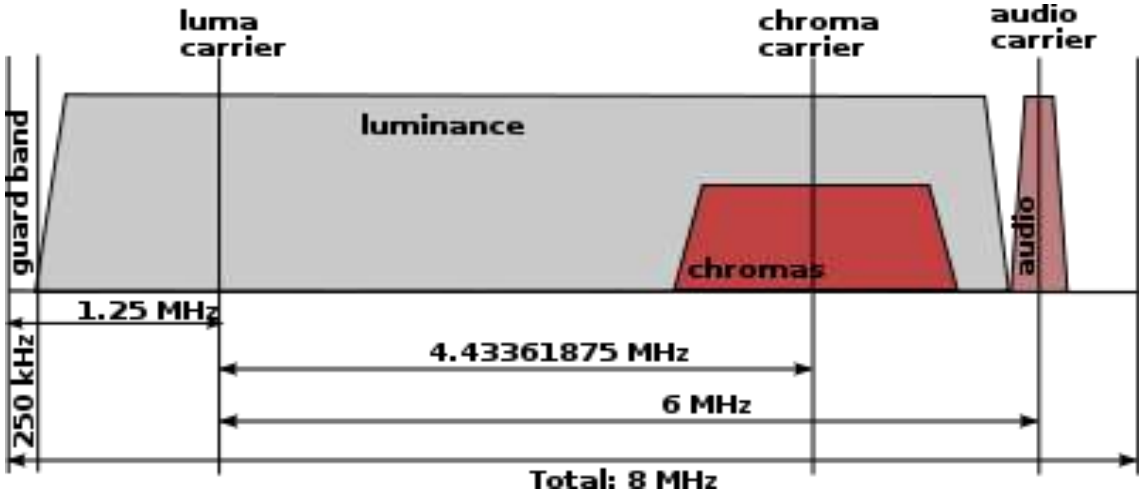

the video signal shortly after the line sync pulse, but before the picture information, during the so called back porch. This color burst is not actually in phase with the original color subcarrier, but leads it by 45 degrees on the odd lines and lags it by 45 degrees on the even lines. This swinging burst enables the color decoder circuitry to distinguish the phase of the R-Y vector which reverses every line.

**SECAM**

SECAM, also written SECAM (*Séquentiel couleur à mémoire*, French for "**Sequential Color with Memory**", is an analog color television system first used in France. A team led by **Henri de France** working at *Compagnie Française de Télévision* later bought by Thomson, now Technicolor invented SECAM. It is, historically, the first European color television standard Technical details. Work on SECAM began in **1956**. The technology was ready by the end of the fifties, but this was too soon for a wide introduction. Initially, a version of SECAM for the French 819-line television standard was devised and tested, but not introduced. Following a pan-European agreement to introduce color TV only in 625 lines, France had to start the conversion by switching over to a 625-line television standard, which happened at the beginning of the 1960s with the introduction of a second network. The first proposed system was called **SECAM I in 1961**, followed by other studies to improve compatibility and image quality. These improvements were called SECAM II and SECAM III with the later being presented at the **1965** CCIR General Assembly in Vienna. Further improvements were SECAM III A followed by SECAM III B, the adopted system for general usage in **1967**.

SECAM was inaugurated in France on October 1, 1967, on *la deuxième chaîne* (the second channel, now called France 2. In 1967, CLT of Lebanon became the third television station in the world after the Soviet Union and France to broadcast in color, utilizing the French SECAM technology. The first color television sets cost 5000 Francs. Color TV was not very popular initially; only about 1500 people watched the inaugural program in color. A year later, only 200,000 sets had been sold of an expected million. This pattern was similar to the earlier slow build-up of color television popularity in the USA. SECAM was later adopted by former French and Belgian colonies, Greece, the Soviet Union and Eastern bloc countries (except for Romania and Albania), and Middle Eastern countries. However, with the fall of communism, and following a period when multi-standard TV sets became a commodity, many Eastern European countries decided

to switch to PAL. Other countries, notably the United Kingdom and Italy, briefly experimented with SECAM before opting for PAL.

- Just as with the other color standards adopted for broadcast usage over the world, SECAM is a standard which permits existing monochrome television receivers predating its introduction to continue to be operated as monochrome televisions. Because of this compatibility requirement, color standards added a second signal to the basic monochrome signal, which carries the color information. The color information is called **chrominance or C** for short, while the black and white information is called the **luminance or Y** for short. Monochrome television receivers only display the luminance, while color receivers process both signals.
- Additionally, for compatibility, it is required to use no more bandwidth than the monochrome signal alone; the color signal has to be somehow inserted into the monochrome signal, without disturbing it. This insertion is possible because the spectrum of the monochrome TV signal is not continuous (for most typical video content), hence empty space exists which can be utilized. This typical lack of continuity results from the discrete nature of the signal, which is divided into frames and lines.
- In all cases, the color signal is inserted at the end of the spectrum of the monochrome signal, where it causes less visual distortion

- In order to be able to separate the color signal from the monochrome one in the receiver, a fixed frequency sub carrier is used, this sub carrier being modulated by the color signal.
- The color space is three dimensional by the nature of the human vision, so after subtracting the luminance, which is carried by the base signal, the color sub carrier still has to carry a two dimensional signal. Typically the red (R) and the blue (B) information are carried because their signal difference with luminance (R-Y and B-Y) is stronger than that of green (G-Y).

**SECAM differs from the other color systems by the way the R-Y and B-Y signals are carried**.

- First, SECAM uses frequency modulation to encode chrominance information on the sub carrier.
- Second, instead of transmitting the red and blue information together, it only sends one of them at a time, and uses the information about the other color from the preceding line. It uses an analog delay line, a memory device, for storing one line of color information. This justifies the "Sequential, With Memory" name.
- Because SECAM transmits only one color at a time, it is free of the color artifacts present in NTSC and PAL resulting from the combined transmission of both signals..
- FM modulation of the color information allows SECAM to be completely free of the dot crawl problem commonly encountered with the other analog standards. SECAM transmissions are more robust over longer distances than NTSC or PAL. However, owing to their FM nature, the color signal remains present, although at reduced amplitude, even in monochrome portions of the image, thus being subject to stronger cross color even though color crawl of the PAL type doesn't exist.

SECAM development predates PAL. NTSC was considered undesirable in Europe because of its tint problem requiring an additional control, which SECAM and PAL solved. The joke was that "SECAM" stood for "*Something exceedingly Contrary to the American Method*" versus NTSC "*Never Twice the Same Color*" whilst "*Peace At Last*" or "*Perfection At Last*" could only be obtained through the PAL system. (But another version of the joke expands PAL as "*People Are Lavender*", "*Picture Always Lousy*", or "*Pay Another License*"). Nonetheless, SECAM was partly developed for reasons of

national pride. Henri de France's personal charisma and ambition may have been a contributing factor. PAL was developed by Telefunken, a German company, and in the post-war De Gaulle era there would have been much political resistance to dropping a French-developed system and adopting a German-developed one instead.

**Analog broadcasting standards: -ATSC, DVB-T, DVB-T2, and ISDB**

**ATSC**

**ATSC** is a set of standards developed by the **Advanced Television Systems Committee** for digital television transmission over terrestrial, cable, and satellite networks. The ATSC standard was developed in the early **1990s by the Grand Alliance, a consortium of electronics and telecommunications companies** that assembled to develop a specification for what is now known as HDTV. ATSC formats also include standard-definition formats, although initially only HDTV services were launched in the digital format.

- The high definition television standards defined by the ATSC produce wide screen 16:9 images up to 1920×1080 pixels in size — more than six times the display resolution of the earlier standard. However, many different image sizes are also supported.
- The reduced bandwidth requirements of lower-resolution images allow up to six standard-definition "sub channels" to be broadcast on a single 6 MHz TV channel.
- ATSC standards are marked A/*x* (*x* is the standard number) and can be downloaded freely from the ATSC's website at ATSC.org.
- ATSC Standard A/53, which implemented the system developed by the Grand Alliance, was published in 1995; the standard was adopted by the Federal Communications Commission in the United States in 1996. It was revised in 2009. ATSC Standard A/72 was approved in 2008 and introduces H.264/AVC video coding to the ATSC system.
- ATSC also boasts 5.1-channel surround sound using the Dolby Digital AC-3 format. Numerous auxiliary data casting services can also be provided.

ATSC replaced much of the analog NTSC television system in the United States[ on June 12, 2009 and will replace NTSC by August 31, 2011 in Canada, December 31, 2015 in Mexico and January 1, 2019 in El Salvador. Broadcasters who use ATSC and want to retain an analog signal must broadcast on two separate channels, as the ATSC system requires the use of an entire channel.

- Dolby Digital AC-3 is used as the audio codec, though it was officially standardized as A/52 by the ATSC. It allows the transport of up to five channels of sound with a sixth channel for low-frequency effects (the so-called "5.1" configuration).
- MPEG-2 audio was a contender for the ATSC standard during the DTV "Grand Alliance" shootout, but lost out to Dolby AC-3.
- The ATSC system supports a number of different display resolutions, aspect ratios, and frame rates. The formats are listed here by resolution, form of scanning (progressive or interlaced), and number of frames (or fields) per second.
- There are three basic display sizes for ATSC. Basic and enhanced NTSC and PAL image sizes are at the bottom level at 480 or 576 lines. Medium-sized images have 720 scan lines and are 1280 pixels wide. The top tier has 1080 lines 1920 pixels wide.
- The different resolutions can operate in progressive scan or interlaced mode, although the highest 1080-line system cannot display progressive images at the rate of 50, 59.94 or 60 frames per second, because such technology was seen as too advanced at the time and the image quality was deemed to be too poor considering the amount of data that needs to be transmitted.
- A terrestrial (over-the-air) transmission carries 19.39 megabits of data per second.
- ATSC signals are designed to use the same 6 MHz bandwidth as analog NTSC television channels. Once the digital video and audio signals have been compressed and multiplexed, the transport stream can be modulated in different ways depending on the method of transmission.

**DVB-T**

**DVB-T** is an abbreviation for **Digital Video Broadcasting — Terrestrial**; it is the DVB European-based consortium standard for the broadcast transmission of digital terrestrial television that was first published in 1997 and first broadcast in the UK in 1998.This system transmits compressed digital audio, video and other data in an MPEG transport stream, using **coded orthogonal frequency-division multiplexing (COFDM or OFDM) modulation**.

**Basics of DVB-T**

- Rather than carrying the data on a single radio frequency (RF) carrier, OFDM works by splitting the digital data stream into a large number of slower digital streams, each of which digitally modulate a set of closely spaced adjacent carrier frequencies.
- In the case of DVB-T, there are two choices for the number of carriers known as 2K-mode or 8K-mode. These are actually 1,705 or 6,817 carriers that are approximately 4 kHz or 1 kHz apart.
- DVB-T has been adopted or proposed for digital television broadcasting by many countries using mainly VHF 7 MHz and UHF 8 MHz channels whereas Taiwan, Colombia, Panama, Trinidad and Tobago and the Philippines use 6 MHz channels..
- DVB-T has been further developed into newer standards such as DVB-H (Handheld), now in operation, and DVB-T2, which was recently finalised.

**DVB-T2**

**DVB-T2** is an abbreviation for **Digital Video Broadcasting – Second Generation Terrestrial**. It is the extension of the television standard DVB-T, issued by the consortium DVB, devised for the broadcast transmission of digital terrestrial television. This system transmits compressed digital audio, video, and other data in "physical layer pipes" (PLPs), using OFDM modulation with concatenated channel coding and interleaving. The higher offered bit rate, with respect to its predecessor DVB-T, makes it a suited system for carrying HDTV signals on the terrestrial TV channel (though many broadcasters still use plain DVB-T for this purpose). It is currently broadcasting in UK (Free view HD, four channels), Italy (Europa 7 HD, twelve channels) and since November 1, 2010 in Sweden (five channels).

- In March 2006 DVB decided to study options for an upgraded DVB-T standard. In June 2006, a formal study group named TM-T2 (Technical Module on Next Generation DVB-T) was established by the DVB Group to develop an advanced modulation scheme that could be adopted by a second generation digital terrestrial television standard, to be named **DVB-T2**.
- When the digital terrestrial HDTV service Free view HD was launched in December 2009, it was the first DVB-T2 service intended for the general public. As of November 2010, DVB-T2 broadcasts were available in a couple of European countries.

- The earliest introductions of T2 have usually been tied with a launch of high-definition television. There are however some countries where HDTV is broadcast using the old DVB-T standard with no immediate plans to switch those broadcasts to DVB-T2. Among countries using DVB-T for nationwide broadcasts of HDTV are France, Italy, Norway and Denmark. Countries where DVB-T2 is in use include:

1. United Kingdom: soft launch in December 2009, full launch in April 2010.
2. Italy: one multiplex, soft launch in October 2010
3. Sweden: two multiplexes, full launch in November 2010
4. Finland: five multiplexes, soft launch in January 2011, full launch in February 2011
5. Ukraine: soft launch in September 2011, full launch in November 2011

**ISDB**

**Integrated Services Digital Broadcasting (ISDB)** is a Japanese standard for digital television (DTV) and digital radio used by the country's radio and television stations. ISDB replaced the previously used MUSE "*Hi-vision*" analogue HDTV system. A derivative of ISDB, *ISDB-T International*, was developed by the Brazilian government and is being widely adopted in South America. ISDB is maintained by the Japanese organization ARIB. The standards can be obtained for free at the Japanese organization DiBEG website and at ARIB.

- The core standards of ISDB are ISDB-S (satellite television), ISDB-T(terrestrial), ISDB-C (cable) and 2.6GHz band mobile broadcasting which are all based on MPEG-2 video and audio coding as well as the transport stream described by the MPEG-2 standard, and are capable of high definition television (HDTV). ISDB-T and ISDB-Tsb are for mobile reception in TV bands. 1seg is the name of an ISDB-T service for reception on cell phones, laptop computers and vehicles.
- The concept was named for its similarity to ISDN, because both allow multiple channels of data to be transmitted together a process called multiplexing. This is also much like another digital radio system, Eureka 147, which calls each group of stations on a transmitter an ensemble; this is very much like the multi-channel digital TV standard DVB-T. ISDB-T operates on unused TV channels, an approach taken by other countries for TV but never before for radio.

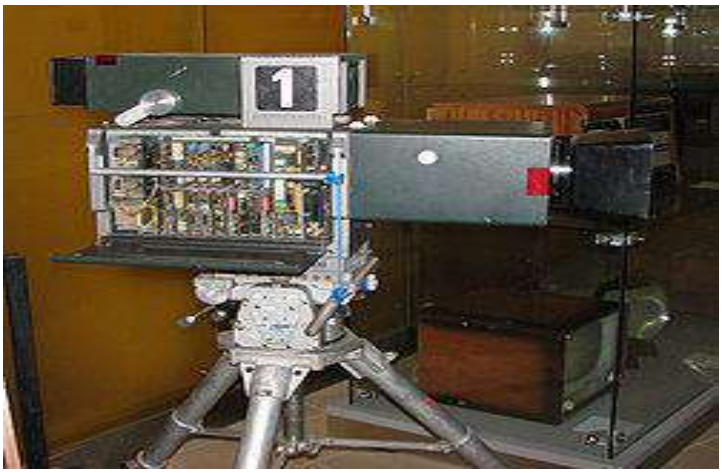

- The various flavours of ISDB differ mainly in the modulations used, due to the requirements of different frequency bands. The 12 GHz band ISDB-S uses PSK modulation, 2.6 GHz band digital sound broadcasting uses CDM and ISDB-T (in VHF and/or UHF band) uses COFDM with PSK/QAM.

**Production equipment – Cameras – Microphones –Lights**

**Professional video cameras**

A **professional video camera** often called a **television camera** is a high-end device for creating electronic moving images (as opposed to a movie camera that records the images on film. Originally developed for use in television studios, they are now commonly used for corporate and educational videos, music videos, and direct-to-video movies. There are two types of professional video cameras:

1. **High end portable recording cameras** essentially, high-end tapeless camcorders used for Electronic news gathering (ENG) and Electronic field production (EFP) image acquisition, and
2. **Television studio cameras** which lack the recording capability of a camcorder, and are often fixed on studio pedestals. Portable professional cameras are generally much larger than consumer cameras and are designed to be carried on the shoulder.

**Professional television camera history has two main lines**:

1. The gradual shrinking of the camera as it became more versatile and self contained; and a

2. Progression of sensors from large insensitive tubes to smaller, much more sensitive tubes and finally to very small, very sensitive solid state **charge-coupled device (CCD**) and **active pixel sensor (CMOS) imagers**.

- 1926 to 1933 "cameras" were a type of flying spot scanner using mechanical disk.
- 1936 saw the arrival of RCA's iconoscope camera.The RCA TK-30 (1946) was widely used as a Field Camera.
- The 1948 Dumont Marconi MK IV was an Image Orthicon Camera.
- Marconi's first camera was shown in 1938. EMI cameras from the UK, were used in the US in the early 1960s, like the EMI 203/4.Later in the 60s the EMI 2000 an EMI 2001.
- In 1950 the arrival of the Vidiocon camera tube made smaller cameras possible.
- 1952 saw the first Walkie-Lookie "portable cameras". Image Orthicon tubes were still used till the arrival of the Plumbicon.
- The RCA TK-40 is considered to be the first color television camera for broadcasts in 1953. RCA continued its lead in the high-end camera market till the (1978) TK-47, last of the high-end tube cameras from RCA.
- Ikegami introduced the first truly portable hand-held TV camera in 1962.
- Philips' line of Norelco cameras were also very popular with models such as PC-60 (1965), PC-70 (1967) and PCP-90 (1968 Handheld). Philips/BTS-Broadcast Television Systems Inc. later came out with an LDK line of camera, like its last high end tube camera the LDK 6 (1982).
- Philips invented the Plumbicon pick up Video camera tube in 1965,that gave tube cameras a cleaner picture. BTS introduced its first HandHeld Frame transfer CCD- Charge-coupled device-CCD camera the LDK90 in 1987.
- Bosch Fernseh marketed a line of high end cameras (KCU, KCN, KCP, KCK) in the US ending with the tube camera KCK-40 (1978). Image Transform (in Universal City, California) used specially modified 24 frame KCK-40 for their "Image Vision" system. This had a 10 MHz bandwidth twice NTSC resolution. This was a custom pre HDTV video System. At its peak this system was used to make "Monty Python Live at the Hollywood Bowl" in 1982. This was the first major high-definition analog wideband videotape-to-film post production using a film recorder for film out.

**Technology**

- Most professional cameras utilize an optical prism block directly behind the lens. This prism block (a trichroic assembly comprising two dichroic prisms) separates the image into the three primary colors, red, green, and blue, directing each color into a separate charge-coupled device (CCD) or Active pixel sensor (CMOS image sensor) mounted to the face of each prism. Some high-end consumer cameras also do this, producing a higher-resolution image, with better color fidelity than is normally possible with just a single video pickup.
- In both single sensor and triple sensor designs, the weak signal created by the sensors is amplified before being encoded into analog signals for use by the viewfinder and monitor outputs, and also encoded into digital signals for transmission and recording.
- The analog outputs are normally in the form of either a composite video signal, which combines the color and luminance information to a single output; or an R-Y B-Y Y component video output through three separate connectors.

**Studio cameras**

- Most studio cameras stand on the floor, usually with pneumatic or hydraulic mechanisms called **pedestals** to adjust the height, and are usually on wheels.
- Any video camera when used along with other video cameras in a multiple-camera setup is controlled by a device known as **CCU (camera control unit**), to which they are connected via a Triax, Fibre Optic or the almost obsolete multi core cable. The CCU along with gen lock and other equipment is installed in the **production control room (PCR)** often known as the Gallery of the television studio.
- When used outside a formal television studio in **outside broadcasting (OB)**, they are often on tripods that may or may not have wheels (depending on the model of the tripod).
- Initial models used analog technology, but are now obsolete, supplanted by digital models. Studio cameras are light and small enough to be taken off the pedestal and the lens changed to a smaller size to be used on a Multiple-camera setup's shoulder, but they still have no recorder of their own and are cable-bound.

- Cameras can be mounted on a tripod, a dolly or a crane, thus making the cameras much more versatile than previous generations of studio cameras. These cameras have a tally light, a small signal-lamp used that indicates, for the benefit of those being filmed as well as the camera operator, that the camera is 'live' - i.e. its signal is being used for the 'main program' at that moment.

**ENG cameras**

**Sony camera head with Betacam SP dock recorder.**

- Though by definition, **ENG (Electronic News Gathering)** video cameras were originally designed for use by news camera operators, these have become the dominant style of **professional video camera** for most video productions, from dramas to documentaries, from music videos to corporate video training.
- ENG cameras are larger and heavier, and usually supported by a shoulder stock on the cameraman's shoulder, taking the weight off the hand, which is freed to operate the lens zoom control. The weight of the cameras also helps dampen small movements.
- 3 CCDs are used instead of one, one for each primary color.
- They have interchangeable lenses.
- All settings, white balance, focus, and iris can be manually adjusted, and automatics can be completely disabled.
- The lens is focused manually and directly, without intermediate servo controls. However the lens zoom and focus can be operated with remote controls in a studio configuration.

- A complete time code section is available, allowing time code presets; and multiple cameras can be time code-synchronized with a cable.
- Recording is to a professional medium like some variant of Betacam or DVCPRO or Direct to disk recording or flash memory. If as in the latter two, it's a data recording, much higher data rates (or less compression) are used than in consumer devices.
- The camera is mounted on tripods and other supports with a quick release plate.
- Controls that need quick access are on hard physical switches, not in menu selections. Gain Select, White/Black balance, color bar select, and record start controls are all in the same general place on the camera, irrespective of the camera manufacturer.
- Audio is adjusted manually, with easily accessed physical knobs.

**EFP Camera operator at a baseball game.**

**EFP Cameras**

- **Electronic Field Production cameras** are similar to studio cameras in that they are used primarily in multiple camera switched configurations, but outside the studio environment, for concerts, sports and live news coverage of special events.
- These versatile cameras can be carried on the shoulder, or mounted on camera pedestals and cranes, with the large, very long focal length zoom lenses made for studio camera mounting.
- These cameras have no recording ability on their own, and transmit their signals back to the broadcast truck through a triax, fiber optic or the virtually obsolete multi core cable.

**A remote-controlled camera mounted on a miniature cable car for mobility**.

**Remote cameras**

- Remote cameras are typically very small camera heads designed to be operated by remote control. Despite their small size, they are often capable of performance close to that of the larger ENG and EFP types.
- "Lipstick cameras" are so called because the lens and sensor block combined are similar in size and appearance to a lipstick container. These are either hard mounted in a small location, such as a race car, or on the end of a boom pole. The sensor block and lens are separated from the rest of the camera electronics by a long thin multi conductor cable. The camera settings are manipulated from this box, while the lens settings are normally set when the camera is mounted in place.
- Block cameras are so called because the camera head is a small block, often smaller than the lens itself. Some block cameras are completely self contained, while others only contain the sensor block and its pre-amps, thus requiring connection to a separate camera control unit in order to operate. All the functions of the camera can be controlled from a distance, and often there is facilities for controlling the lens focus and zoom as well. These cameras are mounted on pan and tilt heads, and may be placed in a stationary position, such as atop a pole or tower, in a corner of a broadcast booth, or behind a basketball hoop. They can also be placed on robotic dollies, at the end of camera booms and cranes, or "flown" in a cable supported harness, as shown in the illustration

**Microphones**

The first decision is which type of microphone best suits your situation.

1. **Hand-Held Mics:** Hand-held mics are versatile and relatively easy to use. They are well-suited to mobile interviews, and to situations where the interviewer needs to direct the talking i.e.people can only speak when the interviewer points the mic at them.

**2. Lapel Mics:** Lapel (lavalier) mics create high quality, consistent sound. Each person has their own mic, the mics are (theoretically) always in the correct position and unwanted noise is rejected well. The disadvantage is that they are slower and more difficult to set up, especially if there are a number of guests coming in and out of the IV setting. Also, if the mic position does happen to go awry, you have to interrupt the interview to fix it.

**Lapel Mics** **Boom Mics**

**3. Boom Mics:** Microphones placed on a boom arm are also very versatile and are used in both studio and mobile settings. The main advantage is that the IV participants don't need to be rigged for audio or worry about mics, and the sound operator is in full control. The microphone is usually a shotgun (very directional) mic which can easily be pointed to any speaker (or other sound if required). The boom operator and camera operator need to work together to make sure the mic stays out of camera shot.

**4. PZM (Pressure Zone) Mics:** PZM mics are useful when a number of participants are seated around a table. The mic is placed in the middle of the table and can pick up all speakers.

**5. Radio Mics:** Any type of microphone can be plugged into a small battery-powered radio transmitter and sent to a receiver at the recording end. This frees the interviewer and guest from the restraints of audio cables. It also means the participants can be a long way from the camera (which would obviously be on a long zoom).

**6. Built-in Camera Mic:** The mic which is built into the camera can also be used for recording the sound. However this is unlikely to produce good interview sound.

**Lighting:**

**The Standard 3-Point Lighting Technique**

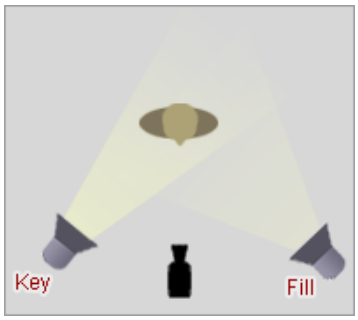

The *Three Point Lighting Technique* is a standard method used in visual media such as video, film, still photography and computer-generated imagery. It is a simple but versatile system which forms the basis of most lighting. Once you understand three point lighting you are well on the way to understanding all lighting. The technique uses three lights called the **key light**, **fill light** and **back light**. Naturally you will need three lights to utilise the technique fully, but the principles are still important even if you only use one or two lights. As a rule:

- If you only have one light, it becomes the key.
- If you have 2 lights, one is the key and the other is either the fill or the backlight.

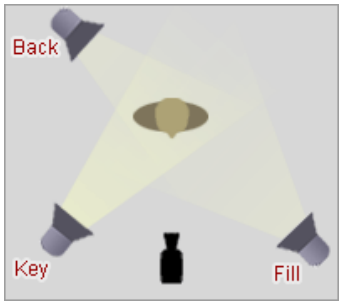

**Key Light**

This is the main light. It is usually the strongest and has the most influence on the look of the scene. It is placed to one side of the camera/subject so that this side is well lit and the other side has some shadow.

**Fill Light**

This is the secondary light and is placed on the opposite side of the key light. It is used to fill the shadows created by the key. The fill will usually be softer and less bright than the key. To achieve this, you could move the light further away or use some spun. You might also want to set the fill light to more of a flood than the key.

**Back Light**

The back light is placed behind the subject and lights it from the rear. Rather than providing direct lighting (like the key and fill), its purpose is to provide definition and subtle highlights around the subject's outlines. This helps separate the subject from the background and provide a three-dimensional look.

If you have a fourth light, you could use it to light the background of the entire scene.

**TV Studio lay out**

A **television studio** is an installation in which video productions take place, either for the recording of live television to video tape, or for the acquisition of raw footage for post-production. The design of a studio is similar to, and derived from, movie studios, with a few amendments for the special requirements of television production. A professional television studio generally has several rooms, which are kept separate for noise and practicality reasons. These rooms are connected via intercom, and personnel will be divided among these workplaces.

**Studio floor**

The studio floor is the actual stage on which the actions that will be recorded take place. A studio floor has the following characteristics and installations:

- decoration and/or sets
- professional video camera (sometimes one, usually several) on pedestals
- microphones
- Stage lighting rigs and the associated controlling equipment.
- several video monitors for visual feedback from the production control room (PCR)
- a small public address system for communication
- a glass window between PCR and studio floor for direct visual contact is usually desired, but not always possible

While a production is in progress, people composing a television crew work the studio floor.

- The on-screen "talent" themselves, and any guests - the subjects of the television show.
- a floor manager, who has overall charge of the studio area stage management, and who relays timing and other information from the television director.
- One or more camera operators who operate the professional video cameras, though in some instances these can also be operated from the PCR using remotely controlled robotic pan tilt zoom camera (PTZ) heads.
- possibly a teleprompter operator, especially if this is a live television news broadcast

**Production-control room**

The **studio control room** (SCR) is the place in a television studio in which the composition of the outgoing program takes place. The production control room is occasionally also called a studio control room (SCR) or a "gallery" - the latter name comes from the original placement of the director on an ornately carved bridge spanning the BBC's first studio at Alexandra Palace which was once referred to as like a minstrels gallery.[1] Master control is the technical hub of a broadcast operation common among most over-the-air television stations and television networks. Master control is distinct from a PCR in television studios where the activities such as switching from camera to camera are coordinated. A transmission control room (TCR) is usually smaller in size and is a scaled down version of central casting.

Facilities in a PCR include:

- A video monitor wall, with monitors for program, preview, VTRs, cameras, graphics and other video sources. In some facilities, the monitor wall is a series of racks containing physical television and computer monitors; in others, the monitor wall has been replaced with a virtual monitor wall (sometimes called a "glass cockpit"), one or more large video screens, each capable of displaying multiple sources in a simulation of a monitor wall.
- A vision mixer, a large control panel used to select the multiple-camera setup and other various sources to be recorded or seen on air and, in many cases, in any video monitors on the set. The term 'vision mixer' is primarily used in Europe, while the term 'video switcher' is usually used in North America.
- A professional audio mixing console and other audio equipment such as effects devices.
- A character generator (CG), which creates the majority of the names and full digital on-screen graphics that are inserted into the program lower third portion of the television screen
- Digital video effects, or DVE, for manipulation of video sources. In newer vision mixers, the DVE is integrated into the vision mixer; older models without built-in DVE's can often control external DVE devices, or an external DVE can be manually run by an operator.

- A still store, or still frame, device for storage of graphics or other images. While the name suggests that the device is only capable of storing still images, newer still stores can store moving video clips and motion graphics.
- The technical director's station, with waveform monitors, vector scopes and the camera control units (CCU) or remote control panels for the CCUs.
- In some facilities, VTRs may also be located in the PCR, but are also often found in the central apparatus room
- Intercom and IFB equipment for communication with talent and television crew
- A signal generator to gen lock all of the video equipment to a common reference that requires color burst [edit] Master-control room

The Master control (**MCR**) room houses equipment that is too noisy or runs too hot for the **Production control room** (**PCR**). It also makes sure that coax cable and other wire lengths and installation requirements keep within manageable lengths, since most high-quality wiring runs only between devices in this room. This can include the actual circuitry and connections between

- character generator (CG)
- camera control units (CCU)
- digital video effects (DVE)
- video servers
- vision mixer (Video Switcher)
- VTRs
- patch panels

The Master control room in a US television station US, is the place where the on-air signal is controlled. It may include controls to play out television programs and television commercials, switch local or television network feeds, record satellite feeds and monitor the transmitter(s), or these items may be in an adjacent equipment rack room. The term "studio" usually refers to a place where a particular local program is originated. If the program is broadcast live, the signal goes from the PCR to MCR and then out to the transmitter.

**Studio and field production**

Television Studios come equipped with multiple cameras and microphones. Lights are attached to the ceiling on a grid. There is a control room with switchers and controllers. You set it up once and leave everything in place ready to go. Everything in a studio is controllable i.e. the lights, the sound, the action. The action is rehearsed and then done once, using multiple cameras. In the control room, the director switches the

cameras and sound sources as the action is happening. In a well-arranged studio, everything exists for the sole purpose of taking action and getting it on tape.

Field production means you're anywhere but a studio. Field production is always dependent upon the characteristics of your location. Every location has a different circumstances and different situation calls for unique methods Field production usually requires a lot of setting up and tearing down the equipment.

| Studio Production | Field Production |
|---|---|
| **Controlled Light** | **Realistic Environment** |
| **Controlled Sound** | **Unrestricted Sound environment** |
| **Restricted Movement** | **Unrestricted Movement** |
| **Single location** | **Flexibility of movement** |
| **Controlled Environment** | **Difficult to reproduce environment** |

**Script writing**

Screenplays have been the key element of filmmaking since the earliest days of motion pictures. Although movies are a visual medium, they typically begin with words on a page, a literary blueprint. In addition to expressing visual ideas on paper, the writer must create engaging characters and an airtight structure. There is little room for error. As legendary filmmaker **Frank Capra** once said, **"Scriptwriting is the toughest part of the whole racket…the least understood and the least noticed".**

**Types of screenplays**

Screenplays can generally be divided into two kinds; a 'speculative' screenplay, and a commissioned screenplay.

- A speculative screenplay is a script written with no upfront payment, or a promise of payment. The content is usually invented solely by the screenwriter, though spec screenplays can also be based on established works, or real people and events.

A commissioned screenplay is written by a hired writer. The concept is usually developed long before the screenwriter is brought on, and usually has many writers work on it before the script is given a green-light

**Structure of a good script / screenplay**

A good screenplay has a **protagonist, antagonist and conflict**. Without these three elements, a screenplay can become boring. However, the antagonist does not have

to be a person. The main character could be an animal or even his own mind, provided there is a character with which viewers can easily relate and conflict, the screenplay can develop into an interesting story.

**1. Characters**

- Always invent your characters and place them in an environment instead of the other way around. Even the best told stories will fail if the characters seem more like objects than interesting people.
- Characters should change as the story progresses.
- Always research the characters.

**2. Format and Development**

- When writing your script, use **capital letters** for both the headings and the character names. While the **dialogue should be centered** on the page, the heading is a location descriptive instruction and should be on the left. Include camera angles where necessary.
- Many scripts are written in **three act structural development**. Most writers choose to do so by using the **beginning of the story for back story and character introduction, the middle for conflict and the end for resolution**. To accomplish this, they introduce the main character early and allow time for the reader to understand how the character thinks and reacts to different situations. The antagonist may be introduced immediately after the expository material or wait to introduce more secondary characters.
- The conflict portion of this script is typically placed in the middle and should be the longest part of the script. While introductions and resolutions are interesting, the real material possibilities are almost always with the protagonist's conflict. Most screen writers will use their introduction material to continually set up the beginning of conflict. In this way, readers can see how a series of events lead to conflict rather than just introducing a problem with no reasoning behind it.

**3. The Premise**

In his book *The Art of Dramatic Writing* (1977), teacher and playwright Lajos Egri discusses at length how premises work. Egri states: ***"Everything has a purpose, or premise. Every good play must have a well-formulated premise No idea, and no situation, was ever strong enough to carry you through to its logical conclusion without a clear-cut premise".*** The premise should be the driving force behind every

event in your screenplay. A good premise is derived from emotions--love, hate, fear, jealousy, desire, etc.--and revolves around a character, a conflict and a conclusion.

If your story does not have a clear premise, it will lack focus and drive. For example, if a story is more "illustrative" than dramatic, presenting ideas rather than conflict, it may not maintain an audience's interest. If a story has more than one premise, or if the premise changes along the way, it will confuse and bore the audience. Either way, the script won't work. However, some screenplays succeed with multiple story lines and points of view. This is because while these movies may seem at first to be without a premise, in fact, each separate storyline has its own clear premise

**4. Character Development**

Emotions are at the heart of every good film. The story must bleed out of your characters' psyches. The most successful screenplays are **character-driven**, even those with complex plots. In solid, character-driven scripts, all action, or plot, is **organic**; that is, it flows logically from the characters' needs and desires. Every good script starts with a protagonist, or pivotal character. The protagonist "is the one who creates conflict and makes the play move forward. A pivotal character must not merely desire something. He must want it so badly that he will destroy or be destroyed in the effort to attain his goal.

The antagonist is the one against whom the protagonist "exerts all his strength, all his cunning, all the resources of his inventive power." A good antagonist must be as strong and willful as the protagonist. Machines, animals and monsters can be effective antagonists only if they are capable of independent thought or emotion. Rarely does a movie succeed without an antagonist. Even disaster and man-against-nature stories need a human opponent.

**5. Creating compelling characters**

Every character in the script should be special in some way. The characters need to be engaging, but should have qualities or quirks that set them apart, and make them memorable. Characters define themselves through large and small actions, through their words and their deeds. As in real life, movie characters also have a private and public side, the face they see in the mirror and the one they present to the world. The behaviour of l characters should be based on the knowledge of human psychology. The biographical information and background details of the characters like physiology age, overall appearance physical traits, social and economic background like place of birth,

occupation, education, race, religion, hobbies, and psychology i.e. temperament, abilities, taste, ambitions, moral standards, etc. should be sketched. The backgrounds and personalities of the characters should be consistent with the roles they play on the screen

**6. Good Dialogues**:

It is vital to create a voice, a way of speaking, for each character. The best dialogue starts with everyday speech and strains out the redundancies and incoherencies. Every scene has its own rhythm or tempo, and dialogue is often its drumbeat. Scenes with long stretches of dialogue, or monologues, are necessarily slower paced. Tension can be heightened by quickening the tempo of an exchange with shortened responses or regular interruptions. Many exchanges of dialogue are like an interrogation, with one character trying to extract information or concessions out of another. Questions tend to create more tension than statements, because by posing them, a character can force an issue, demanding an answer from the other party

**7. Putting in the stops**

The basic story of the main character should have a conflict and a resolution. The conflict needs to be presented in the form of the **"stops"** or obstacles you want your protagonist to face on the path from the conflict to the resolution. The screen play must have powerful stops in order to alleviate the protagonist and create public acceptance of the character.

**8. The three-act structure**

Most screenplays employ a three-act structure. Originating in ancient Greek drama, the three-act structure became standard in American theatre in the early twentieth century and soon after was adapted for film. In **Act One**, characters and conflict are introduced. The conflict deepens in **Act Two** until it reaches a climax or breaking point. In **Act Three**, the conflict resolves and leads to a *denouement*, or conclusion. As a general rule, Act Two is the longest and Act three the shortest. Applying the three-act structure to a two-hour, or 120-page script (one script page is roughly equal to one screen minute), Act One will run about 40 pages; Act Two, 50-60 pages; Act Three, 20-30 pages.

**9. Sub-plots**

Sub-plots contain all the same elements as the main plot--character, conflict and resolution. Although it used to be common to see sub-plots functioning only as comic

relief, with little connection to the rest of the story, they now are expected to parallel and advance the main plot. Sub-plots involve secondary characters interacting with the protagonist or the antagonist. However the sub plot must not overwhelm the main plot.

**10.Scene structure**

Just as the screenplay has a structure, so should be the individual scenes. Although a screenwriting rule of thumb stipulates that scenes should not run much more than two minutes (two full script pages), you should still regard them as mini-dramas. Some short scenes, called **transitional scenes**, merely connect one place or time to another like a bridge and don't require special treatment. Each character in a scene should have an objective, or need, and the tension created by these needs should rise throughout the scene

**11. Back story**

The facts about the characters that are made known first and which later become important are called "back story" or exposition. They are elements of the character's biography that the screenwriter has deemed crucial to the storytelling. Every screenplay contains back story because every character brings a certain amount of baggage to a drama. Some facts about a person can be revealed through props, costumes, makeup and behavior. Most back story, however, is conveyed through dialogue. Good exposition doesn't stick out and is presented in a believable context. Most back story tends to be revealed early in the script, but certain facts may be withheld for dramatic effect. Secrets are the most powerful form of back story, and whole dramas can revolve around them. Knowing how and when to expose details about a character's past is a trial-and-error process and may require several rewrites to nail

**12. Set-ups and pay-offs**

Set-ups and pay-offs are narrative devices commonly used in screenplays. As the word suggests, a set-up introduces a bit of action or gag that will become significant later on and lead to a pay-off. Set-ups, which usually are found in the first half of a script, should appear tacked-on or inconsequential. The first time when the set –up is mentioned, the situation must benign, but when the moment it becomes crucial in the end then it pays-off.

**Outline**

**Difference between an outline, Synopsis and a treatment**

- A synopsis is generally defined as a one-to-four page narrative description of what happens in your story, told with some sizzle, since it will likely be used as a selling tool -- to entice an agent, publisher or producer to take a look at your manuscript.
- A film treatment used to consist of 20 to 40 or more pages of narrative. But today the treatments have become so brief that the line between them and synopses is blurred.
- **An outline is a scene-by-scene breakdown of your story, written in narrative form**. For TV and film scripts that are written on assignments the outline will invariably be read by producers and often by non-writers, such as studio or network executives, and should, therefore, be written with such exposure in mind.

Outline can be written by narrating the scenes in four or five sentences. The following are the important advantages of writing outlines.

- By writing the outlines the story can be easily deconstructed or reconstructed.
- It will enable to look critically at each scene, each situation, to judge how it fits into the whole of your story.
- The pace of the story can be judged i.e. where it sags, where it needs to be tightened.
- Discoveries about the characters can be made. It will to maintain balance and objectivity.
- We can also observe whether the consecutive scenes are too much alike or too jarringly different

**Treatment**

A **film treatment** is a piece of prose, typically the step between scene cards and the first draft of a screenplay for a motion picture, television program, or radio play. It is generally longer and more detailed than an outline (or one-page synopsis), and it may include details of directorial style that an outline omits. They read like a short story, except told in the present tense and describing events as they happen. There are two types: the original draft treatment, created during the writing process, and the presentation treatment, created as presentation material.

**Original draft treatment**

The original draft treatment is generally long and detailed. It consists of full-scene outlines put together. These are usually more than about 30 standard letter size/A4 pages (Courier New 12 point), less than about 80 pages, and an average of about 40 pages.

**Presentation treatment**

Generally the scene card descriptions are written out in order. These only have the essential and important story events that make up the scenes. It's the full story in its simplest form. Usually starting with the concept, then the theme, then character, and also the detailed synopsis of about 4–8 pages of master scenes. This is either to show how the production notes have been incorporated into the screenplay for the director and production executives to look over, or to leave behind as a presentation note after a sales pitch. This would be the treatment to send if a script submission requires one. These are usually more than about 3 pages, less than about 30 pages and an average of 7–12 pages.

Treatments are widely used within the motion picture industry as selling documents, whereas outlines are generally produced as part of the development process. Screenwriters may use a treatment to initially pitch a screenplay, but may also use a treatment to sell a concept they are pitching without a completed screenplay.

It is useful to write a script treatment before writing a screenplay. The treatment provides a rough overview of the screenplay and is stylistically similar to a short story. A treatment is usually several pages long and describes the main action sequences. Brief lines of dialogue can be included in these sequences to emphasize key moments of action. When outlining your treatment, list and describe the most important elements of your story:

1. The main conflict.
2. The person, place, or thing that is the subject of your story.
3. Each action sequence.
4. The main characters.
5. The climax, which is the confrontation between the hero and the villain.
6. The resolution of the main conflict.

**Visualization- Pre-visualization**

**Pre-visualization** can be any technique that attempts to visualize scenes in a movie before filming begins. The term is applied to techniques such as storyboarding, either by

hand drawn sketches or the use of digital technology in the planning and conceptualizing of movie scenes and sequences.

- The advantage of pre-visualization is that it allows directors to experiment with different staging and art direction options – such as lighting, camera placement and movement, stage direction and editing - without having to incur the costs of actual production.
- On larger budget project, the director works with artists in a visual effects department or with dedicated pre-visualization service companies.
- Pre-visualizations can include music, sound effects and dialogue to closely emulate the look of fully produced and edited sequences, and are usually employed for complex or difficult scenes that involve stunts and special effects.
- Digital video, photography, hand-drawn art, clip art and 3D animation have all been used either singly or in combination to preview sequences.

**Shooting script**

A shooting script is the version of a screenplay used during the production of a motion picture. Shooting scripts are distinct from spec scripts in that they make use of scene numbers and they follow a well defined set of procedures specifying how script revisions should be implemented and circulated.

- When a screenplay is approved for production, the scenes are assigned numbers which are included in the script alongside the scene headers. The numbers provide a convenient way for the various production departments to reference individual scenes.
- After a shooting script has been widely circulated, page numbers are locked, and any revisions are distributed on revision pages. Thus the production office might issue a revision containing new pages 3, 9, 17 and 45. This avoids having to print and distribute an entirely new draft for every set of revisions, which would entail crew members having to transfer all their handwritten notes to a new script.
- If scenes on page 45 become longer, they will be continued on new pages 45A, 45B and so on;
- If the scenes on page 45 are all eliminated, a new page 45 will be issued with the word "OMIT" as the absence of a page 45 might look like an error.
- Revision pages are distributed on colored paper, a different color for each set of revisions, with each changed line marked by an asterisk in the right margin of

the page. The progression of colors varies from one production to the next, but a typical sequence would be: white, blue, pink, yellow, green, gold, salmon, cherry, white (this time known as "double white"), and back to blue ("double blue"). When the Assistant Director believes that there are more changed pages than are worth swapping out, the Script Coordinator may issue an entirely fresh script in the appropriate revision color. In some cases, usually before the start of principal photography, an entirely new "white draft" will be distributed in lieu of colored revision pages. The pages in a white draft are renumbered from scratch, while the original scene numbers are maintained.

**Preserving scene and page numbers**.

- When revisions are made to a shooting script, they must be accomplished in a way that doesn't disturb the pre-existing scene numbers. For example, if a new scene is to be inserted between scenes 10 and 11, the new scene will be numbered 10A. For some productions, it may be necessary to insert a scene between 10 and 10A - this scene is then numbered 10aA (a scene between 10 and 10aA would be numbered 10aaA and so on). Every scene thus retains its own unique number throughout the course of the production.
- When a scene is omitted, its number is preserved in the script along with the phrase (OMITTED). This effectively retires the number so that it can't be reused by a new scene inserted later at the same location.
- Page numbers in a shooting script are handled in a similar way. When revision pages are distributed, the page numbers must flow sequentially into the pre-existing page numbers. For example, if page 10 is revised such that it now occupies a page and a half, the revisions will be distributed on two pages numbered 10 and 10A. These two pages will replace page 10 in the outstanding drafts. Conversely, if pages 15 and 16 are shortened such that they now occupy a single page, the revisions will be distributed on a single page numbered 15-16.

**Scene continued**

When a numbered scene is split across pages, (CONTINUED) appears at the bottom of the prior page, and CONTINUED: appears at the top of the subsequent page. This *continued indicator* appears along with the number of the scene being continued and a bracketed count of how often the scene has been continued thus far, e.g. 107 CONTINUED: (2). The number is usually omitted when it's equal to one.

**Dialogue continued**

When dialogue is split across pages, (MORE) appears below the portion of dialogue on the first page, similar to a *parenthetical* but indented the same as the character's name. On the subsequent page, the remaining dialogue is headed by the character's name, which is extended by an abbreviated *continued indicator*, e.g. JOHN (CONT'D). When a character speaks more than once consecutively, with only action separating the speeches, *(continuing) parenthetical* can be used in the subsequent speeches. *(Continuing) parenthetical* are positioned the same as standard ones: below the character's name and indented from the dialogue. Some writers indicate consecutive dialogue by including (CONT'D) beside the character's name (the same as for dialogue split across pages). Many writers choose not to indicate consecutive dialogue at all.

**The revision slug**

A slug (header) appears at the top of every revision page, aligned vertically with the page number. The revision slug typically includes the date the revisions were circulated, the color of the pages in parentheses, and usually, the name of the production or some other descriptive information. Every set of revisions is distributed along with a title page that includes a list of the revision slugs for every set of revisions distributed thus far.

**Revision marks**

Script revisions are marked with asterisks in the right hand margins of the revision pages. When many revision marks are present on a single page, or within a single paragraph or scene, the marks may be consolidated into a single mark. For example, if all the lines in a given passage of dialogue are marked, the marks can be consolidated into a single mark appearing alongside the name of the speaker above the dialogue. In the case of scenes, this single "consolidation mark" appears alongside the scene header. For pages, the consolidation mark appears beside the page number.

**NR – 21063 - Digital Media**

**Unit- 1**

**Introduction to Digital Media**

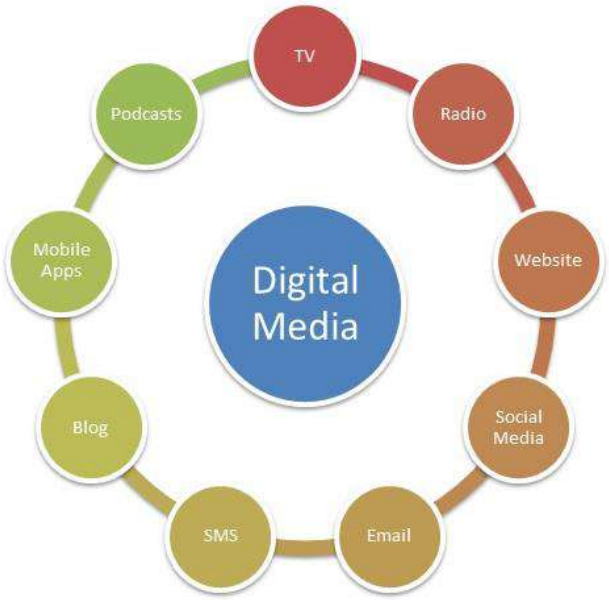

## 1. Concept of Digital media

### What is Digital Media

Another term for Digital media is **new media or social media**.

Digital media is a way to express opinions or ideas in digital form through the Internet, accessible on any digital devices. It is a quick, easy, and effective way of communication and distribution of the content. This includes text, audio, video, and graphics that are transmitted over the internet or through other digital mediums such as television, radio. Digital media content can be created, viewed, distributed, and modified via digital devices, which is something that differentiates it from traditional media.

- **What are examples of digital media?**
- Digital photographs.
- Digital books (e books)
- Websites and Blogs.
- Social Media
- (Facebook, Twitter)
- Mobile Phone Apps
- online newspapers
-

### What is Digital Device

**Digital Device** means an electronic device that can create, generate, send, share, communicate, receive, store, display, or process information, and such electronic devices shall include, but not limited to, desktops, laptops, tablets, peripherals, servers, mobile telephones, smartphones, and any similar storage device which currently exists or may exist as technology develops or such comparable items as technology develops.

## 2. Internet and its functioning

### What is the Internet

The Internet is a global collection of computer networks that are linked together by devices called routers and use a common set of protocols for data transmission known as TCP/IP (transmission control protocol / Internet protocol).

**The primary purpose of the Internet is to facilitate the sharing of information.** There are many different tools used on the Internet to make this possible. Some of the more common tools include email, list servers, newsgroups, telnet, gopher, FTP, and the World Wide Web. Probably the most popular of all Internet tools is the World Wide Web. Internet comprises of various networks that include public, private, government, business, and academic sectors linked together using different electronic technologies. It interconnects global networks with local and vise-versa.

### Functions of Internet:

The Internet is a global network of **physical cables**, which can include copper telephone wires, TV cables, and fiber optic cables. Even wireless connections like Wi-Fi and 3G/4G rely on these physical cables to access the Internet. When you visit a website, your computer sends a request over these wires to a **server**. A server is where websites are stored, and it works a lot like your computer's hard drive. Once the request arrives, the server retrieves the website and sends the correct data back to your computer. What's amazing is that this all happens in just a few seconds!

**Role (function) of Internet**

1.Communication 2. Online transaction 3.Entertainment 4.Gather information 5.Map navigation 6.Weather forecasting information 7.News 8.Data interchange 9.Shopping 10. Professional Business

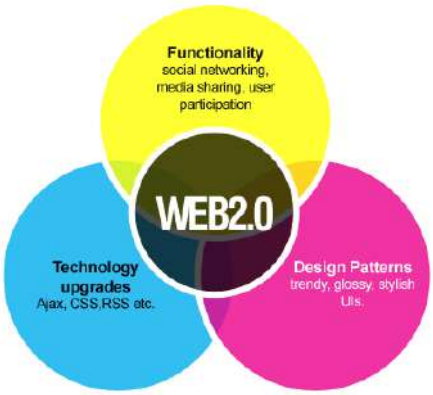

## 3. Concept of Web 2.0

Web 2.0 is the second generation of the World Wide Web. It focuses on the web as a platform and offers more opportunities for collaboration, functionality, various applications, and user-generated content. It is the World Wide Web as it is used today.

Web 2.0, or participative/participatory and social web, "refers to websites that emphasize user-generated content, ease of use, participatory culture, and interoperability for end users." Web 2.0 is a relatively new term, having only come into popular use about twenty years ago, in 1999.

**The word web 2.0 was first coined by Darcy DiNucci and then became popularized by Tim O'Reilly and Dale Doughtery at a conference in 2004.**

**It's important to note that Web 2.0 frameworks only deal with the design and use of websites, without placing technical demands on designers.**

**Characteristics of Web 2.0**

One of the main characteristics of a Web 2.0 site is that users are encouraged and invited to contribute content, instead of simply reading what's already there. **An example of a Web 2.0 site is Medium, a blogging platform where users contribute articles that they have written**, as well as interact with content that other users have shared. Social networking sites, such as Facebook and Instagram, are also great examples of Web 2.0.

**Concepts of Web 2.0**

Web 2.0 might sound complex and overwhelming, but it is easily broken down into three technologies: Rich internet application, web-oriented architecture, and social web. We'll explain each of these in a little more depth later on in this section. Because of these technologies, Web 2.0 combines client and server side software to "provide users with information storage, creation, and dissemination capabilities. None of these things were available in Web 1.0.

First, rich internet application is defined as the user experience from desktop (or laptop) to browser, from both a graphics standpoint and an interactivity point of view. Second, web-oriented architecture relates to the functionality of Web 2.0 applications to leverage a much richer set of applications. An example of web-oriented architecture is RSS feeds, which is a method of aggregating information, such as a blog or podcast feed. Third, social web works to make the end user feel like they are a part of the community. This sense of community can be accomplished via social networking sites like Facebook and Instagram, where users interact with each other, or via the comment sections on news sites, where users can respond to articles that have been posted, creating discussion among all users of the site.

**Comparison between Web 1.0, Web 2.0 and Web 3.0**

Web 1.0 was all about fetching, and reading information. Web 2.0 is all about reading, writing, creating, and interacting with the end user. It was famously called the participative social web. Web 3.0 is the third generation of the World Wide Web, and is a vision of a decentralized web which is currently a work in progress. It is all about reading, writing, and owning. Let's dive deeper to know better about web 1.0 and web 2.0 and the need for web 3.0.

**Web 1.0**

Web 1.0 refers to the first stage of the World Wide Web evolution. Earlier, there were only a few content creators in Web 1.0 with a huge majority of users who are consumers of content. Personal web pages were common, consisting mainly of static pages hosted on ISP-run web servers, or free web hosting services.

**In Web 1.0 advertisements on websites while surfing the internet are banned.** Also, in Web 1.0, Ofoto is an online digital photography website, on which users could store, share, view, and print digital pictures. Web 1.0 is a content delivery network (CDN) that enables the showcase of the piece of information on the websites. It can be used as a personal website. It costs the user as per pages viewed. It has directories that enable users to retrieve a particular piece of information. The era of Web 1.0 was roughly from 1991 to 2004.

**Four Design Essentials of a Web 1.0 Site Include:**

- Static pages.
- Content is served from the server's file system.
- Pages built using Server Side Includes or Common Gateway Interface (CGI).
- Frames and Tables are used to position and align the elements on a page.

**Web 2.0**

2004 When the word Web 2.0 become famous due to the First Web 2.0 conference (later known as the Web 2.0 summit) held by Tim O'Reilly and Dale Dougherty, the term was coined by Darcy DiNucci in 1999. Web 2.0 refers to worldwide websites which highlight user-generated content, usability, and interoperability for end users. **Web 2.0 is also called the participative social web.** It does not refer to a modification to any technical specification, but to modify the way Web pages are designed and used. The transition is beneficial but it does not seem that when the changes occur. Interaction and collaboration with each other are allowed by Web 2.0 in a social media dialogue as the creator of user-generated content in a virtual community. Web 2.0 is an enhanced version of Web 1.0.

**Five Major Features of Web 2.0:**

- Free sorting of information, permits users to retrieve and classify the information collectively.
- Dynamic content that is responsive to user input.
- Information flows between the site owner and site users using evaluation & online commenting.
- Developed APIs to allow self-usage, such as by a software application.
- Web access leads to concerns different, from the traditional Internet user base to a wider variety of users.

**Usage of Web 2.0:** The social Web contains several online tools and platforms where people share their perspectives, opinions, thoughts, and experiences. Web 2.0 applications tend to interact much more with the end user. As such, the end-user is not only a user of the application but also a participant in these 8 tools mentioned below:

- Podcasting
- Blogging
- Tagging
- Curating with RSS
- Social bookmarking
- Social networking
- Social media
- Web content voting

**Web 3.0**

It refers to the evolution of web utilization and interaction which includes altering the Web into a database, with the integration of DLT (Distributed Ledger Technology blockchain is an example) and that data can help to make Smart Contracts based on the needs of the individual. It enables the up-gradation of the backend of the web, after a long time of focusing on the frontend (Web 2.0 has mainly been about AJAX, tagging, and other front-end user-experience innovation). Web 3.0 is a term that is used to describe many evolutions of web usage and interaction among several paths. In this, data isn't owned but instead shared but still is, where services show different views for the same web / the same data.

The Semantic Web (3.0) promises to establish "the world's information" in a more reasonable way than Google can ever attain with its existing engine schema. This is particularly true from the perspective of machine conception as opposed to human understanding. The Semantic Web necessitates the use of a declarative ontological language like OWL to produce domain-specific ontologies that machines can use to reason about information and make new conclusions, not simply match keywords.

**Main features of Web 3.0**

- **Semantic Web:** The succeeding evolution of the Web involves the Semantic Web. The semantic web improves web technologies in demand to create, share and connect content through search and analysis based on the capability to comprehend the meaning of words, rather than on keywords or numbers.

- **Artificial Intelligence:** Combining this capability with natural language processing, in Web 3.0, computers can distinguish information like humans to provide faster and more relevant results. They become more intelligent to fulfill the requirements of users.
- **3D Graphics:** The three-dimensional design is being used widely in websites and services in Web 3.0. Museum guides, computer games, e-commerce, geospatial contexts, etc. are all examples that use 3D graphics.
- **Connectivity:** With Web 3.0, information is more connected thanks to semantic metadata. As a result, the user experience evolves to another level of connectivity that leverages all the available information.
- **Ubiquity:** Content is accessible by multiple applications, every device is connected to the web, and the services can be used everywhere.
- **DLT and Smart Contracts:** With the help of DLT, we can have a virtually impossible-to-hack database from which one can have value to their content and things they can own virtually, this is the technology that enables a trustless society through the integration of smart contracts which does not need to have a middle man to be a guarantor to make that contract occur on certain cause its based on data from that DLT. It's a powerful tool that can make the world a far better place and generate more opportunities for everyone on the internet. Hence, these were the major difference between Web 1.0, Web 2.0, and Web 3.0 having their own uniqueness. All three were used at their respective time and revolutionized the world of the web accordingly

**4. Concept of interactivity**

- The word interactivity is related to and stems from the term interaction used by sociologists, which is **the actions of at least two individuals who exchange or interplay**. It requires levels of messages that respond to previous messages. Interactivity also refers to a communication systems ability to "talk back".

- The Oxford English Dictionary defines **"Interactivity"** in regards to new media as "**allowing a two-way flow of information between it (a computer or other electronic device) and a user, responding to the user's input**."

## Difference Between Web 1.0, Web 2.0, and Web 3.0

| S. No. | Web 1.0 | Web 2.0 | Web 3.0 |
|---|---|---|---|
| 1. | Mostly Read-Only | Wildly Read-Write | Portable and Personal |
| 2. | Company Focus | Community Focus | Individual Focus |
| 3. | Home Pages | Blogs / Wikis | Live-streams / Waves |
| 4. | Owning Content | Sharing Content | Consolidating Content |
| 5. | WebForms | Web Applications | Smart Applications |
| 6. | Directories | Tagging | User behavior |
| 7. | Page Views | Cost Per Click | User Engagement |
| 8. | Banner Advertising | Interactive Advertising | Behavioral Advertising |
| 9. | Britannica Online | Wikipedia | The Semantic Web |
| 10. | HTML/Portals | XML / RSS | RDF / RDFS / OWL |
| 11. | Data was not Focused. | Data of many was controlled by some mediatory. | Data was personalized and no use of mediatory. |
| 12. | Information sharing is the goal. | Interaction is the goal. | Immersion is the goal. |
| 13. | It connects information as its primary goal. | It aims to connect people. | Focuses on relating knowledge. |
| 14. | Static websites | Introduction of web applications | Intelligent web-based functions and apps |
| 15. | A simpler, more passive web. | An enhanced social Web | A semantic web exists. |
| 16. | Web and File Servers, HTML, and Portals are technologies connected to Web 1.0. | AJAX, JavaScript, CSS, and HTML5 are examples of related technology. | Web 3.0 technologies include blockchain, artificial intelligence, and decentralized protocols. |
| 17. | **Associated Technologies** | **Associated Technologies** | **Associated Technologies** |

| S. No. | Web 1.0 | Web 2.0 | Web 3.0 |
|---|---|---|---|
| | • Web and File Servers<br>• Search Engines (including AltaVista and Yahoo!)<br>• E-mail accounts (Yahoo!, Hotmail)<br>• Peer-to-Peer File Sharing (Napster, BitTorrent) and others. | • Frameworks for Ajax and JavaScript<br>• Microsoft.NET<br>• Blogs<br>• Wikis and others. | • Searching Using Semantics<br>• Databases of Information<br>• Ontologies<br>• Intelligent Digital Personal Assistants and others. |

**5. . Mobile 2.0**

- An umbrella term for advanced services on mobile phones. The suffix 2.0 in technology implies that a product is new and improved, reinvented to be better and maybe even more relevant. It describes the convergence of mobile and web services, adding portability, ubiquitous connectivity and location – aware services to add physical context to information found on the web.
- Mobile 2.0, refers to **a perceived next generation of mobile internet services that leverage the social web.**

**Characteristics of Mobile 2.0**

- The social web meets mobility
- Extensive use of User-Generated Content, so that the site is owned by its contributors
- Leveraging services on the web via mashups
- Fully leveraging the mobile device, the mobile context, and delivering a rich mobile user experience
- Personal, Local, Always-on, Ever-present

**6. Social networking websites**

A social networking site is also known as a social networking website or social website. A social networking site is an online platform that allows users to create a public profile and interact with other users. Social networking sites usually allow a new user to provide a list of people with whom they share a connection, and then allow the people

on the list to confirm or deny the connection. After connections are established, the new user can search the networks of connections to make more connections.

Social networking can have a social purpose, a business purpose, or both, through sites with like-minded individuals, peers, friends and family. Popular social networking sites -- such as Facebook, Yelp, Twitter, Instagram and TikTok -- enable individuals to maintain social connections, stay informed and access, as well as share, a wealth of information. These sites also enable marketers to reach their target audiences. Popular examples for social media include **Facebook, Instagram, Twitter, Yelp and Myspace**. Professional connections. Geared toward professionals, these social networking sites may include a general forum where professionals can connect with co-workers or offer an exclusive platform based on specific occupations or interest levels

**What is the purpose of social networking?**

Social networking fulfills the following four main objectives:

1. **Sharing.** Friends or family members who are geographically dispersed can connect remotely and share information, updates, photos and videos. Social networking also enables individuals to meet other people with similar interests or to expand their current social networks.
2. **Learning.** Social networks serve as great learning platforms. Consumers can instantly receive breaking news, get updates regarding friends and family, or learn about what's happening in their community.
3. **Interacting.** Social networking enhances user interactions by breaking the barriers of time and distance. With cloud-based video communication technologies such as WhatsApp or Instagram Live, people can talk face to face with anyone in the world.
4. **Marketing.** Companies may tap into social networking services to enhance brand awareness with the platform's users, improve customer retention and conversion rates, and promote brand and voice identity.

**Social Media vs Social Networking**

**The difference between the two things is that social media is mainly used for communications, while social networking is used to build that network of people.** Some people also consider "social media" to be a noun, just like digital media or print media, and "social networking" to be a verb.

So the social networking part of Facebook would be its groups, where people add each other in a grouped network deliberately. The social media component would be someone's page or wall where the communications are evidently public and accessible to all users without a specific network in mind. So again, a social networking site has the prime objective of allowing an inherently limited group of individuals to connect in a special way—not just a platform for someone to build a profile and advertise something to the world. In light of this, LinkedIn works much more as a hybrid than just a social networking site, although it is still widely considered the primary social networking site for professionals.

On LinkedIn, networking connections work much as described above: the individual can request that another user be added to his or her network, and then that other person can verify or deny the connection. The networking also happens when someone sends or receives a LinkedIn mail message, or adds an individual to their list of network contacts or endorsers. The social media component on LinkedIn is all of the public information on the individual's profile, like the resume, education history and employment history. That information is freely available to any user, no matter who he or she is, so creating it doesn't really consist of social networking behavior.

**7. Concept of media convergence**

Media Convergence simply refers to **the merging of different types of mass media such as Traditional Media, Print Media, Broadcast Media, New Media and the Internet as well as portable and highly interactive technologies through digital media platforms.** Media convergence is the process by which multiple media technologies are brought together into one computerized device. For example, smartphones can do the jobs which newspapers, GPS's, and telephones used to accomplish separately.

This results in the combination of 3Cs, i.e. Communication, Computing and Content as all three are integrated through technology. The most **relevant example of media convergence is a Smartphone** that blends together various media, i.e. print media (e-books, news apps), broadcast media (streaming websites, radio, music apps) as well as

new media (the internet) into a single device that performs various functions from calling and texting to photography, videography, gaming and so much more.

### Advantages of Media Convergence

Media convergence has had major effects on all sorts of media: entertainment media, news media, social media, etc. Some of these effects are positive, especially as concerns convenience, accessibility, and access to information:

- Simplifies media content production
- Speeds up and expands possibilities of media content distribution
- Users can access multiple types of media on one device
- Democratization of media (anyone can produce media on a social media website)
- Expands access to information (anyone with an internet connection can listen to open courses from American universities, for example)

### Disadvantages of Media Convergence

- Creates a divide between those with access to computer technology and those without.
- Tracking of computer programs threatened personal privacy and had led to greater surveillance.
- Digital content can be easily pirated and leaked.
- Music, film, television, and publishing industries have suffered economically due to copyright infringement and loss of audience.
- Digitalization facilitates fake news and manipulative media content.

There are two sides to every coin, and media convergence is no exception. While almost all people experience major benefits from the convenient services offered by converged digitalized technologies, they also experience decreased levels of personal privacy and increased exposure to fake media content.

## 8. Four types of convergence in media: Technological, Business, Professional, Content

## Technological Convergence

The definition of **technological convergence**, as its name implies, is the convergence of previously separate physical technologies (print newspapers, television, CDs) into single devices. Smartphones, tablet computers, smart televisions, and even automobiles now provide people with access to media content that was previously available only through separate channels. Technological convergence is also sometimes referred to as digital device convergence.

Many media corporations have developed cross-media content to adapt to this new technological reality. For example, newspapers often offer digital versions with videos and weblinks. Now, readers of these newspapers can comment on an article and express their opinion. Moreover, technological convergence has seen the rise of social media journalism. This has made it harder for media companies to control the news narrative, which has led both to expose new, true information to the public and the propagation of fake and manipulative content.

## Advantages of Technological Convergence

Technological convergence simplifies the production of media content. It also expands, accelerates and facilitates its distribution, often with associated cost savings. A digital photograph, for example, can be shot and circulated globally within seconds via the Internet. There is no need for film processing, printing and physical distribution. Similarly, consumers can access multiple forms of media content on a single device whenever they choose, often for free. With technological convergence, the electronic transmission of data can be exponential. This replaces the more singular, physical transportation of material goods.

Convergence has also made it easier to produce media. Digitization allows consumers of media content to produce and distribute their own content. They could be everyday people using social media sites. Or they could be professionals (e.g., designers, filmmakers, musicians, writers, etc.) working in their field. Some analysts see this as a democratization of media. Anyone with access to digital media and a computer network can produce, consume and circulate media content.

**Disadvantages (Drawbacks) of Technological Convergence**

- Not everyone has ready and affordable access to digital media, or the skills to employ them.
- A connection to computer networks (and the literacy required to navigate them) is increasingly vital. It creates a digital divide between haves and have-nots.
- Also, the tracking capacity of computer programs has resulted in increased surveillance. This has prompted concerns about personal privacy and security.

**Content Convergence**

**Content** in media convergence ensures that people are reached with the right message, individual, and time. Content must be well to get people engaged. Today, every act of communication in media is accomplished through content. One way that content has engaged with media convergence is through storytelling; users can use their content to tell stories across various platforms. Content is a source of brand extension, reaching a new audience, profit and revenue generation, and increased product sales for media and other business corporations. Rich and narrative content engages with media consumers.

**8. What is Multimedia Content?**

Multimedia content is any type of content that uses a combination of text, images, audio, and video to deliver information. It can serve for entertainment, education, or marketing purposes. The term **multimedia** was **coined by** singer and artist **Bob Goldstein** (later 'Bobb Goldsteinn') to promote the July 1966 opening of his "Lightworks at L'Oursin" show in Southampton, Long Island.

**Benefits of Multimedia**

There are many benefits of using multimedia content

**More engaging than text-only content**

Multimedia content is more likely to capture attention and hold interest than text-only content. This is because it uses multiple senses to engage the viewer or reader.

**Memorable**

Because multimedia content engages multiple senses, it is also more likely to be remembered than text-only content. This can be helpful if you want your audience to remember key information from your content.

**Has a wider reach**

Multimedia content can help you reach a wider audience with your message. This is especially true if you share your content across multiple channels, including social media, email, and your website.

**Good for SEO**

Including multimedia content on your website can actually help boost your SEO efforts. This is because search engines favor websites that offer a variety of content types, including images, videos, and infographics.

**Boosts social shares**

If your multimedia content is truly captivating, it's more share-worthy across social media platforms. This can help increase your reach and exposure, and it can also lead to more inbound traffic to your website.

**Can be repurposed easily**

Unlike text-based content, multimedia content is easy to repurpose across digital channels. For example, you could turn a blog post into an infographic or a video. This can help you get more mileage out of your content and save time in the long run.

**It's just more fun to create!**

Let's be honest – multimedia content is just more fun to create than text-based content. If you're looking for a way to inject some creativity into your content marketing strategy, multimedia content is the way to go.

**Disadvantages of Multimedia Content**

While there are many benefits of using multimedia content, there are also a few potential disadantages to consider.

**More time-consuming to create**

Depending on the type of multimedia content you want to create, it can take more time to produce than text-based content. For example, creating an infographic or a video requires more planning and production than a blog post.

**Can be more expensive to produce**

If you outsource the creation of your multimedia content, it can be more expensive than creating text-based content yourself.

**It might not be appropriate for all types of content**

Not all types of content are well-suited for a multimedia format. For example, a news article might be better presented as text only, while an instructional guide could be more effectively conveyed through an infographic or video.

**Harder to track performance**

Multimedia content can be more difficult to track and measure than text-based content. This is because it's often shared across multiple channels and platforms, making it hard to determine where it originated.

**May not be compatible with all devices.**

Some types of multimedia content, such as video, might not be compatible with all devices. This can limit your audience and make it more difficult to reach everyone you want to target.

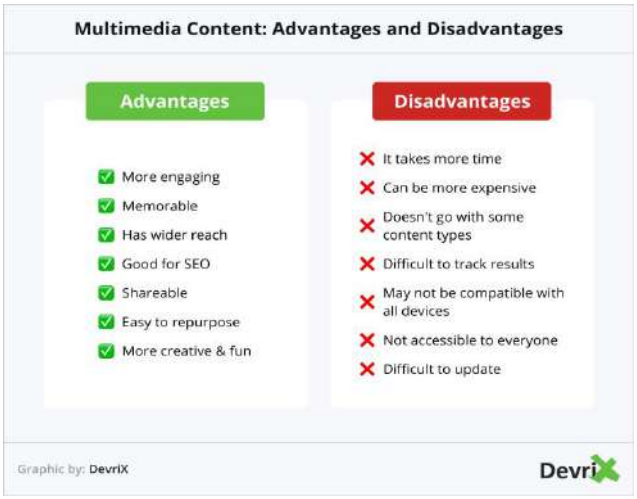

**It may not be accessible to everyone.**

Some people, such as those with visual or hearing impairments, might not be able to access multimedia content. This is something to consider if you want to ensure that your content is accessible to as many people as possible.

**Harder to update.**

Once you've published multimedia content, it can be more difficult to update than text-based content. This is something to keep in mind if you need to make changes or corrections after your content has been published. Also, it's advisable to save your media files in case they need edits in the future. Otherwise, when you update your articles, your graphic designers would have to start from scratch.

Advantages and Disadvantages of Multimedia Content in a simple form:

## 9. Web Browser

**Definition:** A web browser is a kind of software that allows you to go through all the information provided on the world wide web. By using a web browser anyone can search for any type of web page and the web browser opens the page of the particular website which is searched by a searcher.

In simple words when you type any **URL** i.e. address of any website( for example you type www.facebook.com) on the address bar of any web browser then the web browser asks the server to provide information about that website using **http** (hypertext transfer protocol).

A URL is simply an address of a website in a server. Where the server and web browser communicate with each other via **http** .

There are many browsers available like – **internet explorer, Google Chrome, UC browser, firefox, opera,** There are some common web browsers that are mostly used by people, etc.

### Common features of Web Browser

All Web Browsers have some basic features in it. Following are some main characteristics carried by all web browsers

**1. An address bar:** It is the place where you type an address of a website

**2. Refresh button:** It is used to reload the web page.

**3. Stop button:** This button is used to stop the communication between browser and server.

**4. Home button:** It is used to reach the home page quickly

**5. Tabbed browsing:** This is a feature that is used to open multiple websites in a single window. By this feature, you can open many tabs in a window and also open a website in each particular tab.

**6. Integrated search:** This feature allows you to choose your favorite search engine and do a search in them.

**Advantages and Disadvantages of Web Browser:**

Here we will discuss some of the **benefits (advantages)** of using a web browser:

**1**. If any programmer wants to develop a program then the programmer can easily test his/her program on the internet.

**2**.Now a day you can store data on the internet by using a web browser.

**3.** Today's web browser provides many facilities where you can download any file in any folder you want with the help of today's web browser.

**4**. By using a web browser, the ability to reach anyone in the world became easy. Now you can easily reach a person sitting in America from any remote part of India.

**5**. Today's web browser is safer to use and protect your device from the viruses ( especially opera )

**6.** web browsers are available for 24/7 use and we can use them whenever we want.

**The following are disadvantages of web browser :**

Web browsers can take your privacy away as there is the possibility of hacking so hackers can know all the things you do on the internet and can misuse your private information.

Kids also can see any type of content by using a web browser and there is an abundance of adult and violent content which is not good for kids.

Using a web browser for a long time can harm your eyes and brain, a study shows that it affects your concentration power and also decreases your patience.

To work on the internet you have to sit for a long time which increases your obesity.

**10. RSS Feed**

RSS stands for **Really Simple Syndication**, feed is an online file that contains details about every piece of content a site has published.

Each time a site publishes a new piece of content, details about that content—including the full-text of the content or a summary, publication date, author, link, etc.—are automatically generated in the file and displayed in reverse chronological order method

that can help you stay up-to-date with your favorite newscasts, blogs, websites, and social media channels.

RSS is a way for website authors to publish notifications of new content on their website. This content may include newscasts, blog posts, weather reports, and podcasts.

**How does RSS Feed Works?**

An RSS feed is read by an RSS reader or a feed reader, which can be either Web based, a standalone desktop application or a mobile application. To publish these notifications, the website author creates a text file with the XML file extension for the RSS feed that contains the title, description, and link for each post on the site. Then, the website author uses this XML file to add an RSS feed to web pages on the site. The XML file automatically syndicates new content through this RSS feed in a standard format that displays in any RSS reader. When website visitors subscribe to this RSS feed, they read the new website content in an RSS reader.

These RSS readers collect content from multiple XML files, organize the information, and display the content in one application. An RSS feed consolidates information sources in one place and provides updates when a site adds new content. With social media, all you see is the favorite stuff that people share. With an RSS feed, you see everything a website publishes. To find an RSS feed on a website, look on the site's main or home page. Some sites display their RSS feed as an orange button that may contain the acronyms RSS or XML. Not all RSS icons look alike. RSS icons come in different sizes and colors. Not all these icons contain the acronyms RSS or XML. Some sites use a Syndicate This link or another type of link to indicate an RSS feed.

**Before RSS Feed?**

Before the advent of RSS feeds, websites sent subscribers email notifications regarding new content. This was not optimal (best), however, as some emails could end up in the junk folder or mixed with other emails, plus the fact that the emails are formatted differently. In contrast, an RSS reader presents all the feeds using its own interface.

**History of RSS Feed**

RSS was originally introduced in 1999 by the American Internet-services company Netscape Communications Corp., for use with its MyNetscape portal. After Netscape abandoned the standard, software maker UserLand picked up development. With the 2002 release of the RSS 2.0.1 specifications, UserLand froze the standard and assigned the copyright to Harvard University's Berkman Center for Internet & Society.

**12. Digital Journalism in India**

Digital journalism, also known as Netizen journalism or Online journalism, is **a contemporary form of journalism where editorial content is distributed via the Internet, as opposed to publishing via print or broadcast**. Digital journalism is widely recognised as being any form of journalist content that is posted on the internet. It could be in text, audio or video form and because it does not have to print and distribute content, it is much faster than traditional journalism. People can use the internet to access news and events 24 hours a day. They also like to fit their reading into busy lives, so content is shorter than it used to be: Articles are not as long, GIFs can be glanced at in a few seconds and places such as the BBC now offer 15 second snippets of longer interviews.

Web journalism entered India about twenty two years ago. Initially, it had to affect the pressures posed by the post-liberalization era. The deteriorating plight of web journalism led one to question its very survival. But some companies decided to remain it out, come rain or shine and availed, during the quantity 2000- 2002, the services provided by the search engines like Google. Thereafter, different websites like Yahoo, Google, Indiatimes and similar portals started causation news on-line. The net revolution started shortly thenceforth, with newspapers launching their net editions. With magnified use of computers and broadband, internet journalism has full grown by leaps and bounds. With increase in mobile services, that provides property to the web through GPRS, the role of internet journalism has become important. Though the country possesses to beat the barriers expose by inadequate and poor quality power, high rentals related to broadband services, the affordable computers have supported the dissemination of Internet-based news.

Foreign majors like Yahoo, Google and MSN additionally compete the role of anchor. These portals additionally recognized the importance of Hindi and different regional languages. The regional newspapers have additionally started their portals for the users. Aside from the Hindi language newspapers of just about each scheduled language have their on-line editions. The linguistic purity related to internet journalism remains a debated topic. It ought to be unbroken in mind that news is browse from a newspaper, detected over radio and viewed on electronic media. However with internet journalism we'll browse, hear and take into account news, all at an equivalent time. E-journalism is probably an awfully spectacular medium.

However it's not right to infer that internet journalism involves piece of writing and writing of stories alone. If we glance into the contents of these news portals we'll find that, the authorities aren't so serious about the news items. Some portals like Rediff.com and Sify.com are among the few internet sites in India which have some original news contents. But during a number of the portals the primary content is diluted. However, such portals are good within the short run, but are poor players within the top of the day. Websites are assisted by news agencies associated with the print and electronic media.

**Interactive journalism**

People can now react to journalism in a way that was impossible before the internet. Articles have a 'comments' section where people can get involved and give their opinion. For journalists, this allows feedback they would not have had with traditional journalism, but it also means that content is harder to control.

**13. What is e-newspaper?**

An online newspaper is the online version of a newspaper, either as a stand-alone publication or as the online version of a printed periodical.

**Who invented Epaper?**

Electronic paper was first developed in the 1970s by **Nick Sheridon** at Xerox's Palo Alto Research Center.

**Which is the first e-newspaper in India?**

"The Hindu" is the first E-newspaper in India which was launched in 1996. The e-Paper has been developed by Summit Information Technologies Ltd. using state-of-the-art technology and offering responsive, high resolution and versatile features. Whole pages, articles, photographs, and other images can be viewed in .pdf and .jpg format, and articles can also be read as text. Publishers have been switching to e-newspapers for a long time. The reasons why publishers switch to e-newspapers are because it is more convenient, cost-saving, and reduces environmental impact. They save money by only having to pay for electronic devices rather than physical printing equipment such as paper machines.

Publishers switch to e-newspapers because they reduce the environmental impact due to them using fewer trees and other natural resources needed in paper production that contributes to climate change. And the most important reason is that people use electronic devices to read news such as tablets and mobile phones so it is more convenient for them. They are newspapers that are published digitally for anyone to read, instead of in print. They may be found in the form of online print publications, additional or complementary content to printed online material, or original Internet publications.

**Advantages of E-newspapers**

E-newspapers provide many advantages over traditional newspapers such as:

**Ability to store online for later reading:** One of the advantages of E-newspapers is that you can store your news for later if you happen to not have an internet connection. You can read these newspapers later when you are online and want to read them again.

**Ability to search by keyword or browse headlines:** E-newspapers are stored in a database where publishers can choose which articles to show to users based on their queries. You can find any story that is about what you want to read, even if it's in a different country.

**No need for paper:** E-newspapers are a great alternative to traditional newspapers because they save trees and money. Publishers can now publish their content online instead of printing it onto paper, which saves a lot of money as electronic devices are much cheaper than the cost that is needed to produce print newspapers. Can be accessed anywhere anytime

one of the major advantages of E-newspapers are that news can be accessed anywhere anytime
from all over the world!

**Cost-efficient publishing**

Publishers are able to publish content in different countries for a cheaper price with e-newspapers because they do not have to pay for printing. The publishing of e-newspapers is highly cost-efficient because they do not have to pay for physical print devices.

**Users can comment on articles**

People can also express their opinions on articles through comments on E-newspapers which gives readers a different perspective on the story which is very convenient.

**Media-rich Content**

An article is shown to users not only text but also charts, images, video, and other multimedia content which can be highly engaging for users.

**Conclusion**

Overall, E-Newspapers are an incredible platform that can be used to share news worldwide without the use of trees and print devices. They are easily accessible by all allowing you to stay up-to-date on current events, even if you are not near a newspaper stand.

**History of Online Newspaper**

An early example of an "online-only" newspaper or magazine was *(PLATO) News Report*, an online newspaper created by Bruce Parrello in 1974 on the PLATO System at the University of Illinois. Beginning in 1987, the Brazilian newspaper Jornaldodia ran on the state-owned Embratel network, moving to the Internet in the 1990s. By the late 1990s, hundreds of U.S. newspapers were publishing online versions but did not yet offer much interactivity. One example is Britain's Weekend City Press Review, which provided a weekly news summary online beginning in 1995. The first newspaper to go online was The **Columbus Dispatch** on July 1, 1980.

## Emergence of online news portals

### What is a News Portal

News portal is a platform, primarily web-based, that collects facts from selected authentic sources. It targets specific individuals and works to gain customers by providing credible and legitimate information, to aid their perspective. With time, simple web portals have advanced into complex portal structures that enormously facilitate buyer engagement and retention. It consists of a customised website theme design that is really creative and includes some good features that allow smooth surfing. News Portal is an e-learning platform where one can share news from numerous categories, like administration, art, movies, music, market trends, technology etc. This news is updated in real time and is easily accessible. By the very nature of its online presence, it is location-independent and time-saving. It may include images, videos, blogs, etc.

**Key characteristics of News Portals :**

- Allows you to create unlimited content categories, sub-categories and articles.
- Upload photos, videos or document files using the media manager tool.
- Ability to add content from frontend.
- Download or read document files directly.
- Content search function.
- Content archiving.
- Review feature for articles and posts.
- Multilingual support.
- Full access to the administration.
- Users and users groups management feature.
- Create a subscription model for Newsletters.
- Contact form.
- Sitemap for SEO and easy navigation experience.
- Encourages Social Sharing.

## Unit- 2

## Digital Story Telling

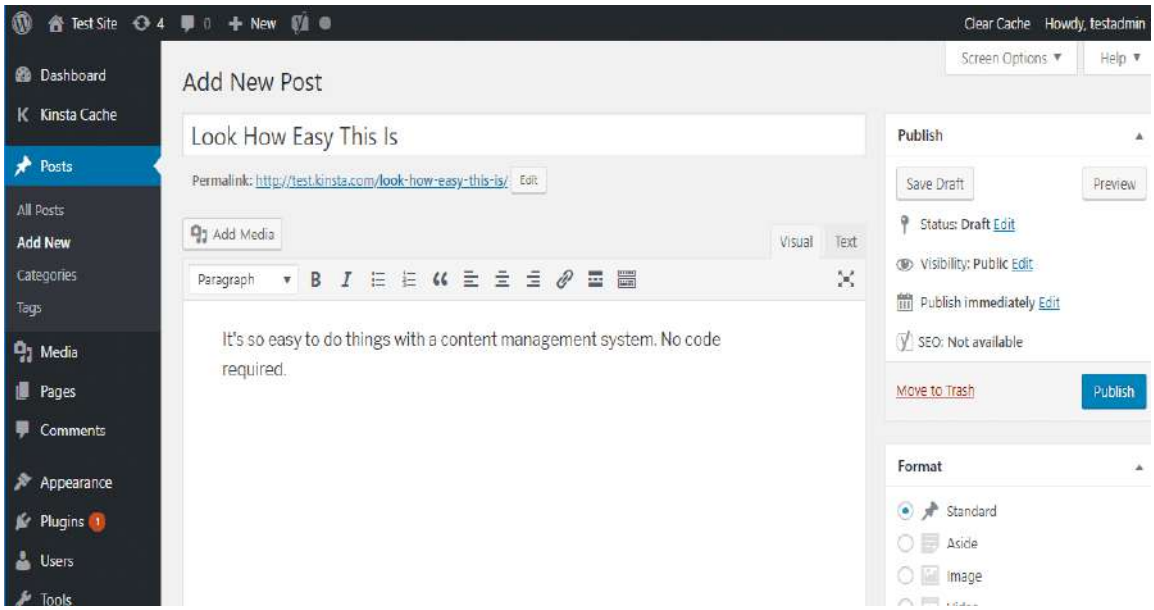

### Introduction to cross-media news production processes

- Cross-media production is **the coordinated reporting of events in several media outlets** (press, radio, television, Internet, mobile phones, and other mobile devices).

- The production can occur at a single integrated newsroom or involve collaboration among newsrooms from different media products systematically designed for and delivered in different media formats.
- The first newsroom-wide tests of cross-media production began as media businesses adopted digital technologies in daily news production and tended to concentrate in big multimedia conglomerates in the late twentieth century.
- The starting point in many cases was the exploration of a tighter relationship between the production of the newly developed Internet outlets and traditional formats (press, radio, television).
- The greatest challenge for cross-media production, nonetheless, is coordinating the different journalistic cultures of print and broadcast newsrooms.
- 
- **What Is a Content Management System (CMS)?**
- 
- A content management system, often abbreviated as **CMS**, is software that helps users create, manage, and modify content on a website without the need for specialized technical knowledge.
- 
- In simpler language, a content management system is a tool that helps you build a website without needing to write all the code from scratch (or even know how to code at all).
- 
- Instead of building your own system for creating web pages, storing images, and other functions, the content management system handles all that basic

infrastructure stuff for you so that you can focus on more forward-facing parts of your website.

- 
- Beyond websites, you can also find content management systems for other functions – like document management.
- 
- **How Does a Content Management System Work?**
- To give you an idea of how a content management system works, we're going to take a whirlwind tour of the WordPress interface (WordPress is a good example of a content management system).
- 
- Let's start with creating a piece of content. **Without** a content management system, you'd need to write a static HTML file and upload it to your server (*sounds complicated, right?*).
- 
- **With** a content management system like WordPress, you can just write your content in an interface that looks a good bit like Microsoft Word.

**Multi-media content generation techniques**

- **What is multimedia content?**

- Multimedia is a combination of various content like audio, text, pictures, video, and animations within a single shot presentation.
- That is different from the traditional mass media, like audio recordings and printed stuff.
- With time, the hypermedia extensions have taken multimedia to the next level. That is, WWW- World Wide Web.

**Multi-media content generation techniques**

- **A**.One popular way to use multimedia content is to create an explainer video. This format is typically short, engaging, and informative. It can be used to introduce a new product or service, explain how to use a specific feature, or even just entertain viewers.

  **B.**Another form of multimedia content is the infographic. Infographics are a great way to take complex information and present it in a visually appealing and easy-to-understand way.
  They can be used to explain data or statistics, share tips or advice, or even just tell a story.

**Interactive content generation**

**Interactive Content** is content that requires the audience to interact or engage with the content piece. It's more like a two-way conversation between you and your audience. *It requires active participation from both sides*.

**News stories with audio-visual inputs**
**Audio-visual inputs**:

1. LCD project 2.Film projector 3. TV 4. Computer 5.VCD player 6.Virtual Classroom 7. Multimedia etc.

1. By using Audio-visual inputs we can make a news story very effective and impressive.
2. People get attracted with Audio-visual inputs.
3. News stories with Audio-visual inputs make people to remember for a long time.
4. You will feel the live presence of the incident.

**Call-to-action (CTA) enabled script writing and its importance**

- 
- **What Is a Call to Action?**
  A call-to-action, or CTA, is a marketing term referring to a piece of content, such as an image, a button, or a line of text, intended to prompt users to perform a specific action.

  It typically takes the form of an instruction or directive using action verbs ("buy", "sign up", "register", "follow", etc.) and leading the consumer to the next step of a sales funnel or process.

  The call to action is a key element on a webpage, acting as a signpost that lets the user know what to do next.

  Without a clear CTA, the user may not know the next steps to take to purchase a product or sign up for a newsletter and is likely to leave the site without accomplishing their task.

  Calls to action are most commonly used in sales and marketing to solicit the desired action from leads and customers. For example, a CTA can be used to grow your email list ("Sign up to our newsletter"), promote a special offer ("Claim your voucher code"), or a piece of content ("Download our new eBook").

A tantalizing CTA is a sum of various different elements:

**Attention grabbing design:** One thing you should remember about CTA is that they need to stand out and make an impact. Don't follow the standard design rules when you

are crafting a CTA button or image. It should not blend in with the rest of your page design. You can combine the elements that match your style, such as fonts and brand colours but make sure the final CTA really pops from the rest of the page. A highly contrasting design is key to an eye – catching call – to – action.

**Action Focused Copy:** Finding the right balance between simple, clear instruction and enticing jargon – free copy that utilizes action words like "download", "register", or "start" can require quite a bit of iteration and creativity. Browse leading brand websites to see what kind of actionable copy they are using and let your inner copywriter emerge.

**A Sense of Urgency:** Adding the element of urgency is one of the best ways to keep you visitors focused on the action you want them to take. Is it a limited period? Is the promotion expiring soon? Let the people know to prompt them to act now rather than put it off for later.

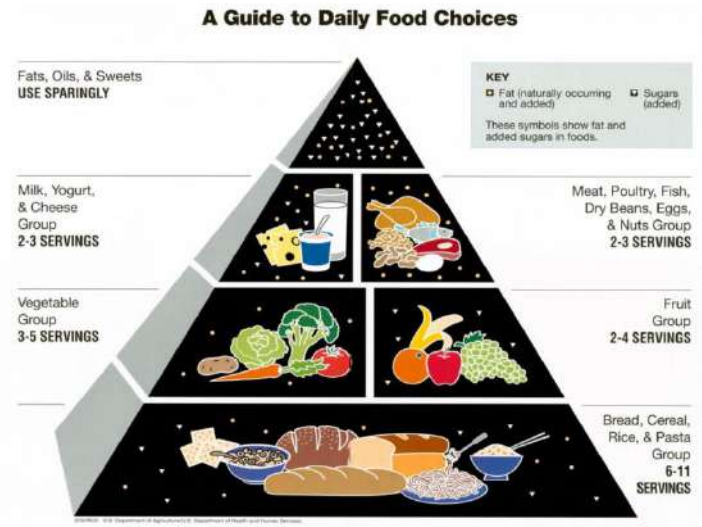

**A clear promise:** Keep your CTAs informative and ensure the copy explicitly tell to the people what they are expecting to do from them. Will they be signed up to your newsletter or taken to a new page to complete the help? Focus on communicating the benefits of clicking on your CTA.

**A Logical path to conversion:** Map put your path to conversion to ensure a smooth and logical flow that will make your CTAs more effective. Its important to align your CTAs with specific stages in the sales cycle in order to make relevant support.

**Use of interactive info-graphics**

- **What is interactive info-graphics**
- An interactive infographic is simply an infographic that has some element of interactivity, such as animation effects triggered by the reader clicking and scrolling.
- These are a form of interactive marketing that requires human engagement to initiate action.

- An infographic (static or interactive) condenses complex data or information into an easy-to-digest visual.
- Infographics can help people understand complex concepts by using visual aids such as charts, graphs, or diagrams.
- They can use both images and text in a visual format to explain concepts.
- The FDA's food pyramid could be considered a very rudimentary(simple) infographic.

**Use of Crowd sourcing and aggregation**

- **What is Crowdsourcing?**
-
- Crowdsourcing involves seeking knowledge, goods, or services from a large group of people.
- These people submit their ideas in response to online requests made either through social media, smart phone apps, or dedicated crowdsourcing platforms.
- The term crowdsourcing is a combination of crowds and outsourcing.
- The term crowdsourcing was coined in 2006 by ***Wired*** magazine author **Jeff Howe** in his article **"The Rise of Crowdsourcing".**

- Some of those involved in crowdsourcing are paid freelancers, but depending on the nature of the knowledge or services requested, most people perform these tasks on a voluntary basis.
-
- **Example for Crowdsourcing**
- A great example of crowdsourcing is online reviews.
- If you've ever reviewed a restaurant, gym, or bar on Google, congratulations! You're a productivecrowdsourcing contributor.
-
- **Different types of crowdsourcing**
-
- **Crowdsourcing can be used to find solutions to all kinds of tasks.** This includes small things like a band asking its fans which cities they should play on their next tour, to ambitious projects like genetic researchers asking for help in sequencing the human genome.
- The breadth and diversity of social media also offer huge potential for crowdsourcing, such as the Obama administration using Twitter to canvas questions for town hall debates, and football clubs asking fans to vote for the team's starting lineup ahead of each match.
- Crowdsourcing can also take the form of idea competitions such as Ideas for Action, a forum for students and young professionals to submit solutions to global innovation challenges.
- Hackathons are another popular form of crowdsourcing, often hosted by tech companies to find inventive solutions to challenging problems.
- And let's not forget perhaps the most prominent modern example of crowdsourcing: Wikipedia, the user-moderated online encyclopedia.

**Use of Social Media platforms**

**What is social media?**

Social media is an internet-based form of communication. Social media platforms allow users to have conversations, share information and create web content. There are many forms of social media, including blogs, micro-blogs, wikis, social networking sites, photo-sharing sites, instant messaging, video-sharing sites, podcasts, widgets, virtual worlds, and more.

**What is the purpose of social media platforms?**

Social media platforms **allow users to have conversations, share information and create web content**. There are many forms of social media, including blogs, micro-blogs, wikis, social networking sites, photo-sharing sites, instant messaging, video-sharing sites, podcasts, widgets, virtual worlds, and more

**Popular Social Media Tools and Platforms:**

- **Blogs:** A platform for casual dialogue and discussions on a specific topic or opinion.
- **Facebook:** The world's largest social network, with more than 1.55 billion monthly active users (as of the third quarter of 2015). Users create a personal profile, add other users as friends, and exchange messages, including status updates. Brands create pages and Facebook users can "like" brands' pages.
- **Twitter:** A social networking/micro-blogging platform that allows groups and individuals to stay connected through the exchange of short status messages (140 character limit).
- **YouTube/Vimeo:** Video hosting and watching websites.
- **Flickr:** An image and video hosting website and online community. Photos can be shared on Facebook and Twitter and other social networking sites.
- **Instagram:** A free photo and video sharing app that allows users to apply digital filters, frames and special effects to their photos and then share them on a variety of social networking sites.
- **LinkedIn:** A place where groups of professionals with similar areas of interest can share information and participate in a conversations.

## Use of hyperlinks and related data while writing and presenting a new story

### What Does Hyperlink Mean?

A hyperlink is an element in an HTML document that links to either another portion of the document or to another document altogether. **On webpages, hyperlinks are usually colored purple or blue and are sometimes underlined.**

Hyperlinks can assume any of the following appearances:

- Text
- Images
- URLs
- Controls (for example, a button)

Hyperlinks are common in news websites. They can help site visitors find more information and learn more about important issues. What affects whether a person clicks on a link? Certainly the topic matters, as does where a link appears on a page. Prompts and labels that introduce hyperlinks also can have an effect. Labeling links as "Most Popular," for instance, encourages people to click on the links to see what others find interesting.

### Other places hyperlinks are found

Hyperlinks are not exclusive to Internet browsers. Many programs and operating systems also use hyperlinks. For example, electronic documents, PDFs, and Windows 10 all feature hyperlinks that open other files, documents, and web pages.
Hyperlinks can also be made into a QR code, placed on products, and scanned by a smartphone to open a web page without entering the URL.

### Use of Hyperlinks in a News Story

Everyone has different preferences on how they would like to read content. Some prefer lots of links in an article, in order to further explore the subject and learn more detail. Others find links distracting, and would rather read print-like plain text. Even when it

comes to citations, people prefer different footnote styles, and there has always been a lot of debate.

Hyperlinks can be organized and labeled in many different ways. Take *The Washington Post*, for example. Opinion columns are categorized on left- and right-leaning opinion pages. The opposing partisan pages are hyperlinked, with the following prompt introducing the link: "Disagree with our opinions here? Check out our (left-leaning / right-leaning) opinions."

## Unit-3

## Mobile Journalism

### Features of Smart- phones

**Smartphone:** A smartphone is a cellular telephone with an integrated computer and other features such as an operating system, web browsing, and the ability to run software applications.

Smartphones can be used by individuals in both a consumer and a business context, and are now almost integral to everyday modern life.

**Important features**

One of the most important elements of a smartphone is its connection to an app store. An app store is a centralized portal where users can search for and download software applications to run on their phones. A typical app store offers thousands of Mobile apps for productivity, gaming, word processing, note-taking, organization, social media and more.

The following are some of the other key features of a smartphone:

- Internet connectivity.
- A mobile browser.
- The ability to sync more than one email account to a device.
- Embedded memory.
- A hardware or software-based QWERTY keyboard.
- Wireless synchronization with other devices, such as laptop or desktop computers.
- The ability to download applications and run them independently.
- Support for third-party applications.

- The ability to run multiple applications simultaneously.
- Touch screen.
- Wi-Fi.
- A digital camera, typically with video capability.
- Gaming.
- Unified messaging.
- GPS.

A smartphone also has the ability to support accessories, including Bluetooth, headphones, power charging cables and extra speakers. Because of the fragile outer casing of most smartphones, users often also purchase screen protectors and more durable cases to put their phones in.

Because they run an OS and applications, smartphones get consistent software updates. Vendors update their mobile OSs a few times a year. Individual mobile apps in an app store also get constant software updates that users can either choose to install or ignore.

**Telling compelling stories**

**What does compelling writing mean?**

Compelling writing is about **expressing your thoughts, using as few words as possible**. So, if you're planning on writing a sentence with an opening that reads, "At the same time, it is very important to note that," think again.

**1.Show,Don'tTell**

When you're trying to hook your audience, it's no good *telling* them how your character feels. *Show*them, with a description that's loaded with opportunities for your reader to slip into your character's shoes and immerse themselves in the story.

**2. Shock and Surprise**

Startle your readers with something they weren't expecting. Marketers do this a lot - aiming for the shock factor - but it's just as important if you're writing a short story or novel. Make it truly shocking and unexpected and you'll have your readers right where you need them.

### 3. Relatability

Compelling writing is real, gritty, and doesn't pull any punches. If you want to keep your readers on the hook, they have to be able to relate to what's happening in your story.
To master relatability, you have to know your audience inside out. What problems do they have? What in their lives causes them the most pain.
If your reader encounters a character they can relate to, who has problems as they do, they're automatically more engaged. Your readers care about the characters they can relate to. They don't care about the characters they have nothing in common with.

### 4. Raise The Stakes

You're writing about real situations (or situations that could be happening to your readers) - but that doesn't mean you have to confine yourself to strict realism. Your readers have put themselves in your character's shoes, been shocked by something, and can relate to the problem - so now you have to raise the stakes.

### 5. Mining The Depths

When you're creating content - whether fiction or non-fiction - You have to bring your characters to life - so it feels like they're living, breathing people bursting off the page.
You bring your characters to life by creating layer after layer of details. To do that, *you* need to know everything about your character's backstory. Anchor them in real-life events that have enough detail to make it sound like you're giving eyewitness testimony in the courtroom. Names, places, feelings, sensations, emotions - build the details until *you* start to feel like you *are* giving eyewitness testimony.

### 6. Make It Memorable

Compelling writing leaves a lasting impression on your reader - which makes them remember *you*. Whether you're a novelist or a social media marketer, your goal is to *ensure* that your reader remembers you. Compelling writing inspires loyalty in your readers, building an audience that is already primed to sign up for your mailing list or like your Facebook page.

## Storytelling Methods for Mobile Consumers

**The Story Focus**

Having a story focus enables the mojo to choose the right gear. For example, shooting sport may require a hybrid DSLR and long lens kit to be able to shoot the required shots from a distance. Conversely, in war-torn Yemen, a small mojo kit can make a journalist less of a target.

So, how do you find the story? First, you need to follow your passion, then you decide if you have an audience for your idea, next you need to know who the good guys and bad guys are, understand their journey and have access to all the players.

Before you develop your idea choose a topic, know your market and ask the following:

- Who's the audience? Why is the story being told, who's watching, what is the demographic, what's the political and the cultural imperative?
- What's the angle? What's the focus and how will this be best achieved creatively and editorially?
- What's the style? Is it a current affairs form, a series of short stories, a long investigative exposé, and is it narration, or interviewee-driven?
- What's the structure? What is the beginning, middle and end; who will speak when and what elements will be required to support the story structure?

As the concept gets more of a story focus, complete a more specific **SCRAP** check list:

- **Story:** what is it and why is it being told?
- **Characters:** who is best to tell it and why?
- **Resolution:** what's the structure and why?
- **Actuality:** what will be filmed, when and why?
- **Production:** where is it happening, what are the logistics and how will I produce it?

SCRAP helps answer journalism's 5Ws — who, what, when, where, why and how. To better understand these relationships between your story and its audience, consider the following:

- Currency of the story.
- Significance of the story will be impacted by its Currency.

- Proximity of the story will impact Significance.
- Prominence of story talent can trump Proximity.
- Human interest can increase with Prominence.

**A Character Focus**

Mojo news stories may be breaking and unplanned, so it's even more important to quickly determine a story focus and the best characters/interviewees to help tell the story. Knowing who to film is important when planning a mojo video production. Unlike print, you can't just call everyone on the phone — mojos need pictures. For example, we can't ring someone for a quick phone interview — they need to be on camera, so managing time and expectations is critical.

For example, who do I interview at the scene of an accident and, importantly, who do I interview first? Can I ask the ambulance driver for a comment while he is inserting an IV line into an injured person's arm? If not, how do I cover this as B roll, so that I can ask my questions when the paramedic is free? What's most relevant in a breaking story at a Bosnian war grave? More bodies, longer interviews with a witness, or the man with photographs of his missing family, who he believes are among the dead? Do I need it all? If so, how will I record it all and how will I include it all in a short video story? The best way to decide who's relevant is to:

- Map your potential interviewees against your structural plan (see below) and your audience expectation.

Once you firm up interviewees, you might need to rejig your structure and how you will use your talent:

- Will the story begin with actuality from the interviewee or B roll with narration?
- When in the story will we hear from the main interviewee?
- Who will I use to tell the climax and how will I create and build to this?
- Who will I use to close the story?
- Do I have clearances?
- Do I have B roll to introduce my interviewees and cover their edited interview moments and my narration?

**Structural Focus**

Now, create a simple five-point structural road map of how my story might go. This guide does three important things:

(a) it articulates the various plot points

(b) acts as a story and character checklist

(c) is the beginning of my edit plan.

Because real research happens on the ground, and because story changes, you need to understand your options and be prepared to shift your views on location. That's where a simple structural plan helps. Rather than being prescriptive, a plan keeps the story focused and the mojo open to new ideas. A plan is also a checklist to help decide if everything is covered before wrapping location

**The Story Character Matrix**

Story is built around an EVENT that impacts our CHARACTER. Through a CHARACTER'S eyes we witness action, strife, emotion, visual and dramatic development corralled in the place holder we call an EVENT.

Video works best when it's centred around EVENTS (that provide currency), told through the eyes of a CHARACTER (that makes it real, personal and emotive), who RISKS losing everything (the stakes and the drama).

**Tools for editing and posting videos for mobile platforms**

- **What is a Mobile Platform?**
- 
- Mobile platforms are basically those that allow software and services to be run on devices.
- Examples of mobile platforms include Palm, BlackBerry, iPhone, Android and Windows Mobile.
- Mobile operating systems provide tools that allow application to share data and services.

- Examples of mobiles OS includes Palm OS, Symbian, Windows Mobile, Mac OS X and Android.

Videos you watch on TikTok, Instagram, Facebook, and YouTube are often produced on full-size PCs, but now that mobile video editing apps are more capable than ever, plenty of people edit videos right on their mobile devices.

A multitude of impressive apps for making video magic are available for Android and iOS. Some of the apps are template-based, requiring you to do no more than select photos and video clips to produce a compelling final product. Others give you nearly as much control as a sophisticated desktop video editing App with tools for overlays, time remapping, motion effects, and audio editing. Some have free versions, though it's worth paying a few dollars to get the best features.

**1. Videoshop**

Videoshop is a video editing app that is fast and easy to use, with all the basic features that web publishers need for producing professional quality video. Journalists can integrate music into their videos, they can edit interviews for length, and they can add subtitles to make their videos easier for viewers to understand. Videoshop also gives users the ability to merge multiple clips into one video, which is a useful feature for digital publishers. The Videoshop mobile app is available on iOS and Android.

**2. Inshot**

Inshot has all the features users expect when they evaluate video editing tools for digital journalists, including freeze-frame, background options, and the ability to shift between ratios to optimize video for different social networks. It’s also easy to use, fast, and very user-friendly. Being user-friendly is an important benefit for anyone who is not experienced in video editing on mobile. In addition to editing basic video to post online, digital journalists can also use Inshot to do photo editing and create collages.

**3. Square Fit**

Publishers who post extensive video on Instagram will want to invest in a mobile app like Square Fit. A dedicated tool for posting video on social channels, Square Fit gives mobile users a straightforward way to post full size videos on Instagram without

cropping. High-resolution videos can be rotated, flipped, and scaled. Users also have the ability to add text, filters, and stickers to their videos. Videos that have been edited with Square Fit are saved to the user's camera roll, where they can then be uploaded to social media channels like Instagram, Facebook, and Twitter.

### 4. WeVideo

A cloud-based video editing platform with free and paid versions, WeVideo was designed to help people make great videos. The platform is more robust than some others on this list, with upgraded features like green screens and built-in stock content. Journalists can use WeVideo to sharpen up most basic video content, like digital video news reports or interviews. WeVideo helps users add logos and create branded templates, which saves time for publishers who upload multiple videos each week. The platform is available via desktop or mobile apps for Android and iOS devices.

### 5. YouTube

The simplest way for digital publishers to get started posting video content is by using YouTube's basic video editing program. Included for free as part of the YouTube platform, this video editor is bare bones. However, it's also free and very easy to use. With YouTube's video editor, journalists can trim video clips and add transitions set to music. One important caveat is that YouTube's video editor only works for videos that you have uploaded to YouTube, so if you plan to use a different video upload site this will not be a viable option.

## Mobile Journalism and its advantages

### What is Mobile Journalism?

Mobile journalism or MOJO can be defined as the process of gathering and delivering news and content creation using a smartphone or tablet. It is a trend in news covering and broadcasting and has the potential to become the new standard in journalism practice, especially to report breaking news.

With the proliferation of smartphones, this new, quick way of journalism is now accessible to all. Photos, videos and audio can be recorded, created and edited on the phones and uploaded to servers which can be accessed by news channels or directly

uploaded to even social media platforms. It is basically close to having an entire production studio in your pocket.

**Advantages of Mobile Journalism**

- **It's cheap:** As almost everybody owns a smart phone now anyway, Mobile journalism apps and other features that are freely available make this medium extremely accessible and cost-effective for journalists who are on the go.

- **MoJo is for everyone**: The biggest advantage of mobile storytelling is that the user interface for this medium can be any smartphone and apps which can assist beginners as well as professionals. There are apps that are specifically designed for MoJo which makes editing, photography and news packaging easier.
- **Accessibility**: The production, coverage, creation, and distribution have evolved and cater to the mobile audience, which means that today's content can be created from a mobile device and then consumed by other mobile device users. This adaptability helps immeasurably and allows the world to indeed be at your fingertips.
- **Flexibility**

Avoiding carrying lots of equipment also helps to reduce the bulk of responsibilities. It provides a flexible space where you can work with fewer people or even individually. It could just be the reporter along with their smartphones. It also assists with carrying out interviews alongside story coverage in spaces that wouldn't usually support a full-blown production without hindering the quality of the content created.

**On the move**: As the name goes, since most of it is done using a mobile phone, this setup is easily portable.

Even with the aforementioned hardware, this entire setup can easily fit in one bag. Imagine the mobility and

portability that provides without hampering the quality of the shoot.

**It's user-friendly**

It's considerably easier to navigate around mobile devices. Having larger and heavy-duty equipment can be a big burden for movement and logistics. Mobile devices are also far less intimidating – people may be more open to speaking into or around a

phone than a camera. And of course, having your CMS on your mobile phone, in addition to all this, would then allow you to record live and publish with ease.

**Mobile Journalism advantages in brief:**

- It can disseminate news and make it viral within minutes.
- It is cheaper than traditional journalism.
- MoJo can cover events and news in distant places.
- The tools used are flexible and easy to use; no expert skills are required.
- It is safer in some incidents such as war coverage, sting operations, etc.

**Drawbacks of Mobile Journalism**

1.Despite all the benefits of Mobile Journalism, questions of privacy, ethics, and truthfulness remain potential drawbacks of its evolution.

2. Social media can easily become flooded with uncredible or misleading information.

3. Anybody today may film or record audio on a smartphone — but the ability for anybody to post, tweet, or share information creates a lack of control over what is created and disseminated.

4. The accessibility of mobile journalism also means that sensitive or violent content may be released.

5. Moreover, the quick dissemination of information can be dangerous for people living in countries where free speech is restricted or controlled.

6. Hong Kong protestors must fight to stay anonymous as the Chinese government deems every protest against Chinese rule to be an illegal assembly.

7. So much as being caught on camera could result in extrajudicial punishment. Those caught so far have been met with arrest, violence, and online harassment.

**Skills required for mastering in mobile journalism**

Here is the list of skills that you must have or need to cultivate to become a mobile journalist:

- Adventurous nature
- Passion for journalism
- Readiness to travel and work extra hours
- Confidence, passion, and fearless nature
- Investigative brain Smartphones usage expertise

**1. Learn to plan a mobile-produced story:** This applies to live streaming too. Just as planning is needed for TV broadcasts and news reports, you need to prepare yourself and know how to approach the story before going on location. Create a rough storyboard. Strong visuals and short, clear scripts are must-haves when producing for digital audiences.

**2. Learn to shoot and edit video packages in the field with a smartphone:** This involves, among other skills, like, Create news packages at a faster pace than traditional news reports. A true mobile journalist shoots and edits on the go. Master the mobile device camera. Use the right software to add lower thirds, incorporate sound and transitions, etc. Learn best practices for producing pieces to camera and interviews. Find suitable solutions to store and share content while in the field.

**3. Adapt to multi-platform mediums and different screens:** Be able to produce tailored content for each medium. Understand that audience switch from radio to Twitter, from newspapers to YouTube, from YouTube to TV, and at the same time they might open Facebook and Instagram. Differentiate content and learn narrative and visual styles suitable for each screen and platform. Understand that each social platform is a separate and unique online community and learn why and when to use them.

**4. Adapt fast-changing mobile technology:** Have a mindset of adapting to and embracing the fast-changing mobile technology environment.

**Managing the journalistic work flow with Mobile**

The workflow to create a story with a smartphone is no different from that followed when reporting conventionally. Some additional considerations have to be taken into account—such as battery life, memory capacity and file formatting—but the general steps for putting together a story remain the same. Also, mobile journalism requires the reporter to work at a faster pace, given that you might share your news report directly to social platforms.

**Planning**

Story angle, Potential sources, and/or interviewees, Potential shots, Script ideas

**News gathering**

Research, Find sources, Collect and verify data

**Shooting, Scripting, Editing**

Shoot still photo/video, Extract stills from video footage, Capture audio, Write for pic/video, Edit images, audio and video, Format files

**Share, Publish or Broadcast**

Digital Platforms, TV

## Unit- 4

## Business of Digital Journalism

**Impact of social media on journalism**

**1. Social media offers journalists increased access to content**

Thanks to social media, journalists have unprecedented access to their audience, putting them closer than ever to the content and story ideas that their readers/listeners care about. Audiences are no longer passively waiting for a news anchor to tell them the news. They're on Twitter or Facebook, sifting through content and sharing stories from their friends and family, sometimes before a journalist has even picked it up.

**2. Journalists are responsible for sharing their stories**

Social media is full of clutter. With active usership in the billions, word travels quickly and then gets lost in the shuffle. Consider that roughly 6,000 tweets are shared per second (per second!) on Twitter. And that's just one of many social networks.

While that makes it a highly effective tool for communicating breaking news, it also makes the lifespan of a news story much shorter than it used to be.

Reports are now responsible for sharing their stories far and wide, and making sure it stays in the news cycle for as long as possible.

**3. The "fake news" phenomenon makes reporting more challenging than ever**

New data from the Pew Research Center shows 45 percent of American adults consume news on Facebook and half of news consumers on Facebook depend solely on that site for news.

While the reach of social media is great, it lacks a method of policing content and sources to prevent completely fictitious stories from spreading.

As Facebook and Twitter draw fire from federal lawmakers over fake Russia-spawned content published ahead of the 2016 presidential election and President Trump continues to arbitrarily slander all kinds of news reports as being fake, reporters are forced to defend themselves and their stories against an increasingly cautious public.

**4. Interaction with the people:** Social media brings new characteristics like interactive dialogue and social interactions. Journalists can now have real conversations with their audience. Online debates have also been put into place so that everyone can express themselves (when comments are enabled of course). Traditional one-way communication is turning into two-way conversations. Social media has given a real meaning to what freedom of speech is.

5. Twitter is also a good way to get breaking stories as soon as they happen. Journalists often use twitter personally to show the audience that they are humans.

6. A new problem social media has raised, is that there is too much news. The audience cannot always figure out the veracity of the news they see on social media. Which news organisation should they trust ? People will continue trusting the big news agencies they have always trusted, but what about the next generation? They will have never

trusted any news organisations and could be lost among the fake news. The 2014 Irish Social Journalism Survey published the statistic that 64% of Irish journalists said that information on social media can't be trusted.

7. News companies can now use live videos. The viewers can be with the journalist somewhere in the world instantly. The use of Facebook live is changing the relationship between the journalist and the viewer because there is no editing.

If a journalist uses Facebook live for their audience, while covering Syria for example, while reporting on bombing, shocking images could traumatise people. Facebook should have an editing role and not only be a platform. News publishers have lost control over distribution. Social media and platforms took over the role of publishers and now the news is filtered through algorithms. And these algorithms are unpredictable.

**Emerging trends related with business of digital platforms**

**What is a Digital Platform?**

- A digital platform is the software and technology used to unify and streamline business operations and IT systems. A digital platform serves as a company's backbone for operations and customer engagement.
-
- **Social media platforms** like Facebook, Twitter, Instagram, and LinkedIn
- **Knowledge platforms** like StackOverflow, Quora, and Yahoo! Answers
- **Media sharing platforms** like YouTube, Spotify, and Vimeo
- **Service-oriented platforms** like Uber, Airbnb, and GrubHub

**Economics of digital journalism**

- The Internet has marked a shift in the production of news, making it difficult for newspaper producers to remain profitable and retain readers. For hundreds of years the newspaper industry has built its business on offering news and articles to readers and exposure to advertisers. The producers of newspapers have had control over the production, distribution and relationships with customers. But

the recent years are marked by a smaller number of subscribers and lower income from advertising.

- The previous ten years show a constant reduction in the number of subscribers, indicating that the printed newspaper is nearing its end. (Suijkerbuijk, 2014) In 2009, for the New York Times, printing the newspaper on a yearly basis would cost twice as much as it would cost to present every subscriber an e-reader. We can understand that the absence of paper with the digital newspapers reduces costs, or that delivery through digital channels reduces delivery costs made for delivering printed newspapers. So, the most important costs can be avoided when moving to digital journalism. (Suijkerbuijk, 2014) It is clear now that Newspapers can gain from going digital.
-
- Economically, we can distinguish between three levels within the informative process that have been clearly affected by recent technological developments in the field of communication:
- **Production:** Production has contributed to a significant reduction in costs. Higher consumption of information material is not followed by higher costs, as costs are limited only to the first version charged. Increasing the economic return once digital information material is consumed, which is an intangible asset that is consumed and whose quality is not affected by frequent cloning. (economics of Arabic Digital Media, 2017) .
- **Distribution:** New information technology has introduced a distinctive distribution pattern that can overcome geographical barriers because electronic journalism spreads in Web space of a global nature, whatever appears over the Web remains available to the recipient anywhere in the world where the Internet is available, 24 hours a day.
-
- **The profit:** The media investment has changed from the difficulty of creating media enterprises and the long time to reach the profit point, to the ease of posting over the Web (ranging from near-free to cost requiring institutional capital), and the speed to spread and make profits.

**Understanding the business models for digital platforms**

- The traditional press relied on advertising as a primary source of income, but with the emergence of digital journalism, which did not attract advertising, it became necessary to find new sources of income, and new business models, including the following:

- **Crowdfunding:** Crowdfunding are increasingly common in media ventures. Like in traditional media, it is about readers wanting to pay for journalism although in a more modern way. Today, A vaster number of online publications now rely on (regular) payments or donations. This has become a way of funding particularly for nonprofit organisations – and less for individual journalists, although there are few successful examples (Bitnner, Digital journalism and the new business model, 2019)
- **Donor funding:** This type of funding comes in Three forms, including philanthropic backing, government funding and corporate responsibility.
- **a. Philanthropists backing:** generally give generous donations to promote good journalism. One example is eBay founder Pierre Omidyar, who through his philanthropic firm has made a US$100 million commitment to support investigative journalism and fight disinformation or so-called fake news.
- **b. Government funding:**A number of governments still fund national or public newspapers. ome examples include countries like France and Norway, which directly fund for-profit media companies. In Austria, an instrument called ressef rderung (press promotion) is in place to support the distribution of press products. Those models are always prone to be instrumentalised by governments to discipline" the press.
- **c. Corporate responsibility:** is another form of funding that newspapers can seek out. Three ambiguous examples are Facebook, Google or large corporations, such as Amazon with The Washington Post, funding journalism as part of their corporate responsibility. The main challenge would be for these corporations to provide funding without seeking to exert influence. (Bitnner, Digital journalism and the new business model, 2019).
-

- **Subscriptions:** Someone has to pay for journalism, or journalism will have to pay for it" is a popular argument among publishers whenever there is talk of free news content. Newspapers which are wholly based on a subscription model, have shown media companies can still survive on this model. Although some organizations can get significant revenue from subscriptions, major media outlets like The New York Times cannot be sustained by subscriptions alone. Subscription models are also largely dependent on targeting audiences that not only value the content produced, but are also willing to pay for it. (Mandla chinula, 2017).
- 
- **Micropayments:** With micropayments, readers pay small amounts to access a single article. Blendle, a Dutch journalism start-up with support from The New York Times Company and Axel Springer, is currently running on this model, with individual stories costing between 10 cents and 90 cents. There are no ads, no paywalls and users only pay for articles they like. If an individual does not like the article that they have read, they can simply ask for their money back. (Bitnner, Digital journalism and the new business model, 2019).
- 
- **Sponsored content:** Sponsored content refers to original, authentic stories written to promote or advertise a company. Since sponsored content is quite similar to journalistic storytelling, the former is usually tagged with a sponsored content" label. Media houses are able to leverage their reputations to create branded stories that audiences are more likely to take seriously. This has in part has attracted companies to advertise with news organizations, and has largely worked for larger publications and non-legacy media. (Mandla chinula, 2017).
- 
- **Live journalism:** Thanks to Facebook Live, Periscope and other platforms, journalists are now being given the opportunity to present their stories in front of a live audience. Live journalism allows journalists to present the news in new and interactive ways. Examples of media companies that are involved in live journalism include The Boston Globe's Globe live and Gannett with its Arizona storyteller project Although some revenue comes from ticket sales, sponsorships seem to generate the most. (Mandla chinula, 2017) Live journalism has become

essential to advancing stories across platforms and the stage has been set". (Patel, Live journalism come of age, predictions for journalism 2018)

**Corporate and their interests in Digital Journalism:**

**Face book Journalism Project**

Facebook announced a new component of its "facebook journalism project on January 2018: a partnership with CNN and other media outlets to produce news shows specifically for Facebook.

To support high-quality journalism, the Facebook Journalism Project works to create strong ties with the news industry by building community through news by training journalists and publishers around the world, and by working with partners to support quality news.

Goal for this programme is to help news media organisations improve how they market their journalism to existing audiences and unlock new sources of revenue from outside their traditional market.

This is a one-of-a-kind programme for executives in news organisations to improve their digital marketing strategy, help them build their news brands, and find new and valuable ways to engage with audiences across digital platforms.

It will consist of "deeper collaboration with news organizations across the spectrum" (presumably the ideological spectrum). The company wants to involve publishers in the creation of new products and help with subscription revenue and new business models.

- **Facebook Journalism Project will work in three ways:**
- **Collaborative news development:** Facebook's news organizations to create news stories in new storytelling formats such as Instant Articles, Live video, and 360 video. Facebook is also committed to supporting local and independent news outlets, and will meet regularly with publishers across the globe.
- **Tools and training for journalists:** Journalists can learn more about Facebook's products and services through a series of e-learning courses and newsroom training in partnership with established news and media institutions such as the Knight

Foundation, Local Independent News Online, and Institute for Journalism in New Media, among others. Facebook has also announced new Live features that would greatly help publishers.

- **Tools and training for everyone:** Users can now report suspected fake news stories that appear on their News Feed and Facebook will send these stories to third-party fact checking organizations. If these stories are found to be fake, they will be flagged as disputed.

**Corporate and their interests in Digital Journalism:**

**Google News Initiative**

The Google News Initiative is a journalism training and funding project of Google, the California-based multinational technology company and subsidiary of Alphabet, Inc.

The Google News Initiative was launched in 2018 and has provided over $189 million in funding to news organizations and journalist training programs. The project offers a variety of training tools centered around using technology and journalism.

The project provides online and in-person training programs, fellowships, journalism school programs, and provides free data tools and cloud computing services to news organizations. The project partners with the Society of Professional Journalists (SPJ), a membership organization for journalists, as well as the Columbia University School of Journalism.

**Key points**

- The Google News Initiative is a journalism-focused program that will help publishers earn money and fight false news.
- It will offer publications another monetization model online called Subscribe with Google, as well as work with established universities and groups to combat misinformation.
- It will also introduce an open-source tool called Outline, which will make it easier for news organizations to set up secure access to the internet for their journalists.

**Activity**

As of late 2020, the Google News Initiative reported distributing more than $189 million to 6,250 news organizations in 118 countries.
The project also reported that the COVID-19 pandemic sped up the need for journalists to use online tools.

While Google as a search engine and tech giant has a complicated history of cooperation and competition with news providers, the company operates the initiative to support national and local media outlets and to combat the impression that Google is a "profits thief" of news organizations.

The Google News Initiative has stated that in the future, the program will employ data and artificial intelligence tools to support more projects such as the initiative's Local News Experiments Project, which funds and supports local news operations.

**Partnerships**

The Google News Initiative works directly with national and local news outlets across the United States and internationally. The project also partners directly with many news industry organizations and nonprofits.

Among its partners is the Society of Professional Journalists, an individual membership organization for journalists. The project also partners with national organizations including the National Association of Black Journalists, the National Association of Hispanic Journalists, the Native American Journalists Association, and the Asian American Journalists Association.

The project also partners with the Poynter Institute for Media Studies, a nonprofit that publishes the *Tampa Bay Times* and operates the controversial left-of-center PolitiFact fact-checking organization, which has received steady criticism for its left-leaning bias.

The project has additionally partnered with several other left-leaning news organizations such as Vox Media and *The Guardian*. The Google News Initiative published a case study praising Vox's use of Google Earth Studio.

**Social impacts of Digital Journalism**

The world as we know is something that changes daily, there is always something new happening. And the electronic devices which are connected to the internet constantly supply the information we need and it is not just restricted to the internet.

All the applications and multimedia stored in the device's storage and drives keep us engaged all the time. It has both a negative and positive effect on our society.

**Positive Effects of Digital Media**

**Ability to Learn New Skills**

The internet has been a blessing since its beginning for learners, now if you have a smartphone or any other digital device connected to the internet.

Then you can learn anything from cooking to coding, you just need curiosity and consistency in your efforts. Most importantly it is self-paced and you can choose from the tons of learning resource available.

Digital media has an important role in the field of education. When it comes to interactive learning that is actively used in modern education structures.

Digital media enhances a child's learning process. Even with digital devices, user interface and interactive applications assist in one's motor skills and application skills.

And we all know how an interactive application is much better at user interaction and feedback than a book.

Just imagine if the internet wasn't there in this critical time of coronavirus pandemic. How effectively it helped people to remain connected with their loved ones virtually and in learning when school and colleges were closed.

**Ability to Communicate**

Because of the internet, anyone can express their experiences or knowledge with everyone around the globe thanks to the Internet. Bloggers can develop highly engaged readers who trust them.

Other platforms like social media have enabled people to communicate with a much greater number of people on a global scale, which allowed diverse people to meet in one place.

It also allowed people to raise their voice against social issues, they can directly communicate with big organization and personalities that cause the problem in people life.

**Opportunity to do Business Digitally**

If you have an idea to sell something it could be a product or service that adds value in people's lives. Through your website, you can sell it anywhere in the world.

When it comes to the marketing of your product, even that can be done digitally by leveraging Digital Marketing strategies like search engine optimization, social media marketing, and email marketing.

The Internet provides the advantage to promote your business online through paid advertising.

**Real-Time Information**

Also, the importance of digital media cannot be neglected in the field of journalism and mass communication. In a competitive and speedy world, it is vital for a news agency and broadcasting channels to get maximum coverage.

For instance, if you're a die heart fan of football, due to your busy working schedule you cannot follow all the important matches, all around the world.

You can catch up on all live updates on your phone or you can record the complete match on your device so that you can watch it later at your convenience.

**The Decrease in Print Media**

Newspapers are sometimes said to be 'silly in their method'. In print sheets a lot of paper is used excessively which is made from trees, ink is overused in the printing process, all just to provide news of the previous day.

However, its working is questioned furthermore by the advancements digital media has made. Why read yesterday's news while you can catch breaking news on a news channel or get the latest news stories on your smartphone?

Digital media has been an indispensable catalyst in technological advancement and human growth. We can now sit at home, read all about any event, from any corner of the world, and the choice is all ours too.

## Negative Effects of Digital Media

### Addiction to Digital Media

Addiction is an engagement in behaviors that become compulsive and often continue despite having harmful effects.

Increasingly, addiction to mobile devices, addiction to social networking sites, such as Facebook, Instagram are prevalent in our society. Excessive usage of these leads to withdrawal symptoms such as feeling anger, tension, and depression when Internet access is not available. This makes individuals dependent on the internet.

We all have heard how playing games on a computer or a gaming console harms our eyesight or does nothing to produce any physical work. How we are addicted to checking messages and taking social feeds on websites.

### Negative Effects on Cognitive Development

New generation children get in touch with internet-connected devices early in their development that certainly has a significant effect on their cognitive development if they use these technologies in excess.

Like it's found in children with excessive involvement with these activities having diminished ability to read, loss of analytical thinking, inability to remember things, decreased attention span, and slow information processing while learning something new.

From these facts, we need to be a little aware before using them as the old saying goes that excess on anything is harmful. Keep it in moderation for your mental and physical well-being.

### Information Overload

There is an almost infinite amount of information available on the internet. Estimates are that the big four (Google, Amazon, Microsoft, and Facebook.) store at least 1,200 petabytes between them. That is 1.2 million terabytes (one terabyte is 1,000 gigabytes).

As a result, it makes it difficult for a decision-maker when he faces a variety of information on the same topic that contributes to confusion rather than clarity and makes it difficult to choose better in important situations of life.

Apart from that, digital media's impact has been worthy to take note of. It has not only provided a new dimension to our lifestyle, but has also lead to the development of communication skills, and worldwide accessibility.

Digital media has also provided a thousand more ways of entertainment and recreation. Amidst the criticism that it allows little or no physical exertion, there have been applications and devices created to provide physical and fitness development.

So the good rule of thumb is keeping a healthy balance between real and virtual life, we need to learn, how to use it effectively instead of getting used by it

**The Political Impact of Digital Communication**

Digital communications are a growing part of local, national, and global political conversations. Learn how the use of digital forms of communications are having both positive and negative impacts on elections, policymaking, and global politics.

1. The communication barriers that did not allow people to interact with the leaders have reduced significantly because of social media.

2. Politicians are reaching out to their supporters on social media.

3. They are making sure to keep the public in the loop through their engagements and posts on social media.

4. It has increased the ability for ordinary citizens to take part in the political process.

5. Besides this, social media has been actively used for influencing diplomatic relations between India and its friendly countries.

6. Data analytics has evolved itself to become the brain of every election campaign. It helps the election campaign committee understand the voters better and align their policies to their needs.

7. As the reach of technology has expanded, with over two-thirds of the world's population now having a mobile phone, so has involvement of general citizens in the political process.

8. Social media platforms including Facebook, YouTube, and Twitter have all become key mediums in the global political landscape. They are seen as leveling the political playing field because of their low cost, easy access, and global reach.

9.Politics and policy have long been subjects of public discussion. Until the 20th century, face-to-face or printed materials were the only form of political communications. Information and discussions were therefore limited to a few hundred or a few thousand people at a time.

10.Politicians use social media to engage with their constituents and promote policies and positions, as well as their own election!

The following are the specific social media platforms for political communication

**Facebook**

Candidates, advocacy groups, political parties, and government entities have all created Facebook pages, and citizens interact directly with each of those groups. In fact, Facebook has become the most common source for political and government news among Millennials.

As Facebook has become an integral part of the lives of adults, it's seen as not just timely but also influential. Research into the intersection of digital communications and politics via Facebook has demonstrated that it has a direct, measurable effect on not just self-expression but voting participation.

**Twitter**

While daily news seems to revolve increasingly around the use of Twitter by politicians, as a news source it ranks well behind Facebook, with around 10 percent of adults seeing it as a news source compared to at least 60 percent for Facebook.

With only 280 characters, tweets must be short and to the point. The democratic, open access nature of the medium and the exchanges have been compared to town hall meetings, but with millions participating instead of hundreds. The downside of Twitter is its no-holds-barred approach with no mediating forces of context and factual support.

**YouTube**

Traditional video forms of political communication such as television have rapidly been overtaken by YouTube. The ability to post online political content, videos of current events, and political messages has brought the world onto everyone's mobile device.

It has also created much higher levels of transparency when statements and events can be filmed and posted in near real time. For governments and politicians it has proven to be a powerful means of targeting video messages to specific demographics and territories at a fraction of the cost of traditional television advertising.

**Digital Journalism and digital social movements**

**What is a Social Movement**

Social movement may be defined as an organized effort by a large number of people to bring about or impede social, political, economic, or cultural change. social movements often work *outside the system* by engaging in various kinds of protest, including demonstrations, picket lines, sit-ins, and sometimes outright.

**The term "social movements" (SM) was introduced in 1850 by the German Sociologist Lorenz von Stein in his book "History of the French Social Movement from 1789 to the Present".** Since then, the term has taken different meanings and interpretations.

The following are the famous digital movements in India:

**1. Anna Hazare-Anti Corruption movement**

Social worker and anti-corruption crusader from Maharashtra, Anna Hazare started the national movement for a strong anti-corruption law. He and some likeminded people from different parts of India came together to form a loose consortium to protest against the 2011 central government's anti-corruption Lokpal bill which was to be discussed in parliament. The protesters felt that the Lokpal bill was too weak and needed much more executive power to become effective in curbing corruption. The protest climaxed with a fast unto death at Delhi by Anna Hazare.

All along the mass media were highlighting the sequence of the protests and lot of discussions were on in social media with netizens giving opinions in chat rooms or having petitions circulated and signed. 'The question is whether mainstream media helped in giving shape for a huge movement or media had no choice than establishing its credentials in a democratic set up to claim for its continuous guardian and fourth pillar status. Some scholars also believe that it was the social media which provided momentum for a huge movement that the main stream media could not ignore. As a result the subsequent intervention of electronic and print media has made the agitation into a mass movement.' (Mohapatra, 2013).

**2. Swachh Bharat Campaign**

Just after the election of 2014, a campaign was launched by Prime Minister of India which a huge popularity in the audience. The main aim of this campaign is to influence people to make their surroundings neat and clean, clean up the streets, roads and infrastructure of Indian cities, towns and rural areas. Cleanliness was very close to Mahatma Gandhi therefore it was launched on his birth anniversary. Social Media has a great influence on Swachh Bharat mission. In the starting PM Modi give the statement that "I have invited 9 people and asked them to come to public places and work towards a clean India. I ask them to invite 9 more people too." After that people started tagging their friends by using many hashtags such as **#SwachhBharatMission, #MyIdeaofSwachhBharat** and a most trending hashtag which brought a big change in people's mindset is **#MyCleanIndia.**

**3. #Me Too movement**

Tarana Burake an African American Women Activist understood the power of Social Media and started # Me Too Movement in 2006 to increase awareness about sexual harassment and sexual assault (Braileanu et al.,2020; Jaffe, 2018; Mendes, Ringrose, & Keller, 2018). The movement took speed in October 2017 when Alyssa Milano an American Actress posted "#Me Too" on social media platform „Twitter" ("Vision," 2018; Zarkov & Davis, 2018). The actress act increases the popularity of "#Me Too movement" among victims and it encourage the survivors to share their stories on social media. The movement immediately became global. The "#Me Too movement" initiated critical and political discussions about the relationship between power and sex (Gill, 2016; Gill &

Orgad, 2018; Jaffe, 2018). The movement revealed that sexual harassment is more about dominance and power than the sexual attraction between the two genders (Jaffe, 2018).Since October 2017 the people of 85 countries participated in the movement (Gill & Orgad, 2018). Some researchers found that #Me Too raises consciousness and solidarity.

**# Me Too movement in India**

The **"#Me Too movement"** was initiated in 2018 September in India when Tanushree Dutta accused Nana Patekar for his inappropriate behavior on film set of film 'Horn Ok Pleassss' (Roy,2019). Later, a list of females came forward to discuss sexual assault incidents happened to them through "#Me Too movement". All of them are very famous personalities and keep a very powerful position in Indian Society after the sexual allegations Mr. MJ Akbar has resigned from his post and Sajid Khan must step down from his upcoming big budget venture Housefull part 4. Indian women have shared their painful stories. They have also mentioned the detailed accounts of alleged molestation and sexual harassment done by their former bosses and colleagues (Kazmin, 2018).

## NR- 11065- MEDIA LAWS AND ETHICS

### 1.1. Constitution:

A **constitution** means a document having a special legal sanctity which sets out the frame work and principal functions of the government, constitution of a country gives idea about basic structure of the political system under which its people are to be governed. It defines the powers of the main organs of the state, demarcates their responsibilities and regulates their relationships which each other and with the people. It can also be termed as "Fundamental Law" of a country which reflects people's faith and aspirations.

A **constitution** is an aggregate of fundamental principles or established precedents that constitute the legal basis of a polity, organization or other type of entity and commonly determine how that entity is to be governed.

**Historical Background of Indian Constitution**

**Regulating Act of 1773**

- The first step was taken by the British Parliament to control and regulate the affairs of theEast India Company in India.
- It designated the **Governor** of Bengal (Fort William) as the **Governor-General (of Bengal).**
- Warren Hastings became the first Governor-General of Bengal.
- Executive Council of the Governor-General was established (Four members). There wasno separate legislative council.
- It subordinated the Governors of Bombay and Madras to the Governor-General of Bengal.
- The Supreme Court was established at Fort William (Calcutta) as the Apex Court in 1774.
- It prohibited servants of the company from engaging in any private trade or acceptingbribes from the natives.
- Court of Directors ( the governing body of the company) should report its revenue.

**Pitt's India Act of 1784**

- Distinguished between commercial and political functions of the company.
- Court of Directors for Commercial functions and Board of Control for political affairs.
- Reduced the strength of the Governor General's council to three members.

- Placed the Indian affairs under the direct control of the British Government.
- The companies territories in India were called “the British possession in India”.
- Governor’s councils were established in Madras and Bombay.

**Charter Act of 1813**

- The Company’s monopoly over Indian trade terminated; Trade with India open to allBritish subjects.

**Charter Act of 1833**

- **Governor-General (of Bengal)** became the Governor-General of India.
- First Governor-General of India was Lord William Bentick.
- This was the final step towards centralization in British India.
- Beginning of a Central legislature for India as the act also took away legislative powers ofBombay and Madras provinces.
- The Act ended the activities of the East India Company as a commercial body and itbecame a purely administrative body.

**Charter Act of 1853**

- **The legislative and executive functions of the Governor-General’s Council wereseparated**.
- 6 members in Central legislative council. Four out of six members were appointed by theprovisional governments of Madras, Bombay, Bengal and Agra.
- It introduced a system of open competition as the basis for the recruitment of civilservants of the Company (Indian Civil Service opened for all).

**Government of India Act of 1858**

- The rule of Company was replaced by the rule of the Crown in India.
- The powers of the British Crown were to be exercised by the Secretary of State for India
- He was assisted by the **Council of India**, having 15 members
- He was vested with complete authority and control over the Indian administration through the Viceroy as his agent
- The Governor-General was made the Viceroy of India.
- Lord Canning was the first Viceroy of India.
- Abolished Board of Control and Court of Directors.

**Indian Councils Act of 1861**

- It introduced for the first time Indian representation in the institutions like Viceroy's executive legislative council (non-official). **3 Indians entered the Legislative council**.
- Legislative councils were established in Center and provinces.
- It provided that the Viceroy's Executive Council should have some Indians as the non-official members while transacting the legislative businesses.
- It accorded statutory recognition to the portfolio system.
- Initiated the process of decentralization by restoring the legislative powers to the Bombay and the Madras Provinces.

**India Council Act of 1892**

- Introduced indirect elections (nomination).
- Enlarged the size of the legislative councils.
- Enlarged the functions of the Legislative Councils and gave them the power of discussingthe Budget and addressing questions to the Executive.

**Indian Councils Act of 1909**

1. This Act is also known as the Morley- Minto Reforms.
2. Direct elections to legislative councils; first attempt at introducing a representative andpopular element.
3. It changed the name of the Central Legislative Council to the Imperial Legislative Council.
4. The member of the Central Legislative Council was increased to 60 from 16.
5. Introduced a system of communal representation for Muslims by accepting the concept of'separate electorate'.
6. **Indians for the first time in Viceroys executive council**. (Satyendra Prasanna Sinha, asthe law member)

**Government of India Act of 1919**

- This Act is also known as the Montague-Chelmsford Reforms.
- The Central subjects were demarcated and separated from those of the Provincial subjects.
- The scheme of dual governance, 'Dyarchy', was introduced in the Provincial subjects.
- Under the dyarchy system, the provincial subjects were divided into two parts –

transferredand reserved. On reserved subjects, Governor was not responsible to the Legislativecouncil.

- The Act introduced, for the first time, **bicameralism at the center**.
- **Legislative Assembly** with 140 members and **Legislative council** with 60 members.
- Direct elections.
- The Act also required that the three of the six members of the Viceroy's Executive Council (other than Commander-in-Chief) were to be Indians.
- Provided for the establishment of the Public Service Commission.

**Government of India Act of 1935**

- The Act provided for the establishment of an All-India Federation consisting of the Provinces and the Princely States as units, though the envisaged federation never came into being.
- Three Lists: The Act divided the powers between the Centre and the units into items of three lists, namely the Federal List, the Provincial List and the Concurrent List.
- The Federal List for the Centre consisted of 59 items, the Provincial List for the provinces consisted of 54 items and the Concurrent List for both consisted of 36 items
- The residuary powers were vested with the Governor-General.
- The Act abolished the Dyarchy in the Provinces and introduced 'Provincial Autonomy'.
- It provided for the adoption of Dyarchy at the Centre.
- Introduced bicameralism in 6 out of 11 Provinces.
- These six Provinces were Assam, Bengal, Bombay, Bihar, Madras andthe United Province.
- Provided for the establishment of Federal Court.
- Abolished the Council of India.

**Indian Independence Act of 1947**

- It declared India as an Independent and Sovereign State.
- Established responsible Governments at both the Centre and the Provinces.
- Designated the Viceroy India and the provincial Governors as the Constitutional (normalheads).
- It assigned dual functions (Constituent and Legislative) to the Constituent

Assemblyand declared this dominion legislature as a sovereign body.

**Formation of the Constitution of India**

- **6 December 1946:** Formation of the Constitution Assembly (in accordance with French practice). The constitution of India was framed by a constituent assembly setup under the Cabinet Mission Plan OF 1946.
- **9 December 1946:** The first meeting was held in the constitution hall (now the Central Hall of Parliament House). The 1st person to address was J. B. Kripalani, Sachchidananda Sinha became temporary president.
- **11 December 1946:** The Assembly appointed Rajendra Prasad as its president, H. C. Mukherjee as its vice-chairman and B. N. Rau as constitutional legal adviser.
- **13 December 1946:** An 'Objective Resolution' was presented by Jawaharlal Nehru, laying down the underlying principles of the constitution. This later became the Preamble of the Constitution.
- **22 January 1947:** Objective resolution unanimously adopted.
- **22 July 1947:** National flag adopted.
- **29 August 1947:** Drafting Committee appointed with B. R. Ambedkar as its Chairman. The other 6 members of committee were Munshi, Muhammed Sadulla, Alladi Krishnaswamy Iyer, N. Gopalaswami Ayyangar, Khaitan and Mitter.
- **26 November 1949:** The Constitution of India was passed and adopted by the assembly.
- **24 January 1950:** Last meeting of Constituent Assembly. The Constitution was signed and accepted. (with 395 Articles, 8 Schedules, 22 Parts)
- **26 January 1950:** The Constitution came into force. (The process took 2 years, 11 months and 18 days - at a total expenditure of ₹6.4 million to finish. the assembly held eleven sessions in 165 days.)
- G. V. Mavlankar was the first Speaker of the Lok Sabha (the lower house of Parliament) afterIndia turned into a republic.
- Sir Benegal Narsing Rau, a civil servant who became the first Indian judge in the International Court of Justice and was president of the United Nations Security Council, was appointed as the assembly's constitutional adviser in 1946. Responsible

for the constitution's general structure, Rau prepared its initial draft in February 1948. The draft of

B.N. Rau consisted of 243 articles and 13 schedules which came to 395 articles and 8 schedules after discussions, debates and amendments.

- At 14 August 1947 meeting of the assembly, committees were proposed. Rau's draft was considered, debated and amended by the eight-person drafting committee, which was appointed on 29 August 1947 with B. R. Ambedkar as chair.
- Before adopting the constitution, the assembly held eleven sessions in 165 days. On 26 November 1949, it adopted the constitution, which was signed by 284 members. The day is celebrated as National Law Day, or Constitution Day. The day was chosen to spread the importance of the constitution and to spread thoughts and ideas of Ambedkar.
- The assembly's final session convened on 24 January 1950. Each member signed two copies of the constitution, one in Hindi and the other in English. The original constitution is hand-written, with each page decorated by artists from Shantiniketan including Beohar Rammanohar Sinha and Nandalal Bose. Its calligrapher was Prem Behari Narain Raizada. The constitution was published in Dehradun and photolithographed by the Survey of India. Production of the original constitution took nearly five years. Two days later, on 26 January 1950, it became the law of India. The estimated cost of the Constituent Assembly was ₹6.3 crore (million). The constitution has had more than 100 amendments since it was enacted.
- The constitution has a preamble and 470 articles, which are grouped into 25 parts. With 12 schedules and five appendices, it has been amended 104 times; the latest amendment becameeffective on 25 January 2020.

**Salient Features of the Indian Constitution**

The Constitution of India became effective on 26 January 1950. B. R. Ambedkar was the chairman of the drafting committee. It lays down the fundamental political code, structure, procedures, powers, and duties of government institutions. Also, it sets out fundamental rights, directive principles, and the duties of citizens. It is the supreme law of India. The features of Indian constitution are:

**a. Lengthiest constitution**

The Indian constitution is one of the bulkiest constitutions of the world**,** comprising of 395 articles**,** 22 parts **and** 12 schedules**.** So far the constitution underwent 100 amendments (28 May, 2015).

**b. Parliamentary Form of Government**

The Indian Constitution chose the Parliamentary form of government. In a Parliamentary form of government executive is part of the legislature and there is a collective responsibility of the council of ministers to the legislature.

**c. Independent judiciary**

The constitution provides an **independent judiciary** (Article 76) which ensures that the government is carried on in accordance with the provisions of the constitution and acts as a guardian of the liberties and fundamental rights of the citizens.

As per the Indian constitution, a single system of judiciary prevails in India. The Supreme Court is at the top, the High Courts at the state level and district and other subordinate courts are below and are subject to the supervision of the High Courts.

**d. Rigidity and flexibility**

The Indian constitution is **combination of rigidity and flexibility**, which means some parts of it can be amended by the Parliament by a **simple majority**, whereas some parts require a **two-third majority** as well as not less than one-half of the state legislatures.

**e. Fundamental rights and fundamental duties**

The Indian constitution provides an elaborate list of **Fundamental Rights** to the citizens of India, which cannot be taken away or abridged by any law made by the states (Article 12–35).

Similarly, the constitution also provides a list of 11 duties of the citizens, known asthe **Fundamental Duties** (Article 51A).

**f. Directive principles of state policy**

The Indian constitution mentions certain **Directive Principles of State Policy** (Article 36–51) which that government has to keep in mind while formulating new policy. The Directive Principles of State Policies in Part IV of the Constitution intends to

make India a welfare state. The Directive Principles are not enforceable by the courts for their violation.

**g. Single citizenship**

The Indian constitution provides a **single citizenship** for all the people residing different parts ofthe country and there is no separate citizenship for the states (Article 5–11).

**h. Bicameral legislatures**

The Indian constitution provides bicameral legislatures at centre consisting of **Rajya Sabha (Council of States)** and **Lok Sabha (House of the People)** (Article 79).

**i. Emergency powers**

The constitution vests extraordinary powers, known as **Emergency Powers** in the President during emergencies out of armed rebellion or external aggression or due to failure of constitutional machinery in the state (Article 352–360).

**j. Special provisions for minorities**

The constitution makes **special provisions for minorities**, Scheduled castes, Scheduled Tribes, etc. by granting them certain special rights and provisions.

**k. Sovereign, Socialist, Secular, Democratic Republic**

Sovereign-India is free from all external controls. No other country can dictate their policies to us. Every Indian anywhere is citizen of India. Socialist-India is a socialist state. India is economically developed country. Secular-Every person is free to follow his or her own religion. No discrimination is based on the grounds of religions. Democratic - India is democratic as every citizen who is above 18 years of age can vote and choose representative of their wish. Right to vote is given. Republic - India is republic as head of state is not hereditary. England is democratic but notrepublic as head of state is hereditary king or Queen.

**l. Adult Franchise**

Adult Franchise means all adult citizens of the country should have the right to vote without anydiscrimination of class, caste, class, religion, or gender. It is based on the basic principle of democracy, which we call equality. It stresses that the right to vote should be equally available toall. It is the bedrock of a democratic system. It enables all citizens to be involved in the governance of their state.

## 1.2. Fundamental Rights

**Fundamental rights in India** are the rights guaranteed under Part III (Articles 12-35) of the Constitution of India. There are six fundamental rights (Article 14 - 32) recognized by the Indian constitution : the right to equality (Articles 14-18), the right to freedom (Articles 19-22), the right against exploitation (Articles 23-24), the right to freedom of religion (Articles 25-28), cultural and educational rights (Articles 29-30) and the right to constitutional remedies (Article 32 and 226).

Seven fundamental rights were originally provided by the Constitution .However, the right to property was removed from Part III of the Constitution by the 44th Amendment in 1978. Originally the constitution also included **Right to property (Article 31).** However, it was deleted from the list of Fundamental Rights by the **44th Amendment Act, 1978.**

- Right to equality (Articles 14–18)
- Right to freedom (Articles 19–22)
- Right against exploitation (Articles 23–24)
- Right to freedom of religion (Articles 25–28)
- Cultural and educational rights (Articles 29–30)
- Right to constitutional remedies (Article 32-35)

**General**

Article-12. Definition (Constitution).

Article-13. Laws inconsistent with or in derogation of the fundamental rights.

**(1). Right to Equality (14-18)**

**Article-14. (Equality before law).**

Article 14 says that no person shall be denied treatment of equality before the law or the equalprotection of the laws within the territory of India.

**Article-15.(Prohibition of discrimination).**

Article-15 provides that no citizen shall be discriminated on grounds only of religion, race, caste,sex or place of birth.

**Article-16. (Equality of opportunity in matters of public employment)**.

Article 16 of the Indian constitution provides for equality of opportunity for all citizens inmatters of employment or appointment to any public office.

**Article-17.(Abolition of Untouchability)**.

Article 17 abolishes 'untouchability' and forbids its practice in any form. The enforcement of any disability arising out of untouchability shall be an offence punishable in accordance with law.

A person convicted of the offence of 'untouchability' is disqualified for election to the Parliament or state legislature. The acts of offences include**:**

- Preaching untouchability directly or indirectly.
- Preventing any person from entering any shop, hotel, public place of worshipand place of public entertainment.
- Refusing to admit persons in hospitals, educational institutions or hostels established for public benefit.
- Justifying untouchability on traditional, religious, philosophical or other grounds.
- Insulting a person belonging to scheduled caste on the ground of untouchability.

**Article-18. (Abolition of titles).**

Article 18 of the constitution of India abolishes titles and makes four provisions in that regard:

- It prohibits the state from conferring any title on any citizen or a foreigner (except a military or academic distinction).
- It prohibits a citizen of India from accepting any title from any foreign state.
- A foreigner holding any office of profit or trust under the state cannot accept any title from any foreign state without the consent of the President of India.
- No citizen or foreigner holding any office of profit or trust within the territory of India can accept any present, emolument or office from or under any foreign State without the consent of the president.

**(2). Right to Freedom (19-22)**

**Article 19** guarantees to all citizens the six rights of freedom including

**Article-19(1) (a) - Freedom of speech and expression**

Expressing one's own views, opinions, belief and convictions freely by word of mouth, writing, printing, picturing or in any other manner.

**Article-19(1) (b) - Freedom of assembly without arms**

- Includes the right to hold public meetings, demonstrations and take out processions which can be exercised only on public land.
- It does not protect violent, disorderly and riotous assemblies or strike.

**Article-19(1) (c) - Freedom of association**

It includes the right to form (and not to form) political parties, companies, partnership firms, societies, clubs, organizations, trade unions or any body of persons.

**Article-19(1)(d) - Right to move freely throughout the territory of India**

The freedom of movement has two dimensions, viz, internal (right to move inside the country) (article 19) and external (right to move out of the country and right to come back to the country) (article 21).

**Article-19(1)(e) - Right to reside and settle in any part of the territory of India**

The right of outsiders to reside and settle in tribal areas is restricted to protect the distinctive culture and customs of scheduled tribes and to safeguard their traditional vocation and properties against exploitation.

**Article-19(1)(g)- Right to practice any profession or to carry on any occupation, trade orbusiness.**

It doesn't include the right to carry on a profession that is immoral (trafficking in women or

children) or dangerous (harmful drugs or explosives, etc,).

**Article-20. Protection in respect of conviction for offences**

**Article 20** grants protection against arbitrary and excessive punishment to an accused person, whether citizen or foreigner or legal person like a company or a corporation. It provides that:

- No person shall be convicted of any offence except for violation of a law in force at the time of the commission of the act or subjected to a penalty greater than that prescribed by the law.
- No person shall be prosecuted and punished for the same offence more than once.
- No person accused of any offence shall be compelled to be a witness against himself.

**Article-21. Protection of life and personal liberty**

Article 21 declares that no person shall be deprived of his **life or personal liberty** except according to procedure established by law. This right is available to both citizens and non-citizens.

The right to life is not merely confined to animal existence or survival but also includes the right to live with human dignity and all those aspects of life which go to make a man's life meaningful, complete and worth living.

**Article-21A. Right to education.**

Article 21 (A) declares that the State shall provide free and compulsory education to all children of the age of six to fourteen years.

This provision was added by the 86$^{th}$ Constitutional Amendment Act of 2002.

**Article- 22. Protection against arrest and detention in certain cases**

Article 22 grants protection to persons who are arrested or detained. Article 22 deals with the ordinary law and includes:

- Right to be informed of the grounds of arrest.
- Right to consult and be defended by a legal practitioner.
- Right to be produced before a magistrate within 24 hours, excluding the journey time.
- Right to be released after 24 hours unless the magistrate authorizes further detention.

**(3). Right against Exploitation (23-24)**

**Article-23**. Prohibition of traffic in human beings and forced labour.

**Article- 24.** Prohibition of employment of children in factories, etc.

**(4). Right to Freedom of Religion (25-28)**

**Article-25**. Freedom of conscience and free profession, practice and propagation of religion.

**Article-26.** Freedom to manage religious affairs.

**Article-27**. Freedom as to payment of taxes for promotion of any particular religion.

**Article-28**. Freedom as to attendance at religious instruction or religious worship in certaineducational institutions

**(5). Cultural and Educational Rights (29-30) Article-29**. Protection of interests of minorities.

**Article- 30**. Right of minorities to establish and administer educational institutions.

**Article-31**. [Omitted.](Property Right)

**(6). Right to Constitutional Remedies (32-35)**

**Article-32**. Remedies for enforcement of rights conferred by this Part.

**Article-33**. Power of Parliament to modify the rights conferred by this Part in their application toForces, etc.

**Article-34**. Restriction on rights conferred by this Part while martial law is in force in any area.

**Article-35**. Legislation to give effect to the provisions of this Part.

**<u>Article 19(1)(a) or Freedom of Speech and Expression</u>**

Article 19(1)(a) in the Constitution of India

All citizens shall have the right

(a). to freedom of speech and expression;

(b). to assemble peaceably and withou rms;

(c). to form associations or unions;

(d). to move freely throughout the territory of India;

(e). to reside and settle in any part of the territory of India;

and(f). omitted

(g). to practise any profession, or to carry on any occupation, trade or business

**Definition**: The freedom of speech under Article 19(1)(a) includes the right to express one's views and opinions at any issue through any medium, e.g. by words of mouth, writing, printing, picture, film, movie etc.

- Freedom of speech and expression is a natural right, which a human being acquires on birth. It is therefore, a basic right. "Everyone has the right to freedom of opinion and expression; the right includes freedom to hold opinions without interference and to seek and receive and impart information and ideas through any media and regardless offrontiers" proclaims the Universal Declaration of Human Rights (1948). The people of India declared in the preamble of the constitution, which they gave unto themselves their to secure to all the citizens liberty of thought and expression.
- The right to freedom of speech and expression is subject to limitations imposed under article 19(2).
- Public order as a ground of imposing restrictions was added by the constitution (first amendment) act 1952, public order is something more than ordinary maintenance of law and order. Public order in the present context is synonymous with public peace, safetyand tranquility.
- Article 19(1)(a) of Indian constitution says that all citizens have the right to freedom of speech and expression. Freedom of speech and expression means the right to express one's own convictions and opinions freely by words of mouth, writing, printing, pictures or any other. It thus includes the expression of one's idea through any communicable medium or visible representation, such as gesture, signs and the like.
- This expression connotes also publication and thus the freedom of press is included inthis category. Free propagation of idea is the necessary objective and this may be done on the platform or through the press. This propagation of ideas is secured by freedom of circulation, liberty of circulation is essential to that freedom as the liberty of publication. Indeed, without circulation the publication would be of little value. The freedom of speech and expression includes liberty to propagate not

one's views only. It also includes the right to propagate or publish the views of other people, otherwise this freedom would not include the freedom of press. Freedom of expression has five broad special purposes to serve:

1. It helps an individual to attain self-fulfillment
2. It assists in the discovery of truth.
3. It strengths the capacity of an individual in participating in decision making.
4. It provides a mechanism by which it would be possible to establish a reasonable balance between stability and social change.
5. All members of society would be able to form their own beliefs and communicate them freely to others.

- The fundamental principle involved here is the people's right to know. Explaining the scope of freedom of speech and expression Supreme Court has said that the words "freedom of speech and expression" must be broadly constructed to include thefreedom to circulate one's views by words of mouth or in writing or through audiovisual instrumentalities. It therefore includes the right to propagate one's views through the print media or through any other communication channel e.g radio andthe television. Every citizen of this country therefore has the right to air his or their views through the printing or the electronic media subject of course to permissible restrictions imposed article 19(2) of the constitution.

**Case: Maneka Gandhi Vs Union of India (1978)**

The Supreme Court considered whether Article 19(1)(a) of Indian Constitution was confined to Indian territory and held that the freedom of speech and expression is not confined to National boundaries. The petitioner (Maneka Gandhi) was a journalist whose passport was issued on June 1, 1976, under the Passport Act, 1967. Later on July 2nd, 1977, the Regional Passport Officer, New Delhi, had ordered the petitioner to surrender her passport by a letter posted. On being asked about the reasons for her passport confiscation, The Ministry of External Affairs declined to produce any reasons "in the interest of the general public." Therefore, the petitioner had filed a writ petition under Article 32 of the Constitution of India stating the seize of her passport as the violation of her fundamental rights; specifically Article 14 (Right to Equality), Article 19 (Right to Freedom of Speech

and Expression) and Article 21 (Right to Life and Liberty) guaranteed by the Constitution of India. The respondent counterfeited stating that the petitioner was required to be present in connection with the proceedings which was going on, before a Commission of Inquiry.

**Case: Bijoe Emmanuel Vs State of Kerala (1986)**

Right not to speak or Right to silence is also included in the Right to speech and expression. In the case of National Anthem, three students were expelled from the school for refusal to sing the national anthem. However, the children stood up in respect when the national anthem was playing. The validity of the expulsion of the students was challenged before the Kerala High Court and they upheld the expulsion of the students on the ground that it was their fundamental duty to sing the national anthem. However, on an appeal being filed against the order of the Kerala High Court before the Supreme Court, it was held by the Supreme Court that the students did not commit any offence under the Prevention of Insults to National Honour Act, 1971. Also, there was no law under which their fundamental right under Article 19(1) (a) could be curtailed.

**Freedom of the Press**

Freedom of speech and expression includes right to impart and receive information which includes freedom to hold opinions." In India, freedom of press is implied from the freedom of speech and expression guaranteed under **Article 19**(1)(a) of the Constitution of India.

**Freedom of the press** or **freedom of the media** is the principle that communication and expression through various media, including printed and electronic media, especially published materials, should be considered a right to be exercised freely. Such freedom implies the absence of interference from an overreaching state; its preservation may be sought through constitution or other legal protection and security.Democracy thrives through vigilant eye of Legislature, care and guidance of public opinion and press par excellence. Freedom of speech include right to propagate one's views through print media or any other communication channel e.g radio, television subject to reasonable restrictions imposed under Article 19(2).

The fundamental right of the freedom of the press implicit in the right the freedom of speech and expression is essential for political liberty and proper functioning of democracy. American press commission has said, "Freedom of the press is essential to political liberty. When man cannot freely convey their thoughts to one another, no freedom is secured where expression exists the beginning of a free society and means for very retention of liberty are already present, free expression is therefore, unique among liberties". The Indian press commission has also expressed a similar view. It says that "Democracy can thrive not only under the vigilant eye of its legislature, but also under are and guidance of public opinion and the press is par excellence the vehicle through which opinion can become articulate". Unlike the American Constitution, article 19(1)(a) of the Indian constitution does not expressly mention the liberty of the press but it has been held that liberty of the press is included in the freedom of speech and expression. The press has no special rights which are not to be given or which are not to be exercised by the citizen in his individual capacity. The editors of a press or the manager are merely exercising the right of the expression, and therefore, no special mention is necessary of the freedom of the press.

The liberty of the press as defined by Lord Mansfield "consists in printing without any license subject to the consequences of law". Thus the liberty of the press means liberty to print and publish what one pleases, without previous permission. The freedom of the press is not confined to newspapers and periodicals. It includes also pamphlets and circulars and every sort of publication which affords a vehicle of information and opinion. Freedom means absence of control, interference or restriction. Hence the expression 'freedom of the press' means the right to print and publish without interference from the state or any public authority. But, as will be seen presently, this freedom, like other freedoms, cannot be absolute but this subject to well known exceptions acknowledge in the public interest, which in India are enumerated in article 19 of the constitution.

**Cases related to Freedom of the Press**

**Case: 1: K.A.Abbas Vs Union of India (1970)**

Khwaja Ahmad Abbas, a Bollywood film director was also a member of the GD Khosla Committee on Film Censorship formed in 1969. His movie, A Tale of Four Cities, better known as "Char Sheher Ek Kahaani" was based on the contrasting lifestyles in four of the most

prominent cities of India at the time, Bombay, Delhi, Calcutta, and Madras. The movie was at loggerheads with the Censorship Committee's liberalist claims. It also createda shock wave in the judiciary by questioning the relationship between fundamental rights granted by the constitution and the Cinematograph Act, 1952. The film had portrayed the scenes of Bombay's red-light districts which proved to be a hard nut to crack for both the CensorshipBoard and the Judiciary. The director was very much adamant that the scenes had to be shown, atleast with a 'U' certificate, if not without any restrictions at all.

The Censor Board's Examining Committee said that a 'U' certificate can be granted to a film only if the public viewing was restricted to an audience above the age of 18. An appeal was filed in the supreme court of India, to which the court responded with an order recommending a 'U' certificate if some scenes portraying the red-light area, which depicted immoral trafficking, economic exploitation of women, and prostitution, were cut from the actual film.

The petitioner filed a petition arguing that his freedom of speech and expression guaranteed by the constitution of India was denied, that the provisions of the Cinematograph Act, 1952 were unconstitutional and void, and that he was denied the 'U' certificate that his film was entitled to. However, the Central Government allowed granting the 'U' certificate without demanding any cuts or changes to be made in the film.

The director then requested to be allowed to amend his petition in light of the altered situation, which was accepted by the court. The petitioner then asked that the provisions of the Act and the power is given to various authorities and bodies under the Act were vague, arbitrary, and indefinite and also questioned the purpose of pre-censorship only in films excluding dailyprograms and news.

**Judgment**

As held in the leading case of **K. A. Abbas Vs Union of India**, Chief Justice Hidayatullah, Justice Shelat, Mitter, Vidyialingam and Ray delivered their judgment and stated that the court does not accept the distinction between pre-censorship and censorship in general and observed that both are to be governed by the standard of reasonable restrictions within the Article 19(1) of Indian Constitution. The Constitution has makes it clear that freedom of speech and expression is not an absolute right and reasonable restrictions can be imposed on it. Pre-Censorship was permitted under the

Constitution for public order and to uphold the rule of law the court observed. The Judiciary is regarded as a legal protector in preserving public interest and ensure justice and Fairplay for all. Concerning the issue of insufficient guidelines in the Act, the court held that guidelines as provided within Article 19(1) of the Constitution clearly states the provisions and are sufficient. But the thin line of distinction between artistic and non-artistic expression in assessing obscenity needs better understanding and clarity. The Court observed he cannot be the whole reason to strike down the provisions of the Act.

Thus, the Supreme Court of India upheld that the restrictions on public exhibition under the Cinematograph Act, 1952 and thereby rejected the petition that challenged the power of censorship and stated that pre-censorship fell under the reasonable restrictions permitted under freedom of speech and expression and that the Act provides the means and provisions to avoid arbitrariness in the exercise of the powers conferred.

**Case: 2: Brij Bhushan Vs State of Delhi, (1950)**

The **facts** of the case are as follows: The petitioners in the present case approached the Supreme Court under Article 32 of the Indian Constitution. Mr.Brij Bhushan is the printer and publisher and K.R. Halkani is the editor of an English weekly of Delhi, called the **'Organizer'**. On 2nd March, 1950 the Chief Commissioner of Delhi issues an order against the petitioners under Section 7(1) (c) of the East Punjab Safety Act, 1949. The order states that the petitioners are required to send a duplicate copy of all the communal matter and news and views about Pakistan including photographs and cartoons other than those derived from official sources or supplied by news agency, before publication for the purpose of scrutiny. According to the respondents the articles published in the Organizer harms the public safety and public order in the state. The petitioners claim that the order violates the fundamental right of speech and expression and the order passed by the respondent does not come under the reasonable restrictions enshrined under Article 19 (2) of the Indian Constitution. Thus, the petitioners had approached the court to issue of writs of certiorari and prohibition to the respondent and to examine the legality of the order made by the respondent.

**Case: 3: Ramesh Thappar Vs State of Madras (1950)**

**Ramesh Thapar v/s State of Madras**,4 Patanjali Shastri,CJ, observed that "Freedom of speech & of the press lay at the foundation of all democratic organization, for without free political discussion no public education, so essential for the proper functioning of the process

of popular government, is possible." In this case, 5 entry and circulation of the English journal "Cross Road", printed and published in Bombay, was banned by the Government of Madras. The same was held to be violative of the freedom of speech and expression, as "without liberty of circulation, publication would be of little value".

The Supreme Court held that the freedom of speech and expression included freedom of circulation. Liberty of circulation was essential to that freedom of liberty of publication. Hence , that the order of Government of Madras would violation of the right under article 19(1)(a). Hence, freedom of expression includes liberty to print and publish and also circulation without previous permissions.

**Case: 4: Indian Express Vs Union of India, (1985)**

Indian Express vs. Union of India, (1985) it has been held that the Press plays a very significant role in the democratic machinery. The courts have duty to uphold the freedom of press and invalidate all laws and administrative actions that abridge that freedom. Freedom of Press includes freedom of publication, freedom of circulation and freedom against pre-censorship.

Indian Express vs. Union of India, speaking about the utility of freedom of the press the court observed. The expression 'freedom of the press' has not been used in article 19 but it iscomprehended within article 19(1)(a). The expression means freedom from interference from authority which would have the effect of interference with the **content and circulation** of newspapers. There cannot be any interference with that freedom to the name of public interest. The purpose of the press is to advance the public interest by publishing facts and opinions without which a democratic electrorate cannot make responsible judgments. Freedom of the press is the heart of social and political intercourse. It is the primary duty of the courts to uphold the freedom of the press and validate all laws or administrative actions which interfere with it contrary to the constitutional mandate.

**Case: 5: In Sakal Papers Ltd. Vs Union of India, (1962)**

In **Sakal Papers v/s Union of India**,9 the Daily Newspapers (Price and Page) Order, 1960, which fixed the number of pages and size which a newspaper could publish at a price was held to be violative of freedom of press and not a reasonable restriction under the Article 19(2).

**Case: 6: Bennett Coleman and Co. Vs Union of India (1973)**

Bennett Coleman and Co. vs. Union of India, the validity of the Newsprint Control Order, which fixed the maximum number of pages, was struck down by the Supreme Court of India holding it to be violative of provision of Article 19(1)(a) and not to be reasonable restriction under Article 19(2). The Court struck down the Government's stand that it would help small newspapers to grow.

**Case: 7: In Tata Press Ltd. Vs. Mahanagar Telephone Nigam Ltd**.,

The Supreme Court held that a commercial advertisement or commercial speech was also a part of the freedom of speech and expression, which would be restricted only within the limitation of Article 19(2). Supreme Court held that advertising, which is no more than a commercial transaction, is nonetheless dissemination of information regarding the product advertised. Public at large are benefited by the information made available through the advertisements. In a democratic economy, free flow of commercial information is indispensable.

**Restrictions on Freedom of Press before and after Independence**

The freedom of speech & expression is subject to reasonable restrictions and Supreme Courtof India has included following aspect in the meaning of reasonable restriction.

A. Security of the state

B. Friendly relation with foreign state

C. Public order

D. Decency and morality

E. Contempt of court

F. Incitement to an offence

G. Sovereignty and Integrity of India.

**Security of the State**: Reasonable restrictions can be imposed on the freedom of speech and expression, in the interest of the security of the State. The term security of state has to be distinguished from public order. For security of state refers to serious and aggravated forms of public disorder, example rebellion, waging war against the state [entire state or part of the state], insurrection etc.

**Friendly relations with foreign States**: This ground was added by the Constitution (First Amendment) Act of 1951. The State can impose reasonable restrictions on the freedom of

speechand expression, if it hampers the friendly relations of India with other State or States.

**Public order:** This ground was added by the Constitution (First Amendment) Act, 1951 in order to meet the situation arising from the Supreme Court's decision in Romesh Thapar's, case (AIR 1950 SC 124). As per hon'ble Supreme court, public order is different from law and order and security of state [Kishori Mohan v. State of West Bengal]. The expression 'public order' connotes the sense of public peace, safety and tranquillity. Anything that disturbs public peace disturbs public order [Om Prakash v. Emperor, AIR 1948 Nag, 199].But mere criticism of the governmentdoes not necessarily disturb public order.A law, which punishes the deliberate utterances hurting the religious feelings of any class has been held to be valid and reasonable restriction aimed to maintaining the public order

**Decency and Morality**: Decency and morality section 292 to 294 of the Indian Penal Code provide instances of restrictions on the freedom of speech and expression on the grounds of decency and morality, it prohibits the sale or distribution or exhibition of obscene words. The standard of morality changes with changing times.

**Contempt of court:** The constitutional right to freedom of speech would not allow aperson to contempt the courts. The expression Contempt of Court has been defined Section 2 of the Contempt of Courts Act, 1971. The term contempt of court refers to civil contempt or criminal contempt under the Act.

**Defamation**: The clause (2) of Article 19 prevents any person from making any statement that defames the reputation of another. Defamation is a crime in India inserted into Section 499 and 500 of the I.P.C. Right to free speech is not absolute.

**Incitement to an offense**: This ground was also added by the Constitution (First Amendment) Act, 1951. The Constitution also prohibits a person from making any statement that incites people to commit offense.

**Sovereignty and integrity of India**: This ground was added subsequently by the Constitution (Sixteenth Amendment) Act, 1963. This is aimed to prohibit anyone from making the statements that challenge the integrity and sovereignty of India.

## UNIT-2

## 2.1. Copy Right Act

**Introduction:**

Definition: Copyright is an intellectual property right. Intellectual Property Rights protects works that are created by a person's skills, labour and investment of time and money.

The copyright law tries to make sure that people who create intellectual products receive the economic benefit from selling, leasing, renting or licensing their inventions.

India is one of the largest producers and exporters of copyright materials. In order to protect the authors and performers government enacted Copyright Act - 1957 (amended in 1999), the Copyright Rules - 1958 (amended in 1995), and the International Copyright Order, 1999.

Copyright is a legal right to creators of literary, dramatic, musical and artistic works and producers of cinematograph films and sound recordings. It gives them a blanket right over the production, reproduction, adaptation and translation of the work. It also gives broadcasting organizations 'broadcast reproduction right' and bestows on performers 'performer's right'.

Copyright piracy is a theft of the intellectual properties of a person, and therefore is a crime. According to the National Crime Records Bureau there is a rise of awareness and action against infringement of copyrights in India.

**What constitute copyright work?**

**Original literary work**

This includes almost any words written down or recorded such as newspapers, magazine articles or features, books, plays, song lyrics, poems, film scripts, articles or features, published on the internet.

**Dramatic work**

This includes plays, choreographed work, dances, stage musicals etc.

**Musical work**

This includes original musical works if music is recorded without being written down it may only be protected as a sound recording.

**Artistic work**

This includes graphic work, photographs, sculpture or collage, painting, architecture, drawings, diagrams, maps, charts or plans, models of buildings cartoons and other works of artistic craftsmanship.

**Sound recordings, films and broadcasts**

This includes a recording of sounds, any recorded moving images as a film, video recordings. Video piracy is therefore an infringement of copyright.

**Ownership of the Copyright:**

Generally the author of a work shall be the first owner of the copyright.

The author of a work has the right to claim authorship of the work and to restrain or claim damages in respect of any distortion, mutilation, modification or other acts in relation to the said work which is done before the expiration of the term of copyright if such distortion, mutilation, modification or other act would be prejudicial to his honour or reputation. Moral rights are available to the authors even after the economic rights are assigned.

The owner may assign anyone or any organization the copyright partially or wholly, the full or part term, with the territorial extent. The assignment of copyright in any work shall also specify the amount of royalty payable, if any, to the author or his legal heirs during the currency of the assignment and the assignment shall be subject to revision, extension or termination on terms mutually agreed upon by the parties. If no specifics are mentioned in the terms, the copyright is understood to be given for five years and within India.

The Copyright Board may cancel an agreement, if there is a complaint from the original author, and it is proven that the person who has the copyright has not exercised the rights and broke the terms.

The author of a work may relinquish all or any of the rights comprised in the copyright in the work by giving notice in the prescribed form to the Registrar of Copyrights.

The owner of the copyright shall have a resale share right, a percentage fixed either by theparties involved or by the Copyright Board.

**Term of copyright:**

Copyright is protected for a limited period of time. The general rule is that copyright lasts for 60 years. In the case of original literary, dramatic, musical and artistic works the 60-year period is counted from the year following the death of the author. In the case of cinematograph films, sound recordings, photographs, posthumous publications, anonymous and pseudonymous publications, works of government and works of international organizations, the 60-year period is counted from the date of publication.

**Infringement of Copyright:**

Any person who without a license obtained from either the owner of the work or the Registrar of Copyrights, who permits any place for communication of a copyrighted material for profit, knowing that it is an infringement, hires, rents, sells or buys or except for personal use is a violation of copyright.

The following are some of the commonly known acts involving infringement of copyright:

Ø Making infringing copies for **sale or hire** or selling or letting them for hire;

Ø permitting any place for the performance of works in public where such **performance** constitutes infringement of copyright;

Ø Distributing infringing copies for the purpose of trade or to such an extent so as to affect prejudicially the interest of the owner of copyright;

Ø Public exhibition of infringing copies by way of trade; and

Ø Importation of infringing copies into India.

**Defenses for copyright:**

News Reporting

Criticism or review

Research and private study

Incidental inclusion

Spoken words

Judicial proceeding

**Punishment:**

The minimum punishment for infringement of copyright is imprisonment for six months with the minimum fine of Rs. 50,000/-. In the case of a second and subsequent conviction the minimum punishment is imprisonment for one year and fine of Rs. one lakh.

### 2.2. Press and the Registration of Books Act 1867

There shall be kept at such office and by such officer as the state govt shall appoint in this behalf , a book to be called a catalogue of books printed in India , where in shall be registered a memorandum of every book which shall have been delivered of this act. Such memorandum shall contain the following particulars:

- The title of the book and content of the title page
- The language in which the book in written
- The name of the author, translator or editor of the book

- The subject
- The place of printing and the place of publication
- The name or firm of the printer and the name or firm of the publisher
- The date of issue from the press or the publication

**Provident fund**

**Wage board**

Chairman

Supreme court or high court judge

**2.4. <u>Press Council Act</u>**

The press has to be free and responsible in a democracy. The process of ensuring these by government intervention would be disastrous. Therefore an alternate system was needed. The

best way is to let the peers of the profession, assisted by a few discerning laymen to regulate it through a properly structured representative impartial machinery. Thus, the Press Council was set up. The first of its kind was established in Sweden in 1916. Soon it spread to other countries. The First Press Commission (1954) suggested setting up of a Press Council to "safeguard the freedom of the press", " to ensure on the part of the Press the maintenance of High standards of public taste and to foster due sense of both the rights and responsibilities of citizenship" and " to encourage the growth of sense of responsibility and public service among all those engaged in the profession of journalism." The Commission had concluded that the best way of maintaining professional ethics in journalism would be to bring into existence a body with statutory authority, of people principally connected with industry.

As a result of the Press Council Act, 1965, Press Council of India was constituted on 4th July, 1966 as an autonomous, statutory, quasi-judicial body, with Shri Justice J R Mudholkar, then a Judge of the Supreme Court, as Chairman. The Press Council of India is a statutory quasijudicial body.

There were two Acts that established the Press Council. The 1965 Act established the Press Council, and the 1978 Act reestablished it.

The Press Council Act, 1965 The Act's goal was to establish a Press Council for the purpose of preserving the freedom of the Press and of maintaining and improving the standards of Newspapers in India. Effective from 12th Nov. 1965. It extends to the whole of India except the State of Jammu and Kashmir.

**Brief Study of the Act** The Council consists of a Chairman and twenty-five other members. The Chairman shall be a person nominated by the Chief Justice of India. The members include thirteen working journalists, of whom not less than six shall be editors of newspapers, six from the management section of the newspapers, three subject experts, two from the House of the People nominated by the speaker and one from the Council of States, chosen by its Chairman.

**Amendments on the Act**

Acting on grievances, composition of the nominating committee was changed by an amendment of the said Act in 1970, according to which the Chairman and the members from the press were to be nominated by a Nominating Committee consisting of the Chairman of the Rajya Sabha, the Chief Justice of India and the Speaker of the Lok Sabha.

The amending Act of 1970 introduced several other provisions in the Act. The manner of

selection of persons of special knowledge or practical experience was specified. It provided that of the three persons to be nominated from among such people, one each shall be nominated by the University Grants Commission, the Bar Council of India and the Sahitya Academy. Out of the six seats for proprietors and managers of newspapers, two each were earmarked for big, medium and small newspapers. The membership of the Council was raised by one to provide a seat for persons managing the news agencies.

No working journalist who owned or carried on the business of management of newspapers could now be nominated in the category of working journalists. Also, it was specified that not more than one person interested in any newspaper or group of newspapers under the same control, could be nominated from the categories of editors, other working journalists, proprietors and managers.

The Nominating Committee was empowered to review any nomination on a representation made to it by any notified association or by any person aggrieved by it or otherwise. The amended Act also barred re-nomination of a retiring member for more than one term. Where any association failed to submit a panel of names when invited to do so, the Nominating Committee could ask for panels from other associations or persons of the category concerned or nominate members after consultation with such other such individuals or interests concerned as it thought fit.

Under the original Act, the Chairman was nominated by the Chief Justice of India. But, after this amendment, nomination of the Chairman was also left to the Nominating Committee. The Council set up under the Act of 1965 functioned till December 1975. During the Internal Emergency, the Act was repealed and the Council abolished.

**The Press Council Act - 1978**

A fresh legislation providing for the establishment of the Council was enacted in 1978 and the institution came to be reviewed in the year 1979 with the very same object of preserving the freedom of the press and of maintaining and improving the standards of Press in India. The present Council is a body corporate having perpetual succession.

Objective of the Act is to establish a Press council for the purpose of preserving the freedom of the Press and of maintaining the standards of newspaper and news agencies in India. Effective from 7th Sept. 1978. The revived Press Council was set up on March 1st, 1979.

The council shall consist of a chairman and twenty-eight other members. The chairman is

nominated by a Committee consisting of the chairman of the council of states (Rajya Sabha), the Speaker of the Houses of the People (Lok Sabha) and a person elected by the members of the council, and the nomination so made shall take effect from the date on which it is notified by the Central Government in the Official Gazette.

The members include thirteen working journalists, of whom not less than six shall be editors of newspapers, six from the management section of the newspapers (two each from big, medium and small newspapers), three subject experts (one each is nominated by UGC, Bar Council of India, and Sahitya Academy), one representing the news agencies, three from Lok Sabha nominated by the speaker and two from Rajya Sabha, chosen by its Chairman.

The Press Council Act empowers the Press Council to make observations in respect of conduct of any authority including Government, if considered necessary for performance of its functions under the Act. It can warn, admonish or censure the newspaper, the news agency, the editor or the journalist or disapprove the conduct of the editor or the journalist if it finds that a newspaper or a news agency has offended against the standards of journalistic ethics or public taste or that an editor or a working journalist has committed any professional misconduct.

**Functions**

- to help newspapers to maintain their independence;
- to build up a code of conduct for newspapers news agencies and journalists in accordance with high professional standards;
- to ensure on the part of newspapers news agencies and journalists, the maintenance of high standards of public taste and foster a due sense of both the rights and responsibilities of citizenship;
- to encourage the growth of a sense of responsibility and public service aiming all those engaged in the profession of journalism;
- to keep under review any development likely to restrict the supply and dissemination of news of public interest and importance;
- to keep under review cases of assistance received by any newspaper or news agency in India from any foreign source including such cases as are referred to it by the Central Government or are brought to its notice by any individual, association of persons or any other organization: Provided that nothing in this clause shall preclude the central Government from dealing with any case of assistance received by a

newspaper or news agency in India from any foreign source in any other manner it thinks fit;

- to undertake studies of foreign newspapers, including those brought out by any embassy or other representatives in India of a foreign state, their circulation and impact.
- to promote a proper functional relationship among sell classes of persons engaged in the production or publication of newspapers or in news agencies:
- to concern itself developments such as concentration of or other aspects of ownership of newspapers and news agencies which may affect the independence of the Press;
- to indurate such studies as may be entrusted to the council and to espousers its opinion in regard to any matter referred to it by the central government;
- to do such other acts as may be incidental or conductive to the discharge of the above functions.

**Powers**

Every inquiry held by the Council shall be deemed to be a judicial proceeding. Where, on receipt of a complaint made to it or otherwise, the Council has reason to believe that a newspaper has offended against the standards of journalistic ethics or public taste or that an editor or a working journalist has committed any professional mis-conduct or a breach of the code of journalistic ethics, the Council may, after giving the newspaper, the editor or journalist concerned an opportunity of being heard, hold an inquiry in such manner as may be provided by regulations made under this Act and, if it is satisfied that it is necessary so to do, it may, for reasons to be recorded in writing, censure the newspaper, the editor or journalist, as the case may be.

If the council finds there is no sufficient ground for holding an inquiry the petition is dropped. The decision of the Council shall be final and shall not be questioned in any court of law.

**General powers**

Every inquiry held by the Council shall be deemed to be a judicial proceeding. The general powers include:

- summoning and enforcing the attendance of persons and examining them on oath;
- requiring the discovery and production of documents;

- requisitioning any public record or copies thereof from any court or office;
- receiving evidence on affidavits; ÿ issuing commissions for the examination of witnesses or documents. ÿ any other matter which may be prescribed.

## 2.5. Cinematography Act 1952

The CBFC is a statutory body which regulates the public exhibition of films in India according to the provisions under the Cinematograph Act, 1952.

The Cinematograph Act of 1952 enshrines certain guidelines that tame the public expression of ideas, opinions and imagination via films by filmmakers. Cinema has opened up to new possibilities and debatable themes in the social and political arenas. With the rapid technological advancement, it is easy to abuse the wonders of technology and portray themes that are hurtful to social conformations.

### Film censorship and Legislative development in India

The film censorship is technically a Colonial concept. Initially in British India silent films were a source of private entertainment. However, with the passage of time cinema became an Indian fancy. Thus, regulations had to be put on the exhibition of films. The first Cinematograph bill was proposed in 1917 with the purpose of protecting public morality from the exhibition of objectionable films.

It is interesting to note that the Indian legislative Council opposed the passage of such a bill for the sake of liberty. Regardless, the colonial state approved the *Cinematograph Act in 1918*. This Act came into effect from 1 August 1920 and it inaugurated the concept of film censorship in India. The 1918 Act dealt with two issues:

1. the licensing of cinema houses.
2. the certification of films according to its suitability for public exhibitions.

A separate authority was set up; without the authority's permission, no film could be exhibited.

Post India's independence in 1947, the new government felt the necessity to retain film censorship. However, few amendments were made to the Cinematograph Act 1918 in 1949. Two categories of film certification were created, '**A'** certificate for restricting viewership to adults and **'U'** certificate for an unrestricted exhibition. The 1949 amendment also provisioned for the setting up of a central censorship board instead of a regional one. In 1951 the Central Board of Film Censor was formed by the Ministry of Information and broadcasting.

Subsequently, a consolidated statute, the Cinematograph Act was enacted in 1952 which

empowered the central government authority to constitute a censorship board.

**Formation of CBFC**

The Central Board of Film Censors was renamed into the Central Board of Film Certification on June 1, 1983. This board implements and follows the provisions under the Cinematograph Act, 1952. The chairperson and other members are appointed by the Central Government.

Board certifies films without which they are not eligible for public exhibition. *Section 5B(1)* of the CA, 1952 empowers the CBFC to examine and implement principles of sovereignty and integrity of India while certifying a film. It also requires the board to check works against the security of the States, friendly relations with foreign States etc.

Objectives of Film Certification

*Section 5B(2)* lays down the principles to be followed by the CBFC while sanctioning films. The guidelines require the CBFC to ensure that-

1. the medium of film conforms to the values of the society.
2. creative freedom or artistic expression shall not be unreasonably curbed.
3. the certification must be responsive to social change.
4. the film must provide clean and healthy entertainment.
5. the film must be cinematical of a decent standard and is of aesthetic value.
6. The CBFC must judge the film in its entirety and not from a one-track biased perspective.

Organizational setup of CBFC

The CBFC is a bi-level association. It is headquartered at Mumbai and has 9 Regional Offices. These Regional Offices assist in the examination of films.it is interesting to note that the members of the Advisory Panel are from different walks of life who are nominated by the Central Government.

**Board of CBFC**

The actual statutory power to certify films lies with the Board of CBFC. The main CBFC Board consists of a Chairman and other members 12 to 25 in the number who are appointed by the Central Government. It is interesting to note that there are no prescribed minimum qualifications required to be a member of the CBFC as under the Cinematograph Act. Tenure of members is also very flexible and no maximum or minimum tenure is set. The tenure is in fact subjected to the pleasure of the Central Government. The Central Government can terminate

tenure whenever possible on reasonable grounds. The chairman, however, holds office for a period of 3 years only. On exception, the chairman continues until his successor is appointed.

**Regional Offices of CBFC**

The nine Regional Offices have a particular regional officer who supervises it. They are situated at Kolkata, Bangalore, Chennai, Guwahati, Cuttack, Mumbai, Hyderabad, New Delhi and Thiruvananthapuram.

**Judicial Pronouncements**

1. In the criminal appeal *Raj Kapoor v. State [AIR 1980 SC 285]*, the Apex Court laid down by that if film certificate is granted by the censor board under *Section 6* of the CA, 1952, the court shouldn't disregard the decision because of the fact that an expert committee judges the suitability of films for the audience. The expert committee knows better and their understanding of the principal ingredients of the obscenity would also be better.
2. In the landmark case of *K.A Abbas v. Union of India [AIR 1971 SC 481]*, the Delhi High Court explained the broad legal governing principles on the censorship issue related case *Srishti School of Art, Design and Technology v. Chairman, CBFC [2011 IIIAD (Delhi) 289]*. the following points were summarised in 2011 by the Delhi HC:

- Reasonable standards must be adopted while judging.
- The onus of proof of obscenity must be provided by the petitioner (Government).
- The film must be judged in its entirety in order to determine whether a particular scene in it offends Cinematograph guidelines or not.
- The Petitioners must also prove the proximate and direct nexus of the film to endangering public order
- The courts shouldn't ordinarily disregard CBFC's decisions regarding film certification unless it is proven to be unreasonable.

3. In *S. Ranga Raan v. P. Jagjivan Ram [(1989) 2 SCC 574]*, the issue raised was whether the Tamil Film 'Ore Oru Gramathile' should be granted the "U" certificate. The film apparently deprecated the exploitation of people on the basis of their caste.

The Supreme Court held that as long as there is no utterance in the film that threatens to overthrow the government by unconstitutional means and there is no indication as to impairment in the integration of the country the U certificate can be conferred.

4. In *Gita Ram v. State of HP [AIR 2013 641]*, the appellants were caught while showing the blue film named "size matter" to young men in their premises. The wrongdoers were convicted and sentenced accordingly for an offence punishable under *Section 292* r/w *Section 34* of the Indian Penal Code. They were also subjected to *Section 7* of the Cinematograph Act.

**Need for reform in the CBFC and the Statute**

In recent times it has been debated that the CA, 1952 is a pretty outdated statute. The colonial-era Statute needs to be updated as the societal mindset has changed and the standard of visual entertainment has also changed. Famous director Rakeysh Omprakash Mehra has stated that society has adapted itself to a different world and therefore, it is high time that things go to the next level. With the advancement in technology and the amount of connectivity and information available nowadays benefits the film industry in more ways than one. However, the age-old statute restricts a few of the creative possibilities due to its backwardness. An immediate change is the need of the hour. The time when the act was passed cannot be applied to the present.

The *Mudgal Committee* has recommended a few important changes. One of the most important recommendations was the need for change in name of the 'advisory panel' to 'screening panel'. The committee also recommended that the panel must consist of 9 members in such a manner in order to ensure language diversity via representation. At least 2 lady members must be included. The Mudgal committee also mentioned that the present method of appointment is more political than practical. It is also observed that the CBFC often contains members who have little knowledge of the intricacies of Indian cinema and the real societal standards.

Another suggestion was to widen the scope of jurisdiction of the Film Certificate Appellate Tribunal. The suggestion is that tribunals can hear cases regarding objection in the film rather than courts. This would save time and resources a bit more than the usual tedious court procedure.

**2.6. Censorship**

CENSORSHIP OF FILMS IN INDIA

I. Introduction

Censorship is defined by the Oxford Dictionary as the *'prohibition or suppression of any part of the news, books, films, etc. that are considered politically unacceptable, obscene, or a threat to*

*security.'* Films are considered an excellent medium of communication with the general public. The evolution of technology has brought a sea of change in the way films have been able to reach the public in every corner of India. Additionally, it has boosted the power of films to significantly contribute to the cultural and social development of the country. Generally, Press and Films enjoy the same right and status as far as the constitution freedom related to expression and spreading of an idea is concerned. **Article 19(1)** of the ***Constitution of India*** guarantees freedom of speech and expression. Hence, both Press and Films are regulated under this provision. It is pertinent to note that the above right is not absolute and has certain limitations. Matters that are against foreign relations, public policy, integrity and sovereignty of the State, decency and morality, public order, etc. are certain limitations to the above, as mentioned in the **Article 19(2)** of the Constitution of India.

II Censorship of Films

The ***Cinematograph Act, 1952*** (the Act), ensures that films fulfill the objectives prescribed by law. In the Act is a provision for the establishment of a *Central Board of Film Certification* (the Board). This is the regulatory body in India that issues a certificate to the makers of films for public exhibition. Once the Board has examined a film, the Board can:

- Sanction the film for unrestricted exhibition;
- Sanction the film for public exhibition limited to adults;
- Direct such modifications and excisions in the film before sanctioning the film to any of the above;
- Refuse to sanction the film for exhibition completely.

One of the first cases where the issue of censorship of film was raised is ***K A Abbas v Union of India***, where the Supreme Court of India considered the vital question related to pre-censorship of cinematography in relation to the freedom of speech and expression that is guaranteed under the Constitution of India. It was held by Hidayatullah, C.J, that censorship of films which includes pre-censorship was constitutionally lawful. Though, he added, that unjustified restriction on freedom of expression by the Board should not be exercised. In the case of ***S. Rangrajan v Jagjivan Ram***, Supreme Court faced a similar question, and was of the view that *'if the exhibition of the film could not be validly restricted under **Article 19(2)**, risk of procession and demonstration was not a valid ground to suppress the same.'* The Supreme Court added that it was the State's duty to protect the freedom of expression. The Supreme Court of India in giving

its judgement in the case of ***Bobby Art International v Om Pal Singh Hoon*** was of the opinion that, a film must be judged in its entirety. The court added that where the theme of the film is to condemn violence and degradation, scenes of expletives to advance the message, which was the main intention of the film, is permissible.

III Types of Certifications

There are mainly four kinds of certifications given by the Central Board of Film Certification:

*1.Universal (U)*

This type of certifications is the Unrestricted Public Exhibition, and the same holds no limitations for the age groups that may watch the same. They could be family, educational or social oriented themes. This category has fantasy violence and minimal foul language. When a movie is being certified U by the Board, it must ensure that the movie is suitable for a family to watch it together including the children.

*2.Parental Guidance (UA)*

This type of certification explains that the film is appropriate for all age groups. However, it is in the interest of the children below the age of 12 to be accompanied by their parents. The reason could that the theme of the movie may not be the most appropriate for the child without the guidance of their parents.

*3.Adults Only (A)*

As the certification suggests, this type of film is restricted to adults only. Persons above the age of 18 are adults, for the meaning of this certification. The theme may contain disturbing, violent, drug abuse and other related scenes which are not considered suitable for viewing by children who may be influenced by the same negatively. Films that meet the requisites of the abovementioned criteria but are not suitable for exhibition to children or those below the age of 18 shall be certified A.

*4.Restricted to Special Class of Persons (S)*

This is the last type of the certifications under the board, and the same explains that the films which are rated S are meant for a special class of persons only. For example, doctors. If the Board is of the opinion the with regards to content, nature and the theme of the film is to be restricted to members of a class of persons or any profession, the above certification shall be given to such film.

## IV OBJECTIVES OF FILM CERTIFICATION

*A.**The main objectives of the Board for the above are as follows***:

1. To ensure that the medium of the film responsible. Additionally, to safeguard the sensitivity of standards and value of the society.
2. To ensure that creative freedom and expression are not unjustifiably curbed.
3. To ensure to adapt to the social changes.
4. To ensure the theme of the film provides a healthy and clean entertainment.
5. To ensure that the film is of cinematically an adequate standard and aesthetic value.

*B.**In pursuance of the above, the Board must ensure that***:

1. Activities that anti-social such as violence are not justified or glorified;
2. The way criminals are depicted, and other related words or visuals must not incite the commission of any kind of offence;
3. The scenes showing ridicule and abuse of mentally and physically handicapped, cruelty or abuse of animals, involving children as victims of violence and abuse must not be presented needlessly;
4. Avoidable or pointless scenes of cruelty, horror and violence that are intended to provide entertainment but may have the effect of dehumanizing or desensitizing people are not shown;
5. Scenes that glorify or justify drinking are not shown;
6. Scenes that tend to justify, glamourize or encourage drug addiction are not shown. Additionally, similar scenes for the consumption of tobacco or smoking must not be shown;
7. Human susceptibilities are not offended by obscenity, vulgarity or obscenity;
8. Words with dual meanings that cater to dishonourable instincts are not used;
9. Scenes denigrating or degrading women in any manner is not shown;
10. Scenes that involve sexual violence against women in the form of rape or any other form of molestation are avoided. If the theme of the movie requires so, the same must shall be reduced to a minimum and no details are to be shown. The same goes for scenes that involve sexual perversion;
11. Words or visuals contemptuous of religious, racial or other groups must not be presented;

12. Words or visuals that promote obscurantist, communal, anti-national and anti-scientific attitude are not shown;
13. The integrity and sovereignty of the country is not called in question;
14. The security of the country is not endangered or jeopardized;
15. Relations with foreign states are not overwrought;
16. Public order is maintained, and not hindered;
17. Words or visuals involving defamation of a body or an individual, or contempt of court are not shown;
18. National emblems and symbols are not presented except according to the provisions of Emblems and Names (Prevention of Improper Use) Act, 1950 (12 of 1950).

***C.*The Board shall additionally ensure that a film:**

1. Is judged as a whole from the perspective of its overall impact; and
2. Is inspected in the light of the period illustrated in the film along with contemporary standards of India and the people who the movie is related to, to ensure that the firm does not corrupt the morality and ethics of the audience.

Applying to all of the above categories, the Board shall ensure the titles of each film is carefully scrutinized to ensure they are not vulgar, violating, provocative or offensive to the guidelines mentioned above.

V. Constitution

The Board consists of a Chairman and non-official members, all of whom are appointed by the Central Government. It is headquartered in Mumbai, Maharashtra. Additionally, it has nine Regional offices, namely, Chennai, Bangalore, Hyderabad, New Delhi, Guwahati, Cuttack, Kolkata and Thiruvananthapuram.

Regional Offices, as mentioned above, are assisted by the Advisory Panels. The Advisory Panels, like the Board, is selected by the Central government. The members chosen for the panel are from different walks of life, and they are chosen for a period of 2 years.

It has a two-tier jury system, the Examining Committee and the Revising Committee.

VI. Common Reasons for Censorship or Banning of a Film

In light of the history of why a film has been banned, or parts of it are censored, the main categories for why the same is done are as follows:

1. **Sexuality**: A rigid social structure has been followed in Indian society. Hence, a medium which portrays sexuality regardless of the audio, written or visual form, which has not been fathomed by the society and is concerned a social stigma is banned on the grounds that it might have the effect of undignified morals of Indians.
2. **Politics**: The isolation of political forces is not far when one talks about censorship. The description of an allegorical political scene, directly or indirectly, is banned by the authorized party to it. Overt political overtones are not appreciated by the government and hence is a common reason why certain films are either entirely banned, or such scenes are censored or removed.
3. **Communal Conflict**: Under a heterogeneous nation like India, if a film incites or spurs any type of communal conflict, the same is censored. The aim is to avoid the consequences such a film would have on the audience it intentionally or unintentionally targets. If the state believes that a movie would open a window for riots by a community for the way they have been portrayed in the film, the same is banned by the Board or censored.
4. **Incorrect Portrayal:** Sometimes, a situation arises where a well-known personality objects his own depiction in a medium which would be exhibited, and consequently goes for censoring the same. For more clarity, in a situation where the medium is of biographical nature, and the person on whom it is based does not approve the authenticity of the same, there have been times when the person has sued for the medium not to be released, or be edited and released upon approval of such person.
5. **Religion:** Religion does not appreciate any type of defiance or disobedience towards the values it proliferates. Hence, any medium which directly or indirectly distorts any aspect of the religion including its preaching, values, idols, to name a few, is highly criticized and therefore, censored.
6. **Extreme Violence:** Indubitably, the portrayal of extreme gore and violence may meddle and disturb the human mind. Viewing such scenes may have a negative psychological effect on the mind. If the Board of a similar opinion that such a scene through any medium may have an underlying negative impact on the viewer, contrary to the entertainment or knowledge such scene tries to bestow, the same may be banned, edited or censored by the Board in public interest.

VII. Conclusion

In India, the basis on which a film is censored or banned has been evidently traditional norms. That being said, what is censored today, may not be censored tomorrow. The socio-economic dynamics of a country is continually evolving. Hence, all regulations must try to adapt to the same. The Constitution of India guarantees freedom of speech and expression with justifiable limitations on certain expressions like contempt of court, morality and decency, the security of the State, public order, incitement to an offence, defamation, etc. and rightly so

**2.7. <u>Prasara Bharathi Act 1990</u>**

Media have to be free to be credible, and competent. Too much political pressure and intervention usually makes the media to be a puppet in the hands of politicians and pressure groups. Media in a democracy at the same time should not be that free to do anything that may go against the concept of a welfare state.

Therefore, the question autonomy with accountability, or accountability without autonomy, or autonomy without accountability is of prime importance. India needs a free and objective media. Greater accountability increases political involvement, and greater autonomy may decrease credibility

With the technological development government's ability to enforce regulations, is weakening. Technology challenges, defeats broadcasting controls and regulations. With the advent of cable TV, Direct-to-home TV, the Internet and a convergence in communication modes, there is no foolproof way to control the movement of data, information and entertainment.

All India Radio and Doordarshan were under direct control of the government between 1959-1997. The 1990 Prasar Bharati Act was implemented in 1997 via an ordinance by the UF government's Jaipal Reddy. But in May 1998, it was allowed to lapse by his successor, Sushma Swaraj, demanding more accountability. Swaraj's successor, Mahajan, stayed with her decision. Since then, Prasar Bharati has acting CEOs. Other vacancies on the Board exist from the summer of 1998 — including the vital posts of chairman, and member finance. There are no director generals for AIR or DD either. Prasar Bharati struggles to live.

The problem lies with not 'accountability. Because, there is an I&B nominee on the Board and an I&B parliamentary standing committee; an annual report has to be submitted to Parliament; and there's always the Comptroller and Auditor General. Problem lies with political interference in appointments.

**Brief Study of the Prasar Bharati Act, 1990**

The Prasar Bharati Act aims at establishing a Broadcasting Corporation for India, to be known as Prasar Bharti. All property, assets, debts, obligations and liabilities incurred, all contracts entered into, cases of akashvani and Doordarshan, shall be transferred to management of the corporation. The corporation is free of Income tax.

The corporation shall function under the government, functioning under its directions, submitting information to government whenever asked for, accounts are auditable by government, and government grants are assured.

The primary duty of the corporation is to organize and conduct public broadcasting service to inform, educate and entertain the public and to ensure a balanced development of broadcasting on radio and television;

- upholding the unity and integrity of the country and the values enshrined in the constitution;
- safeguarding the citizen's right to be informed freely, truthfully and objectively on all matters of public interest, national or international, and presenting a fair and balanced flow of information including contrasting views without advocating any opinion or ideology of its own;
- paying special attention to the fields of education and spread of literacy, agriculture, rural development, environment, health and family welfare and science and technology;
- providing adequate coverage to the diverse cultures and languages of the various regions of the country by broadcasting appropriate programmes;
- providing adequate coverage of sports and games so as to encourage healthy competition and the spirit of sportsmanship;
- providing appropriate programmes keeping in view the special needs of the youth; informing and stimulating the national consciousness in regard to the status and problems of women and paying special attention to the upliftment of women;
- promoting social justice and combating exploitation, inequality and such evils as untouchability and advancing the welfare of the weaker sections of the society;
- safeguarding the rights of the working classes and advancing their welfare;
- serving the rural and weaker sections of the people and those residing in border regions, backward or remote areas;

- providing suitable programmes keeping in view the special needs of the minorities and tribal communities;
- taking special steps to protect the interests of children, the blind, the aged, the handicapped and other vulnerable sections of the people;
- promoting national integration by broadcasting in a manner that facilitates communication in the languages in India; and facilitating the distribution of regional broadcasting services in every state in the languages of that state;
- providing comprehensive broadcast coverage through the choice of appropriate technology and the best utilization of the broadcast frequencies available and ensuring high quality reception;
- promoting research and development activities in order to ensure that radio and television broadcast technology are constantly updated; and
- expanding broadcasting facilities by establishing additional channels of transmission at various levels.

**2.8. Cable T.V. Act -1995**

Before the introduction of cable television in India, broadcasting was solely under the control of the State. The Government of India was caught unprepared with the emergence of cable networks and broadcasting through satellites in the early 1990s. The Government was not able to put a check on transmission and broadcast of television through foreign satellites.

The necessity of procuring licence for operating cable networks was first mentioned by the Rajasthan High Court in the case of *Shiv Cable TV System v. State of Rajasthan*. In this case, the district magistrate ordered a ban on cable networks as they were being operated without licence. Subsequently the order of the district magistrate was challenged in the Rajasthan High Court on the ground that the order was in violation of fundamental right to freedom trade and profession. The high court held that there was no violation of the right to freedom of trade because cable networks fall within the definition of "wireless telegraph apparatus" under the Indian Wireless Telegraphy Act and therefore it necessary to have licence to operate such network. This highlighted the need for having a framework for the regulation of cable networks in India which led to the enactment of the Cable Television Networks (Regulation) Act, 1995.

**Object of the Act**

The object of the Act was to regulate the 'haphazard mushrooming of cable television networks'. Due to the lack of licensing mechanism for cable operators; this resulted in large number of cable operators, broadcasting programmes without any regulation. The Act aimed at regulating content and operation of cable networks. This was due to the availability of signals from foreign television networks via satellite communication. The access to foreign television networks was considered to be a "cultural invasion" as these channels portrayed western culture. It also wanted to lay down the "responsibilities and obligations in respect of the quality of service both technically as well content wise, use of materials protected under the copyright law, exhibition of uncertified films, and protection of subscribers from anti-national broadcasts from sources inimical to national interests".

There were three amendments made to the Act.

The Act is divided into five chapters. The first chapter discusses the scope and extent of the Act and meaning of the terms used in the Act. The second chapter deals with "Regulation of Cable Television Network". The third chapter relates to "Seizure and Confiscation of certain Equipments". The fourth chapter focuses on "Offences and Penalties". The fifth chapter covers other miscellaneous provisions.

**Regulation of Cable Television Network**

The regulation of cable television network under the Act is ensured through a two step process. In order to keep track of cable operators, it has mandate a compulsory registration for cable operators. It also lays down provisions to regulate content to be broadcasted by the cable operator.

**Registration of Cable Operators**

In order to regulate cable television networks, it was made mandatory for cable television network operators to be registered. Procedure for registration is laid down is section 5 of the Act. Any person who is operating or desires to operate a cable network may apply for registration to the registering authority.

An application for registration of cable operator has to be made under Form 1 along with the payment of fees of Rs.50 to the head post master within whose territorial jurisdiction the office of cable operator is situated. The registration certificate which is issued by the registering authority after inspection is valid for 12 months and can be renewed.

The registering authority may also refuse the registration of a cable operator. The reason for such refusal has to be recorded in writing and communicated to the applicant.

Section 4A was inserted into the Act by the TRAI (Amendment) Act, 2002. Section 4A deals with "transmission of programmes through addressable system". [Refer to section on "2003-Amendment to the Cable Television Networks (Regulation) Act, 1995 (Amendment Act)"].

**Content Regulation**

The Central Government, in public interest can put an obligation on every cable operator to transmit or retransmit a programme of any pay channel through addressable system. In public interest the central government may also 'specify one or more free-to-air channels to be included in the package of channels' (basic service tier). The Central Government may also, in public interest specify the maximum amount which can be charged by the operator to the subscriber for receiving the programmes transmitted in the basic service tier provided by such cable operators. The cable operators have to publicize to subscribers the subscription rates of each pay channel at regular intervals.

Sections 5 and 6 of the Act deal with advertisement code and programme code. All cable services should be in conformity with the codes. Under section 7, cable operators have to maintain a register as to the content transmitted or retransmitted. All cable operators shall compulsorily re-transmit Doordarshan channels.

Section 9 of the Act mandates 'use of standard equipment in cable television network'. It is the duty of the cable operator to make sure that the cable television networks do not interfere with authorized telecommunication systems.

**Offences and Penalties**

Section 11 gives power to the authorized government authority to seize any cable operator's equipment, if such officer has reason to believe that the cable operator is using the equipment without proper registration.

Sections 16, 17 and 18 of the Act deal with offences under the Act. They lay down punishments for any act which is in contravention with the provisions of the Act.

Section Ingredients of the Offence Penalty/ Fine

| | | |
|---|---|---|
| 16 | Anyone who is held to be in violation of the provisions of this Act | For the first offence: Imprisonment for a term which may extend to 2 years or with fine which may extend to Rs. 1000 or with both.<br>For every subsequent offence: Imprisonment for a term which may extend to 5 years and with fine which may extend to Rs. 5000. |

Section 17 deals with when an offence under this Act is committed by a company; in this case the person in charge will be liable.

The Act also gives power to the authorized officer to prohibit the transmission of certain programmes in public interest under section 19 of the Act.

Under section 20 of the Act, the Central Government in public interest may prohibit the operation cable television network. The Central Government may make such an order in the interest of the (i) sovereignty and integrity of India; or (ii) security of India; or (iii) friendly relations of India with any foreign state; or (iv) public order, decency or morality.

### 2.9. Conditional Access System (CAS)

**Conditional access** (abbreviated **CA**) or **conditional access system** (abbreviated **CAS**) is the protection of content by requiring certain criteria to be met before granting access to the content. The term is commonly used in relation to digital television systems and to software.

In order to protect the content and rights, digital TV operators turn to the technology known as conditional access or CA. Conditional access, as the name itself suggests, provides the service of controlling the access to digital television to people who are or are not subscribers. Their end goal is simple and clear – encrypting the channel signal and decrypting it only for the viewers who meet the required conditions. Besides the most common use by digital TV operators, conditional access can also be applied to digital radio and data broadcasts, non-broadcast information and interactive services. The equipment and software required for the system is supplied by the CAS provider, so that the broadcasters can incorporate it in their own equipment.

Every CA system is made up of the following fundamental components: a Subscriber Management System, a Subscriber Authorization System, a security module and a set-top box.

Even though securing the content is of outmost importance to pay TV operators, the development and maintenance of a conditional access system can be extremely time consuming and ineffective. That is why operators entrust the safety of their content to companies specializing in pay TV protection technology.

We, ASI, offer the extensive set of features which make up Conax Contego's sophisticated platform as well as the set top box itself.

Conax Contego unifies all DVB, IPTV and OTT clients in one security management system. Keeping up with the wide array of content offered, as well as ways and devices to access it by, presents an ongoing challenge of securing the whole of the pay TV eco-system. Conax Contego provides solutions for secure eco-systems through support for linear, time shifting and on demand content viewed on every available consumer device, from smart TVs to smart phones, laptops and tablets. The service presents high flexibility to the size and settings of any business model and operation requirement, allowing remote activation of new features and increasing of capacity and performance.

### 2.10. Convergence Bill

The dawn of the 21st century marked the end of Gutenberg era and a sea change in the field of technology, entertainment and media as a new platform was created through convergence. "Convergence" in respect of media and entertainment, in its simplest form, means the combination of new media and old media within a single piece of media work, bringing together different media products and technology.

In other words, convergence means the coalescence and merging of traditionally separated technologies and forms of communication into one, as far as possible.

**Some examples**

This can be illustrated by the following example: Mobile phones were devised only to make and receive calls and send instant text messages. However, with the evolution of technology, mobile phones now perform several other functions, doubling as cameras, video recorders, radios and mp3 players, and providing access to games and the internet.

his is a result of the convergence of many technologies, which allows one media product to perform many different tasks. A similar example is that of a television which, in addition to its traditional use for watching programmes or movies, is now used to play games through Xbox, PlayStation, etc.

Convergence has been most apparent in the environment of digital communications, with the merging of the television, computer and telecommunications industries. This has taken place to cater to consumer demand for access to content any time and anywhere.

The changing times have brought trans-media exploitation of branded properties including Star Wars, Pokémon and Harry Potter from Hollywood, Tare Zameen Par and Ra-One from Bollywood, and many others. To expand their potential audience and market, such brands have associated other forms of media with their original product.

The level of uncertainty has increased as a result of the drift in technology and the rise of new media markets. Moving to convergent media may prove to be expensive, unpredictable and uncertain in the beginning, but it will open many possibilities and lead to more personalized content, tailored to users' needs and wants.

**Scenario in India**

The birth of the 21st century had a magical effect on India. The country entered into a new digital era in which three vital ingredients – communication, information and entertainment – would be the prime drivers of the economy.

In 2000, the government of India introduced a proposed Communication Convergence Bill (known as the Convergence Bill), with the objective of establishing a converged regulatory framework to promote and develop the communications sector (including broadcasting, telecommunications and multimedia) in an environment of increasing convergence of technologies, services and service providers.

The regulatory framework aims to keep pace with the convergence of telecom, internet and broadcasting services, which is taking place all over the world. The Communication Bill is expected to repeal legislation such as the Indian Telegraph Act, 1885; the Indian Wireless Telegraphy Act, 1933; the Cable Television Networks (Regulation) Act, 1995; and the Telecom Regulatory Authority of India Act, 1997.

**Bill's objectives**

The main objectives of the Convergence Bill are:

(a) To facilitate the development of a national communications infrastructure, in order to provide a wide choice of services to consumers;

(b) To establish a regulatory framework that addresses the convergence of technologies, and defines the powers and roles of a single regulatory and licensing authority for broadcasting, telecommunications and multimedia;

(c) To establish a basis for codes and standards for broadcasting content.

The bill proposes to achieve these objectives by establishing a new regulatory body, to be known as the Communications Commission of India. The commission would replace the Telecom Regulatory Authority of India, and would become the sole regulator of the broadcasting, telecommunications and multimedia sectors.

**Conclusion**

Convergence in the media and entertainment sector is at a nascent stage in India. Technological changes at every level are required to make it a reality. The Convergence Bill is a significant step towards the development of future-oriented vision with regard to India's information technology, broadcast, communications and entertainment industries.

### 2.11. Cyber Laws

Cyber Laws of India

---

In Simple way we can say that cyber crime is unlawful acts wherein the computer is either a tool or a target or both. Cyber crimes can involve criminal activities that are traditional in nature, such as theft, fraud, forgery, defamation and mischief, all of which are subject to the Indian Penal Code. The abuse of computers has also given birth to a gamut of new age crimes that are addressed by the Information Technology Act, 2000.

Cyber law, also known as Internet Law or Cyber Law, is the part of the overall legal system thet is related to legal informatics and supervises the digital circulation of information, e-commerce, software and information security. It is associated with legal informatics and electronic elements, including information systems, computers, software, and hardware. It covers many areas, such as access to and usage of the Internet, encompassing various subtopics as well as freedom of expression, and online privacy.

Cyber laws help to reduce or prevent people from cybercriminal activities on a large scale with the help of protecting information access from unauthorized people, freedom of speech related to the use of the Internet, privacy, communications, email, websites, intellectual property,

hardware and software, such as data storage devices. As Internet traffic is increasing rapidly day by day, that has led to a higher percentage of legal issues worldwide. Because cyber laws are different according to the country and jurisdiction, restitution ranges from fines to imprisonment, and enforcement is challenging.

Cyberlaw offers legal protections for people who are using the Internet as well as running an online business. It is most important for Internet users to know about the local area and cyber law of their country by which they could know what activities are legal or not on the network. Also, they can prevent ourselves from unauthorized activities.

The Computer Fraud and Abuse Act was the first cyber law, called CFFA, that was enacted in 1986. This law was helpful in preventing unauthorized access to computers. And it also provided a description of the stages of punishment for breaking that law or performing any illegal activity.

**We can categorize Cyber crimes in two ways**

- The Computer as a Target :-using a computer to attack other computers. e.g. Hacking,Virus/Worm attacks,DOS attack etc.
- The computer as a weapon :-using a computer to commit real world crimes. e.g. Cyber Terrorism, IPR violations,Credit card frauds,EFT frauds, Pornography etc.
- Cyber law (also referred to as cyberlaw) is a term used to describe the legal issues related to use of communications technology, particularly "cyberspace", i.e. the Internet. It is less a distinct field of law in the way that property or contract are as it is an intersection of many legal fields, including intellectual property, privacy, freedom of expression, and jurisdiction. In essence, cyber law is an attempt to integrate the challenges presented by human activity on the Internet with legacy system of laws applicable to the physical world.

Cyber Law in INDIA

---

*Why Cyberlaw in India ?*

When Internet was developed, the founding fathers of Internet hardly had any inclination that Internet could transform itself into an all pervading revolution which could be misused for criminal activities and which required regulation. Today, there are many disturbing things

happening in cyberspace. Due to the anonymous nature of the Internet, it is possible to engage into a variety of criminal activities with impunity and people with intelligence, have been grossly misusing this aspect of the Internet to perpetuate criminal activities in cyberspace. Hence the need for Cyberlaws in India.

*What is the importance of Cyberlaw ?*

Cyberlaw is important because it touches almost all aspects of transactions and activities on and concerning the Internet, the World Wide Web and Cyberspace. Initially it may seem that Cyberlaws is a very technical field and that it does not have any bearing to most activities in Cyberspace. But the actual truth is that nothing could be further than the truth. Whether we realize it or not, every action and every reaction in Cyberspace has some legal and Cyber legal perspectives.

Importance of Cyber Law

Cyber laws are formed to punish people who perform any illegal activities online. They are important to punish related to these types of issues such as online harassment, attacking another website or individual, data theft, disrupting the online workflow of any enterprise and other illegal activities.

If anyone breaks a cyber law, the action would be taken against that person on the basis of the type of cyberlaw he broke, where he lives, and where he broke the law. It is most important to punish the criminals or to bring them to behind bars, as most of the cybercrimes cross the limit of crime that cannot be considered as a common crime.

These crimes may be very harmful for losing the reliability and confidentiality of personal information or a nation. Therefore, these issues must be handled according to the laws.

- When users apply transactions on the Internet, cyber law covers every transaction and protect them.
- It touches every reaction and action in cyberspace.
- It captures all activities on the Internet.

*Does Cyberlaw concern me ?*

Yes, Cyberlaw does concern you. As the nature of Internet is changing and this new medium is being seen as the ultimate medium ever evolved in human history, every activity of yours in Cyberspace can and will have a Cyberlegal perspective. From the time you register your Domain Name, to the time you set up your web site, to the time you promote your website, to the time when you send and receive emails , to the time you conduct electronic commerce transactions on the said site, at every point of time, there are various Cyberlaw issues involved. You may not be bothered about these issues today because you may feel that they are very distant from you and that they do not have an impact on your Cyber activities. But sooner or later, you will have to tighten your belts and take note of Cyberlaw for your own benefit.

## Advantages of Cyber Laws

The IT Act 2000 attempts to change outdated laws and provides ways to deal with cyber crimes. We need such laws so that people can perform purchase transactions over the Net through credit cards without fear of misuse. The Act offers the much-needed legal framework so that information is not denied legal effect, validity or enforceability, solely on the ground that it is in the form of electronic records.

In view of the growth in transactions and communications carried out through electronic records, the Act seeks to empower government departments to accept filing, creating and retention of official documents in the digital format. The Act has also proposed a legal framework for the authentication and origin of electronic records / communications through digital signature.

- From the perspective of e-commerce in India, the IT Act 2000 and its provisions contain many positive aspects. Firstly, the implications of these provisions for the e-businesses would be that email would now be a valid and legal form of communication in our country that can be duly produced and approved in a court of law.
- Companies shall now be able to carry out electronic commerce using the legal infrastructure provided by the Act.
- Digital signatures have been given legal validity and sanction in the Act.

- The Act throws open the doors for the entry of corporate companies in the business of being Certifying Authorities for issuing Digital Signatures Certificates.
- The Act now allows Government to issue notification on the web thus heralding e-governance.
- The Act enables the companies to file any form, application or any other document with any office, authority, body or agency owned or controlled by the appropriate Government in electronic form by means of such electronic form as may be prescribed by the appropriate Government.
- The IT Act also addresses the important issues of security, which are so critical to the success of electronic transactions. The Act has given a legal definition to the concept of secure digital signatures that would be required to have been passed through a system of a security procedure, as stipulated by the Government at a later date.
- Under the IT Act, 2000, it shall now be possible for corporates to have a statutory remedy in case if anyone breaks into their computer systems or network and causes damages or copies data. The remedy provided by the Act is in the form of monetary damages, not exceeding Rs. 1 crore.

Areas involving in Cyber Laws

These laws deal with multiple activities and areas that occur online and serve several purposes. Some laws are formed to describe the policies for using the Internet and the computer in an organization, and some are formed to offer people security from unauthorized users and malicious activities. There are various broad categories that come under cyber laws; some are as follows:

**Fraud**

Cyber laws are formed to prevent financial crimes such as identity theft, credit card theft and other that occurring online. A person may face confederate or state criminal charges if he commits any type of identity theft. These laws have explained strict policies to prosecute and defend against allegations of using the internet.

**Copyrighting Issues**

The Internet is the source that contains different types of data, which can be accessed anytime, anywhere. But it is the authority of anyone to copy the content of any other person. The strict

rules are defined in the cyber laws if anyone goes against copyright that protects the creative work of individuals and companies.

**Scam/ Treachery**

There are different frauds and scams available on the Internet that can be personally harmful to any company or an individual. Cyber laws offer many ways to protect people and prevent any identity theft and financial crimes that happen online.

**Online Harassment and Stalking**

Harassment is a big issue in cyberspace, which is a violation of both criminal laws and civil. In cyber laws, there are some hard laws defined to prohibit these kinds of despicable crimes.

**Data Protection**

People using the internet depends on cyber laws and policies to protect their personal information. Companies or organizations are also relying on cyber laws to protect the data of their users as well as maintain the confidentiality of their data.

**Contracts and Employment Law**

When you are visiting a website, you click a button that gives a message to ask you to agree for terms and conditions; if you agree with it, that ensures you have used cyber law. For every website, there are terms and conditions available that are associated with privacy concerns.

**Trade Secrets**

There are many organizations that are doing online businesses, which are often relying on cyber laws to protect their trade secrets. For example, online search engines like Google spend much time to develop the algorithms that generate a search result. They also spend lots of time developing other features such as intelligent assistance, flight search services, to name a few and maps. Cyber laws help these organizations to perform legal action by describing necessary legal laws for protecting their trade secrets.

## 2.12. Information Technology Act 2000

Aim of the Act is to provide legal recognition for transactions carried out by means of electronic data interchange and other means of electronic communication, commonly referred to as "electronic commerce", which involve the use of alternatives to paper-based methods of communication and storage of information, to facilitate electronic filing of documents with the Government agencies and further to amend the Indian Penal Code, the Indian Evidence Act, 1872, the Bankers' Books Evidence Act, 1891 and the Reserve Bank of India Act, 1934 and for

matters connected therewith or incidental thereto.

The Act is adapted from the UN Model Law on Electronic Commerce agreed upon by nations 30th January, 1997.

**Brief Study of the Act**

Information Technology Act, 2000 extends to whole of India and under certain situations, to outside India. It came into effect 9th June, 2000.

Subscribers may authenticate an electronic record by affixing his digital signature through asymmetric crypto system and hash function which envelop and transform the initial electronic record into another electronic record. ("hash function" means an algorithm mapping or translation of one sequence of bits into another, generally smaller). If information or matter is authenticated by means of digital signature affixed in such manner as may be prescribed by the Central Government, it legally accepted.

Where any law provides that information or any other matter shall be in writing or in the typewritten or printed form, then, notwithstanding anything contained in such law, such requirement shall be deemed to have been satisfied if such information or matter is rendered or made available in an electronic form; and accessible so as to be usable for a subsequent reference.

Payment applications licenses etc. could be done electronically, in accordance with the prescription of the government.

Documents could be retained in electronic form for reference, and evidence.

Any matter could be published for the public in electronic form. However, it is not mandatory to do all transactions of publication in electronic form.

Prove for a transfer of electronic matter or document is when there exists an acknowledgement either electronic or in any other form.

Where any security procedure has been applied to an electronic record at a specific point of time. then such record shall be deemed to be a secure electronic record from such point of time to the time of verification.

A Controller of Certifying Authorities and deputies to be appointed by government to manage these processes. The Controller may perform all or any of the following **functions,** namely:—

1.exercising supervision over the activities of the Certifying Authorities;

2. certifying public keys of the Certifying Authorities;

3. laying down the standards to be maintained by the Certifying Authorities;

4. specifying the qualifications and experience which employees of the Certifying Authorities should possess;

5. specifying the conditions subject to which the Certifying Authorities shall conduct their business;

6. specifying the contents of written, printed or visual materials and advertisements that may be distributed or used in respect of a Digital Signature Certificate and the public key;

7. specifying the form and content of a Digital Signature Certificate and the key,

8. specifying the form and manner in which accounts shall be maintained by the Certifying Authorities; 9. specifying the terms and conditions subject to which auditors may be appointed and the remuneration to be paid to them;

10. facilitating the establishment of any electronic system by a Certifying Authority either solely or jointly with other Certifying Authorities and regulation of such systems;

11. specifying the manner in which the Certifying Authorities shall conduct their dealings with the subscribers;

12. resolving any conflict of interests between the Certifying Authorities and the subscribers;

13. laying down the duties of the Certifying Authorities;

14. maintaining a data base containing the disclosure record of every Certifying Authority containing such particulars as may be specified by regulations, which shall be accessible to public.

**Offences and Penalties**

If any person without permission of the owner or any other person who is in charge of a computer, computer system or computer network, access, changes, copies, destroys, virus, etc, shall be liable to pay damages by way of compensation not exceeding one crore rupees to the person so affected.

Those who fail to furnish any document, or report to the Controller or the Certifying Authority as required, shall be liable to a penalty not exceeding one lakh and fifty thousand rupees for each such failure.

Whoever contravenes any rules or regulations of this Act, for which no penalty has been separately provided, shall be liable to pay a compensation not exceeding twenty-five thousand

rupees to the person affected by such contravention or a penalty not exceeding twenty-five thousand rupees

Whoever knowingly or intentionally conceals, destroys or alters or intentionally or knowingly causes another to conceal, destroy or alter any computer source code used for a computer, computer programme, computer system or computer network, when the computer source code is required to be kept or maintained by law for the time being in force, shall be punishable with imprisonment up to three years, or with fine which may extend up to two lakh rupees, or with both.

Whoever with the intent to cause or knowing that he is likely to cause change information residing in a computer resource (hacking) shall be punished with imprisonment up to three years, or with fine which may extend upto two lakh rupees, or with both.

Whoever publishes or transmits or causes to be published in the electronic form, any material which is lascivious or appeals to the prurient interest or if its effect is such as to tend to deprave and corrupt persons who are likely, having regard to all relevant circumstances, to read, see or hear the matter contained or embodied in it, shall be punished on first conviction with imprisonment of either description for a term which may extend to five years and with fine which may extend to one lakh rupees and in the event of a second or subsequent conviction with imprisonment of either description for a term which may extend to ten years and also with fine which may extend to two lakh rupees.

Whoever makes any misrepresentation to, or suppresses any material fact from, the Controller or the Certifying Authority for obtaining any licence or Digital Signature Certificate, as the case may be. shall be punished with imprisonment for a term which may extend to two years, or with fine which may extend to one lakh rupees, or with both.

Any person who secures access to any electronic record, book, register, correspondence, information, document or other material without the consent of the person concerned discloses such electronic record, book. register, correspondence, information, document or other material to any other person shall be punished with imprisonment for a term which may extend to two years, or with fine which may extend to one lakh rupees, or with both.

Any unauthorized person who publishes digital signature certificates shall be punished with imprisonment for a term, which may extend to two years, or with fine which may extend to one lakh rupees, or with both.

Whoever knowingly creates, publishes or otherwise makes available a Digital Signature Certificate for any fraudulent or unlawful purpose shall be punished with imprisonment for a term, which may extend to two years, or with fine which may extend to one lakh rupees, or with both.

The provisions of this Act shall apply also to any offence or contravention committed outside India by any person irrespective of his nationality.

Any computer, computer system, floppies, compact disks, tape drives or any other accessories related thereto, in respect of which any provision of this Act, rules, orders or regulations has been or is being contravened, shall be liable to confiscation.

Police officer not below the rank of Deputy Superintendent of Police shall investigate any offence under this Act. Authorized by the Central Government in this behalf may enter any public place and search and arrest without warrant any person found therein who is reasonably suspected or having committed or of committing or of being about to commit any offence under this Act.

No person providing any service as a network service provider shall be liable under this Act, rules or regulations if he proves that the offence or contravention was committed without his knowledge or that he had exercised all due diligence to prevent the commission of such offence or contravention.

The government can make laws with regard to the Act, direct and guide state governments in effecting the provisions. It can make necessary amendments.

No suit, prosecution or other legal proceeding shall lie against the Central Government, the State Government, the Controller or any person acting on behalf of him, the Presiding Officer, adjudicating officers and the staff of the Cyber Appellate Tribunal for anything which is in good faith done or intended to be done in pursuance of this Act or any rule, regulation or order made.

**Unit-3**

**3.1. Indian Penal Code**

A Code is a synthesis of a heterogeneous mass into a comprehensive system. Indian Penal Code is a comprehensive piece of legislation that provides for a large variety of offenses. Separate enactments cover the offences that are not covered in the Code. From the very olden times, the rule of Dharma guided the justice process. There were different justice systems according to the caste system. Women and Brahmins were exempted from capital punishment. With the advent

of Muslim rule judicial process were according to the Muslim laws. During the colonial period the judicial regulations of Lord Cornwallis (1793) formed the foundations of Indian judicial system. Regulating Act of 1773 formed the supreme Court of India. Indian Councils Act 1861 prepared separate short codes for judicial administration. During British rule, the English Criminal law with some modifications was in effect in the Presidency towns of Bombay, Culcutta and Madras. In all other places Muslim Criminal Law was in effect. Indian Penal Code was drafted by the First law Commission headed by Lord Macaulay. It was approved on Oct. 6, 1860, and came into effect on Jan 1, 1862. After the independence it was revised.

### 3.2. Cr.PC sections relevant to media

### 3.3. Prevention of Publication and Objectionable Matter Act, 1955

**PREVENTION OF PUBLICATION OF OBJECTIONABLE MATTER ACT, 1976**

The Act was passed along with amendment to Article 19 (2) of the Constitution. The Act empowered the government to demand and forfeit security for publication of "objectionable matter". Aggrieved owners and printers were given right to demand trial by jury. It remained in force till 1956.

An Act to provide against the printing and publication of incitement to crime and other objectionable matter Be it enacted by Parliament in the Twenty-seventh Year of the Republic of India as follows : Prefatory Note- Statement of Objects and Reasons-A publication in print has a more lasting and widespread effect than other forms of communication. Press (Objectionable Matter) Act, 1951 was enacted to penalise the abuse of the freedom of the press by publication of matter involving encouragement of violence or sabotage or incitement to certain other very grave offences. The Press Commission which submitted its Report in 1954 accepted the possibility of existence of irresponsible elements who needed to be curbed through special legal measures. The Commission recommended the setting up of a Press Council which would, inter alia, safeguard the liberty of the press and evolve and maintain standards of journalistic ethics. The Commission hoped that as the Press Council "grows in strength and prestige the necessity of having resort to such measures as the Press (Objectionable Matter) Act will gradually disappear". In the hope that the press would evolve its own internal control. Government allowed Press (Objectionable Matter) Act, 1951, to expire on the 1st February, 1956. Later, in accordance with the recommendations of the Press Commission, Press Council Act, 1965, was

enacted. The experience of the system of Press Council has not, however, been satisfactory. It did not serve to deter those elements which were in a position to use the printed medium in an- undesirable way, for spreading hatred, for character assassination and undermining the people's morale and taste. In view of the need for urgent action in the matter, the. President promulgated on the 8th December, 1975, the Prevention of Publication of Objectionable Matter Ordinance, 1975. 2. The Ordinance provided for the prohibition of the printing or publication of any, specified matter for a temporary period not exceeding two months where such prohibition is necessary for preventing or combating any activity prejudical to the interests of sovereignty and integrity of India, security of the State, friendly relations with foreign States, public order, decency or morality or any activity involving or likely to involve, or culminate in, incitement to offences. The Ordinance also provided for demanding security from keepers of presses and publishers and editors of newspapers found guilty of being concerned in the publication of objectionable matter as defined in the Ordinance. Provisions were also made in the Ordinance for preventing the circulation and distribution of objectionably matter. The main purpose of the Ordinance was to prevent the use of the Press for encouragement of violence, sedition and other offences and for the publication of obscene or securrilous matter and the definition of "objectionable matter" has been strictly confined to this purpose. 3. The Bill seeks to replace the Ordinance. The Notes on Clauses explain the provi- sions of the Bill.

### 3.4. Press and Publication (Parliamentary Proceedings) Act, 1976 - Constitutional amendment Article 361 (Protecting the publication of Parliament and Legislature)

In order to strengthen the basis of democratic Government which is the Parliament and opinion of the people therein, it is of paramount importance that proceedings in Parliament shall be communicated to the public. For this purpose, newspapers and other mass publicity media should be afforded the privilege of publishing substantially true reports of proceedings in Parliament without being exposed to any civil or criminal action.

Under this Act no person shall be liable to any proceedings, civil or criminal, in any court in respect of the publication in a newspaper of a substantially true report of any proceedings of either House of Parliament unless the publication is proved to have been made with malice.

This Act shall apply in relation to reports or matters broadcast by means of a wireless telegraphy as part of any programme or service provided by means of a broadcasting station

situate within the territories to which this act extends as it applies in relation to reports or matters published in a newspaper.

### 3.5. Contempt of Court

Origin of the law of contempt in India can be traced to the English law, where courts punished those who scandalized the court or the judges. The first Indian statute on Contempt of Courts Act was passed in 1926. The Act aimed at limiting the powers of certain courts in punishing contempt of courts.

The Act and all such Acts of Contempt of Court that were in effect in some of the States were replaced by the Contempt of Courts Act, 1952.

Lok Sabha in 1960 decided to scrutinize the Act so as to see it in light of Freedom of Expression of the Individual and of the need for safeguarding the status and dignity of courts and interests of administration of justice.

Accordingly a committee was set up on July 29, 1961 under the chairmanship of the late H N Sanyal, and it submitted its report on February 28, 1963. The Joint Select Committee of Parliament on Contempt of Courts examined the issue in detail and a new bill, the Contempt of Courts Bill, 1968 was prepared by the committee.

The Contempt of Courts Act, 1952 was repealed, and the Contempt of Courts Act, 1971 was passed by the Parliament in December 1971 and it came into force December 24, 1971. It extends to the whole of India, except to the state of Jammu and Kashmir, except to the extent to which the provisions of this Act relate to contempt of the Supreme Court.

**Brief Study of the Act**

Contempt of Courts Act empowers the courts to punish any willful disobedience to, or disregard of, a court order or any misconduct in the presence of a court; action that interferes with a judge's ability to administer justice or that insults the dignity of the court.

The objective of the Act is to keep the administration of justice pure and undefiled. While the dignity of the court is to be maintained at all costs, the contempt jurisdiction, which is of a special nature, should be sparingly used.

The Act differentiates Civil and Criminal Contempt of Court. 'Civil contempt' means willful disobedience to any judgment, decree, direction, order, writ or other process of a court or willful breach of an undertaking given to a court. 'Criminal contempt' means the publication (whether by words, spoken or written, or by signs, or by visible representation, or otherwise) of

any matter or the doing of any other act whatsoever which scandalizes or tends to scandalize, or lowers or tends to lower the authority of, any court, or prejudices, or interferes or tends to interfere with the due course of any judicial proceeding, or interferes or tends to interfere with, or obstructs or tends to obstruct, the administration of justice in any other manner.

Any willful or deliberate or reckless disobedience to the orders of the court to do or abstain from doing any act or breach of any undertaking given to the court is prima-facie civil contempt. Non caring of the warrant issued by the criminal court amounts to criminal contempt. Breach of an injunction, or breach of an undertaking given to a court by a person in a civil proceeding amounts to contempt.

A judge, magistrate or other persons act in judicially shall also be liable for contempt of his own court or of any other court in the same manner as any other individual.

Any contempt of Nyaya Panchayats or other village courts, by whatever name known, for the administration of justice, established under any law, is not punishable with this Act.

**Guidelines to Media Professionals**

The law relating to contempt of court is well settled. Any act done or writing published which is calculated to bring a court or a judge into contempt, or to lower his authority, or to interfere with the due course of justice or the lawful process of the court, is a contempt of court.

Comment on pending case or abuse of a party may amount to contempt when the case is tried by a judge. Judges by reason of their office are precluded from entering into any controversy in columns of the public press. There is no special principle attached to the press to comment, criticize or investigate the facts of any case of the prejudice of the trial of the case. No editor has a right to assume the role of investigator to try to prejudice the court against any person.

Contempt by speech or writing may be by scandalising the court itself, or by abusing parties to actions, or by prejudicing mankind in favour of or against a party before the cause is heard. It is incumbent upon courts of justice to preserve their proceedings from being misrepresented, for prejudicing the mind of the people against persons concerned as parties in causes before the cause is finally heard has pernicious consequences.

Speech or writings misrepresenting the proceedings of the court or prejudicing the public for or against a party or involving reflections on parties to a proceeding amount to contempt. To make a speech tending to influence the result of a pending trial, whether civil or criminal is a grave contempt. Comments on pending proceedings, if emanating from the parties or their lawyers,

are generally a more serious contempt than those coming from independent sources.

If a person was ignorant that the proceeding was pending, and commit an act that amounts contempt of court, he shall not be guilty. A comment, when the civil or criminal proceeding is not pending at the time of publication shall not be deemed to constitute contempt of court. Any one who distribute any publication without knowing that it contained matters amounting to contempt of court is not guilty.

A person shall not be guilty of contempt of court for publishing a fair and accurate report of a judicial proceeding or any fair comment on the merits of any case which has been heard and finally decided. It is essential for the healthy administration of justice.

Thus,

It is to be noted that the liberty of free expression is not to be compounded with a license to make unfounded allegations of corruption against judiciary. If it is, it is abuse of that right.

A defence of truth or justification is not available to the publisher of a newspaper in proceedings for contempt of court.

Court and legal reporting must be true, accurate and without malice.

While reproducing the court proceedings, no words may be added, omitted or substituted.

Criticism has to be reasonable and offered for the public good. The criticism of a judge must take the form of reasonable argument or exploitation; must be made in good faith and free from the imputation of improper motives. Criticism on judgments must be done without casting aspersions on the judges and the courts and without adverse comments amounting to scandalizing the courts.

A complaint or report about a judicial officer of his dishonesty, partiality or other conduct unbecoming of a court, made to an authority to whom it is subordinate, is not contempt of court if all reasonable care is taken by the makers to keep it confidential. Immunity is provided to a citizen making such complaints in good faith to the high court.

A person shall not be guilty of contempt of court for publishing a fair and accurate report of judicial proceedings before any court sitting in chambers or in camera except when prohibited by the Court.

**Exceptions to Contempt of Court**

Making a statement without knowing that the case was pending with the court.

Making a statement on a case that is not pending in the court,

A Fair criticism on the judicial proceedings

Distributing material without knowing that it contains a contempt for the court,

A true report on the judicial proceedings

Complaint against the presiding officers of subordinate courts to superior courts in good faith.

**Contempt Procedure**

When it is alleged, or appears to the Supreme Court or the High Court upon its own view, that a person has been guilty of contempt committed in its presence or hearing, the court may cause such person to he detained in custody, and, at any time before the rising of the court, on the same day, or as early as possible thereafter, shall-

(a) Cause him to be informed in writing of the contempt with which he is charged.

(b) Afford him an opportunity to make his defence to the charge,

(c) After taking such evidence as may be necessary or as may be offered by such person and after hearing him, proceed, either forthwith or after adjournment, to determine the matter of the charge, and

(d) Make such order for the punishment or discharge of such person as may be just.

**Punishment for contempt of court**

Person alleged with contempt of court is informed, given opportunity for defense, punished or discharged.

Every case of criminal contempt under section 15 shall be heard and determined by a bench of not less than two judges. However, a single judge can also deal with criminal contempt's committed in facie curium; In re: court on its own motion.

No court shall initiate any proceedings if contempt, either on its own motion or otherwise, after the expiry of a period of one year from the date on which the contempt is alleged to have been committed.

The court is guided by its own procedure to be followed in the facts and circumstances of each individual case and to see that the condemner is getting full opportunity to make his defence.

A contempt of court may be punished with simple imprisonment for a term which may extend to six months, or with fine which may extend to two thousand rupees, or with both.

**Apology**

The accused may be discharged or the punishment awarded may be remitted on apology being made to the satisfaction of the court. The court can, even when accepts the apology, commit an

offender to prison or otherwise punish him.

### 3.6. Indecent Representation of Women Prohibition Act

Indecent Representation of Women (Prohibition) Act, 1986 was enacted on 23rd December 1986. It covers the whole of India except the State of Jammu and Kashmir. It aims at prohibiting indecent representation of women in advertisements or in publications, writings, paintings, figures or in any other manner.

The Act defines "Indecent representation of women" as the depiction in any manner of the figure of a woman, her form or body or any part thereof in such a way as to have the effect of being indecent, or derogatory to, or denigrating, women, or is likely to deprave, corrupt or injure the public morality or morals.

Brief study of the Act

The Act states that no person shall publish, or cause to be published, or arrange or take part in the publication or exhibition of, any advertisement, which contains indecent representation of women in any form.

No person shall produce or cause to be produced, sell, let to hire, distribute, circulate or send by post any book, pamphlet, paper, slide, film, writing, drawing, painting, photograph, representation or figure which contains indecent representation of women in any form. Except when the goal of such action is for the public good, in the interest of science, literature, art, or learning or other objects of general concern; or used for religious purposes.

Any authorized government official can search any place in relation to violation of this act, if needed with force, seize materials or documents without warrant. However search in a private dwelling house needs a warrant. No suit, prosecution or other legal proceeding shall lie against the Central Government or any State Government or any officer of the Central Government or any State Government for anything which is in good faith done or intended to be done under this Act. The official has to report it to the Report nearest Magistrate and take his orders as to the custody of the seized materials.

Anyone who violates this act, may be imprisoned up to two years, fined up to two thousand rupees. In the event of a second or subsequent conviction, imprisonment between six months to five years and a fine between ten thousand rupees to one lakh rupees. The offence is boilable.

### 3.7. Drug and Magic Remedies Act or

**What is a Magic Remedy?**

"Magic remedy" as defined in the Act includes a talisman, mantra, kavacha and any other charm of any kind which is alleged to possess miraculous powers for or in the diagnosis, cure, mitigation, treatment or prevention of any disease in human beings or animals or for affecting or influencing in any way the structure or any organic function of the body of human beings or animals.

**Objectives:**

- To control the advertisement of drugs in certain cases.
- To prohibit the advertisement of remedies alleged to possess magic qualities

**Applicability:**

The Drugs and Magic Remedies (Objectionable Advertisement) Act was enacted in 1954.

- to regulate the method of advertisement of medicines
- to prohibit the advertisement of treatments which are supposed to hold magic qualities,
- to prevent self-medication of harmful drugs. The Act lists the diseases and disorders in respect of which advertising is banned.

**Penalties:**

In case of offense under the act, the punishment includes:

- in the case of a first conviction, with imprisonment for maximum upto 6 months or with fine, or with both and
- in the case of a subsequent conviction, with imprisonment which may extend to 1 year, or with fine, or with both.

or

The Drugs and Magic Remedies (Objectionable Advertisements) Act, 1955

This is an Act to control, the advertisement of drugs in certain cases, to prohibit the advertisement for certain purpose of remedies alleged to possess magic qualities and to provide for matters connected therewith.

This Act defines drugs and registered medical practitioners besides defining magic remedy. According to Act the Magic remedy includes a talisman mantra kavacha and any other charm of any kind which is alleged and possess miraculous powers for or in the diagnosis, cure,

mitigation treatment or prevention of any disease in human beings or animals or for affecting or influencing in any way the structure or any organic function of human beings or animals.

No person or company shall take any part in the publication of any advertisement referring to any drug that is used for:

a) the miscarriage in woman,

b) maintenance or improvement of the capacity of human beings for sexual pleasures,

c) correction of menstrual disorder in women, and

d) the diagnosis, cure, mitigation, treatment or prevention of any disease.

No person or company will take part in advertisement which give false impression or makes a false claim for the drug or mislead the people. Whosoever contravenes any of the provision of this Act shall be punishable with imprisonment extended to six months or with fine, or with both for first time conviction. It may extend to one year imprisonment or with fine or with both on subsequent convictions.

The schedule for diseases specified under the Act are: appendicitis, atherosclerosis, blindness, blood poisoning, Bright's disease, cancer, cataract, deafness, diabetes, brain diseases or disorder, uterus diseases, disorder of menstrual flow, disorders of nervous system, prostatic gland disorders, dropsy, epilepsy, female disease (in general), fever (in general), Fits, Forms and structure of the female breast, gall bladder stones, kidney stones, bladder stones, gangrene, glaucoma, goiter, heart diseases, high or low blood pressure, hydrocele, hysteria, infantile paralysis, insanity, leprosy, leucoderma, lock jaw, locomotors ataxia, lupus, nervous debility, obesity, paralysis, plague, pleurisy, pneumonia, rheumatism, rruptures, sexual impotence, small pox, stature of person , sterility of women, trachoma, TB, tumours, typhoid fever, ulcers of GI tract, venereal diseases including, AIDS.

### 3.8. Defamation – Libel and slander

Defamation is an infringement on the Right to Reputation of an individual or group of people.

Every person in modern society has an inviolate right to the preservation of his reputation in the society. Therefore any person who intentionally defames him and communicate such matter to a third person infringes his right for social reputation. An injury to reputation is more damaging and disturbing than loss of wealth or property.

Reputation is a part of the personal property of a person. In the case of Kanwar vs State the

court observed that, “Nobody can use his freedom of expression as to injure another’s reputation or to indulge in what may be called character assassination.”

Defamation is an intentional false communication, either published or publicly spoken, by words, signs or visible representations, that injures another’s reputation or good name. Section 499 of the Indian Penal Code defines Defamation as; “Whoever by words, either spoken or intended to be read, or by signs or by visible representations, makes or publishes any imputation concerning any person intending to harm, or knowing or having reason to believe that such imputation will harm, the reputation of such person, is said except in specified cases, to defame the person.

” Defamation is distinct from insult, and abuse. Because, insult or abuse is not communicated to a third person with the intention of bringing the other’s reputation in public. Some wrongful actions like a banker “dishonouring its customer’s cheque in spite of being in funds is not counted as defamation.

**Types of Defamation**

Defamation is classified into **libel and slander**. When some defamatory material is written, printed or published, with words, photos, etc, it is libel. When it is communicated through words of mouth, gestures, facial expressions, body movements it is slander.

**Privilege**

Statements of some people made in some occasions, however defamatory they might seem to be, may not be considered as a violation of the defamation law.

**Absolute Privilege**: There are certain occasions on which the law regards freedom of speech as essential, and provides a defence of absolute privilege which can never be defeated, no matter how false or malicious the statements may be. The following communications are ‘absolutely privileged’ and protected from defamation proceedings:

- Statements made in either House of Parliament.
- Statements made in the course of judicial proceedings or quasi-judicial proceedings.
- Communications between lawyers and their clients.
- Statements made by officers of state to one another in the course of their official duty.

**Qualified Privilege**: Qualified privilege operates only to protect statements, which are made without malice (ie, spitefully, or with ill-will or recklessness as to whether it was true or false).

- Statements made in pursuance of a legal, moral or social duty, but only if the party making the statement had an interest in communicating it and the recipient had an interest in receiving it.
- Statements made in protection of an interest, eg public interests or the defendant's own interests in property, business or reputation.
- Fair and accurate reports of parliamentary proceedings.

**3.9. RTI Act 2005 or FREEDOM OF INFORMATION ACT, 2005**

Revolutions in democracies are bloodless and take place in the confines of Legislatures - RTI 2005 is one of them. It is a law enacted by the Parliament of India and aimed at giving access to records of Central and State governments. All the States and Union Territories, except Jammu & Kashmir come under this Act. J&K is covered by a state-level law.

- Any citizen of India, including from J&K can seek information from a public authority under this law. A public authority means any authority or body or institution of self-government, established or constituted by or under the Constitution of India, by any other law made by Parliament or State Legislatures. Reply should be given expeditiously or within 30 days.

The Act requires the public authority to computerise their records for wide dissemination. Parliament passed the RTI Bill on June 15, 2005. It came into force on Oct 13, 2005. Disclosure of official information was prevented by OSA 1923 and various other special laws. RTI Act has relaxed this.

In 1975, the Supreme Court of India issued a judgment on the citizen's right to know. This was a major turning point and it awaited the citizens to their right to know. OSA 1923 which was modeled on the British law of OSA 1899 kept a lid on people's right to know. This lid was blown off. OSA prohibited disclosure of information related to security of the State, sovereignty of the country, friendly relations with foreign states, non-classified information, etc. Besides OSA, Civil Service Conduct Rules and Indian Evidence Act give ample powers to keep away information from people. In 2000, the NDA government had passed Freedom of Information Bill 2000. This was based on an extremely diluted form of a draft prepared by veteran civil right's activist, H D Shourie. This eventually became a law know as Freedom of Information Act 2002. This act came under fire from various quarters as it gave too many exemptions. These included not only the usual exemptions on the grounds of national security and sovereignty, but also requests such as disclosure of information regarding disproportionate diversion of the resources of a public

authority for example. Similarly, there was no upper limit on the charges that could be levied for seeking information. Also there were no penalties prescribed to impose on government officials for not complying with the request for information. So FOI Act never became an effective force.

RTI activists kept pressure on the Central Government to come up with a better version of this Act replacing the toothless FOI Act 2002. The first draft of the RTI Bill was presented to Parliament in December 2004 during the UPA rule. It is applicable to all constitution authorities, executive, legislature, and judiciary, any institution or body established or constituted by an Act of Parliament or a State Legislature, or bodies owned, controlled or substantially financed by government or nongovernment organisations substantially financed directly or indirectly by funds provided by the government. Private bodies are not directly under the Act. However, information that can be accessed 5 under any other law in force by public authority can also be requested for. Privatized Pubic Utility companies (though they are privatized), have been brought under the RTI Act by Central Information Commission under the verdict. The Act overwrites OSA 1923.

The RTI Act specifies that the citizen's have a right to request and obtain any information as defined; take copies of documents; inspect documents, works and records; take certified samples of materials of work; obtain information from printouts, disks and floppies, tapes and video cassettes, or in any other electronic mode. The Act prescribes that all those authorities covered by it must appoint a Public Information Officer (PIO). Any citizens can submit a request to the PIO in writing for any information. It is the duty of the PIO to provide this information. If the request concerns some other Public Authority, it is the responsibility of the PIO to transfer or forward the request to his counterpart within five days. PIO will be assisted by Asst. PIOs. The citizen who wants information needs to disclose only his name and contact details; the citizen doesn't need to disclose the reason for seeking information.

**Time limit for replying:**

If the request is made to the PIO, the reply should be given within 30days of receipt. If it is made to the APIO, the reply should be given within 35 days of receipt. If the PIO transfers the request to any other Public Authority, the reply should be given within 30 days from the receipt of transfer by the PIO concerned.

- Information concerning corruption and Human Rights violation by scheduled security

agencies (CSF, BSF, etc.) is to be provided within 45 days, but with prior approval of the Central Information Commission (CIC).

If life or liberty of any person is involved, the PIO should reply within 48 hours.

- The applicant has to deposit an amount for obtaining the information.

**Fee:**

Initially for Central Departments, the fee fixed for filing of a request was Rs.10/-, Rs.2/- per page of information, Rs.5/- for each hour of inspection after the first hour. There will be no fee for BPL persons (who have to produce their ID). If information is not provided within the stipulated time, it is treated as refusal. Refusal with or without reason could be the ground for filing an appeal or complaint.

**Sub-section 7(3)** of the Act permits the PIO to demand unprescribed further fees or additional fees from the applicants for providing information. This had generated a heated debate and a raging controversy.

**Section 8** of the Act gives exemption from disclosure of information…

disclosure of which would be prejudicially affect the sovereignty and integrity of India; the security, strategic, scientific or economic interest of the state; relations with foreign states, or lead to incitement of the offence

- (ii) Information which has been forbidden to be published by any court of law or tribunal or the disclosure of which may constitute contempt of court

- (iii) information, the disclosure of which would cause a breech of privilege of Parliament or the State Legislature

(iv) information including commercial confidence, trade secrets, or intellectual property, the disclosure of which would harm the competitive position of a third party, unless the competent authority (PIO / CIC) is satisfied that larger public interest warrants the disclosure of such information

- (v) Information received in confidence from a foreign government

- (vi) Cabinet members including records of deliberations with the council of ministers, secretaries and other officers.

**There are (x) such items regarding exemption from disclosure…**

In terms of the Section 2(f) of the Act, information has been defined as any material in any form including records, documents, memos, emails, opinions, advises, press releases, circulars,

orders, log books, contracts, reports, papers, samples, models, data material held in any electronic form and information relating to any private body which can be accessed by a public authority under any other law.

**Organizations exempted from rti:**

Scheduled Central Intelligence and Security Agencies like: Intelligence Bureau, Research Analysis Wing, Directorate of Revenue Intelligence, Central Economic Intelligence Bureau, Directorate of Enforcement, Narcotics Controlled Bureau, Central Investigation Bureau are excluded from the ambit of RTI Act. However, their exclusion is not absolute. They have an obligation to provide information related to 'corruption' and 'human rights violations', information regarding violation of Human Rights could be given after the prior approval of the Central or State Information Commission.

**Section 11**: If a request is made by a citizen for the disclosure of confidential information given by a third party, the Central or State Information Officers can oblige if it is in the public interest and the same outweighs in importance and any possible harm or injury to the interest of such third party. In the case of trade or commercial secrets protected by law such third party information would not be disclosed. Within 5 days of a request of this kind, the third party who gave the confidential information should be issued a written notice and his submission should be taken into account.

**Section 12 & 15 and their sub-sections**: deal with Central and State Information Commissions, terms of office and conditions, service, and removal of Chief Information Commissioners.

**Section 20**: Imposes penalties on Central or State PIOs for not accepting applications or for not replying within the stipulated time or for giving incomplete or misleading information or for destroying information. It shall impose a penalty of Rs.250/- each day till the application is received or information is furnished. However, the total amount of such penalty shall not exceed Rs.25, 000/-.

**Section 26**: calls upon the Central and State governments excluding J&K tom promote RTI Act through wide publicity and educational programmes. According to unofficial sources, in the first year of RTI Act about 42,000 applications for information were filed by citizens to Central government authorities.

RTI Act, as it is stated in its introduction itself was intended "to secure access (to citizens) to

information under the control of public authorities in order to promote transparency and accountability in the working of every public authority…" The Right to Information Movement and its culmination – the RTI Act, were the result of this. Though it may still need some fine-tuning, it is a vital piece of law.

### 3.10. Right to Privacy, Data Privacy – Personal Information Security

Privacy is a fundamental human right, enshrined in numerous international human rights instruments.1 It is central to the protection of human dignity and forms the basis of any democratic society. It also supports and reinforces other rights, such as freedom of expression, information and association.

Activities that restrict the right to privacy, such as surveillance and censorship, can only be justified when they are prescribed by law, necessary to achieve a legitimate aim, and proportionate to the aim pursued.

As innovations in information technology have enabled previously unimagined forms of collecting, storing and sharing personal data, the right to privacy has evolved to encapsulate State obligations related to the protection of personal data.3 A number of international instruments enshrine data protection principles,4 and many domestic legislatures have incorporated such principles into national law.5

## Unit-4

### 4.1. Defining Media Ethics

The word 'Ethics' stems from the term 'ethos', which for Aristotle, was "the speaker's personal character when the speech is so spoken as to make us think him credible." Ethics is concerned with principles and ideas that regulate an individual's behavior.

The Macquarie Dictionary defines ethics as, "A system of moral principles by which human actions and proposals may be judged good or bad or right or wrong." The Webester's New Collegiate Dictionary defines ethics as "a set of principles ... conforming to accepted professional standards of conduct."

Another definition of ethics is, "A set of standards by which a particular group decides to regulate its behavior — to distinguish between what is legitimate or acceptable in pursuit of their aims and what is not."

Ethics refers to principles that define behavior as right, good and proper. Such principles do not always dictate a single "moral" course of action, but provide a means of evaluating and deciding

among competing options.

### 4.2. Media Ethics in India

- Ethical communication is that which allows others to grow to their fullest potential, in which value of the other individual is emphasized and felt, and in which both parties in the communication exchange are trusted, respected and appreciated, and a positive communication climate is established.
- Ethical Communication is fair, accurate, honest, truthful, responsible, independent and decent. Truth is its guiding principle. The message is presented in a fair, accurate and unbiased manner.
- Ethical communication is telling the whole truth fairly, freely and fearlessly.
- Being ethical does not mean passive, but dynamic. They criticize the government society constructively to make them better.
- Being ethical is not being completely open. At times the source of news has to be kept confidential when there is a clear reason to do so.
- Being ethical as a communicator is to tell the truth as it is, not manipulated by technology, personal interest or biased by pressure groups, impartially, with professional disinterestedness.
- Being ethical also mean thinking universally. Some information if it does eternal good for the entire society has to be kept hidden, according to the social commitment.
- Being ethical means accepting nothing of value from news sources or others outside the profession. Gifts and free or reduced-rate travel, entertainment, products and lodging should not be accepted. Expenses in connection with news reporting should be paid by the newspaper.
- Being ethical means remaining free of associations and activities that may compromise integrity or damage credibility.
- Communication action should not primarily be aimed at for rewards.
- Communication shall not degrades individuals and humanity through distortion, intimidation, coercion, and violence and through the expression of intolerance and hatred.
- Ethical communication respects privacy and confidentiality.

- Communicators with ethics take responsibility for the short- and long-term consequences of their own
- Avoid undercover or other surreptitious methods of gathering information except when traditional open methods will not yield information vital to the public. Use of such methods should be explained as part of the story
- Avoid stereotyping by race, gender, age, religion, ethnicity, geography, sexual orientation, disability, physical appearance or social status.
- Give voice to the voiceless; official and unofficial sources of information can be equally valid.
- Be sensitive when seeking or using interviews or photographs of those affected by tragedy or grief, victims of sexual crimes, especially when they are minors. Be cautious about identifying juvenile suspects or victims of sex crimes.
- Journalists are accountable to their readers, listeners, viewers and each other. Admit mistakes and correct them promptly. A journalist shall rectify promptly any harmful inaccuracies, ensure that correction and apologies receive due prominence and afford the right of reply to persons criticized when the issue is of sufficient importance.
- A journalist shall strive to ensure that the information he/ she disseminates is fair and accurate, avoid the expression of comment and conjecture as established fact and falsification by distortion, selection or misrepresentation.
- The press must not, even where the law does not prohibit it, identify children under the age of 16 who are involved in cases concerning sexual offences, whether as victims or as witnesses. The journalist shall do the utmost to rectify any published information which is found to be harmfully inaccurate.

### 4.3. Code of ethics in News Profession

**Professional Codes of Ethics**

PREAMBLE. The First Amendment, protecting freedom of expression from abridgment by any law, guarantees to the people through their press a constitutional right, and thereby places on newspaper people a particular responsibility. Thus journalism demands of its practitioners not only industry and knowledge but also the pursuit of a standard of integrity proportionate to the journalist's singular obligation. To this end the American Society of Newspaper Editors sets

forth this Statement of Principles as a standard encouraging the highest ethical and professional performance.

ARTICLE I - Responsibility. The primary purpose of gathering and distributing news and opinion is to serve the general welfare by informing the people and enabling them to make judgments on the issues of the time. Newspapermen and women who abuse the power of their professional role for selfish motives or unworthy purposes are faithless to that public trust. The American press was made free not just to inform or just to serve as a forum for debate but also to bring an independent scrutiny to bear on the forces of power in the society, including the conduct of official power at all levels of government.

ARTICLE II - Freedom of the Press. Freedom of the press belongs to the people. It must be defended against encroachment or assault from any quarter, public or private. Journalists must be constantly alert to see that the public's business is conducted in public. They must be vigilant against all who would exploit the press for selfish purposes.

ARTICLE III - Independence. Journalists must avoid impropriety and the appearance of impropriety as well as any conflict of interest or the appearance of conflict. They should neither accept anything nor pursue any activity that might compromise or seem to compromise their integrity.

ARTICLE IV - Truth and Accuracy. Good faith with the reader is the foundation of good journalism. Every effort must be made to assure that the news content is accurate, free from bias and in context, and that all sides are presented fairly. Editorials, analytical articles and commentary should be held to the same standards of accuracy with respect to facts as news reports. Significant errors of fact, as well as errors of omission, should be corrected promptly and prominently.

ARTICLE V - Impartiality. To be impartial does not require the press to be unquestioning or to refrain from editorial expression. Sound practice, however, demands a clear distinction for the reader between news reports and opinion. Articles that contain opinion or personal interpretation should be clearly identified.

ARTICLE VI - Fair Play. Journalists should respect the rights of people involved in the news, observe the common standards of decency and stand accountable to the public for the fairness and accuracy of their news reports. Persons publicly accused should be given the earliest opportunity to respond. Pledges of confidentiality to news sources must be honored at all costs,

and therefore should not be given lightly. Unless there is clear and pressing need to maintain confidences, sources of information should be identified.
These principles are intended to preserve, protect and strengthen the bond of trust and respect between American journalists and the American people, a bond that is essential to sustain the grant of freedom entrusted to both by the nation's founders.

**What Are the Standard Ethical Principles for Journalists?**

There are several key ethical standards that appear across global news organizations. At the highest level, they call on journalists to seek the truth, act in the public interest, and minimize harm.

- **Honesty**. Journalists have an obligation to seek out the truth and report it as accurately as possible. This requires diligence: this means making every effort to seek out all the facts relevant to a story. Journalists should also corroborate any information with multiple sources.
- **Independence**. Journalists should avoid taking political sides and should not act on behalf of special interest groups. Any political affiliations or financial investments that might constitute a conflict of interest with the subject they are writing about should be declared to editors and readers. Some organizations characterize this principle as "objectivity," while others, especially non-profit civic journalism projects, reject this term, as they position themselves explicitly on the side of public interest.
- **Fairness**. In addition to being independent, journalists should show impartiality and balance in their reporting. Most news stories have more than one side, and journalists should capture this. That said, they should not place two different perspectives on equal footing where one is unsupported by evidence. The exception to the impartiality rule is opinion writing, as well as "gonzo" journalism and creative nonfiction.
- **Public accountability**. News organizations should listen to their audience. To enable the public to hold them accountable, journalists should write under their own bylines and accept responsibility for their words. When news outlets publish factual errors, they need to issue a correction.
- **Harm minimization**. Not every fact that can be published should be published. If the amount of harm that could come to private individuals—particularly children—as a result of disclosure exceeds the public good that would come of it, then news outlets

might choose not to publish the story. This is less of a consideration when it comes to public figures. It is huge, however, in matters of national security, where lives could be on the line.

- **Avoiding libel**. This is a legal as well as a moral imperative for journalists. Journalists cannot print false statements that damage a person's reputation. In most jurisdictions, true statements cannot be libelous, so journalists can protect themselves by rigorously checking facts.
- **Proper attribution**. Journalists must never plagiarise. If they use information from another media outlet or journalist, they need to attribute it to them.

### 4.4. Press Council of India guidelines

Section 13 of the Press Council Act, 1978, suggests formulation of a guide for the journalists. Accordingly in 1984 and 1986 two sets of codes were formulated. In 1992, the Council brought out "A Guide to Journalistic Ethics" containing principles of journalistic ethics.

The Guide suggests a way of steering safely and responsibly through the minefield of legal, moral and ethical problems which confront the editors, journalists and owners of newspapers. It is not a compilation of cast-iron principles but contains broad general principles, which, if applied with due discernment and adaptation to varying circumstances of each case, will help the journalists to self-regulate the conduct of their profession along the path of professional rectitude. These are by no means exhaustive nor are they meant to obtain a rigidity which could hinder the unfettered working of the Press.

The fundamental objective of journalism is to serve the people with news, views, comments and information on matters of public interest in a fair, accurate, unbiased, sober and decent manner. Towards this end, the press is expected to conduct itself in keeping with certain norms of professionalism universally recognised. The norms enunciated below and other specific guidelines appended thereafter, when applied with due discernment and adaptation to the varying circumstance of each case, will help the journalist to self-regulate his or her conduct.

Some of the broad principles evolved by the Council in course of its adjudication on various subjects both in respect of standards of journalism and the freedom of the Press are summarized below:

**Accuracy and fairness**: The press shall eschew publication of inaccurate, baseless, graceless, misleading or distorted material. All sides of the core issue or subject should be reported.

Unjustified rumours and surmises should not be set forth as facts.

**Pre-publication verification**: On receipt of a report or article of public interest and benefit containing imputations or comments against a citizen, the editor should check with due care and attention its factual accuracy - apart from other authentic sources with the person or the organisation concerned to elicit his / her or its version, comments or reaction and publish the same with due amendments in the report where necessary. In the event of lack or absence of response, a footnote to that effect should be appended to the report.

**Caution against defamatory writings**: A newspaper should not publish anything which is manifestly defamatory or libellous against any individual organisation unless after due care and checking, they have sufficient reason to believe that it is true and its publication will be for public good.

**Right to privacy**: The press shall not intrude or invade the privacy of an individual unless outweighed by genuine overriding public interest, not being a prurient or morbid curiosity. So, however, that once a matter becomes a matter of public record, the right to privacy no longer subsists and it becomes a legitimate subject for comment by press and media among others. Explanation: Things concerning a person's home, family, religion, health, sexuality, personal life and private affairs are covered by the concept of privacy excepting where any of these impinges upon the public or public interest.

**Recording interviews and phone conversation**: The press shall not tape-record anyone's conversation without that person's knowledge or consent, except where the recording is necessary to protect the journalist in a legal action, or for other compelling good reason.

**Corrections**: When any factual error or mistake is detected or confirmed, the newspaper should publish the correction promptly with due prominence and with apology or expression of regrets in a case of serious lapse.

**Right of reply**: The newspaper should promptly and with due prominence, publish either in full or with due editing, free of cost, at the instance of the person affected or feeling aggrieved / or concerned by the impugned publication, a contradiction / reply / clarification or rejoinder sent to the editor in the form of a letter or note. If the editor doubts the truth or factual accuracy of the contradiction / reply / clarification or rejoinder, he shall be at liberty to add separately at the end a brief editorial comment doubting its veracity, but only when this doubt is reasonably founded on unimpeachable documentary or other evidential material in his / her possession.

This is a concession which has to be availed of sparingly with due discretion and caution in appropriate cases.

**Letters to editor**: An editor who decides to open his columns for letters on a controversial subject, is not obliged to publish all the letters received in regard to that subject. He is entitled to select and publish only some of them either in entirety or the gist thereof. However, in exercising this discretion, he must make an honest endeavour to ensure that what is published is not one-sided but represents a fair balance between the views for and against with respect to the principal issue in controversy.

**Obscenity and vulgarity to be eschewed**: Newspapers / journalists shall not publish anything which is obscene, vulgar or offensive to public good taste.

**Violence not to be glorified**: Newspapers / journalists shall avoid presenting acts of violence, armed robberies and terrorist activities in a manner that glorifies the perpetrators' acts, declarations or death in the eyes of the public.

**Glorification / encouragement of social evils to be eschewed**: Newspapers shall not allow their columns to be misused for writings which have a tendency to encourage or glorify social evils like sati pratha or ostentatious celebrations.

**Headings not to be sensational / provocative and must justify the matter printed under them**: In general and particularly in the context of communal disputes or clashes - a. Provocative and sensational headlines are to be avoided; b. Headings must reflect and justify the matter printed under them; c. Headings containing allegations made in statements should either identify the body or the source making it or at least carry quotation marks.

**Caste, religion or community references**: In general, the caste identification of a person or a particular class should be avoided, particularly when in the context it conveys a sense or attributes a conduct or practice derogatory to that caste.

**Investigative journalism**, **its norms and parameters**: Investigative reporting has three basic elements. a. It has to be the work of the reporter, not of others he is reporting; b. The subject should be of public importance for the reader to know; c. An attempt is being made to hide the truth from the people.

**Confidence to be respected**: If information is received from a confidential source, the confidence should be respected.

**Advertisements**: Commercial advertisements are information as much as social, economic or

political information. What is more, advertisements shape attitude and ways of life at least as much as other kinds of information and comment. Journalistic propriety demands that advertisements must be clearly distinguishable from editorial matters carried in the newspaper.

**4.5. Paid News**

Paid news in India is the practice of cash payment or equivalent to journalists and media organizations by individuals and organizations so as to appear in their news articles and to "ensure sustained positive coverage".

**Definition of 'paid news':** The Committee acknowledged challenges in defining and determining what constitutes or qualifies as 'paid news'. It cited advertisements camouflaged as news, denial of coverage to select electoral candidates, exchanging of advertisement space for equity stakes between media houses and corporate and the rise in paid content as manifestations of paid news.

The Committee asked the Ministry of Information and Broadcasting (MoIB) to formulate a comprehensive legal definition of 'paid news' in consultation with stakeholders and suggest measures for usage of 'circumstantial evidence' in indentifying paid news.

**4.6. Ethics in Reality T.V**

Reality television connects people to the real world. Shows like Survivor, Amazing Race and The Bachelor have captivated audiences all around the world with its drama and raw emotions of ordinary people and not of paid actors. Adults, teens and even children as young as five years old are glued to their television as soon as these reality shows air. Reality shows, just like any other television programs has its ethics that needs to be responsibly preserved and honored.

**4.7. Ethics related to Sting Journalism**

**Meaning of Sting Operation**

A sting operation is a deceptive operation designed to catch a person committing a crime. Often Sting operation is referred to investigative journalism. Sting operations are deep investigation which are kept very confidential and are usually carried out to obtain information not easily accessible by people. They are generally undercover operations to unveil the information that have been concealed actively by people or have been kept suppressed under some political, monetary or other force.

**Types of Sting Operations**

Based on the purpose that they are meant to serve sting operations are classified into two types : Positive Sting operations : these sting operations are meant for public purposes and are based on issues that are very important in public domain these are generally related to government functionaries or activities by government . Another type of sting operations are Negative Sting Operations: are not meant to serve the public domain. They encroach upon the privacy of the person who has been caught upon the camera and can even be harmful for society and its people.

**Sting Operation in India**

The sting operations conducted in India are generally categorized as positive sting operations which are carried out with the motive to maintain public order and to target acts of individuals which are against public order but they may also turn out to be negative sting operations at times. These sting operations are also targeted to make the government more accountable. As democracy cannot survive without accountability and it is important that citizens are kept informed about government to retain this accountability.[1] India is a democratic country and thus being a democracy it is important that nothing in the country operates behind the scenes. Everything has to be crystal clear and informed to the citizens. Media being the biggest channel of communication plays a vital role of spreading and informing the citizens about what policies are being made and what the government is doing and acts as the strongest fourth pillar in a democracy. The efficiency of democracy is checked on the lines of freedom its press enjoys. In India freedom of press is impliedly incorporated under Article 19(1) (a) of Indian Constitution.[2]

Also people's right to know has been recognized important by judiciary under article 19(1) (a) where it has been held by Supreme Court that freedom of speech and expression includes freedom of press and circulation.[3]Justice Mathews while speaking on the necessity of sting operation told, certainly the public need to be informed about the acts of government and the public functionaries. This right to be informed is a part of freedom of the press.[4] Thus in India despite the absence of specific laws for sting operations, it is generally covered under Article 19(1) (a) of the Indian Constitution, 1950 with reasonable restrictions.

**Legality of Sting Operation in India**

In India there are no specific laws regarding sting operations. It is however dealt in under different provisions of different statutes. There has been a conflicting opinion of judiciary on sting operations and their legality. It has been widely analyzed that sting operations intervene in individual's privacy and thus violates article 21 under the Indian Constitution. Also they are seen violating public order and are a threat to decency and morality and thus are contrary to the provisions of article 19(2) of Indian Constitution.

The Courts in many cases have dealt with the problems pertaining to the legality of Sting operations and have decided upon it in accordance with the facts of the case. In a sting operation carried out by "LIVE INDIA" it was alleged that Ms. Uma Khurana, a teacher, was involved in forcing the girls for prostitution. These allegations resulted in anger amongst the mob consequently leading to physical attacks on the teacher. The investigation carried out on the orders of the court however clearly stated that the allegations made under the sting operation were false and the teacher was falsely alleged of being a part of act. The court in this matter stated that spreading information in the society is important beyond doubt but cases of entrapment like these should not be permitted.

However in another instance the legality of sting operations was upheld by Delhi High Court which was conducted to expose corruption in union parliament by Annirudha Bahal and Suhasini Raj. Courts in India have generally been of the opinion that sting operations are deceiving in nature. They are fake promises of confidentiality made by a person to trap the other for committing an act. They were declared illegal by Supreme Court and also a warrant was issued against those who conducted it. The Supreme Court has also stated that person who conducts the Sting operation can be held liable under section 12 of Prevention of Corruption Act for abatement of offence. Indian Courts on admissibility of sting operations have treated them as extra judicial confessions in certain cases like Naroda Patiya Massacre case where the sting operation was carried out by Ashish Khaitan and the operation has a high probative value and was accepted by court.

This ambiguity in the legality of sting operation needs to be clarified. A separate clause must be added stressing upon the difference between the sting operations that are genuine and those that encroach upon the privacy of others by Union Information and Broadcast Ministry. As Indian judiciary has always remained inclined towards the Right to life and liberty of

individuals. It has been said by Supreme Court that publishing anything relating to the privacy of individual without his consent would be violation of right to privacy under article 21 irrespective of the fact that whether the content published is true of false. This is also important because the Indian judiciary from time to time has laid down the importance of circulation of information in a democratic country like India.

Sting operation and freedom of press is one of the modes of this information circulation thus those sting operations which deal with genuine matters and are not against public order, decency and morality cannot be banned. It has become important to lay down rules and limitations governing the extent to which media can interfere in one's privacy because in the present scenario the sting operations are mainly carried out on topics which can attract the masses and increase channel TRPs. Thus it is an issue of immense importance that stricter and proper laws must be enacted to establish the definite legal status of sting operations in India and also to prevent the misuse of freedom of press by carrying out sting operations which disrespect the duty of maintaining others privacy. The laws must make sure that sting operations are carried out for the purpose that they are meant to serve that is public awareness and spreading information to citizens and do not become a threat to and individual by imposing false allegations and by collapsing his dignity , reputation in the society.

**Comparison of Sting Operations in India and Other Countries**

In countries like United States sting operations are considered to be legal and are treated as the bread and butter of the organizations. Entrapment is considered illegal in these countries. It has been clearly stated that prosecution based on entrapment is the abuse of courts process. Also defense of entrapment has not been considered as a substantive defense.

It is considered to be a clear and effective mode of crime prevention. These operations need to be carried out by approval of authorities like FBI. The Courts in US also opine that freedom of speech to press is not for the benefits of press but it is for the benefit of citizens. However sting operations are not permitted in country like Sweden. In India however the position and legality of sting operation is subject to various conflicted opinions. Delhi High Court has upheld right to Sting as integral part of freedom of speech and expression to establish a corruption free society. However on contrary Supreme Court held that Sting operations cannot be deemed lawful method for law enforcement.

**Drawbacks of Sting Operations**

The issue of sting operations is always seen surrounded by questions of morality, legality and ethics. The foremost concern arising out of sting operations is the violation of privacy of an individual. Where on one hand sting operations are a part of freedom of speech and expression under article 19(1)(a) of India Constitution on contrary they contravene the provisions of article 21 which provides right to life with dignity by collapsing the reputation and profession of a person on whom sting operation in targeted. It also encroaches upon his dignity as an individual.

The 17th Law Commission has even presented its recommendations to stop media interference in individual privacy through its 200th report.There are cases when these stings bring into limelight those individuals who are actually innocent but due to the influential nature of media the people tend to believe what is shown. It has also been found out in a survey that 72% viewers believe that sting operations serve the purpose. People tend to get influenced with the operations conducted as sting operations usually cover topics and target individuals about whom citizens are not aware and hence they are left with no option rather than to believe and get easily convinced. One of the major drawbacks of sting operations is that they do not reduce the rate of crime in any manner.

**Actions That Can Be Brought Against Sting Operations**

Sting operations have always been in question for their validity. In the absence of any proper laws governing it the actions can be brought under the provisions of different laws prevailing in the country. They are:

1) Violation of right to life under Article 21 of the Indian Constitution.

2) Violation of right to privacy under article 19(2) of the Indian Constitution regarding acts which are against public order, decency and morality.

3) For abatement of offence under Article 12 of Prevention of Corruption Act

4) For unlawful invasion under tort claim for damages can be made.

**Conclusion**

The coin of democracy when flipped results in right to privacy on one side and informed citizens on the other and media acts as a medium between the both. There may arise situation where conflict arises between both the sides of the coins as sting operations intervene into privacy of individuals to provide information to the citizens. To balance both there needs to be a

proper set of rules or guidelines which govern the sting operations conducted by media and defines unambiguously the extent of their legality and boundaries of their operation. The American distinction between entrapment and sting operations can also be considered in India.

**4.8. Ethics in Advertising, Public Relations and Social Media**

Ethics means a set of moral principles which govern a person's behavior or how the activity is conducted. And advertising means a mode of communication between a seller and a buyer.

**Thus ethics in advertising means a set of well defined principles which govern the ways of communication taking place between the seller and the buyer**. Ethics is the most important feature of the advertising industry. Though there are many benefits of advertising but then there are some points which don't match the ethical norms of advertising.

**Ethics also depends on what we believe**. If the advertisers make the ads on the belief that the customers will understand, persuade them to think, and then act on their ads, then this will lead to positive results and the ad may not be called unethical. But at the same time, if advertisers believe that they can fool their customers by showing any impractical things like just clicking fingers will make your home or office fully furnished or just buying a lottery ticket will make you a millionaire, then this is not going to work out for them and will be called as unethical.

Recently, the Vetican issued an article which says ads should follow three moral principles - Truthfulness, Social Responsibility and Upholding Human Dignity.

Generally, big companies never lie as they have to prove their points to various ad regulating bodies. Truth is always said but not completely. Sometimes its better not to reveal the whole truth in the ad but at times truth has to be shown for betterment.

Pharmaceutical Advertising - they help creating awareness, but one catchy point here is that the advertisers show what the medicine can cure but never talk about the side effects of that same thing or the risks involved in intake of it.

Children - children are the major sellers of the ads and the product. They have the power to convince the buyers. But when advertisers are using children in their ad, they should remember not to show them alone doing there work on their own like brushing teeth, playing with toys, or infants holding their own milk bottles as everyone knows that no one will leave their kids unattended while doing all these activities. So showing parents also involved in all activities or things being advertised will be more logical.

Alcohol - till today, there hasn't come any liquor ad which shows anyone drinking the original

liquor. They use mineral water and sodas in their advertisements with their brand name. These types of ads are called surrogate ads. These type of ads are totally unethical when liquor ads are totally banned. Even if there are no advertisements for alcohol, people will continue drinking.

Cigarettes and Tobacco - these products should be never advertised as consumption of these things is directly and badly responsible for cancer and other severe health issues. These as are already banned in countries like India, Norway, Thailand, Finland and Singapore.

Ads for social causes - these types of ads are ethical and are accepted by the people. But ads like condoms and contraceptive pills should be limited, as these are sometimes unethical, and are more likely to loose morality and decency at places where there is no educational knowledge about all these products.

Looking at all these above mentioned points, advertisers should start taking responsibility of self regulating their ads by:

- design self regulatory codes in their companies including ethical norms, truth, decency, and legal points
- keep tracking the activities and remove ads which don't fulfill the codes.
- Inform the consumers about the self regulatory codes of the company
- Pay attention on the complaints coming from consumers about the product ads.
- Maintain transparency throughout the company and system.

When all the above points are implemented, they will result in:

- making the company answerable for all its activities
- will reduce the chances of getting pointed out by the critics or any regulatory body.
- will help gain confidence of the customers, make them trust the company and their products.

**Importance of Ethics in Advertising**

The main aim of any business, big or small, is to increase sales, gain more consumers, and to improve its visibility in the market. In a nutshell, the business owners are looking for ways to make money and grow. The startups, on the other hand, have an additional responsibility to benefit their stakeholders.

Business owners want to increase the market share of their products. The first thought that comes to their mind is to advertise the products and services. They want their team to come up

with the most creative ways to promote their products to attract customers to them. Every advertiser wants to showcase their product as one of the best with unique qualities that none of the competitors possess.

Advertising is one of the essential tools for success in any business. However, in the fierce battle of brands, advertisers sometimes forget ethics and mislead the customers with false claims. Thus advertisements can be both helpful and harmful. The debate between ethical and unethical advertising begins here, although the line between the two is blurry and ill-defined.

**Few Examples of Unethical or Misleading Advertisements**

**Zomato** received a backlash when they used Hindi expletives, MC, and BC in bold and put thousands of hoarding across India to sell Mac-n-Cheese and Butter Chicken.

**Dabur Chyawanprash** ad, which claimed that it could boost the immunity of the children three times more and help them fight diseases, was slammed by the ASCI for the unsubstantiated claims.

**Arnica hair oil** ad claims, "Prevents hair fall and increases hair growth" and "It gives cooling to the brain and better sleep", were misleading and unsubstantiated according to ASCI.

HUL for its lever Ayush soap claimed 'based on 5,000-year-old Ayurved scriptures with 15 ayurvedic herbs'. The Customer Complaints Council (CCC) found that these claims besides other claims were inadequately substantiated and are misleading.

"The visual of the celebrity (Akshay Kumar) when seen in conjunction with the claims are likely to mislead consumers regarding the product efficacy and contravened ASCI's guidelines for celebrities in advertising," ASCI said.

**Rules and Regulations of Advertising**

In India, we have Advertising sector watchdog, Advertising Standards Council of India (ASCI), that investigates complaints against false and misleading advertisements

Established in 1985, ASCI is a voluntary self-regulatory organization of the advertising industry in India. The non-Government body is, committed to the cause of self- regulation in advertising, ensuring the protection of the interest of consumers.

The Ministry of Consumer Affairs, Food and Public Distribution (Department of Consumer Affairs) has launched a portal called "Grievance Against Misleading Advertisements (GAMA)". It is dealing with complaints relating to misleading advertisements. Under an MoU, the Department has assigned the task of processing the complaints received through the GAMA

portal to the Advertising Standards Council of India (ASCI) as per its code. ASCI evaluates any complaint regarding misleading or unethical ad received at GAMA. If the claim is true, ASCI asks the advertisers to modify or withdraw the misleading advertisements. In case of non-compliance, ASCI forwards such complaints to the Regulators concerned to take necessary action.

**Ethics in Public Relations**

Although each PR practitioner will decide which ethics they ultimately put into practice, the PR code of ethics maintained by the Public Relations Society of America (PRSA) is a useful starting point for ethically responsible decision-making.

These six provisions constitute its core code of conduct:

1. **Free flow of information**: Communications should be accurate and honest in order to maintain high-integrity relationships with the media and other stakeholders. Practices such as gift-giving must be handled with care.
2. **Competition**: PR practitioners should avoid deliberately undermining competitors and engaging in practices that damage the entire industry. Hiring should follow open and ethical standards.
3. **Disclosure of information**: All information necessary for informed decision-making should be disclosed to clients or employers. Sponsors and financial interests should be revealed to avoid deception.
4. **Safeguarding confidences**: Confidential, privileged, or otherwise private data should be kept safe. It is unethical to take such information to another job and use it to undermine a previous client or employer, or to leak it.
5. **Conflicts of interest**: "Real, perceived and potential" conflicts of interests should be avoided. PR professionals can better serve their clients and employers when their personal and business interests don't clash with their PR work.
6. **Enhancing the profession**: It's important to build trust in the PR profession among the public. When PR practitioners follow and self-enforce the PRSA code of conduct, they increase the overall credibility of public relations practice.

PRSA members should consult the organization's guidance on ethics in public relations, not only to avoid conflicts of interests and other improprieties but also to maintain public trust in the overall practice of public relations.

**Ethics in Social Media**

The concept of social networking pre-dates the Internet and mass communication as people are said to be social creatures who when working in groups can achieve results in a value greater than the sun of its parts . The explosive growth in the use of social media over the past decade has made it one of the most popular Internet services in the world, providing new avenues to "see and be seen",. The use of social media has changed the communication landscape resulting in changes in ethical norms and behavior.

Social media sites can be described as online services that allow users to create profiles which are "public, semi-public" or both. Users may create individual profiles and/or become a part of a group of people with whom they may be acquainted offline . They also provide avenues to create virtual friendships. Through these virtual friendships, people may access details about their contacts ranging from personal background information and interests to location. Social networking sites provide various tools to facilitate communication. These include chat rooms, blogs, private messages, public comments, ways of uploading content external to the site and sharing videos and photographs. Social media is therefore drastically changing the way people communicate and form relationships.

Today social media has proven to be one of the most, if not the most effective medium for the dissemination of information to various audiences. The power of this medium is phenomenal and ranges from its ability to overturn governments (e.g., Moldova), to mobilize protests, assist with getting support for humanitarian aid, organize political campaigns, organize groups to delay the passing of legislation (as in the case with the copyright bill in Canada) to making social media billionaires and millionaires. The enabling nature and the structure of the media that social networking offers provide a wide range of opportunities that were nonexistent before technology. Facebook and YouTube marketers and trainers provide two examples. Today people can interact with and learn from people millions of miles away. The global reach of this medium has removed all former pre-defined boundaries including geographical, social

and any other that existed previously. Technological advancements such as Web 2.0 and Web 4.0 which provide the framework for collaboration, have given new meaning to life from various perspectives: political, institutional and social.

**Social media**. Currently, the use of social media has become the part of human's life everywhere. It allows the users to get and share information all over the world in a very short time.

Unfortunately, the consequences of social media abuse in spreading information also affect the number of users who enter the legal domain resulting from the information spread on social media that is unethical.

As an effort to reduce the problem in using social media, ethical conduct is needed to prevent from mutually insult or accuse others for no apparent reason. As a matter of fact, these matters will lead the users into law for being careless in spreading information on the internet.

**ETHICS IN SOCIAL MEDIA**

The fast moving era also influence the technology growth. Nowadays almost everyone can share information and communicate directly by using social media through internet which saves more time and cost.

Indeed, users have freedom in using social media to communicate with anyone. What is ignored here is the ethics in using it. It would much better if users know what ethics should be noticed when using social networking.

The lack of public awareness related to ethics in social media will trigger some social problems. Mostly the users are blinded by the hoax news on social media. Here are some important things related ethics in using social media.

1. Ethics in Communication

   Mostly occurred, ethics is ignored during the communication through social media. The most common case appear is many abusive words during a conversation through social networking, both intentionally and unintentionally.It would be nice if communications on the Internet is using polite and proper words. Always use the correct language when we communicate to anyone through social media.

   2. Avoid Spreading race, pornography and violence issues

It would be wise if we do not spread information relates certain race or religion. Share useful information only and avoid conflict to others and uploading violent photos such as traffic accident photo or other violent images.

3. Check the news validity

Nowadays it is very common to find out a news that disfigure other parties in social media. Some parties did this to impose the competitors by sharing hoax news. Therefore, social media users should be more intelligent in capture any information. Before you share the news, it will be wiser to check the news validity first.

4. Appreciate other's works

When sharing information in the form of photographs, writings or videos which belong to others, make sure to mention the source to show your appreciation to other's works. Never copy-paste any contents without showing the source .

5. Do not share personal information too much

It would be wiser for you to restrict your personal life in using social media. Do not share your personal information such as phone number or home address. There will be possibility that other contacts on your list will use the information to harm you.

# NC 21066 – Basics in Photography-

## Unit-1

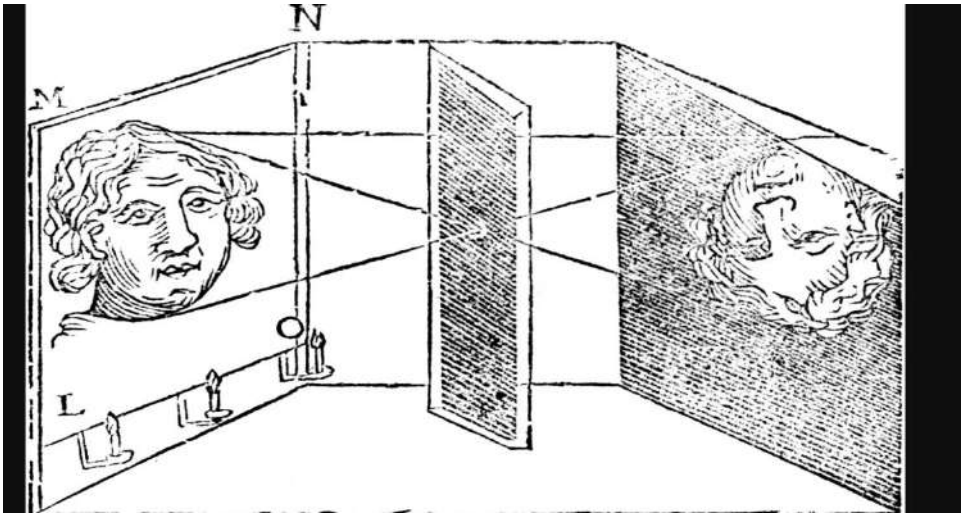

### 1. History and Evolution of photography

Photography **is regarded as the method of recording the image of an object through the action of light, or related radiation, on a light-sensitive material. The word, derived from the Greek *photos* ("light") and *graphein* ("to draw"), was first used in the 1830s**. As a means of visual communication and expression, photography has distinct aesthetic capabilities.

**Important Characters of a Photograph:**

- One of the most important characteristics is **immediacy.** Usually, but not necessarily, the image that is recorded is formed by a lens in a camera. Upon exposure to the light forming the image, the sensitive material undergoes changes in its structure, a latent (but reversed) image usually called a **negative** is formed, and the image becomes visible by development and permanent by fixing with sodium thiosulfate, called **"hypo."** The essential elements of the image are usually established immediately at the time of exposure. This characteristic is unique to photography and sets it apart from other ways of picture making. The seemingly automatic recording of an image by photography has given the process a sense of authenticity shared by no other picture-making technique. The photograph possesses, in the popular mind, such apparent accuracy that the adage **"the camera does not lie"** has become an accepted norm.
- The photographer perceives the essential qualities of the subject and interprets it according to his or her judgment, taste, and involvement. **An effective photograph can disseminate information about humanity and nature, record the visible world, and extend human knowledge and understanding. For all these reasons, photography has aptly been called the most important invention since the printing press.**

**Principle of the camera obscura**

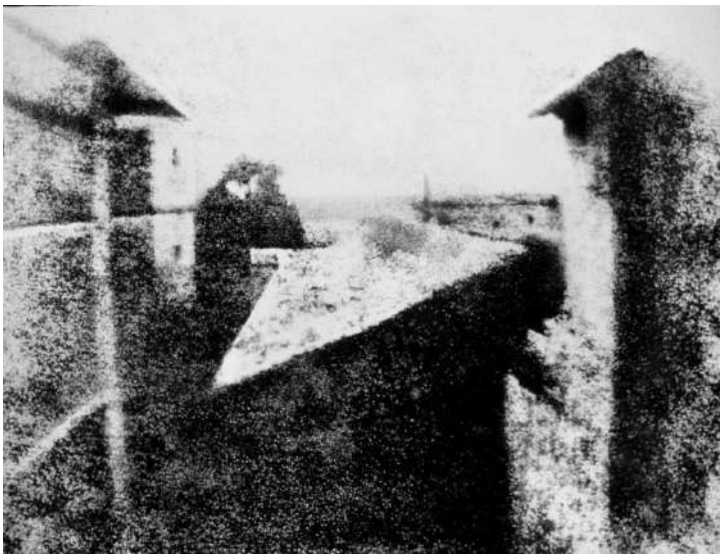

The forerunner of the camera was the **camera obscura,** a dark chamber or room with a hole in one wall, through which images of objects outside the room were projected on the opposite wall. The principle was probably known to the Chinese and to ancient Greeks such as Aristotle more than 2,000 years ago. Late in the 16th century, the Italian scientist and writer **Giambattista della Porta** demonstrated and described in detail the use of a camera obscura with a lens.

In **1727 the German professor of anatomy Johann Heinrich Schulze** proved that the darkening of silver salts, a phenomenon known since the 16th century and possibly earlier, was caused by light and not heat. His discovery, in combination with the camera obscura, provided the basic technology necessary for photography. It was not until the early 19th century, however, that photography actually came into being.

## A. Heliography

- **Nicéphore Niépce**, an amateur inventor living near Chalon-sur-Saône, a city 189 miles southeast of Paris, was interested in lithography, a process in which drawings are copied or drawn by hand onto lithographic stone and then printed in ink,
- Niépce oiled an engraving to make it transparent and then placed it on a plate coated with a light-sensitive solution of **bitumen of Judea (a type of asphalt)** and **lavender oil** and exposed the setup to sunlight.

- After a few hours, the solution under the light areas of the engraving hardened, while that under the dark areas remained soft and could be washed away, leaving a permanent, accurate copy of the engraving.
- Calling the process **heliography ("sun drawing"),** Niépce succeeded from 1822 onward in copying oiled engravings onto lithographic stone, glass, and zinc and from 1826 onto pewter plates.
- ***In 1826/27, using a camera obscura fitted with a pewter plate, Niépce produced the first successful photograph from nature, a view of the courtyard of his country estate, Gras, from an upper window of the house. The exposure time was about eight hours, during which the sun moved from east to west so that it appears to shine on both sides of the building.***

**View from the Window at Le Gras** **Cardinal d' Amboise**

- Niépce produced his most successful copy of an engraving, a portrait of **Cardinal d' Amboise**, in 1826. It was exposed in about three hours and in February 1827 he had the pewter plate etched to form a printing plate and had two prints pulled.
- Paper prints were the final aim of Niépce's heliographic process, yet all his other attempts, whether made by using a camera or by means of engravings, were underexposed and too weak to be etched. Nevertheless, Niépce's discoveries showed the path that others were to follow with more success.

## B. Daguerreotype:

**Louis-Jacques-Mandé Daguerre** **View of the Boulevard du Temple**

- **Louis-Jacques-Mandé Daguerre** was a professional scene painter for the theatre. Daguerre made preliminary sketches by tracing the images produced by both the camera obscura and the camera lucida, a prism-fitted instrument that was invented in 1807. In 1829 he made partnership with Niépce and worked with him for four years.
- By 1835, three years after Niépce's death, Daguerre had discovered that a latent image forms on a plate of **iodized silver** and that it can be **"developed"** and made visible by exposure to **mercury vapor**, which settles on the exposed parts of the image. **Exposure times could thus be reduced from eight hours to 30 minutes**.
- By 1837 Daguerre was able to fix the image permanently by using a solution of table salt to dissolve the unexposed silver iodide. That year he produced a photograph of his studio on a silvered copper plate, a photograph that was remarkable for its finer detais. Also that year, Niépce's son Isidore signed an agreement with Daguerre affirming Daguerre as the inventor of a new process, **"the daguerreotype."**
- Daguerre wrote a booklet describing the process, ***An Historical and Descriptive Account of the Various Processes of the Daguerreotype and the Diorama***, which at once became a best seller and 29 editions and translations appeared before the end of 1839.

## C. Calotype

- **William Henry Fox Talbot,** trained as a scientist at the University of Cambridge, could not draw his scientific observations, even with the aid of a camera lucida; this deficiency inspired him to invent a photographic process..
- He made paper light-sensitive by soaking it alternately in solutions of **common salt (sodium chloride) and silver nitrate**. Silver chloride was thus produced in the fibers of the paper. Upon exposure to light, the silver chloride became finely divided silver, dark in tone. Theoretically, the resulting **negative**, in which tonal and spatial values were reversed, could be used to make any number of **positives** simply by putting fresh sensitized paper in contact with the negative and exposing it to light.

**William Henry Fox Talbot** **Portrait of Two Men**

- Talbot's method of fixing the print by washing it in a strong solution of sodium chloride was inadequate, however, and the process was not successful until February 1839, when his astronomer friend **Sir John Herschel** suggested fixing the negatives with **sodium hyposulphite** (now called sodium thiosulfate) and waxing them before printing, which reduced the grain of the paper.
- Talbot, convinced of the value of duplicability, continued to work to improve his process. **On September 21–23, 1840**, while experimenting with **gallic acid**, a chemical he was informed would increase the sensitivity of his prepared paper, Talbot discovered that the acid could be used to develop a latent image. **This discovery revolutionized photography on paper as it had revolutionized photography on metal in 1835. Whereas previously Talbot had needed a**

**camera exposure of one hour to produce a negative, he now found that one minute was sufficient.**

- Talbot named his improved negative process the **calotype,** from the Greek meaning "**beautiful picture,"** and he protected his discoveries by patent.

**D. Development of the wet collodion process**

**Frederick Scott Archer**

**Ambrotypes**

- Photography was revolutionized in 1851 by the introduction of the wet collodion process for making **glass negatives**.
- This new technique, invented by the English sculptor **Frederick Scott Archer,** was 20 times faster than all previous methods
- **Paper prints** could easily be made from glass-plate negatives. The process had one major drawback: the photographer had to sensitize the plate almost immediately before exposure and expose it and process it while the coating was moist.
- Collodion is a solution of **nitrocellulose (guncotton) in alcohol and ether**; when the solvents evaporate, a clear plastic like film is formed.
- The wet collodion process was almost at once universally adopted because it rendered detail with great precision that rivaled that of the daguerreotype.
- It reigned supreme for more than 30 years and greatly increased the popularity of photography, despite the fact that it was unequally sensitive to different colors of the spectrum.
- The wet collodion process was also used to produce positive images on glass called **ambrotypes,** which were simply underexposed or bleached negatives that appeared positive when placed against a dark coating or backing.

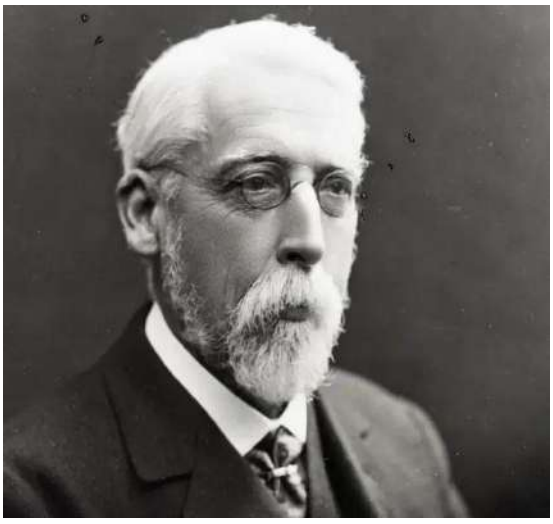

- **Tintypes, first known as ferrotypes or melainotypes,** were cheap variations of the ambrotype. Instead of being placed on glass, the collodion emulsion was coated on thin iron sheets that were enameled black. Easy to make and inexpensive to purchase, tintypes were popular among soldiers in the Civil War and remained a form of folk art throughout the 19th century.

**F. Development of the dry plate**:

- In the 1870s many attempts were made to find a dry substitute for wet collodion so that plates could be prepared in advance and developed long after exposure, which would thereby eliminate the need for a portable darkroom.
- In 1871 **Richard Leach Maddox**, an English physician, suggested suspending silver bromide in a gelatin emulsion, an idea that led, in 1878, to the introduction of factory-produced dry plates coated with gelatin containing silver salts. This event marked the beginning of the **modern era of photography.**
- Gelatin plates were about 60 times more sensitive than collodion plates. The increased speed freed the camera from the tripod, and a great variety of small hand-held cameras became available at relatively low cost, allowing photographers to take instantaneous snapshots.

**Dry Plates – Gelatin Process**

**Richard Leach Maddox**

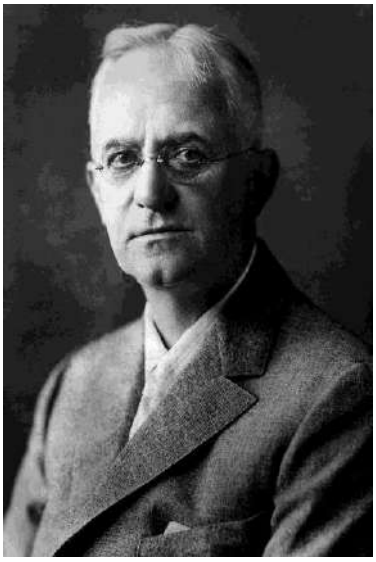

**G. Kodak Camera**

- Of these, the most popular was the **Kodak camera**, introduced by **George Eastman in 1888**. Its simplicity greatly accelerated the growth of amateur

photography, especially among women, to whom much of the Kodak advertising was addressed. In place of glass plates, the camera contained a roll of flexible negative material sufficient for taking 100 circular pictures, each roughly 2.5 inches (6 cm) in diameter.

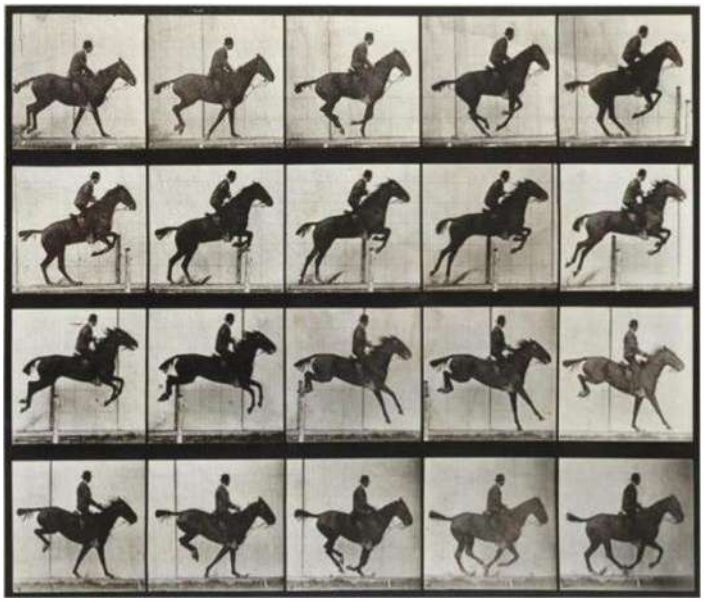

- After the last negative was exposed, the entire camera was sent to one of the Eastman factories in Rochester, New York, or Harrow, England where the roll was processed and printed;

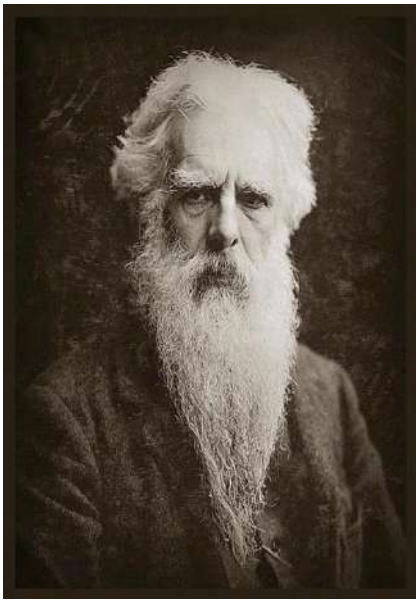

**Kodak camera – 1888** **George Eastman**

**H. Eadweard Muybridge: photographic study of a man jumping a horse**

**Eadweard Muybridge: *Figure Hopping***

- A few years before the introduction of the dry plate, the world was amazed by the photographs of horses taken by Eadweard Muybridge in California. To take these photographs, Muybridge used a series of 12 to 24 cameras arranged side by side opposite a reflecting screen. The shutters of the cameras were released by the breaking of their attached threads as the horse dashed by.
- Through this technique, Muybridge secured sets of sequential photographs of successive phases of the walk, the trot, and the gallop. When the pictures were published internationally in the popular and scientific press, they demonstrated that the positions of the animal's legs differed from those in traditional hand-drawn representations.

- To prove that his photographs were accurate, Muybridge projected them upon a screen one after the other with a lantern-slide projector he had built for the purpose; the result was the **world's first motion-picture presentation**. This memorable event took place at the San Francisco Art Association in 1880.

**I. Color Photography**

**Kodachrome film** **Leopold Godowsky, Jr., and Leopold Mannes**

- In the 1880s **photochromes,** colour prints made from hand-coloured photographs became fashionable, and they remained popular until they were gradually replaced in the first decades of the 20th century by **Autochrome plates.**
- The Autochrome process, introduced in France in 1907 by Auguste and Louis Lumière, was the first practical colour photography process. It used a colour screen a glass plate covered with grains of starch dyed to act as primary-colour filters and black dust that blocked all unfiltered light) coated with a thin film

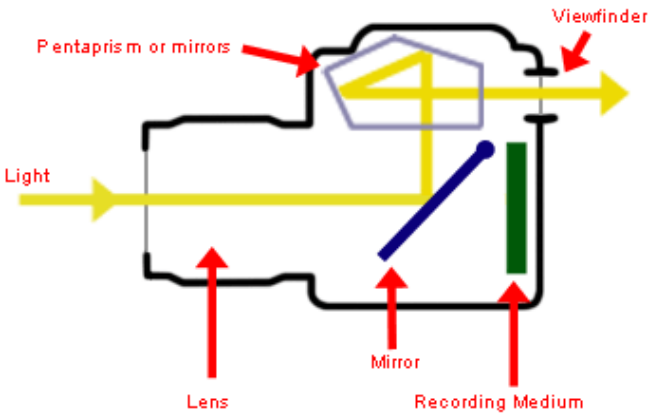

of panchromatic i.e., sensitive to all colours emulsion, and it resulted in a positive colour transparency.

- In 1935 **Leopold Godowsky, Jr., and Leopold Mannes**, two American musicians working with the Kodak Research Laboratories, initiated the modern era of colour photography with their invention of **Kodachrome film**.
- In 1942 Kodak introduced the **Kodacolor negative-positive** film that 20 years later—after many improvements in quality and speed and a great reduction in price—would become the most popular film used for amateur photography.

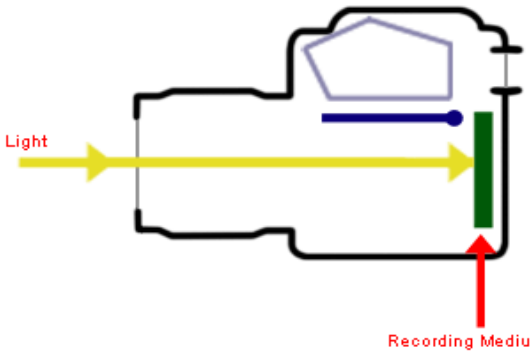

**2. Types of Cameras**-

**A. Single Lens Reflex - (SLR):**

- The most popular type of general-purpose camera for enthusiasts and professionals is the **single lens reflex (SLR).**
- This type of camera has a **moveable mirror** behind the lens which reflects an image through a **five-sided prism (pentaprism)** or pair of mirrors, onto a glass screen or the viewfinder). This means the photographer sees exactly the same image that will be exposed on the recording medium. .

- When you press the shutter button, the main mirror is flipped out of the way so the light passes straight through to the recording medium as pictured below. As you do this, you notice the image briefly disappear from the viewfinder. There is also the familiar sound of the **"camera click"** as the whole mechanism works.

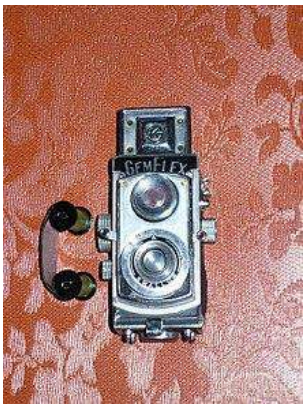

- The obvious advantage of this system is accuracy. SLR cameras also work well with different lenses. Since you are seeing exactly what the lens sees, you can swap lenses as required and always be confident of what you are capturing.
- There are also some disadvantages of this system:
    - SLR cameras tend to be bulkier and heavier than viewfinder cameras.
    - SLR cameras tend to be noisier than other types because of the physical mechanism.

**B. Twin Lens Reflex (TLR)**

- A **twin-lens reflex camera** (**TLR**) is a type of camera with two objective lenses of the same focal length. One of the lenses is the photographic objective or "taking lens" (the lens that takes the picture), while the other is used for the viewfinder system, which is usually viewed from above at waist level.
- In addition to the objective, the viewfinder consists of a 45-degree mirror , a matte focusing screen at the top of the camera, and a pop-up hood surrounding it.
- The two objectives are connected, so that the focus shown on the focusing screen will be exactly the same as on the film.
- TLR cameras ended after the arrival of digital cameras.
- Examples of TLR – **Kinaflex, Instantflex TL70, Gemflex**, **Rolleiflex**

## C. Rangefinder Cameras

- A **rangefinder camera** is a camera fitted with a **rangefinder** which is a range-finding focusing mechanism is allowing the photographer to measure the subject distance and take photographs that are in sharp focus.
- Most varieties of rangefinder show two images of the same subject, one of which moves when a calibrated wheel is turned; when the two images coincide and fuse into one, the distance can be read off the wheel.
- Cameras without built-in rangefinders could have an external rangefinder fitted into the accessory shoe. Earlier cameras of this type had separate viewfinder and rangefinder windows; later the rangefinder was incorporated into the viewfinder.
- More modern designs have rangefinders coupled to the focusing mechanism so that the lens is focused correctly when the rangefinder images fuse; compare with the focusing screen in non-autofocus SLRs.

  Example : **Foca Camera, Leica Camera, Contax Camera**

**Polaroid Cameras**

- Polaroid Camera is a **instant camera** is a camera which uses self-developing film to create a chemically developed print shortly after taking the picture. Polaroid Corporation pioneered and patented consumer-friendly instant cameras and film, and was followed by various other manufacturers.
- The invention of commercially viable instant cameras which were easy to use is generally credited to American scientist **Edwin Land**, who unveiled the first commercial instant camera, the model 95 Land Camera, in 1948 a year after he unveiled instant film in New York City.
- In February 2008, Polaroid discontinued the production of its instant films and cameras, shut down three manufacturing facilities as the sales of analog film by all makers dropped by first decade of the 21st century.
- In 2009, Polaroid was acquired by PLR IP Holdings LLC, which uses the Polaroid brand to market various products often relating to instant cameras. Among the products it markets are a Polaroid branded Fuji Instax instant camera, and various digital cameras and portable printers.

  Example: **Polaroid SX-70, Polaroid 635 Supercolor**,

**D. Super wide-Angle Camera**

- An ultra wide-angle Camera has a lens whose focal length is shorter than that of an average wide-angle lens, providing an even wider view.
- Many smart phones also have wide angle cameras. Example: Samsung Galaxy s 22 etc. It has a 50MP main camera wih a Field of View of 585 degrees.
- Some ultra wide angel cameras offer a 120 degree filed of view

**E. Panoramic Camera:**

- Panoramic cameras give you wide-area coverage with just one camera. You can use them to monitor activities and detect incidents in large areas, track the flow of people, and improve area management. And because just one camera plays the role of many, your installation and system costs are kept lower.
- Panoramic cameras are used for taking panoramic pictures by revolving a lens so that the film is exposed through a narrow vertical slit so that adjacent areas of the film are exposed consecutively. **It gives a wide and unobstructed, so as to take in an extensive area in all directions**
- **Panoramic photography** is a technique of photography, using specialized equipment or software that captures images with horizontally elongated fields of view. It is sometimes known as **wide format photography**.

- An image showing a field of view approximating, or greater than, that of the human eye – about 160° by 75° – may be termed panoramic

F. **Aerial Camera**

- Aerial cameras are **highly specialized instruments developed to enable accurate and consistent imagery of the below surface to be obtained from an aircraft**.
- Commonly used cameras are **Zeiss EMKA 15/23 and Wild RC-8**. These work on both panchromatic and colored films.
- Aerial photographs are simply pictures taken from above. There are two types of aerial photograph – **vertical and oblique**
- Aerial imagery is an indispensable tool for **topographical mapping and the interpretation of places, objects, and features**. The remote sensing method collects vital information that can be used for land use, agricultural management, forestry, conservation, urban planning and more

**G. Sub-miniature Camera:**

- A subminiature camera is a class of camera that is very much smaller than a "miniature camera". Cameras that used film smaller than 35mm were referred to as "sub-miniature"

- The smallest of these are often referred to as "ultra-miniature
- The smaller subminiature cameras, called ultraminiature cameras, particularly Minox, are associated with spying.
- **Subminiature photography** uses film such as 16mm, 9.5mm, 17mm, or 17.5mm films. It is distinct from photomicrography, photographing microscopic subjects with a camera which is not particularly small.
- There are many subminiature cameras Example: **Minox, followed by Tessina, GaMi, Rollei, Yashica, Mamiya, Gemflex and Minolta**

**Minolta 110 Zoom SLR**

**Russian KMZ Narciss 16mm SLR**

I. **Digital Photography**

- **Digital photography** uses cameras containing arrays of electronic photo detectors interfaced to an analog-to-digital converter (ADC) to produce images focused by a lens, as opposed to an exposure on photographic film.
- The digitized image is stored as a computer file ready for further digital processing, viewing, electronic publishing, or digital printing.
- Any electronic image sensor can be digitized; this was achieved in 1951. The modern era in digital photography is dominated by the semiconductor industry, which evolved later.
- An early semiconductor milestone was the advent of the **charge-coupled device (CCD) image sensor**, first demonstrated in April 1970; the field has advanced rapidly and continuously ever since, paced by concurrent advances in photolithographic fabrication.
- DSLR - digital single-lens reflex camera (DSLR) and most of the digital cameras now come with an electronic viewfinder, which approximates the final

photograph in real time, which can also review and adjust or delete a captured photograph within seconds, making this a form of instant photography, as compared to most photochemical cameras from the preceding era.

- Image sensors are arrays of electronic devices that convert the optical image created by the camera lens into a digital file that is stored in some digital memory device, inside or outside the camera. Each element of the image sensor array measures the intensity of light hitting a small area of the projected image i.e. a pixel and converts it to a digital value.
- The two main types of sensors are **charge-coupled devices (CCD), in which the photo charge is shifted to a central charge-to-voltage converter, and CMOS or active pixel sensors.**

## UNIT-2: Components of DSLR Camera

### 2.1 Key components of DSLR Camera

DSLR stands for Digital Single Lens Reflex. Digital stands for the sensor, single-lens means that the camera uses one only lens for different particular operations, and reflex stands for the system of the mirror in the camera. The following are the different parts of the DSLR Camera.

- **Viewfinder**: Viewfinder is a camera component that shows the photographer the area of the subject that will be included in a photograph. In modern cameras it usually is part of a direct visual- or range-finder focusing system and may also be used to display exposure settings or meter information.

- View Finder shows exactly what is going to be photographed. Most DSLR cameras have **optical TTL (through the lens**) viewfinders, which allow you to look through the lens.
- Photographers look through the viewfinder to get a better view of what they are shooting. It enables the photographers to frame or crop a particular scene to arrange their composition.
- Viewfinders reduce image distortion and capture an accurate image.

A major difference between basic compact cameras and Digital SLR cameras is that Digital SLR cameras use a mirror and **pentaprism system** to reflect the light coming through the lens directly to the eye level viewfinder. When the shutter release button is pressed the mirror flips up so that the light can reach the image sensor. The mirror system found in Digital SLR cameras is a major reason for its larger size. It also contributes to the higher price of the camera

- **LCD Screen**: LCD stands for **Liquid Crystal Display**. It is the display technology used to create the screens embedded in the back of nearly all digital cameras.
  - LCD works for reviewing photos, displaying menu options and serving as a live viewfinder.
  - All digital cameras contain full-color display screens. It is the display of the camera, in which we will be able the pictures, the settings or what we have captured and how does it look as a final thing.
  - Unlike the optical viewfinder, the LCD screen displays the entire frame that the sensors capture. Optical viewfinders, even on a professional level DSLR, only show 90-95% of the image.
- **Lens**: Lens brings light to a fixed focal point and it allows you to control the amount of light that is coming at your camera. Convex lens are used in photographic camera so that real image formed can be taken on screen as concave mirror does not form real image. The purpose of the camera lens is to focus and direct the incoming light.

  The camera lens consists of one or more precisely shaped pieces of glass or plastic called **elements.** The light coming through the elements is "bent" or directed to the image sensor where the information about the light is captured. The camera lens is an extremely important part of the camera. That is because the type of lens and the quality of the lens being used will contribute greatly to the sharpness and overall appearance of the picture. There are various types of

camera lenses available. The most common types of lenses are Wide Angle, Standard, Telephoto, and Zoom lenses. Lenses on Basic Compact Cameras are fixed and cannot be changed. Lenses for Digital SLR Cameras and Compact System Cameras can be removed and changed to better suit a particular photo shooting situation.

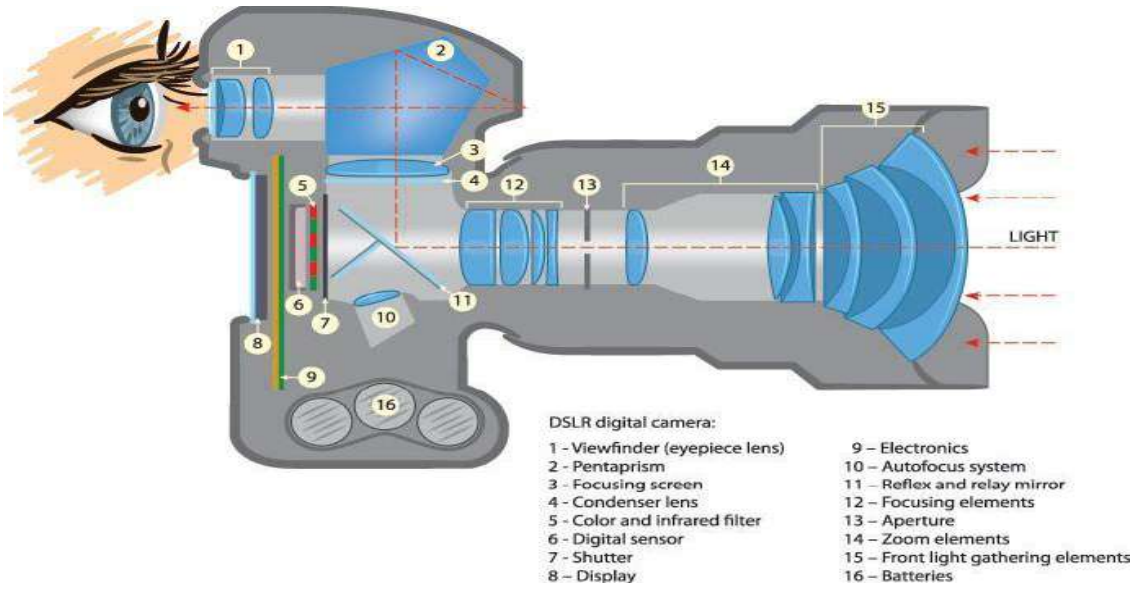

- **Flash:** A flash is a device used in photography that produces a brief burst of light typically lasting 1/1000 to 1/200 of a second at a color temperature of 5500 K to help illuminate a scene. A major purpose of a flash is to illuminate a dark scene. There are Built-in flash which comes out as a pop-up. Besides having a built-in flash, you can also add an external flash or otherwise, known as a speedlite
- **Mode Dial**: A mode dial or camera dial is a dial used on digital cameras to change the camera's mode. Most digital cameras, including DSLR and SLR-like cameras, support modes, selectable either by a **rotary dial** or from a menu.
    - Mode dial in a DSLR camera helps to change the mode that you are shooting or taking a picture of. In most DSLR cameras you will find the mode dial as a wheel.
    - Shooting modes fall into three categories: auto, scene, and P, S, A, and M modes.
        - In auto and scene modes the camera controls shutter speed and aperture.
        - P, S, A, and M mode are known as exposure modes and give photographers a choice as to which elements of exposure—aperture or shutter speed—they wish to control.
        - Represented by the letters “P” - Programmed auto), “S” - Shutter-priority auto), “A” - Aperture-priority auto), or “M” - Manual
        - In M mode (manual exposure), the photographer is able to adjust the aperture, shutter speed and sensitivity. In P, A, and S modes the camera determines the optimal exposure (image brightness), but in M mode, the user settings determine the exposure.
- **Shutter Release Button**: When pressed, the shutter of the camera is "released", so that it opens to capture a picture, and then closes, allowing an exposure time as determined by the shutter speed setting. Some cameras also utilize an electronic shutter, as opposed to a mechanical shutter. In DSLR camera, without

the shutter release button picture cannot be taken. This button is placed in the top right of the camera. The digital cameras have a two step shutter button that's designed to help with focusing and framing the image

- **Mirror**: The mirror's job is to "guide" or direct the light from the lens into the viewfinder. It does a click once we take the picture. That click is the movement of the mirror on your DSLR camera
- **Sensor**: A sensor in a camera is added to receive the information that comes from the viewfinder and the lens. The sensor is the main part that turns that information into an image. There are two main types of sensors that a DSLR camera works with.
    - CCD charge-coupled device
    - CMOS complementary-metal-oxide semiconductor.

The focused light coming through the lens is directed to the digital camera's image sensor. That focused light is "captured" or read by the sensor prior to being stored in the cameras memory card. The image sensor has a grid with millions of microscopic light information gathering elements called **"photo-sites."** Each one of these photo-sites are better known as **pixels.** There are one million pixels in a Megapixel. Each photographic image consists of millions of pixels. In general, the more pixels in a picture, the better the quality of the image. The size of the camera's image sensor is also a factor in the quality of an image. Larger sensors have larger pixels and are able to reproduce colors as well as shadow areas more accurately. The image sensors in Digital SLR cameras are much larger than those in basic compact cameras.

**Working of DSLR Camera**

As the camera starts focusing, the camera begins to read the light that is coming in. The ambient light falls on the lens and it flows through the aperture. Depending on the size of the aperture that particular amount of light will pass to the shutter. The Shutter will decide how long this amount of light should be let in on the sensor. Once the shutter release button is pressed it will snap open and shut at the set speed and slice the light that is coming in. This incoming sliced light will fall in on the light sensor and then on the digital film; thus burning the image on it

**2.2. Autofocus:**

Autofocus (AF) is the feature of a camera that tries to ensure that the chosen subject is sharp within the photo. Sensors detect how far away the subject is from the camera, and this information is relayed to the lens, which then uses an electronic motor to adjust the focal distance of the lens. All DSLRs cameras have the option to disable AF if desired.

The first autofocus cameras were developed in the late 1970's and their speed and accuracy has been improved greatly since that time. The latest cameras have incredibly complex, dedicated AF sensors that analyze the scene through the viewfinder and predict what it is that you are trying to focus on. Once they have locked onto a subject, focus can be maintained on a moving target which makes it particularly useful for sports photography. Thus autofocus is the system that automatically adjusts camera focus. Cameras typically have a two-stage shutter-release button:

- First stage in which the shutter-release button is lightly pressed halfway, and a
- Second Stage in which the shutter-release button is pressed the rest of the way down.

The following are the main camera Autofocus modes in photography:

- Single autofocus mode (AF-S / One-Shot AF) Single autofocus mode (AF single) is the most basic option available. ...
- Continuous autofocus mode (AF-C / AI Servo) ...
- Hybrid autofocus mode (AF-A / AI Focus AF)

**2.3. Light controls- Aperture, Shutter and Exposure**

The following are the three different ways to control how much light you camera takes in. They are the **ISO**, the **Aperture**, and the **Shutter Speed**.

**A. ISO - International Organization for Standardization**

The Two film standards called **ASA and DIN** were combined into ISO standards i.e. International Organization for Standardization in 1974. Although ISO initially was defined only for film sensitivity, it was later adopted by digital camera manufacturers with the purpose of maintaining similar brightness levels in film.

- ISO is simply a camera setting that will brighten or darken a photo. As you increase your ISO number, your photos will grow progressively brighter.
- A photo taken at too high of an ISO will show a lot of grain, also known as **noise,** and might not be usable.
- ISO should be raised only when we are unable to brighten the photo via shutter speed or aperture
- A lower ISO value means less sensitivity to light, while a higher ISO means more sensitivity.
- Best ISO Settings
    - ISO 100-200: Best for bright daylight.
    - ISO 200-400: Slightly less ambient light, such as indoors during the daytime or outdoors in the shade.
    - ISO 400-800: Indoors, with a flash.
    - ISO 800-1600: Low light indoors or at night when you can't use a flash.

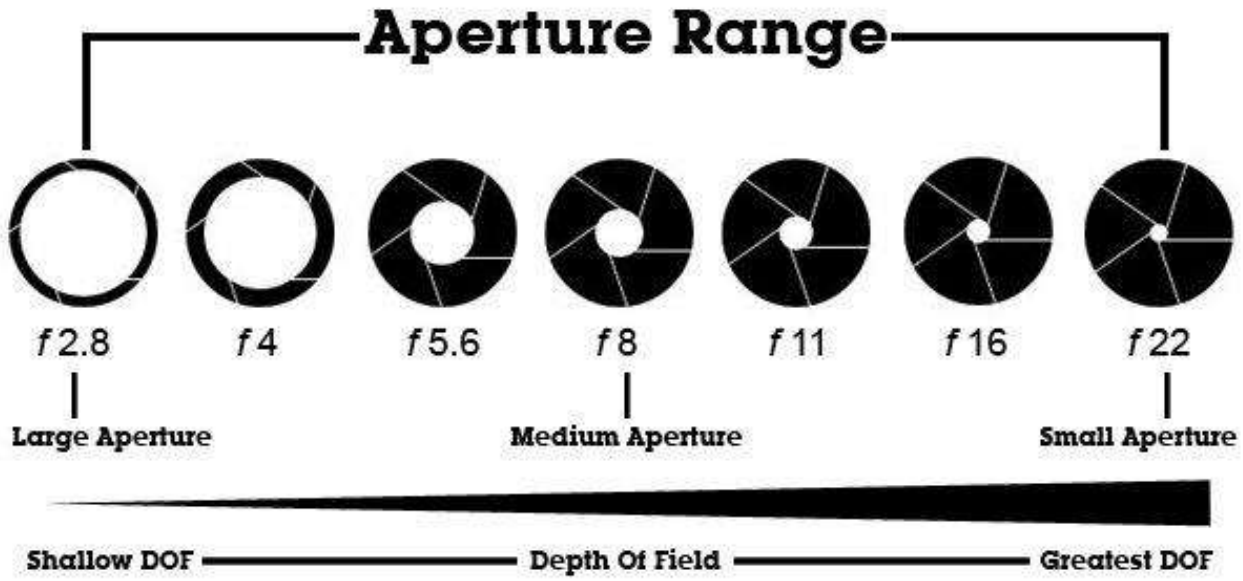

The lowest ISO (base ISO) of the camera is typically ISO 100 or 200 can be used in plenty of light and to minimize the appearance of noise as much as possible. ISO should be increased only when there is not enough light for the camera to capture a sharp, bright photo any other way. When the photos are taken in indoors without a

flash, or capturing ultra-fast action higher ISO number is set to take the photos without introducing blur

**B. Aperture**:

Aperture is defined as a space through which light passes in an optical or photographic instrument. The aperture setting determines how much light hits your sensor. Aperture refers to a hole in your lens through which light enters the camera.

- The aperture of a lens is the diameter of its opening.
- Aperture is expressed as f/stop.
- The smaller the f/stop number or f/value the larger the lens opening (aperture).
- **F-stop values: f/2, f/2.8, f/4, f/5.6, f/8, f/11, f/16, f/22etc.**

## Depth of the Field

Depth of field is how much of your image is in focus. In more technical terms, depth of field is the distance in an image where objects appear "acceptably in focus" or have a level of "acceptable sharpness." Depth of the Field helps distinguish the foreground from the background to create a focal point that draws the eye and tells it where to look.

- Depth of field refers to the range of distance that appears acceptably sharp. It varies depending on camera type, aperture and focusing distance, although print size and viewing distance can also influence our perception of depth of field.
- **The aperture** is the opening created by a set of overlapping metal blades, known as the diaphragm, inside a photographic lens. This opening controls the amount

of light coming through the lens. The Depth of the field is controlled by the aperture.

- Depth of field is the area of acceptable sharpness in front of and behind the subject which the lens is focused. It refers to how blurry or sharp the area is around your subject. A shallow depth of field refers to a small area in focus. Often the subject is in focus, while the background is blurred.
- A higher depth of field would see the whole image from foreground to background sharp and in focus, a lower depth would result in blurry backgrounds and blurred elements in the foreground too
- ***The smallest f-numbers correspond to the large apertures and therefore the shallowest depth of fields.***
- ***And the larger f-numbers correspond to the smallest apertures and therefore the deepest depth of fields.***

| f- Number | Aperture | Depth of the Field |
|---|---|---|
| **SMALL - f/2, f/2.8, f/4, f/5.6** | **LARGE Aperture** | **SHALLOW Depth of Field** |
| **LARGE - f/11, f/16, f/22** | **SMALL Aperture** | **DEEP Depth of the Field** |

## C. Shutter Speed

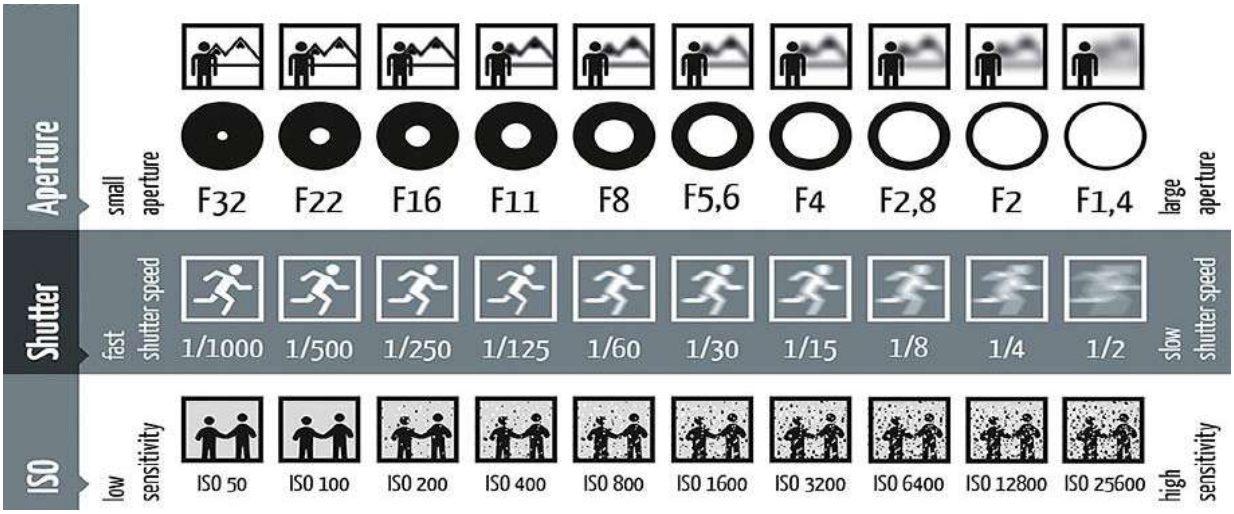

Shutter speed is the *length of time* the camera shutter is open, exposing light onto the camera sensor. It indicates how long is the camera spending in taking the photo.

- Shutter speed is **the speed at which the shutter of the camera closes**.
- Shutter speeds are typically measured in fractions of a second when they are under a second. For example, 1/4 means a quarter of a second, while 1/250 means one-two-hundred-and-fiftieth of a second (or four milliseconds). Most modern DSLRs and mirror less cameras can handle shutter speeds of 1/4000th of a second at the fastest, while some can handle even quicker speeds of 1/8000th of a second and faster
- A fast shutter speed creates a shorter exposure — the amount of light the camera takes in — and a slow shutter speed gives the photographer a longer exposure.
- With higher shutter speed, the less time you leave the shutter open and the less is exposed to light. In general, higher shutter speeds are better for daytime

photography. With low shutter speed, the more time you leave the shutter open and the more is exposed to light. In general, low shutter speeds are better for nighttime photos.

- **The effect of shutter speed is on exposure, which relates to the brightness of an image. If you use a long shutter speed, your camera sensor gathers a lot of light, and the resulting photo will be quite bright. By using a quick shutter speed, your camera sensor is only exposed to a small fraction of light, resulting in a darker photo**
- Shutter speed can be a vital tool to capture a photo of the proper brightness. On a sunny day, you may need to use a fast shutter speed so that your photo isn't overexposed. Or, if it is dark out, a long shutter speed may be necessary to avoid a photo that is too dark
- A fast shutter speed is typically whatever it takes to freeze action. If you are photographing birds, that may be 1/1000th second or faster. However, for general photography of slower-moving subjects, you might be able to take pictures at 1/200th second, 1/100th second, or even longer without introducing motion blur.
- Long shutter speeds are typically above 1 second – at which point, you will need to use a tripod to get sharp images. You would use long shutter speeds for certain types of low-light / night photography, or to capture movement intentionally. If anything in your scene is moving when you use long shutter speeds, it will appear very blurry.
- **A fast shutter speed - freezes action. Example - If you are photographing birds, which may be 1/1000th second or faster.**
- **Slow Shutter Speed – Slower Moving Objects - For slower-moving subjects, you might be able to take pictures at 1/200th second, 1/100th second, or even longer without introducing motion blur.**
- **Long Shutter Speed – Low Light / Night Photography - Long shutter speeds are typically above 1 second – at which point, you will need to use a tripod to get sharp images. You would use long shutter speeds to capture movement intentionally.**

- Cameras handle shutter speeds automatically by default. When the camera is set to "AUTO" mode, the shutter speed, aperture and ISO is selected by the camera. To set the shutter speed manually – we can set the camera to "SHUTTER PRIORITY" and choose the shutter speed, and the camera automatically selects the aperture. By setting the camera to "MANUAL" mode we can choose both shutter speed and aperture manually. Within both of these modes, you can choose to set ISO manually or automatically.

| LIGHT FACTOR | METHOD |
|---|---|
| **ISO** | Amount of light by the sensitivity of the sensor |
| **Shutter Speed** | Amount of light by the length of time |
| **Aperture** | Amount of light by the intensity by a series of different sized openings |

## 2.4. Lenses – Zoom - Use of Lenses

There are two basic categories of camera lenses:

1. **Prime lenses**. Primes have a fixed lens focal length, making them faster and sharper. While prime lenses are less flexible due to the fixed focal length, they are also fast and lightweight, making them easy to travel with.

**2.** **Zoom lenses**. They use a series of lenses to allow different focal lengths from a single lens, making them more flexible but not as fast. They contain more glass, which aids in their flexibility, but they also tend to be bigger and heavier than prime lenses.

Within both prime and zoom types of lenses, there are a lenses with different focal lengths**.**

1. **Macro Lenses** - This type of camera lens is used to create very close-up, macro photographs. They produce sharp images at extremely close range. These lenses are used in Nature Photography

2. **Telephoto Lenses** - Telephoto lenses are a type of zoom lens with multiple focal points. These types of lenses are great for isolating a subject that is far away with a narrower field of view. A telephoto lens is used for focusing in on distant objects. Eg. Sports Photographers. They are quite large, heavy, and expensive,

3. **Wide Angle Lenses** - Wide angle lenses are ideal for fitting a large area into your frame. This is especially useful for landscape photography or street photography.

4. **Standard Lenses**: Standard lenses can be used for a variety of different types of photography. Their focal lengths are from 35mm and 85mm.

**5.** **Specialty Lenses**

- **Fisheye lens**. A fisheye lens is an ultra-wide-angle lens that can take in a full 180 degree radius around it. Fisheye lenses are so named because they distort an image's field of view, making even a room in a house look like a bubble.

- **Tilt shift lens**. A tilt shift lens distorts perspective, making things look smaller than they really are—almost as if they are toys.
- **Infrared lens**. These lenses play with light rather than perspective, filtering out all light waves except infrared for a unique visual effect

| Focal Length | Type of Lens | What is it used for? |
|---|---|---|
| 4mm - 14mm | Fisheye | Abstract, creative |
| 14mm - 35mm | Wide angle | Landscape, architecture |
| 35mm - 85mm | Standard | Street, travel, portrait |
| 85mm - 135mm | Short telephoto | Street photography and portraits |
| 135mm+ | Medium telephoto | Sports, wildlife, action |
| 300mm+ | Super telephoto | Sports from a distance, nature and astronomy |
| 35mm - 200mm | Macro | Close-up shots |

Thus Zoom lenses are 70-200 mm lens. Prime lenses have a fixed focal range - Can't zoom in or out. The main advantage of prime lenses is that they specialize in just one focal length. Prime Lenses produce much higher quality images than a zoom lens in general. Telephoto Lens has a range of 100mm up to 600mm, sometimes even more. Telephoto lenses are bulky and may require a tripod to support them

**2.5. Using of Camera Accessories – Filter, Reflector, Lens hood, Tripod**

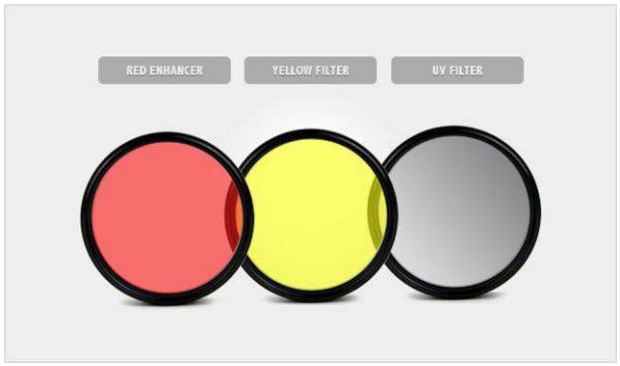

**A. Filters:**

Lens filters are transparent or translucent glass or gelatin elements that attach to the front of a lens. They protect the camera lens. They alter the characteristics of light passing through the lens or add special effects and colors to an image. The filter can be of a square or oblong shape and mounted in a holder accessory, or, more commonly, a glass or plastic disk in a metal or plastic ring frame, which can be screwed into the front of or clipped onto the camera lens. Filters, in photography are used to selectively modify the component wavelengths of mixed (e.g., white) light before it strikes the film. Filters change the dynamics of the light entering the lens and usually are altered with exposure to compensate for this fact. This is called the Filter Factor and each filter has a specific filter factor. Basing on the type of fitting filters are of two types:

- **Screw-in filters** - Screw-in filters fit directly onto your lens, in the threads at the edge of the lens barrel. Each screw-in filter is a specific width, so the more

lenses of different widths may need more filters. Screw-in filters are ideal and make polarizers and UV filters easy to swap in and out

- ***Slot-in filters***, a *filter* holder is placed on the lens' adapter ring and *filters* are dropped into the holder. The holder usually has interchangeable ...

**Screw-in filters** ***Slot-in filters***

Basing on the type of filters used there are three types of filters. They are uv Filters, P**olarizing Filters and Neutral Density filters**

# Unit-3 – Notes

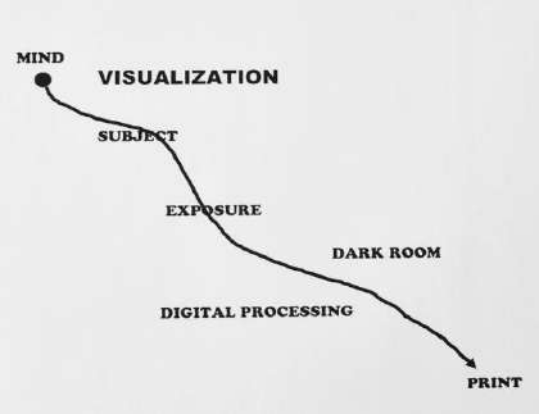

## UNIT - 3: DSLR Camera Photographs and Editing

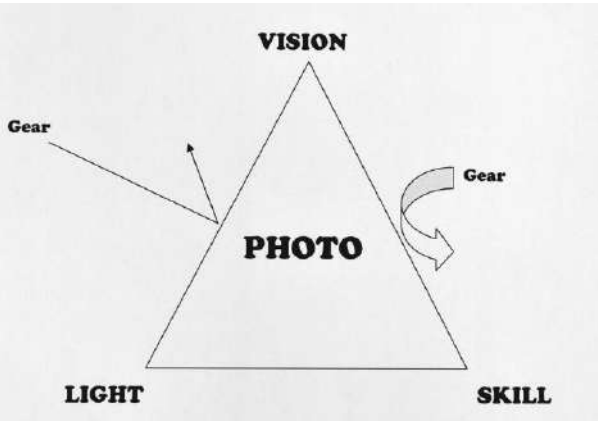

### 3.1. Visualization of a Photograph

Visualization is a conscious process of projecting the final photographic image in the mind before taking the first steps in actually photographing the subject. The term visualization refers to the entire emotional-mental process of creating a photograph, and as such, it is of the most important concepts in photography." "To visualize an image (in whole or in part) is to see it clearly in the mind prior to exposure, a continuous

projection from composing the image through the final print." Visualization is more accurately viewed as an attitude toward photography. Thus Photographic visualization is the confluence of imagination and technique. It is the ability to picture the essence of the final print in your mind before releasing the shutter.

The first step towards visualization – and hence toward expressive interpretation – is to become aware of the world around us in terms of the photographic image. A photographer must explore what lies before our eyes for its significance, substance, shape, texture, and the relationship of tonal values. Hence visualization is all about the perception of the surroundings and aesthetic persuasions. Visualization is a conscious process of projecting the final photographic image in the mind before taking the first steps in actually photographing the subject. The term visualization refers to the entire emotional-mental process of creating a photograph, and as such, it is of the most important concepts in photography." "To visualize an image is to see it clearly in the mind prior to exposure, a continuous projection from composing the image through the final print." Photographic visualization is the confluence of imagination and technique. It is the ability to picture the essence of the final print in your mind before releasing the shutter.

Ansel Adams said I use my mind to direct the shot, the camera and everything else follows. Ansel Adams wrote and instructed extensively on the process of visualization. He deemed it to be a conscious, intuitive, and expressive process that begins as an artistic construct in the mind that the photographer deliberately and physically translates into a visual and tangible expression of that construct. Adams writes much more on visualization and concentrates heavily on the appreciation of structure, shape, and form as well as technical manipulations of the tools of the trade that culminates in the print, the end product of visualization. According to him the three things that determine the success in making a compelling photograph are

- Artistic vision,
- The light, and
- Skill of the photographer.

He also maintained that the triad above is impervious to the essential gear that one carries: the camera and lens. In the words of Ansel Adams, the composition card is elegantly defined and described: *"Visualizing photographs can be carried a step further by using a black cut-out card … The frame is cut to the proportions of the film format and held at the approximate distance from the eye to approximate the image area. The card helps in isolating and seeing more acutely the relationships of subject elements …"* The power of the composing card are that it trains the mind and the eyes to visualize the composition out of the relative "vastness" of the scene before the photographer makes the exposure. With practice and experience, the potential exists for the photographer to become more skilled to recognize and "filter out" out the extraneous elements and include only what is desired and needed for the photograph.

**Photo Composition - Shapes**

Photo composition is how a photographer arranges visual elements within their frame. It's a placing and organization of objects in a pleasing style says photographer Adam. Long. **The points relevant for all forms of photography are**

1. **Lines**: Lines will help to balance the photo, direct the viewer's eye, and comprise the overall message of the photograph. Strong lines within a photograph also make an image pop. The understanding of the concept of leading lines gives the photographer control on the subject and the direction of the viewer's eye.
2. **Shapes**: Every element within the frame has a shape and each shape will have a varied effect on the viewer. A circle, for example, can create a calm and harmonious

feeling while helping direct the viewer's eye around and inside the circular shape. On the other hand, a triangle will make your photo appear much sharper and geometric. It will also point the viewer's eye in a specific direction which makes intention and planning a necessity when featuring this shape.

3. **Depth:** The three dimensional effect in the photograph is called depth. An image without depth will appear flat and dull and will not inspire the viewer. Depth is created by elements such as lighting and the position of the subjects. To create depth photographer must use the shadows and angles created by your light source.

Thus in a photograph the LINES are used to direct your viewers' attention to the main subject. Various shapes are used to create setting in the photo. The light is used to create depth and add additional dimension to the photograph.

### 3.2. Characteristics of A Photograph – Visual Elements

Visual elements are the devices and techniques applied by photographers while taking a photograph to ensure a pleasing and aesthetic outcome. The visual elements are like a set of tools that can be used to construct a great image.

**A. Light quality** describes the source, amount, and direction of lighting in a photograph. Light can come from natural sources, like the sun. It can be altered or created by humans, by using such things as flash bulbs or lamps. It can also be diffused by clouds or by humans putting a veil of cloth over a lamp. The direction of light is also important when looking at photographs: it can come from above, behind, or from one side. *Bright, dim, cloudy, directional, diffused*, and *flash* are some terms used to describe lighting.

**B. Texture** is how the surface of an object appears to feel or actually feels to the touch. Texture can be described as rough, smooth, soft, etc. Texture is shown in photographs by the way the light falls on an object and through value changes. The paper on which the photograph is made also determines texture

**C. Focus** is the sharpness or clarity of subjects in the photographic image. Soft focus is created when a photographer manipulates the camera to achieve blurry, gentle edges. Photographers use the aperture and limitations of the lens to create sharp detail, soft edges, or both; this is called selective focus.

D. **Color**: Artists use color to achieve many effects. Color gives viewers a sense of mood, place, and time of year. Color can also move your eye around a composition and create a sense of space on a flat surface. Some artists achieve very saturated (strong, intense)

color in their images, while others intentionally use subdued or muted colors in their subject matter.

**E. Angle of view or Point of View** is the position from where the photographer took the picture. A photographer can point the camera from below, above or straight at an object. In other artistic media, this is often called point of view. When looking for subjects, especially in nature, a photographer often shifts the angle of view to make interesting images. Angle of view can also express emotion or mood. It can give the viewer a sense of being small if looking up, or a sense of being big if looking down.

**Angle of view or Point of View** in photography simply means the position from which the camera sees the scene. The way the camera is looking at the subject i.e. looking down, looking up, how close we are to the subject make about point of view and will change how viewer sees the photo. Thus 'point of view' refers to the position the camera while viewing a scene. It is the position from which the camera sees the scene.

- Juxtaposition: Shooting a subject from an unexpected angle is regarded as Juxtaposition. It will have more impact than the viewing angle encountered in everyday life.
- A powerful point of view involves "becoming the subject." This means that shooting the photo from the angle of the subject. These shots allow the viewer to feel like they are experiencing the event first hand.
- Shooting a photo from the eye level of the subject is the quickest way to help the viewer's connects emotionally with a photo subject. By literally putting those at the photo subject's level can create an instinctual response. Shooting at eye level also allows you to see more of the subject than shooting downward or upward. This straight-on angle also helps to prevent distortion caused by perspective or angle of view.
- When you shoot a photo from below a subject, you can make the viewer feel as though the subject is in control of a situation. The simple act of looking up at a subject can impart a feeling of smallness, loss of control or a sense that the subject is unobtainable.
- Shooting from above a subject allows the viewer to feel superior to the subject or convey a sense of protectiveness of the subject.

**F. Framing** is how a photographer carefully presents a subject. Unlike painters, who usually begin with a blank canvas, photographers begin with everything in front of

them. Once a subject is found, a photographer decides what to include in the picture frame. The photographer then composes the image to draw a viewer's attention to the subject in a way that best expresses the artist's idea of it.

- Framing in photography refers to **the process of composing a picture**. It involves choosing what you'll include in the frame and what you'll leave out. The goal is to create a pleasing composition that directs the viewer's attention to the subject matter. Framing is essential in photography because **it helps you to create the desired response when a viewer looks at the image**. It can also help you to convey a specific message through the photo
- Framing can **make an image more aesthetically pleasing and keep the viewer's focus on the framed object(s)**. It can add depth to an image, and can add interest to the picture when the frame is thematically related to the object being framed. Thus Framing is **the act of manipulating context to make consumers more receptive to your product or service**
- A framing object refers to anything in the scene that can be used to form a visual frame around the subject or focal point. Frames will add wonderful visual interest to an image, as well as context and depth. They're also perfect for drawing the viewer's eye into the scene toward the focal point. A frame can go around all four edges of the composition, or it might just creep around one or two edges of the scene.
- The simple act of taking a few steps back, or changing your shooting position and viewpoint, can result in you being able to include a framing object in your photo. A framing object is typically something in the foreground that you shoot through, such as an open window or an archway. But background elements can also be used as a frame, such as the trees behind the people in the photo below. One of the main benefits of using frames is that they add context to your photo. By including the framing object in the foreground the viewer will get extra information about the scene.
- Frames provide your audience with an insight into the immediate surroundings of your location. They tell the viewer exactly where you

were standing when you took the photo. Frames are wonderful compositional elements for drawing attention to the main subject or focal point. Surrounding the subject with a frame helps to draw the viewer's eye into or through the frame, directly to the point of interest. Not only does the frame obscure some of the busy or empty surroundings, but it essentially tells the viewer where to look. Frames don't always have to be foreground objects that you shoot through. They can also be elements in the background or next to the subject.

**G. Centre of Interest** is that part of the picture which attracts the mind. A focal point is that area of a picture that attracts the eye. This area is more important when compared to the other objects or elements in a composition. This can be by contrast of values, more colors, and placement in the format. It is the point in the image where the photographer hopes to focus the attention of the viewer. Another word for "center of interest" is Emphasis. Emphasis is done to show the importance or special importance given to something that is the same as the center of interest. Most often it is good for the picture to have only one principal idea, topic, or center of interest to which the viewer's eyes are attracted. Subordinate elements within the picture should support and focus attention on the principal feature so it alone is emphasized.

A picture without a dominant center of interest or one with more than one dominant center of interest is puzzling to a viewer. Subsequently, the viewer becomes confused and wonders what the picture is all about. When the picture has one, and only one, dominant "point of interest," the viewer quickly understands the picture. When there is nothing in the image to draw attention to a particular area or object, the eyes wander through the scene. The focus can be a single object or several arranged to draw attention to a specific area. When the center of interest is a single object that fills most of the picture area or one that stands out boldly, attention is attracted immediately to it, but, not all subjects are as simple to arrange or as bold and impressive. A photographer usually has at his disposal many factors or elements that can be used and arranged within the picture area to draw or direct attention to the primary idea of the picture. Some of these elements are lines, shapes, human figures, tone, texture…

**H. Horizontal Line, Vertical Lines in Photography:**

Horizontal lines are lines drawn from left to right or right to left and are parallel to the x-axis. Vertical lines are lines drawn up and down and are parallel to the y-axis.

Horizontal lines and vertical lines are perpendicular to each other. Horizontal lines create a sense of calmness, while vertical lines convey a sense of structure and strength. Diagonal lines convey energy, movement, and direction. Curved lines can create a sense of softness or elegance. Vertical lines in a photograph add tension to the scene. They also show strength and stability. Horizontal lines provide a sense of calm. Diagonals impart energy and a sense of dynamics to the frame

## I. Near-Far Relationship

The Near/Far technique is essentially a method of putting the foreground as close to the lens as you can to create an almost 'in your face' composition. By doing this you are telling the viewers to 'look here' as that is the part of the scene that is most interesting. But you want to make sure you don't get so close you are losing focus in either the foreground or background.

### 3.3. Editing Photographs- A. Transferring Photographs to a personal Computer

The photos from the camera can be transferred to a personal by using a

- A USB cable can be used to connect the camera directly to the computer. The Drag and drop function can be used to transfer the images from the camera to the desktop.
- Every camera will have an SD Card as a storage device for storing the photos. The SD Card can be removed from the camera slot and it can be aligned with the computer and used to transfer the image files from the card to the computer.
- The latest DSLR cameras have Wi-Fi feature in it. The Wi-Fi facility can be turned on and the computer can be aligned with the camera from the transfer of the photos from camera to the cloud and access your cloud account

## Image File Formats

An Image file format is a format of the photo for a digital image. The data stored in an image file format may be compressed or uncompressed. If the data is compressed, it may be done so using Lossy compression or the Lossless Compression. Thus the Image files are composed of digital data and the data can be displayed on a digital display or printed out using a printer. The following image file formats are used in photography.

1. **TIFF**: TIFF or Tagged Image File Format are lossless images files meaning that they do not need to compress or lose any image quality or information allowing for very high-quality images but also larger file sizes. TIFF images are Lossless as they are not compressed. TIFF is used for taking Very high-quality images and are best for High quality prints, professional publications and archival copies
2. **Bitmap**: BMP or Bitmap Image File is a format developed by Microsoft for Windows. There is no compression or information loss with BMP files which allow images to have very high quality, but also very large file sizes. Due to BMP being a proprietary format, it is generally recommended to use TIFF files. BMP files do not have any compression and is used for high quality scans and archival copies
3. **JPEG**: JPEG which stands for Joint Photographic Experts Groups is a "lossy" format meaning that the image is compressed to make a smaller file. The compression does create a loss in quality but this loss is generally not noticeable. JPEG files are very common on the Internet and JPEG is a popular format for digital cameras - making it ideal for web use and non-professional prints. JPEG has Lossy Compression i.e. some file information is compressed or lost. It is used for Web Images, Non-Professional Printing, E-Mail, Power point

   JPEG is the Joint Photographic Expert Group, which works on the standards for compression of still digital images. MPEG is the Moving Picture Expert Group, which works on the standards for compression of digital movies. JPEG is intended for compressing images that will be Still images / only one frame. MPEG achieves high compression rate by storing only the changes from one frame to another, instead of each entire frame.
4. **GIF**: GIF or Graphics Interchange Format files are widely used for web graphics, because they are limited to only 256 colors and can be animated. GIF files are typically small is size and are very portable. GIF has a lossless Compression i.e. compression without loss of quality. GIF formats are used for Web Images and can be used for animations.
5. **PNG**: PNG or Portable Network Graphics files are a lossless image format originally designed to improve upon and replace the gif format. PNG files are able to handle up to 16 million colors, unlike the 256 colors supported by GIF. PNG

files have lossless - compression i.e. without loss of quality. They are used for Web Images.

6. **RAW Image Files**: RAW images are images that are unprocessed that have been created by a camera or scanner. Many digital SLR cameras can shoot in RAW. These RAW images are the equivalent of a digital negative, and hold lot of image information and are processed in an editor such as Adobe Photoshop or Lightroom. RAW images do not have any Compression. They are used for Photography and are also used to save metadata having unprocessed and lots of information

**B. Cropping of Photos**

Cropping is done to the photographs to

- Convert photos from horizontal to vertical and vice versa; The most basic cropping option is to convert a horizontal image to a vertical and vice versa. This type of cropping is extremely easy to perform as the cropping tool can be used to drag a rectangle inside the image that is opposite to the original image's layout
- Cropping is done to show a different perspective in the photos. Different perspective can be achieved by cropping various angles of the photo.
- Cropping is done for close ups and to fulfill rule of thirds. Cropping is an useful tool for cutting out close ups from different photos.. It can also be performed for fulfilling rule of thirds and for achieving balance and unity in the photos
- Cropping is done to remove distractions that creep knowingly or unknowingly into the photos. The crop function allows to cut out a portion of the image or change the image dimensions without distorting the image
- Cropping is also done to remove unused space or free the cramped photos for creating space.

**C. Scaling and toning of Photos**

Scale is the ratio of the distance between two points on an image to the actual distance between the same two points on the ground. In computer graphics and digital imaging, image scaling refers to the resizing of a digital image. The magnification of digital material is known as up-scaling or resolution enhancement. The most common side effect of scaling an image larger than its original dimensions is that the image may appear to be very fuzzy or pixelated. Scaling images smaller than the original dimensions does not affect quality as much, but can have other side effects.

- Proportional Scaling is done when we scale an image to size while maintaining the correct proportions of the image. Whereas the Resizing the image changes the dimensions of the image without applying a transformation to the existing contents. Scaling the image will stretch the existing contents to the new dimensions.
- Smooth Scaling is done to better the color quality by blending neighboring colors.

Toning is a method of changing the color of black- and-white photographs. In analog photography toning is a chemical process carried out on silver-based photographic prints.

There are three main types of tone:

- The dark tone: the photography is rather dark with low lights or dark colors. Low key black and white photos are dark toned photos.
- The clear tone: the photography is rather clear with high lights or bright colors. ...
- The neutral tone: the photography is neither dark nor clear.

### 3.4. **Photo Editing Software:**

The following are some of the Proprietary or paid Photo Editing Software:

- Adobe Photoshop - Best Overall Photo Editor for Mac and PC
- Corel Paint Shop Pro - Best Easy Photo Tool for Beginners
- Skylum Luminar - Best HDR and Filters for Photographers.
- Adobe Lightroom - Best Online Photo Editing Tool
- Skylum Aurora HDR
- Canva
- Stencil
- Pic Monkey

The following are some of the free Photo Editing Software

- Adobe Photoshop Express
- GIMP –GNU Image Manipulation Programme
- Paint . NET
- Pixlr E
- Photoscape X
- Fotor
- Photos Pos Pro

- In pixio

The following is the procedure followed for using a Photo Editing Software

1. **Choose a photo editing program**: Depending upon the availability and affordability choose a photo editing programme.
2. **Use filters and presets**: Many photo editing software's include filters. Also known as presets, filters are like photo editing recipes that mix up a combination of settings to give your photos a certain look
3. **Take advantage of automatic modes:** Every Photo editing programs have algorithms for automatically post-processing images. These allow the program to analyze an image and make suggested changes in the name of AUTO / ENHANCE. If the results are not acceptable we can always undo the changes as the original photo is never really changed.
4. **Crop the scene:** Cropping is removing the unwanted edges of an image, making the image smaller and allowing the main subject of your photo to take a larger portion of the frame. Cropping improves the balance, and order of the photos. For doing cropping we must click on the corners and pull from the top, the bottom, and both sides of my frame. The distracting elements must be removed and the main subject must be made the main focus of the image.
5. **Straighten lines**: The lines depicted in the photo must be straightened and this can be done using the photo editing software. First any one dominating line in the photograph must be selected and it should be made straight. The most common line that needs straightening is the horizon.
6. **Bring colors to life**: Some photographers like a lot of bright colors, while others prefer a more muted color scheme. Regardless of that adjusting colors will make photos look more professional. Contrast, saturation and vibrance options can normally be adjusted in photo editing programs. Contrast visually alters colors, as it determines the relative difference between lights and darks in your image
7. **Adjust the white balance**: White balance of images determines how warm or cool the light is. Warmer light has a yellow, or sunny look, while cooler light results in blue tones. In most photo editing programs, white balance is edited with a tool called temperature. Move the temperature slider right for warmer tones or left for cooler tones.

8. **Remove spots and clutter**: In order to ensure a perfect image certain spots / background clutter must be removed. Spots are easy to remove in most photo editing programs by using spot removal tools. To clean up background clutter the photo can be cropped accordingly.

**The following are some of the basic steps used to edit a photo.**

**1. Crop and Clean Up Your Images**

**A. Straighten images:** The horizon must be horizontal when you shoot. If not then the first editing step is to straighten it.

**B. Crop images:** Cropping the image is the second step. Cropping improves the compositional details by removing the distracting and unwanted elements in the frame. It also repositions the subject

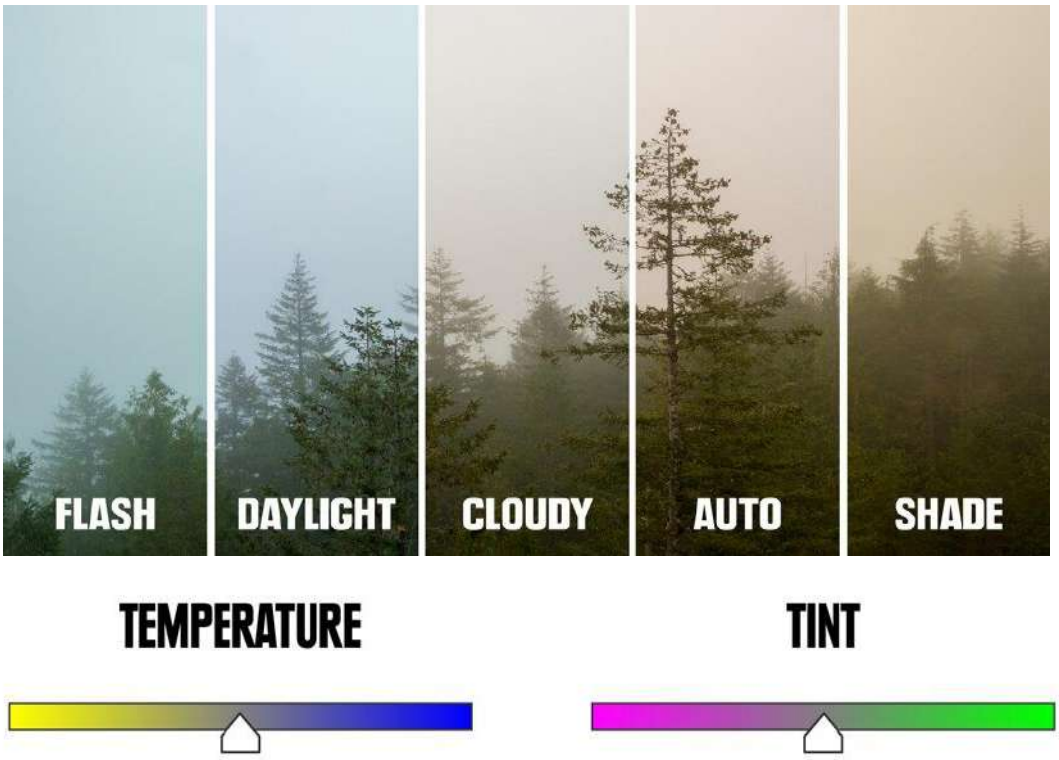

**C. Spot-clean images:** The outdoors is a dusty place and nature's gritty elements have a way of finding their way onto your camera lens, and then onto your photos. Most editing programs have a spot-removing tool. Use the tool for spot cleaning of the images

**2. Adjust the White Balance**

White balance relates to color levels, not exposure levels. If the image has an overall color tone that is displeasing or unnatural we can adjust white balance to fix it. The JPG files capture far less digital data than RAW files hence they offer a minimal amount of white balance adjustment during editing. Most editing programs have the modes like "flash," "daylight" or "cloudy" to better calibrate the image for the lighting conditions when it was shot. In addition, many have both a "temperature" and a "tint" slider that can used to fine-tune the overall lighting cast on an image

.

**3. Adjust Exposure and Contrast**

**A. Adjusting exposure:** The correct exposure can be achieved by adjusting as bright or dark as you want.

**B. Adjusting contrast:** Contrast is the range of dark to light tones. When it's extra high, we get stark image, where all tones, regardless of color, are either very dark or very light. When it's extra low we see a flat image where no elements in the frame stand out. Typically a middle contrast that avoids either of those extremes must be selected.

**3. Adjust Color Vibrancy and Saturation:** Once white balance is adjusted, we can further refine colors in the photos with the saturation and vibrancy controls. The distinction between the two is subtle:

- Increasing vibrancy increases color intensity in neutral color tones and maintains color intensity in the brighter colors.
- Increasing saturation makes all colors throughout the frame more intense. When bright colors pop, it can give the photo a more dramatic look

**5. Adjust Sharpness:** Sharpening an image gives it a crisper, cleaner look. Many programs offer multiple sharpening tools. Begin by adjusting the overall amount of sharpness (on a scale from 0 to 100). Start at 50 percent, then adjust the level up or down to get the sharpness you prefer.

Thus photo-editing techniques include:

1. **Noise reduction:** smoothing the picture out, typically accomplished by reducing the pixel size
2. **White balance:** the color of the light in the image
3. **Contrast:** higher contrast makes an image more punchy, while lower contrast makes it flatter in color
4. **Exposure:** the brightness of the photo
5. **Color adjustments:** change the color of an item or element in the photo

**Resizing and cropping:** adjust the dimensions of the image

**********

# Unit-4 – Notes

## 4.1. Picture Composition

### A. Picture Composition

A camera can't record the context and mood that made the scene exciting: the feel, the smell, the action. It also doesn't record the depth and range of color the eye can interpret. Hence we need to recreate them through composition. Composition is the way the elements in a photo are arranged. A photographer must choose the following like Center of interest, Depth of field, Exposure and cropping to make the photograph more interesting and appealing.

### B. Composition Techniques:

A photographer must only consider what he sees through a camera. The human eye can see almost 180 degrees but even a very wide-angle camera lens can see up to perhaps only 84 degrees. A camera does records everything in its plane of view to be in focus, Human vision with one eye closed is more like a camera lens. It records on a two-dimensional plane and because of stereoscopic vision we cannot delineate subjects from the background. Hence photos come with distracting backgrounds.

When a photographer takes a picture we tend to focus on two types of spaces in the photo

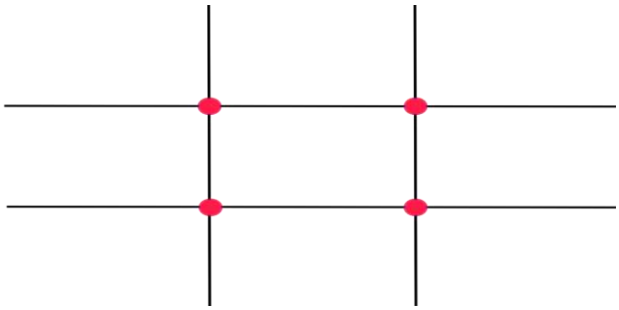

1. **Positive Space**- Space occupied by the subject
2. **Negative Space**- The area not occupied by the subject.

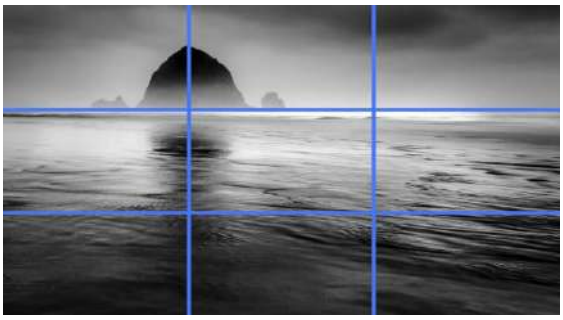

The photographer must improve the Positive space of the subject and neglect the negative space i.e. the area not occupied by the subject. Hence a photographer must notice and control that negative space. Every photo has a background and it carries visual weight. For example a particularly bright area, even if out of focus, will draw attention from the subject. Hence unnecessary bright objects in the background need to be avoided.

### C. Rule of Thirds -

Rule of thirds is a composition technique. It is primarily intended to divide the frame into three equal horizontally and vertically segments using two pairs of equidistant straight lines. The points of interest are then placed along those lines or their intersections, so as to make the resulting image look more balanced, dynamic and overall aesthetically pleasing to the eye. The Principle of Rule of Thirds emphasizes that the center of interest or subject

of a photo generally should not be in the exact center of the picture because it looks static and dull. Hence the center of interest must be placed at the intersection of imaginary thirds in order to avoid a static center.

The "Rule of Thirds" is a concept borrowed from the Art of Painting. **John Thomas, in the year 1797** was the first person who used this phrase in his book ***Remarks on Rural Scenery***. He proposed the idea of dividing the space of the frame into three equal parts, instead of placing the subject dead center in the frame and breaking up the space into two. The formula was a much more harmonizing proportion than precise half

Depending upon the elements in the scene and the camera orientation the grid can be divided into three equal parts. The four points of intersection between the vertical and horizontal lines are actually the **'hot spots'** or the prime points where we humans tend to focus more. Think of these points like a visual magnet always trying to pull our attention. The 'rule' suggests that instead of dividing the frame in two by say placing the primary subject in the middle and creating two negative spaces on either side, the image looks far better when the subject is placed near the edge of the frame and there is one large negative space instead of two. Thus the "Rule of thirds" was made to make our images more balanced, dynamic and harmonizing. To better and creatively use the negative spaces and take the most advantage of the 'visual hotspots'

**Application of Rule of Thirds**

- Place people's eyes and heads on the horizontal lines depending on how close up you are shooting.

- Use vertical grid lines for things like trees, buildings, or wider shot of a person with a background behind them
- In landscape photography use the horizontal grid lines for things like horizons and where water meets land
- An average landscape contains a certain part of land and sky OR water and sky. Using the Rule Of Thirds to break up your composition into three equal pieces you can devote the lion's share of the pie to the particular element that you want to amplify more than the other.
- **Get the specific focal points of the photo onto the corners of that middle square**

**D. Headroom, Nose Room**:

In photography **head room** is a concept of aesthetic composition that addresses the relative vertical position of the subject within the frame of the image. Headroom refers specifically to the distance between the top of the subject's head and the top of the frame. The amount of headroom that is considered aesthetically pleasing is a dynamic quantity and it changes relatively to how much of the frame is filled by the subject. Too much room between a subject's head and the top of frame results in **dead space.**

**Nose Room:**

It is also called as **lead room, nose room or 'looking room** to include the sense of space on both sides of the image. The lead room principle in photography is a simple, but essential composition technique. The lead room principle means that when framing a subject, a well-composed image will have a negative space in the direction that the subject is facing. In the case of moving objects, this will be in front of and in the direction that the object is moving.

- If a character is looking screen-left, certainly it's most common to place them on the right of frame – giving them lead room or *nose room* or *looking space* on the left, but that is not the only option.
- In certain situations it's more appropriate, or simply more aesthetically pleasing, to place them on the left, or in the centre. And although the rule of thirds suggests how *far* to the left or right they will commonly be placed.

**C. Depth of field & Depth of Focus techniques**

The simplest definition for depth of field is the area of your image that is in focus. More specifically, the distance between the nearest and the farthest object that are in focus. The shallowness of the depth of field depends of the f/stop also known as

aperture, the focal length of the lens, the size of the camera sensor and distances between you, the subject and the background.

- The aperture of a lens is the diameter of its opening. Aperture is expressed as a f/stop. The smaller the f/stop number (or f/value), the larger the lens opening (aperture). Depth of field depends of the size of the opening of the aperture. The larger the aperture opening is the more shallow the depth of field will be and opposite vice versa.
- The next thing that defines depth of field is focal length. If you have zoom lens or two prime lenses that are different in focal length you can test this yourself. The basic idea is that the longer the focal length is, the shallow the depth of field will get. And of course, the opposite is true when we have short focal lengths

The amount of a photo that's sharp is a *key artistic component of photography*. Whether your image has a shallow depth of field or a deep depth of field can make a huge difference. If you're photographing a portrait subject with a distracting background, failure to create a shallow depth of field will often result in a very snapshot, mediocre photo. And if you're photographing a landscape with a beautiful foreground, a stunning mid ground, and a jaw-dropping background, failure to use a deep depth of field will prevent the viewer from appreciating the entire scene.

## 4.2 Branches of Photography

### A. Nature Photography:

Nature photography is a wide range of Photography taken outdoors and devoted to displaying natural elements such as landscapes, Wildlife and Plants and close-ups of natural scenes and textures. Nature photography tends to put a stronger emphasis on the aesthetic value of the photo than other photography genres. Nature photography" overlaps the fields of—and is sometimes considered an overarching category including – Wild Life Photography, Landscape Photography.

**Wild Life Photography,**

- The world's three largest photography organizations, like Photographic Society of America, The Federation Internationale de l'Art Photographique and Royal Photographic Society have adopted a common definition for nature and wildlife photography to govern photography competitions.
- Nature photography is restricted to the use of the photographic process to depict all branches of natural history, except anthropology and archaeology in such a

fashion that a well-informed person will be able to identify the subject material and certify its honest presentation.

- The story telling value of a photograph must be weighed more than the pictorial quality while maintaining high technical quality.
- Human elements shall not be present, except where those human elements are integral parts of the nature story such as nature subjects, like barn owls or storks, adapted to an environment modified by humans, or where those human elements are in situations depicting natural forces, like hurricanes or tidal waves.
- Scientific bands, scientific tags or radio collars on wild animals are permissible.
- Photographs of human created hybrid plants, cultivated plants, feral animals, domestic animals, or mounted specimens are ineligible, as is any form of manipulation that alters the truth of the photographic statement
- No techniques that add, relocate, replace, or remove pictorial elements except by cropping are permitted.
- Techniques that enhance the presentation of the photograph without changing the nature story or the pictorial content, or without altering the content of the original scene, are permitted including HDR, focus stacking and dodging/burning. Techniques that remove elements added by the camera, such as dust spots, digital noise, and film scratches, are allowed.
- Stitched images are not permitted. All allowed adjustments must appear natural.
- Color images can be converted to grey scale, monochrome.
- Infrared images, either direct- captures or derivations are not allowed.

**Wild Life Photography** is all about capturing animals in their natural habitats. The animals are often photographed in action, such as eating, fighting, or in flight. Alternatively, more static portraits may be used to show detail of the animal or to depict it in its environment. Captive or controlled animals are often photographed instead of true wild specimens, although it is arguable as to whether this constitutes true wildlife photography.

Images used in Nature Photography competitions may be divided in two classes: **Nature and Wildlife.**

- In Nature sections Photography of landscapes, geologic formations, weather phenomena, and extant organisms is the primary subject matter.

- This includes images taken with the subjects in controlled conditions, such as zoos, game farms, botanical gardens, aquariums and any enclosure where the subjects are totally dependent on man for food.
- Images entered in Wildlife sections meeting the Nature Photography Definition above are further defined as
    - Extant zoological or botanical organisms free and unrestrained in a natural or adopted habitat.
    - Landscapes, geologic formations
    - Wildlife is not limited to mammals, birds and insects. Marine subjects and botanical subjects including fungi and algae taken in the wild are suitable wildlife subjects, as are carcasses of extant species.
    - Photographs of zoo or game farm animals, or of any extant zoological or botanical species taken under controlled conditions are not eligible in Wildlife sections

The techniques of wildlife photography differ greatly from other forms of photography. Wide apertures are used to achieve a fast shutter speed, freeze the subject's motion, and blur the backgrounds. Wildlife is also usually shot with long Telephoto lenses from a great distance by using a tripod. Many wildlife photographers use Blinds, Camouflage.

**Ethical rules of wildlife photography:**

1. **Nature comes first** - Animals and the natural environment first, and photography second
2. **Wildlife conservation** should be an aim of wildlife photography
3. **Be respectful of your subjects**.- No threat of physical harm, predation, anxiety, or impairment of reproduction to wild life.
4. **Minimize disturbances** The photographer should take every effort to minimize the disturbances that could occur before shooting, during shooting, or even after shooting is done. Avoiding direct flash is recommended, especially when shooting small mammals. If using an artificial light source, keep it as far away from the animal as possible
5. **Do your research**- The wildlife photographer should be knowledgeable about flora and fauna, natural history, and related subjects such as

geology and zoology. At the very least, the wildlife photographer needs a working knowledge of the animals they're shooting

6. **Treat all wildlife with equal respect** -Common or rare, endemic or migratory, all wild animals and flora have equal rights. It is not acceptable to disturb the common species to shoot the rarer species
7. **Know the rules** - The wildlife photographer should understand the rules and regulations relating to the wildlife and nature of the country they are in before going out in the field
8. **Ask before shooting** - When preparing to shoot in a certain location, the photographer should check if permission is required to shoot there, and obtain permission from the relevant authority
9. **Don't interfere with your subjects**.- It is not appropriate to manipulate wildlife or their surroundings for the sake of a photo
10. **No feeding of animals**.- Attracting animals by baiting is not recommended, and using live baits is not appropriate, nor is feeding animals
11. **Leave no traces**. - The photographer should be aware not to damage or disturb any of the natural habitats around them while shooting
12. **Approach only with caution**- Approaching a wild animal must be done with great care, and should be undertaken by only those with a good knowledge of the behavior of the animal in question

## Landscape Photography:

Landscape photography is a type of photography that captures the beauty of nature, bringing the viewers into the scenery, setting, and mood in these outdoor locations. We don't need a model, props, or people in the shot for capturing landscapes & nature. While landscapes can sometimes include people in the scene, the art form is generally characterized by its absence of people. Landscape photography is a subset of nature photography. Whereas nature photography focuses on sequential and in-focus shots that may also be close-ups of both flora and fauna. Landscape photography focuses on wide-angle shots of mountains, rivers, estuaries, seas, city skylines. Landscape architecture can be summed up under three main elements: **Greenscape, Hardscape and Waterscape**

- **Nature Landscape Photography**. Nature Landscape photography focuses on capturing wide scenic images of natural landscapes
- **Astrophotography.** - Astrophotography, also known as astronomical imaging, is the photographs of astronomical, celestial objects, events.
- **Impressionistic Landscape Photography**.- It is an image with a dreamy, blurry quality. Rather than detail of a single moment, multiple moments in a single image is captured
- **Representational Landscape Photography**.- It is the most natural and realistic out of all the styles of landscape photography
- **Minimalist Landscape Photography**. – It is a form of photography that is distinguished by extreme, austere simplicity. It emphasizes spareness and focuses solely on the smallest number of objects in the composition process**.**
- **Abstract Landscape Photography**. - abstract landscapes is to essentially present the landscape in a way in which is different from how a human would normally perceive a landscape.
- **Aerial Landscape Photography** - Aerial photography typically refers specifically to bird's-eye view images that focus on landscapes and surface objects
- **Urban landscape photography** - Buildings can be major or minor elements or merely incidental in the background of a "traditional" landscape photo

## B. Still Photography

Shooting images of items that are non-moving is called as Still Photography. A lot of things qualify for such a genre. Everyday household items like flower vases, pencils, coloring tools, watches, electronic items, utensils etc qualifies as still photography subjects.

There are many different kinds of still photography.

- **Product photography:** Much of the technique used in still photography is also used in commercial photography, such as product photography. The method is used to photograph small items like watches, smart phones etc. Although the photography technique might be similar, the lighting technique isn't. It depends on the exact product you're photographing, its nature of light reflectance, and how it can best be represented to determine how the product needs to be lit and photographed. Lights play an essential role in the whole setup of product

photography. It would help with a multiple light setup, modifiers, and diffusers to ensure that the product is appropriately lit. There is a whole wide world of abstract photography done with small items such as pieces of rock, collectibles, and odd items of everyday use.

- **Food photography: T**he second most important still life photography genre is food photography. Food photography is a booming business, and skilled food photographers are highly demanded. Food photography demands that the product, which is a plate of food, must look good in the photograph. Often food photographers hire specialist food stylists to help them make a platter presentable before photographing for their clients. Food photography is mainly done with a high-key lighting effect. Everyone loves a brightly lit photograph of a food plate that clearly shows the details and is tempting. That said, some food items can also be given a low-key effect for the best results

Some simple tips to shoot still life photography

- Composition: The first thing you need to pay attention to is the composition part. One of the primary things about still life photography is that you can and have to do many experiments. If you ever wanted to try out all the rules of photography, still life photography is one genre that allows you to do that—changing things around, playing with the positioning of the object being photographed, and so on.
- Lighting: Whether you're shooting with natural or artificial lights, you can change and experiment with things. In terms of lighting, you can play around with shadows, textures, and shapes. The option to change things around will be more if you're using artificial lighting. If you can afford one or more lights, you can experiment with them. Use one as the key light and the second as the fill, rim, or background light. Additional lights will help you to create depth and dimension in your photos. This is what allows you to create an interesting image.
- Camera angle: Still, life photography has evolved, and so have the camera angles used to shoot still life photography. Previously, during the golden days of film photography, still, life photos were shot entirely from a tripod set up with the object set on a table or bench. The standard camera angle was straight on. The camera angle would rarely change. Things have evolved since those times. Still, life photographers are experimenting with the camera angle and coming up with new approaches to shooting. A tripod is an excellent tool to have, along with a

PTZ head, to exploit different camera angles. Some tripods like this Neewer 72.4-Inch Aluminum Camera Tripod comes with a 360-degree rotatable center column.

## C. Architecture Photography

Architecture refers to the design, engineering, and construction of manmade structures, as well as the final structures themselves. While it's possible to simply point a camera at a building or a bridge and snap a picture, there is an art to photographing architecture. Famous architectural photographers include Albert Levy, who began photographing older buildings in the 1870s, and American mid-century modernist Julius Shulman, who became popular after photographing modern buildings. Thus Architecture photography (also referred to as building photography or structure photography) generally means photography that focuses on buildings. It can include shooting building exteriors and interiors, as well as bridges, other structures, and cityscapes.

Architecture photography has a long history. In fact, the world's oldest surviving photo, *View from the Window at Le Gras*, is an example of architectural photography—and it was taken in the 1820s. The medium has remained popular for all these years, and that's no surprise when you consider the significance of architecture. Buildings do much more than provide us with shelter. They are also works of art and long-lasting cultural symbols. Building photography may have first taken off as a way to document buildings, but along the way, it has evolved into its own diverse art form. Architecture photography has two distinct types: exterior, and interior.

1. **Exterior architecture photography**. This refers to photographs of the outside of a structure. Exteriors benefit from a wealth of natural light, which makes them easier to photograph. Depending on the whims of nature, exteriors may also produce wildly varying, moody, and dramatic results.
2. **Interior architecture photography**. This refers to photographs of a structure's interior. Interiors are often more challenging to capture: ambient light available through windows or skylights is often limited, and sometimes filtered, as

through colorful stained glass windows in churches. Supplemental lighting in the form of a flash helps accurately capture interiors**.**

Once you've chosen architecture interior or exterior to photograph, follow these simple guidelines to capture it effectively.

1. **Do your research**. Every architectural structure has a story. Research the architect and his or her influences as a starting point, along with the style and the date the building was constructed or renovated.
2. **Get a first impression**. When standing in front of or inside a structure, first look around and take stock of everything you see. What do you notice first? Where is your eye drawn? Let your gut be your initial guide to what's interesting about your architectural subject.
3. **Zoom in on details**. If you've done your research, you may notice small details that line up with the narrative of your architectural subject. Consider the shape of the roof or the materials of the ceiling or floor. Look for repeating design elements or unusual symbols. Architecture photography is as much about capturing the details as it is about documenting the whole.
4. **Zoom out on the landscape**. It is also important to survey the landscape and place the architecture in context. If there is a body of water nearby, try capturing the reflection of the building alongside the building itself.
5. **Incorporate other structures or rooms**. If there are other structures that contrast nicely with your subject, try incorporating them into the frame. For interiors, try capturing your subject from an adjoining hallway or room that offers a different perspective. Photographing these details provides an additional layer of complexity and interest to architecture photography.
6. **Shoot from every angle**. Look for different angles, perspectives, and vantage points that may offer a fresh take. Can you shoot an interior from above, or through a window? What does that bridge look like from underneath? Is that building as impressive from the air as it is from the street?
7. **Shoot at different times and conditions**. What does your exterior subject look like on a rainy day? How does the light of a desk lamp on a dark night affect the feel of an interior? Different times of day and weather conditions can add a unique atmosphere to your architectural photos

**Tips and Techniques: Follow these tips to get the most out of your architectural photography.**

1. **Position matters**. The simplest way to achieve a stunning photo is to position the camera perpendicular with the vertical lines of a building. Produce a visually arresting image by controlling the perspective and adjusting the focal plane to capture multiple parallel vertical lines.
2. **Keep an eye out for dynamic shapes**. Clean lines set against a clear sky highlight the symmetry of a structure, but keep an eye out for curves or other dynamic shapes that add a sense of movement to an otherwise still image.
3. **Find the right light**. Wait for the light to shift and capture the change in shadows stretching off windows or columns. If the light is not ideal, adjust your shutter speed and aperture (or, on a smart phone, your exposure setting) with the aim of grabbing three shots: underexposed, automatically exposed, and overexposed.
4. **Play with your camera settings**. Since each scene is different, play with shutter speed and aperture for the three shots above, capturing one that is darker than you'd like, one that is brighter, and one that seems fine, but could use some work. Perfection does not matter at this point in the process, as you'll be merging these three images during post-processing to produce a final, balanced image.

## D. Wedding Photography

Wedding photography is a specialty in photography that is primarily focused on the photography of events and activities relating to weddings. It may include different types of photography like Portrait Photography of the couple before the official wedding day, such as a pre-wedding engagement session On the official wedding day, the photographers will attempt to provide documentary photography coverage to document the different wedding events and rituals throughout the wedding day(s).

**Four approaches to wedding photography**

- Traditional wedding photography provides for more classically posed images and a great deal of photographer control during the ceremony.
- Photojournalist style of wedding photography takes its cue from editorial reporting styles and focuses more on candid images with little photographer interaction - Shooting images quickly using available light or on-camera flash rather than formal posing techniques and studio lights.

- Contemporary/fashion-based wedding photography, a photographer will combine candid images of the events of the day with posed images that are inspired by latest fashion. This style often involves more innovative and dramatic post-processing of images.
- A fourth style that is popular is wedding studio photography where couples make an appointment with a studio for an in-studio or a location shoot, with support from a hair stylist and make-up artist in addition to the photographer and the couple. The couple will go through many changes of clothing and backgrounds in a similar manner to the fashion based approach

## E. Sports Photography

Sports photography refers to the genre of Photography that covers all types of Sports, Games and associated activities. The word "sports photography" encompasses a wide range of activities. The main application of professional sports photography is for editorial purposes. Dedicated sports photographers usually work for newspapers, sports magazines. The aim of sports photography is to promote sports and games.

- Equipment used for sports photography includes a DSLR Camera with interchangeable lenses ranging from 14mm to 400mm or longer in focal length depending on the type of sport.
- The proper lenses are very important as they allow the photographer to reach closer or farther as quickly as possible to keep up with the game play.
- Essential accessories include a Monopod or Tripod for stability and extra batteries.
- Longer focal length lenses are typically used to photograph action in sports such as football, while wide angle lenses can be used for sideline and close-up athlete photos.
- The preferred camera bodies for modern sports photography have fast auto focus and high burst rates, typically 8 frames per second or faster. The current flagship sports

**OUTDOOR SPORTS PHOTOGRAPHY**

Outdoor sports the distances are greater and light brighter, while in indoor sports the distances are lesser and the light dimmer. Outdoor sports long focus lenses with slower apertures are used. For indoor sports shorter lenses with faster apertures are used. Both zoom and prime lenses are used; zoom lenses generally in the 70–200,

75–300, 100–400 or 200-400 range allow a greater range of framing; primes are faster, cheaper, lighter, and optically superior, but are more restricted in framing. Apertures of f/2.8 or faster apertures are used, though f/4 is also found, particularly on brighter days. This varies with sport and preference – Example Golf photographers may prefer to use a 500mm f/4 as opposed to a 400mm f/2.8 as it is a lighter lens to be carried around all day.

**INDOOR SPORTS PHOTOGRAPHY**

Indoor sports photography has less distance between the action and photographer and extreme lighting. Photographers will be close to the action while looking upwards directly into harsh stage lighting against a black background. Prime lens named "nifty fifty“ can be used. The shutter speed is extremely fast while still setting the aperture to bring in enough light. In this scenario a budget telephoto lens would produce both dark and blurry images. Using a prime 50mm lens is a good option for many indoor events.

Location is often important for sports photography. At big events, professional photographers often shoot from VIP spots with the best views, usually as close to the action as possible. Most sports require the photographer to frame their images with speed and adjust camera settings spontaneously to prevent blurring or incorrect exposure. Getting to know your subjects is critical in capturing emotion. Understanding who athletes are makes a better photo. Knowing the game is very essential in sports photography. Predicting what happens next in a sports game is critical in understanding how to compose your shot. The action moves fast so you take the time to prepare yourself before going out and taking photos.

- Sports photography is often done in Shutter Priority mode or manual. A frequent goal is to capture an instant with minimal blur, in which case a minimal shutter speed is desired, but in other cases a slower shutter speed is used so that blur shows to capture the motion, not simply the instant.
- A particular technique is Panning, where the camera uses an intermediate shutter speed and pans with the subject, yielding a relatively sharp subject and a background blurred in the direction of motion, yielding a sense of speed
- ISO speed is often high to allow faster shutter speeds and may be left in auto.

- Photos are often taken in burst mode to capture the best moment, sometimes in combination with JPEG rather than RAW shooting (JPEG files being smaller, these allow longer bursts)..

**Tips for taking perfect sports photos**

1. Know the Rules of the Game and the Camera Interface
2. Don't Waste Your Time Chimping
3. Go Flash less, Use Shutter Priority Mode
4. Get the Best Access You Can and Shoot the Entire Event, Not Just the Action
5. Tell the Story of the Game, Capture the Emotion of the Game
6. Play with a Few Wide Angle Shots and always protect your equipment

**PSY15141 GENERAL PSYCHOLOGY**

**Unit – I: Psychology as science**

Lesson-1 Introduction to Psychology- Definition, nature, scope and aims of Psychology- The rise of experimental psychology.

Lesson-2 Branches and Fields of Psychology- Early Divisions, Basic Fields, Applied Field, Both basic and Applied Fields.

Lesson-3 Schools of psychology- Structuralism, Functionalism, Behaviorism, Psychoanalytic.

Lesson-4 Methods of Psychology – Introspection method, observation method, Survey method, case study method, experimental method and Correlational method.

**Unit-II: Physiological basis of behavior**

Lesson-5 Neuron- The structure of neuron-Types of neurons-Varieties of neuron transmitters.

Lesson-6 Nervous system -Central and Peripheral nervous system- Autonomic Nervous system.

Lesson-7 Brain - Structure and functions of brain- Limbic System.

Lesson-8 Endocrine glands – Effects of over and under secretion of glands.

**Unit - III: Sensation, Attention & Perception**

Lesson-9 Sensation: Sensory process-Senses and sensory organs, general characteristics of Sensation and Sensory thresholds, Subliminal Perception, Signal Detection Theory.

Lesson-10 Attention: Selective attention – Kinds of Attention- Barriers of Attention- Concepts and Mechanisms- Selective Attention.

Lesson-11 Determinants and Theories -Broadbent, Treisman and Deutsch and Deutsch, Norman Models, Sustained Attention, Theories Expectancy, Signal Detection, Arousal, Habituation; Intensive Properties of Attention, Fluctuations of Attention, Attention Span.

Lesson-12 Perception: Meaning of Sensation- Types of Sensation - Definition of Perception – Factors influencing Perception (Physiological and Psychological) - Perception and Illusion

**Unit – IV: Motivation and Emotion**

Lesson-13 Motivation-definition and Nature - Instinct, drive, needs, incentive, motive, Classification of motives.

Lesson-14 Theories of Motivation- Instinct theories – Freud & Mc Dougal; Need hierarchy theory – Maslow

Lesson-15 Emotion: Nature, kinds of emotions- physiological basis of emotion.

Lesson-16 Theories of emotion: The James – Lange theory – The Cannon – Bard theory.

## Contents

1. **Psychology as science**

1.1 Introduction to Psychology- Definition, nature, scope and aims of Psychology- The rise of experimental psychology.

1.2 Branches and Fields of Psychology- Early Divisions, Basic Fields, Applied Field, Both basic and Applied Fields.

1.3 Schools of psychology- Structuralism, Functionalism, Behaviorism, Psychoanalytic.

1.4 Methods of Psychology – Introspection method, observation method, Survey method, case study method, experimental method and Correlational method.

2. **Physiological basis of behavior**

2.1 Neuron- The structure of neuron-Types of neurons-Varieties of neuron transmitters.

2.2 Nervous system -Central and Peripheral nervous system- Autonomic Nervous system.

2.3 Brain - Structure and functions of brain- Limbic System.

2.4 Endocrine glands – Effects of over and under secretion of glands.

3. **Sensation, Attention & Perception**

3.1 Sensation: Sensory process-Senses and sensory organs, general characteristics of Sensation and Sensory thresholds, Subliminal Perception, Signal Detection Theory.

3.2 Attention: Selective attention – Kinds of Attention- Barriers of Attention- Concepts and Mechanisms- Selective Attention.

3.3 Determinants and Theories -Broadbent, Treisman and Deutsch and Deutsch, Norman Models, Sustained Attention, Theories Expectancy, Signal Detection, Arousal, Habituation; Intensive Properties of Attention, Fluctuations of Attention, Attention Span.

3.4 Perception: Meaning of Sensation- Types of Sensation - Definition of Perception – Factors influencing Perception (Physiological and Psychological) - Perception and Illusion

**4. Motivation and Emotion**

4.1 Motivation-definition and Nature - Instinct, drive, needs, incentive, motive, Classification of motives.

4.2 Theories of Motivation- Instinct theories – Freud & Mc Dougal; Need hierarchy theory – Maslow

4.3 Emotion: Nature, kinds of emotions- physiological basis of emotion.

4.4 Theories of emotion: The James – Lange theory – The Cannon – Bard theory.

## 15142SOCIAL PSYCHOLOGY

**Unit – I: Introduction to Social Psychology**

Lesson-1 Introduction to Social Psychology- Definition, Historical origins; Relationship with other social sciences-(Sociology, Economics, Political Science and Anthropology).

Lesson-2 Historical Development of Social Psychology- Early Years of Social Psychology, Formational Years of Social Psychology, Expansion of Social Psychology ,Social Psychology in 21st Century ,Social Psychology in India

Lesson-3 Research methods in Social Psychology (Field Research, survey research, Archival Research, Correlational Research, observational research).

**Unit – II: Social Perception and Social Cognition**

Lesson-4 Person perception; Attribution- Understanding the causes of others beahviour, Kelly's theory; Bem's theory; Regulatory focus theory.Impression formation and impression management.

Lesson-5 Schemas- Types of Schema, Person Schemas, Self Schemas, Group Schemas, Role Schemas, Events Schemas, Impact of Schema.

Lesson-6 Mental frame works- Interpersonal attraction. Communication system in human beings Nonverbal communication; the language of expression

**Unit – III: Socialization & Social Influence**

Lesson-7 Socialization- Definition, Motive and behavior.

Lesson-8 Agencies of socialization- (Parents, Peergroup, school and media) Sexual motives, Sex role identity, Psychological Androgyny, Dependency, Moral development, Self-Esteem, Self concept.

Lesson-9 Conformity- Solomon Asch: Pioneer of Research on Conformity, Impact of Conformity, Factors Affecting Conformity, Reasons for Conformity, Disadvantages of Conformity ,Resisting Conformity , Minority Influence.

Lesson-10 Compliance- Principles of Strategies Used in Compliance, Strategies for Gaining Compliance, Techniques Based on Friendship or Liking , Techniques Based on Commitment and Consistency, Techniques Based on Reciprocity, Techniques Based on Scarcity.

Lesson-11Obedience- Milgram's Experiment, Reasons for Destructive Obedience, Resisting Destructive Obedience.

**Unit – IV: Attitudes**

Lesson-12 Attitudes -Nature and formation of Attitudes, Functions of Attitudes.

Lesson-13 Theories of attitudes- Reinforcement theory; Balance theory; Cognitive dissonance theory;

Lesson-14 Measurement of attitudes- Self measures; Likert, Thurston Osgood and Bogardus scales: Physiological measures.

3.2 Agencies of socialization- (Parents, Peergroup, school and media) Sexual motives, Sex role identity, Psychological Androgyny, Dependency, Moral development, Self-Esteem, Self concept.

3.3 Conformity- Solomon Asch: Pioneer of Research on Conformity, Impact of Conformity, Factors Affecting Conformity, Reasons for Conformity, Disadvantages of Conformity ,Resisting Conformity , Minority Influence.

3.4 Compliance- Principles of Strategies Used in Compliance, Strategies for Gaining Compliance, Techniques Based on Friendship or Liking , Techniques Based on Commitment and Consistency, Techniques Based on Reciprocity, Techniques Based on Scarcity.

3.5 Obedience- Milgram's Experiment, Reasons for Destructive Obedience, Resisting Destructive Obedience.

4. **Attitudes**

**4.1** Attitudes -Nature and formation of Attitudes, Functions of Attitudes.

**4.2** Theories of attitudes- Reinforcement theory; Balance theory; Cognitive dissonance theory;

**4.3** Measurement of attitudes- Self measures; Likert, Thurston Osgood and Bogardus scales: Physiological measures.

**PSY15143 ABNORMAL PSYCHOLOGY**

**Unit I: Meaning and definition of abnormality**

Lesson-1 Meaning and definition of abnormality- Definition and Criteria of abnormality-
Lesson-2Historicalbackground of abnormal psychology.
Lesson-3 Classification system: Brief overview of classification- DSM IV and ICD – 10, Advantages and disadvantages of classification, Problem of Diagnosis.

**Unit II: Different Perspectives of abnormal behaviour**

Lesson-4 Psychoanalytical Perspectives- Freud's Psychoanalytical theory-Jung's analytical theory-Adler's Individual psychology.
Lesson-5 Behaviorist perspective- Skinner's operant theory- Bandura social learning theory-
Lesson-6 Humanistic Existential perspective- Maslow needs Hierarchy theory-
Lesson-7 Cognitive perspective – Beck and Ellis

**Unit III: Nature of causation of Abnormalities**

Lesson-8 Causes of Abnormal Behavior- Biological causes: Constitutional, neurophysiologic and Biochemical Psychological Causes
Lesson-9 Pathogenic causes, Pathogenic Interpersonal relationships.
Lesson-10 Socio– culture causes: Social class, Social roles, and Cultural factors.
Lesson-11 Predisposing, Precipitating reinforcing, Feedback and circularity of Causes.

**Unit IV: Classification of Mental Disorders**

Lesson-12 Psycho-Neurosis- Causes and Aetiology-Psychoses-Causes and Aetiology Anxiety disorders.
Lesson-13 Somatoform disorders: Somatoform Disorders Somatoform disorders– Hypochondriasis - Somatization Disorder - Pain Disorder - Conversion Disorder - Body Dimorphic Disorder.
Lesson-14 Functional disorders- Mood disorders- Mood disorders Definition & Meaning – Depressive Disorder – Theoretical Perspectives on Depressive Disorder – Major Depressive Disorders – Unipolar and Bipolar disorders – Substance Induced Mood Disorders - Suicide – Classification – Causes - Treatment and Prevention.
Lesson-15 Personality disorders- Personality Disorders Cluster A Personality Disorders – Cluster B Personality Disorders – Personality Disorders – Paranoid – Schizoid – Schizotypal – Histrionic – Narcisstic – Anti-Social Personality Disorders- Addiction.
Lesson- 16 Psychosomatic disorders.

4.2 Somatoform disorders: Somatoform Disorders Somatoform disorders– Hypochondriasis - Somatization Disorder - Pain Disorder - Conversion Disorder - Body Dimorphic Disorder.

**4.4** Functional disorders- Mood disorders- Mood disorders Definition & Meaning – Depressive Disorder – Theoretical Perspectives on Depressive Disorder – Major Depressive Disorders – Unipolar and Bipolar disorders – Substance Induced Mood Disorders - Suicide – Classification – Causes - Treatment and Prevention.

**4.5** Personality disorders- Personality Disorders Cluster A Personality Disorders – Cluster B Personality Disorders – Personality Disorders – Paranoid – Schizoid – Schizotypal – Histrionic – Narcisstic – Anti-Social Personality Disorders- Addiction.

4.6 Psychosomatic disorders.

**PSY 15144 Unit-I: Nature of Psychological Measurement**

Lesson-1 Nature of Psychological Measurement -Definition and Advantages of Measurement

History of Measurement.

Lesson-2 Scales of Measurement-The Nominal Scale-The ordinal scale-The interval scale-The ratio scale.

Lesson-3 Nature of Psychological Variable- Mental test tradition-Psycho Physical tradition

**Unit-II: Psycho- Physical Methods and Psychological scaling methods**

Lesson-4 Method of Average Error-Constant and Variable Errors-Evaluation.

Lesson-5 Methods of Minimal Changes-Evaluation.

Lesson-6 Method of Constant Stimuli- -Evaluation.

Lesson-7 Psychological scaling methods- Method of Pair comparison and rank order - evaluation.

**Unit-III: Test Development and Test Standardization Procedures**

Lesson-8 Test Development- Uses of Psychological test- Criteria of a Psychological Test.

Test Standardization Procedures- -Construction of psychological test-

Lesson-9 Reliability-Types of reliability- Test -retest reliability- Interrater reliability- Parallel forms

reliability-Internal Consistency

Lesson-10 Validity- Types of validity- Construct Validity- Content Validity- Face validity- Criterion

Validity -Concurrent Validity.

Lesson-11 Test Construction- Item writing - Meaning and types of items and their differences, guidelines for item writing. Response sets – Meaning, types and implications.

Lesson-12 Item analysis – Meaning and purpose. Item indices ad Item discrimination index.

Lesson-13 Test score - interpretation- Types of scores.

Lesson-14 Ethical issues in test use and interpretation.

**Unit-IV: Standard Psychological tests &miscellaneous techniques:**

Lesson-15 Classification of Psychological Tests - Intelligence- Aptitude Tests-Tests of Interest

Lesson-16 The semantic differential technique-Attitude scales- Personality Testing-MMPI.

Lesson-17 Projective Techniques -TAT, Rorschach etc.

Lesson-18 Culture and Psychological tests.

**PSY15145ENVIRONMENTAL PSYCHOLOGY**

**Unit – I: Introduction**

Lesson-1 Introduction -Nature, scope, Origin of environmental psychology;
Lesson-2 Fields of Environmental psychology- Relationship with other fields-
Lesson-3 Basic principles of environmental psychology-
Lesson-4 Major research methods in environmental psychology-Questionnaire studies, Field studies, Case studies.

**Unit – II: Environmental Risk and Perception**

Lesson-5 Natural Disasters: Characteristics of Natural Disasters, Perception and Psychological Effects of Natural Disasters;
Lesson-6 Noise and Air Pollution: Source and effects of Noise in the Work Place, Noise and Social Behaviour.
Lesson-7 Perception, Health, Performance.
Lesson-8 Social Behaviour and Air Pollution.
Lesson-9 Environmental Perception and Cognition; Environmental Cognition, Cognitive Maps, Way finding.

**Unit – III: Environment and Behaviour- Theories**

Lesson-10 Changing Behaviour to save the Environment: The Commons Dilemma as an Environment-BehaviourProblem.
Lesson-11 Strategies to Encourage Environmentally Responsible Behavior-Contemporary Values and Environmental Attitudes.
Lesson-12 Functions of theories; the arousal perspective: Environmental load perspective; Adaptation level theory;
Lesson-13 Environmental stress perspective.

**Unit – IV: Psycho-educational aspects of Environmental Protection.**
Lesson-14 Environmental education and laws of environmental Protection
Lesson-15 Disaster Management-Social Forestry and Ecological Aesthetics
Lesson-16 Managing scarce resources.

## Contents

**1. Introduction**

**1.1** Introduction -Nature, scope, Origin of environmental psychology;

1.2 Fields of Environmental psychology- Relationship with other fields-

1.3 Basic principles of environmental psychology-

1.4 Major research methods in environmental psychology-Questionnaire studies, Field studies, Case studies

**2. Environmental Risk and Perception**

**2.1** Natural Disasters: Characteristics of Natural Disasters, Perception and Psychological Effects of Natural Disasters;

2.2 Noise and Air Pollution: Source and effects of Noise in the Work Place, Noise and Social Behaviour.

2.3 Perception, Health, Performance.

2.4 Social Behaviour and Air Pollution.

2.5 Environmental Perception and Cognition; Environmental Cognition, Cognitive Maps, Way finding.

**3. Environment and Behaviour- Theories**

3.1 Changing Behaviour to save the Environment: The Commons Dilemma as an Environment-BehaviourProblem.

3.2 Strategies to Encourage Environmentally Responsible Behavior-Contemporary Values and Environmental Attitudes.

3.3 Functions of theories; the arousal perspective: Environmental load perspective; Adaptation level theory;

3.4 Environmental stress perspective.

4 **Psycho-educational aspects of Environmental Protection**

4.1 Environmental education and laws of environmental Protection

4.2 Disaster Management-Social Forestry and Ecological Aesthetics

4.3 Managing scarce resources.

**SEMESTER - II**

**PSY 25141COGNITIVE PSYCHOLOGY**

**Unit-1The Study of Cognition**

Lesson -1 Definition and Historical origins of Cognitive Psychology

Lesson -2 The Philosophical Background: Early Greek Philosopher – Descartes; Locke;

Lesson -3 British Associationism; Kant. Associationism in Psychology: Contributions of Ebbinghaus.

Lesson -4 The twentieth century Associationism. The Gestalt view, Bartlett's outlook.

**Unit-2Learning & Memory**

Lesson -5 Definition and Nature - Learning theories, - Pavlov, Thorndike and Skinner

Lesson -6 Types of Learning – Conditioning, Habitual, Insight- Transfer of Training- Motor and verbal learning - Motor skills, distribution of practice, warm up, patterns of movement & knowledge of results

Lesson -7 Verbal learning – process in verbal learning. Organization, practice, individual differences

Lesson -8 Memory: Definition, Types of Memory- Working memory, Semantic memory, Picture memory and Verbal memory, Remote Memory, Procedural memory etc.

**Unit-3Concept Formations and Problem Solving**

Lesson -9 Concept formation- Process in concept formation – Analytical and non analytical Strategies

Lesson -10 Types, functions and Determinants of concept formation

Lesson -11 Problem Solving: Functional fixedness, Organization and insight Syllogistic Reasoning; Strategies for problem solving- Role of reasoning

**Unit-4Creativity and Intelligence**

Lesson -12 Creativity; Creative process, creativity and functional fixity, Investment theory and Creativity-Judging creativity'

Lesson -13 Intelligence: Definition and nature, Differences between Creativity and intelligence

Lesson -14 Factors influencing intelligence: Spearman, Thurston and Guilford's Gardner's Theory of multiple intelligences

Lesson 15 Stenberg's Triarchic theory –Measurement of Intelligence

3.1 Concept formation- Process in concept formation – Analytical and non analytical Strategies

3.2 Types, functions and Determinants of concept formation

3.3 Problem Solving: Functional fixedness, Organization and insight Syllogistic Reasoning; Strategies for problem solving- Role of reasoning

**4 Creativity and Intelligence**

4.1 Creativity; Creative process, creativity and functional fixity, Investment theory and Creativity-Judging creativity'

4.2 Intelligence: Definition and nature, Differences between Creativity and intelligence

4.3 Factors influencing intelligence: Spearman, Thurston and Guilford's Gardner's Theory of multiple intelligences

4.4 Stenberg's Triarchic theory –Measurement of Intelligence

**PSY25142 APPLIED SOCIAL PSYCHOLOGY**

**Unit-1Social Influence and Social Exchange**

Lesson -1 Conformity, Asch's conformity studies; explaining conformity
Lesson -2 Compliance - meaning, examples and techniques
Lesson -3 Obedience; Milgram's Studies, obedience and authority
Lesson -4 Modeling; cooperation, competition, bargaining, conflict resolution

**Unit-2Prejudices and Discrimination**

Lesson -5 Definition and Nature of Prejudice and Discrimination
Lesson -6 Origin of Prejudice (Cognitive and Social) – Challenging Prejudice
Lesson -7 Prejudice based on Gender, prejudice and discrimination
Lesson -8 Forms of Discriminatory behavior

**Unit-3Aggression**

Lesson -9 Definition and Nature-Theoretical perspectives on Aggression
Lesson -10 The role of biological factors Drive theories and modern theories of aggression
Lesson -11 Determinants of human aggression; social, personal and situational determinants
Lesson -12 Prevention, Control and management of aggression

**Unit-4Environment and Behavior**

Lesson -13 Urban environment and social behavior
Lesson -14 Effect of noise, Temperature, Weather, Light and Air pollution
Lesson -15 Crowding-Long term -Effects of crowding
Lesson -16 Theories of crowding-Crowd and Behaviour

**PSY25144** **POSITIVE PSYCHOLOGY**

**Unit I : Introduction**

Lesson-1 Positive Psychology: Concept, History, Nature, Dimension and Scope

Lesson-2 Western and Eastern views of Positive Psychology-Athenian ViewsJudeo Christianity – Confucianism – Taoism – Buddhism – Hinduism

Lesson-3 Positive Psychology in India-Value Systems – Orientation to Time – Thought Processors – Different Ways to Positive Outcomes: Hope – Compassion – Harmony

Lesson-4 Theories: PERMA model, Self-determination theory, Hope theory, Broaden and Build theory.

**Unit II : Happiness and Wellbeing**

Lesson-5 Introduction to Psychology of happiness, well-being and scope

Lesson-6Age old definition of Happiness – Subjective Wellbeing as a Synonym for Happiness – Types of happiness – Eudemonic and Hedonic

Lesson-7 History of Happiness

Lesson-8 Traits associated with Happiness

Lesson-9 Happiness across the life span; gender and happiness; marriage and happiness; other facts of life

Lesson-10 Measurement of Happiness (The Steen Happiness Index, Subjective Happiness Scale, Happiness Scale).

**Unit III : Wellbeing and Emotions**

Lesson-11 Positive emotions, positive relationships and wellbeing

Lesson-12 Hope and optimism, love and belongingness, love and kindness.

Lesson-13 Gratitude, forgiveness, empathy and altruism

Lesson-14Positive emotions and health resources - Expanding the Repertoire of Pleasure - Happiness and Subjective Well being- Influence of positive Emotions.

Lesson-15 Determinants of Subjective Well being – 21st Century Definition of Happiness – Complete Mental Health: Emotional – Social and Psychological Well being – Increasing Happiness in Life

Lesson-16 Positive traits, personality, emotions and biology, positive beliefs.

**Unit IV : Wellbeing and Spirituality**

Lesson-17 Religion, spirituality and wellbeing: role of religion and spirituality to maintain subjective wellbeing – A special focus to Indian spirituality and well being

Lesson-18 Understanding a Changing Human Behavior Primary Prevention – Components of Effective Primary Prevention – Head Start – Primary Preventions for Racial & Ethnic Minorities – Primary Preventions for Children and Elders – Secondary Preventions – Common Components of Secondary Preventions – Secondary Preventions for Racial & Ethnic Minorities – For Children and Elders .

Lesson-19 Virtues in Indian culture - Primary Enhancement – Psychological Health – Physical Health – Secondary Enhancement – Psychological and Physiological Health – Balancing the Preventions and Enhancement systems

## Contents

**1.Introduction**

**1.1** Positive Psychology: Concept, History, Nature, Dimension and Scope

1.2 Western and Eastern views of Positive Psychology-Athenian Views Judeo Christianity – Confucianism – Taoism – Buddhism – Hinduism

1.3 Positive Psychology in India-Value Systems – Orientation to Time – Thought Processors – Different Ways to Positive Outcomes: Hope – Compassion – Harmony

1.4 Theories: PERMA model, Self-determination theory, Hope theory, Broaden and Build theory.

**2.Happiness and Wellbeing**

2.1 Introduction to Psychology of happiness, well-being and scope

2.2 Age old definition of Happiness – Subjective Wellbeing as a Synonym for Happiness – Types of happiness – Eudemonic and Hedonic

2.3 History of Happiness

2.4 Traits associated with Happiness

2.5 Happiness across the life span; gender and happiness; marriage and happiness; other facts of life

2.6 Measurement of Happiness (The Steen Happiness Index, Subjective Happiness Scale, Happiness Scale).

**3 Wellbeing and Emotions**

3.1 Positive emotions, positive relationships and wellbeing

3.2 Hope and optimism, love and belongingness, love and kindness.

3.3 Gratitude, forgiveness, empathy and altruism

3.4Positive emotions and health resources - Expanding the Repertoire of Pleasure - Happiness and Subjective Well being- Influence of positive Emotions.

3.5 Determinants of Subjective Well being – 21st Century Definition of Happiness – Complete Mental Health: Emotional – Social and Psychological Well being – Increasing Happiness in Life

3.6 Positive traits, personality, emotions and biology, positive beliefs.

**4 Wellbeing and Spirituality**

4.1Religion, spirituality and wellbeing: role of religion and spirituality to maintain subjective wellbeing – A special focus to Indian spirituality and well being

4.2 Understanding a Changing Human Behavior Primary Prevention – Components of Effective Primary Prevention – Head Start – Primary Preventions for Racial & Ethnic Minorities – Primary Preventions for Children and Elders – Secondary Preventions – Common Components of Secondary Preventions – Secondary Preventions for Racial & Ethnic Minorities – For Children and Elders .

4.3 Virtues in Indian culture - Primary Enhancement – Psychological Health – Physical Health – Secondary Enhancement – Psychological and Physiological Health – Balancing the Preventions and Enhancement systems

**PSY 25145 RESEARCH METHODOLOGYAND STATISTICS**

**Unit I: Introduction & Identification of Problem**

Lesson-1 Meaning of Research Objectives of Research - Types of Research – Approaches and Significance of Research,

Lesson-2 Research Methods Versus Methodology - Research and Scientific Method, Research Process - Criteria of Good Research – Research and goals of Psychological Research

Lesson-3 Research problem: Defining and Selecting the problem - Technique involved in defining a problem-Types of Research: Basic Research and applied Research: Exploratory research, Problem: Types of problems- Identifying a Research Problem - Variables: Independent, Dependent and Intervening Variable – Experimental group and control group

Lesson-4 Hypotheses: The nature and types of Hypotheses, stating a hypothesis, criteria of hypothesis and functions of hypothesis

**Unit II: Sampling & Data Collection and Presentation**

Lesson-5Sampling: Types of sampling and issues related to selection of sample size.

Lesson-6Data collection & presentation: Primary and secondary data

Lesson-7 Presenting research results: Writing a research report: How to write a research Paper

Lesson-8Ethical Considerations in Research

**Unit III: Introduction to statistics and Non-Parametric tests**

Lesson-9Frequency distribution- Measurement of central tendency – graphical Representation of the frequency distribution

Lesson-10Measures of variability- Range-Quartile deviation- Average Deviation - Standard deviation.

Lesson-11 Normal Probability Curve –Application of normal probability curve.

Lesson-12 Non-Parametric tests- Chi-square tests- The Mann-whitney 'U' test – Wilcoxon Matched Pair test - The Median test.

**Unit IV: Statistics for Data Analysis & Report Writing**

Lesson-13 Statistics for Data Analysis One and two tail tests – Student 't' test – Large sample 't' test – Application, purpose, assumptions and calculation of Analysis of Variance (ANOVA) and Two-way ANOVA –

Lesson-14 Application, purpose, assumptions and calculation of Chi-square Test – Application, purpose, assumptions and calculation of Regression Analysis - Comparison of Parametric and Nonparametric Tests.

Lesson-15Report Writing: Meaning of Interpretation - Techniques of Interpretation - Precaution in Interpretation - Significance of Report Writing - Different Steps in Writing Report –

Lesson-16 Layout of the Research Report - Types of Reports - Mechanics of Writing a Research Report - Precautions for Writing Research Reports

## SEMESTER - I - CORE PAPER

## MAJM11061 – History of Mass Media

## SYLLABUS

### Unit -1- History and Development of Press in India

1.1. Origin of Newspapers in India

1.2. Indian Press and Freedom Movement

1.3. Indian Media in Post-Independence era

1.4. Press and Emergency

1.5. History and Development of News Agencies in India

### Unit-2- History and Development of Radio and Television in India

2.1. Origin and growth of Broadcasting in India

2.2. Origin and Growth of Cable T.V, Satellite T.V in India

2.3 Origin and Growth of F.M. Radio, Community Radio in India

2.4. Present Status of Broadcasting in India

### Unit-3 – History and Development of Social Media

3.1. Origin and Growth of Internet

3.2. Web Journalism, Web Portals

3.3. Online News Papers – e-Papers

3.4 Social Networking Sites – Face book, Twitter

### Unit – 4 – Contemporary issues of Mass media

4.1. Growth of Mass media in India,

4.2. Circulation, TRP's

4.3. New technology and Mass media

4.4. Impact of COVID on Indian Media – Disruptive Communication

## Unit -1- History and Development of Press in India

### Introduction

A newspaper is a publication containing information in the form of news and advertising. General-interest newspapers often feature articles on major events of the day including political, crime, business, sports, entertainment etc. Apart from that most newspapers express their opinion on the happenings in the society in the form of editorial and expert opinions in the form of columns. Newspapers also give supplements in the form of tabloids containing regional / local news. Along with that a wide variety of material in the form of op-eds, obituaries; entertainment features such as crosswords, sudoku, weather forecasts, advice, cartoons etc.

Before the invention of newspapers in the early 17th century, official government bulletins were circulated at times in some centralized empires. In Ancient Rome "Acta Diurna" or government announcement bulletins, were made public by Julius Caesar. They were carved in metal or stone and posted in public places. In China early government-produced news sheets, called "Tipeo" were circulated among court officials during the late Han dynasty in 2nd and 3rd centuries AD. Between 713 and 734, the "Kaiyuan Za Bao" ("Bulletin of the Court") of the Chinese Tang Dynasty published government news; it was handwritten on silk and read by government officials. In Europe concise handwritten news sheets were published. In 1556, the government of Venice first published the monthly *"Notizie Scrittee"* which costed one gazetta. These newsletters shared some characteristics of newspapers, but are not usually considered as true newspapers. However, none of these publications fully met the classical criteria for proper newspapers, as they were typically not intended for the general public and restricted to a certain range of topics.

"Avvisi" were hand-written newsletters used to convey political, military, and economic news quickly and efficiently throughout Europe, and more specifically in Italy, during the period of 1500-1700. Avvisi can be divided into two categories: 'Public Avvisi' and 'Secret Avvisi, though each copy was often written by the same person. The avvisi found their origins, and peaked, in the early modern Italian world - primarily Rome and Venice. The popularity and distribution of the Avvisi was driven by each court's desire to know what the opposing and even the allied courts are up to. News networks spread all across Europe, but the Avissi itself was generally created in either Rome or Venice. Avvisi influenced many aspects of the early modern world including

public opinion, political battles, the nature of propaganda, careers, and historical records. Avvisi helped to develop public opinion by informing, organizing, and providing a voice for the public. They allowed the general public to learn of the secret dealings of the nation's leaders, form a response, and then have that response actually be heard by their fellow citizens - essentially making them new players in the game of politics.

**History of Printing**

The Concept of making an impression with a seal or using a rolling pen like device with carved symbols to impress an image in soft clay was an old one. Even the process of printing a whole page of letters by painstakingly carving them in to a smooth paper or other surface was understood long ago. The Chinese had done it and had printed the “Diamond Sutra”; the World’s first book in 800AD. The Gold Smith of Mainz, Germany Johann Gutenberg found out a unique way to make “type”. After much experimentation he developed the idea of making a steel punch for each letter painstakingly carved in a precise way. Then he could punch the image in to a small square of softer metal such as Brass. He made a little clay mould around the impression so that hot lead could be poured in to it making a casting of the letter. This mold could be used over and over to cast as many individual letters as the printer needed. Then the letters could be lined up in a tray and form words and sentences. Tightly secured they could be pressed down on them. Gutenberg eventually discovered a way to mix lead with other metal in to a kind of alloy that worked instead of lead, which was quite soft.

Gutenberg obtained a big wine press and modified it considerably arranging a platform for the tray filled with letters and a flat surface to press down the parchment or paper. Gutenberg set up the press in Mainz, Germany in 1454-1455 and began printing “Papal indulgences” i.e. the documents authorized by the Pope to grant forgiveness to the sinners for which there was a considerable demand. In 1456 Gutenberg and his assistants printed 300 copies of Bible, which had 42 lines. It was in black gothic lettering and the initial letters were left blank and later ornamented to give the impression that the work had been hand written, as Gutenberg did not want to give away his secrets. But the discovery of the technique could not be long hidden as the technique spread to Italy and in particular to Venice. Gutenberg also faced financial problems in the form of a Lawsuit against his investor John Fust. Gutenberg lost the suite and was forced to abandon his press at Mainz. With the Gutenberg monopoly

shattered and the secrecy of the new technology was compromised and spread to other parts of the world. Gutenberg was left broken.

## The spread of Printing Press

The Gutenberg invention was passed on to other parts of Germany and slowly to other parts of the world. The emigrating German printers, foreign apprentices diffused the technology to other parts of the World. Printers began to device new forms of lettering that were more appropriate to the physical requirements of print. In Venice Nicolas Jenson added the "Lower Case" to the art of printing. In 1498 Aldus Manutius Romanus added a sloping alphabet that came to be called as "Italics" in his publishing's. William Coxton brought printing to England. He learnt the printing in Cologne and recognizing opportunities of this new technique he began business in Bruges. In 1476 he returned to his native land and began printing in West Minister. Until Coxton most books were published for religious purposes and in language of Church i.e in Latin. Coxton translated books in to English so that books could be read widely. In fifteen years, he produced more than 100 books and died in 1491.

In rapid succession, printing presses were set up in middle and western Europe. Major towns, in particular, functioned as centers of diffusion (Cologne 1466, Rome 1467, Venice 1469, Paris 1470, Cracow 1473, London 1477). In 1481, barely 30 years after the publication of the Bible of Gutenberg, the small Netherlands already featured printing shops in 21 cities and towns, while Italy and Germany each had shops in about 40 towns at that time. Germany and Italy were considered the two main centers of printing in terms of quantity and quality.

The near-simultaneous discovery of sea routes to the West by Christopher Columbus in 1492 and East by Vasco da Gama in 1498 and the subsequent establishment of trade links greatly facilitated the global spread of Gutenberg-style printing. Traders, colonists, but, perhaps most, missionaries exported printing presses to the new European oversea domains, setting up new print shops and distributing printing material. In the Americas, the first extra-European print shop was founded in Mexico City by Giovanni Paoli in 1544. In 1638 Rev. Jesse Glover set to sail for America taking the press with him. He died on his way. But eventually the press was set up at Cambridge, Massachusetts by Stephan Day and his son Matthew. The Jesuits started

operating the first printing press in Asia at Goa in1556. Before the end of the fifteenth century printing started in France and Switzerland.

For a long time however, movable type printing remained mainly the business of Europeans working from within the confines of their colonies. Ignorance and religious reasons seemed to be among the reasons for the slow adoption of the printing press by indigenous peoples. Thus, printing remained prohibited in the Ottoman Empire between 1483 and 1727. In the 19th century, the Gutenberg-style press arrived to the shores of Tahiti (1818), Hawaii (1821) and other Pacific islands. It marked the end of a global diffusion process which had begun almost 400 years earlier. At the same time, the 'old style' press was already in the process of being displaced by industrial machines like the Steam powered Press (1812) and the Rotary Press (1833).

**Printing In India**

In India, reports are that Jesuits "presented a polyglot Bible to the Emperor Akbar in 1580 but did not succeed in arousing much curiosity. The English East India Company brought a printer to Surat in 1675, but was not able to cast type in Indian scripts, so the venture failed. In 1711 printing machine was established in Madras. In 1725 Benjaman Shulj of Germany came to India and translated Bible in to Tamil and printed it in 1728. Charles Wilkens of Britan learnt Sanskrit and translated Bhagawad Geeta, Hitopadesham, Sakuntalam into English. He also prepared types to print books in Devanagari Script.

Printing in Telugu language started in Madras and Serampore simultaneously. In 1807 Missionaries of Serampore developed fonts to print books in Telugu. But in 1812 the printing press in serampore was destroyed due to fire accident. But it was started in the same year. William Caries Telegu Grammar book “Telugu Vyakarnam” was printed in 1814. George Crane and Augustus Digranges translated few chapters of Bible in to Telugu Language. The remaining chapters were translated by Edward Pitchet and printed in 1818. Late printing press were established in Machalipatnam, Kakinada, Nellore and Rajahmundry.

**Impact of Printing Press**

“Printing” is considered as one of the greatest human accomplishments. The following are some of the noted influences of Printing press:

**Spread of Literacy:**

Prior to the fifteenth century people reproduced books by “Manu scripti” i.e., copying of existing books laboriously by hand. The process often introduced errors and

also limited the number of books available and severely restricted them for common people. But printing has brought tremendous change as hundreds and thousands of copies of particular book could be reproduced with great precision. It helped to make different categories of books available to common man and in turn helped to increase. literacy.

**Evolution of Mass Press**

The primitive news sheets gave way to the printed News Paper by the influence of printing. They created new form of Mass medium in 16th century, the "Print Medium" i.e., Newspapers, Magazines, Books. They were widely used in the society and were instrumental in bringing great changes in human condition by influencing the patterns of interaction in societies. It brought a sea change in the psychological outlook of the individual also. Gradually the "Mass Press" evolved which had the power to influence public opinion. "Printing" was the basic tool of communication for nearly 500 years and is one of the key elements in the evolution of modern Mass Communication process.

**First step towards Freedom of Press**

Press was a means of increasing and deepening communications. It was regarded as dangerous and subversive by many in the authority. The history of press has always been that of a battle for freedom against those who would stifle the open expression of opinion. In 1644 British Parliament imposed a licensing rule in an effort to curb the proliferation of printing. It was against this system that John Milton published "Aeropagatica" one of the noblest statements of the "freedom of press". In 1695 i.e., after fifty years licensing rule came to an end in Britan. This laid ground for the free expression of will by some of the greatest masters of Journalism like Defoe, Swift, Steele, Addison creating new ground for free exchange of ideas, opinions and ideologies.

**Origin of Newspapers in India:**

The history of the contemporary journalism begins with the establishment of the printing press by Christian missionaries in India. Christian missionaries established printing press at the end of fifteenth century for spreading the messages of Christianity in the country. The first printing press arrived in India on 6th September 1556 and was installed at the college of St. Paul in Goa. English East India Company brought Printing press to Surat in 1675. Printing machines were installed in Bombay, Madras and Calcutta in 1674, 1772 and 1778 respectively. The Christian missionary's set-up

printing press in India at such a time when our country was struggling with several social evils and malpractices like child marriage, sati system, illiteracy, superstitions etc.

## The First's in India

- First printed newspaper of India in English was Bengal Gazette, edited & published by James Augustus Hicky, which came out on 29th January 1780.
- **T**he first Indian language newspaper was Digdarshan. It started in April 1818 by the Serampur missionaries William Carcy, Joshua Marshman & William Ward.
- The first journal in Assamese Language was Amnodaya started in 1846 under the editorship of the Reverend Oliver.T. Cutter.
- The first Gujarati newspaper was Mumbai Samachar. It was established in 1822 by Farduvji Marzaban as a weekly & then became a daily in 1832. It is the newspaper with the greatest longevity in India.
- The first Hindi daily was Sam char Sudhavarshan started in Calcutta in 1854.
- The first Urdu newspaper published was Urdu Akhbar
- Kannada Samachar was the earliest Kannada journal, according to many scholars. But others think that the first Kannada journal was Mangaloora Samachar.
- Darpan was the first Marathi newspaper started on 6 January 1832.
- Induprakash was the first Anglo-Marathi daily established in 1862.
- The first Oriya magazine published was Junaruna the Orissa Mission Press in 1849 under the editorship of Charles Lacey.
- The first printing press in Punjab was established in Ludhiana in 1809.
- The first Tamil periodical was 'Tamil Patrika', a monthly brought out in 1831 by the Religious Tract Society in Madras; it lasted till 1833.

## Birth of Bengal Gazette*:*

James Augustus Hickey has the distinction of launching the first newspaper in India. His "Bengal Gazette" or the "Calcutta General Advertiser" or **"**Hickey Gazette**"** came out on January 29th 1780, in Calcutta as a two-sheet weekly newspaper. There were two rival groups in the council of then Governor- General- one group supporting Warren Hastings, then Governor General and another group led by Philip Francis who himself an aspirant of the post of the Governor General. Phillip Francis patronized

**'**Bengal Gazette**'**. Hickey described the newspaper in the following words "A weekly political and commercial newspaper open to all parties but influenced by none"

It printed items taken from English papers at home, letters from local, mofussil readers, and items of gossip, scandal and items of interest to Europeans. Its contents were non- serious, spicy and sometimes vulgar. Hickey had a column to himself through which he used to address the readers directly and there was a poet's corner also. The paper's witty and scurrilous remarks very soon earned the enmity of the Governor General Warren Hastings, the chief Justice Elijah Impey and the administration in general. The paper personally attacked Hastings and his friends. It had given Warren Hastings several nicknames like 'Mr. Wrong head', 'The great Mogul', 'The Dictator' etc.

Hickey's fortunes began to decline when a rival appeared in "Indian Gazette" in the same year as he began his venture. Indian Gazette was a better newspaper with four pages, each 16 inches long with three columns and well printed. Hastings took action against Hickey for defamation on two counts in June 1781. Hickey was convicted and sentenced to one-year imprisonment with a fine of Rs.2000. The Chief Justice awarded damages to Hastings of Rs.500, but the Governor General waived it. Even though Hickey was jailed the paper continued. Hastings launched another action against Hickey in March 1782. As a result, the types for printing paper were seized. The newspaper survived only for two years. The Bengal Gazette was the forerunner of many more journals and newspapers which appeared in Calcutta. With in six years of Hickey's venture there were four weeklies and one monthly in the city of Calcutta. Hickey is regarded as the 'Founder of the Indian Journalism'.

Approximately 200 newspapers/ journals came into existence between 1780 and 1857 but most of them were closed within short duration of time. Some of the important newspaper started after Bengal Gazette in Bengal Presidency were India Gazette (1780), **Calcutta Gazette (1784), Asiatic Mirror** (1788), **The Calcutta morning post** (1799), **The Oriental star** (1795), The **Calcutta Monthly Journal** (1794) and **The Bengal Harkaru** (1795). In Madras the "Madras Courier", an officially recognized and owned by the Government printer came out as a weekly in 1785. It was followed by the "Hurkaru" edited by Boyd in 1793. The "Hurkaru" ceased publication after one year. Other important newspapers started in Madras presidency were Madras Gazette (1795) and Indian Herald. There was no newspaper in Bombay until Bombay

Herald (1789) was started. It merged into The Bombay gazette in 1791 and became an official publication.

### *James Silk Buckingham*

In the early years of 19th century Calcutta saw the emergence of the first real journalist in India, James Silk Buckingham. With his arrival the real and stable form of journalism came into practice. James Silk Buckingham came to India as the editor of "Calcutta Journal" in the year 1818 started by some Calcutta Merchants to protect their interests and propagate their views. He was the person with true journalistic spirit, abilities and a multidimensional personality. The first issue of "Calcutta Journal" appeared in Calcutta on October 2nd 1818. It had an effective presentation of political, commercial and literary news stories. It was completely away from the cheapness promoted by Hickey's gazette.

Buckingham was a scholar whose studies included anthropology and literature and he had special interest and knowledge about steam navigation, air-filled balloons. He was keen observer of customs and habits of people among whom he lived. His writing style was lucid, simple and easily understandable. His presentation was with full of drawings and charts. He wrote special features and also published the Letters to the Editor. Buckingham laid emphasis on the news of local conditions rather than fashions and the life of people. His editorials touched on the Government's policies and were fearless in exposing their motives. He condemned certain Indian customs like Sati and frequently wrote the failure of Government to stop them.

Buckingham is recognized as the "Father of Indian Journalism". He was the inspiration behind the growth of Indian Journalism. It was with the advent of Buckingham that the press really began to discuss the public questions. Throughout his journalistic career he concentrated on the public conduct of bureaucrats, government attitude towards governance and educating public opinion. Buckingham considered a well-conducted press essential to promote knowledge and dispel ignorance. He was a stout champion of Freedom of press. Buckingham was a close friend of Raja Ram Mohan Roy. Their friendship was a paradox in itself because both belonged to different backgrounds and different ideologies. Roy was essentially a social and religious reformer. Both of them fought for elimination of social evils in Indian society, for the freedom of Indian Press and left an unforgettable impression in the field of the Indian

Journalism. His objective and impartial journalistic approach led to the popularity of the newspaper. Within a short duration of three years the bi-weekly turned to Calcutta's first daily.

Buckingham, despite his British origin did not hesitate to highlight the malpractices of the British administration. His repeated disclosures of official malpractices and his success of securing redressal of grievances proved to be dangerous to the reputation of the East India Company. The immediate provocation for action against him was his exposure of the unusual appointment of the head of the Presbyterian Church, the Reverend Dr. Bryce to the clerkship in an office that supplied stationary items to the Government. Buckingham has antagonized the members of the Governor's general council and other officials with his criticism of their policies. Some top officials of the Government filed libel suit against Buckingham and he appeared in the Court as the defendant. The case fell through but the costs he faced were heavy. Three members of the council of the Governor- General, John Adams, John Fedel and William Butterworth, were staunch opponents of Buckingham back to England. After Hastings, Adams became the Governor-General. Finally after much struggle his opponents were able to deport him on January 13, 1823 under the new press regulations. Jawaharlal Nehru described him as among the earliest champions of freedom of press and one "who is still remembered" in India.

## Early Journalism in Bengal Presidency

The initial forty years of Indian Journalism were entirely controlled by Europeans. Calcutta became the main center of publication of Newspapers and Journals. Calcutta witnessed publication of several Bengali, Persian, Hindi and Urdu Newspapers and periodicals.

- The first newspaper in India i.e. in English "Bengal Gazette" was started in Calcutta.
- Ganga Kishore Bhattacharya along with Harachandra Roy started the first Indian owned English daily "Bengal Gazette" in Calcutta in 1816.
- The first Hindi paper "Udand Marthand "was started in Calcutta.
- The first Hindi daily was "Samachar Sudhavarshan" started in Calcutta in 1854.
- The first Urdu newspaper "Jam-I-Jahannuma" was started in Calcutta under the editorship of Lal Sadasukh Lal in April 1822.

- Serampore Missionaries started the First Vernacular paper in Bengali "Digdarshan" in Calcutta.

The following are the factors, which helped in the establishment of Newspapers in Bengal presidency of in Calcutta particularly.

1. Calcutta was the center of Administration for the entire Indian provinces and the most of the administrative offices were in Calcutta encouraging many Britishers to set up newspapers with the help of officials catering more for officials.
2. The printing press came to Calcutta in 1778 and got proliferated quickly. Most of the other language types were also prepared in Calcutta.
3. English language thrived well in Calcutta and more English-speaking Indians were concentrated in Calcutta, which enabled to the spread of English language papers in Calcutta.
4. The spread of Literacy was fast in Bengal presidency than in other presidencies. Bengal is the birthplace for many types of new ideologies, socio-religious movements in India.
5. British Journalists who came to India were more attracted to the Socio-Economic conditions of Calcutta and hence settled in Calcutta.
6. More intellectual freedom, literary personalities, poets, revolutionaries, resided in Calcutta, which helped n spreading of Ideology.

Amidst controversies and resistance, publication of 49 new newspapers began from Bengal and Bombay between 1831-1833. Out of this, 33 were in English and 16 were in Bengali. Hence very aptly Calcutta is regarded as "birthplace of Indian Journalism".

**Journalism and Social Reforms:**

Calcutta is called as the cradle of Indian Journalism, but Bombay is regarded as a citadel from where Indian Journalism launched social reform movement. Some of the greatest social reformers have launched their campaigns from Bombay and used the press for spreading the reform ideology. Some of them are Dadabhai Naoroji, Kasandas Mulji, Gopalrao Hari Deshmukh, Mahadev Gobind Ranade, Behram Malabari.

Some of the vernacular language newspapers of Bombay were inclined towards social reforms. Bal Shastri Jambhekar began publishing an Anglo-Marathi fortnightly

and a Marathi fortnightly called 'Dig' in the years 1832 and 1842 respectively. Another newspaper 'Prabhakar' also championed the cause of social reforms. Gopal Rao Deshmukh a well-known social worker used to write for the newspaper. He also wrote some other newspapers like "Gyan Prakash", and "Lokhitvarta". His articles were mainly on the social issues. He advocated social reforms with cooperation from the British government. Deshmukh initiated 'Indu Prakash' an Anglo-Marathi daily in the year 1861.

Vishnu shastri Pandit was the editor and Mahagovind Ranade was the columnist in that. Social reform was the main goal of the publication. This was the time when intellectuals from Western India got attracted towards Journalism one-way or other. They looked Journalism as a powerful means of expression. Mahadev govind Ranade used journalism and stage through his life to fight the freedom struggle. He is also known for his campaign for widow marriage. Dadabhai Naoroji, a great nationalist leader became the editor of "Rastgoftar" in 1851, a newspaper started by Khurshedji Cama for promoting social reforms. Apart from that he also preached social reforms in his paper "Voice of India"

Between 1853 to 1870, Karsan Das Mulji, a great social reformer started a journal "Satyaprakash". Karsan Das was practical reformer who was moved with the sufferings of the downtrodden and oppressed in Hindu society. He launched crusade against widow remarriage, education of girls and attacked priest community for their autocratic methods. From 1884- 1891 the well-known social reformer Behram Malabari used the Indian press to raise voice against the evils and malpractices of the contemporary Hindu society. Malabari was trying to uplift the Dalits and marginalized sections of the society by exposing the evils of the traditional Hindu society. He launched a countrywide program for discouraging child marriage. He was the chief campaigner in the movement to pass the age of consent bill. He wanted to bring a legislation to ban people, who perform child marriage from appearing in university examinations. He wanted that bachelors should be given preference in Government appointments. Social reforms of Malabari and Karsan Das went on simultaneously although both had a different methodology of working. Both the reformers were ardent advocates of English language.

"The Hindu" took up the battle of social reforms in the Madras Presidency. "The Hindu" through the valiant efforts of its editor G. Subramanyam Aiyer waged the fight to get rid of the social evils and faced stiff opposition from Hindu orthodoxy. Paper campaigned for Widow remarriage, rising the age of the marriage, abolition of caste, and for uplift of untouchables. The paper began to lose its circulation and advertisements as the orthodox traditional society shunned the paper. Subramanyam Aiyer set a personal example by solemnizing the marriage of his widowed daughter in Bombay in presence of social reformers

Social reformers were successful in having the "Age of consent" bill passed by the Imperial Legislative Council in 1891 in the teeth of opposition of section of Hindus. The bill sought to rise the age of consummation of marriage from 10 years (as fixed in the act of 1860) to 12 years. The bill was opposed vigorously in Calcutta press. In Maharashtra it led to major collision between the forces of Hindu Orthodoxy led by Bal Gangadhar Tilak and the social reformists led by Malabari. The Hindu welcomed the bill and supported it by publishing news items which highlighted the ban of attending the child marriages by progressive Hindus, incidents where widow remarriages were performed etc.

## Role of Press in India's Struggle for Freedom - The Revolt of 1857 and the Press

The Journalism in the initial days was mainly by the Britishers or foreigners who were promoting the interest of East India Company of on Missionary work. Late Indian Journalism emerged as a mission, when the idea of freedom and native rule was ascertained by freedom fighters. At the time of the first war of independence, many papers were in operation in the country. Papers like Bangadoot of Ram Mohan Roy, Rastiguftar of Dadabhai Naoroji and Gyaneneshun advocated social reforms and thus helped arouse national awakening.

The author and play writer Girish Chandra Ghosh established "Hindu Patriot" in 1853. It became popular under editorship of Harish Chandra Mukherjee. The paper is known for its continuous writings on indigo cultivation and the plight of farmers involved in it. Up to 1857, the paper highlighted the difficulties of farmers and began an awakening of farming community in India. The paper played a key role in exposing the motives behind the "Neel cultivation". The impact of the paper can be ascertained as many farmers took part in the revolt of 1857. In 1861 the paper published a play named

“Neel Darpan’ and launched a movement against the British, urging the people to stop the cultivation of the crop to white traders. By the efforts of the “Hindu Patriot” British Government appointed the Neel Commission, which ultimately removed many restrictions over the Indigo cultivation in India. It was in 1857 “Payam-e-Azadi” started publication in Hindi and Urdu, calling upon the people to fight against the British. The paper was soon confiscated and anyone found with a copy of the paper was persecuted for sedition. The Hindi daily “Samachar Sudhavarashan” and two newspapers i.e., “Doorbeen” in Urdu and “Sultan-ul-Akbar” in Persian faced trial in 1857 for having published a 'Firman' by Bahadur Shah Zafar, urging the people to drive the British out of India. The revolt of 1857 gave a great boost to large number of Urdu newspapers. The “Sadiqul Akhbar” played an active role in the revolt. Its editor by Maulvi Mohmmed Baqar was shot and killed for aiding the rebels. The “Delhi Urdu Akhbar” published the news of the revolt and the information regarding the battles taking place at different places. For its role in the revolt its Editor Jamiludin was sentenced to three years imprisonment after the revolt.

The attitude of British Government towards Indian press changed considerably after the revolt. The press in Bengal, Bombay and Madras was not connected with the revolt and there was no mass participation of people in the revolt. The British criticized Lord Canning liberal policies. British press went aggressive after the revolt and presented the revolt as an act of defiance to the crown. The revolt was followed by the notorious Gagging Act of Lord Canning, under which restrictions were imposed on the newspapers and periodicals. In June 1857 Governor General Lord Canning imposed Act No XV, which regulated the establishment of printing press and put a restrain on circulation of printed books and papers. During this period the British crown had taken over the administration from the East India Company. The revolt of 1857 created a divide between the native press and the press run by British in India later known as the Anglo-Indian Press. The gulf widened deeply in later years when the Indian independence moment became strong. The Anglo-Indian press i.e., the English papers published in India by the British or foreign individuals supported the British Government and the Native or the Nationalist press i.e. the papers in both English and Vernacular languages published and owned by Indians supported the freedom struggle. A great transformation came in the official attitude of British administration after the

revolt. The British Government denounced the policy of conciliation with Indian press and kept press under heavy scanner imposing restrictions under press laws. Dr. George Bust who was the editor of Bombay Times at the time of revolution of 1857 strongly recommended the actions against the Indians by the British administration

Various Urdu newspapers were ceased by the administration at the time of 1857 Sepoy Mutiny. In 1861 there were 17 vernacular newspapers that included eleven Urdu, six Hindi and one newspaper by missionaries. Out of these newspapers eight published from Agra, two each from Ajmer and Etawah, one from Ludhiana, Meerut, Jaunpur, Saharanpur, Allahabad and Kanpur. After 1857, the Indian Press especially the Vernacular Press witnessed the atrocities of the British Government. Newspapers like 'Hindu' a weekly by C. Subramanyam Aiyer from Madras, 'Amrit Bazar Patrika' edited by Motilal Ghosh from Calcutta. 'Hindu Patriot' by Harishchandra Mukherjee from Calcutta. 'Indian Patriot' from Malabar Kerala took over the bastion of freedom movement after 1857. The then public opinion of the country was much influenced by the newspapers from Bengal like 'Neel Darpan', 'Shome Prakash', 'Indian Mirror' and 'Bengal'.

## Evolution of Anglo-Indian Press

It is the European owned press. It includes the English papers published in India by the British or foreign individuals. Anglo-Indian press was distributed in all major cities and centers where both the official and Nonofficial European community was strong. The following are the important Anglo-Indian newspapers in important cities of India.

- Calcutta – Englishman, Statesman (1875)
- Bombay – The Times of India (1861)
- Madras – The Madras Times (1860), Madras Mail (1868)
- Allahabad – Pioneer (1861)
- Lahore – The Civil and Military Gazette (1872)

**(Between these Statesman and Times of India changed into Indian hands and survived up to today)**

The Anglo – Indian press is more powerful, more prosperous and more influential than the Indian journals. The Anglo-Indian press had the support of British business community. These papers were run on commercial business mode, as Journalism to British in India was more or less a trade, a means of livelihood. Where as to Indians, Journalism is more earnest, more touching and was inclined towards

national interest and national awakening. Anglo-Indian press was much better produced than the Indian press. They had purposeful and well-written editorials. Their workforce was well organized in structure, exercised and experienced in field, professional and effective in approach. They maintained high standards of production and publication. The Editors were well trained in an established and well-flourished environment of Britan and Europe and were very adept in their craft. These papers paid well. When the doors of these papers were opened for Indians, there was a rush of applicants for places in sub-editing and reporting desks.

## Robert Knight

Robert Knight began his Journalistic career in India in "Bombay Times". He served for some time as editor of "Bombay Times". His editorials were characterized by balance and moderation and very effective. In 1861 he was successful in bringing a merger of "Bombay Times" with "Standard" and "Telegraph" and renamed it as "The Times of India". In 1868 he sold his shares in the "Times of India" to his partner Mathais Mull and started "Bombay Statesman". He again sold the paper after some time and shifted his activities to Calcutta.

In Calcutta he started a monthly Journal "The Indian Economist". He also entered into the Government service as an undersecretary in the Agricultural Department of Bengal Government. He produced the "Agricultural Gazette of India". In both the journals he criticized the famine relief measures of the Government. Questions were raised on the employee of the Government running a newspaper and also criticizing the Government publicly. Robert Knight resigned from service in 1874. In 1875 he started the "Indian Statesman", which was changed into "Statesman" after eight months. Knight also merged "Friend of India", the newspaper started by Serampore Missionaries and merged it with Statesman.

The price of the "Statesman" was kept at One Anna, while the other papers like Englishman, Indian Daily News were priced at four annas per copy. He introduced the Sunday papers in Statesman with features and articles of popular interest and very soon Statesman became the leader of Anglo-Indian press. He was responsible for awakening of public opinion in India. He campaigned for protection of health of Bombay citizens and wrote excessively about the measures to be taken by Government for reducing heavy mortality rate in Bombay. He inspired Anglo-Indian journalists to write on Indian

subjects and believed in bringing Europeans and Indians together. He combined professional competence with public activities.

## The Madras Times, Madras Mail & Pioneer

The Madras Times was started in 1860. In 1868 Madras Mail appeared as evening paper. Madras Times was merged into Madras Mail in 1928. Sir Charles Lawson and Henry Cornish founded Madras Mail and worked as Joint Editors. They broke away from the Madras Mail owing to the differences with the Proprietor over the attitude to the administration and Lord Napier, Governor of Madras. Talented editors including T. Eariewells, A. E. Lawson, William Digby, D. Scott Brenner and A. A. Hayles succeeded the duo. A. A. Hayles was the Madras Mail greatest and last recognized editors. He joined Madras Times in 1921. He became the editor of Madras Mail, when Madras Times merged into Madras Mail in 1928. He held the post even after the paper changed over to Indian hands in 1945. The Paper celebrated its centenary in 1968 and closed down in 1981. Pioneer was started in 1861 in Allahabad in response to a persistent demand from officials for a government newspaper to meet the attacks on the Indian Press. Pioneer in 1868 had the reputation of being an organ of an influential section of officials who wanted to suppress the Indian National Congress formed three years earlier. Pioneer campaigned against the Indian National Congress and vehemently opposed its leaders, actions and policies.

The Civil and Military Gazette came out in Lahore in 1872 and with it merged a number of papers like the Moffussilen of Agra, Lahore Chronicle, Punjab Times and Indian Public Opinion. It had a distinction of having on its staff Rudayard Kipling, the great poet, Novelist and author. He spent seven years in India. He was 17 years old and was working as Assistant to Stephan wheeler, editor of Civil and Military gazette. In 1886, he worked under Kay Robinson. He moved on to pioneer after five years stint in Gazette and continued his literary labors. The Anglo-Indian papers except “Statesman” showed no sympathy to Congress. Many papers especially “Pioneer” ran malicious campaign against Congress. In 1906 Congress proclaimed ‘Swaraj’ for the first time and Anglo-Indian papers like Englishman, Civil and Military Gazette and Times of India criticized it

**Effects of Anglo-Indian Press**

- Anglo-Indian press was having the support of the Government and it enjoyed all the privileges provided to the press in those times.
- Government also provided many facilities to the reporters professionally. Government Secretariat in Bombay opened an editor's room where reporters were given news of public importance and allowed to consult Government records. The office of Naval Commander in Chief of Marine Department provided table and chairs for reporters in the waiting room and allowed reporters to copy news from English papers when the mail arrived from different places.
- In March 1877, a Press Commissioner was appointed to deal with English Press whether owned by Europeans or Indians. The first to occupy the post was Robert Lethbridge followed by C.E.Buckland.
- With the entry of professional editors in to Anglo-Indian papers the standard of Journalism also increased in India.

**Development of Communication facilities & National awakening in India**

Communication and transport facilities had not developed in India until the middle of the 19th century. The newspapers had to be satisfied with the old news and most of the news from outside India or even from other provinces was given very lately. In 1862 it took nine days for a letter to reach Calcutta from Bombay, nine days to Madras, six days to Delhi and four days to Bangalore. Mail from England came at an interval of five weeks. But the advent of telegram made it possible to flash news from Calcutta in thirteen minutes, from Madras in five minutes. Under adverse weather conditions telegrams from Calcutta to Bombay took fifteen hours. But the telegraph charges were heavy.

Newspapers started getting postal benefits. The opening of Suez Canal, steam navigation and introduction of cable service also encouraged quick percolation and dissemination of news in any part of the world. The development of Railways and postal system gave better movement and fast transportation of goods, news and material. Reuter's news cables reached Bombay in 1865 and the first office of Reuters was set up in 1866. Cable cost was one-pound sterling a word with a minimum of 20 words per message. Commercial news was in much demand than the other types of news. Court

cased and public meetings were well reported. Proof reading was poor. The front page of the newspaper was filled with Government notifications and private advertisements.

On the other hand the development of better communication facilities brought Englishman exiled in India closer to homes in England. Introduction of better transport systems like railways knit the European community closer in India. Lot of Europeans settled in India in administrative and journalistic jobs. This led to the widening of gap between the rulers and the subject race. Prestige, position and power began to dominate the thinking of Englishman. In the same manner injustice, tyranny of the British Government, utter want of consideration to native subjects, insolence and pride of Englishman in India both official and unofficial began to hurt the sentiments of Indian people.

In January 1877, Lord Lytton organized an Imperial Assembly in Delhi and proclaimed Queen Victoria as Empress of India. But at that time many provinces in India were under severe drought conditions and people were under stressful conditions. The pomp and show of the British Government in India in organizing the "Delhi Durbar" along with failure of administration in emergency and crisis situations led to wide spread protests in India. Newspapers were full of articles and caricatures representing viceroy as "Nero fiddling while Rome is burning". In 1877, great famine affected vast areas of Bombay and Madras presidencies and in the native states of Hyderabad and Mysore involving a population of 36 million. Large stock of grains was available in Bengal, Burma but there was no adequate transport to carry them to the needy. The lack of administration forethought and complete lack of will to deal with the situation was resented by the people of India.

## Vernacular Press Act

Lord Lytton imposed the Vernacular Press Act in March 1878. It imposed several restrictions on Language Press. The act directed to suppress the vernacular Language press in India as it was becoming more aggressive in comment, criticism and was evolving as a potent medium in the dissemination of new ideas. The immediate reason for imposing the act was the severe criticism of Afghan war in the press.

- The act prohibited vernacular papers from publishing anything, which was likely to excite feelings of disaffection towards the Government.

- The Magistrate was given vide powers to demand security deposits from the printer or publisher of the newspaper.
- Failure to comply would lead to confiscation of property.
- There was no provision of appeal against the decision of Magistrate.

**Impact of Vernacular Press Act**

The act was only applied to vernacular press and the discriminatory treatment evoked widespread protest in the Country. In 1878 there were 200 language papers in the country. Many national leaders like Surendranath Benarjee believed that Vernacular Press Act was the immediate cause for the awakening of political consciousness and the genesis of National movement in the country. Liberals in Britan also opposed the press act. Many vernacular papers turned into English papers to withstand the act. Among them the most important was the "Amrit Baazar Patrika", a Bengali language paper switched to English language overnight. There was severe agitation resenting the Vernacular press act. National leaders like Surendranath Benarjee, Bipin Chandra Pal, spearheaded the agitation. Surendranath Benarjee fought against the law by forming a Native association and mobilized the public opinion through public meetings. He also sent a deputation to Viceroy under Native association demanding to repeal the act. Lord Rippon succeeded Lord Lytton and repealed the Vernacular Press act in 1881. The repealing of the act also coincided with the coming of Liberal Government under Gladstone to power in England.

**Press and the First Session of Congress**

The Editors commanded a very high reputation at the time of the birth of the Indian National Congress. One could measure the extent of this respect from the fact that out of 72 delegates who participated in the meeting one third were Journalists and those who occupied the frontline seats in the first ever Congress session held in Bombay in December 1885 included some of the famous editors of Indian newspapers. The editor of "The Hindu", G. Subramanya Iyer, proposed the first resolution at this Session. In this resolution, it was demanded that the government should appoint a committee to enquire into the functioning of Indian administration. A journalist from Poona, Chiplunkar moved the second resolution in which the Congress was urged to demand for the abolition of India Council which ruled the country from Britain. Dadabhai Naoroji, who was a noted journalist of his time, supported the third resolution.

Dadabhai Naoroji proposed the fourth resolution. Motilal Ghosh of Anand Baazar Parika and Narendranath Sen of Indian Mirror, Calcutta also participated in the first session.

There were many Congress Presidents who had either been the editors or had started the publication of one or the other newspapers. Freedom of press was one of the important issues taken up by Congress In this context, particular mention may be made of Ferozeshah Mehta who had started the "Bombay Chronicle" and Pandit Madan Mohan Malaviya who edited daily, "Hindustan". He also helped the publication of "Leader" from Allahabad. Moti Lal Nehru was the first Chairman of the Board of Directors of the "leader". Lala Lajpat Rai inspired the publication of three journals, the "Punjabi", "Bandematram" and the "People" from Lahore. During his stay in South Africa, Gandhiji had brought out "Indian Opinion" and after settling in India, he started the publication of "Young India", "Navjeevan", "Harijan", "Harijan Sevak" and "Harijan Bandhu". Subash Chandra Bose and C.R. Das were not journalists but they acquired the papers like "Forward" and "Advance", which later attained national status. Jawaharlal Nehru founded the "National Herald".

Indian press also was guiding the congress and setting the agenda of the freedom struggle. The Indian press demand the 'swaraj' long before Congress was founded. In 1870 itself "Amrit Baazar Patrika" demanded the constitution of a Parliament with Indian representation. In 1874 Kristodas Pal demanded 'Home rule' for India and constitution of Government of India in "Hindu Patriot" The Anglo-Indian press except "Statesman" showed no sympathy to Congress. Many papers especially "Pioneer" ran malicious campaign against Congress. In 1906 Congress proclaimed 'Swaraj' for the first time and Anglo-Indian papers like Englishman, Civil and Military Gazette and Times of India criticized it

## Revolutionary Movement and the Press

Lord Curzon partitioned Bengal in September 1905 for administration reasons. The partition evoked severe dissent in Indian masses that looked as a ploy to disturb the Hindu-Muslim unity. The incidents of mass repression by British Government led to the consolidation and strengthening of revolutionary thought in Indian's, especially in Indian youth who were inspired by leaders like Tilak, Aurobindo Ghosh, Bipin Chandra Pal etc.

So far as the revolutionary movement is concerned, it did not begin with guns and bombs but it started with the publication of newspapers. The first to be mentioned

in this context is “Yugantar” publication of which was started by Barindra Kumar Ghosh who edited it also. When the Ghadar party was organized in America, Lala Hardayal started publication of the journal 'Ghadar'. Within one year, millions of copies of this journal were published in Hindi, Urdu, Punjabi, Gujarati, Marathi and English and sent to India and to all parts of the world· where Indians were residing. In the beginning the copies of the journal were concealed in parcels of foreign cloth sent to Delhi. It was also planned to smuggle the printing press into India for this purpose. But then the war broke out and it became almost impossible to import printing machinery from abroad. Lala Hardayal was arrested in America and deported to India. One of his followers Pandit Ramchandra started publishing “Hindustan Ghadar” in English. With the U.S. joining the war, the American Government arrested the Ghadar party workers. When the trail was on, one of the rivals of Pandit Ramchandra managed to obtain a gun and shoot him dead in the jail itself. The death of Ram Chandra led to the closure of this paper.

In 1905 Shyamji Krishna Verma started publication of a journal “Indian Sociologist” from London. It used to publish reports of political activities taking place at the India House in London. In 1909 two printers of this journal were convicted. Shyamji Krishna Verma left England for Paris from where he started the publication of the journal. Later on, he had to leave for Geneva. He continued to bring out the journal from there for two or three years more. In Paris, Lala Hardayal, in collaboration with Madam Cama and Sardar Singhraoji Rana brought out “Vandematram” and “Talwar”. After “Yugantar”, it was “Vandematram” that played a significant role in the freedom struggle. Subodha Chandra Malik, C.R. Das and Bipin Chandra Pal established this journal on August 6, 1906. Its editor, Aurobindo Ghosh, the editor of “Sandhya”, B. Upadhyay and editor of Yugantar B. N. Dutt had to a face a trial for espousing the cause of freedom. So far as the Hindi papers were concerned, they looked to government for support for some time. Bhartendu Harish Chandra was the first to start a journal “Kavi Vachan Sudha” in 1868. Its policy was to give vent to the miseries of the people of India. When the Prince of Wales visited India, a poem was published in his honor. The British authorities were given to understand that the poem had two meanings and that one word used in the poem could also mean that the Prince of Wales should get a shoe beating.

The government aid to journals like Kavi Vachan Sudha was stopped for publishing what was objectionable from the government point of view. Bhartendu Harish Chandra resigned from his post of an honorary Magistrate. His two friends, Pratap Narain Mishra and Bal Krishna Bhatt started publication of two important political journals “Pradeep” from Allahabad, and “Brahman” from Kanpur. The Pradeep was closed down in 1910 for espousing the cause of freedom. The “Bharat-Mitra” was a famous Hindi journal of Calcutta, which started its publication on May 17, 1878 as a fortnightly. It contributed a lot in propagating the cause of freedom movement. The journal exposed the British conspiracy to usurp Kashmir. Several other papers published from Calcutta which played an important role in freedom struggle included Ramanand Chatterjee's “Modern Review” in English, “Pravasi Patra” in Bengali and “Vishal Bharat” in Hindi.

One of the important Hindi Journalist who has earned a name for his patriotism was Ganesh Shanker Vidyarthi. In 1913, he brought out weekly “Pratap” from Kanpur. He made the supreme sacrifice in 1931 in the cause of Hindu-Muslim unity. Krishna Dutt Paliwal brought out “Sainik” from Agra, which became a staunch propagator of nationalism in Western U. P. The noted Congress leader, Swami Shradhanand, started the publication of Hindi journal “Vir Arjun” and Urdu journal “Tej”. After the assassination of Swami Shradhanand, Vidyavachaspathi and Lala Deshbandhu Gupta continued the publication of these journals. They were themselves prominent Congress leaders. In Lahore, Mahashaya Khushal Chand brought out “Milap” and Mahashaya Krishna started publishing Urdu journals which helped a lot in promoting the national cause. In 1881, Sardar Dayal Singh Majitha on the advice of Surendra Nath Bannerjee brought out Tribune under the editorship of Sheetala Kant Chatterjee. Bipin Chandra Pal also edited this paper for some time. Later in 1917, Kalinath Rai joined the paper as its editor.

There is not a single province in India, which did not produce a journal or newspaper to uphold the cause of freedom struggle. A. G. Horniman made the “Bombay Chronicle” a powerful instrument to promote militant nationalism. He himself took part in the meetings where Satyagraha used to be planned. He published vivid accounts of Jallianwala Bagh carnage for which one correspondent of his paper, Goverdhan Das, was sentenced to three years' imprisonment by a military court. Horniman too was arrested and deported to London even though he was ill at that time. Amritlal Shet brought out

the Gujarati journal "Janmabhumi" which was an organ of the people of the princely states of Kathiawad, but it became a mouthpiece of national struggle. Similarly, another Gujarati journal "Saanjvartman" played a prominent role under the editorship of Sanyal Das Gandhi, who played a very significant role in the Quit India Movement in 1942. It was soon after independent formed a parallel Government in Junagarh and forced the Nawab of Junagarh to leave the country. The three editors of the Sindhi journal Hindi Jairam Das Daulatram, Dr. Choithram Gidwani and Hiranand Karamchand, were arrested, their press closed and the property of the paper confiscated. Sachidanand Sinha, who had started the publication of "Searchlight" under the editorship of Murtimanohar Sinha, carried the tradition of national newspapers forward In Bihar. Dev Brat Shastri started publication of "Nav Shakti" and "Rashtra Vani". The weekly "yogi "and the "Hunkar" also contributed very much to the general awakening.

## Indian press act 1910

In 1906, the Viceroy was worried over close connection of Congress with language papers. In December 1906, Minto received information that a direct attempt is made to sow disaffection or revolt in the native army. He believed that the national press was having harmful influence on the native army through inflammatory and seditious articles. Minto began to take action against Indian press in 1906.

- In June 1906, "Punjabee" newspaper from Lahore was prosecuted and editor sentenced to six months imprisonment. There were protests and demonstrations and unrest in Punjab following the conviction of editor of "Punjabee" as Lala Lajpat Rai owned it.
- The editor of "Hindu Swarajya" was arrested and sentenced to six months imprisonment.

The growing discontent among native people forced the Government to draw up regulations for press control. Viceroy realized that the Anglo-Indian press was equally responsible in creating the discontent by writing bitter things about native political organizations. In June 1907, Government published a 'Resolution' warning all newspapers against publishing seditious matter and authorizing local Government to institute prosecution for sedition. In 1907 series of arrests and prosecutions of editors and journalists and confiscation of presses took place.

- June 1907: Editor of "Hindustan" Dinanath was arrested and sentenced for five years imprisonment.
- July1907: Editor of "Yuganthar" of Calcutta was prosecuted for sedition and sentenced for one-year imprisonment. Press was confiscated.
- July 1907: Editor of "Sonar Bangla" of Calcutta was arrested.
- July 1907: Police raided the office of "Bandemataram" and Aurobindo Ghosh was arrested for sedition. Aurobindo escaped and sought asylum in French territory.
- July 1908: Tilak was arrested for sedition and sentenced for six years imprisonment.

The press prosecutions and confiscations became the order if the day in 1907 and in 1908, but did not yield desired results. Hence on *February 8th 1910, Indian Press Act* was imposed and fresh restrictions were formulated. Between 1910 and 1914 several demands were made to the national press. Papers were asked to pay security of Rs.5000 or close down. To resist the oppressive measures and protect the interests of the National press 'Press Association of India' was formed in 1915. The association studied the situation and reported that

- Between 1915-1917:22 papers were asked to furnish security and 18 had shutdown
- Between 1917-1919: 963 newspapers and printing presses, which existed before Press act 1910 had been preceded against the act and action taken. In the same period 173 new printing presses and 129 new papers were not given permission by demanding heavy security.
- Government collected Rs.5 lakhs during the first year of the Press act 1910, through securities and forfeitures. Over 500 publications were preceded under the act.

**Leaders of National Press: Surendranath Benarjee**

Surendranath Banerjee is one of the journalists who revolutionized the politics of Indian Nationalism. He believed in evolution than revolution. He got admitted into Indian Civil Service (ICS) in 1871 and was dismissed from service in 1874. The reason for his removal from service i.e., failing to correct a false report of his subordinate, was very petty reason which an English officer would have got away with a simple departmental reprimand. But this acted as a spark for his entry into political field.

By this time students awakening started in India and students' associations and secret societies also started. The protest against the Vernacular press act for a period of three years brought Indians together. The Indian owned, edited English press was very strong and influential in Calcutta with the "Bengalee", "Amrit Baazar Patrika", "Hindu Patriot" and "Indian Mirror".

Surendranath Benarjee believed that Vernacular Press Act was the immediate cause for the awakening of political consciousness and the genesis of National movement in the country. He galvanized the public support against the British Government by addressing the public at various forums and occasions. Surendranath Benarjee was in forefront of organizing political activity not only in Bengal but also all over the country by undertaking a world tour. In Lahore he persuaded Dayal Singh Majithia to start a newspaper "Tribune" and helped it with supply of machinery and editors. He made special effort to merge various associations all over India to form into an All-India Political Association, the basis for formation of Indian National Congress.

Benarjee was the hero of the anti-partition movement when Viceroy Lord Curzon partitioned Bengal for administration convenience. Benarjee sense of public duty was so great that on the day, when his wife had passed away, he was shaken with grief, he pulled himself up and dictated his usual leading article for his paper. His mastery over style, his vigor of thought and the high moral platform he took always kept in him in a special league.

## Bipin Chandra Pal

He was a born rebel and a product of Brahmo samaj movement in Bengal. He was a persuasive speaker at meetings of the Brahmo Samaj. He started his life as a teacher and worked in many places like Bangalore. His Journalistic career began by starting a Bengali weekly "Paridarsak" in Sylhet in 1880. In 1883 he joined the 'Bengal Public Opinion" in Calcutta as its Chief editorial writer. Its editor was Babu Mohan Das, father of Chittaranjan Das. In 1887, he went to Lahore to join "Tribune" as Sub editor. He was for some time the Calcutta Correspondent of "The Hindu" of Madras. He also founded the English weekly "New India" and another weekly "Bandemataram". Later they passed on to the hands of Aurobindo Ghosh. Later he also took up the editorship of "Independent" but resigned from it owing to differences with Pandit Motilal Nehru in 1921. He went on a lecture tour in USA in 1899. He was at Oxford at the New

Manchester College. For his virulent and potent ideology, he is regarded as “Father of Indian revolution thought”

Pal career started with the birth of Indian National Congress in the year 1883. At the age of 26, he was a delegate to the congress session in 1886 from his own district Sylhet. He had the consummate ability to expressing the most advances extreme views in language, which was not susceptible to legal action. Pal speeches were highly inflammable but not seditious. They never contained incitement to violence and no personal attacks. He had the capacity to express extreme views in polite and civil language. He regarded the national movement as a spiritual one rather than economic and political one. In 1907 he was sentenced to a term of imprisonment for refusing to testify against Aurobindo Ghosh in a sedition case. Aurobindo Ghosh, Bal Gangadhar Tilak and Bipin Chandra Pal formed a powerful extreme group in Congress, which has to dominate the political scene until the advent of Mahatma Gandhi and launch of Non-Cooperation Movement.

**Bal Gangadhar Tilak**

Bal Gangadhar Tilak was born as Keshav Gangadhar Tilak (23 July 1856–1 August 1920) was an Indian Nationalist, teacher, social reformer and independence fighter. He was the first popular leader of the Indian Independence Movement.. The British colonial authorities infamously and derogatorily called the great leader as "Father of the Indian unrest". He is regarded as one of the pioneers of siaffection and a triumphant champion of Hindu orthodoxy. He was also conferred upon the honorary title of “Lokmanya”, which literally means "Accepted by the people (as their leader)". Tilak was one of the first and strongest advocates of "Swaraj" (self-rule) in Indian consciousness. His famous quote, "Swaraj is my birthright, and I shall have it !" is well-remembered in India even today. Bal Gangadhar Tilak was the first champion of Swadeshi movement. Through his speeches and newspapers, he worked on the prejudices and passions of both educated and uneducated.

Tilak co-founded two newspapers with Gopal Ganesh Agarkar, Vishnushastri Chiplunakar and other colleagues: “Kesari”, which means "Lion" in Sanskrit and was a Marathi newspaper, and 'The “Maratha”, an English newspaper in January 1881. It was announced that “Kesari” would deal with the political and economic developments in he country along with world events. It would writ with objectivity and impartiality and truth would be its watchword. In its first editorial “Kesari” compared the newspapers to

'nightwatchman' and said the responsibility of the press is to keep executive office in wholesome fear of public opinion. It declared its intention of improving the social conditions by frankly telling people what was bad and harmful. "Kesari" sought to educate people and promote popular agitation, where as "Maratha" set out to be the authoritative spokesman of educated public opinion in Maharashtra.

In just two years 'Kesari' attracted more readers than any other language newspaper in India. "Kesari" became the largest circulated language newspaper in the country. Tilak's editorials were virile, impassionate filled with lofty patriotism and courage with conviction. They were generally about the people's sufferings under the British. These newspapers called upon every Indian to fight for his or her rights. Tilak's writings were dictated by him and they read like speeches. His style was always direct and his sentences were short and crisp. His expression of ideas was crystal clear and it went direct to the heart of readers. They were full of quotations from the ancient Sanskrit works, popular sayings, historic parallels, apt metaphors filled with forceful and original ideas. He wrote on day-to-day problems, economic questions, philosophical ideas, historical researches literature and art. Tilak used to say to his colleagues: "You are not writing for the university students. Imagine you are talking to a villager. Be sure of your facts. Let your words be clear as daylight." In "Kesari" he almost created new language. In the old Marathi language, there were plenty of writing on devotion and philosophy. But to discuss serious matters of politics to attack and rebut opponents, to crush them with satire and ridicule old Marathi language was of little use and so new terminology was developed and used effectively.

Tilak criticized the inadequate relief measures during the great famine and plague which gripped Maharashtra and other parts of Country in 1896-1897. Through "Kesari" he told the Government to perform their duty and save people from starvation. He warned that peasants might rebel against them if steps were not taken immediately to relieve distress. "Kesari" devoted many columns to news of famine and relief measures. It exposed the high handedness behavior of officials. The famine of 1896 decided the ultimate course of Tilak's course in Indian national movement. Plague epidemic spread from Mumbai to Pune in late 1896, and by January 1897, it reached epidemic proportions. In order to suppress the epidemic and prevent its spread, it was decided to take drastic action, accordingly a Special Plague Committee, with jurisdiction over Pune city, its suburbs and Pune cantonment was appointed under the

Chairmanship of W. C. Rand, I. C. S, Assistant Collector of Pune by way of a government order dated 8 March 1897. On 12 March 1897, 893 officers and men both British and native, under command of a Major Paget of the Durham Light Infantry were placed on plague duty.

Rand used tyrannical methods and harassed the people. The appointment of military officers introduced an element of severity and coercion in the house searches, the highhandedness of the government provoked the people of Pune and some soldiers were beaten in Rastapeth locality. Tilak took up the people's cause by publishing several articles pleading the officials to treat Indians with decency and humility when house searches were carried out. But the harsh methods were persisted by W.C. Rand. Tilak led a citizen's deputation to Rand to protest against harsh methods. After that he wrote inflammatory articles in his paper Kesari, in very harsh language quoting the Hindu scripture, the Bhagavad Gita, *"to say that no blame could be attached to anyone who killed an oppressor without any thought of reward"*. Following this, on 22 June, Rand and another British officer Lt. Ayerst were shot and killed by the Chapekar Brothers and their other associates. Tilak was charged with incitement to murder and arrested. Tilak's trial began on September 8th 1897 and lasted six days. He was sentenced to 18 months imprisonment by Judge Stranchey. In response to the verdict Tilak commented that *"I have constituted myself and my two newspapers as the permanent opposition to Her Majesties Government of India*". When he emerged from prison, he was revered as a martyr and a national hero and adopted a new slogan, *"Swaraj (Self-Rule) is my birth right and I will have it".* He resumed the editorship of "Kesari" in July 1899.

On 30 April 1908 two Bengali youths, Prafulla Chaki and Kudiram Bose, threw a bomb on a carriage at Muzzafurpur in order to kill a District Judge Douglass Kenford but erroneously killed some women travelling in it. While Chaki committed suicide when caught, Bose was tried and hanged. Tilak in his paper Kesari defended the revolutionaries in two articles and called for immediate Swaraj or Self-rule. Most of Anglo-Indian papers like "Pioneer", "Englishman", "Times of India" and "Statesman" criticized the event. Bengal Government put on the blacklist of press containing many papers and started prosecuting them. Upadhyaya the editor of "Sandhya" was arrested.

Tilak was arrested for sedition. He asked a young Muhammad Ali Jinnah to represent him. Tilak's trial of 1908 was the most historic trial. His last words on the verdict of the Jury were such: *"In spite of the verdict of the Jury, I maintain that I am*

*innocent. There are higher powers that rule the destiny of men and nations and it may be the will of providence that the cause which I represent may prosper more by my suffering than by my remaining free".* These words now can be seen imprinted on the wall of Room. No. 46 at Bombay High Court. But the British judge convicted him and was sentenced for six years on July 22nd 1908 as per the incitement to offences act passed in that year. He was imprisoned from 1908 to 1914 in the Mandalay Prison, Burma. While imprisoned, he continued to read and write, further developing his ideas on the Indian Nationalist movement.

## Mahatma Gandhi

Mahatma Gandhiji's ascendancy in Indian politics and has assumption of leadership of the national movement acted as an elixir for Indian Journalism. He was a peerless, fearless, effective and eloquent with his words, Mahatma Gandhi was the most effective mass medium of the 20th century. His journalism belonged to an era when there was neither radio nor television. Such was the power of his *'soul communication'* that whatever he said and wrote reached the farthest corners of this country within days and to the entire world thereon. Mahatma Gandhi, in a journalistic career spanning nearly four decades, edited six journals. But Gandhi's command over the basics of mass communication ensured that his daily "outpourings of heart and soul" reached all.

Before Gandhi became a freedom fighter or a media crusader, he was a journalist. A lawyer by training he went to South Africa to practice. The circumstances in which the people, particularly Indians lived, prompted him to take up their cause. Initially he used friendly newspapers as a forum to express his views through letters to local dailies and interviews. His letters to the editors of South African dailies are an example on how to fight injustice in a country where the laws are loaded against one section of the people, without giving offence to the rulers themselves. A telling example of this trait was his letter dated October 25, 1894 to the *Times of Natal*, which carried a contemptuously worded editorial of Gandhi and his opinion on racial discrimination

After 10 years of relentless crusade, Gandhi realized that the twin tasks of mobilizing public opinion and influencing official decisions given the magnitude of the daunting tasks required a regular newspaper. He decided to take a plunge into journalism by launching his first newspaper "Indian Opinion" in June 1903. The weekly newspaper was to serve the interests of British Indians in South Africa. The power of

language familiar to the people was an obvious realization for Gandhi. The newspaper was published in four languages, English, Gujarati, Tamil and Hindi. The sole aim of a newspaper for the Mahatma was service. Conscious of the power of the medium he believed in control and restraint. The guidelines on policy that he published in the first issue on June 6, 1903 enunciated the advocacy principle in working for the community by asserting their rights and invoking a sense of responsibility among them. He was clear about the nature and content of his newspaper. It would not carry any advertisements nor try to make money. Instead, he sought subscribers who would give donations. It was while writing in *Indian Opinion* that Gandhi stumbled on the concept of *Satyagraha*. Writing on Satyagraha in South Africa, he said: "*Indian Opinion* was certainly a most useful and potent weapon in our struggle and regarded the journal as "a mirror of his own life".

The guidelines on policy for *Indian Opinion* suggests that the paper would serve as the best advertising medium for Indians His stance on not wanting to accept advertising support is explained by the view that, advertisements are inserted by people who are impatient to get rich, in order that they may gain over their rivals. He believed in accepting non-commercial advertisements that serve a public purpose. In *My Experiments with Truth*, he wrote: "Week after week I poured out my soul in its columns and expounded the principles and practice of Satyagraha as I understood it. I cannot recall a word in these articles set down without thought or deliberation or a word of conscious exaggeration, or anything merely to please. Indeed, the journal became for me a training in self-restraint and for friends a medium through which to keep in touch with my thoughts. Pouring his soul in its columns he expounded the principles and practices of Satyagraha. The journal was to him a training in self-restraint and for friends a medium through which to keep in touch with his thoughts. Comparing the power of the press to unchained torrent of water. He was concerned that like the unchained water, which can devastate crops, an uncontrolled pen serves but to destroy. "*Indian Opinion* lasted for 11 years. It more or less forced the South African provincial regimes to modify their repressive laws against Indians.

*"Indian Opinion"* in a significant way laid the foundations for Gandhi's contributions to Journalism after his return to India in 1915 to take up the larger cause of Indian Independence. Seeking time from Gokhale, his mentor, he decided to travel to familiarize himself with his homeland. The Indigo farmers plight in Champaran became

a starting and rallying point for his first Satyagraha in India. He promptly went Champaran, Bihar and investigated the issues, and produced a report that would be the envy of the greatest investigative journalist anywhere in the world. After Champaran it was only a matter of time before the Mahatma took to journalism as his most potent weapon of *Satyagraha*. It was in this context that Gandhi forays into Journalism in India began. The deportation of B.G. Horniman, then editor of Bombay Chronicle who was also a formidable supporter of Satyagraha, provided an opportunity to Gandhi. Fueled by encouragement of his well-wishers and friends he decided to the take up the Editorship of *Young India*, which was then published by the management of the *Bombay Chronicle*. His overarching concern for addressing the communication needs of the General Public became evident when he expressed that English alone could not be a medium of the newspaper. Therefore, along with the editorship of Young India he also took over the editorship of *Navjivan*, a Gujarati monthly that he converted into a weekly

Issue after issue of *Young India* and *Navajivan* carried samples of the Mahatma's journalistic genius, which blended seemingly earnest appeals to the government to do what was "just and righteous". In March 1922, Gandhi was charged with spreading disaffection by writing seditious articles in *Young India*. In his own inimitable manner Gandhi said: *"I hold it to be a virtue to be disaffected towards a government, which in its totality has done more harm to India than any previous system. India is less manly under the British rule than she ever was before. Holding such a belief, I consider it to be a sin to have affection for the system*." He also believed in healthy journalism and avoided poisonous communication: *"My writings cannot be poisonous. They must be free from anger, for it is my special religious conviction that we cannot truly attain our goal by promoting ill will against the rulers or anyone else. My writings cannot but be free from hatred towards any individual because it is my firm belief that it is love that sustains the earth"*

The burden of leading a nation towards freedom and the contingency of having to face trials followed by jail terms, did not stem the flow of writings from Gandhi's pen. There was not a day when he was not writing on some issue or the other in *Young India* and *Navajivan*. To these he added *Harijan*, *Harijan Sevak*, and *Harijan Bandu*, which became the Mahatma's potent media for carrying his message to the weakest sections of India. *Young India* and *Navajivan* folded up in January 1932 when Gandhi was imprisoned for a long spell. Between 1933 and 1940, *Harijan* (English), *Harijan Bandu*

(Gujarati) and *Harijan Sevak* (Hindi) became the Mahatma's voice to the people of India. These newspapers found the Mahatma concentrating on social and economic problems. Caste disparities and such instruments of social deprivation as untouchability and ostracization were the targets of the Mahatma's crusade. Gandhi's assessment of the newspapers of the day was not complimentary.

Extolling the qualities and expectations of an editor he was clear that even when a newspaper writes something that displeases the government, which is nonetheless true, the editor should not apologies. He was categorical in stating that if a newspaper were to run into difficulties as a consequence of publishing truth it should rather close down than buckle. This he felt was a better service to the public. It is wrong to use newspaper as a means of earning a living. There are certain spheres of work, which are of such consequence and have such bearing on welfare that to undertake them for earning one's livelihood will defeat the primary aim behind them. When further a newspaper is treated as a means of making profits, the result is likely to be serious malpractices. He affirmed time and again that the need to educate the people was a primary goal of newspapers.

The power of the government in imposing restriction on printing presses also did not daunt him. He articulated the fact that newspapers could be brought out hand written. He enunciated a situation where if he were to dictate his views to fifty persons at a time and those fifty in turn circulate it the process of duplication and multiplication increases many fold. If necessary and by creating a zeal the contents could in any case reach the masses. Journalism is one noble profession whose power and responsibility he firmly believed. Gandhi was formally associated with six journals-*Indian Opinion*, *Young India*, *Navjivan*, *Harijan*, *Harijanbandhu* and *Harijansevak* and practiced what he believed in**.** More than 75 % of the content in his papers came from his own pen. It is estimated that during his lifetime Gandhi wrote more than 10 million words. That translates into 500 words every day for 50 years. And all his writing was related to personal improvement, and social and political reform. The single factor that helped Gandhi the most in earning the title of 'Mahatma' and the leadership of the masses was his dedication of running the weekly newspapers for nearly 40 years of his life. Journalism was the factor that transformed Ordinary Gandhi into Mahatma Gandhi. Gandhi's work in journalism had a strong influence not only on every newspaper in India but also on the entire literary world of every language in India" He said "My

newspapers became for me a training ground in self-restraint and a means for studying human nature in all its shades and variations. Without the newspapers a movement like Satyagraha could not have been possible"

## Mahatma Gandhi And Mass Media

Apart from being a national leader and social reformer, Gandhi was a great communicator. More than anyone else, he recognized that communication is the most effective tool to shape opinion and mobilize popular support. He was successful because he had a latent skill in communication that surfaced in South Africa where he had gone initially to set up practice as a lawyer. The practice of communication started by him in South Africa gave him the clue to rally millions of his countrymen when he returned to India. According to Chalapathi Raju, himself an eminent editor, Gandhi was probably the greatest journalist of all time, and the weeklies he ran and edited were probably the greatest weeklies the world has known. He published no advertisement; at the same time, he did not want his newspapers to run at a loss. He had gained considerable experience in South Africa, where he had taken over in 1903 the editorship of the 'Indian Opinion' and published it in English, Tamil and Gujarati, sometimes running the press himself.

'Young India' and 'Harijan' became powerful vehicles of his views on all subjects. He wrote on all subjects. He wrote simply and clearly but forcefully, with passion and burning indignation. One of the objects of a newspaper, he said is to "Understand the popular feeling and give expression to it; another is to arouse among the people certain desirable sentiments, and the third is fearlessly to expose popular defects"

Gandhi's papers published no advertisements. They enjoyed wide circulation. His approach to journalism was totally devoid of ambitions. To him it was not a vocation to earn his livelihood; it was a means to serve the public. In the 'Young India' of 2 July 1925, he wrote: "I have taken up journalism not for its sake but merely as an aid to what I have conceived to be my mission in life. My mission is to teach by example and present under severe restraint the use of the matchless weapon of Satyagraha which is a direct corollary of nonviolence."

Gandhi looked upon journalism as a means to serve the people. He said in his autobiography "My experiments with truth" "The sole aim of journalism should be service. The newspaper is a great power, but just as an unchained torrent of water

submerges whole countryside and devastates crops even so an uncontrolled pen serves but to destroy. If the control is from without, it proves more poisonous than want of control. It can be profitable only when exercised from within”

“Indian Opinion... was a part of my life. Week after week I poured out my soul in its columns and expounded the principles and practice of Satyagraha, as I understood it. During 10 years that is until 1914 except the intervals of my enforced rest in prison there was hardly an issue of 'Indian Opinion' without an article from me. I cannot recall a word in these articles set down without thought or deliberation or word of conscious exaggeration, or anything merely to please. Indeed, the journal became for me a training in self-restraint and for friends a medium through which to keep in touch with my thoughts."

Gandhi launched Satyagraha against the Rowlatt Act and the massacre in Jallianwala Bagh. He learnt in South Africa how important the press and public opinion could be in politics and had taught himself how to use the written word most effectively. He was a staunch supporter of Freedom of Press. He said time and again “Freedom of the press is a precious privilege that no country can forgo” To ventilate his views and to educate the public on Satyagraha he used the two journals 'Young India' and 'Navjivan’. In 1933 Gandhi started 'Harijan', 'Harijanbandhu', 'Harijansevak' in English, Gujarati and Hindi, respectively. These newspapers were the vehicles of his crusade against untouchability and poverty in rural areas. These papers published no advertisements even then they enjoyed wide circulation. His note of defiance and sacrifice gave a new stimulus to the evolution of press as a weapon of Satyagraha.

It will be pertinent to point out as to what Mahatma Gandhi considered to be the role of newspapers. He wrote “In my humble opinion, it is wrong to use a newspaper as a means of earning a living. There are certain spheres of work, which are of such consequence and have such bearing on public welfare that to undertake them for earning one's livelihood will defeat the primary aim behind them. When, further a newspaper is treated as a means of making profits, the result is likely to be serious malpractices. It is not necessary to prove to those who have some experience of journalism that such malpractices do prevail on a large scale”

He was of the opinion that “Newspapers are meant primarily to educate the people. They make the latter familiar with contemporary history. This is a work of no mean responsibility. It is a fact, however, that readers cannot always trust

newspapers. Often facts are found to be quite the opposite of what has been reported. If newspapers realized that it was their duty to educate the people, they could not but wait to check a report before publishing it. It is true that often they have to work under difficult conditions. They have to separate the truth from the false in a short time and can only guess at the truth. Even then, I am of the opinion that it is better not to publish a report at all if it has not been found possible to verify it"

In 'Young India' Gandhi once gave a glimpse of the exacting code he had set up for himself. "To be true to my faith, I may not write in anger or malice. I may not write idly. I may not write merely to excite passion. The reader can have no idea of the restraint I have to exercise from week to week in the choice of topics and my vocabulary. It is training for me. It enables me to peek into myself and to make discoveries of my weaknesses. Often my vanity dictates a smart expression or my anger a harsh adjective. It is a terrible ordeal but a fine exercise to remove these weeds."

**Gandhi's canons of Journalism**

Gandhi had been frequently writing on various aspects of journalism. To him editorial independence, adherence to truth and self-restraints were the three over riding considerations for journalism. In his message for the editor of the newspaper, 'The Independent', on 30 January 1919, he wrote: "In wishing you success in your new enterprise, I would like to say how I hope your writings would be worthy of the title you have chosen for your journal; and may I further hope that to a robust of independence you will add an equal measure of self-restraint and the strictest adherence to truth? Too often in our journals as in others do we get fiction instead of fact and declamation in place of sober reasoning? You would make 'The Independence' a power in the land and a means of education for the people by avoiding the errors I have drawn attention to"

"The sole aim of journalism should be service. The true function of journalism is to educate the public mind, not to stock it with wasted and unwanted impressions. The newspapers should be read for the study of facts. They should not be allowed to kill the habit of independent thinking".

On receiving Advertisement support for running a newspaper Mahatma Gandhi wrote: "It is now an established practice with newspapers to depend for revenues mainly on advertisements rather than on subscriptions. The result has been

deplorable. The very newspaper, which writes against the drink evil, publishes advertisements in praise of drinks. In the same issue, we read of the harmful effects of tobacco as also from where to but it. Or we shall find the same issue of a paper carrying a long advertisement for a certain play and denouncing that play as well. Medical advertisements are the largest source of revenue though they have done, and are still doing incalculable harm to the people. These medical advertisements almost wholly offset the services rendered by the newspapers.

I have been eyewitness to the harm done by them. Many people are lured into buying harmful medicines. Many of these promote immorality. Such advertisements find a place even in papers run to further the cause of religion. This practice has come entirely from the West. No matter at what cost or effort we must put an end to this undesirable practice or at least reform. It is the duty of every newspaper to exercise some restraint in the matter of advertisements".

Gandhi's views on values of journalism bring to bear on the profession of journalism the force of ethics and morality. In this context he had said, "It is often observed that newspapers published any matter that they have, just to fill in space. The reason is that most newspapers have their eyes on profits. There are newspapers in the west, which are so full of trash that it will be a sin even to touch them. At times, they produce bitterness and strife even between different families and communities. Thus, newspapers cannot escape criticism merely because they serve the people.'

## *List of important newspapers started by eminent people in India*

| Newspaper | Language | Year | Editor/Founder |
|---|---|---|---|
| Amrit Bazar Patrika | Bengali | 1868 | Motilal Ghosh, Shishir Ghosh |
| Abhyudaya | Hindi | 1907 | Madan Mohan Malviya |
| Bangali | English | 1879 | Surendra Nath Banarjee |
| Bangal Gazette | English | 1780 | James Angustus Hicky |
| Bombay Herald | English | 1789 | Balshastri Jambekar |
| Bangvasi | Bengali | 1881 | Jogindernath Bose |
| Bombay Chronicle | English | 1913 | Firozshah Mehta |
| Common Well | English | 1914 | Annie Basent |
| Denik Hindosthan | Hindi | 1885 | Raja Rampal Singh |
| East India | English | 1829 | Henry Derojio |
| Ghadar | Urdu and | 1913 | Lala Hardayal |
| Harischandra Megazine | Hindi | 1872 | Bhartendu Harischandra M. K. Gandhi |
| Harijan | Hindi Gujarati | 1933 | MK Gandhi |
| Hindu | Hindi | 1878 | Veer Raghavachari |
| Hindu | Hindi | 1881 | Mahadev Govind Ranade |
| Hindu Patriot | Gujarati | 1853 | Harischandra Mukharjee, Girish Chandra Ghosh |
| Hindu Review | English | 1911 | Bipinchandra Pal |
| Hindustan Standard | English | 1899 | Sachchidanand Sinha |
| Hindustan Times | English | 1920 | K. M. Pannicar |
| Indian Review | English | 1920 | GA. Natetion |
| Independence | English | 1919 | Motilal Nehru |
| Indian Mirror | English | 1861 | Devendra Nath Tagore and Manmohan Chosh |
| Somprakash | Bangali | 1859 | Ishwar Chandra Vidyasagar |
| Statesman | English | 1875 | Robert Knight and Sunanda Dutta Re |
| Sudharak | Marathi | 1888 | Gopal Ganesh Agarkar |
| Servants of India | English | 1918 | Srinivas Shastri |
| Times of India | English | 1861 | English Press |
| Tribune | English | 1877 | Sir Dayai Singh Majithia |
| Udant Martand | Hindi | 1826 | Jugal Kishor |
| Young India | English | 1919 | Mahatma Gandhi |

**The era of Nehru and Free India**

In the first flush of freedom the press rode with the current and was sympathetic and co-operative with the National Government. A section of the press how ever had not got over the hangover of colonial rule and indulged in fanning communal passions and hatred and penned scrullious writings. The period became known for Sensational Journalism. Some of the papers adopted "Communal policy" because playing down the riots and disturbances curded the sales. In the early years the Indian editors had had to make up their minds on what attitude they should adopt against Nehru's newly established Government. Since Nehru was not facing any kind of opposition the press should take it upon itself to function as an unofficial opposition outside the parliament exercising the role of responsibility and circumspection. The Government and Nationalist press went loggerheads after just one year of Independence. Press was expected to play a constructive role more detached, more responsible view of its obligations on one hand to the Government of the day and on other hand to the people as a whole.

Jawaharlal Nehru was one of the earliest in the Government to voice his displeasure against the press, in the All-India Newspaper Editors Conference in 1952. In 1959 he also raised the issues in his speeches and attacked the press. Nehru remarked, "Newspapers are enjoying power without responsibility. He looked at the press as a more or less Permanent Opposition. He was very much surprised by the confusion made by the newspapers on the domestic policies initiated by the Government. The situation was same with Sardar Vallabhai Patel and C. Rajagopalachari on various issues. The press went loggerheads and criticized the stand of the Government on various issues and created rift between various Government authorities. Critical editorials on escape of Mir Layak Ali, the ex-Prime Minister of Hyderabad from house arrest, and the introduction of the first press control bill by C. Rajagopalachari, the last Governor General of India was under press scrutiny. Similarly press created differences between the candidates in presidential race i.e., C. Rajagopalachary and Rajendra Prasad. Press exploited the differences of opinion between Dr. B. R. Ambedkar, Sardar Vallabhai Patel and Jawaharlal Nehru and many articles were written about them.

National Government first set up Press Law Enquiry Committee, which submitted its report in May 1948. It favored abolition of laws especially concerning press restrictions. It favored the provisions in Telegraph act, Post office act, Sea customs

act which provided for interception of messages and literature. It recommended the retention of Official secrets act and three sections of Indian Penal Code 124-A, 153-A, and 505 dealing with disaffection, communal hatred and tampering with loyalty of armed forces. C. Rajagopalchari introduced press objectionable mater bill in the Parliament Through this bill power was given to the Government to demand and forfeit security from a newspaper or printing press after judicial decision. Complaints against the printing press have to be made at the session's judge, who after a judicial enquiry with the help of the jury can demand security from the press. The bill, which became the law, was allowed to lapse in 1956.The Government also appointed the first press commission under chairmanship of Justice Rajyadhyaksha, to study the state of press, working conditions of Journalists, freedom of press and machinery for ensuring high standards of journalism. The working Journalist's act was passed in 1955. The Press Council was established in 1965, with Justice N. Rajagopala Iyengar as President. The second press commission was set up in May 1978, under the chairman ship of Justice P. C. Goswami. On his resignation in January 1980, it was reconstituted again under Presidentship of Justice K.K. Mathew. Its report was submitted in 1982.

**Indian Press and Emergency - The timeline and background**

| | |
|---|---|
| 12th June 1975 | The Allahabad High Court found Indira Gandhi guilty of corrupt election Practices and debarred her from the office for a period of Six years |
| 25th June 1975 | National Emergency was imposed by Indira Gandhi on grounds of Internal disturbance and Press Censorship started. Indira Gandhi felt that Certain persons have been inciting the police and the armed forces against the discharge of their duties and their normal functioning". **Emergency was in force for a period of 19 months**. |
| 18th January 1977 | President Fakuruddin Ali Ahmed dissolves the Loksabha |
| 16th to 20th March 1977 | Sixth General elections held in India. |
| 21st March 1977 | Emergency was officially withdrawn |
| 22nd March 1977 | Janata Party and its allies gain absolute majority in Lok Sabha |
| 24th March 1977 | Moraji Desai becomes the Prime Minister of India |

The Emergency was declared in June 1975 by Government of Indira Gandhi under Rule 48 of Defense of India rules and as per Article 352 of Indian Constitution... Indira Gandhi felt that Indian press was misleading about her and her aims and objectives. Indira Gandhi alleged that Jayaprakash Narayan was the chief conspirator intent on provoking full-scale rebellion and encouraged anti- Congress parties to

obstruct not only economic development, but all-round functioning of administration and economy. She said ***"They were inciting people not to work, for non-payment of taxes, preventing farmers from selling their produce to Government, encouraging mass strikes and arousing students to violence. Therefore, emergency was seen as constitutional necessity***". It gave the Prime Minister the much needed right to deal harshly with disruptive elements and to set nation back in the path of progress. Themes like "The Nation on the move", "Emergency ushers in era do discipline", "Marching to a better tomorrow", and "Emergency for a stronger and prosperous future" were splashed in newspapers, posters billboards, and stickers throughout important cities. The arrest and detention of opposition leaders, social activists, Journalists, students and academicians were seen necessary for preservation of democracy. Many political leaders, opposition party workers, intellectuals, Journalists were nabbed in mid-night swoop and jailed. Some organizations and groups were also banned. On 26th June 1975, in her first emergency broadcast on Radio, she said **"I am sure you are conscious of the deep and widespread conspiracy which has been brewing ever since I began to introduce certain programmes, measures of benefit to the common man and women of India. Certain persons have gone on length of inciting our armed forces to mutiny and our police to rebel. How can any Government worth its name stand by and allow the country stability to be imperiled. The actions of the few are endangering the rights of the vast majority".**

Again, speaking in Loksabha on 22nd July 1975, she said **"Whatever we are doing is Pro-India; it is Pro-Indian people and is in the pro- in the direction of future of India**" Addressing the people on the occasion of Independence Day celebrations on 15th August 1975, she said **"We are not happy to declare emergency, but we had to under compulsion of circumstances. Stringent measures were taken just as bitter pills have to be administered to a patient in the interest of his health. No one can prevent India marching ahead".** Indira Gandhi started implementing he "20 – point programme" i.e. the national economic programme aimed at National building. Publicizing the programme Government pamphlets were printed announcing **"The emergency provides us with a new opportunity to go ahead with our economic tasks".** The views and opinions of Indira Gandhi were echoed by praise of Chief Ministers and important dignitaries who proclaimed emergency as a necessary measure, a wise and timely action for development of poor. By 1976 the 20 point

programme was joined by equally and promising five point programme to be implemented by the Youth Congress under the leadership of Indira Gandhi's youngest son Sanjay Gandhi. But by the end of 1976 and the early 1977 the dissenting voices started reflecting from citizens by large sections of Polity. Indira Gandhi decided to calm fears of permanent dictatorship by relaxing censorship and announcing General elections on 21st March. In the elections Janata Party got a massive majority and Moraji Desai became the Prime Minister.

**Impact on Indian Press**

The declaration of emergency was a shocking blow to the Indian press, which was its greatest victim. Worst form of Pre-censorship was imposed on the press during emergency. Indira Gandhi was of the opinion that Press Censorship became a necessity and on 3rd July 1975 said **"I am not happy that we had to impose regulations on newspapers. But some journals had shed all objectivity and independence and allied themselves totally with the opposition and did anything to spread doom and defeatism. For some time they had deliberately distorted news, made provocative comments, hurled allegations all of which had to be stopped in order to restore the climate of trust".**

Arrests, censorship and climate of fear had prevented circulation of alternate views and also cultivated a series of blanks in the information disseminated to the people the electricity supply to major newspapers was terminated for a period of three nights to prevent the adverse publicity in the short term and to impose press censorship in the long term. Censorship prohibited all categories of news, comment and rumor relating to emergency in order to maintain public order. It provided the arrest and detention unless preauthorized in writing by an authorized officer from the Public Information Bureau (PIB) in Delhi or by Director of Information of State Government. No editorials were allowed without scrutiny. It was very difficult for the press to publish the factual news and comments. In the absence of news items newspapers began to publish topics like Ramayana, Mahabharata, Harappa and Mohenjo-Daro. The following guidelines were issued to the press

- Press was asked not to publish or disseminate information which will disturb internal security.
- Press has to suppress the news themselves through moderation.
- It should not publish anything to excite disaffection towards Government.

- It should not promote feelings of enmity between different classes of persons in India.
- It should not publish anything to slowdown or cessation of work in a place.
- It should not reproduce any news item published in a foreign newspaper.
- It should not publish false allegations against leaders or denigrate the institution of Prime Minister.
- It should not publish anything to subvert the functioning of democratic institutions.
- It should not publish any news items related to agitations.

On July 26th, 1975, newspapers Editors received more detailed instructions. On December 8th, 1975 three ordinances were issued banning the publication of "Objectionable matter", abolition of "Press council" and for removing the "Freedom of press" to report proceedings of Parliament. The banning of publication of "Objectionable mater" was made into the law on January 28th 1976.

The press reacted with total submission. A voluntary blackout of the press followed. But the two national newspapers which had successfully withstood censorship restrictions were the Indian Express and Statesman under the table editorship of V.K. Narasimhan and C. R.Irani respectively. They retained their commitment to freedom of press by publishing dissenting voices and views of the public, the hardships faced by the public and the reaction of opposition. The two newspapers were successful in informing the public that Indira Gandhi decided to impose emergency in order to stamp out opposition voices, which she could no longer control by democratic means. These newspapers conveyed the message that emergency was a device to through which Indira Gandhi obtained access to basic tools of dictatorship through which she got the power to ban all meetings, processions and agitations that were organized against her. By imposing pre- censorship, she was able prevent negative propaganda, gag the press, detain and arrest journalists, editors who raised concern and commented on the emergency.

According to V.K. Narasimhan **"Emergency is like a dark night where people lost their basic liberties to a regime of terror and suppression they had not known even under the British".** Foreign correspondents were at fire expected to submit drafts of their articles for inspection by official censors. Later they were permitted to censor their own dispatches according to the official guidelines. **Peter Hazlehurst of**

**the Times, Mark Tully of the BBC, Lewis Simpson of the Washington Post and Loren's Jenkins of Newsweek were among those foreign correspondents who were expelled from India for their controversial reporting.** But the articles and news in foreign newspapers published abroad reached India through underground channels and played a played a key role in motivating public opinion. **"Satyavani"** an underground paper which published in London and New York during emergency contained the writings of foreign Journalists and peoples opinion of India. **"Seminar"** was an intellectual journal which tried to publish the people's voice byte was not brought out due to fear of Government's action.

**Press and the period after Emergency**

The later Prime Minister ship period of Indira Gandhi was filled with political unrest, communal eruptions, administrative problems in the North West and North Eastern States. Indira Gandhi faced the Sikh problem in Punjab, violent agitations in Assam over the nationality question. In Punjab army entered in to the Golden temple to flush out the extremists in the 'Operation Blue Star'. This led to the outbreak of more terrorism activities by the misguided youth. On October 1984, Mrs. Gandhi was shot dead by Sikh Security guards. Rajiv Gandhi was sworn in as Prime Minister. General elections were held in 1985. Congress returned to power. Rajiv Gandhi signed an accord with Akali Leader Santh Longowal, but the accord got delayed. In the meantime, Longowal was killed. Within two years of Prime Minister ship i.e. in 1987 an unprecedented high velocity attack was mounted against Rajiv Gandhi in the Print Media. **During this period Indian newspapers were on a mission mode and riding on a boom due to**

- Politicization of Masses
- New awareness of rising middle class
- Development of Language press
- Growth of Journalism as a profession and joining of more young blood.

The following are some of the important developments in Indian journalism in this period

- The **"Magazine revolution"** started in India in a big way.
- The era of **"Controversial Journalism"** began in full blast and politicians and all parties, VIP's, Film personalities were subjected to severe press scan.
- This resulted in beginning of **"Character Assassination Journalism"**.

- The dependence on official press releases, press conferences slowly gave way to new forms of information collection. The device of Interview was used to extract the information from various personalities.
- The trend of **"Investigation Journalism"** i.e. unearthing the most uncomfortable information regarding an individual or organization, personal relations and corruption issues were given priority. Two newspapers i.e. Indian Express and Statesman were very strong in Investigative reporting.
- Newspapers and magazines involved in **"Peephole Journalism"** in which the issue was aggravated in to a crisis situation by publishing information on personal life's and media watch on Politicians, VIP's increased.

**Example 1**: Indian Express aggregated the situation between **Rajiv Gandhi and the President Zail Singh**. The publication of letter written by Zailm Singh to Rajiv Gandhi contradicting his statement in Parliament about his relations with President increased the friction and strained relations between them.

**Example 2**: Press played a key role in blowing up the **'Fairfax issue'**. Fairfax was an American investigating agency. It was alleged that it was employed by V.P. Singh to detect the economic offenders abroad. Press started various stories that V.P. Singh was using the Fairfax to probe on the economic offences of the Film actor Amitabh Bachhan and his brother who were close family friends to the Prime Minister Rajiv Gandhi. The change of Portfolio of V.P. Singh to defense also added strength to the press charges.

**Example 3**: Once again V.P. Singh as Defense Minister told to the press persons that Indian middle men were paid huge commissions in a **Submarine deal between India and West Germany**. This led to the gossip and rumor in the press about the involvement of Rajiv Gandhi as he was holding the defense portfolio before V.P. Singh.

**Example 4**: The Swedish Radio broadcasted a story of heavy kickbacks were paid to Indian officials and politicians in the **'Bofors Gun deal'** between India and Sweden. V.P. Singh resigned from the Cabinet which incr3esed the media attention on the issue. The Hindu under the editorship of N. Ram and the its Geneva Correspondent Chitra Subramanyam started publishing a series of Investigative stories in the Bofors deal exposing that many was paid to Indian officials and politicians. The Indian Express carried an editorial in the front-page alleging involvement of Rajiv Gandhi in the issue. The image of the Rajiv Gandhi was seriously dented by the exposes.

- In the entire political drama press played a major role in gathering, interpreting and presenting the news to the information hungry Indians. But they were partisan in approach with much disinformation and slant in news presentation. Open accusations were made on highest offices without evidence and on speculative information. The entire episode resulted in increasing the credibility gap between the hard facts and the news published. But ht newspapers and magazines were inclined towards the speculative stories as they were attracting the reader and fetching huge circulation.
- The Government attitude towards the press at both Centre and States during this period has been one of non-interference. There is no sign of benevolence or open hostility. But in Bihar rand Tamil Nādu bills were introduced in the Legislature to curb the freedom of press by the State Government's, but were withdrawn after vehement protests from press by journalist organization and public bodies.

## Trends in Indian Press - Working Journalists Movement

Working Journalists movement spearheaded by stalwarts like **M. Chalapathy Rao** started in India. He founded the **Indian Federation of Working Journalists in 1950** and was its president for three years. He was a member of First Press Commission appointed in 1952. He was instrumental in the Commission's recommendation for the appointment of a wage board for working journalists. The Commission recognized the necessity for fixing a minimum wage for journalist employees.

- Government of India accepted this recommendation and constituted a wage board for working journalists under the chairmanship of **H.V. Divatia in 1957**. Besides fixing minimum wages for all categories of Journalists, the board included **Proof readers and Examiners** within the definition of 'Working Journalist'. The Journalists were assured of a minimum wage, a suitable grade and their hours of work were fixed with as assured weekly rest day.
- Second Wage board was appointed under the Chairmanship of **Justice Palekar in 1977**. But board could not complete its work as the representatives of the newspaper's owners i.e. The Indian and Eastern Newspapers Society and Indian Language Newspapers Society resigned from then wage board following differences. Government of India brought an **ordinance in 1979** appointing Justice Palekar as **one-man tribunal** on Working Journalists wages. He gave his award in 1980. But this award was not completely implemented as it placed

small newspapers and large newspapers on the dame footing and newspapers claimed that they were not able to implement it as it would lead to the closure of units due to financial implications.

- The Third Wage Board was appointed by Government of India under the Chairmanship of **U.N. Bachwat in July 1985.** It presented its interim report in 1986 and gave interim relief of 7.5% on basic pay. On May 31, 1986 Government increased the interim relief to 15%.
- The Fourth Wage Board was set up in August 1994.

The Working Journalists movement in India was unique as it was able to achieve its aims i.e. Protection of the rights of working journalists, a minimum wage and security of service without a struggle. This was largely due to the role played by the Indian press in the Freedom struggle. The Working Journalists movement was led by famous stalwarts in Indian Journalism like M. Chalapathy Rao, J.P. Chathurvedi and T.R. Ramaswami. The Working Journalist act of 1955, which they were able to see through on statue book was unique as there is no similar legislation anywhere World for protection of working journalists.

The Journalistic values went a sea change along with the changes in the Nationalistic values. The Indian Constitution recognized 'right to expression' as a constitutional right of every Indian citizen. India is one of those countries in the world where in citizens are free to express their views. The press is allowed to perform the twin-task of highlighting the weaknesses of the government and the administration and also unearthing the corruption. The contemporary Indian Newspapers have established certain values and guidelines for themselves that include development of a new outlook, conservation and dissipation of the Indian Culture, Promotional of harmony among different Indian languages, encouragement to literary personalities, and information dissemination to the people, their education and their entertainment. The Indian Press had to experience the severity of the government in the past. Apart from a few incidents, the Indian Journalism is peacefully moving on the path of Independent and healthy journalism. The competition due to electronic media has strengthened the roots of the Indian Journalism. The print media has maintained its supremacy amidst cutthroat competition and diversification.

**From 1975-1990**

The declaration of emergency in 1975 was a turning point in the history of Indian Journalism. After the emergency, Indian journalism underwent a revolution not only in style and substance but also in variety, management, circulation, technology, professionalism, marketing and design. Indian press experienced a sea change in production techniques and commercialization.

**Magazine Explosion**

Magazine Journalism started after 1976. The news magazines emerged in a big way in India. The following are the reasons for starting of magazine journalism in India.

- The emergency affected the **politicization of Indian middle class** with the result they wanted to know more about the people ruling them.
- The emergency also left many scandals, gossip and unpleasant stories, which could not be, catered in detail thorough newspapers.
- Magazines catered to those people who did not read the newspapers too carefully and wanted news to be delivered once in a week or fortnight in a glossy easy to digest package.

The following magazines started and flourished in this period.

**India Today**: India Today, was a fortnightly first started in late 1975. It was intended to be a news magazine for Indians living abroad. Madhu Trehan was its founder and editor. He was an Indian resident abroad with a Journalism diploma from American University. The first issue gave an evoking response. After that his brother Arun Purie took over as Editor and put India Today firmly on its feet. By skillful editing and sleek production and presentation style India Today captured the readers. India Today is largest circulated fortnightly and is published in Hindi, Tamil, Telugu apart from English.

**Sunday**: Sunday is a weekly from the Anand Baazar Patrika group and was launched in 1970 under editorship of M.J.Akbar. With the success of Sunday magazine Anand Baazar group also started another English daily "Telegraph" in Calcutta in 1982 with M.J. Akbar as editor.

**Frontline:** Frontline is a fortnightly started from the publishers of "The Hindu" in 1984.

***The Week****: Malayala Manorama" Group from Kottayam, Kerala, published The Week.*

***Illustrated Weekly of India****:* The "The Times of India" group started illustrated Weekly of India under the editor ship of Pritish Nandy. Pritish Nandy soon captured the

imagination of the readers with his startling interviews of politicians, Ministers and VIP's in all walks of life. Illustrated weekly of India ceased its publication in 1993.

**Impact of Magazines**

Magazines caught the imagination and psyche of Indian reader. The investigative scoop, personality profiles of Politicians, Ministers, Film personalities, Gossip, scandals related to them, exclusive photo features, no hold bar interviews, became a rage with the sensation starved Indian readers.

- There was a dramatic jump in circulation of the periodicals and magazines. ***In 1975 there were 225 publications of Newspapers and Magazines with a combined circulation of over 14 million. But by 1985 there were 300 publications with a combined circulation of more than 26 million***.
- The magazines gave birth to the Investigative journalism in India. Many Investigative Journalists like Arun Shorie and N. Ram started their career in reputed Magazines.
- The Magazine journalism provided a fresh approach, a new self-assured and knowledgeful writing style and ushered in an element of educated writing.
- However, in the swing of success the Magazines went all out to provide sensational stories specialized in 'stripping the reputation' placing the premium on sensational crime, wars, dacoit and dirty Politics. The trend was giving more importance to what is going wrong rather than what was right. Conflicts between personalities and issues were highlighted rather than their solutions.
- The Magazines started the "Libelous" or "Defamation Journalism" which included publishing the reports and features having potentially libelous or defamatory statements.
- The period of 80's and 90's called as 'aggressive spirit of the decade' in Indian journalism was confined to Indian news magazines, where as the news papers by and large have been unaffected by it.

**2. Investigative Journalism**

The concept of Investigative Journalism started in India in a big way. The journalists no longer depended on official news and press releases. There was a conscious effort to unearth scams, fan gossip and scandal. The journalists turned into investigators who exploited the conditions to extract information from the Government

officials, politicians and bureaucrats etc. The following are the important Journalists who can be regarded as pioneers in Investigation Journalism

**Arun Shourie**

The Journalist who made the greatest impact on the readers through investigative stories is Arun Shourie. He first wrote for India Today, later he worked as executive editor of Indian Express, which published his investigative stories every day. He exposed the abuse of authority during the emergency in various news articles, special stories and exclusive news items. He received Padma Bhushan from the Indian Government in 1990.

- His investigative story on the misuse of official position for collection of funds created a storm in the Parliament and resulted in the ouster and prosecution of the Chief Minister.
- His investigative stories on two former Prime Ministers, a former Home Minister, a former Loksabha Speaker and a Deputy Prime Minister created sensation in the country.
- His campaign stories on Mandal Commission are widely known for its tenacity and impact in the country.

**Impact of Arun Shourie of Indian Journalism**

- Arun Shourie proved the power of press i.e., Newspapers in particular to the whole country. He altered the entire perception of the profession of Journalism. He had a phenomenal intelligence and unerring grasp of how best to break a story. His strategy was to publish an exclusive investigative story in the front page of every edition when Parliament was in session, in order to take it to the notice of the Government.
- He showed Journalists how to push themselves, how to investigate further and how to document everything.
- He was the first Indian **Campaign and Investigative journalist** known nationally and internationally and inspired many Indian journalists to adopt his strategy and methodology in the country like **Ashwin Sarin** of Indian Express proved by investigation that women were being sold like cattle in Madhya Pradesh. **Arun Sinha** of Indian Express broke the story of blinding of under trial prisoners by the Police of Bihar. **Shiela Barse**, a freelance reporter of Bombay wrote many stories on child prostitution. **Anita Pratap** of Times shocked the

world by taking an interview with the LTTE chief Prabhakaran in his hideout at Jafna, Srilanka. **Sucheta Dalal** was instrumental in exposing the security scam that rocked the country.

**N. Ram**

N.Ram is another Investigative journalist who was honored with Padma Bhushan by the Government. He was the Associate Editor of 'The Hindu' and distinguished himself by his investigative stories on Bofors deal. The documents published by him in association with the Paper's Geneva Correspondent Chitra Subramaniam on Bofors deal created a sensation

**New breed of Reporters & Editors**

The period saw some major changes in the editorial and reporting departments of many newspapers.

- Girilal Jain retired as editor of Times of India after a distinguished record of service and was succeeded by Dilip Padgoankar. The Hindustan Times got a new editor V.K. Narayanan. H.K. Dua joined as Editor-in –Chief of Indian Express.
- Many women reporters occupied high positions in the newspaper hierarchy and also entered into the field of Investigative Journalism with outstanding ability and performance. They included women like Anita Pratap 'Times' correspondent of New Delhi, Rasheeda Bhagat, Chief of News Bureau, Indian Express, Madras, Sucheta Dalal of 'Times of India'.

**Economic Newspapers**

Following the economic reforms and adoption of policy of Liberalization and Privatization in India in the year 1991, there was a spurt of "Economic Journalism". The economic liberalization has created a new executive class in India, who were high salaried people and who wanted to earn more. The growth of capital market increased the demand for business and economic information. There were no daily newspapers exclusively devoted to economic or financial journalism in 1954 as per the first Press Commission report. But by mid-1990's most of the major Newspapers groups started their own economic newspaper.

- "Financial Express"- started by "Indian Express" group
- "Business Standard"- started by "Anand Baazar Patrika" Group, Calcutta.
- "Economic Times"- started by "Bennett & Coleman Ltd".
- "Business Line" – started by "The Hindu" group, Madras.

- "Business Today" - started by "India Today" group, New Delhi.

Business journalists acquired much market value and were drawing fat salaries

**Prominence of Astrological predictions**

A notable trend of Indian press is the prominence given to Astrological predictions. With very few exceptions all the major newspapers, dailies, periodicals carry them as a regular item every week. The first press commission had condemned the practice and said the spread of habit of consultation and reliance on astrological predictions is certain to produce an unsettling effect on the minds of the readers.

The Second Press Commission also endorsed that "We are of the view that editors of general interest and periodicals who believe in promoting scientific temper among their readers and in combating superstition and fatalism should discontinue the publication of astrological predictions". But the publication of astrological predictions has increased and has spread to all major dailies, magazines in both English and vernacular languages.

**Improvement in Pictorial News**

The Indian press used to suffer from a shortage of pictorial news coverage. There was a general lack of understanding of the scope of Photograph's in journalism among newspaper editors. Indian press for a majority years continued as verbal medium. The scenario has improved with the entry of magazine journalism where importance is given for photographs. With the adoption of news techniques in printing technology and the onset of new cameras the standard of Photo Journalism has tremendously improved. The brand of "Photo Journalists" emerged and at present is in great demand.

**Freedom of Editor**

Court Directions and constitutional provisions assured the Freedom of press in India, but the freedom of Editor was left in doubt. Many Indian editors have resigned protesting the proprietarily interference. The Second Press Commission clearly stated, "The interest of owner of newspaper lies in economic success. However commercial consideration ought not to override editorial considerations. The freedom of owner is only a part of freedom of press. But the editor must have sufficient authority to conduct the newspaper in public interest while following ht policy laid down by the owner". Indian press has seen several stalwarts resigning their job protesting editorial interference by proprietors. For example

- Proprietor of Hindustan Times, G.D. Birla dismissed its Editor B.D. Vergheese.

- Kushwant Singh quitted as Editor of Hindustan Times and Illustrated Weekly of India.
- Arun shourie quit as executive editor of Indian Express and joined it after a gap.

The Indian editors were getting low salaries, had to fear the iron chains of British but were strong in opinion during the Pre-Independence period. But the Post-Independence period witnessed a tremendous increase in pay followed by more policy restrictions leading to formation of a controlled opinion. Most editors suffered between prudence of self-interest and had to abandon self-expression due to proprietarily interventions in the form of policy restrictions.

**Ownership Pattern**

Today, in India persons running other business or having strong business links with major industrial groups control major portion of press. Many problems are arising due to the big business ownership of multiple newspapers.

- According to the Registrar of Newspapers in 1984 there were 108 common ownership units. A common owner ship unit is one, which has two or more interest newspapers of which at least one is a daily. These units owned among themselves 374 news interest newspapers i.e., 299 dailies, 63 weeklies and 12 other periodicals.
- Bennett Coleman Company has 15 news interest publications.
- The Express Group has 33 news interest publications.
- The big units dominated not only English language press but also Language journalism.
- Eleven big units published 34 dailies from major metropolitan cities in India.

The Second Press Commission has said, “When newspapers are controlled by other big business, they become vehicles of expression of the ideology of their own owners and the selection and presentation and display of news in such newspapers would be dictated by that ideology. In their hands the newspaper industry involuntarily becomes the cultural arm of other business and industries and takes vested interest in maintaining the existing socio-economic system. The newspapers controlled by b big industrial units may be selective in their presentation of news and views in return for benefits conferred in respect of their business interests”.

## Unit-2- History and Development of Radio and Television in India

### Origin and growth of Radio Broadcasting in India
### From 1921 to 1947

The birth of Radio Broadcasting in India has stated on an experimental basis in the year 1921, when Times of India in collaboration with Post and Telegraphs Department broadcasted a Musical program on request of Sir George Lloyd to the concerned companies. In 1923, a broadcasting conference was held in Calcutta. From 1923 'Radio Clubs' proliferated in India. 'Radio Club Calcutta' was started 1923, followed by 'Madras Presidency Radio Club' in 1924. On March 27th 1925, Government officially gave a notification, inviting applications for setting of broadcasting stations in India.

The idea of regular Radio broadcasting service took shape for the first time in 1926 in the form of an agreement entered between Government of India and a private company called 'Indian Broadcasting Company Limited'. The company was started by a group of businessman, with a meagre capital, inspired by the success of European Broadcasting Under the agreement a license for construction of two stations, one at Bombay and another in Calcutta was granted. The Calcutta station was inaugurated on 23rd July 1927, and Bombay station was inaugurated on 26th August 1927. But in three years they gathered only 7000 listeners and company went into liquidation by 1st March, 1930. In response to the popular demand and lobbying of investors Government decided to acquire the Indian Broadcasting Company Limited on 1st April 1930 and run the Calcutta and Bombay stations experimentally for a period of two years. The name of the company was changed to Indian State Broadcasting Service (ISBS).

After two years on May 1932, Government decided to continue the broadcasting and placed the ISBS under Department of Industries and Labour. But the Government's economizing efforts still reduced the number of listeners. But the starting of BBC's new empire program on shortwave increased the popularity of Radio. There was a rush to buy new Radio sets. Government encashed it by imposing an extra duty on Radio sets. The purchase of 8000 new radio sets earned Government good revenues. The new earning was used to construct new radio station at Delhi, which was inaugurated in 1936.

A separate Department of 'Controller of Broadcasting' was created to take care of broadcasting operations under the Department of Labour in March 1935. On August 30th 1935, Lionel Fielden was appointed as first Controller of Broadcasting in India. The

name of Indian State Broadcasting Service was changed into 'All India Radio' on June 8th 1936. Broadcasting was transferred to the Department of Communication in November 1937 and was later transformed to the Department of Information and Broadcasting in October 1941. The start of World War II catalyzed the growth of radio in India. New high-power transmitters were started and external services division, started in 1941 was strengthened to counter the Nazi propaganda. Most of the News Services and the external services were started during the war years. During the war years 27 news bulletins were broadcasted every day.

**From 1947 to 1990**

When India became independent All India Radio was a separate department under Department of Information and Broadcasting. It had six stations at Calcutta, Bombay, Delhi, Lucknow (02-04-1938), Madras (16-06-1938) and at Tiruchirapalli (16-05-1939). It had a total of 18 transmitters, six medium wave and 12 shortwave transmitters. In 1947, AIR was transmitting programmes in 8 languages i.e., Tamil, Telugu, Gujarati, Marathi, Punjabi, Hindustani, Bengali and in English to 2, 75,000 listeners who were only 11.5% of Indian population residing in 2.5% of total area, predominantly in urban towns. The radio stations located in princely states were taken over by the Government after Independence.

Broadcasting was considered as a key role in the development of the country especially in achieving political integration, economic development and social modernization. Radio was an integral medium of communication and its popularity increased exponentially. From 1957, All India Radio was also called as 'Akashvani'. In the following years All India Radio had a slow but steady development. New broadcasting stations came up in all over India. Radio was instrumental in promoting social change through execution of innovative programmes like Radio rural forums for Agriculture communication in 1960's, promotion of adult literacy in 1980's, Women and legal rights issues in 1990's etc. The advent of regional radio in popularized the medium even more. Local broadcasting reflecting local issues of concern to the community and has taken the Radio to the nook and corner of the Country. By 1990, AIR had 91 broadcasting stations with 167 transmitters, out of which, 130 were of medium wave, 33 shortwave and 4 FM transmitters at Bombay, Calcutta, Delhi and Madras.

**At present**

A present AIR has a three-tier broadcasting system National Service, Regional Service, Local service. National service reflects the broad-spectrum f nation life and acts as complimentary to regional language. The 1000 KW transmitter at Nagpur to which the foundation stone was laid down in 1982 by the then Prime Minister Indira Gandhi along with the Delhi station form the National Channel. The National service was launched on 18th May 1988. National channel broadcasts centrally originated news bulletins in Hindi, English, Music and newsreels. All the existing regional centers form the middle tier. They emphasize the regional programmes in regional languages. The local radio stations form the third tier of broadcasting, catering to the local needs of the community. As on 2010, AIR has 223 broadcasting stations with 358 transmitters including 143 Medium Wave, 54 Shortwave and 161 FM transmitters. AIR covers 91.42% of countries geographic area and caters services to 99.13% of Indian population i.e., 104 million households in 24 languages and 146 dialects. At present there are 111 million radio sets operational in India.

**Origin and growth of Television in India**

The origin and growth of Television in India can be raced in four phases.

**I. The period from 1960's to 70's: The Initial phase**

- Terrestrial television in India started with the experimental telecast starting in Delhi on **15th September 1959** with a small transmitter and a makeshift studio with the grants from **UNESCO** and equipment support from **USA and Phillips (India).**
- The first Television center was started in New Delhi. Television broadcasts started as part of All India Radio's services. Programs were broadcast twice a week for an hour a day on such topics as community health, citizen's duties and rights, and traffic and road sense.
- In **1961** the broadcasts were expanded to include a **school educational television project**. Indian films and programs consisting of compilation of musicals from Indian films joined the program line-up as the **first entertainment programs in 1965**.
- **Programme recording started in 1966** and the first ever programme to be recorded was 'Yuri Gagarin'. A limited number of old U.S. and British shows were also telecast sporadically.

- **The regular daily transmission started in August 1965**. 'Krishi Darshan' programme started for farmers and was telecasted in 80 villages located around Delhi, UP and Haryana.
- By **1965-66 Black and white television sets** entered into the Indian market through Phillips.
- The year **1966 saw the in introduction of 'plays'** in broadcasting like 'Aisa Bhi Hota Hai' and 'Sara Akash'. Apart from that the technical capability were enhanced by taking up the telecasting of **Republic Day parade in the year 1966**. But the lack of trained personnel, good quality software and sufficient entertainment programming halted the development of Television as an effective mass medium.

**The period from 1970's to 80's: The experimentation phase**

- The year **1971** saw the **introduction of news and current affairs programmes in English** language. Later weekly programmes in Hindi like 'Aamne Samne' and 'Desh Videsh' were introduced.
- The first major expansion of television in India began in **1972**, when a second television station was opened in **Bombay**. This was followed by stations in Srinagar and Amritsar (1973), and Calcutta, Madras and Lucknow in 1975. Relay stations were also set up in a number of cities to extend the coverage of the regional stations.
- In **1975**, the government carried out the first test of the possibilities of satellite-based television through the **SITE program**. SITE (Satellite Instructional Television Experiment) was designed to test whether satellite-based television services could play a role in socio-economic development. Using a **U.S. ATS-6 satellite** and up-link centres at Ahmedabad and Delhi, television programs were beamed down for about 4 **hours a day to about 2,400 villages in 6 states**. The programs dealt mainly with in- and out-of-school education, agricultural issues, planning and national integration. The program was fairly successful in demonstrating the effectiveness of satellite-based television in India and the lessons learnt from SITE were used by the government in designing and utilizing its own domestic satellite service INSAT.
- By **January 1976 commercial service was launched** in television broadcasting. The advent of advertising in television in 1976 brought tremendous change in

the revenues. Until that time television had been funded through a combination of television licenses and allocations from the annual budget (licenses were later abolished as advertising revenues began to increase substantially).

- In these early year's television, like radio, was considered a facilitator of the development process and its introduction was justified by the role it was asked to play in social and economic development. Television was institutionalized as an arm of the government, since the government was the chief architect of political, economic and social development in the country. By 1976, the government found itself running a television network of eight television stations covering a population of 45 million spread over 75,000 square kilometres. Faced with the difficulty of administering such an extensive television system television as part of All India Radio, the government constituted **Doordarshan in 1976**, the national television network, as a separate Department under the Ministry of Information and Broadcasting, as an attached office under the Ministry of Information and Broadcasting. By 1979 the total television sets in India reached to 0.9 million with 17 transmitters.

**The period from 1980's to90's: The expansion phase**

- In 1982 television began to attain national coverage and develop as the government's pre-eminent media organization. Two events triggered the rapid growth of television that year. **INSAT-1A**, the first of the country's domestic communications satellites became operational and made possible the networking of all of Doordarshan's regional stations. For the first time Doordarshan originated a nation-wide feed dubbed the **"National Programme"** which was fed from Delhi to the other stations from **August 15th 1982**.
- The possibility of reaching a nationwide audience made television look increasingly attractive to advertisers after the introduction of the "National Programme" in 1982. In turn, Doordarshan began to shift the balance of its programming from educational and informational programs to entertainment programs. The commercialization of Doordarshan saw the development of soap operas, situation comedies, dramas, musical programs, quiz shows and the like.
- In **November 1982**, the country hosted the **Asian Games** and the government introduced **colour broadcasts** for the coverage of the games. To increase television's reach, the government launched a crash program to set up low and

high-power transmitters that would pick-up the satellite distributed signals and re-transmit them to surrounding areas. The inaugural ceremony of Asian games was covered by Outdoor broadcasting vans on 1st November, 1982. More than 22 sporting events were covered from 18 stadia for the Asian games by Doordarshan.

- JCT-Thapar group started manufacturing colour picture tubes from Chandigarh. 'UPTRON' a government of Uttar Pradesh firm started producing colour television sets in India.
- By **1987** Doodrdarshan programming was extended to **morning as well as in noon**.
- By the late 1980s more and more people started to own television sets. Though there was a single channel, television programming had reached saturation. Hence the government opened up another on **September 17th 1984**, which had part national programming and part regional. This channel was known as DD 2 later DD Metro. Both channels were broadcast terrestrially.
- The 80s was the era of Doordarshan with shows like **Hum Log (1984), Buniyaad (1986-87)** and comedy shows like **Yeh Jo Hai Zindagi (1984)**, Mythological dramas like **Ramayan (1987-88)** and **Mahabharat (1989-90)** glued millions to Doordarshan and later on **Bharat Ek Khoj, The Sword of Tipu Sultan and Chandrakanta**. Hindi film songs-based programs like **Chitrahaar, Rangoli, Superhit Muqabla** crime thrillers like **Karamchand, Byomkesh Bakshi**. Shows targeted at children include **Dada Dadi ki Kahaniyan, Vikram Betal, Malgudi Days, Tenali Rama**.
- In 1983 television signals were available to just 28% of the population, this had doubled by the end of 1985 and by 1990 over 90% of the population had access to television signals.
- By 1990 Doordarshan revenues from advertising were about $300 million, accounting for about 70% of its annual expenditure. The total television viewers increased to 8.8 million and transmitters increased to 179 by the end of 90's.

**<u>The period from 1990's to 2000: The satellite television phase</u>**

- By 1991, Doordarshan's earlier mandate to aid in the process of social and economic development had clearly been diluted. Entertainment and commercial programs had begun to take centre stage in the organization's programming

strategies and advertising had come to be Doordarshan's main source of funding. Doordarshan, having a monopoly in Indian market expanded its services and introduced new concepts and programming.

- DD covered the **CHOGAM and NAM** summits and attained international recognition.
- The **Central Production Centre** was started in **February 1989**.
- The **Independence Day of August 15th 1989 was covered live by DD**.
- PAS-1 and PAS-4 are satellites whose transponders help in the telecasting of DD programmes in half the regions of the world.
- An international channel called **DD International was started in 1995** and it telecasts programmes for 19 hours a day to foreign countries-via PAS-4 to Europe, Asia and Africa, and via PAS-1 to North America.
- The year 1991 saw the beginnings of international satellite broadcasting in India and the government launched a major economic liberalization program. Both these events combined to change the country's television environment dramatically.
- International satellite television was introduced in India by **CNN** through its coverage of the **Gulf War in 1991**. Three months later **Hong Kong based Star TV** (now owned by Rupert Murdoch's News Corp.) started broadcasting five channels into India using the ASIASAT-1 satellite. By early 1992, nearly half a million Indian households were receiving Star TV telecasts. A year later the figure was close to 2 million and by the end of 1994, an estimated 12 million households were receiving satellite channels. This increase in viewership was made possible by the 60,000 or so small-scale cable system operators who have mushroomed across the country. These systems have redistributed the satellite channels to their customers at rates as low as $5 a month.
- Taking advantage of the growth of the satellite television audience, a number of Indian satellite-based television services were launched between 1991 and 1994, prominent among them **Zee TV, the first Hindi satellite channel**. By the end of 1994, 12 satellite-based channels were available in India. This number was doubled by the end of 1996, with a number of Indian programmers and international media companies like Turner Broadcasting, Time-Warner, ESPN, and Channel 5 introducing their new satellite television services for India.

**Growth of Cable TV in India**

- Cable TV has its roots in the late seventies. Indian television viewers were looking for entertainment options, apart from what state-owned broadcaster DD was offering. That came their way with the import and manufacture of video cassette recorders permitted domestically. **There was a veritable boom in video cassette recorder sales during this period**. Enterprising individuals in apartment blocks placed a video in their homes or their garages and started offering a cable TV service to people who opted for it. The fare available was Hindi and English movies and pirated western comedies, music and game shows. At this stage, cable TV was restricted to the major metros and towns and the upper crust of society.
- The impetus for its spread came in 1990 with the advent of the Gulf war. **Ted Turner's CNN** started beaming news reports of the bombing of Kuwait by Saddam Hussein and sparked off a demand for satellite dishes. Only the affluent could afford them. Some cable operators who had been running their Hindi and English movie channels added dishes and started relaying CNN into homes. This spurred demand for cable TV, making it a lucrative business and it attracted more individuals to the industry.
- The launch of Star TV and Zee TV further fueled the spread of cable TV. In the first half of 1992, almost 4,500 households were being given cable programmes daily. That figure increased to 9,450 homes daily in the second half of the year. According to a study conducted by market research firm – According to Frank Small survey for Star TV from a mere 412,000 urban households in January 1992, the number of cable homes went up to 11.8 million out of a total of 32.4 million TV owning homes by the end of 1994.
- The business has undergone a transformation too. In the beginning it was small and driven by entrepreneurs. At one time the cable TV operator's population was estimated at a sky high 100,000. In the next three years, large companies have also set up their own cable networks. Among them: In Cable net (managed by the Hinduja group), Siti cable (a joint venture between Zee TV promoter Subhash Chandra and Rupert Murdoch's News Television), Asianet, Hathway Cable & Datcom, Ortel Communications and RPG Netcom (a company promoted by the

RPG group). International cable networking companies such as United International Holdings, TCI and Falcon Cable of the US, have tested the waters: While UIH almost set up a joint venture with the RPG group which did not fructify; TCI/Time Warner discussed possibilities with the Times of India group which were inconclusive. Falcon Cable however, was successful in establishing a joint venture with the Hindustan Times publishing group in New Delhi called India Information Technologies Ltd.

- Following the liberalization of the broadcasting industry, the Hong Kong based Star TV- Network introduced five major television channels into the Indian broadcasting space that had so far been monopolized by the Indian government-owned Doordarshan, MTV, STAR PLUS, Star Movies, BBC, Prime Sports
- Soon after, India saw the launch of Zee TV, the first privately-owned Indian channel to broadcast over cable followed by Asia Television Network (ATN). A few years later CNN, Discovery, National Geographic, BBC made their foray into India. Later, Star TV Network expanded its bouquet with the introduction of STAR World India , STAR Sports, ESPN, Channel V, STAR Gold.
- With the launch of the Tamil language Sun – TV (India) in 1992, South India saw the birth of its first private television channel. With a network comprising more than 20 channels in various South Indian Languages, Sun TV network recently launched a DTH service and its channels are now available in several countries outside India.
- Following Sun TV, several television channels sprung up in the south. Among these are the Tamil-language channel Raj Television and the Malayalam - language network Asianet Communications Limited, both launched in 1993. These three networks and their channels today take up most of the broadcasting space in South India. In Telugu-language, Telugu daily newspaper Eenadu started with its own channel called ETV in 1995 later diversified into other Indian languages.
- Throughout the 90s, along with a multitude of Hindi language channels, several regional and English Language channels flourished all over India. By 2001, international channels HBO and History Channel started providing service. In 1999–2003, other international channels such as Nickelodeon, Cartoon Network, VH1, Disney and Toon Disney entered the market.

- Starting in 2003, there has been an explosion of news channels in various languages; the most notable among them are NDTV, CNN-IBN and Aaj Tak. The most recent channels/networks in the Indian broadcasting industry include UTV Movies, UTV Bindass, Zoom, Colours, 9X and 9XM. There are several more new channels in the pipeline, including Leader TV.

## Conditional Access System

- **CAS or conditional access system is a digital mode of transmitting TV channels through a set-top box (STB)**. The transmission signals are encrypted and viewers need to buy a set-top box to receive and decrypt the signal. The STB is required to watch only pay channels.
- The idea of CAS was mooted in **2001**, due to a furor over charge hikes by channels and subsequently by cable operators. Poor reception of certain channels; arbitrary pricing and increase in prices; bundling of channels; poor service delivery by Cable Television Operators (CTOs); monopolies in each area; lack of regulatory framework and redress avenues were some of the issues that were to be addressed by implementation of CAS.
- It was decided by the government that CAS would be **first introduced in the four metros**. It has been in place in **Chennai since September 2003**, where until very recently it had managed to attract very few subscribers. It has been rolled out recently in the other three metros of Delhi, Mumbai and Kolkata. **As of April 2008, only 25 per cent of the people have subscribed the new technology**. The rest watch only free-to-air channels. As mentioned above, the inhibiting factor from the viewer's perspective is the cost of the STB.
- The information and broadcasting ministry set March 31, 2015 as the deadline for shift from analog to digital systems. Digitization, where the feed will be received through set-top boxes, is expected to be executed in phases and the four metros of Delhi, Mumbai, Kolkata and Chennai have to shift to digital addressability by October 30, 2012. Phase II will include 35 cities with population of more than one million, such as Patna, Chandigarh, Pune and Bangalore by March 31, 2013. All urban areas are expected to digitize by November 30, 2014 and the remaining areas by March 31, 2015.

**DTH:**

- DTH is defined as the reception of satellite programmes with a personal dish in an individual home. As of July 2011, India had roughly 35 million DTH subscribers.
- Cable TV and DTH are two methods of delivery of television content. CAS is integral to both the systems in delivering pay channels. Cable TV is through cable networks and DTH is wireless, reaching direct to the consumer through a small dish and a set-top box. Although the government has ensured that free-to-air channels on cable are delivered to the consumer without a set-top box, DTH signals cannot be received without the set-top box.
- India currently has 7 major DTH service providers and a total of over 35 million subscriber households in mid-2011. Dish TV **(a ZEE TV subsidiary), Tata Sky, Videocon D2H, Sun Network owned ' Sun Direct DTH', Reliance Digital, Bharti Airtel's DTH Service 'Airtel Digital TV ' and the public sector DD Direct Plus** offer DTH services in India. As of 2010, India has the most competitive Direct-broadcast satellite market with 7 operators vying for more than 135 million TV homes. India is set to overtake the USA as the world's largest Direct-broadcast satellite market by 2012. The rapid growth of DTH in India has propelled an exodus from cabled homes; the need to measure viewership in this space is more than ever.

## Origin and Growth of F.M. Radio, Community Radio in India

**FM Radio in India**

The FM broadcasting In India began in 1977, but boomed after 2001 when the privatization of FM broadcasting began. AIR's FM LRS (Local Radio Station) was inaugurated on 1 July 2000 at 06:00 hours in Kodaikanal relaying Madurai programs in the frequency 100.5 MHz. 100.5 was so much popular and LRS was upgraded to a FM Channel in just two months. The channel covered a radius of about 200km due to its location at 2200 meters above MSL at Kodaikanal. KODAI FM, as it is popularly known. It is the biggest individual FM channel in India in both area coverage and listenership.

FM broadcasting began on 23 July 1977 in Chennai, then Madras, and was expanded during the 1990s, nearly 50 years after it mushroomed in the US. The country first experimented with private FM broadcasts in the small tourist destination of Goa and the large metropolitan areas of Delhi, Kolkatta, Mumbai, and

Chennai. These were followed by private stations in Bangalore, Hyderabad, Jaipur, and Lucknow.

Until 1993, All India Radio, a government undertaking, was the only radio broadcaster in India. The government then decided to privatize the radio broadcasting sector.] It sold airtime blocks on its FM channels in Indore, Hyderabad, Mumbai, Delhi, Kolkata, Vizag and Goa to private operators, who developed their own program content. The Times Group operated its brand, Times FM, till June 1998. After that, the government decided not to renew contracts given to private operators. Instead, in 2000, the government announced the auction of 108 FM frequencies across India, opening up the FM broadcasting industry to private competition. Radio City Bangalore, started on July 3, 2001, is India's first private FM Radio station. The Times Group rebranded their radio operations, establishing the Radio Mirchi brand. The first Radio Mirchi station began broadcasting on October 4, 2001 in Indore

Indian policy currently states that these broadcasters are assessed a one-time entry fee (OTEF), for a license period of 10 years. Under the Indian accounting system, this amount is amortized over the 10-year period at 10% per annum. The annual license fee for private broadcasters is either 4% of revenue share or 10% of reserve price, whichever is higher. India's earlier attempts to privatize its FM channels ran into rough weather when private players bid heavily and most could not meet their commitments to pay the government the amounts they owed.

FM radio appeared in India in a limited scale in 1970's. The application of FM started when AIR opened its first local FM radio station at Nagercoil in Tamilnadu in 1984, to generate programming of local relevance through participation of local communities. When FM technology was introduced, it was difficult to buy FM band radios as they were too expensive. FM channel's programming was to address rural, tribal audience but the radio sets were affordable for only rich and upper-class households there by creating a mismatch between the content and the audience. The idea of local community participation became gradually diluted.

Today there are 139 FM transmitters all over India. But the FM radio programming is facing problems due to staffing in local stations. The location and deputation of staff to FM radio stations located in remote areas became very problematic for AIR. The FM scene under the State-run AIR was stagnating when the commercial industry began interest in FM markets. The commercial FM efforts of Times

Radio, and Radio Mid-Day tried to attract younger generations with different music formats. The pressure to open up the FM radio markets increased. The ideology of the post liberalized India also helped in successful entry of private players into the FM market.

The Indian Government took up the expansion of FM market. As it was highly commercial in nature Government imposed hefty license fee apart from a revenue sharing model in which the operator has to share the profits of the business with the Government. The first phase of expansion ran into trouble with some of the bidders going to court and some others defaulting. Out of 108 licenses 86 never went on air. In a bid to revive the expansion scheme, Government recast its policy in September 2005 by announcing a more reasonable one-time entry fee and four percent of revenue sharing arrangement and wanted to give out 339 licenses to private parties. Educational were allowed to seek FM licenses with a bank guarantee of Rs. 50,000. But only very few institutions like Annamalai University, Mudra Institute of Communications have taken licenses and gone on air till date. Reacting to the situation, Government once again referred the FM issue to a group of ministries in October 2005. To provide guidelines for licensing

The first phase of private sector involvement in FM radio broadcasting was launched by Ministry of Information and Broadcasting, Government of India vide its notification in year 1999. The objective behind the scheme was to attract private agencies to supplement the efforts of All India Radio by operationalizing FM radio stations that provide programs of relevance with special emphasis on local content, increase content generation and improve quality of fidelity in reception. During phase-I, total 108 channels were offered to private agencies in 40 cities. One channel in each of these cities was also earmarked for educational content. However, only 21 private channels could get operationalized during this phase. These 21 FM radio channels have large acceptability from the listeners.

Based on the experience of phase I, Government introduced phase II scheme with certain modifications on 13$^{th}$ July 2005. In this phase 337 channels were put on bid encompassing 91 cities. Letters of Intent (LOI) were issued to 245 channels and 136 channels have become operational till now. Recently government vide its notification dated 8$^{th}$ June 2007 invited bids for 93 vacant slots and four new channels in Dehradun.

It is expected that private FM radio broadcasting will soon be extended covering 92 cities in total. Nationally, many of the current FM broadcasters, including the Times of India, Hindustan Times, Mid – Day and BBC are established media institutions in the country, and are making a strong pitch for news on FM, which is currently limited to nationalized stations only. Private FM stations are allowed to rebroadcast news from All India Radio, as long as they do so without any changes or additions. The Supreme Court of India on 17 October 2013 issued a public interest litigation to the central government requesting that the rules should be changed to allow FM stations to broadcast news reports As of December 2018, there are more than 369 operational private radio stations in more than 101 cities and towns across India. The Government of India owned All India Radio has about 450 FM stations covering 39% of the area and 52% of the population of India.

FM Radio is one of the preferred mode of entertainment among youth and adults across the nation. The variety offered by various FM Radio stations in local languages is welcomed by the masses. It has also evolved as a potential medium for local businesses to expand their reach through radio advertisements. Ministry of Information & Broadcasting is also utilizing Private FM Radio as a platform to reach the masses for furthering the developmental agenda of the Government. During the Covid-19 pandemic the private FM Radio stations have made laudable efforts to sensitize the populace on getting vaccinated and on adopting Covid appropriate behavior such as wearing masks, keeping 2 yards distance and practicing hand hygiene etc. The pro-bono campaign by FM radio channels in the fight against Covid-19 by promoting vaccination and sensitizing the masses, especially in the identified high-risk districts, tremendously helped in containing the spread of coronavirus and deserves praise from all quarters. Private FM radio channels have been operationalized in Leh and Kargil of the UT of Ladakh and at Bhaderwah, Kathua and Poonch of the border areas of the UT of J&K. As on March 30, 2022, 386 FM Radio channels are operational in 113 cities across the country spread across 26 States and 5 Union Territories

**Community Radio**:

The expression Community Radio has been defined in different ways. It has been called a local radio, people's radio, democratic radio, and so on.

- According to Lewis (1995): "The community radio is a form of local radio which defines itself as an autonomous entity and relies on the community for its survival without any commercial aims or objects."
- According to UNESCO, Community radio is 'a medium that gives voice to the voiceless, that serves as the mouthpiece of the marginalised and is at the heart of communication and democratic processes within societies'.

Community Radio implies a range of terms like “alternative‟, “radical‟ or citizen radio. Traditionally in sociology, a “community‟ is defined as a group of interacting people living in a common location. Community radio is often built around concepts of access and participation, and so the term “community‟ may be thought of as often referring to geographical communities based around the possible reach of the signal, i.e., the people who can receive the message, and their potential to participate in the creation of such messages. It has come to be known as the 'narrow casting' as opposed to 'broadcasting'. The introduction of the community radio is a milestone not only in reaching out to the remotest area but also persuading the citizen to share in the vision and excitement of development. With the avowed objective of developing itself as community broadcasting, the local radio strives to demolish the division between the broadcaster and the audience and serve as a link between the citizen and the extension agencies. In course of time, these community radio stations would act as a catalytic agent in galvanizing the local community into action for their own development.

Community radio is a type of radio service that offers a third model of radio broadcasting beyond commercial and public service. Community stations can serve geographic communities and communities of interest. They broadcast content that is popular and relevant to a local/specific audience but which may often be overlooked by commercial or mass-media broadcasters. Community radio stations are operated, owned, and driven by the communities they serve. Community radio is not-for profit and provides a mechanism for facilitating individuals, groups, and communities to tell their own diverse stories, to share experiences, and in a media rich world to become active creators and contributors of media. In many parts of the world, community radio acts as a vehicle for the community and voluntary sector, civil society, agencies, NGOs & citizens to work in partnership to further community development as well as broadcasting aims. Modern-day community radio stations often serve their listeners by offering a variety of content that is not necessarily provided by the larger commercial

radio stations. Community radio outlets may carry news and information programming geared toward the local area, particularly immigrant and minority groups that are poorly served by other major media outlets.

In India, this concept can be effectively harnessed keeping in view the variety in region, background, culture, language, education and economic status. Community radio stations can be used to project and reflect the needs, desires, problems, joys and sorrows of a society clearly defined within a limited area. For example, the need to construct a new road, remove stagnant water, put down gang warfare or whatever problem is being faced by the people in a specific area, could be dealt with in a meaningful way, Fruitful negotiations could be held by the affected people with area development workers, local authorities and voluntary agencies. Similar background of, the people facilitate problem solving, and imparting instructions on various development related issues. The mainstream media is unable to cater to the true information needs of the community, as it is primarily market driven and run with profit maximizing motive. Hence, the question of alternative media comes, which definitely has to have space in terms of localization of content, participation and involvement of the community. Generally speaking, after the television appeared on the scene, radio listening has declined all over the world. Hence, radio had to change its style of functioning in order to meet the challenge from television.

A lot of importance is given to broadcasting at the local or the grassroots levels in most countries. Though this local or community radio movement started in the 1960s and the 1970s in western countries, it reached the developing countries only in the 1980s and the 1990s.In India the campaign to legitimize community radio began in the mid-1900s, soon after the Supreme Court of India decreed in 1995 that “airwaves are public property.” All India Radio is the state monopoly broadcasting organization in India. It’s centralized broadcasting and bureaucratic approach prevents people’s large-scale participation in broadcasting. The Chanda and Verghese enquiry committees had suggested the introduction of local radio stations with enlarged participatory approach all over India. However, the Government of India decided to start local radio stations during the sixth five-year plan only. Therefore, in some places, local stations were started on an experimental basis. Community Radio is a new concept in broadcasting in India. Each of the stations serves a small area, providing utility services reaching right into the heart of the community which uses the microphone to reflect and enrich its life

and artistic expression. The first experiment in local/community radio was conducted in Nagercoil, Tamil Nadu. The experiment was launched on October 30, 1984. The main objective of this station is to support the development of socio-economic and cultural objectives of the local people. Besides providing information, education and entertainment this local radio station disseminates information relating to government policies and programmes extensively and motivates the people to participate in the national endeavor for integrated development of the country. Other experiments have been carried out in rural areas of Bangalore, Karnataka and Hyderabad, Andhra Pradesh. Several NGOs use local radio to further their development activities. Chetana (Kolkata) and Ravi Bharati (Patna), for instance records their programmes on adult education, in the field and using local talents.

In 2006, the Government of India notified new community radio guidelines, which permitted NGOs and other civil society organizations to own and operate community radio stations. By 2008, the ministry of Information & Broadcasting, Government of India, had received 297 applications for community radio licenses, including 141 from NGOs and other civil society organizations, 105 from educational institutions and 51 for "farm radio" stations to be run by agricultural universities and agricultural extension centers. Of these, 107 community radio stations were cleared for licensing through the issue of Letters of Intent. Thirteen Grant of Permission Agreements (GOPA) were signed with license applicants under the new scheme. Soon after, there were 38 operational community radio stations in the country. Of these, two are run by NGOs and the rest by educational institutions.

The first community-based radio station, licensed to an NGO was launched on 15th October 2008- "Sangham Radio" in Pastapur village, Medak district, Andhra Pradesh. Sangham Radio, which broadcasts on 90.4 MHz, is licensed to Deccan Development Society (DDS), an NGO that works with women's group in about 75 villages of Andhra Pradesh. The second NGO-led community radio station in India was launched on 23rd October 2008 in Madhya Pradesh. Named „Radio Bundelkhand" after the Bundelkhand region of central India where it is located, the radio station is licensed to the Society for Development Alternatives (DA), a Delhi-based NGO. According to the Ministry of Information & Broadcasting, 47 community radio stations were operational in India by 1st November 2009, including 45 campus- based stations and two community radio stations run by NGOs. By December 2009, the number of community

radio stations run by civil society groups had shot up, including Sangham Radio, Radio Bundelkhand, Mann Deshi Tarang (Satara, Maharashtra), Namma Dhwani (Budikote, Karnataka), Radio Mattioli (Wayland, kerala), Kalanjiam Samuga Vanoli (Nagapattinam, Tamil Nadu).

Today more than 160 community radio stations are functioning in various states of India. By 4th December 2009, the Ministry of Information & Broadcasting had issued GOPA for 62 community radio stations. Most of the GOPAs were issued to educational institutions. For instance, among the campus-based community radio stations started in 2009, SARANG 107.8 is one in Karnataka, when few others have received SACFA (Standing Committee Clearance for Frequency Allocation). SARANG 107.8 is run by St Aloysius College, Mangalore. Symbolically, the name implies "all colours" of Mangalore signifying the union of various social, religious, linguistic communities and their harmonious existence. Community radio in India has many advantages over All India Radio and Private FM. Programmes nearly always in the local languages deal with local issues involving ordinary people so that villagers and town folk understand what they are about. Just hearing themselves on radio is an empowering experience for many of the marginalized sections in society. In India farmers, tribals and women identify strongly with community radio. The local communities of farmers, fisher folk, medical/legal experts, students, workers contribute regularly to this radio. As such health and hygiene, feedback pertaining to agriculture and fisher folk issues, road safety, water conservation, rain water harvesting, folk culture and life, as well as entertainment by local residents and students are the hallmark of this radio.

**Models of community radio**

Philosophically two distinct approaches to community radio can be found though the models are not necessarily mutually exclusive. One stresses service or community-mindedness, a focus on what the station can do for the community. The other stresses involvement and participation by the listener. The service model localism is often prized, as a third tier, can provide content focused on a more local or particular community than larger operations. Sometimes, though, the provision of syndicated content that is not already available within the station's service area is seen as a desirable form of service. Within the access or participatory model, the participation of community members in producing content is seen as a good in itself.

Community radio is confined to a small geographical area. It depends on low power transmission covering not more than 20-30 km radius. It serves a community which uses common resources for livelihood, has common development issues and concerns, which are relatively localized, nevertheless connected to national and regional development goals. The concept of community radio developed in the West as an alternative to or a critique of the mainstream broadcast media. Tracing its origins in Europe in the 1960s and 1970s, McCain and Lowe (1990) found "swashbuckling entrepreneurs boarded the airwaves illegally and seized as much of the audiences as they could carry away from the treasure chest monopolies controlled by the State with its public service model of broadcasting." Thus, pirate stations have been a major factor in motivating governments and national broadcasting systems to introduce legitimate local radio in Europe.

**Advantages of Community Radio**

The community radio projects were mostly associated with externally funded development projects which were influenced by the discussions and inclusive concepts of participatory communication for sustainable development and new understanding of communication as a two-way process rather than just communicating 'to' the listener.. The community was treated as the social space within which participation and two-way communication process would occur. This reinforced the need for planning communication strategies to catalyze development efforts in the immediate communities.

- Communities are not monolithic units. They consist of people with different positions, individual/community priorities and varied approaches to their diverse questions and their solutions. There are also different levels of connectors and catalysts within communities. The community radio provides a platform for all segments of population to discuss common issues from different viewpoints in a positive atmosphere.
- All members of the community have to discipline themselves when participating in the programmes of community radio. They are expected to follow certain norms prescribed by the code of conduct of the radio station. In effect, community radio trains the community members in a very practical way for democratic behaviour.

- The community radio mode provides opportunities to project and discuss the community's common issues, helps promote a sense of belonging among community members and strengthens the community bond among individual members. Thus the objective of community radio programming is to promote democratic discussions and a platform for expression of divergent view points.
- Community radio can facilitate contextualising national development programmes within the immediate community and taking national development goals as close as possible to the intended beneficiaries. Through community radio, members are able to feed-forward on local development concerns, giving an opportunity for development agencies and authorities to get involved in a constructive dialogue on development priorities at local levels.
- Similarly, the community radio provides opportunities to the community to make reiterative evaluation of programme implementation and eventually to make development inputs more relevant and efficient. This transparent process makes the community rely more on an integrated national system in which the degree of power sharing between the centre and the periphery is understood by each other.
- The ability of the communities to be involved in shaping programme implementation at the grassroots levels is well assured. A regular community dialogue and feedback facilitates continuous improvement in programme delivery and makes the radio centre more responsive.
- At the same time, community radio helps facilitate self-reliance by mobilising resources readily available with the community. They can analyse their problems and propose their own solutions. This confidence makes them consider themselves as a part of the system they belong to. The very recognition that they have the possibility to influence national policy implementation at grassroots levels makes them feel a part of an inclusive nationhood.

Community radio operations have distinct characteristics which differ from commercial and national Public Service Broadcasters (PSB) in regard to its mission and service. Community radio does not compete with commercial and PSB, rather plays a complementary role. But primarily, community radio is operated by and for the community and owned by the community itself. It is an empowering tool for the

community. A nation consisting of empowered communities is more secure as they can make an equitable contribution to nation building.

The advent of low-cost low-power EM transmission and downsizing of production equipment and the experiences in different parts of the world provided impetus for community radio. Some initiatives were taken to make Community radio as a potential participatory and two-way communication tool to support development in rural societies of developing countries. UNESCO supported community radio projects in Homa-bay in Kenya, and Mahaweli in Sri Lanka, in the early 1980s are among some of the earlier efforts in this direction. But, given the fact that the countries were not yet ready to relinquish their broadcasting monopolies, these early initiatives had to be carried out within the Government-owned broadcasting systems.

**Mahaweli Community Radio: Sri Lanka**

The first Asian community radio was established at Girandumkotte in Sri Lanka in 1986 under the Mahaweli Community Radio project. In fact, the project was started in 1980 as a community programme service, serving the Mahaweli settlements under which nearly 60,000 families were resettled downstream the Mahaweli River. The purpose of this community radio project was to cater to the needs of the newly-settled families. It aimed to help them exchange their settlement experiences, learn new skills from each other, give timely information on day-to-day activities and help in catalyzing development in the new communities. It was a new experience where both young and mature members of the settlers' families functioned as volunteer broadcasters. They identified various settlement issues, animated the community through their own programmes, much of which also related to cultural expressions which they brought from their place of origins. Lively interaction between settlers and field officers responsible for various settlement administration matters were broadcast over the community radio.

These broadcasts enabled policy makers and senior officials responsible for settlements to learn about problems and prospects of the settlements. It also helped to establish an all-inclusive decisions-making process to solve many important issues such as water distribution, marketing avenues, health, education, etc. The Mahaweli community radio project of Sri Lanka in fact was administratively under the national broadcaster, Sri Lanka Broadcasting Corporation. The unique feature of the Girandumkotte community radio system was the airing of the volunteers' produced

programmes. There were the three expert producers assigned to the station by the Sri Lanka Broadcasting Corporation. They were all fresh recruits, specifically trained for community broadcasting and were therefore not highly influenced with the ideas of the so-called professional broadcasting or commercial programming of the urban centres. They acted as technical consultants and trainers of the volunteer broadcasters.

**Thambuli Community Radio: The Philippines**

The first truly community-owned and operated Asian community radio stations were established in the Philippines with UNESCO-supported Thambuli Community radio project. The "Thambuli Community Radio Project" has set up a management and training team that co-operates with communities to organise independent community radio stations in less developed rural areas. So far, twenty-two community radio stations have been established in different rural communities. In the project, the thrust is on the local communities to build the radio station. Through focus group discussions, they set the guidelines for the broadcasters; they organise the radio team from all sectors of the village. All team members volunteer to share work. The project provides equipment, training, facilitates research and helps in identifying community development schemes. Devoid of commercial or sectarian interests, these small radio stations help strengthen the democratic process by providing access to different viewpoints, build tolerance and help animate the local development efforts. For the communities involved, there is a deep sense of pride of being the masters of their own communication facility that allows correlating their activities with the wider national development goals.

**Radio Sagarmatha: Nepal**

Another independent community radio movement in Asia began in Nepal. Radio Sagarmatha is Nepal's first independent community broadcasting station and represents South Asia's first effort at "independent community radio." The Sagarmatha radio station was established with financial and technical assistance provided under UNESCO's International Programme for the Development of Communication (IPDC). . Under Nepal's National Communication Policy Act (1993), a special task force, Radio Sagarmatha prepared the guidelines for the radio project. Private sector participation in FM broadcasting is one major provision of this act. Radio Sagarmatha has been on air daily on 102.4 FM with its innovative combination of educational, informative and entertaining programming. Radio Sagaramatha's programmes concern vital issues

affecting the everyday lives of the citizens of Nepal's capital Kathmandu and its environments. Radio Sagaramatha's programmes have looked at Kathmandu's growing problems such as air pollution, urbanization and its impact on heritage sites, tourism, threat of HIV / AIDS and garbage disposal. Radio Sagaramatha serves the ethnic, religious and linguistic diversity of over two million people around the Kathmandu valley

Community broadcasting is a relatively new concept in Nepal. Radio Sagaramatha's listeners are mostly urban citizens of Kathmandu which is the nation's social, economic and political center. Thus, the radio is dealing with an intelligent, informed community. This listener profile is both a challenge as well as an opportunity. Getting attention of this audience demands programming that is competitive, comparable and superior to what already exists. It is an opportunity, because Sagaramatha is dealing with a public that has always influenced Nepal's political and economic decision-making. Thus, the community radio is also in a position to influence change. This environment shapes Radio Sagaramatha's mission. Nepal now has a strong community radio movement with nearly six community radio stations in different parts of the country. Some of them have been established by people who have formed in to community co-operative societies, deemed to be a good model to ensure community ownership.

**Community Radio policy in India**

Community Radio Policy in India, guidelines provided by Ministry of Information and Broadcasting, Government of India. In December 2002, the Government of India approved a policy for the grant of licenses for setting up of Community Radio Stations to well established educational institutions including IITs/IIMs. The matter has been reconsidered and the Government has now decided to broad base the policy by bringing 'Non-profit' organizations like civil society and voluntary organizations etc. under its ambit in order to allow greater participation by the civil society on issues relating to development & social change. Basic principles of Community Radio policy guidelines in India are provided by Ministry of Information and Broadcasting. An organization desirous of operating a Community Radio Station (CRS) must be able to satisfy and adhere to the following principles:

- It should be explicitly constituted as a 'non-profit' organisation and should have a proven record of at least three years of service to the local community.

- The CRS to be operated by it should be designed to serve a specific well-defined local community.
- It should have an ownership and management structure that is reflective of the community that the CRS seeks to serve.
- Programmes for broadcast should be relevant to the educational, developmental, social and cultural needs of the community.
- It must be a Legal Entity i.e.; it should be registered (under the registration of Societies Act or any other such act relevant to the purpose).

**Transmission and power range of Community Radio stations in India**

- CRS shall be expected to cover a range of 5-10 km. For this, a transmitter having maximum Effective Radiated Power (ERP) of 100 W would be adequate. However, in case of a proven need where the applicant organization is able to establish that it needs to serve a larger area or the terrain so warrants, higher transmitter wattage with maximum ERP up to 250 Watts can be considered on a case-to-case basis, subject to availability of frequency and such other clearances as necessary from the Ministry of Communication & IT.
- The maximum height of antenna permitted above the ground for the CRS shall not exceed 30 meters. However, minimum height of Antenna above ground should be at least 15 meters to prevent possibility of biological hazards of RF radiation.
- Universities, Deemed Universities and other educational institutions shall be permitted to locate their transmitters and antennae only within their main campuses.
- For NGOs and others, the transmitter and antenna shall be located within the geographical area of the community they seek to serve. The geographical area (including the names of villages/institution etc.) should be clearly spelt out along with the location of the transmitter and antenna in the application form.

## Unit-3 – History and Development of social media

### Origin and Growth of Internet

The Internet started in the 1960s as a way for government researchers to share information. Computers in the '60s were large and immobile and in order to make use of information stored in any one computer, one had to either travel to the site of the computer or have magnetic computer tapes sent through the conventional postal system. Another catalyst in the formation of the Internet was the heating up of the Cold War. The Soviet Union's launch of the Sputnik satellite spurred the U.S. Defense Department to consider ways information could still be disseminated even after a nuclear attack. This eventually led to the formation of the ARPANET (Advanced Research Projects Agency Network), the network that ultimately evolved into what we now know as the Internet. ARPANET was a great success but membership was limited to certain academic and research organizations who had contracts with the Defense Department. In response to this, other networks were created to provide information sharing.

January 1, 1983 is considered the official birthday of the Internet. Prior to this, the various computer networks did not have a standard way to communicate with each other. A new communications protocol was established called Transfer Control Protocol/Internetwork Protocol (TCP/IP). This allowed different kinds of computers on different networks to "talk" to each other. ARPANET and the Defense Data Network officially changed to the TCP/IP standard on January 1, 1983, hence the birth of the Internet. All networks could now be connected by a universal language.

When we think of the Internet we often think only of the World Wide Web. The Web is one of several ways to retrieve information from the Internet. These different types of Internet connections are known as protocols. You could use separate software applications to access the Internet with each of these protocols, though you probably wouldn't need to. Many Internet Web browsers allow users to access files using most of the protocols. Following are three categories of Internet services and examples of types of services in each category.

**File retrieval protocols:** This type of service was one of the earliest ways of retrieving information from computers connected to the Internet. You could view the names of the files stored on the serving computer, but you didn't have any type of graphics and

sometimes no description of a file's content. You would need to have advanced knowledge of which files contained the information you sought.

**FTP (File Transfer Protocol):** This was one of the first Internet services developed and it allows users to move files from one computer to another. Using the FTP program, a user can logon to a remote computer, browse through its files, and either download or upload files (if the remote computer allows). These can be any type of file, but the user is only allowed to see the file name; no description of the file content is included. You might encounter the FTP protocol if you try to download any software applications from the World Wide Web. Many sites that offer downloadable applications use the FTP protocol.

**Web Journalism, Web Portals**

Journalism has changed rapidly in the late 20th and early 21st centuries. The traditional ideal of journalism was for reporters to serve as independent sources, attempting to deliver the news in a fact-based, objective manner. While this tradition remains intact in some news avenues, increased access to technologies has led to the proliferation of citizen and activist journalists who openly have a bias or point of view, but still attempt to promote that perspective through a lens that includes fair framing, editing, and reporting. Some also take advantage of these technologies to advance propaganda under the guise of news. In addition, the internet has allowed for all of us to become authors: Anyone can create a blog and put an opinion out into the world, where it can go viral without any fact-checking or editing. Journalists in the digital age must operate in a world where the news cycle moves faster. As a result, striking a balance between timely and in-depth reporting is often more difficult. o facilitate speedy, accurate reporting, modern journalists use various recent inventions and innovations:

- **Internet:** Before the digital age, reporters had to either call in their stories or drive to the newsroom to type it out, and then submit it to their editors; after that, the story would have to find its way to the printing press. Now, the internet means journalists can file stories on location from a phone or laptop, allowing organizations to get breaking news on their websites within minutes of it happening.
- **Specialty software**: Modern programs and apps allow journalists to do everything from video editing to graphics work, research, and transcription from the comfort of their living rooms.

- **Videoconferencing software:** Applications like Zoom and Google Meet allow journalists to conduct interviews and staff meetings remotely.
- **Smartphones:** Arguably the most important tool in modern journalism is the smartphone, most commonly iPhones and Android devices. Capable of shooting images and video, recording audio, accessing the internet, and more, journalists can produce professional work using nothing other than their smartphones.
- **Social media:** Journalists use social media networks, such as Twitter, Instagram, and Facebook, to promote their work, stay on top of breaking news, seek sources, and interact with the public.
- **Digital recorders and transcription services:** In the early days of modern journalism, reporters had to rely on shorthand to accurately quote a subject, not an easy task when listening to a politician's speech or a star player's postgame interview. Now, recorders that cost less than $100 can easily record, store, sort, and play back dozens of hours of audio on a single charge, and advanced voice-recognition software can generate transcripts from audio files with increasing accuracy.
- **Digital cameras (dual purpose):** When cameras were film-based only, journalistic photography was an expensive, time-consuming practice reserved almost solely for professionals. Now, with the proliferation of digital and smartphone cameras, almost everybody has a dual-purpose device that can take both high-definition photographs and video. Most professionals still rely on more advanced digital single-lens reflex (DSLR) cameras and newer mirrorless digital cameras, which come with interchangeable lens systems that allow the cameras to shoot everything from close-ups to a football field far away.

The web, at the primary stage was used for official and commercial purposes only. But in due course of some time, the commercial web site owners diverted their attention for other services also which includes sending of knowledge. At first, the web browsers started showing some news highlights scrolling on the pc screen, below the foremost themes. In due course of sometime the instant news were highly appreciated by the users and became very fashionable. Therefore the pc elites planned to start out full-fledged newspaper portals which addressed news as their primary product. For this purpose they appointed programmers for sending news items at the internet site, editors to ascertain the contents, reporters for collection of stories and other personnel like technical writers, copywriters and related posts. Thus gave birth to a replacement

kind of journalism mentioned because the online journalism. "The newspaper arrives one morning, but something is missing. There's no delivery person tossing the folded papers into dimly lighted driveways, no familiar think. In fact, there is no paper in the smallest amount. This newspaper is electronic.-a digitalized blend of text, graphics, color photos, sounds and full motioned video dancing across a book-size".

The Internet is known as the web because the virtual route of internet connection is so complex that it's kind of a spider web with plenty of connections and interconnections. There are various nomenclatures of web journalism including the online Journalism, e- Journalism, Online journalism or e-newspaper. The format within the e-newspaper is analogous thereto of the regular newspaper and thus the activities finished input, processing, production and circulation of newspapers online are called web journalism. There are news agencies, reporters, editors and thus the owners, almost like that of a printed newspaper. But in web journalism the owners are called the hosts, the editors are called content writers and thus the content developers, the reporters are called online contributors or online reporters. The news agencies are sometimes same. They also subscribe the regular news agencies, which even have their Internet errs and content services.

Web journalism entered India about twenty two years ago. Initially, it had to affect the pressures posed by the post-liberalization era. The deteriorating plight of web journalism led one to question its very survival. But some companies decided to remain it out, come rain or shine and availed, during the quantity 2000- 2002, the services provided by the search engines like Google. Thereafter, different websites like Yahoo, Google, Indiatimes and similar portals started causation news on-line. The net revolution started shortly thenceforth, with newspapers launching their net editions. With magnified use of computers and broadband, internet journalism has fullgrown by leaps and bounds. People, World Health Organization cannot access TV, radio and newspapers; keep themselves updated through the e-editions of newspapers. With increase in mobile services, that provides property to the web through GPRS, the role of internet journalism has become important. Though the country possesses to beat the barriers expose by inadequate and poor quality power, high rentals related to broadband services, the affordable computers have supported the dissemination of Internet-based news. Foreign majors like Yahoo, Google and MSN additionally compete

the role of anchor. These portals additionally recognized the importance of Hindi and different regional languages.

The regional newspapers have additionally started their portals for the users. Aside from the Hindi language newspapers of just about each scheduled language have their on-line editions. The linguistic purity related to internet journalism remains a debated topic. It ought to be unbroken in mind that news is browse from a newspaper, detected over radio and viewed on electronic media. However with internet journalism we'll browse, hear and take into account news, all at an equivalent time. E-journalism is probably an awfully spectacular medium. However it's not right to infer that internet journalism involves piece of writing and writing of stories alone. If we glance into the contents of these news portals we'll find that, the authorities aren't so serious about the news items. Some portals like Rediff.com and Sify.com are among the few internet sites in India which have some original news contents. But during a number of the portals the primary content is diluted. However, such portals are good within the short run, but are poor players within the top of the day. Websites are assisted by news agencies associated with the print and electronic media. But true websites are peopling that boast of dedicated teams of reporters and journalists

**Online News Papers – e-Papers**

**Online journalism** is defined as the reporting of facts produced and distributed via the Internet . As of 2009, audiences for online journalism continue to grow. In 2008, for the first time, more Americans reported getting their national and international news from the internet, rather than newspapers, and audiences to news sites continued to grow due to the launch of new news sites, continued investment in news online by conventional news organizations, and the continued growth in internet audiences overall, with new people discovering the internet's advantages for convenience, speed and depth However, the professional online news industry is increasingly gloomy about its financial future. Prior to 2008, the industry had hoped that publishing news online would prove lucrative enough to fund the costs of conventional newsgathering. In 2008, however, online advertising began to slow down, and little progress was made towards development of new business models. The Pew Project for excellance in Journalism describes its 2008 report on the State of the News Media, its sixth, as its bleakest ever.

Despite the uncertainty, online journalists are cautiously optimistic, reporting expanding newsrooms. They believe advertising is likely to be the best revenue model supporting the production of online news.

An early leader in online journalism was The News & Observer in Raleigh, noorth Carolina Steve Yelvington wrote on the Poynter Institute website about Nando, owned by The N&O, by saying "Nando evolved into the first serious, professional news site on the World Wide Web -- long before CNN, MSNBC, and other followers." It originated in the early 1990s as "NandO Land". Many news organizations based in other media also distribute news online, but the amount they use of the new medium varies. Some news organizations use the Web exclusively or as a secondary outlet for their content. The online news association founded in 1999, is the largest organization representing online journalists, with more than 1,700 members whose principal livelihood involves gathering or producing news for digital presentation. The Internet challenges traditional news organizations in several ways. Newspapers may losecalssoified advertising to websites, which are often targeted by interest instead of geography. These organizations are concerned about real and perceived loss of viewers and circulation to the Internet.

The Internet has also given rise to more participation by people who are not normally journalists. A research study conducted by Pew Research Center for The People & The Press offer a classification of newspaper readers and the movement of online readers. Around 46% of Americans are classified as Traditionalist. This means these people rely on traditional media sources like TV, newspaper and radio. Those in the Integrator category rely on traditional media as well as increasing internet news. This is around 23% of Americans. This is category is mostly of the baby boomer generation. The category that is now seeing an increase is the Net-Newsers. This is around 13% of Americans who rely mainly on the internet for their news. This category is mainly a younger generation like college graduates and who able to access the internet access easily whether it be a lap top, Blackberry or iPhone. This is where the future of readers and newspapers are headed. Bloggers write on Web Logs or Blogs. Traditional journalists often do not consider bloggers to automatically be journalists. Other significant tools of on-line journalism are Internet forums, Discussion boards and chats, especially those representing the Internet version of official media.

An **online newspaper**, also known as a **web newspaper**, is a newspaper that exists on the World Wide Net or Internet either separately or as an online version of a printed periodical. Going online created more opportunities for newspapers, such as competing with broadcst Journalsim in presenting breaking news in a timelier manner. The credibility and strong brand recognition of well-established newspapers, and the close relationships they have with advertisers, are also seen by many in the newspaper industry as strengthening their chances of survival. The movement away from the printing process can also help decrease costs. Professional journalists have some advantages over blogs, as editors are normally aware of the potential for legal problems. Online newspapers are much like hard-copy newspapers and have the same legal boundaries, such as laws regarding libel, privacy and copyright, also apply to online publications in most countries, like in the UK. Also in the UK the Data Protection Act applies to online newspapers and news pages. As well as the PCC rules in the UK. But the distinction was not very clear to the public in the UK as to what was a blog or forum site and what was an online newspaper. In 2007, a ruling was passed to formally regulate UK based online newspapers, news audio, and news video websites covering the responsibilities expected of them and to clear up what is, and what isn't, an online publication.

News reporters are being taught to shoot video and to write in the succinct manner necessary for the Internet news pages. Many are learning how to implement blogs and the ruling by the UK's PCC should help this development of the internet. Journalism students in schools around the world are being taught about the "convergence" of all media and the need to have knowledge and skills involving print, broadcast and web. Some newspapers have attempted to integrate the internet into every aspect of their operations, i.e., reporters writing stories for both print and online, and classified advertisements appearing in both media; others operate websites that are more distinct from the printed newspaper. In the developing world online publishers are drawing large amounts of traffic and reaping the rewards of online publishing. The Guardian also leads the way with online news with a revolutionary website that trumps many other UK based newspaper websites. The oldest example of a online newspaper or in this case a weekly summary over the weekend's news is The Weekend City Press Review, set up in 1991 this was a pioneer in the online market. Popular in the city, this subscription based service continues to run today. But they are based on hard copy

reports and papers. See 'Hybrid newspapers' section of this page. Truly 'Online Only' newspapers and magazines started much later, with the exception of "News Report", an online newspaper created by Bruce Parrello in 1974 on the PLATO System at the University of Illinois.

Very few newspapers in 2006 will claim to have made money from their websites, which are mostly free to all viewers. Declining profit margins and declining circulation in daily newspapers have forced executives to contemplate new methods of obtaining revenue from websites, without charging for subscription. This has been difficult. Newspapers with specialized audiences such as The Wall Street Journal or The Chronicle of Higher Education, successfully charge subscription fees. Most newspapers now have an online edition, including, *The Los Angeles Times*, The Washington Post USA Today and The NewYork Times. The Guardian experimented with new media in 2005, offering a free twelve part weekly podcast series by Ricky Gervais.. Another UK daily to go online is The Daily Telegraph. In India, major newspapers went online to provide latest and most updated news from them *Times of India*, Hindustan Times, The Hindu, *Indian Express* and The New Indian Express. Some newspapers even provide E-Paper which is regarded as the digital replica of the newspaper. In Australia, some newspapers corporations offer an online version to let their readers read the news online, such as The Australian, Sydney Morning Herald. The Santiago Times operates out of Santiago, Chile and is 100% on line, editions are published in English covering Chilean current events daily Monday through Friday.

The true **online only paper** is a paper that does not have any hard copy connections. An example of this is an independent web only newspaper, introduced in the UK in 2000, called the South Port Reporter. It is a weekly regional newspaper that is not produced or run in any format other than 'soft-copy' on the internet by its publishers. As of 2009, the collapse of the traditional business model of print newspapers has led to various attempts to establish local, regional or national online-only newspapers - publications that do original reporting, rather than just commentary or summaries of reporting from other publications. An early major example in the U.S. is the Seattle Post – Intelligencer which stopped publishing after 149 years in March 2009 and went online only. In Scotland in 2010 Caledonian Mercury was set, as Scotland's first online-only newspaper with the same aims as Southport Reporter in the UK. In the US, technology news websites such as CENT, TechCrunch and ZDNet started as web

publications and enjoy comparable readership to the conventional newspapers. Also, with the ever-rising popularity of online media, veteran publications like the US News & World Report are abandoning print and going online-only.

There are some newspapers which are predominantly an online newspaper, but also provide limited hard copy publishing. An example is annarbor.com, which replaced the Ann Arbor News in the summer of 2009. It is primarily an online newspaper, but publishes a hardcopy twice a week. A news sheet is a paper that is on one or two pages only. Soft-copy sheets are like online newspapers, in that they have to be predominantly news, not advert or gossip based. These sheets can be updated periodically or regularly, unlike a newspaper. They must also like a newspaper be regarded as a news outlet by media groups and governments. The development of electronic newspapers, will very soon be supplementing hard-copy printed papers via electronic paper. In February 2006, the Flemish Daily, De Tijd, Antwerp announced plans to distribute an electronic-ink version of the paper to selected subscribers. This would have been the first such application of electronic ink to newspaper publishing.

**Social Networking Sites – Face book, Twitter**

Social networking was born one day in 1971, when the first email was sent. The two computers were sitting right next to each other. The message said "qwertyuiop'. In 1978, the BBS–or Bulletin Board System, was created. The BBS hosted on personal computers, where users need to dial in via the modem of a host computer, and exchanging data through phone lines to other users. The BBS was the first system that lets users interact with one another through the internet. It was slow, but it was a good start, and only one user could log in at a time. Later that year, the very first web browsers were distributed using Usenet, the earliest online bulletin board of the time. Usenet was created by Jim Ellis & Tom Truscott, where users posted news, articles and funny posts. Unlike the BBS and forums, Usenet did not have a 'central server'. This concept soon inspired the 'Groups' feature we know today; such as Yahoo! Groups, Google Groups and Facebook Groups.The first ever version of instant messaging was around 1988, called IRC or Internet Relay Chat. IRC was Unix-based then, and thus exclusive only to a few people. IRC was used for communications, as well as link and fire sharing. Soon the earliest copies of web browsers were distributed via Usenet.

In 1994, the first social networking site was created, Geocities. Geocities allowed the users to create and customize their own web sites, grouping them into different

'cities' based on the site's content. The following year, TheGlobe.com launched to public, giving users the ability to interact with people who have the same hobbies and interests, and to publish their own content. few years later, AOL Instant Messenger and SixDegrees.com launched in 1997. Instant messaging was born, giving users the freedom to chat with friends, and create a profile. AOL was probably the true precursor to today's social networking sites. The member profiles allowed its users to write a biography and share details about themselves. The profiles were searchable so people could look your profile up. It was the most innovative feature at that time. Other sites followed suit, creating social networking sites such as Classmates, Friendzy, Hi-5, just to name a few. Many were dating sites, while some were more niche driven. For example, Classmates allowed users to reconnect with old classmates, pals, bullies and crushes. It was a hit immediately, and today Classmates still has some 40,000,000 registered users.

SixDegrees.com is one of the earliest social networking sites, but did not gain the same success. The idea is based on the theory that people are separated by no more than six degrees from one another. It also allowed users to create profiles, make groups, search and invite friends. However, they encouraged members to invite more people to the site and had too many membership drives. Many people complained that the membership invitations were spam, filling up their websites with junk. It was sold in 2001 for $125 million but completely shut down the year after. Other niche-driven sites are AsianAvenue–established in 1997. By 1999, BlackPlanet was established and in 2000, MiGente.com for Hispanic servers. In the mid-1990s, the internet was at its full force. Yahoo! was established and Amazon had begun selling books. Every household was getting a PC. The World Wide Web showed no signs of slowing down. The first modern social networking site that we define today is Friendster. It also uses the degree of separation concept similar to SixDegrees, but dubbed it 'Circle of Friends'. Friendster was basically a dating site that wasn't all about dating. In the first 3 months, Friendster was able to amass 3,000,000 users. This means 1 in 126 web users were Friendster members at the time.

Soon MySpace followed suit, who cloned Friendster. It was launched after only 10 days of coding. It soon became more popular than Friendster. MySpace gave users more freedom than Friendster when it came to customization; with music, videos and a hipper online environment. It garnered 90 million registered users–and even if it is no

longer the top networking site in the world, it is still a favorite in the USA. The glory days of Friendster have passed, and its popularity is now surpassed by MySpace and Facebook. Today most of Friendster's traffic comes from Asia, especially Indonesia and the Philippines. Another site with considerable success is LinkedIn. It was established in 2003, and took a more professional and business approach to social networking. Other sites focused on getting dates, having friends, and reuniting with old classmates, but LinkedIn focused on building business contacts and professionals. Today LinkedIn has 30 million registered members.

Facebook came into the social networking scene a little bit later. It was launched in 2004, and the primary intent was to connect US college students. Facebook first began with Mark Zuckerberg's alma mater Harvard. At first it was exclusive, and you could only join in if you had been invited by a member of Facebook. The 'exclusive' feature proved to be a success, and in its first month, over half of the 19,500 Harvard students signed up. Two years later, the campus-only networking site became open to the public. In 2008, Facebook surpassed MySpace and Friendster as the leading social networking site. It now has over 150 million members around the globe.

## Unit – 4 – Contemporary issues of Mass media

### Growth of Mass media in India - Circulation, TRP's

The Indian Media and Entertainment (M&E) sector is expected to grow by 25% in 2021 and is expected to reach INR 1.73 trillion (US$23.7 billion) states **FICCI-EY report 'Playing by new rules'** launched today. With its current trajectory, the M&E sector in India is expected to reach INR 2.23 trillion (US$30.6 billion) by 2023 at a CAGR of 17%. In 2020 while television continued to remain the largest segment, digital media has overtaken print, and online gaming has overtaken a disrupted filmed entertainment segment. The Indian Media and Entertainment sector has degrown by 24% to INR 1.38 trillion (US$19 billion) in 2020. Digital media and online gaming were the only segments that grew in 2020 adding an aggregate of INR 26 billion. Other segments have degrown by an aggregate of INR 467 billion. While M&E as a sector has usually grown and often outperformed India's nominal GDP, the sector fell three times (3x) India's nominal GDP fall by 8% due to the discretionary nature of the spend. Subscription revenues however proved their mettle by holding up better than advertising revenues. The TV industry declined 13% from INR787 billion to INR685 billion in 2020. The largest M&E segment saw a 21.5% fall in advertising revenues in 2020 to INR251 billion on account of highly discounted advertising rates during the lockdown months. Subscription declined 7% to INR434 billion due to the continued growth of free television, reverse migration and a reduction in average revenue per user due to part implementation of NTO 2.0. Regional channels received 27% more ad volumes than national channels in 2020. Major sport leagues got postponed, but IPL provided a much-needed revival push in sports viewership. Smart TV sets crossed the five million mark and grew their base by around a million homes. With people spending more time indoors the overall time spent watching TV increased by 9% over 2019. Television segment revenues are expected to grow at a CAGR of 7% to reach INR847 billion by 2023 driven by increased base of subscribers as households continue to get televised. Growth will be driven by connected TVs which could cross 40 million homes by 2025 and free television could cross 50 million homes by then, thereby making core television a more massified product. The smart television will usher in an era of connected viewing which will enable viewers to interact with each other, as well as the broadcaster, through the content. The importance of regional and sports programming

will increase, driving up both ad rates as well as end-consumer package pricing, subject to regulatory action

In 2020 digital media grew by 6.5% to reach INR235 billion and is expected to grow at 22% CAGR to reach INR425 billion by 2023. Digital subscription grew 49% in 2020 to reach INR43.5 billion as the pandemic and the consequent lockdown reduced fresh content on television, online sports went behind a paywall and the pandemic forced much of the population for longer periods indoors. Paid OTT subscriptions crossed 50 million for the first time in 2020. Digital advertising stayed stable on the back of increased allocation of ad spends by advertisers who accelerated their investments in digital sales channels. SME advertisers continued to increase their spends on digital advertising and experimented more with online e-commerce platforms. Digital advertising is expected to outpace all other ad media by 2024 or 2025. The metrics that matter will change from monthly active users to daily active users, from audience numbers to engagement, loyalty and time spent, leading to platforms focusing on segmented audiences and community ownership. Newspaper digital products will increasingly go behind paywalls and it is expected to generate subscription revenues of INR4 billion by 2023. It is estimated that demand for original content will double by 2023 from 2019 levels to over 3,000 hours per year. The share of regional language consumption on OTT platforms will cross 50% of total time

Print has degrown 36% in 2020 due to the impact of COVID-19. Print's revenue declines were led by a 41% fall in advertising and a 24% fall in circulation revenues. English language and metro newspapers were hit harder and struggled to get back their circulation post the pandemic, while regional language newspapers recovered a larger portion of their lost circulation. Print companies implemented significant cost reduction measures to achieve between 25% and 40% efficiencies, a significant portion of which can continue in the years ahead. Many print companies started conducting digital versions of their popular IPs and entered the high-volume but lower value digital events business. ransformation in the print segment is expected to be in the areas of product realignment, revenue transformation, cost intelligence and digital demarcation. Print will need to focus on growing reach in its existing markets through a combination of identifying new micro-markets which are underpenetrated as well as forging bundle deals with direct to consumer aggregators like television, e-commerce platforms, OTT platforms, etc. Significantly, more industry-level shared services initiatives are expected

to ensure cost efficiencies. Publishers can also implement process automation for productivity improvement across key business processes. The focus will remain on strengthening the print segment's core capability to building communities but with a wider scope of offerings to them apart from just news.

While mass media struggled throughout 2022 to release itself out of disruptions confronted due to Covid-19 pandemic, it is presumed that the year 2023 will be devoted to accommodate in the changed social environment of 'new normal' evolving and implementing new strategies. The long lockdowns during the pandemic affected the media and entertainment sector like any other industry and business. However, three separate reasons contributed to the owes to make the situation complicated. First, unprecedented innovations in the field of technological advancement brought far reaching changes in production and distribution in various fields of mass media and the traditional business models could not accommodate to such developments. The crisis continued for three decades in the markets of developed nations and one to two decades old among the developing nations. The biggest huddle for the shift to digital media was marked by absence of successful revenue generation models. As a result, the urgency demanded by digital-first media policy could not be met.

The prevailing environment compelled consumers shift to digital platforms. Assessment of preferences and adoption pattern of individual consumers employing artificial intelligence and machine learning techniques for management of digital platforms started a new era in the consumer economics. Ordinary people started avoiding newspapers and television channels in presence of round-the-clock service provided by social media. Discarding opinion of the professional commentators on current issues, started relying on analysis by self or friends circle. An era of feudal attitude ended in media and entertainment industry.

Second, all forms of mass media : print, television and digital were developed with the advertisement-dependent business model. The model was evolved accidentally 200 years ago during Penny Press era in the United States for management of media economics solely depending upon advertisement revenue, discarding classic cost-for-value model for products sold in the market place.Rise of popularity in the digital platforms in the developed nations resulted in shift of advertisement spending from print and television into digital. But the problem that caused concern relates to advertisement spending did not reached digital mass media, but about 80 to 85 percent

immersed in social media 'Face Book', search engine 'Google' and e-commerce platform 'Amazon'.

Third, mass media platforms enjoyed supremacy in the spheres of political, cultural and social organizations for a long time and disregarded the essence of communication to be truthful, objective and non-partial. Media products available in different platforms were built with their own perspectives which is against natural justice and media ethics. Neglect to creativity resulted in negative effects in the long run. The standard of media products met with casualty due to inflow of power-brokers, money-minded and sycophant into media landscape. Major change in consumer behavior towards media products resulted during the pandemic. Many expected that the effects of pandemic will be temporary and pre-pandemic order will return within no time in post-pandemic period. But annual statistics for 2022 proved all such predictions wrong.

In a broad view, mass media passed through the first and second steps during 2020-21, while third and fourth steps were crossed during 2022. The last phase will be confronted during 2023. The logic clearly indicates that media and entertainment industry will adopt new models during 'new normal' of 2023. In the process few of the platforms will sink into oblivion, a few will opt for consolidation and others evolve five, ten or twenty-year-long projects employing their resources to overcome the huddles. Thus, 2023 will act as a year of change.

In the contemporary media ecosystem print medium confronted high casualties due to disruption. On one hand, advertisement revenue continue to fall among the newspapers and periodicals while on the other hand, subscription figures registered fast decrease. A researcher quoted newspaper circulation trend in Britain analyzing data gathered by 'Price Water-house Cooper' between 2017 and 2022. The total loss of circulation during past five years has accounted 45 percent and the trend may continue for next five years between 2023 and 2027 to reach 65 percent.

In many geographies it is difficult to collect dependable circulation figures of newspapers and the other print products. In such situations, it is taken for granted that the newspaper market figures of Britain may reflect in other markets with little variation. Data collected through newspaper hawkers in a tire–II city in Odisha showed that the highest circulated language daily decreased circulation from 10,000 copes to 6,500 copies, the second highest circulation reduced from 9,000 to 6,000 copies and the

third largest circulation from 8,000 copies sinked to 4,500 copies. In a rough estimate newspaper market in Odisha may have reduced to 45 percent during the past five years. If one will expect a further fall of circulation of newspaper to 65 percent during next five years, the situation definitely demands urgent intervention.

In the process of change in print media industry which includes newspapers, periodicals and books needs renewed editorial policy formulation which will drive the journey. Readership will increase only when the publications start presenting content those are more relevant, useful, personally important and interesting to the readers. It will require adoption of not only new editorial models, but also presentation and circulation formats. The new content management system has to ensure speed, flexibility, monetization and empowerment of editorial desk to achieve optimum results. It is time to abandon old habits and assumptions. Editorial policy construction will rely more on reader's than editor's perspectives. There is no dearth of patronage for niche content. The new readers will seek content tailored to their needs and desires.

Secondly, the monetization angle in editorial, production and circulation management will gain prominence during 2023. Experts predict that overall advertisement spend during 2023 will remain almost in a similar position compared to 2022, but continue to flow into other than mass media channels. It will result in turbulence, instability and uncertainty throughout 2023. It will compel print publications to concentrate upon reader revenue sources, such as subscriptions, membership, donation and events. Readership engagement will emerge as a new work segment.

Thirdly, the print media will be compelled to seek help of the advanced technological tools in problematic fields which include content generation, content evaluation, subscription sales promotion and print order management. For example, machine learning algorithms can calculate exactly how many copies will sell in news-stands which will protect the publisher from printed copy wastage. Similarly subscription drive, popularity measurement of articles, even content generation and make-up may also gather benefit through use of technology. In the past such type of facilities were inaccessible, but now available online everywhere for a small price on a piece-meal-basis. The trend will be a long term initiative, but publishers may start adoption beginning 2023.

All the available publication platforms may not be interested to fight against the disruptions. As a result, a good number of platforms may close business during 2023. The economic slowdown evident in the post-pandemic period is feared to grow further and the situation imposes restrictions on investments in mass media and entertainment industry.

**New technology and Mass media**

Today, the Media world is experiencing a serious overhaul, a shift in paradigm. The normal way in which people are accessing information, expressing views, forming opinions is changing fast. The usual sources of information like Newspapers, Radio and Television are getting replaced with new forms like Websites, blogs, pod casts, social networking sites etc. Today apart from reading, listening and viewing, people are also browsing, e-Mailing, chatting, networking in various innovative technological applications of Internet. These new forms of interactive communication technologies which evolved in the last part of the 20th century are termed as 'New Media'. New media is an emerging field of different forms of new generation electronic, digital, computerized, networked information and communication systems made possible through the applications of computer technology. The term is in relation to "old" media forms, such as print newspapers and magazines, which are static representations of text and graphics.

New Media can provide information, interaction between persons, groups, organizations virtually anywhere in the world at a low and affordable cost. New Media has evolved as an interconnected network of audio, video and electronic communication that will blur the distinction between Interpersonal and Mass communication. The new media are responsible for formation of virtual communities and groups who have similar interests and ideologies there by changing the patterns of human communication with expanding the interactivity by crossing physical boundaries, religion and nationality. It is a generic term for the many different forms of electronic communication that are made possible through the use of computer technology. The term is in relation to "old" media forms, such as print newspapers and magazines that are static representations of text and graphics. New media includes:

- Websites
- Streaming audio and video
- Ee- mail

- online communities
- Web advertising
- Virtual Reality environments
- Inernet Telephony
- Digital cameras
- Mobile Communication

The term ***broadband*** refers to a telecommunications signal of greater bandwidth, in some sense, than another standard or usual signal (and the broader the band, the greater the capacity for traffic). Different criteria for "broad" have been applied in different contexts and at different times. Its origin is in radio systems engineering, but became popularized after Media One adopted it as part of a marketing campaign in 1996 to sell their high speed data access. The slogan was "This is Broadband. This is the Way". The term has never been formally defined, even though it is used widely and has been the subject of many policy debates, and the FCC "National broadband Plan".

Broadband in telecommunications refers to a signaling method that includes or handles a relatively wide range (or band) of frequencies, which may be divided into channels or frequency bins. The wider or broader the bandwidth of a channel, the greater will be its information-carrying capacity. In radio for example, a very narrow-band signal will carry Morse Code; a broader band will carry speech; a still broader band is required to carry music without losing the high audio frequencies required for realistic sound production. A television antenna described as "broadband" may be capable of receiving a wide range of channels; while a single-frequency or Lo-VHF antenna is "narrowband" since it only receives 1 to 5 channels. In data communications a digital modem will transmit a data rate of 56 kilobits per seconds (kbit/s) over a 4 kilohertz wide telephone line narrowband or voice band.

Broadband in data can refer to broadband networks or broadband Internet and may have the same meaning as above, so that data transmission over a fiber optic cable would be referred to as broadband as compared to a telephone modem operating at 56,000 bits per second. However, a worldwide standard for what level of bandwidth and network speeds actually constitute Broadband have not been determined. Broadband in analog video distribution is traditionally used to refer to systems such as cable television, where the individual channels are modulated on carriers at fixed

frequencies. In this context, baseband is the term's antonym, referring to a single channel of analog video, typically in composite form with separate baseband audio. The act of demodulating converts broadband video to baseband video. However, broadband video in the context of streaming internet video has come to mean video files that have bitrates high enough to require broadband internet access in order to view them. Broadband video is also sometimes used to describe IPTV Video on demand.

**Narrowband** refers to a situation in radio communications where the bandwidth. It is a common misconception that narrowband refers to a channel which occupies only a "small" amount of space on the radio spectrum. The opposite of narrowband is wideband. In the study of wireless channels, *narrowband* implies that the channel under consideration is sufficiently narrow that its frequency response can be considered flat. The message bandwidth will therefore be less than the coherence bandwidth of the channel. This is usually used as an idealizing assumption; no channel has perfectly flat fading, but the analysis of many aspects of wireless systems is greatly simplified if flat fading can be assumed. Narrowband can also be used with the audio spectrum to describe sounds which occupy a narrow range of frequencies. In telephone, narrowband is usually considered to cover frequencies 300–3400 Hz. **Wireless Broadband** is a fairly new technology that provides high-speed wireless internet and data network access over a wide area.

Also called Mobile broadband, wireless broadband technologies include new services from companies such as verizon, Sprint, and AT& T Mobility, which allow a more mobile version of this broadband access. Consumers can purchase a PC Card., laptop card, or USB equipment to connect their PC or laptop to the Internet via Cell phone towers. This type of connection would be stable in almost any area that could also receive a strong cell phone connection. These connections can cost more for portable convenience as well as having speed limitations in all but urban environments

**Broadband Internet access**, often shortened to just broadband, is a high data rate Internet access—typically contrasted with dial –up- process using a modem. Dial-up modems are limited to a bitrate of less than 56 kbit/s and require the dedicated use of a telephone line-whereas broadband technologies supply more than double this rate and generally without disrupting telephone use. Although various minimum bandwidths have been used in definitions of broadband, ranging up from 64 kbit/s up

to 4.0 Mbit/s, broadband is defined as having download data transfer rates equal to or faster than 256 kbit/s,

Streaming is the technique for transferring data such that it can be processed as a steady and continuous stream. Streaming technologies are becoming increasingly important with the growth of the internet because most users do not have fast enough access to download large multimedia files quickly. With streaming, the client browser or plug-in can start displaying the data before the entire file has been transmitted. For streaming to work, the client side receiving the data must be able to collect the data and send it as a steady stream to the application that is processing the data and converting it to sound or pictures. This means that if the streaming client receives the data more quickly than required, it needs to save the excess data in a buffer. If the data doesn't come quickly enough, however, the presentation of the data will not be smooth. There are a number of competing streaming technologies emerging. For audio data on the Internet, the de facto standard is Progressive Network's *RealAudio*.

## Characteristics of New Media

Although there are several ways that New Media may be described, *The New Media Reader* edited by Wardrip-Fruin and Montfort defines New Media by using eight simple and concise propositions:

1. **New Media versus Cybe culture** - Cyber culture is the study of various social phenomena that are associated with the Internet and network communications (blogs, online multi-player gaming), whereas New Media is concerned more with cultural objects and paradigms (digital to analog television, iPhones).
2. **New Media as Computer Technology Used as a Distribution Platform** - New Media are the cultural objects which use digital computer technology for distribution and exhibition. e.g. (at least for now) Internet, Web sites, computer multimedia, Blue-ray disks etc. The problem with this is that the definition must be revised every few years. The term "new media" will not be "new" anymore, as most forms of culture will be distributed through computers.
3. **New Media as Digital Data Controlled by Software** - The language of New Media is based on the assumption that, in fact, all cultural objects that rely on digital representation and computer-based delivery do share a number of common qualities. New media is reduced to digital data that can be manipulated by software as any other data. Now media operations can create several versions

of the same object. An example is an image stored as matrix data which can be manipulated and altered according to the additional algorithms implemented, such as color inversion, gray-scaling, sharpening, rasterizing, etc.

4. **New Media as the Mix Between Existing Cultural Conventions and the Conventions of Software** - "New Media today can be understood as the mix between older cultural conventions for data representation, access, and manipulation and newer conventions of data representation, access, and manipulation. The "old" data are representations of visual reality and human experience, and the "new" data is numerical data. The computer is kept out of the key "creative" decisions, and is delegated to the position of a technician." e.g. In film, software is used in some areas of production, in others are created using computer animation.
5. **New Media as the Aesthetics that Accompanies the Early Stage of Every New Modern Media and Communication Technology** - "While ideological tropes indeed seem to be reappearing rather regularly, many aesthetic strategies may reappear two or three times...In order for this approach to be truly useful it would be insufficient to simple name the strategies and tropes and to record the moments of their appearance; instead, we would have to develop a much more comprehensive analysis which would correlate the history of technology with social, political, and economical histories or the modern period."
6. **New Media as Faster Execution of Algorithms Previously Executed Manually or through Other Technologies** - Computers are a huge speed-up of what were previously manual techniques. e.g. calculators. "Dramatically speeding up the execution makes possible previously non-existent representational technique." This also makes possible of many new forms of media art such as interactive multimedia and computer games. "On one level, a modern digital computer is just a faster calculator; we should not ignore its other identity: that of a cybernetic control device."
7. **New Media as the Encoding of Modernist Avant-Garde; New Media as Metamedia** - Manovich declares that the 1920s are more relevant to New Media than any other time period. Meta-media coincides with post modernism in that they both rework old work rather than create new work. New media avant-garde "is about new ways of accessing and manipulating information" (e.g. hypermedia,

databases, search engines, etc.). Meta-media is an example of how quantity can change into quality as in new media technology and manipulation techniques can "recode modernist aesthetics into a very different postmodern aesthetics."

User-generated content (UGC), also known as Consumer generated media (CGM) or user-created content (UCC), refers to various kinds of media content, publicly available, that are produced by end-users. The term user generated content entered mainstream usage during 2005 having arisen in web publishing and new media content production circles. Its use for a wide range of applications, including problem processing news, gossip, research reflects the expansion of media production through new technologies that are accessible and affordable to the general public. All digital media technologies are included, such as question-answer databases, digital audio blogging, podcasting mobile photography etc. In addition to these technologies, user generated content may also employ a combination of open source free software, and flexible licensing or related agreements to further reduce the barriers to collaboration, skill building and discovery. Sometimes UGC can constitute only a portion of a website. For example on Amazon.com the majority of content is prepared by administrators, but numerous user reviews of the products being sold are submitted by regular visitors to the site. Often UGC is partially or totally monitored by website administrators to avoid offensive content or language, copyright infringement issues, or simply to determine if the content posted is relevant to the site's general theme.

**Impact of COVID on Indian Media – Disruptive Communication**

According to the World Association of Newspapers and News Publishers, Indian publishers are fighting for revenues and drowning their publication houses. Direct ad sales have been affected because of social and physical distancing. A lot of rumors and misinformation related to the Novel Corona virus were spread on social media due to newsprint industries that suffered a lot in distribution to circulation. Newspaper delivery boys or hawkers refusing to step out due to fear of the local authority stopped on roads. According to the tweet of Saching Kalbag (2020) was saying there is no physical edition of the daily Hindustan Times in Mumbai because of tough restrictions aimed at preventing the spread of the contagious Corona virus and that made it difficult for newspapers deliver along with their distribution partners. The Lockdown of transportation of newspapers was a huge reason for slow circulation in the lockdown period. As a result, the print media across the whole country was disrupted. Regional

newspapers & publication houses were fully shutdowns on that time because many registered newspaper editors have not efficient printing press and they published their newspapers by private printing press owners. Readers were getting information available on digital platforms through electronic and web editions.

While the central government of India has declared and included print newspapers as an essential services category which was suffering due to the suspension of traffic. The Ministry of Information and Broadcasting has laid out steps to ensure the operational continuity of print and electronic media during the overall Covid- 19 outbreak. Newspaper industries were already troubling with high production costs before the pandemic Covid-19. Small and medium newspapers suffering to publish newspapers physical copy due to lack of income revenue generate. The print was the second-largest advertising medium in the country but presently huge shares of profit likely to be overtaken by digital forums in 2020. Today's younger generation or millennial loves to read news and information on their digital gadgets like cell phones, laptops, and tablets, etc. The challenge for India's newsprint industry is to keep retains its readers for physical newspaper editions along with digital news web portals. According to the Yash Porwal (2020), Indian newsprint industries are struggling with high-cost production and the central government's new customs duty which all add immense pressure. According to the Indian Readership Survey (IRS) those under 35 years, 56 percent identified as online readers compare to just 16 percent of the print medium. Regional and local publishers of the newsprint industry don't have enough facilities to publish news and incidents online through news portals and subscriptions. Most of the peoples of rural areas don't like to subscribe to regional or local newspaper portals. News portals of regional media firms have not able to get advertisements which are the backbone of income source of any media firm.

During the Covid-19 pandemic all public events, cultural events, and various sports competitions were either suspended or postponed. Pandemic made a standstill situation of the economic cycle which includes real estate, political events, special tournaments had stopped and the newsprint industry faced a huge and unimaginable financial crisis. According to the recent statistics which was released by the Indian Newspaper Society (INS) that newsprint industries have to bear the brunt loss of Rs. 4,5000 crore, in the beginning, two months country's lockdown of March and April 2020. INS also indicated that further losses may up to Rs. 15,000 crore in the upcoming

six to seven months. The prolonged economic slowdown will be decline advertisements revenue and ruin the business model of the newsprint industry. ABP news channel chief executive D.D Purkayastha said that newsprint advertisement revenue which shares 80 percent to 85 percent of total revenue is almost zero after post lockdown. Therefore Indian Newspaper Society (INS) has written a letter requesting the central government of India to waive the taxation which currently has a 5 percent customs duty and give government advertisements to all newspapers including small and medium newsprint industry. According to the Shemin Joy This preprint research paper has not been peer reviewed. Electronic copy available at: https://ssrn.com/abstract=3868829 Preprint not peer reviewed © 2021 IJRAR May 2021, Volume 8, Issue 2 www.ijrar.org (E-ISSN 2348-1269, P- ISSN 2349-5138) IJRAR21B1736 International Journal of Research and Analytical Reviews (IJRAR) www.ijrar.org 62 (2020), INS demands package for the print media in the face of unprecedented Corona virus crisis. INS President Shailesh Gupta has written a letter to Information and Broadcasting Secretary Ravi Mittal and he was saying by his letter that the newspaper industry is facing an "unprecedented crisis" without advertising revenue.

According to INS newspapers have given employment to almost 9-10 lakh peopled directly and 18-20 lakh indirectly. After a decline in advertisement revenue the newsprint companies of India working on how to minimize production costs and gain control over spending. The management authorities of the newspaper company decided to do pay cut-offs and minimum manpower to avoid unnecessary expenses. Many newspapers have suspended special editions and reduced the number of pages to compensate for the costs. 'The Hindu' group in India has suspended the print edition of 'Sportstar' which was the fortnightly magazine published since 1978. As tweeted by Hindustan Times journalist Abhishek Baxi on March, 20 (2020) that HT has put its weekend edition into its main publication. "HT is suspending the print edition for 2-3 weeks because the staff is working from home." According to Amrita Nayak Dutta (2020), The Delhi edition of Hindustan Times now consists only of 14 pages, down from over 20 pages. The Indian Express put its e-paper behind a paywall and has made it temporarily free of cost. Magazines also affected due to the Corona virus. Outlook magazine has temporarily suspended its print edition and only the weekly magazine's e-version is available to readers on its official website. Paper office said that media houses are facing losses of Rs. 5 crores to Rs. 10 crores per day. Mostly National and Regional

newspapers instructed their employees to work from home but thousands of journalists of print and electronic media have to work on the field. They have taken risks of their lives while reporting on Corona virus infection from visiting containment zones to hospitals. There is no insurance policy has given by the government of India for journalists.

All major newspaper groups showed exit doors to their employees and slashed the salaries due to the Covid-19 financial crisis. The Times Group announced salary cuts of its print publication employees. It said there will be a salary reduction between 5 and 10 percent from 1 April. The Hindu announced pay cuts for those employees whose earning above Rs. 6 lakh per year. Those employees earning from Rs. 6 lakh to 10 lakh per year would see a pay cut of 8 percent; Rs. 15 to Rs. 25 lakh is 16 percent; Rs. 35 lakh is 20 percent and the rest those earning above Rs. 35 lakh would see a cut of 25 percent. News channel NDTV too announced salary cuts between 10 and 40 percent from April 1, 2020, for the upcoming three months. The pay cut is applicable for those employees earning more than Rs.50,000 per month. English daily DNA, run by Essel Group had stopped printing after his company. Another English daily Star of Mysore has stopped publishing since 13 April. Raghav Bahal, founder of The Quint and Bloomberg Quint announced that Quint's business news website has terminated its television and sent 45 employees including producers, reporters, and tech support staff on indefinite leave without pay. Along with the print media, electronic media and digital web media have also shaken due to the pandemic. Now newspaper owners have appealed to the central government for help. Newspapers have not received many advertising bills yet from the government and they have demanded that the bills should be paid immediately.

- The newspaper industry has lost over Rs 4,000 crore and is likely to suffer further losses of up to Rs 15,000 crore in the next six to seven months if relief is not provided.
- The prospects of a prolonged economic slowdown and a decline in advertisement revenue have aggravated the weaknesses in the business model of the print industry, which has been hugely dependent on advertisement revenue.
- The news industry survived against all the odds in the past two decades with the digital onslaught and the rise of Twitter and Facebook. But with this crisis, the industry has entered uncharted waters

- India's top newspapers are trying to adapt in real-time, dropping online paywalls and offering free PDF versions of the print publication to try to keep their audiences intact. But none of that's helping earn revenues at a time the economy is in the doldrums and advertising is low.
- After the Great Recession of 2008, ad spending growth decelerated in India, and as in other parts of the world, younger audiences have moved to access their news digitally. But, he says, “the elite and the elderly still like the touch and feel of paper,” and they continue to be drivers of the industry in India. “It's not as if people stopped reading.”That's what makes the corona virus a particularly significant threat. It's the affluent neighborhoods that — fearing the spread from vendors or the newspapers — are turning away. And the elderly — loyal readers otherwise — are the most vulnerable against the virus.
- The main reason the media industry has been affected so severely is over fears of a sharp cutback in advertising expenditure by companies. Our print advertisement revenue, which is 80% to 85% of our total revenue, is almost zero post lockdown," said D. D. Purkayastha, chief executive of ABP.
- The Times of India, among the world's largest circulating English-language dailies, has shrunk to around 16 pages with supplements, compared with 40 plus pages previously, as ads from companies have stopped, said one Times employee.
- According to INS estimates, newspapers provide direct and indirect employment to almost nine to 10 lakh people and over 18-20 lakh people respectively.
- The 88-year-old Indian Express this month also announced pay cuts of up to 30% for some staff and warned of more sacrifices to come. NDTV too announced salary cuts between 10% and 40% from April 1 for three months. The pay cut is applicable for employees earning more than Rs 50,000 per month.
- The Quint has sent almost 50% of its staff on leave without pay besides enforcing pay cuts for the rest.

- The Times this week laid off its entire staff on Sunday magazine team. The Express Group informed its employees that the organization was going for a temporary salary cut.

Our newspapers were eternally on the lookout for short-cuts. Thus, when the economy was thrown open in the 1990s, a couple of them saw it as a great opportunity to grab windfall revenues from a plethora of consumer goods and durables flooding the market. But they needed to rapidly ramp up their subscription base and become more attractive to advertisers. They thus dropped cover price of the newspaper to as low as Re 1. This cheap subscription model, complete with gifts and other incentives gave them an instant boost in circulation. But it also locked the newspaper down to an eternally low cover price. To put this low pricing into perspective, a comparison in pricing of English language newspapers in India's neighborhood is an eye-opener. Dawn's (Pakistan) cover price is Rs 25 while The Island (Sri Lanka) is priced at Rs 30 per copy. Sri Lanka's Sunday Observer sells for a whopping Rs 60. On the other hand, India's market leader, The Times of India, is priced at Rs 4.50.

There is little doubt that this sort of predatory pricing has led to the print media being boxed into a corner. Had it increased its costs gradually, like toothpaste, cigarettes, beer or soft drinks (selling newspapers was often equated with selling toothpaste in the 1990s and 2000s), these papers would not have been in the state they currently find themselves. Any attempt at course correction and suddenly taking the price to a more equitable Rs 25 or 30 will almost certainly wipe out their subscription base. A long newspaper, like The Times of India, has 48 pages. The newspaper is sold for around Rs 5 and about 40 per cent is taken by distributors. The media organisation gets around Rs 2.40. Now each page costs Rs 0.25 to print and printing 48 pages costs Rs 12. A very conservative cost of paying employees and news agencies etc is Rs 3. So if newspapers are produced at Rs 15, how are they sold at Rs 5 and how is profit still generated? The answer is ad revenue. In short, the over-dependence on advertising is deeply encoded and flawed. The print media industry needed to stop depending on advertisements for revenue and, instead, make it a “user-must-pay” model.

Television viewership in India during the lockdown saw an unprecedented growth of 37% to exceed 1.2 trillion minutes 1. Television consumption at this scale hasn't been witnessed or even imagined before. But when the Broadcast Audience Research Council (BARC) declared these massive growth numbers, it did not enthuse

the Rs 78,800 crore industry as it normally would have. Instead, industry CEOs were locked on video calls, deliberating cost cuts, appraisal freeze, pay reduction, and layoffs. The industry is grappling with an existential crisis that it had neither anticipated nor planned for. Even their best strategic planners had not seen this tsunami coming. Combating the menace of COVID-19 has meant separating people from each other, and inevitably, from doing just about everything the industry does to make money. Creating intellectual property (IP) lies at the core of the industry, in the form of scripted and non-scripted shows which are then monetized through advertisement and subscription revenues. The absolute lockdown has impacted both these activities, putting on hold production of hundreds of shows, and wreaking havoc on the networks' development plans. The programming void is filled through repeats of older shows. The complete shutdown of all sports events has been devastating for the broadcast industry, especially networks like Star India and Sony Pictures who have a significant stake in sports broadcasting.

About 26 private sports channels have now been reduced to re-running old tournaments, with no certainty about when and in what form live-sports might resume. The lockdown has thus negated the general assumption that the rise in viewership translates to increased revenues. On the contrary, advertisers across the board have cut back their spends drastically, owing to the overall economic distress and decreased consumer spending. Advertising volumes have witnessed a 26% decline as per BARC data, and spot rates have also understandably crashed. It is believed that total billing has fallen by 70-75% during this period. While 'normal' industry-wide advertising revenue stood at Rs 32,000 crore in 2019, this is a body blow to broadcasters. While all genres have felt the impact, sports have suffered the most as it is almost impossible to derive any economic value from telecasting a tournament when one already knows the outcome. While no data is publicly available, a fall of 85% to 90% in advertisement revenue would be very believable just going by the negligible ad volumes during these repeat telecasts.

Moreover, the suspension of television shows is also bound to impact advertiser interest in GEC channels that are broadcasting reruns with their content banks having run out. Subscription revenue, another source of income for payment networks, is also not bereft of its share of woes, with no significant spike in subscriber numbers. How can a cable/DTH operator or subscriber justify paying the same monthly fee for a sports

channel with no live sports, or for general entertainment with no fresh content. Subscription revenue collected from end-subscribers is completely dependent on cash collections from home and/or monthly recharge at dealer points. The lockdown has severely impacted these collections, which in turn impacts the liquidity of broadcasters.
A longer lockdown will eventually lead to a drop in subscriber numbers of pay channels, in the absence of fresh content. Viewers may find it more economical to downgrade to free-to-air offerings and seek better options with OTT platforms which have hours of fresh content to offer to new subscribers.

Disney+Hotstar's launch during the lockdown, for example, would be able to seize this opportunity and grow subscription numbers, capitalizing on its very popular Disney library. Increasing subscriber churn will put pressure on networks to extend discounts in order to retain viewers and maintain channel reach, which will drive down subscription revenue significantly. The massive hit to overall revenue will inevitably put severe financial stress on margins, with most networks struggling to even cover fixed costs. While larger networks will have to seriously consider suspending operations of some of their channels, smaller networks will find it difficult to survive this onslaught.
Sports networks with no live sports and margins will in all probability be forced to consolidate multiple sports channels. For the English genre, which was already struggling with falling viewership due to the proliferation of OTT platforms, and the new tariff order of the TRAI, the lockdown is a death blow.

The unlocking dilemma is something that businesses across the globe are struggling with and attempting to find the right balance between lives and livelihood.
The challenges of unlocking are unique to the television industry as it relies almost entirely on human resources and creativity to build economic value. How does one resume shooting shows which are dependent on physical proximity and showcasing human expression. Will these shows be as good, or as popular, with scripts that envisage actors keeping their distance and in masks? Lastly, re-imagining and re-designing production protocols and guidelines in itself is a complex exercise that is not only time consuming but will also mean increased cost of production. Sports networks have to deal with an added set of complications arising out of sports rights agreements involving billions of dollars, due to cancellation and postponement of marquee events. These networks not only stand to lose advertising revenues but also take a hit to their

earnings, with no clarity on whether or how much they have to pay for the rights for these games.

While it would be pragmatic for all stakeholders to reach consensus given the gravity of the crisis and its human dimension, eventually it may simply boil down to immutable contractual obligations. In this eventuality, losses and increasing cash flow problems will predictably create frictions down the line. On the positive side, the sports world is hugely interdependent and works on long term relationships. Hopefully, none of the stakeholders would want to risk future relationships by taking hostile legal positions, especially during a calamity of this nature. Some of the broadcasters who in more exuberant times had bid aggressively for sports rights, may also now try to either renegotiate or exit unfavorable deals. In the interim, uncertainties will take a huge toll on the business. The road to recovery looks long and rough, as resuming production of shows and sporting events is just the beginning. The corona virus's greatest impact on television won't stem from the acute shock of suspended production but from the long-lasting consequences of the recession. While marketing and promotional activity is not an immediate priority for advertisers struggling to re-build their own businesses, revenues will remain subdued through the middle of 2021. Pay-TV growth is directly connected to consumer appetite, which will be at its lowest during the recession.

Entertainment is a discretionary expenditure that an average household struggling with unemployment and other financial commitments will try to control at this time. As consumers are forced to make hard choices, OTT platforms and telcos may be able to offer a better proposition in terms of value, quality, and cost, and hence this period may accelerate the pace of cord-cutting. The pay-TV ecosystem will also be influenced by the emerging regulatory landscape, including the New Tariff Order 2.0 by the TRAI. Post-COVID-19, we will witness a new wave of industry transformation, accelerating the pace of consolidation which had begun in 2019. India is home to 918 registered television channels (386 news and 582 non-news).

This proliferation was enabled by India's economic growth from 1991 onwards, with the market generating increased advertising spends, and animal spirits driving the establishment of new channels. Clearly there will be a shakeout in these dire times, with several channels shutting down or moving online. The News Broadcasting Association has appealed to the central government to provide a stimulus package, and also to ensure that the government advertisement over dues are cleared. It will not be long

before the general entertainment channels (GECs) also come under severe financial stress and require stimulus support from the government. Consumer habits could be altered for good by the COVID-19 pandemic and may force television networks to make hard choices between their linear television and OTT businesses. Currently, Indian broadcasters OTTs lack sufficient originals and largely depend on catch up content. It is likely that they will lean harder into their OTT businesses and move more content investments towards fast-growing streaming services.

The market will certainly not be in a position to reward and incentivize a large number of channels. While television may continue to be the primary screen until the data infrastructure in India can meet growing demand, this will hold good only for selected mass entertainment channels, live sports, and news. Which prudent network would see wisdom in investing to rebuild a business that is rapidly losing out to the streaming future? Niche genres like English entertainment, kids, and infotainment will have to accelerate their plans to go "only digital" for better monetization opportunities.
On a positive note, creativity and entertainment have always staged remarkable recoveries after periods of stress. Newton discovered theories of gravity and motion when he was confined during the Great Plague in London in 1665-1666. Similarly, the Black Death (1342- 1553) marked an end of an era in Italy and led to the emergence of the Renaissance, one of the greatest epochs for art, architecture, and science in human history.

# NR- 11062 – PRINT JOURNALISM

## UNIT-1

### Definition of News

According to the Dictionary of Canadian English

- Something told as having just happened: information about something that has just happened or will soon happen.
- A report of a current happening or happenings in a newspaper, on television, radio, etc.

According to Random House Dictionary

- A report of a current event.
- A report on current events in a newspaper or on radio or TV
- Such reports taken collectively.

According to American Heritage Dictionary

- Recent events and happenings.
- A report about recent events.
- New information.

According to Globe Modern Dictionary

- A report of events as given each day by newspaper, radio,
- Information, which was not known before.

According to Oxford Shorter Dictionary

- New things, novelties (1565).
- Tidings, new information of recent events; new occurrences as a subject of report or talk.
- A newspaper.

The following are some of the important Quotations on "News ".

- Churchill (1898): It is better to be making the news than taking it.
- John Bogart (1918): When a dog bites a man that is not news, because it happens so often. But if a man bites a dog, that is news.

### Structure of News

The following are the some of the general components found in a news story. The definition and explanation of the below terms is given the earlier chapter.

- Teaser or kicker
- Headline
- Subheading or deck

- Pointers of bullets
- Super lead
- Credit line
- Date line
- Lead of Intro
- Body

**My Six Servants**

**I keep six honest serving men. They taught me all I knew. Their names are WHAT and WHY and WHEN And HOW and WHERE and WHO - - *Rudyard Kipling***

Rudayard Kipling's "Six honest serving men" i.e. 5'W's and 1 'H', remain as the main tool of information gathering in Journalism. One or more of these questions may be important in a particular story, but together they form a good guide to get all the facts of a news story. These questions drive the search for facts and also help to organize and build a story. The first paragraph of a news story i.e. the lead is written keeping the 5'W's and 1 'H' in mind. The different kinds of leads also follow those six honest serving men.

The concept of 5W's and H has been redefined by the canons of Public or Civic Journalism that emphasizes the fact that the ultimate motive of the press is to support public life as journalism is for the public. The proponents of Public or Civic Journalism gave various approaches to news gathering that journalists cannot live in vacuum as neutral observers, they must listen to all voices not only the loudest. Hence in Public Journalism the reporters should try to answer the 5 W's and H in a different way as follows:

- Who- cares, is affected, needs to be included, has a stake, is missing from this discussion.
- What- are the consequences, does it mean to citizens, would this accomplish.
- When- were things different, can things be different, should the situation lead to action.
- Where – are we headed, is the common ground, is the talk of citizens in the debate.
- Why – is this happening, are things not happening, should we care.
- How - it affects civic life, does my story help, will the public decide.

**ABC of reporting**

- Some principles of news writing you must apply every time in order to put words on paper like accuracy, brevity, clarity, coherence, emphasis, objectivity and unity.

- **Accuracy:** If a writer has to pick one principle that should never be violated, this should be the one. To fall down in this area is to discredit your entire writing effort. A reporter must be working with facts. These facts will involve persons, places and things. They will involve names, ages, titles, rank or ratings, addresses and descriptions. These facts may be familiar and unfamiliar. Hence a reporter can never afford to be casual in his approach to facts. When a reporter files a story to a newspaper, the editor depends on it for accuracy in every fact. A mistake in a news story implies that the reporter is careless and undependable.
- **Attribution:** It relates to accuracy. It means that reporters should name the person who has made the comment or a statement. Good quotations in give life and colour to a story and aid in development of coherence. Attribution also ensures that the reader does not get the impression the statement is writer's personal opinion. However, attribution should never be used in the story merely to flatter a person by publicizing his or her name.
- **Brevity:** A reporter always faces the question, "Should I be brief in my writing or complete?" By all means, be brief, but not at the expense of completeness. The key is to boil down the writing and eliminate garbage. A compact piece of writing is frequently much stronger than a lengthy story.
- **Clarity:** Nothing is more discouraging for a reader than reading an article with confused arrangement and argument. Hence no chance should be given for misunderstanding of readers. Hence every sentence written should be reread for better clarity and to avoid any unnecessary confusion.
- Coherence means sticking together. An article that skips illogically from topic to topic and back again in a jumbled, befuddled manner lacks coherence. Facts should follow facts in some kind of reasonable order. It may be logical order, chronological order, place order or order of importance, depending on the subject, but order of one kind or another is vital.
- **Emphasis:** The writing should emphasize what you want it to convey to the readers. This is assured in news writing by writing the most important fact first. There are other types of arrangements for emphasis that are used in feature stories or in editorials.
- **Objectivity:** In order to report news accurately, a reporter must keep himself detached from the happenings and present an impersonal, unbiased, unprejudiced story. It is not the reporter's job to influence people directly, but rather to tell them what is going on. Hence a reporter must direct the thinking of the readers by presenting unbiased facts there by allowing the readers to think for themselves.

- **Unity:** A news story should deal with one basic topic. There may be many facts and ins and outs to the story, but it is still one story. A story which has more than one line of thought or activity lacks unity. The simple solution is to write two stories, rather than trying to combine a mass of information into one.

**Structure of a news story**

Research has shown that most people spend less than three seconds on scanning a news article and deciding whether to read it or not. So the news writers i.e. reporters have to make special efforts to capture readers interest and provide the main thrust of the story in a limited time. Thus the news story is written in an **'Inverted pyramid style'**. As the name suggests this is a 'top-heavy' format and the most important facts are written at the top followed by the least important ones. This type of writing differs from the other styles of writing i.e. storytelling, feature writing etc. In other styles the important things are presented in the last phase. In the inverted pyramid style of news writing the climax is presented first. This method packs the most important acts together with the barest necessary explanatory material into the first paragraph moves into the detailed portion of the story i.e. the body covering the facts in diminishing order of importance.

**The Inverted pyramid style of news writing**

The inverted pyramid style of writing owes its origin to the early days of the 'Telegraph'. Before that reporters were less direct and used the narrative story telling techniques. When reporters started using Telegraph and wired their stories from remote location on the undependable telegraph lines, then they adapted the new style i.e. the inverted pyramid style. Telegraph made it possible to transmit information as soon as it was received by the reporter, shortening the news cycle considerable and making it possible fro news to travel almost simultaneously from the place of its origin to the place it was read. However the telegraph was not always reliable and lines were often unclear and discontinuous. Hence it was important for the reporter to send the most important information first before the lie broke and gave the other information later. Another important consideration was the cost factor. The telegraph was expensive costing five dollars a word. Hence the reports had to be tightly written in short paragraphs with no wasted words to save the cost. The first paragraph of the story is called the 'Lead'. It contained the gist of the story in a way to create interest and drew the readers. The paragraph was followed by the important background or contextual information. This paragraph

was sometimes referred to as 'nut graf' i.e. the paragraph containing the nuts and bolts. This was followed by the other key facts and opinions presented in decreasing order of importance.

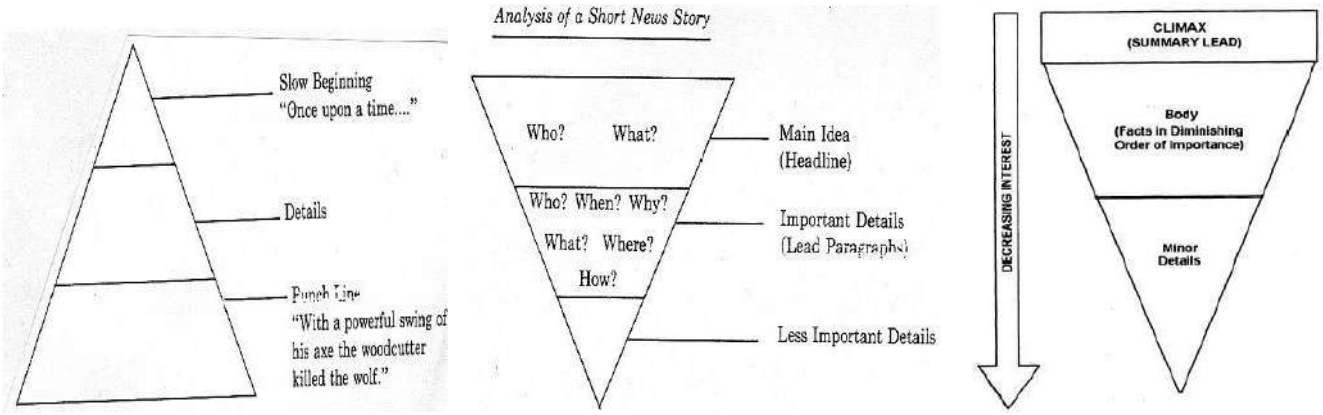

**Figure: Normal Story structure & Inverted pyramid news story structure.**

**Advantages of Inverted pyramid style of news writing:**

The inverted pyramid style offers several distinct advantages in news writing, which are discussed in the following text.

- **Cut-off test:** The presentation of information in the decreasing order of importance gives an advantage for the editor to cut off or edit the story without disturbing the essence of the story. This is possible as the paragraphs following the lead are mere an elaboration or explanation of the same. This is called as the 'cut-off test'
- **Different leads**: The inverted pyramid style of writing has given rise to the different forms of leads that are in use in the present day news writing.
- **The climax is presented first.** This method packs the most important facts together with the barest necessary explanatory material into the first paragraph (the summary lead), then moves into the detailed portion of the story (the body) by covering the facts in diminishing order of importance. This form of news writing is commonly known as the inverted pyramid style because when it is diagrammed, it appears as an upside-down pyramid
- **Presents Pertinent Facts First** Most readers have neither the time nor the desire to read every word of every story in a newspaper. By using the summary lead, the news item focuses the reader's attention on the news, arouses the reader's interest and allows the reader to swiftly skim important facts. In other words, spill the whole story in the first paragraph. The reader can decide whether to continue reading the details or to go on to

something else. But even if the reader stops there, the inverted pyramid form of writing has provided the essential facts.

- **Facilitates Page Layout** The inverted pyramid method of story construction is a valuable tool for page layout. If the story has been written in inverted pyramid form, it becomes a simple matter of cutting lines of type from the bottom of the story until it fits the available space or "jumping" (continuing) the story on another page — all without damage to the important facts that appear at the top.
- **Facilitates Headline Writing** Headlines for news stories should tell the main facts in the briefest form. If a story is written in the proper inverted pyramid style, the copy writer, who writes the headline can find these facts in the first paragraph. The copyreader will not have to search the entire story for headline material.

**Disadvantages of inverted pyramid style of writing**

The following are some of the disadvantages of the inverted pyramid style of news writing.

- The inverted pyramid style presents the most important information in the top, which may prevent the reader to go through the remaining part of the story or a complete reading.
- There is every possible chance that some of the important items may slip away for the top and get explained in the later part of the story.
- The process of important information in the top most part i.e. the lead may result in dumping of heavy information and making it very complex.

**Types of News** –

In newspapers and magazines there are wide variety of articles and features. There are many forms of journalistic writing and different forms of news.

1. **Hard News:** Hard News or straight news is the kind of news that is found in the first page. Most stories in the main section of the news paper and hard news. They are based on tight set of facts, follow a straight forward structure and have no Interpretation apart from what might be provided in the form of quotes from people. Such stories written in the classic inverted pyramid style and usually deal with serious issues like politics, economics, crime, disaster etc.
2. **Soft News:** Soft news or stories are not as crucial as that of the hard news and usually deal with a lighter manner. The soft news usually contains news stories related to entertainment, lifestyle, food, fashion, travel and leisure. Such issues usually do not form the part of the main news spectrum

3. **Features:** Stories that require greater depth and interpretation are presented as features. These are usually found in the special sections or on inside pages and they often carry illustrative elements like photographs, tables, charts and graphs. Practically any topic that requires such treatment can be written in the form of a feature and sometimes specific aspects of hard news is elucidated as a feature article. Some news papers include feature supplements that provide the space and the layout for more creative treatment of topics. Feature writing offers challenge to the writer to explore the given idea in more detail than is possible in a straight news story. Features can be both serious and soft issues.
4. **Editorial:** Journalism is generally considered with facts and analysis based on objective assessment of information. But, there are certain spaces in the newspaper where people can express their opinions on issues and events. Such opinions are also based on facts, arguments built carefully on evidence but there will be certain element of subjectivity. Such opinionated pieces are called as 'Editorials'. In editorials the space is devoted to the newspapers voice on issues of current importance in the form of invited columns Etc.
5. **Some of the other forms of news are as follows:**
    - **Briefs:** They are brief summaries of happening appearing as a list of items along one side if the front page.
    - **Bright:** They are short, humorous or light hearted pieces sometimes carried with photographs.
    - **Sidebar:** It is an item that accompanies a features or a news story and elucidates some aspect of the story such as time line, or a list of milestones or even a short interview profile.
    - **Info graphic:** This is a news item that combines text and numbers in an illustrative and informative manner.

**Source of news**

The depth of information in the story differentiates a good story from a bad one. The wider and deeper the range of facts and views expressed, the better is the analysis and more value it has for the reader. Hence the entire crux of the story depends on the news gathering, as journalism without facts is no different from fiction. Research, fact finding and investigation are the activities that a journalist or reporter has to pursue for gathering information.

**1. Research:** Most news stories begin with some amount of background information collected by research on a particular issue, which gives an understanding of the topic. A reporter start the

research by meeting the experts or people related to the issue or can browse the internet for some preliminary information.

**2. Libraries:** Libraries is one of the best places to get printed information especially on past and old events or incidents. Old news papers can also be accessed in the libraries which can give lot of information on the topic and the angle from which it is covered.

**3. Other Media reports:** Earlier reports on the same topic from other media also give an opportunity for getting valuable information. Searching old media files other than print and Web can pose problems. Old audio and video clips are difficult to be accessed.

**4. Internet:** The information like statistical data, market information, demographic data, product information, research, analysis is available in paid databases in Internet. Great deal of information is also available free for the users. Search on Internet may be richly rewarding or terribly frustrating. There is limitation in the material available on the net as only recent information i.e. from the past 25 years can be accessed through internet.

Brain Brooks et.al classified sources into the following seven different types:

- **Friends:** People, who are inclined to talk, discuss about the topic.
- **Enemies:** People who are against of talking or discussing the issue in general or with a journalist in particular.
- **Losers:** People who are going to lose in some way, if the information is made public.
- **Victims:** people who are affected by the issue and who need to be dealt sensitively and seriously.
- **Experts:** People who have studied the issue and have an educated and expert opinion.
- **Establishment:** The authority, Government, organization, leaders, officials, bureaucrats, officers, groups etc who generally hold the information or are concern with the issue.
- **Actors:** People who are in the centre of the action and who will have impact directly.

**News values**

Decisions about news are governed by a set of priorities that have evolved over the time. These principles are based on what editor's thing "people should know" in order to function as members of society and as citizens of democracy. These priorities are also influenced by what editors think "people want to know". Within this frame work of reader interest and taste there are

certain values for news selection. These news values are in tandem with audience demand or interest. The following some of the most important news values.

1. **Timeliness:** News is something that is just happened and it is related to the newness of facts. The more recent, the event or situation the more likely it is to be news worthy. Editors deciding between two stories that are fairly equal will select the most recent or timely one. Without timeliness a publication will lose readership. An event that has happened a while ago may come into news again because of new development or because something relating to has occurred.
2. **Proximity**: Proximity refers to the closeness or nearness to the event. We pay more attention to what happens around us. If it happens nearby it is usually of more interest than if it happens elsewhere. Proximity or nearness is of two kinds. **Geographic proximity** has to do with the events and issues that happen around us. Hence a newspaper always publishes stories that happen in a local area, which readers are curious to know and interest more the local public. The other form of proximity is the psychological proximity i.e. we are interested in some things and issues even though we are not near to it. Events like disasters, accidents, human stories are of interest to everyone in spite of their geographical distance.
3. **Prominence**: When it comes to news, people are not created equal. The famous, infamous and the eccentric have a special appeal to the public. This element explains why the press follows movie stares, interview politicians, celebrities etc. Famous people make news. Reporters routinely cover the activities of the rich, famous and powerful people of all fields. The term 'Paparazzi' is used to describe photographers who stalk celebrities and is known for its publicity oriented, gossip news papers. Today, media has the power to turn a personality into a celebrity overnight by giving more prominence to their issues or events.
4. **Conflict**: It involves news stories with war, crime, disaster, vendetta which have an element of tension, surprise, suspense and opposing forces. These stories make news because they all have an element of conflict. The famous saying goes 'if it bleeds, it leads'. Conflict is one of the most important values in news. It is often used to peg a story that might peg escape readers interest. A dull and boring story can be made interesting by adding a little spice of conflict into it. Once the reader interest is gained then it becomes easy to give other practical details of the story, which are read by the readers. This type of 'framing' has both positive and negative consequences.

5. **Human - interest**: The stories which make the reader to laugh or cry and emotional can be called as human –interest stories. They cause feelings of sorrow or pity or amazement. Human interest stories deal with qualities like love, hate, compassion, sympathy, curiosity, anger and grief. They are stories about people and events with which the reader can identify. These stories focus on human element behind events that talk about the people's factor in every facet of life that goes beyond the 'hard facts'. The feature supplements of every newspaper contain lot of stories with human angle. Human interest is a value that was not found on the front page news. But this trend is slowly changing in the recent years.
6. **Relevance / Usefulness**: People always want news which they can use i.e. news that helps them to cope up with daily complexities of life. People read the news paper for information regarding important changes in the day to day environment that might have an impact on their own routines and plans. News regarding the price rise, rates of commodities, Government rules and regulations, entertainment details, film timings, weather details etc is published by news paper for their range of applications to different sections of society.
7. **Impact / Consequence**: This element refers to the importance of the event. If what has happened or will happen will have an effect on a large number of people, then it ha more impact or consequence than something that will affect fewer people. Impact / consequence have to do with practical value and are more about the psychological, social, cultural or economic effect. News on budget, price rise, science, health and development are reported due to their vice impact on various consequences.
8. **Magnitude**: Big events make news. Natural disasters like massive earth quakes, floods, drought, terrorist attacks, big sporting events, mega conferences, international awards etc make news due to their magnitude and of common interest to vide range of readers.
9. **Progress**: News about development or progress always makes a good reading whether it is local, national or international. A cure for cancer, completion of new mall, statistics on country's growth, progress of Government policies, programmes in various sectors become news worthy.
10. **Variety**: If the occurrence is unusual, strange or has never happened before, it is likely to be news worthy.

The newsworthiness of a story depends on the strength or intensity of the news elements After gathering material for a news story, we normally find that one or more elements overshadow the others in intensity. These are the **dominant elements.** This is sometimes

referred to as the **news peg.** A news peg is the most significant or interesting fact in a story. It is featured in the first paragraph, and all other facts revolve around it. In other words, it is a foundation around which you construct the facts of your story.

**Definition of Lead**

The opening of a news story or generally the first paragraph is called as the lead. It is usually one paragraph and can be in one or more sentences depending upon the nature and complexity of the news item. The journalist must therefore write a clear, fairly short sentence that reveals the important aspects of the story or the gist of it. The writing of news lead was a direct outcome of the adaptation of the new and changed technology in news paper journalism in 19th century. Because telegraph lines were unreliable and often failed news reporters were transformed into 'headlines', to give the reader the main points of longer stories that followed. The opening paragraphs of the news story called the 'lead' told the most important facts. The rest of the story continued with the other details. If the telegraph line broke during the story, at least the most important part would be getting through to the editor's desk. Thus the inverted pyramid style of reporting was developed. The following are some of the characteristics of a traditional lead.

1. A traditional lead must be tight. An overstuffed first paragraph is not a way to attract the reader.
2. Hard leads are rarely more than one sentence long and almost never longer than two sentences. Leads usually should be less complex and contain simple words. For example: The New York Times on July, 2 1969: 'Men have landed and walked on the moon'. These eight words have captured history.
3. The led must include the most newsworthy elements in the story.
4. The simple formula for writing the lead is to answer '5 'W's and 1'H'.
5. For news stories with a significant background the context of the news is kept in the lead.
6. Among the '5 'W's and 1'H'' the 'what', 'who' and 'Why'' become news leads regularly. The remaining 'W's i.e. 'when' and 'what' rarely dominate the lead except in some extraordinary cases.

A lead normally will answer the '5 'W's and I 'H' as far as possible i.e. who, what, when, where, why and how. Depending on which question is answered first the leads are of the following types

- When the 'who' is featured in the lead, it is called as **'name lead'** Ex: Barack Obama, President of United States is scheduled to visit India in May.
- When the 'what' is featured it is called an '**event lead'**. Ex.: Reducing tensions between the two countries is first priority in the Indo-Pak heads meet to be held at Canada.
- When the 'when' is featured then it is called as **'time lead'**. Ex: Today at 5.00 PM the terrorist group issued a new video from an Afghanistan based Television network.
- When the question 'where' is featured, it is called as **'place lead'**. Ex: The Washington based software company announced its back-off plans from the computer project.
- When the 'why' is featured, it is called a **'cause lead'**. Ex: Because of growing pressures within the party, the Chef Minister announced his resignation.
- When the 'how' is featured, it is called as a **'manner lead'**. Ex: After a decision by the Board of Cricket Control of India, India pulled out from the tournament stating security reasons as the reason.

**<u>Kinds of Leads</u>** –

The lead is the most important part of the story and has to be written carefully. The lead of the story helps in attracting reader's interest and tells the reader the central point of the story without hiding the subject with unnecessary or misleading words and phrases. There are many types of leads. But the most commonly used lead is the summary lead or 'straight lead' and it summarizes the story This type of lead gives the most important information first and deals with hard news so they are also called as 'hard leads'. Hence the lead contains the most news worthy information of the entire story. But today many reporters are increasingly using 'Anecdote', 'Question', 'Quotation', 'Scene Setting', 'Description', leads which provide an interesting information first rather than the important information. Hence such types of leads are called as 'Soft leads' or 'non-traditional leads'. The following are the different types of leads.

1. **The Summary news lead**: Every news story must answer the six questions i.e. who, when, where, why, what and how. However the lead is not the only place to answer all of them. The lead should answer at least one or two questions that are most news worthy and unusual. In news story 'people' and 'what they do' are the most important things and the presentation of these information gives variations in summary leads. They are
    - **The Immediate - identification lead**: It is used when the identities of the major subjects in the story are important and well known.

- **The Delayed - identification lead**: In many stories the names of the main subjects are not as important as what those people did or happened to them. For those stories reporters use leads that withhold complete identification of the people involved until the second or third paragraph.
- **Blind Lead**: Leads that hold back details so the reporter can get to the central point of the article more quickly are called as 'blind leads'. A blind lead does not hold the central point of the story but only that information which does not need immediate reader's attention is withheld.

Summary lead is the most commonly used lead, but today reporters are using many **non-traditional or soft leads or alternate leads**. Sometimes these types of leads run to four to five paragraphs. Usually they have a 'nut paragraph' immediately after the lead. The nut paragraph states the central point of the story and serves the function of a summary news lead. Writing alternate leads requires thought and imagination as well as ability to recognize and convey an interesting idea uniquely. The following are the different kinds of alternate leads:

**1. Buried Lead or Anecdote Lead**: A buried lead is the most common type of lead. It is called as a **delayed lead**. A buried or delayed lead begins with interesting example or anecdote that sets the story theme. Hence this type of lead is also called as anecdote lead. Then a nut paragraph i.e. a third or fourth paragraph summarizes the story and move it from the anecdote to the general issue or the problem.

**2. Multi paragraph lead:** It is written as unit of the thought. The summary lead consists of two or three paragraphs that flow into each other.

**3. Quotation lead**: Sometimes a source or speaker provides quotations that can summarize the entire story, brief and is self explanatory. Such quotes can be used in the first paragraph of the quotation lead. But a quotation lead should be so affective that a reporter should feel that he cannot improve it further.

**4. Question lead**: Questions occasionally make effective leads called as 'question leads'. To be effective the question leads must be brief, simple, specific and provocative. The question lead should contain limited words.

**5. Descriptive lead:** Leads which begin with the descriptive details that paint picture for the reader before moving gradually into the action is called as 'descriptive lead' or 'scene setter'. The description should be colorful and interesting so that it aroused reader's interest. The description should also help summarize the story.

**6. Suspense lead:** Reporters use 'suspense leads' to create suspense and arouse curiosity or raise a question in their minds. By hinting at mysterious developments reporters try to compel the readers to read the story.

**7. Shocking lead:** Shocking leads are used immediately to capture the attention of the reader. It generally includes unusual twist that adds to their effectiveness.

**8. Direct address lead:** Reporters very occasionally use a form of direct address or speak directly to their readers. This type of lead is called as 'direct address lead'.

**9. Phrase leads or Zinger:** Sometimes the lead is started with a phrase that gives a surprise and very effectively in highlights the story. Such type of lead is called as 'Phrase lead or Zinger lead'**.**

**Article:**

A news article discusses current or recent news of either general interest i.e. daily newspapers or of a specific topic i.e. political or trade news magazines, club newsletters, or technology news websites. A news article can include accounts of eyewitnesses to the happening event. An article is a written work published in a print or electronic medium. It may be for the purpose of propagating news, research results, academic analysis, or debate. A news article can include accounts of eyewitnesses to the happening event. It can contain photographs, accounts, statistics, graphs, recollections, interviews, polls, debates on the topic, etc. Headlines can be used to focus the reader's attention on a particular or part of the article. The writer can also give facts and detailed information following answers to general questions like who, what, when, where, why and how.

Quoted references can also be helpful. References to people can also be made through the written accounts of interviews and debates confirming the factuality of the writer's information and the reliability of his source. The writer can use redirection to ensure that the reader keeps reading the article and to draw her attention to other articles. For example, phrases like "Continued on page 3" redirect the reader to a page where the article is continued. While a good conclusion is an important ingredient for newspaper articles, the immediacy of a deadline environment means that copy editing often takes the form of deleting everything past an arbitrary point in the story corresponding to the dictates of available space on a page. Therefore, newspaper reporters are trained to write in inverted pyramid style, with all the most important information in the first paragraph or two. If the less vital details are pushed towards the end of the story, then the potentially destructive impact of draconian copy editing will be minimized.

**Elements of a news article**

- **Headline:** A headline is text above a newspaper article, indicating its topic. The headline catches the attention of the reader and relates well to the topic. Modern headlines are typically written in an abbreviated style omitting many elements of a complete sentence and almost always including a non-copular verb.
- **Byline**: A byline gives the name and often the position of the writer, along with the date.
- **Lead:** The lead (sometimes spelled *lede*) sentence captures the attention of the reader and sums up the focus of the story. The lead also establishes the subject, sets the tone and guides reader into the article. In a news story, the introductory paragraph includes the most important facts and answers the questions: *who*, *what*, *where*, *when*, *why* and *how*. In a featured story, the author may choose to open in any number of ways, often using a narrative hook, possibly one of the following: an anecdote, a shocking or startling statement, a generalization, pure information, a description, a quote, a question or a comparison.
- **Body or running text**: For the news story, details and elaboration are evident in the body or running text of the news story and flow smoothly from the lead. Quotes are used to add interest and support to the story. Most news stories are structured using what is called an inverted pyramid. The *angle* (also called a *hook* or *peg*) is usually the most newsworthy aspect of the story and is specifically highlighted and elaborated upon.[3]

A featured article will follow a format appropriate for its type. Structures for featured articles may include, but are not limited to:

- *Chronological*, where the article may be a narrative of some sort;
- *cause and effect*, where the reasons and results of an event or process are examined;
- *classification*, where items in an article are grouped to help aid understanding;
- *compare and contrast*, where two or more items are examined side-by-side to show similarities and differences;
- *list*, a simple item-by-item run-down of pieces of information;
- *question and answer*, such as an interview with a celebrity etc

**Columns**

Journalism of today finds its most extensive expression through the medium of Column. The writing of a column is an art and an established profession in journalism circles. It is regarded as personal journalism at its best as a columnist communicates individually to the readers.

Normally columnists have by lines and a standard column with a headline. His / Her by line become a trade name and gets associated with type, tone and character of the individual. No journalism has more appeal, a more authoritative influence or a more useful contribution than the column writing.

'Columning' is not a new development. James Franklin wrote many columns from 1721 in 'New England Courant' and later in 'Pennsylvian Gazette'. The 'Federalist Letters' written by Alexander Hamilton, James Madison and Johan Jay under the name 'Publius' in support of the ratification of the constitution published in 'New York Independent Journal' in 1787-1788 are regarded as 'Personal Editorial Columns'

Columnists face the challenge of writing succinctly to a particular space and they must write on deadline. But their writing must never be boring, repetitive. It should be fresh and keep get hooked to the readers interest. Most of the columnists try to write on contemporary issues with an analytical of historical or opinionated background. The steps for writing a column are similar to those writing any opinion piece.

- **Choose a topic of interest to readers**: Write about what is known. Give it a personal touch by adding your experience. Unlike a reporter a columnist may write in first person.
- **Collect facts**: Before writing always do research on the topic and have an understanding of the event.
- **Organize the thoughts**: Here the columnist may differ from the traditional editorial structure. The columnist may find telling a story or personal narrative more effective than the formal ordering of arguments.
- **Revise:** After writing the first draft always revise. Look for your personal voice and your insight to the event.
- **Keep a notebook for ideas**: Columnists always observe, listen, scribble and write.

Column writing is used to inform, influence and entertain. There are great varieties of columns written and published today. They are broadly classified into

- **The Personal editorial or Essay column**: The personal editorial or essay column is an opinion column filled with facts and analysis. The author deals with the topics of the moment or of current interest. Most columnists in this category may be classified as
    - News commentators
    - Political analysts
    - Discursive essayists

- Sports writers
- Advice Commentators

- **Round about - Town department columns**: The round about - town department columns consist of columns which write about gossipy items collected by the columnists for their human interest value. These columns give the 'behind the scenes' glimpses of celebrities or politicians etc.
- **Humor Column**: The Humor column or 'Colyam' is a combination of editorial paragraphs, epigrams, gags, wise remarks, humors and sentimental verses and writing which produce satire on an issue or incident.

**Importance of Columns**

The importance of columns as an integral part of the modern news papers is evident with their presence in the editorial page and in other important pages. The following are some of the important issues related to column writing.

- **Column promotes the intimacy with the reader**: The column answer the need for a closer personal contact between publication, news paper and the reader. The column is one of the best methods to address the reader directly.
- **Columns entertain the readers**: The main purpose of the columns is to present an issue with divergent opinions. But it has to be in an entertaining and informative mode. Once the column ceases to entertain a reader it looses its specialty.
- **Columns must have a new act every day**: The column must be fresh every time it appears. The theme, tone and mode of presentation should be different every time. The issue should be relevant and be people oriented.
- **Columns perform serious function**: Columnist today, particularly news commentators, political analysts etc. do perform serious function by stimulating public discussion of affairs of the day. Their views and comments stir a debate in the public forum and result in forming of a peer pressure of likeminded readers.
- **Columnists need special qualifications**: The most essential quality of a columnist is 'individuality'. Beyond that columnists should have keen sense of observation, an aptitude of analysis and synthesis and experience in public affairs and this must be coupled with writing skills. Originality, creativity, ability and good background knowledge are essential for a columnist. He should also have natural aptitude, varied experiences and good imagination.

- **Resourcefulness in searching the subject matter is needed**: A columnist needs to have skill in eliciting facts from individual incidents or instances. He should be natural collector of information which can be used in his columns.

**Important Columnists of India**

- **Political Columnists**: Sudheendra Kulkarni, Tavleen Singh, Shekhar Gupta, Khushwanth Singh, Bhanu Pratap Mehta, M.J.Akhbar, Swapan Das Guptha, Kuldip Nayyar, Rajdeep Sardesai.
- **Financial Columnists**: M.K.Venu, S.Bhattacharya, Meghanand Desai, Vikram.S.Mehta, Swaminathan Aiyyer, Sucheta Dalal.
- **Internal Affairs**: C.Raja Mohan, Shashi Tharoor.
- **Sports Columns**: Suresh Menon, Sanjay Manjarekar, Sunil Gavaskar, Ravi Shashtri, Hrasha Bhogle, Diana Edilgi, Kapil Dev.
- **Contemporary issues**: Jag Suraiyya, Bachi Karkaria, Shobha De, Soli Sorabji.
- **Media issues**: Sevanti Nenan, Mrinal Sen, Barkha Dutt.

**Feature**

Feature writing is the craft and capturing and chronicling people's life and experience. Feature writers dig for facts and try to capture in detail the emotions of the reader and try to entice them. The line between the news and feature writing blurs in the 21st century journalism. Good feature writing must bring an expanded set of skills to the task of news gathering and writing.

- Good feature writing is impossible without reporting and precise communication. Feature writing needs good research as more details will be needed for good analysis. Feature writing involves more than gathering information i.e. it entails gathering of scenes and selective details that build them. Feature writing needs good quotes and snappy anecdotes.
- The news story stops after presentation of facts and ideas, but the feature story goes further. It explores the background, the birth and growth of event. It conveys to the reader what the writer or a person thinks about the idea or event. It has greater appeal to writer's imagination.
- Feature story is not a recitation or repetition of facts, but rather than a skilful presentation of facts along with associated ideas in a human perspective.
- Feature impacts the readers beyond the realm of the usual news story and appeals human emotions like curiosity, sympathy, skepticism, humor, consternation and amazement etc.

- A feature story apart from giving the facts goes beyond those facts by simplifying them with study, research, interviews and tries to entertain the readers.
- Feature story is a detailed presentation of an interesting timely, seasonal subject in a popular form with a purpose or entertaining readers.

**Characteristics of feature stories**

The following are the important characteristics of feature stories.

- Feature stories must be factual and based on proof and real events. In addition to that feature stories throw new light on different aspects. It tries to explore new background probes of an in depth idea or an event
- Language of a feature stories must be simple with precise words direct sentences, concise short and logically ordered paragraphs.
- Feature stories use 'Non-traditional leads' like zingers, anecdotes, scene setter and quotation leads.
- Feature stories are not written in 'Inverted pyramid style'. These stories are built up with necessary details and conclude with a climax.
- Feature stories make the readers to feel the story. A good feature evokes images that refer to the sensory experiences of readers, bringing the readers virtually to the scene.
- Features discuss the ideas in terms of public and organization in terms of members.
- Feature writing can select different tones touching various human emotions i.e. less serious, humor, drama, emotional, sentimental etc
- A feature writer reacts to the people, situation, events and places and provides good explanatory matter to the story.

**Difference between a news story and a feature story:**

| Sl.No | News Story | Feature Story |
|---|---|---|
| 1 | News is an objective and factual account of events**.** | Feature goes much beyond news. It gives a new dimension to the news. It examines and throws new light on different aspects of news. |
| 2 | Its main purpose is to inform, educate and enlighten the readers. | Its purpose is to inform, entertain and also arouse curiosity, sympathy, humor and other feelings among readers and guides the readers. |
| 3 | The reporter evaluates important news elements and information and places it in the lead. | A feature writer reacts to the people, situations, events, places and on the background and explanatory matter of the story. |

| | | |
|---|---|---|
| 4 | News story deals with recent and current events. | A feature need not be a current subject. |
| 5 | Brevity is the soul of news writing. News story has no place for background or subsidiary material. | There is relatively more freedom to a feature writer. He can to some extent adjust length to his requirements. |
| 6 | Proximity is an important issue in news story. | Feature writer do not have any restrictions of geographical area. |
| 7 | News story is written in an Inverted pyramid style with a summary format. | Features are written in a different style. Features contain a more colorful, entertaining and explanatory style. |
| 8 | Traditional leads are used in the news story. | Non-traditional leads like zinger, anecdote and scene setting are used in feature writing. |
| 9 | News story is limited to a single time and place. It is not always a complete story in itself. | The feature on the other hand is a self sufficient and complete story. |
| 10 | News stories are written in third person with attribution. | Features can be written in first, second or third person. |

**Editorial**

Editorials are meant to influence public opinion, promote critical thinking and sometimes cause people to take action on an issue. In essence an editorial is an opinionated news story.

**Four types of Editorials**

- **Explain or interpret**: Editors often choose these editorials to explain the way the news paper has covered a sensitive or controversial subject.
- **Criticize**: The editorials constructively criticize actions, decisions or situations while providing solutions to the problem identified. Immediate purpose is to get readers to see the problems, not the solution.
- **Persuade**: Editorials of persuasion aim to immediately see the solution, not the problem. From the first paragraph, readers will be encouraged to take a specific, positive action. Political endorsements are good examples of editorials of persuasion.
- **Praise**: Sometimes editorials comment on people and organizations for something done well or executed.

For writing editorials certain kind of preparation and experience is necessary. The following is the procedure to be adopted for a journalist to write an editorial.

- **Find a topic**: A brainstorm on the events which has caught the reader's eye, regionally, nationally and internationally is necessary. The topic of the editorial must be relevant and must be related to an issue of some recent happening.

- **Research**: Professional editorial writers do lot of research before writing the editorial. Computer assisted research, personal interviews, news articles, archives, library documents and other sources are referred to get an adequate background on the subject. The acquisition of knowledge on a particular issue or topic will give clarity of thought and action in the editorial stance taken.
- **Thesis**: The writers of editorials need to take a reasonable approach and deal an issue on hand with a more circumstantial and logical approach. The editorial should be specific and should contain accurate examples and references rather than a vague or passing comment.

The following are some of the essential elements to be kept in mind while writing an editorial.

- **Catch attention**: The editorial should begin with a general statement, which does not indicate the writers stand or controversy.
- **Commit**: The lead should flow naturally into the thesis or the stance taken by the editorial.
- **Concede**: After stating the theses recognize the strongest opposing argument.
- **Counter**: Switch now into a strong argument favouring the thesis.
- **Convince:** Build on your argument and make it stronger by stating facts and enough examples.
- **Clinch**: Save the strongest argument for the last. This discourages rebuttal and leaves the reader with something convincing to ponder.
- **Commit again**: Using different restate your thesis.
- **Cap it off**: Leave the reader with a little something extra i.e. a vision of the future, a revisit to the lead or a call for action etc.

**Human interest stories**

People are interested in other human beings. They are eager to know million different things that make us society of human beings. The human issues range from individualistic, heroic, and innovative to absurd and heart breaking. People like to read about achievements, failures, unusual coincidences, memorable moments and ordinary people dealing with extraordinary situations. These stories focus on human element behind events that talk about people's factor in business, sports or in any fact of life. Such stories depicting an individual angle which interests others are called as 'human interest stories'.

Human interest features are a kind of 'slice of life' stories that tell about the interesting circumstances in people's lives. These stories focus on individual and go beyond 'hard facts'. Any major events always have a human interest angle attached to it. These stories put a human face on

the issue and interpret the numbers, facts in terms of how they affect people in every day real life. The stories find human angle that touches people and has an impact on common people and makes them laugh, wonder or think.

Human interest can be written as hard news, soft news or as features, but these stories need a different approach. Human interest stories can be written on any individual in a group provided the reporter has a new approach and tells something interesting about him, his occupation or his habits etc. The emphasis on these features is on unique views of life and unusual occupations. Human interest stories very often do not find space in the front page, which normally is restricted to hard news. But the trend is changing fast and with the changing reader's tastes, reader's editors are placing the human interest stories in front page as well and carrying human interest stories along with the issue based stories.

**Photos:**

Most print media use a combination of words and pictures to tell the news, but some only use words. If you have ever seen a newspaper with no pictures, you will know that it does not look attractive; it does not make you want to read it. It looks as though it will be hard work, and readers are therefore put off. It is also limited in its ability to tell the news accurately. When we talk about "pictures", we are usually talking about photographs, but there are other kinds of pictures, too. Good drawings, paintings and other graphic work also work well as news pictures. There are three main reasons why newspapers need news pictures.

- **To brighten the page:** A page without a picture is just a slab of grey text. It looks boring and many people will not bother to read what is written on it. That is a pity if some of those stories are well researched and well written, but it is true. The readers who pay money for a newspaper expect their job to be made easy for them. They expect the news to have been sorted out into big stories and little stories, to have been written clearly, and to be presented in a way which is easy to read. Newspapers without pictures do not make the news easy to read. They make life hard for the readers. The newspaper's journalists are not doing their job properly.
- **To tell the news** : News is something which is new, unusual, interesting, significant and about people. It is obvious that **new**, **unusual**, **interesting** and **significant** things **about people** can be communicated by pictures as well as by words. Not all stories will be ideal for pictures. Some will be told more easily in words than in pictures, while other stories may be told with one picture more easily and more clearly than in many words. There is an

old saying in English that "one picture is worth a thousand words". That can be true, but only if it is the kind of story which is suitable to be told by a picture, and only if it is a good picture. We shall look in a moment at what makes a good news picture. Pictures can sometimes tell the news just by themselves, with a caption to say who the people are and where the event is taking place. At other times, the picture may go with a story, to work as a team with the words. In either case, a news picture must always leave the reader knowing more than he did before. It must carry information.

- **To show what it looks like**: Only a very gifted writer can use words in a way which lets the reader visualize exactly what a scene is like. Not every reporter can write as well as that. A picture can let the reader see what a person, or a place, or a building, or an event looks like.

Good news pictures need three qualities:

- to look alive and exciting
- to have a relevant context
- to be meaningful

**Cartoons:**

Cartoon is a simple drawing showing the features of its subjects in a humorously exaggerated way, especially a satirical one in a newspaper or magazine. Cartoons make an integral part of newspapers, conveying messages or expressing public opinion immaculately. They are also considered as the pictorial overture or introduction to any key event or personality and the readers love them. There are various types of cartoons:

**Pocket cartoon:** It is a single-column cartoon having a fixed place on the first page of newspapers. Pocket cartoons deal with something related to the life of common people. They may be compassionate, humorous, or satirical. Such types of cartoons usually contain a single idea or perception. They convey to the readers an added message or information that is not provided by the articles or news stories.

**Editorial cartoon:** It deals with contemporary political developments or events. Political cartoons are traditionally three-column cartoons. They are not always humorous, but rather more critical or sarcastic. Usually, such cartoons appear on page 1, depending on the significance or impact of the event.

**Strip cartoon:** They are comic strips that are used to regale the readers and make the newspaper more appealing and attractive to the common readers, especially the younger generation. They give social messages too

**Purpose of cartoons**

In most cases the purpose of newspaper cartoons is to add humor and sarcasm, hitting an individual or event above or below the belt often in an abysmal manner. Almost every cartoon has a unique character. Cartoons are recognized more by the lines and caricatures rather than by the name of the cartoonist. Most pictures comprise a caption that is apt and relevant to the sketch. Cartoons are also considered as the lighter side of editorial opinion, not in words but through sketches and lines. They are a kind of running commentary on social changes, mistakes, failures, success, accomplishments, and major contemporary events. Cartoonists always pick up news subjects, related to the present on a day-to-day basis. Cartoonists fear none while presenting their opinion on any event or individual.

## UNIT- 2

### Specialized reporting - Crime Reporting:

Crime reporting teaches some of the essential techniques of journalism. You learn how to dig for a story, how to follow leads, how to interview people to extract information and how to write crisp, clear, interesting stories under pressure of a deadline. In small newspapers, radio and television stations, general reporters cover crime stories, while in bigger organisations there may be a specialist crime reporter or team of reporters who cover nothing else but crime. Crime reporting covers all aspects of law-breaking - the police, the criminals and the victims.

### Why report crime?

Crime reporting has long been a central part of news coverage in free press societies, because crime stories are usually newsworthy. There are several reasons why you should report crime and why people want to read about or listen to stories of crime:

- Readers or listeners often want an explanation of why crimes happen. They ask: "Could it happen to me?" They may want to know so that they can prevent a similar thing happening to themselves.
- Your readers and listeners need to know how laws are broken, and how people who break laws are caught and punished. This helps them understand what laws are and what the penalties for breaking them are.
- Most people obey the law, so crime stories are about unusual events - one of the criteria for news.
- Some people are interested in the way criminals get something without much effort. For example, although a gang of crooks may spend weeks or months planning a robbery to net them $100,000, it might take ordinary workers many years of effort to earn that much legally. Some crimes may fascinate people who obey the laws but who wonder what it might be like to break them.
- Criminals take risks and face punishment if they are caught. This may make them fascinating to read about.

### Types of crime

There are many types of crimes, criminals and victims. There are serious crimes and small offences. There are professional criminals and ordinary people who occasionally break the law. There are crimes which have obvious victims and there are the so-called victim-less crimes. It is not always the major crimes which make the most interesting news. Of course, your readers or

listeners will be interested to know about an armed hold-up which netted a million dollars. But they may also be interested in the story of a sneak thief who broke into a poor widow's home and killed her much-loved cat. As with all news, crime stories should be new, unusual, interesting, significant and about people.

- **New** - Crime reporting has to be as up-to-date as possible. This is partly because some crimes depend for their news value on being current. For example, a story about a violent killer on the loose will lose much of its impact (and its value in alerting your audience to danger once he is captured. Also, because in some societies crimes are a regular feature of life, todays break-and-enter quickly replaces yesterdays break-and-enter in the public's attention. Crime stories get stale quickly.
- **Unusual** - Murders or armed robbery are not every day events in most communities, and so have news value. However, less serious crime can also have unusual elements. Someone who sneaks on to a bus without paying or throws rubbish on the street may be breaking the law, but it is not very newsworthy. However, if a person stows away on an international airliner, that free flight becomes newsworthy. If the rubbish someone dumps fills three garbage trucks, that too is newsworthy.
- **Interesting or significant** - As we have said, most law-abiding citizens are interested in people who break the law in big or unusual ways. Crimes which by themselves are ordinary can become significant when placed in context. For example, the car theft can be one of hundreds in a city, but it may become significant if it is the hundredth car to be stolen this year.
- **About people** - Crimes involve people, as criminals and victims. The so-called victim-less crime does not really exist.

Most stories about crimes will have some news value. Exactly how much depends on several factors, which you will have to consider. Seriousness: We usually assume that more serious crimes are more newsworthy. A murder is more important than an armed assault, which is more serious than a break-and-enter, which is more serious than a parking offence. In terms of money, the bigger the amount stolen, the more important the crime. Remember, however, that money has a different value to different people. The theft of $100 will be more newsworthy when it is money taken from a poor widow that when it is stolen from a rich businessman.

- **Unusual nature of the crime**: The more unusual crimes are generally more newsworthy. A break-and-enter at a school may be more newsworthy than a break-in at a home, but a burglary at a crocodile farm may be more newsworthy still.
- **Size of the community**: Crimes are usually viewed as more important by smaller communities. If you are a journalist on a big city newspaper, an ordinary car theft may not be newsworthy at all. If you are a journalist in a small community, a car theft may be the biggest news of the week. Everybody may know the owner - they may all know the car. It is a sad fact that quite horrible crimes do not make the news in a big city because they are so common and because the chances are small of readers or listeners knowing the victims or caring about them.

Crimes become more newsworthy if they involve people who are themselves newsworthy. An ordinary person attacked on the street may not be big news, but if that person is a local chief, that will be very newsworthy. A fraud case becomes more important when it involves a leading politician. A robbery becomes bigger news when police reveal that the robber was an escaped prisoner with convictions for murder and rape. It is generally true that a crime becomes more newsworthy if there is a strong chance of it happening again - usually because the criminal is known and likely to strike again.

**Budget Reporting**

The 'Annual Financial Statement', laid before both the Houses of Parliament constitutes the Budget of the Union Government and annual financial statement laid in the both houses of Assembly constitutes the Budget of State Government. This statement takes into account a period of one financial year. The financial year commences in India on 1st April each year. The statement embodies the estimated receipts and expenditure of the Government of India for the financial year.

With the emergence of Welfare State, Governments have come to look after virtually every sphere of human life. They have to perform manifold functions from maintaining law and order, protecting their territories to implementation of plans for economic and social betterment. Besides, they provide a variety of social services like education, health, employment and housing to the people. Government requires adequate resources to discharge these functions effectively. The necessary funds are mobilized from the country's resources by way of taxes both direct and indirect, loans both long-term and short-term, to meet the Governmental expenditure. In India, the

principal sources of revenue are customs and excise duties and income-tax on individuals and companies.

**Need for Budget**

Since there is a limit to the resources, the need for proper budgeting arises. Budget allocates scarce resources to various Governmental activities. Every item of expenditure has to be well thought out and total outlay worked out for a specific period. Prudent spending is essential for the stability of a Government and proper earnings are a pre-requisite to wise spending. Hence, planned expenditure and accurate foresight of earnings are essential for sound Governmental finance. Preparation of Budget for the approval of the Legislative is a Constitutional obligation of the Government both at the Center and the State levels. Legislative prerogative over taxation, legislative control over expenditure and executive initiative in financial matters are some of the fundamental principles of the system of Parliamentary financial control.

There are specific provisions in the Constitution of India incorporating these tenets. For example, article 265 provides that 'no tax shall be levied or collected expect by authority of law'; no expenditure can be incurred expect with the authorization of the Legislature (article 266); and President shall, in respect of every financial year, cause to be laid before Parliament, Annual Financial Statement (article112). These provisions of our Constitution make the Government accountable to Parliament.

The Budget of the Indian Railways is presented separately to Parliament and dealt with separately, although the receipts and expenditure of Railways form part of the Consolidated Fund of India and the figures relating to them are included in the 'Annual Financial Statement'. The general Budget is presented to Parliament on such date as is fixed by the President. The Budget speech of the Finance Minister is usually in two parts. Part A deals with general economic survey of the country while Part B relates to taxation proposals. General Budget was earlier being presented at 5 P.M. on the last working day of February, but since 1999 the General Budget is being presented at 11 A.M. on the last working day of February, i.e. about a month before the commencement of the financial year expect in the year when General Elections to Lok Sabha are held. In an election year, Budget many be presented twice-first to secure Vote on Account for a few months and later in full. The General Budget is presented in Lok Sabha by the Minister of Finance. He makes a speech introducing the Budget and it is only in the concluding part of his speech that the proposals for fresh taxation or for variations in the existing taxes are disclosed by him. The

'Annual Financial Statement' is laid on the Table of Rajya Sabha at the conclusion of the speech of the Finance Minister in Lok Sabha.

**Guidelines for covering budget**

- Budget reporters in the State as well as Centre need to be in constant touch with the ministry of Finance of respective Governments as and when budget exercises get started.
- The Budget speech is filled with technical and budgetary terms. Hence a reporter must be well aware with the budgetary terminology.
- Budget is all about figures, statistics and comparisons. Hence a reporter has to be sound in remembering figures, percentages and bit of experience in Economics and Maths will help.
- The budget has to be presented in simple and most uncomplicated style to the general reader. The highlights and major allocations can be given graphically than writing in text as it will be more easily understood.
- General public will be anxious to know things like impact on basic necessities, measures taken to control price rise, Income tax, Value added tax exemptions, rates of commodities, consumer items etc. It will be well understood if presented in a more graphic oriented manner.
- As the budget is prepared in stages it is essential for the reporter to start the reporting exercise along with the budget preparations. Special writes ups can be prepared on the Revenue collections, expenditure items of the particular year in respect to various departments.
- The budget deficit is always a debatable and much discussed matter. Hence it is essential for the reporter to concentrate on deficit and the manner in which it is narrowed.
- The allocations for the ongoing programmes as well as the new programmes can be studied discussed and analyzed.
- A reporter has to be vigilant throughout the year and collect the information regarding any new schemes announced by the State or Central Government. By doing this he can analyze the allocations for each programmes depending on the number of beneficiaries.
- A track of previous budget is necessary as it will help in giving comparative accounts of each sector.
- The Economic survey presented earlier than the budget reveals the financial and economic status of the country. Hence it should be followed carefully and reported.

- The budget is for the people and public pulse, opinion, their demands needs to be conveyed to the respective Governments. Hence special reports on what people want as propriety in the budget can be reported in special stories.
- Direct articles giving individual opinion of various classes from all income groups can be presented.

**Sports Reporting**

Sports journalism is a form of journalism that reports on sports topics and events. The sports department in the newspapers has been mockingly called the toy department as sports journalism was not concerned as a 'serious' topic of the news desk. But before the age of ESPN, the internet, and instant replay, it was the sports reporter in the stands writing up the game for the local paper, and, the radio journalist covering it live on radio, who made fans feel like they were right there, cheering on their favorite team, game after game, boll after boll.

Today sports coverage has grown in importance as sport has grown in wealth, power and influence. Sports journalism is an essential element of any news media organization. There are separate newspapers and magazines related to sports journalism like sports illustrated, Sports Star Etc. Today every newspaper has a dedicated sports page entirely to sports reporting. These are international newspapers such as L'Equipe in France, La Gazzetta dello sport in Italy, Marca in Spain, and the Sporting Life in Britain American magazines such as Sports Illustrated and the Sporting News, all-sports talk radio stations, and television networks such as Euro sport, ESPN and The Sports Network (TSN). Neo sports, Ten sports. STAR Sports Etc. Today Sports like Cricket, Tennis, American football, ice hockey, basketball and baseball are the most popular games due to the media coverage and has an excellent commercial relationship in the form of merchandise and advertising.

- In professional and some collegiate sports, it is common practice to allow properly accredited sports reporters into locker rooms for interviews with players and coaching staff after games, while the sports teams provide extensive information support.
- As with reporters on other news beats, sports journalism should involve investigating the story, rather than simply relying on press releases and prepared statements from the sports team, coaching staff, or players. Sports journalists are expected to verify facts given to them by the athletes, teams, leagues, or organizations they are covering.
- Sportswriters regularly face more deadline pressure than other reporters because sporting events tend to occur late in the day and closer to the deadlines many

organizations must observe. Yet they are expected to use the same tools as news journalists, and to uphold the same professional and ethical standards. They must take care not to show bias for any team.

- Since the 1990s, the growing importance of sport, its impact as a global business and the huge amounts of money involved in the staging of events such as the Olympic Games and football World Cups, has also attracted the attention of investigative journalists. These journalists played a key role in breaking some of the most sensational stories like use of banned drugs in sports, racial discrimination in sports, match fixing in cricket etc.
- Major League Baseball gave print journalists a special role in its games. They were named official scores and kept statistics that were considered part of the official record of the league. Active sportswriters were removed from this role in 1980. Although their statistical judgment calls could not affect the outcome of a game in progress, the awarding of errors and wins/saves were seen as powerful influence on pitching staff selections and play lists when coach decisions seemed unusual.
- In the same way most if the retried sports person are now part of the media in the form of specialist, commentators, observes etc. This trend is much observed in games like Cricket where the entire commentary profession is now filled with retired professionals.
- Sports stories occasionally transcend the games themselves and take on socio political significance: Jackie Robinson breaking the color barrier in baseball is an example of this. Modern controversies regarding the hyper-compensation of top athletes, the use of anabolic steroids and other, banned performance enhancing drugs, and the cost local and national governments to build sports venues and related infrastructure, especially for Olympic Games, also demonstrate how sports can intrude on to the news pages.
- Increasingly, sports journalists have turned on long-form writing, producing popular books on a range of sporting topics, including biographies, history and investigations.

**Guidelines for writing sports stories**

To report well on a sport, you must know the sport thoroughly. Check your facts: Sports involve many people, stats and technicalities. The following are some of the guidelines for writing good sports stories.

- **Have a strong lead:** Like any article, the sports article must start with a strong lead, one that encapsulates the available information on "who, what, where, when, why and how." This is basic for how to write articles of any topic. A good lead will get the reader's attention with a strong and but concise summary of the story to follow. Also, note that a lead always places emphasis on an important or interesting aspect of the story. The article would tell the story of the game, but the lead would introduce the game with the most important or interesting fact about it
- **Write clearly and concisely:** Since sports articles can be written in a "literary non-fiction:" lengthy, poetic, story. But most of the stories in daily sports section of the newspaper are concisely written. Sports articles include context and metaphor and technical sports terms, but they're also to-the-point and generally stick to basic vocabulary. Being specific is one of the more basic tips for article writing.
- **Know the context:** Writing a sports article requires a basic working knowledge of the universe on which you're reporting. This may mean not only knowing all about the current players, coaches and standings but knowing some history, as well. This may be requiring some research and study. A sports journalist also has to know about the sport itself including rules, history, current controversies and other information. A sports journalist may need more in-depth knowledge than a casual fan. Many sports teams have press department that will provide journalists with extensive information about their organizations including current players and team history.
- **Give the major play by play:** Obviously, there are many important incidents, happenings in any match or game, and no article will include them all. Your job as a reporter is to report the basic chronology - beginning, middle, and end, of the sports event - with details about the major moments: turning points, big plays, big mistakes, momentum builders. In other words, you're providing something of a verbal highlight reel. This will mean you need to pay careful attention to 'who does what and when' during the event. You then must figure out which moments to include and which to leave out. You have the advantage of hindsight when keeping these events together. A thorough understanding of the game and how it's played will also be important when you are evaluating what events are the key. You will also need to connect the events smoothly as you help your audience to create a mental picture of what happened.

- **Use quotes as possible:** Most sports news articles include quotes from people involved. Most professional sports teams hold post-game news conferences or speak to reporters after the game which gives you good information for writing sports articles. Asking good questions and collecting answers from players and coaches is an important part of writing a sports article.
- **Check your facts:** Also like regular news articles, sports news articles should correctly present the facts. Sporting events usually generate a lot of statistics. They can also be very fast-paced, involve tens of different players and follow rules you might need to double-check if you're going to reference them. A clean, concise sports article will have its facts straight.

**Science reporting.**

Science reporting is a branch of journalism that uses the art of reporting to convey information about science topics to a public forum. A science journalist is a journalist who specializes in writing about science topics, and thus practices science journalism, or popular science. Science journalism conveys reporting about science to the public. The field typically involves interactions between scientists, journalists, and the public. Science values detail, precision, the impersonal, the technical, the lasting, facts, numbers and being right. Journalism values brevity, approximation, the personal, the colloquial, the immediate, stories, words and being right now. Hence the two fields have got antagonistic characters.

The beginnings of science journalism in India languages could be traced back to the articles published in the monthly Digdarshan from Srirampur (Hooghly), West Bengal in April 1888 in Hindi, Bengali and English. These articles dealt with topics like flying in a balloon, steam boat, etc. Other newspapers also started giving scientific information. Science communication activities could not develop sufficiently during nineteenth century; however, a number of publications were brought out in different Indian languages and on various scientific subjects. The science communication was mainly limited to publications of books and scientific journals, except a few popular science articles on latest developments.

In the beginning of the twentieth century, new trends emerged. Science congresses, scientific and industrial exhibitions, seminars, industrial and technological museums, public lectures, popular science magazines, etc. were few among the newer developments towards science communication. But the pace of these activities remained low and no significant effort was

done to popularize science among the people and inculcate a scientific temper amongst them. The same pattern more or less continued till independence.

After Independence, science popularization was being taken up at various levels. The Scientific Policy Resolution of March 4, 1958 has been a guiding factor for development of science and technology in the country. It was the first Prime Minister of India, Pt. Jawahar Lal Nehru, who gave an impetus to scientific pursuits and development of scientific outlook. The Independent India witnessed a rapid growth in the efforts of science communication and popularization. With a view to integrate, coordinate, catalyze and support the efforts of science communication and science popularization in the country, the Government of India established the National Council for Science and Technology Communication (NCSTC) in 1982 as an apex body, which puts more concerted efforts in this direction.

Professional scientific writing differs from the popular science writing in news papers. Professional scientists write about outline research methodology and findings, describe what they observe, critique and respond to their colleagues, and raise questions that encourage further scientific investigations. But their audience is limited to their colleagues, peer and other scientific community. But Science writing from this perspective is different from the writing needed for the news papers where the audience is not professionals and the information has to be toned down in style, character and more of the research outcome has to be presented in the form of application to the society or social life in particular

Popular science writing for masses has to address larger public about the science and technology that shape modern life, as well as broader social issue like nuclear power safety, bioethics, are the environment. It should be on that science which can be writing newsstand magazines, newspapers, popular books, televisions or radios programmes and has a profound influence on the society. This kind of writing has different goals and different audiences that the scientific community's writing, popular science writers must entertain persuade report, describe, and communicate clearly. Part of the difficulty that science journalists and popular science writers face is that the audience's knowledge base is much more diverse, and perhaps limited, than that of the scientific community. Hence popular science writers have to keep explaining things in a subtle manner in a simple language from the significance of scientific facts to the methods by which they can become applicable and simultaneously hold the reader's attention. Science reporting is done in various forms in the media.

- Scientific investigations in progress, research finding and their implications to society.

- New breakthrough technologies in the field of agriculture, space, medicine, health and industrial process.
- Basics science applications to society.
- Any form of writing that encourages spirit of enquiry and research on scientific principles.
- Reports exposing the myths and beliefs in the society become part of scientific news.

Science popularizing is done through 18 regional languages, to penetrate into local populace effectively. Selection of target audience has greatest significance. Our science communication efforts or aimed at various target group, such as, common man, children, students, farmers, women, workers or specialists, etc. various forms for presentation are being used to making science communication more interesting and enjoyable, such as science news, report, article, feature, story, play, poem, interview, discussions, lecture, documentary, docu-drama, scientoon (science+cartoon), satire, etc. The idea is to provide people already interested in science with great insight into how research works

Nav Bharat Times, a leading Hindi daily, started a science column in the year 1948. Today unfortunately, in most of the dailies, weeklies and monthlies we do not see much coverage of science and technology. It is desirably and imperative to introduce science columns in newspapers/magazines. It is desirable to have science correspondents with all newspapers. This would, in due course, help evolve a policy on editing and reporting of contemporary topics on science and technology in different modes of presentation in the media.

One of the reasons for the science reporting to have remained under developed in our country is due to the fact that except for a few dry and drab articles, technical information/news, hardly any other modes of science writing were employed. May be this is why common man could not come to terms with science and technology. If science presented in the form of stories, poems etc, common man not only would be able to read but, also would understand appreciate science. Poetry is a powerful medium for communication, which could be used for communicating science to children and neo-literates. Explaining science in the form of poetry is not as difficult as it may seem. Science drama and skits are also underutilized. Only rarely one comes across science drama and skits in print medium

Upcoming science writers me to give of try to communicating science through theses unconventional modes. Humor and satire are other area still untreated in science reporting. In fact, these modes have not been exploited in science communication at all! Newspapers/ magazines do publish debates on political and science issues, but rarely a science reporter or an

editor has shown interest in publishing debates on any scientific issues. Today, there exit several possibilities of publishing debates on a correct issues based on interviews with scientist and articles based on the same. Apparently, the readers show a keen interest in scientific topics is presented in such an exciting manner. The use of the various modes in science reporting would generate interest in science and can also inculcate scientific attitude into them.

The aim of a science journalist is to render the very detailed, specific, and often jargon-laden information produced by scientists into a form that non-scientists can understand and appreciate, while still communicating the information accurately.

- Science journalists often **do not have training in the scientific disciplines** that they cover. Some have earned a degree in a scientific field before becoming journalists or exhibited talent in writing about science subjects.
- With budget cuts at major newspapers and other media, there are **fewer working science journalists** than before.
- Science journalists regularly come under criticism for **falsely reporting scientific stories**. Very often, such as with climate change, this leaves the public with the impression that disagreement within the scientific community is much greater than it actually is.
- Science is based on experimental evidence, testing and disputation is a normal activity. Science journalism finds itself under a critical eye due to the fact that it combines the necessary tasks of a journalist along with the investigative process of a scientist.
- Science is communication of how the world works. Journalists who become scientists are more likely to find their information based on what's new in the topic field. Journalists without a background and expertise in the topic they write about have a more limited amount of knowledge to communicate.
- One area in which science journalists seem to support varying sides of an issue is in risk communication. Science journalists may choose to highlight the amount of risk that studies have uncovered while others focus more on the benefits depending on audience and framing.

**Environment Reporting**

Environmental issues represent a very low proportion of all stories covered by newspapers and television. These stories also suffer content limitations, typically providing little qualification or support from scientific data, making **vague references to the scientific communication, and emphasizing sensationalist aspects and near-term and personal consequences.**

- No coverage of environmental issues in the popular media is likely to be a straightforward treatment of the "facts," due to many practical constraints, some of which are inherent in the structure and values of modern news reporting. Among these practical influences on media portrayals of climate change are
    - Misreporting or miscommunication
    - Public misunderstanding, low levels of journalistic training
    - Media time and space constraints (especially in television)
    - Commercial pressures on media to be more profitable
    - Event orientation
    - "Technophobia" of many reporters and their editors
    - Confusion over complex scientific terminology
    - Focus on "newsworthy" drama and novelty rather than the Underlying environmental issue
    - Dependence on official sources
- The media's portrayal of environmental issues is too often in **reaction to disastrous events.** As a result, the general public receives information of environmental threats after the fact, so that people are unable to play an influential and proactive role in the political process, particularly with problems relating to public health. Therefore, it is vital that environment policies and practices based on strong scientific information as opposed to the seemingly haphazard and sometimes contradictory information as communicated to the general public through the mass media.
- Media coverage of environmental issues is often a **compromise between scientific evidence and economic interests**. Almost all the newspapers rely heavily on the economic support of their advertisers; it is in their financial interest not to publish articles that conflict with the viewpoints of their primary financial contributors. For example, a recent study conducted on the media coverage of global warming determined that despite scientific evidence identifying global warming as a pressing environmental problem, the validity of this scientific theory continues to be discussed in the media, though rarely among scientists in the field. The authors of the study analyzed the content of 100 articles about the greenhouse effect and determined that the perspectives of big business, in this case the fossil fuel interests comprising the coal, oil, and automobile industries, were discussed at length in nearly all articles, while the scientific viewpoint generally reported to

the public was that of the 1 percent of scientific experts who dispute the claim that global warming is real. Unfortunately, this phenomenon is not limited to global warming but is a common feature of the coverage controversial environmental issues get, especially those issues with economic implications.

- The **media doesn't always provide balanced information**. As a result, the public is confused about the pollution issues. In addition, using mass media for environmental risk communication can be problematic because newspapers are not necessarily sources of balanced information. Because of time pressures, journalists work on the quick turnaround of stories and spend minimal time reviewing technical documents. Instead they rely on their key informants, which can potentially bias their interpretation of the scientific data.

Environmental issues such as global warming, pollution and wildlife preservation have been a concern for the scientific community for decades. However, recent research has shown that **public awareness of such issues is increasing**,. The proportion of Americans who say that global warming is either personally "extremely important" or "very important" increasing from 27 percent in 1997 to 52 percent in 2007. **This can be partially attributed to the changes in the way news media has portrayed these issues, along with other media and real-world events.**

## UNIT-3

### Editing definition

Editing is a prepublication or pre-broadcast practice of correcting mistakes, abridging and rewriting the reporters' stories for maximum clarity, precision, effectiveness, simplicity, accuracy and objectivity.

Every news story is given treatment in terms of language, expression to suite journalistic values in the editing process. Professionals may specialize in the editing of writing, still images, cinema/video, sound recordings and music recordings. All incoming news items submitted by the staff reporters and by the news agencies are collectively called as 'copy', To achieve balance in news presentation news originating within the organization and that pouring in from outside is sorted and sifted. Sorting out and sifting also helps induce parity between the well-written articles and those written by the inexperienced reporters. In the process, the unwanted matter gets weeded out. Only newsworthy stories are finally selected. These are checked for grammar, syntax, facts, figures, and sense, and also clarified for betterment, and are condensed for economy of space. News editing is tailoring news items or a news story to the required shape and size, using the right kind of expressions and symbols. A copy is edited to highlight the "news sense" in a story and to bring uniformity of language and style in an issue of newspaper. The newsroom in a newspaper or a news agency office is the hub of the entire activity in a news organization. The Editorial Desk also known as the Editorial Department or Copy Desk or News Desk) is the nerve centre of a newsroom. It is here that every day the newspaper issues are planned and prepared.

### The Functions of Editing

In any kind of media content production, editing has the following basic functions:

a. **The Reliability & Credibility function**

   Well edited material gains fame and builds a brand image; it multiplies number of customers by adding new ones and also retains old ones. Audiences rely on information from any medium only when they believe that it reports objectively and accurately. Editing can also save the firm from unwanted humiliation.

b. **Commercial Function**

   By shortening and trimming verbose and long stories, editing saves the firm from wasting paper or resources unnecessarily. A well edited matter gains good audience which is in turn crucial in attracting advertisement money. The money enables the institution to survive in competitive environments.

c. **Legal Function**

The editor avoids materials that carry libelous contents from a reporter's story. The editing task includes shaping of stories so that they go with the laws of the land; the editor removes any kind of expression that might end the firm up in a court. By doing so, it saves the firm from unwanted expense and waste of time there by reducing unnecessary pressures from the law.

d. **Beautifying function**

Editing increases the attractiveness of the written material by incorporating basic design inputs. The headline size, grading of stories and the positioning of pictures which are done by the editor add to the beauty of the material. This in turn helps the sale tremendously.

e. **Polishing Function**

Every media institution has its own policy regarding different issues. Every material produced by a firm should go in line with this policy. In addition to this, editors check whether stories and articles are appealing to readers taste. They also evaluate the materials in line with professional standards of journalism. Due to these reasons editors perform polishing functions of media.

f. **Reporters' Function**

Editing helps reporters in several ways:

- Due to the pressure of deadlines reporters end up throwing their stories with out rewriting and verification.
- Reporters may find it difficult to put the correct words together, or may be carried away by own verbal abilities.
- Sometimes reporters get buried in their own information. They collect so many facts and details and lose sight of the main story.
- Some reporters are lousy writers. Their narratives are disjointed and their grammar is appalling.

**Aims and Objectives of Editing**

The editor is basically responsible for:

- Producing a story which is accurate and adequate
- Coming up with a grammatically correct, properly punctuated and capitalized writing in news stories
- Eliminating libelous statements (for legal matters)

- Eliminating editorialized or opinionated contents from the stories
- Reducing verbosity by trimming or shortening stories
- Simplifying, polishing or improving the stories
- Giving headlines, and selecting appropriate picture to stories
- Writing editorials that reflect the opinion of the institution, organization
- Creating balance between business interests and professional values.

**Principles of Editing**:

1. Replace "to be" verbs (is, was, were, etc.) with strong active verbs. Often this entails making your statement in active rather than passive voice. Original sentence in passive voice: The ball was kicked by Bill. Revised sentence in active voice: Bill kicked the ball. This example is easy because the stronger verb is fairly obvious. In other situations, words ending with -tion are often verbs waiting to happen. For example, we can transform "frustration" into "frustrates," and "allocation" can become "allocates."Also, collapsing compound verbs into a single verb ("are able to" into "can") rids your sentences of both dull verbs and a lot of clutter. For example, we can rewrite "I am hopeful that he will recover" as "I hope he recovers."
2. Eliminate strings of prepositions (often a symptom of passive voice).Original sentence: Shakespeare's Hamlet is dominated by a sense of the main character's brooding over the nature of man in society. Notice all the prepositional phrases: by a sense, of the main, over the nature, of man, in society. We may not be able to eliminate them all, but we can tackle a few. Revised sentence: In Shakespeare's Hamlet, the main character constantly broods over man's place in society.
3. Be concise. Eliminate clutter, which often appears in the form of prepositional phrases, but also watch out for the senseless and the redundant moments. Notice how, in the example above, "by a sense of" adds nothing to the meaning of the sentence. And beware of pairs of words, which create a nice rhythm to your prose but say the same thing: "With careless nonchalance, she threw the bag over her shoulder." Clearly, either "carelessly" or "nonchalantly" will serve our purposes, but we don't need both. Also, expletives (there are, it is) often launch weak sentences: "There are many people who find success intimidating." We have a couple options with this sentence: "Success intimidates many people" or "Many people fear success."

4. Vary the structure and length of your sentences. Your prose becomes choppy (and dull) when every sentence begins with the main subject followed by a verb, and when sentences are of uniform length: "I stopped exercising. I gained 50 pounds."We could improve these sentences by combining them: "After I stopped exercising, I gained 50 pounds."
5. Use transitional words and phrases to show relationships between sentences. Notice how, without any transitional words, we cannot be sure what the relationship is between "I stopped exercising" and "I gained 50 pounds." Did the speaker stop exercising because he had gained fifty pounds? Or did he gain fifty pounds because he stopped exercising? Did exercise or the lack thereof have anything to do with the speaker's weight gain? A revision should clarify this relationship

**Duties and responsibilities of editor/ sub editor**

**A. Editor- Duties and responsibilities**

The important functions of the editor are Policy formulation, Public Relations, team building, leadership, planning, organizing the Desk, convening meetings and the coordination techniques

**Qualities needed for Editor**

A good editor shall have the following qualities:

- Penetrating sense of news value/ good nose for news.
- Accuracy, accuracy, accuracy.
- Education is half truth (experience, natural endurance and training are vital).
- Retentive memory is an asset.
- Constructive mind is essential (avoid evil mindedness, cynicism, and extreme pessimism).
- Good command of the language.
- Adaptability (ready to handle any kind of assignment any time).
- Alertness of the mind.
- Must do a wide range of reading, and have a sound general knowledge (a walking encyclopedia).
- Must have the ability to write headlines (needs a hand of a craftsman).
- Must have the ability to make contacts (sociable and friendly).
- He should be an excellent communicator.
- He should be a good planner.
- He should be an efficient administrator.

- He should be an efficient coordinator.
- He should be a delectable leader.
- He should have a sensitive feel for typography, good newspaper design and good photographs.
- He should maintain cordial relations with leaders and public in every walk of life but not succumb to blandishments.

*Editor checks the following:*

- Typographical errors
- End-of-line word divisions and bad breaks (incorrect line or page breaks)
- Spelling errors
- Errors in word usage
- Errors in grammar and syntax
- Errors and inconsistencies in punctuation
- Establish and maintain consistent patterns of mechanics (e.g., capitalization)
- Format of document, text, citations and references according to the appropriate style guide
- Apparent errors in arithmetic and in other facts within the realm of general knowledge
- The styling of tables, graphs, and other art, including their labels, captions, and text mentions
- Conventions such as use of italics, boldface, underlines abbreviations and symbols, the treatment of technical and trademarked terms, and the choice of spelling and punctuation styles.
- Ambiguous vocabulary and syntax
- Redundancies and verbosity
- Jargon that is inappropriate for the intended audience
- Connections and transitions, parallels, and paragraphing
- Consistent style in headings and in captions for tables, figures, and illustrations
- Statements that should be checked for accuracy, and follow up as required.
- Inconsistencies in logic, facts, and details, and query
- Possible legal trouble spots (e.g., libel, plagiarism, missing reprint permissions) or departures from social acceptability (e.g., gender, ethnicity, age, (or other) bias; failure to give sources.

**Responsibilities of the Editor**

- Checking stories for accuracy, adequacy, objectivity, and fairness
- Giving assignments to reporters and photographers
- Creating balance between business interests and professional values
- Eliminating editorialized (opinionated) news stories
- Simplifying, polishing, or improving the story
- Making stories in conformity with the policy of the institution and law and regulations of the country
- Making corrections of grammar, punctuation, capitalization
- Eliminating verbosity by trimming or shortening stories, articles, etc
- Giving headlines to stories and selecting appropriate pictures to them
- Write editorials that reflect the opinion of the newspaper
- Work in conformity with all other departments in the institution
- Create and maintain its contact outside the organization (influence people, policy makers, government bodies, pressure groups, etc)

**B. Duties and responsibilities of Sub-Editor:**

The sub-editor is actually responsible, more than any other person for what the paper looks like and stands for to the readers. There are many ways in which a sub-editor can leave the impression of his personality on the newspaper. The format of a paper is in reality determined by the sub-editor. The sub-editor has the nose for selecting the right type of news

- It is the task of the sub-editor to decide as to what is going in for tomorrow's newspaper and in what form. In fact, the sub-editor with a wide experience in his work is the most suitable person to become the editor in due course of time.
- The sub-editor has to separate the grain from the chaff out of the great number of news material lying on his desk. He should have an eye for accuracy. He must check the facts of a story and look out for the errors, if any.
- If there are certain facts which are missing, he must ask these from the reporters. The sub-editor has to read every story and sometimes contrive to make it interesting and newsworthy.
- The sub-editor has to put all the conflicting accounts into one coherent and wholesome story. If the reports contradict or conflict with each other, then he has to believe the story put in by newspaper's own correspondent.

- It is thus the responsibility of the sub-editor to make the story clear. He should see to it that the news story is based upon facts; it is as complete as possible and is clear from every angle for easy understanding.
- A sub-editor checks the news stories one by one. He goes through every single line of the copy. Then he adds a catch line, if the reporter has not already provided a suitable one. He also writes a suitable headline for the story.
- This is a very important and difficult duty of the sub-editor. After this, he edits the story, cutting the unnecessary matter and trimming the length to the right size according to the space where it has to be printed.
- He checks the spellings of names and places so that these are not printed wrongly. A sub-editor also has to correct errors of grammar, capitalization, punctuation and abbreviations. He cannot afford to allow even the most minor error in the newspaper.
- When a sub-editor feels that the intention of the writer of a story is not clear or the message of the story is very vague, then he can refer the copy back to the reporter and ask him to rewrite the story.
- The sub-editor has to take into consideration the policy of his newspaper before allowing a news item to be published. He has to breathe life into some dead matter lying before him so that the story is made lively. Sometimes, he tones down a story, if it is too dangerous, to make it safe.
- He has also to decide the suitability of the news stories and articles on the merits of their news value to the particular paper.
- He has to reject a superfluous article and prune another to its justified size. He is always on the look out to print a news story which is a scoop, well ahead of his rivals.
- After deciding the main contents of his newspaper, the subeditor has to use his utmost skill in their make-up and display.
- The maximum attention a sub-editor has to pay is to the layout of captions and the main news page. Balance and proportion are the qualities, which should be aimed at before anything else.

**Duties of a Sub-Editor**

Once the news editor selects the reports to be published, the desk chief gives that to sub editors under him to polish, correct, edit, put a headline, select the type phase and add pictures or

graphs if required. These are the main process of editing and duties of a sub editor, described below in detail:-

**Editing a copy**

The first job of a sub editor is to see that the report is in good language and there are no mistakes. There can be spelling mistakes, mistakes in sentence construction, grammar and factual mistakes. If the sub editor finds a portion of the report ambiguous or incorrect or doubtful he has to cross check it with the reporter.

**Adding value to report**

Sub editor must add value to the report. If some background material has to be added, he has to collect it from the library and improve the story. For example, if a report is filed on a train accident killing ten people, the sub editor can improve the story by collecting information about other major train accidents that happened recently. Similarly if a report is filed on the spread of dengue fever in the city, the sub editor should take a backgrounder about the earlier outbreaks of such contagious diseases and the measures taken to check these.

**Give a good heading to a news**

The sub editor has to find a good heading for the story. The heading should be sharp, attractive, crisp and convey the spirit of the story. The heading should compel the reader to stop and read the whole story.

**Managing column spacing**

While writing the heading, a sub editor should know the space available for the story, whether it is one column, two columns or three etc. The heading should fit within that column.

**Formatting**

Sub-editor has to select the type, or font, of the letters in each heading according to the length and width of the column. Thus a sub editor should also know about the font sizes available. Each paper has its fonts and types.

**Suggest a suitable heading**

While writing the heading, it should fit into the mood of the story. A sarcastic heading for a hard story will look odd. Similarly, a hard line heading will spoil the spirit of a humorous piece. The heading should also be suggestive. It should never be a full sentence.

**Improve visual quality of report**

The sub editor now has to see if there is a possibility for including photographs along with the news item. Pictures or graphs can improve the visual quality of a report.

## Condensation

Condensation is a task that the sub editor has to do. Reporters generally file lengthy stories. Only the sub editor will be able to know about the availability of space in the newspaper. If the full story written by a correspondent will not squeeze into the space available, it is the job of the sub editor to condense it by rewriting or editing. If one word can substitute for a number of words that definitely should be done.

## Headlines – Types of headlines

A reader often decides whether to read a story based on what the headline says. A headline tempts the reader to dig into the story. The modern trend in headlines is towards simplicity. Most newspapers now use heads that say what has to be said in a minimum of words. A good headline conveys the news in a story and the significance and meaning behind the story. The headline must give the essence of the story. While explaining the story accurately your headline also must fit into a limited space.

### Headline Functions

A Headline in newspaper or in any other medium has enormous functions for the news producers and consumers. Some of these basic functions are the following:

- As it is the representative of the entire story, it conveys to the reader the gist of the whole story beneath.
- Tells the news to the readers of headline alone.
- It conveys the relative significance of the story to the readers.
- Helps readers to select which story to read (imagine a newspaper with no headlines).
- By lending character and stability to newspaper, headings create favorable recognition value.
- They present accurate and complete information quickly and attractively.
- They help to sell the newspaper at stand by attracting attention and arousing curiosity.
- The headline carries the condensation process a step further. Headline speaks in terms of words .whereas lead speaks in terms of sentences and the body in terms of paragraphs.

### Headline types

1. Full-line or cross-line pattern:

Full-line or cross-line pattern of headline writing is one of the most favorite patterns among newspapers and magazines. In this pattern, the headline starts from the left extreme corner of the

story and extends to extreme right of this particular story. There is a possibility of using one or two lines in this pattern.

2. Centered headline pattern:

This pattern is also very popular among many newspapers and magazines. Here we ensure that the lines do not touch column rules on both sides of the story. There exists equal exists equal amount of white space on either side.

3. Flush line pattern:

Another common news headline pattern is the flush line pattern. The head starts either from left or right corner of the story, but it should end at the center without touching the other corner. There are two types of this pattern, the flush left and flush right. The right flush pattern is not widely used. There can be a 1 line, 2 line patterns. Length of lines is immaterial in these patterns.

4. Pyramid or inverted pyramid patterns:

These patterns are very traditional patterns; however, they are also used widely in current headline writings, and are among the favored ones. Here the maximum number of lines used is 5 and the minimum is 2.The upper or the lower should be longer and so on. The lines are uniformly indented from both sides.

5. Waist line pattern:

This patter can have centered or cross lines at the middle: however, the basic thing is that it forms a waist like shape when created. Here a great variety is possible. The minimum number of lines that form the pattern is there. This pattern is less popular is three. This pattern is less popular than many of the patterns.

6.Step line pattern:

Two and more lines are needed to form this pattern. In indented some spaces from the first and so on. It is a few uses the pattern these days. Especially, the flush left step line head confuses readers very much.

7. Banner/Ribbon/streamer head:

This pattern runs across the whole page (6or7 columns) of the newspaper. As it is used for a very significant story, very big and bold font sizes are used. It usually appears on the front page. Banner heads are used only when a story has national or international significance. As stories of such significance happen rarely, this pattern is also used sparingly.

8. Multi Deck pattern: In this pattern, several decks are used one after the other. The pattern was in the olden days of the newspaper. As it takes a lot of space and it is wordy, it is no more used by the newspapers of today.

# Communication Theory- Unit-1

## 1.1. Definitions of communication

The word communication is derived from the Latin word 'Communus', which means 'common'. It is a process of exchange of facts, ideas, and opinions. It is a means by which individuals or organizations share meaning and understanding with another. In other words it is the transmission and interaction of facts, ideas, opinions, feelings and attitudes. Thus the exact meaning of the word communication is 'to share' or 'to participate'. The dictionary meaning of communication includes

- Communication is the transmission of a message or information by speaking or writing. Communication is giving or exchanging information, signals, messages by talk or gestures or writing.

According to Fred G. Meyer "Communication is the exchange of ideas, opinions by words, letters or messages". Thus holistically communication is defined as "***giving, receiving or exchanging ideas, information, signals or messages through appropriate media, enabling individuals or groups to persuade, to seek information, to give information or to express emotions***"

| | |
|---|---|
| 1 | "Communication is the discriminatory response of an organism to a stimulus" **(Stevens, 1950).** |
| 2 | "Communication is the mechanism by which power is exerted" **(Schacter, 1951).** |
| 3 | "Communication is the process of conducting the attention of another person for the purpose of replicating memories" **(Carrier and Harwood, 1953**). |
| 4 | "Communication is the verbal interchange of thought or idea" (**Hoben, 1954**). |
| 5 | "The connecting thread appears to be the idea of something's being transferred from one thing, or person, to another. We use the word 'communication' sometimes to refer to what is so transferred, sometimes to the means by which it is transferred, sometimes to the whole process. **(Ayer, 1955).** |
| 6 | "Communication is the process that links discontinuous parts of the living world to one another" **(Ruesch, 1957).** |
| 7 | "Communication is the process by which we understand others and in turn endeavor to be understood by them. It is dynamic, constantly changing and shifting in response to the total situation" **(Anderson, 1959).** |
| 8 | "Communication arises out of the need to reduce uncertainty, to act effectively, to defend or strengthen the ego" (**Barnlund, 1964**). |
| 9 | "Communication is the transmission of information, idea, emotion, skills, etc., by the use of symbols, words, pictures, figures, graphs, etc. It is the act or process of transmission that is usually called communication" **(Berelson and Steiner, 1964).** |
| 10 | "Every communication act is viewed as a transmission of information, consisting of a discriminative stimuli, from a source to a recipient" **(Newcomb, reprinted 1966**). |

**Communication Postulates**

The fundamental aspects or conditions can best be surveyed within the framework of a single broadly conceived postulate: *Communication occurs whenever persons attribute significance to message-related behavior.* The following are the basic dimensions or postulates of communication:

***1. Communication is dynamic, not static***

Instead of a mechanistic picture of linear cause and effect, communication is the more complex notion of dynamic change, one in which an indefinitely large number of particulars interact in a reciprocal and continuous manner. Each successively smaller level of activity is itself a composite of interacting elements. "Communication simply is not analogous to a process where something changes as it is "passed" or "transferred" from one person or setting to another. It is less misleading to think of communication as an occurrence, a happening, rather than something that exists in and of itself."

***2. Communication Is Irreversible***

Human experience flows in words as a stream, in a "single direction leaving behind it a permanent record of man's communicative experience". Hence no statement, however repetitious, can be regarded as pure redundancy. Somehow, repetition of even the same signal alters the larger significance of the exchange. Once the transaction begins, there can be no retreat, no fresh start, and no way to begin all over again."

***3. Communication Is Proactive, not passive***

Communication is more than "an exercise in translation" or an "action that ensures agreement between what is said and what is understood". Communication is more than a passive reaction to a stimulus. But too much sensational imagery, reading and hearing is offered to our senses by the media. People become passive and apathetic and compulsively want to react to the overabundance of communications, popularly called as **communication overload.** But human beings have got a tremendous capacity of to select, amplify, and manipulate the signals that assault their senses. It ignores the fact that people engaged in communication are proactive because they enter the transaction totally. Among living creatures man is the most spectacular example of an agent who amplifies his every activity, first in the way he perceives it, and then in the way he modifies his environment."

***4. Communication Is Interactive:***

Communication "cannot be properly understood apart from the constant succession of interacting forces that influence us, both internally and externally" It is not what happens around him that makes a man experienced; it is the successive constructing and reconstructing of what happens, as it happens, that enriches the experience of his life. The term interaction suggests a reciprocal influence.

***5. Communication Is Contextual:***

Communication never takes place in a vacuum; it is not a "pure" process, devoid of background or situational overtones; it always requires at least one's minimal sensitivity to immediate physical surroundings, an awareness of setting or place that in turn influences the ebb and flow of what is regarded as personally significant. To be sure, the context of communication comprises physical characteristics—seating arrangement, color and light, physical space, and the like—but it is much more than the sense of these physical things. It includes the less tangible matter of atmosphere and ambiance, of socio-cultural background."

***6. Communication is grounded in perspective***

It is not events themselves, but how men construct events, that determines what they will see, how they will feel, what they will think, and how they will respond" These differences in perspective account for wide variations in context and culture as well as for many communication failure

**Communication Misconceptions**:

***The following are some of the misconceptions / myths related the concept of Communication.***

***1. Communication is Information Transfer:***

The first myth is that communication is simply the transfer of information, just like a computer. Theodore Roszak in 1986 called it as '*The Cult of Information*', where we assume that human beings behave just like computers as data processing machines. The fact is, we're not machines. Our communicative behavior is much more complex. Part of that complexity is the fact that we do not respond equally to the each message, even to the same message sent at different times in a different context. Communication is not about giving information. It is about exerting influence. Far from being guided by

logic, it is guided by psycho-logic. The goal of communication is not simply telling, but acting, changing another person's behavior through what we say to them.

***2. Communication failures can be solved by restoring the connection:***

If we assume that communication is simply the transfer of information, then all we need to do to solve it if repair the open circuit, plug back into to the network, tune the signal. Once this linear, one-way analogy is accepted, it is almost impossible not to think of communicative difficulties as a result of some malfunctioning that occurs along the line. Even worse, communication tends to be defined in all-or-nothing terms: Either the system works or it does not; the signals arrive at their destination, or they are blocked somewhere along the line."

***3. Communication is either on or off:***

Again, if communication is information transfer, when it fails, it must fail completely. No signals can sneak through a broken network connection. However, human communication can't be turned off so easily. Some messages, perhaps unintentional, still exert some influence. In a sense we can never have a communication failure—some message is communicated even if it is not the one the speaker intended...

***4. Communication is passive****:* If communication is information transfer, it doesn't take much active effort. We have come to regard communication as passive. We simply send our messages and let them take their course, never bothering to reinforce them or check to see if they were received. When we begin to see communication as exerting influence, we can see it is hardly a passive matter. We have to actively attend to the messages we send. We have to be conscious of the unintentional messages we give out that may betray our unguarded intent. We begin to manage our communication strategically, making sure we make the most of the messages we send.

**1.2, Scope**

It is essential for the sender to understand the scope, and for the recipient to understand the purpose of the communication. If this understanding does not exist, then there is little chance for an effective and successful communication. The communication scope refers to the sphere of operations related to the communication. There are two aspects i.e. 'audience scope' and 'subject scope'.

- **Audience scope:** It is very essential for the communicator to clearly identify the target audience of the communication. It will also allow the communicator to

tailor the communication, especially the language used to the particular needs of the audience as well as their cultural background. Most communications are not aimed at specific people, but at groups of people, or more likely, at job functions or users of particular products. It may also be the case that the communication is aimed at 'the general public'. In each case, the communicator must ensure that the target audience is clearly identified.

- **Subject scope:** In order to allow readers to further ascertain whether a communication contains information that they need to know, or that they may be looking for, a communication should always clearly identify the subject scope of the communication. The subject scope is a specification of the information covered by the communication.

**Purpose of Communication**:

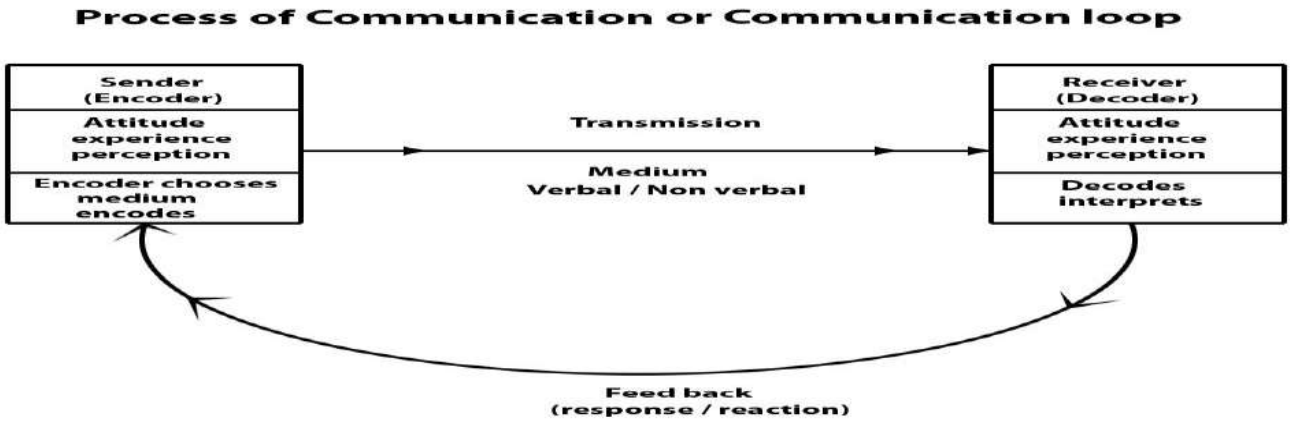

A communication will always have a purpose and the purpose of the communication must be clear to the recipient of the communication. The following list highlights different purposes of communication and describes the way in which the communication might need to differ based on this purpose i.e. To inform, To convey, To persuade, To request, To warn, To reassure etc.

**General Objectives of Communication**

1. **We communicate to persuade**: It means that we want someone to do something and this desire of ours is communicated. The mother patting the child to stop crying, the advertiser displaying a model in a new T-Shirt and the politician haranguing (urging) his audience to vote for him are all having the same objective of persuading, while communicating it differently.
2. **We communicate in order to give or provide information**: The science teacher demonstrating an experiment, the bank announcing a reduction in interest rates and the finance minister, presenting the budget are all communicating to provide information.
3. **We communicate seeking information**: A passer by asking you the way to the post-office, the student asking the teacher for some clarification or the investigating policeman making discreet enquiries are all seeking information by using this communication skill.

4. **We communicate to express our emotions** like courage or fear, joy or sorrow, satisfaction or disappointment with appropriate gestures and words. Some people have unlimited skill to emote, (i.e., to display excessive emotion) to suit the occasion. Our politicians are capable of emoting well, which by itself is a communication skill.

### 1.3. Communication process & Variables

Every bit of message communicated undergoes a certain process involving more than one person. Nobody communicates to a vacuum or wilderness. Communication is considered effective if it receives the desired result, response or reaction. All Communications are related to some context. In any context, a communication loop exists to enable successful communication.

- At one end of the loop is the **sender of a message or information**. He receives a stimulus to send a message across.
- The stimulus may be **external or internal**. There might be an urging from an outside source which is external stimulus. The internal stimulus might be a desire from within the person to send across a message or information.
- He converts the message into a **code**. This process is called **encoding**. The sender is also called the encoder. He chooses the appropriate verbal or non-verbal code and puts the message into that code.
- Then the encoder transmits the coded message through an appropriate **medium**. The sender or encoder chooses the appropriate medium based on several factors such as the receiver, the message, and its urgency or otherwise. He may choose a

non-verbal signal, body language, speech, writing or any other available medium to transmit the encoded message.

- The message gets transmitted to the **receiver**. The receiver decodes the message and perceives it. Unless the receiver is aware of the code and is able to use the medium, he cannot decode it.
- Misinterpretation may arise even if there is interference in the medium. The receiver's response or reaction is the **feedba**ck that the sender gets. The feedback may again be a signal or an action.
- In short communication is related to the context. Context is determined by country and culture generally and the individual's mindset and attitude particularly. Environment and the stimuli, external or internal determine the actual process of communication.
- The sender in response to an external or internal stimulus perceives a message. He puts it into an appropriate code of verbal or non-verbal symbols. He transmits it across to the receiver through an appropriate medium. This act of the sender is conditioned by his mental attitude, his experience and his perception of all the related factors. The receiver, based on his experience, attitude and perception of all related factors decodes the message, interprets it and reacts or responds to it.
- We should remember that the sender and the receiver should share a symbol that will carry the same meaning for both. If they do not, misunderstanding is bound to occur.

**Forging an effective communication loop**

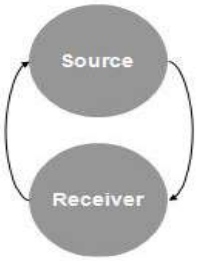

- The message is the core idea a sender wants to communicate. The sender should carefully decide upon the precise message that he wants to communicate and its purpose. He should take into consideration the context of his communication and the attitude of the receiver. Based on these factors, the sender should choose the code and the medium for transmitting the code.
- The receiver should be familiar with the code and be competent to access the medium of transmission. The choice of the medium also depends on the urgency of the message. If the sender wants an urgent feedback, he should choose the oral medium.

### 1.4. Types of communication

Communication means transferring messages from one to another through any medium. There are various levels in communication like Intrapersonal communication, Interpersonal communication, Group communication and Mass communication. Mass communication plays the vital role because it reaches very large number of audience. Basically Mass communication has two forms one is Interpersonal communication and another one is media communication.

**1. Intrapersonal Communication:**

***Intrapersonal communication is a communication which happens yourself***. Here both Source (sender) and receiver is only one. So, the feedback works without any interruption. Example: A person can communicate himself through pain, thinking, feelings and emotion etc.

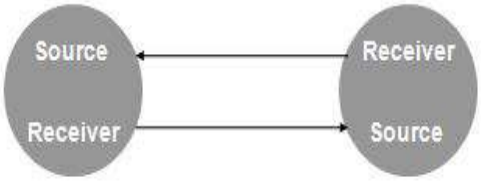

**A. Intrapersonal communication**

**2. Interpersonal or Dyadic Communication:**

In **Interpersonal or Dyadic communication**, two persons are involved in this communication process. Here the Source becomes a receiver and receiver become Source because of dynamic communication process were the feedback's are shared between Source and the receiver. It is an **interactional process** between two people, either **face-to-face or through mediated forms**. It is, in other words, a dialogue or conversation that is personal, direct and intimate. A lot depends on the relationship between the two individuals, their equality of status, the socio-cultural environment in which the exchange takes place etc. When a mechanical device in involved in an interpersonal exchange, it is termed **interpersonal mediated communication**. Feedback is instantaneous and easy to measure.

- **Relational (Qualitative):** Communication in which the roles of sender and receiver are shared by two people simultaneously in order to create meaning.

- **Situational (Contextual):** Communication that occurs between two people in a specific context.
- **Quantitative:** Dyadic interactions, including impersonal communication.
- **Functional (Strategic):** Communication for the purpose of achieving interpersonal goals.

B. Dyadic communication

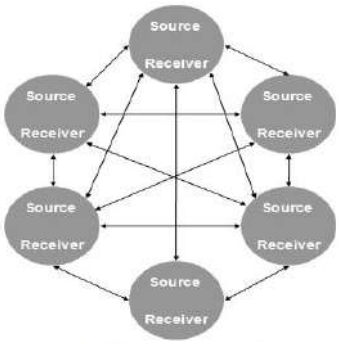

**3. Small Group Communication:**

If there are more than two members involved in the communication process, then it will become a group communication. **If least number of persons is involved in the group communication is called as small group communication**. In this communication process, everyone becomes a Source as well as receiver through sharing information and gives feedback to another. Group Communication is an interactional process that occurs among three or more people interacting in an attempt to achieve commonly recognized goals either face-to-face or through mediated forms. The larger the group, the less intimate and personal is the possibility of exchange. Feedback is the key word here. Feedback is not instantaneous and is difficult to measure.

**Groupthink** is an important aspect in group communication. This occurs when a homogenous highly cohesive group is so concerned with maintaining unanimity that they fail to evaluate all their alternatives. Groupthink members see themselves as part of an in-group working against an out-group opposed to their goals. Groups engaged in groupthink tend to make faulty decisions when compared to the decisions that could have been reached using a fair, open, and rational decision-making process. Group thinking groups tend to:

- Fail to adequately determine their objectives and alternatives,
- fail to adequately assess the risks associated with the group's decision,
- not seek expert advice,

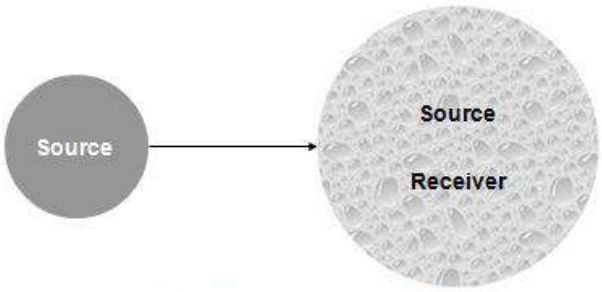

- select and use only information that supports their position and conclusions, and does not make contingency plans in case their decision and resulting actions fail

C. Small group communication

**4. Public Communication:**

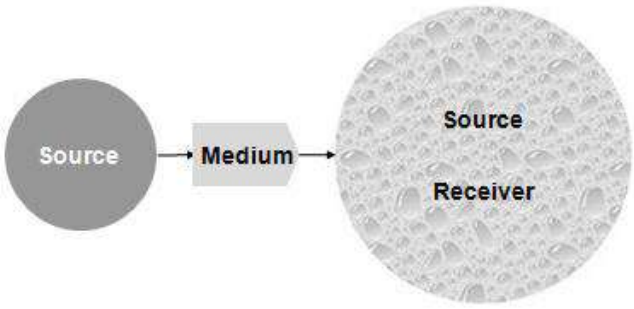

In public communication, Source or messages from a single person will reach or received by huge number of audience. But in this communication there is no mutual feedbacks between source and receiver like small group communication and it's only focused on Speaker

D. Public communication

**5. Mass Communication**

In mass communication there is large number of audience and they all can't group together in one place, so we need certain tool or technology for communication process. In mass communication, there is no direct access with receiver. Mass media include newspaper, radio, television and internet. Here the audience feedback is very less or delayed

E. Mass communication

Mass Communication represents the creation and sending of a **homogeneous message** to a **large heterogeneous audience** through the media. Mass communication studies the uses and effects of the media by many as opposed to the study of human interaction as in other communication contexts. Mass media is termed by **Daniel Learner** as "mobility multipliers" and **Schramm** as "magic multipliers".

**Functions of the Mass Media:** The following are the basic functions performed by the mass media:

- **Information:** Surveillance of the environment relates to news about the happenings in society. The mass media carry out this function by keeping us informed about the latest events in and around the world.
- **Entertainment:** Mass media help us relax with family and friends and pass time. They also fulfil our psychological and social needs.
- **Symbolic Function:** Mass media provide a shared symbolic environment. According to George Gerbner Television is central symbol of any culture and it performs the symbolic function by disseminating political, social and cultural symbols.
- **Development:** The mass media in developing countries of Asia, Africa and Latin America perform the function of facilitators of ˜development communication'' focusing on the socio-economic needs of the backward sections of society.
- **Advertising:** This is a commercial function that helps keep the economic status of a country healthy.

### 1.5. Characteristics print, radio, Television, film & Internet

| Type of Medium | Characteristics | |
|---|---|---|
| | **Medium aspects** | **Institutional aspects** |
| Print Medium | Regular and frequent appearance.<br>Printing Technology.<br>Topicality of Content.<br>Medium has reference value. | Literate audience, Urban focus.<br>Relative freedom with self-censor.<br>In public domain.<br>Commercial basis. |
| Radio medium | Sound appeal, Portable flexible in use.<br>Variable content but music oriented.<br>Has participative potential.<br>Individual and intimate in use.<br>Transient medium.<br>Relatively high involvement. | Relative freedom with self-censor<br>Local and decentralized in concept.<br>Relatively cheaper technology.<br>Subject to legal and social control |
| Television medium | Highly diversified content.<br>Most effective audio-visual medium.<br>Close, personal and domestic nature.<br>Low intensity and involvement.<br>Transient medium. | Complex technology and organization.<br>Subject to legal and social control<br>Relative freedom with self-censor<br>National & international in character.<br>High public visibility. |
| Film medium | Audio-visual channel of reception.<br>Private experience of public content.<br>Extensive and universal appeal.<br>Predominantly a narrative fiction.<br>International in genre and format.<br>High intensity and involvement. | Subjected to social control.<br>Complex organization and distribution.<br>High cost of production.<br>Multiple platforms of distribution.<br>Relative freedom with official censor |
| Internet medium | Computer based technology.<br>Highly interactive & participative.<br>Have private and public functions.<br>Interconnectedness.<br>Ubiquity and de-locatedness. | Low degree of regulation. |

### 1.6. Barriers to Communication

Communication is effective if it flows freely in a communication loop between the sender(s) and receiver(s). Free flow means uninterrupted transmission of the information / the message through an appropriate medium, correct comprehension of the message by the receiver and a relevant and appropriate feedback from him. Misunderstanding, Irrelevant response and undesirable reactions are the consequences of a failed communication exercise. Failure of effective communication results in loss of valuable time, resource, material and even life. Barriers to communications range from the simple distracting noises to the most complex psychological factors. These barriers may cause a simple communication gap or a total failure of communication.

1. Barriers to communication result in undesirable reaction and unfavorable response.

2. The communication exercise fails because the feedback is absent or falls short of expectation
3. Barriers to communication are caused by environmental, physical, semantic, attitudinal and varying perceptions of reality

**I. Environmental and Physical barriers**:

The major environmental / physical barriers are Time, Place, Space, Climate and Noise. These factors may just cause distraction leading to inattentiveness or totally alter the message, causing miscommunication.

**Time**: Time has an important role in a communication process. Every concern has to choose a fast channel of communication with good alternatives. For example

- We have to choose a face-to-face oral communication channel to give instructions to a worker
- Public address system to reach a large member of people scattered over a large area,
- Visual signal in crowd management and
- Courier system to reach clientele spread over and at distance.

All these developments emphasize the importance of 'time' in a communication exercise. Immediacy of the objective usually determines the choice of the medium. In modern times, slow channels of communication are getting replaced by effective fast channels of communication.

**Space**: Space plays an important role in an oral communication situation. It can act as a barrier to communication or act as an aid promoting good communication. Experts classify an oral communication situation on the basis of the distance maintained between sender and receiver as Intimate, Personal, Official and Public.

- **Intimate**: If the distance between the two, the encoder (sender) and decoder (receiver) is less than a **foot and a half (18 inches),** the situation is labeled intimate. The mother coddling the baby, the father and the son, or husband and wife in a familial / private situation communicate at an intimate level of space.
- **Personal**: Friends and peer groups who are in a process of communication maintain a distance of about **two to three feet** which is personal.
- **Official**: In official situation, the space should be at least **four to five feet** depending on the message or information.

- **Public**: The distance between the speaker (the encoder) and the listeners (decoder, in this context an audience) should be **over ten feet**, in a public situation.

Any reduction of these minimum space parameters will lead to awkward and embarrassing situations. Generally, Americans and Europeans do not want violation of their personal space. They refer to their personal body space as the **'body-bubble'** which they do not want to be violated by unwanted intrusions. Asians and people from the Middle East do not attribute importance to space. Space can act as barrier in a cross cultural or trans-national oral communication situation. Overcrowding in elevators, jostling in office corridors and elbowing in public transport systems are all external factors that do affect communication as barriers. Proper maintenance of distance will help overcome this carrier. It will remove miscommunication and prevent distortion of a message or information.

**Place**: The place or the location where a communication process takes place can degenerate into a barrier to effective communication. Factors like inconvenient place, rickety furniture, poor lighting, and inadequacy of space make people irritable / impatient and annoyed. Friction and conflict erupt easily in such places effecting the transaction of business communication. Good ambience and suitably lighted and ventilated places promote effective communication.

**Climate:** Though the word climate refers to the human relations prevailing there, it is no exaggeration to say that the actual room temperature helps people to keep their heads cool! Unfavorable climate can act as a barrier to communication leading to wrong perceptions or decision.

**Noise:** Noise is a physical barrier to effective communication. Noise may have its origin from an external source or may exist even in the communication loop. Effective communication is almost impossible on the factory floor, the bus stand or railway station. No one should try to out shout a machine to achieve successful communication. Instead he should choose a better place with less noise to communicate his message / information. Noise distorts messages and acts as a barrier to effective communication.

**Tips to overcome Physical or environmental barriers**

(a) Time – adopt appropriate fast channels of communication

(b) Space – maintain the distance in the communication exercise as determined by the situation

(c) Place – Avoid overcrowded and ill-lit, ill- ventilated places to achieve effective communication

(d) Medium – Choose the appropriate medium oral / written (sign (audio/visual) medium

**II. Semantic Barriers**:

Every word has a direct meaning called the **denotative meaning**. In addition to its exact or lexical meaning, words also acquire implied meanings **called connotative meanings**. Connotations are understood based only on an individual's experience. If the encoder and decoder do not share the some connotative meaning for a word, miscommunication occurs. If the receiver does not understand the connotation attributed by the sender, miscommunication takes place. But when words are used for denotations alone, not much damage will be done. Semantics is related to meanings of words. It is related to connotative and denotative meanings of words and its study. To overcome the semantic barrier to communication, the communicator should choose the precise and exact word that will carry the same meaning for the receiver in the given context. The meaning of the word is related to context at the connotation level.

**III. Cultural Barriers:**

To avoid the cultural barriers we should understand and accept the cultural variations in individuals and groups. Appreciate them and adopt your communication style to them. In the context of globalization and free trade, business communication has to cut across different cultural identities. These invariably cause cultural barriers that have to be overcome. For example

- The relaxed and leisurely pace of the Easterners, the formal and official style of the Britishers, the casual and matter-of fact nature of the Americans, the thorough nature of the Germans and the extreme courtesy and politeness of expression of the French are all cultural features.
- It is easy for an American to give his opinion even to his boss whereas decisions and opinions are seldom expressed in the presence of elders and seniors in the East.

To overcome any cultural barrier to effective communication one has to possess an understanding of the culture of the receiver(s) / decoder. Even in body language there are variations. The loop formed by tip of the thumb and index finger is a signal of agreement in North America but an obscenity in the Southern states.

**IV. Psychological Barriers**:

Communication is an activity dependent on the flexible nature of the participants. We will send or receive a message and react / respond to it only if we feel that the person who communicates has credibility. Our reaction and response depend on our attitude to the source of information. The sender should consider the receiver's view point as the receiver should overcome his bias against the sender to overcome attitudinal barriers. The information / message should be favorable to the receiver to respond / react to it. Communication exercise is affected by the values opinions and attitudes of the sender and the receiver in a given context. The reaction / response to an unfavorable information / truncated message from a source lacking credibility will always fall short of the expectation and fail to provide the necessary feedback to the sender.

**V. Perception of Reality**:

Perception is the understanding of the world around us. Each one perceives the world in his own unique way and interprets what has been perceived in yet another unique way and interprets what has been perceived in yet another unique way.

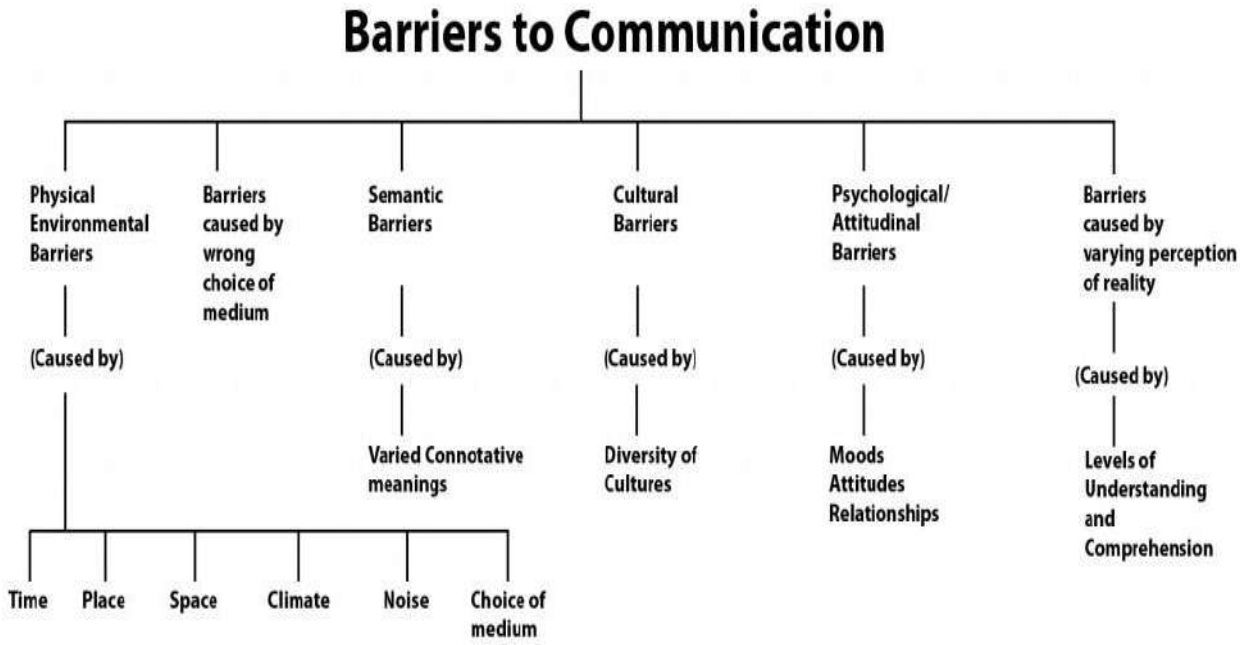

- **Abstraction:** An abstract is a condensation of something. When we communicate, we unconsciously resort to 'abstracting', i.e., keeping to the essentials. We eliminate what we decide to be superfluous. But the receiver may not be competent enough to understand what we have eliminated. Abstracting is necessary for good and effective communication but it should not be done in certain demanding situations. If done it becomes a barrier. For example when you are instructing a lay and illiterate person about cleaning the house, you have to tell literally to sweep, dust and mop. Abstracting at this situation may not prove to be useful. The worker may not understand that you want every step and process to be gone through. But when you give the job to an agency, you can simply say, I want the house "thoroughly cleaned". Good abstracting can remove barriers in communication caused by unnecessary words and details. In a

communication process, if the participants have different levels of perception, abstraction will be a barrier to communication.

- **Slanting:** Slanting is a barrier to communication process. A slanted report is judgmental. News reporters are asked to report news and not give them a slant. A small 'crowd' or a large crowd' is generally slanted expressions giving only relative meanings. Instead, if you say a gathering of about five thousand people you avoid slanting. Communication should also be unaffected by inferences and assumptions. Most inferences and all assumptions are highly subjective. They tend to become barriers if they form the basis of a message or information.

**VI. Medium of Communication – Wrong choice as a barrier**

A wrong medium or an inappropriate medium chosen for communicating a message will act as a barrier to communication. Complementing one medium of communication with another can help overcome communication barrier caused by the medium chosen. An oral reminder in person or over the telephone followed up with a written letter can easily produce the desired response or expected reaction.

## UNIT-2

### 2.1. Development of Communication Models:

The following are the different stages in the development of the Communication models. They are

**A. Action Models:**

- The Action models are sender oriented.
- These models work well with the mediated communication but not well with the inter-personal communication.
- From the action model point of view the communication may fail due to failure of source to structure the message correctly or the listener did not correctly listen to the message.
- **Examples:** Aristotle Model of Communication, Lasswell Model, Shannon & Weaver Mathematical Model, Wendell Johnson Model, Berlo Model, George Gerbner Model, Westley and MacLean Model and Defleur Model.

**B. Interaction Models:**

- The Interaction Model presumes that there must be some form of relatedness between the source and receiver or the speaker and listener.
- The interaction model focuses on the "Control of Communication" i.e. whether the message has intended effect or not.
- The interaction model added the concept of "Linear feedback" to the communication models. In the interaction models the process of listening becomes receiving, decoding, interpreting and acting upon the message.
- When the receiver acts upon the message the behaviour is seen as "feedback". In the interaction models "what is new is information and what is not new is redundancy".

**C. Transaction Models:**

- The transaction models view communication as "simultaneity". That means while 'A' is speaking to 'B' then 'B' is generating messages or feedback in many ways through body postures, facial expressions, eye movements, hand movements etc.
- In transactional models both persons in communication situation are participating simultaneously in the communication process.

- In transactional models the concern is with the pattern of behaviour within the relationship formed between the sender and receiver.

**D. Convergence Models:**

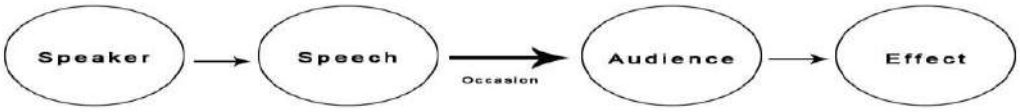

- The convergence models of communication are based on the principle of "Cybernetics".
- The analytical concept of interaction, self generation, mutual exchange of information and mutual understanding explain the human communication in the convergence models.
- Kincaid (1979) developed convergence models which focuses on the concept of "mutual understanding" in the communication process.

## 2.2. Models of communication

### 2.2.1. Aristotle's Communication Model

Aristotle, a great philosopher initiative the earliest mass communication model called "Aristotle's Model of Communication". He proposed model before **300 B.C** in his hook tilted **"Rhetoric".** In the model he identifies the importance of audience role in communication chain.

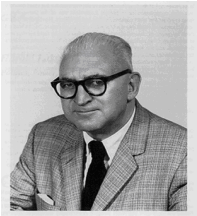

ARISTOTLE'S MODEL OF COMMUNICATION

- Aristotle Model of Communication is simple and linear and has **5 basic elements (i) Speaker, (ii) Speech, (iii) Occasion, (iv)Audience and (v) Effect**.
- Speaker plays an important role in Public speaking. The speaker must prepare his speech and analyze his audience needs before he enters into the stage. His words should influence in audience mind and persuade their thoughts towards him.

- Aristotle advises speakers to build speech for different audience on different time (occasion) and for different effects
- This model focuses more on **public speaking**
- Example: Alexander gave brave speech to his soldiers in the war field to defeat Persian Empire. In this context
    - Speaker – Alexander
    - Speech - about his invasion
    - Occasion - War field
    - Audience – Soldiers
    - Effect - To defeat Persia.

### 2.2.2. Lasswell formula or Lasswell's model - 1948

Harold Dwight Lasswell, the American political scientist proposed the model in **1948** which states that ***"A convenient way to describe an act of communication is to answer the following questions"***

- **Who –** The communication source or the Communicator
- **Says What –** Message or the information disseminated
- **In Which Channel- The** Medium
- **To Whom –** The Receiver
- **With what effect-** The aim of the communication i.e. its effect on audience.

- Lasswell model suggests the message flow in a multicultural society with multiple audiences. The flow of message is through various channels.
- In this model,
    1. Communicator component refers to the research area called **"Control Analysis".**

2. Says what is refers to **"Content Analysis",**
3. In which channel is refers to **"Media Analysis",**
4. To whom is refers to **"Audience Analysis"**
5. With What Effect is refers to **"Effect Analysis"**

- This model is about process of communication and its function to society, According to Lasswell there are three functions for communication:
  1. **Surveillance of the environment**
  2. **Correlation of components of society**
  3. **Cultural transmission between generation**

**Example:** CNN NEWS – A water leak from Japan's tsunami-crippled nuclear power station resulted in about 100 times the permitted level of radioactive material flowing into the sea, operator Tokyo Electric Power Co said on Saturday. Who – TEPC Operator, What – Radioactive material flowing into sea, Channel – CNN NEWS (Television medium), whom – Public, Effect – Alert the people of Japan from the radiation.

**Advantage of Lasswel model**:

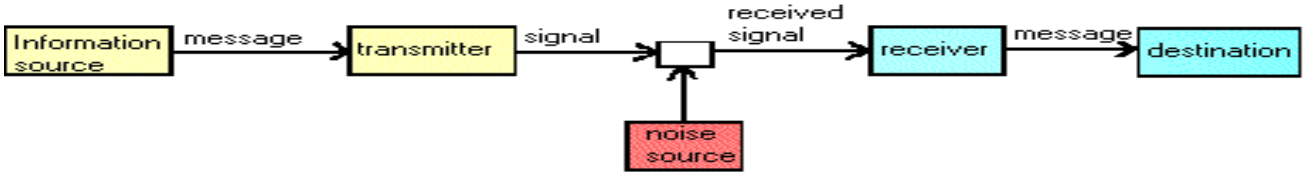

- It is Easy and Simple
- It suits for almost all types of communication
- The concept of Control analysis has given rise to the field of "Communication research".

**Disadvantage of Lasswell model**:

- The concept of Feedback and noise are not mentioned
- The model proposes a linear process of communication, which was later disproved.

### 2.2.3. The Shannon-Weaver Model-1949

**Claude Shannon** and **Warren Weaver** postulated the **Mathematical theory** of Communication or a **general model of communication** in the year **1949**. They both were working on an assignment in Bell Telephone Industries as part of their researching in the field of information theory. The following is the diagrammatic representation of the model.

- The Shannon-Weaver Model (1947) proposes that the communication process must include **six elements**:
    - **a source**
    - **an encoder**
    - **a message**
    - **a channel**
    - **a decoder**
    - **a receiver**

Shannon's model breaks the process of communication down into **eight discrete components**.

**1. An information source**: All human communication has some **source i.e**. the information source may be a person or group of persons with a given purpose. They have a reason for engaging in communication Source creates the message and has intent to disseminate information.

**2. The message**: Message is sent by the information source and received by the destination. Message can be verbal or non-verbal.

**3. A transmitter**: According to Shannon's & Weaver's model a transmitter may be the telephone instrument that captures an audio signal, converts it into an electronic signal, and amplifies it for transmission through the telephone network. Transmission is readily generalized within Shannon's information theory to encompass a wide range of transmitters. For example

- The simplest transmission system like face-to-face communication has two layers of transmission. The first, **the mouth (sound) and body (gesture),** create and modulate a signal. The second layer, which might also be described as a **channel,** is built of the **air (sound) and light (gesture**) that enable the transmission of those signals from one person to another.
- A television broadcast would obviously include many more layers, with the addition of cameras and microphones, editing and filtering systems, a signal distribution network like a satellite and a local radio wave broadcast antenna.

**4. The signal:** Signal flows through a channel.

- There may be **multiple parallel signals**, as is the case in face-to-face interaction where sound and gesture involve different signal systems that depend on different channels and modes of transmission.
- There may be **multiple serial signals**, with sound and/or gesture turned into electronic signals, radio waves, or words and pictures in a book.

**5. A carrier or channel**: In Shannon & Weaver model the channel is represented by the small unlabeled box in the middle of the model. The most commonly used channels include **air, light, electricity, radio waves, paper, and postal systems**. There may be multiple channels associated with the multiple layers of transmission.

**6. Noise**: **The concept of noise was introduced for the first time by Shannon and Weaver.** Noise is described as the form of **secondary signals** that obscure or confuse the original signal carried in the form of message. As Shannon's focus was more on telephone transmission, carriers, and reception his concept of noise is restricted to erroneous signals that obscure some portion of the signal within the channel. This is a fairly restrictive notion of noise. But by current standards, **noise is regarded as all that disturbances that inhibit the original message to be decoded by the receiver.**

- Shannon is generally considered to have been primarily concerned with physical or 'mechanical' or 'engineering' noise in the channel, i.e. unexplained variation in a communication channel or random error in the transmission of information. This interferes with the physical transmission of the message. The **principle of redundancy** i.e. repetition of the message is used to reduce physical noises in interpersonal communication. Everyday examples of **physical noise** are: A loud motorbike roaring down the road while you're in a conversation, Your little brother standing in front of the TV set, Mist on the inside of the car windscreen, Smudges on a printed page etc. In media channels this concept of noise i.e. **Channel noise**, can be identified with the state, operation of technology, social access to channels, purchasing power of consumers etc.
- A second type of interface is the **Semantic Noise**. This occurs when the message is misunderstood by the receiver due to lack of understanding of communicators 'frame of reference'. In these circumstances receiver normally does not attach the same meaning to the message as intended by the communicator or understands only a part of it. Instances like use of difficult words, unknown

terms by the communicator, way of delivering the message, attentiveness, status of the receiver and communicator, their knowledge, awareness or educational levels may cause semantic noise. Semantic noise is reduced when communicator adjusts his vocabulary, tone and format of delivery of message according to the needs, interests and understanding of audiences.

**7. A receiver:** In Shannon's conception, the receiving telephone instrument. In face to face communication, a **set of ears (sound) and eyes (gesture)** act as receivers of message. In television, several layers of receiver, including an antenna and a television set.

**8. A destination**. Presumably a person who consumes and processes the message is regarded as destination of message in the model.

**Importance of Shannon and Weaver model of the communication**:

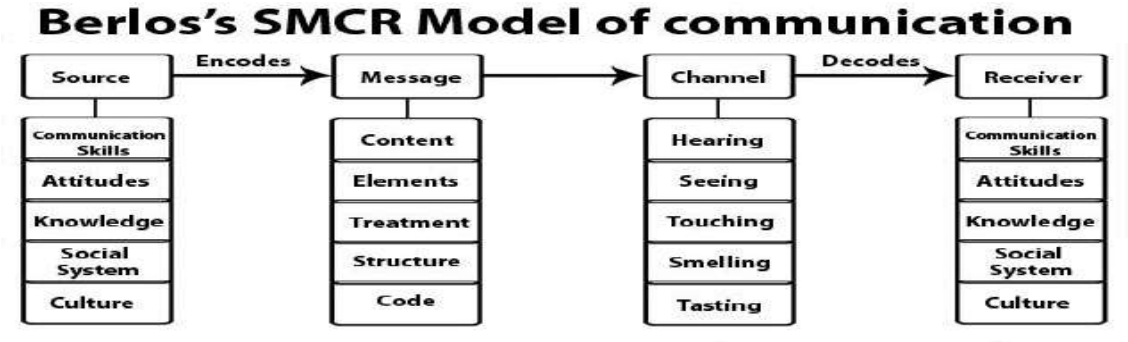

- It is the beginning of the modern field of communication theory as it provided, for the first time, a general model of the communication process that could be treated as the common ground of such diverse disciplines as journalism, rhetoric, linguistics, and speech and hearing sciences.
- The concept of 'Noise' was a major input to the communication process. This model led to technical improvements in the message transmission and it served to bring the scholars from different fields to study the communication process scientifically
- The communication model was successful in structuralize the communication process to a set of basic constituents that not only explain how communication happens, but why communication sometimes fails
- This model that identifies the most important components of communication process and their general relationship to one another.

**Drawbacks of the model**:

- Like all models, this model is also a minimalist abstraction of the communication process. In reality of most communication systems are more complex. Most information sources and destinations act as both sources and destinations.
- The model failed to consider the semantic and pragmatic levels of the communication process.

- Apart from its obvious technological bias, a drawback from off the model is its linearity. It looks at communication as a one-way process
- The model is regarded as a model of the flow of information through a medium, and an incomplete and biased model that is far more applicable to the system it maps, a telephone or telegraph, than it is to most other media.
- The model suggests that communication within a medium is frequently direct and unidirectional, but in the real world of media, communication is almost never unidirectional and is often indirect.
- The communication researches who used this model did not give enough attention to noise and feedback components.

### 2.2.4. Berlo's SMCR Model of Communication-1960's

**David Berlo** model of communication was proposed in **1960's** explains the various components of the communication process. The model postulates four basic components i.e. **Source, Message, Channel and Receiver**. For each of these four components there are five channels there are five channels that need to be considered. The source and the receiver are treated in the same way in the model. The model is not specific to any particular communication.

**1. Source**: The source is where the message originates.

- **Communication skills** – It is the individual's skill to communicate i.e. ability to read, write, speak, listen etc.
- **Attitudes** – The communicators attitude towards the audience, subject and towards oneself.
- **Knowledge**- The knowledge about the subject one is going to communicate. It is not talking about the general knowledge it is all about the knowledge of the subject, so it is the familiarity of what you are communicating.

- **Social system** – The Social system includes the various aspects in society like values, beliefs, culture, religion and general understanding of society. It is where the communication takes place. We can communicate only to the extent that the social system allows, when we communicate take social system into account.
- **Culture**: Culture of the particular society also comes under social system.

According to this model, only if the communicator has the above qualities in adequate proportion then only he will be able to communicate. The information given from the communicator is **encoded** into message and this process is referred as encoding.

**2. Message**

- **Content** – The beginning to the end of a message comprises its content
- **Elements** – It includes various elements like language, gestures, body language etc. Content is always accompanied by some elements.
- **Treatment** – It refers to the packing of the message. The way in which the message is conveyed or the way in which the message is passed on or delivered.
- **Structure**- The structure of the message i.e. the format, arrangement and the structure the message into various parts.
- **Code**- The code of the message means the form and the frame in which it is delivered e.g. language, body language, gestures, music and even culture is a code. Only when the code is proper, the message will be clear, improper use may lead to misinterpretation.

**3. Channel**- It is the five senses through which we use to communicate and receive information i.e. Hearing, Seeing, Touching, Smelling, And Tasting. Communication takes place channels by any of the 5 senses or their combination.

- **Hearing**: The use of ears to get the message for e.g. oral messages, interpersonal etc.
- **Seeing**: Visual channels for e.g. TV can be seen and the message is delivered.
- **Touching**: The sense of touch can be used as a channel to communicate for e.g. we touch and buy food, hugging etc.
- **Smelling**: Smell also can be a channel to communicate for e.g. perfumes, food, charred smell communicates something is burning, we can find out about which food is being cooked etc.

- **Tasting**: The tongue also can be used to decipher e.g. Food can be tasted and reacted.

**4. Receiver**: Who receives the message and decodes is referred to as **decoder** or the receiver. The receiver needs to think like the source. This model believes that for an effective communication to take place the source and the receiver needs to be in the same level in terms of the physical, sociological and psychological frames. For e.g. If the communication skills on source side are good then the receiver should equally have good listening skills. For the effective communication the source should consider the receiver's attributes i.e. Keep the receiver in mind, speak accordingly and give them what they need

**Criticism of Berlo's SMCR model of communication:**

1. The model lacks the components like feedback, noise and does not mention the barriers to communication
2. It is a linear model of communication.
3. Needs people to be on same level for communication to occur but not true in real life

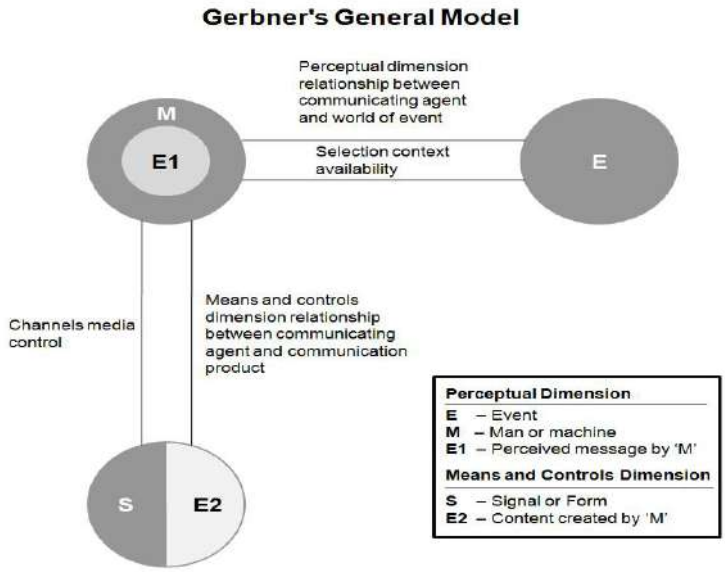

### 2.2.5. George Gerbner's -General Model-1956

Mr. George Gerbner is one of the pioneers in the field of communication research. He worked as a professor and head of the Annenberg School of Communications in the University of Pennsylvania. In **1956**, Gerbner proposed the **general purpose of communication** in his model. He stressed the dynamic nature of communication in his work and also the factor which affecting the reliability of communication. The model indicates that ''if source reacts to an event in a situation through some channel then the content and consequences of the communication act are conveyed in some form and context. Gerbner model emphasizes the presentation of communication content through specific form and context in which receiver perceives the information"

**(i) Perceptual Dimension:**

An 'E' is an event happens in the real life and the event content or message is perceived by 'M' (Man or a Machine). After "M" Perceiving the message from "E" the message transforms into "E1". '**E1' is not same as like 'E'**. Any man or machine can't perceive the whole event but only the part of the event, this is known as "Perceptual Dimension". The 3 factors that are involved in the perceptual dimension are:

- **Selection**: 'M' cannot perceive the entire content of the event "E". So 'M' selects the interesting or needed content from the entire event and filters the other.
- **Context**: The context of the event "E" may be misunderstood or may not be understood at all by 'M'**.** The context may also change due to the 'M's attitude, mood, culture and personality
- **Availability**: 'M' may be completely unaware about the event "E" due to his unavailability in which case he needs to depend on others for understanding about it.

For example, a journalist perceives the messages from the event. He can't focus the whole event so he filters the unwanted or unrelated content from the event. This filtered content is not same or like the actual event content because the journalist edits the content based on his attitude, mood, cultural background and according to the organizations policy.

**(ii) Means and Controls dimension:**

If 'M' becomes the source for communicating about the event 'E' which he has perceived as 'E1' then it is articulated through the means and control dimension. 'M' creates a statement or signals about the message and creates the content as "SE2". Here S indicates the Signal or Form. The content (E2) is structured or formed (S) by 'M' and it is communicated in different ways like channels or media to send the message. The greater or lesser degree of control of 'M' over the channel like his degree of skill in using communication channel, his language and verbal control and his experience in using the

new technology plays a major role in dissemination of the information i.e. SE2. The important effect of the means and control dimension is that the information about the original event 'E' differs from 'E2' in terms of specific context, form and frame. This process can be extended to infinitum by adding on other receivers (M2, M3etc.) who have further perceptions (SE3, SE4 etc.) of the statements about perceived events. **Message at every level is altered or changed.**

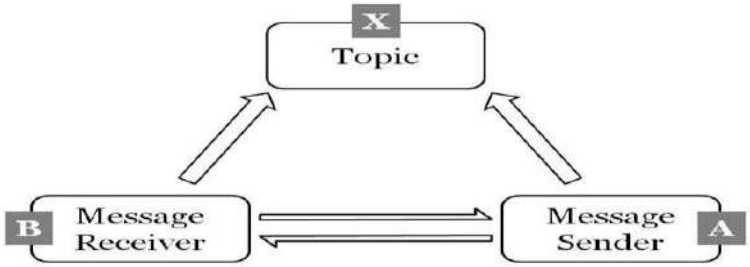

**Example:** In case of news reporting, E can be any event that has happened and the reporter (M) selects a particular part of event (E1) that may be provide his channel higher TRP ratings or the news may boost the particular party which his channel supports. This SE2 is sent through a medium to the mass audience. Then the audience distributes the message to others like his friends i.e. (SE3) by adding his own interpretation and the process continues. **The model has resulted in emergence of various areas of communication research**.

| **Communication Component** | **Research Area** |
|---|---|
| Someone | Audience Research |
| Perceives an Event | Perception research |
| And Reacts | Effectiveness measurement |
| In a Situation | Physical / Social setting research |
| Through some Means | Media investigation |
| To make available Materials | Administration and Distribution |
| In Some Form | Structure / Organization / Style |
| And Context | Communicative Setting |
| Conveying Content | Content Analysis |
| Of some Consequence | Overall changes study |

### 2.2.6. The Newcomb's Model-1953

Theodore M. Newcomb is a great pioneer in the field of social psychology. He worked in the areas of human motivation, perception and learning. He wrote books "Personality and Social Change" (1943), "Social Psychology" (1950). He published a new social approach in field of communication which is called "ABX" system, later it became Newcomb's model and it's published in the name of "An Approach to the Study of Communicative Acts (1953)". The New Comb's model of communication was introduced by Theodore M Newcomb of the University of Michigan in 1953. He gives different

approach to the communication process. The main purpose of this theory is to introduce the role of communication in a social relationship (society) and to maintain social equilibrium within the social system. He does not include the message as a separate entity in his diagram, implying it only by use of directional arrows. He concentrates on the social purpose of communication, showing all communication as a means of sustaining relationships between people. Sometimes it's called as an "ABX" model of communication.

**The Newcomb's Model**

The Newcomb's model works in a triangular format or A-B-X system. A – Sender, B – Receiver, X – Matter of Concern. The relationship between A and B is like student and teacher, government and public or newspaper and readers. Sender and Receiver may work in a same flow but the same time some factor like "X" may affect their flow of relationship. "X" it may be third persons, issue, topic or policy.

**For Example**: Teachers introduce a new policy to increase the college timing from 6 hours to 8 hours.

A – Teachers B – Students X – Policy or issue. If both students and teachers are satisfied with this policy then the communication maintains its equilibrium status between them. Otherwise the flow of communication between "A" and "B" becomes trouble in the social system. If "A" or "B" is not ready to accept the policy then it will directly affect the social system and can't maintain the equilibrium status. Teacher's "A" can convince students "B" as much as possible. Otherwise they have to make some adjustments in the Policy "X" and convince them towards the policy.

### 2.2.7. Westley and MacLean's Model of Communication-1957

Westley and MacLean's model of communication is proposed by Bruce Westley and Malcolm S. MacLean in 1957. Westley served as a teacher at the University of Wisconsin, Madison, between 1946 and 1968. MacLean was director of University of

Journalism School (1967-74) and co founder of the University College at University of Minnesota.

Bruce Westley

Malcolm S. MacLean

In the model the

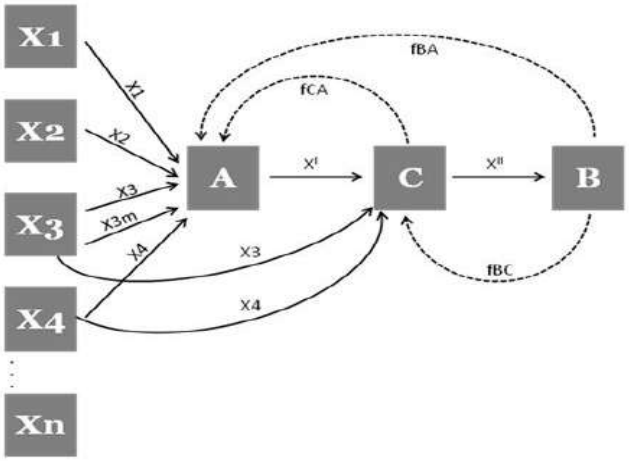

- A's- Represent the institutions like Public Relations, Advertisement agencies, etc. They select and transmit the message **purposively** to modify B's perception about X and perform the **Advocacy role**
- B's- Represent the perceivers and audience members who perform the **Behavioral role.** They respond in terms of their needs and requirement for messages as a means of orienting themselves to the environment.
- C's- Represent the Media / Channels and perform the **Channel role** or **Gate Keeper role**. They select and transmit information to B's **non-purposively**.
- The Feedback is an important component in this model and it is represented in various loops i.e. **multiple feedback.**
- The model postulates that communication does not begin when one person starts to talk, but rather when a person responds selectively to the physical surroundings. This model considers a strong relation between responders and their surroundings in the process of communication. Communication begins only when a person receives message from surroundings. In case the respondents feel to communicate then there can be seen a purposive intent to communicate.
- The Channel / Media institutions perform the gate keeper's filtering the information that enters into the system. The filtering process occurs at different levels and only some information is allowed to disseminate to the receivers.
- Each receiver responds to the message they received based on their object of orientation. This model can be seen two contexts, interpersonal and mass communication. And the point of difference between interpersonal and mass

communication is the feedback. In interpersonal, the feedback is direct and fast. In the mass, the feedback is indirect and slow.

**Example**: A Daily News Papers will receive many Press releases from Public Relations Agencies on behalf of their clients. News paper will publish the selected Press releases due to the space constraints. Then, Readers can directly respond to the client or they can respond to the News daily which published in the Newspaper. If Readers responded to News paper, it will communicate the feedback to concern PR Agency. X1, X2 and X3 — are Press Release, Feedback (f), Clients (A), Reader (B) and Daily News Paper (Gate Keeper) (c)

- 1. Feedback Loop between Reader (B) and News Paper (C) – fBC
  2. Feedback Loop between News Paper(C ) and Client (A)- fCA
  3. Feedback loop between Reader (B) and Client (A)- fBA.

**Westley and MacLean's Model of Communication**

**X1, X2, X3 and X4….—are news articles or information, Feedback (f), Clients (A), Reader or Audience (B) and Gate Keeper (c)**

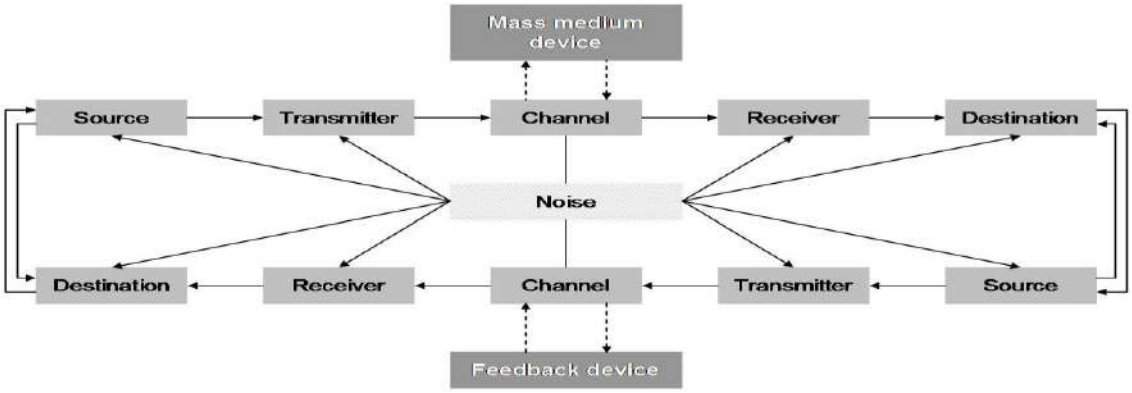

**Merits and Demerits**:

- This model accounts for Feedback and is a Two Dimensional model.
- It can account for different modes of communication, i.e., for both interpersonal communication and Mass communication.
- The model postulates that feedback can occur at multiple levels and it may be direct or indirect, fast of slow.

**2.2.8. De Fleur Model of Communication-1966**

Melvin Lawrence De Fleur is a professor and scholar in the field of communications and Social Psychology. In 1954, he received a PhD from University of Washington in Social psychology for his experimental study "Experimental studies of stimulus response relationships in leaflet communication". He proposed the model in **1966.**

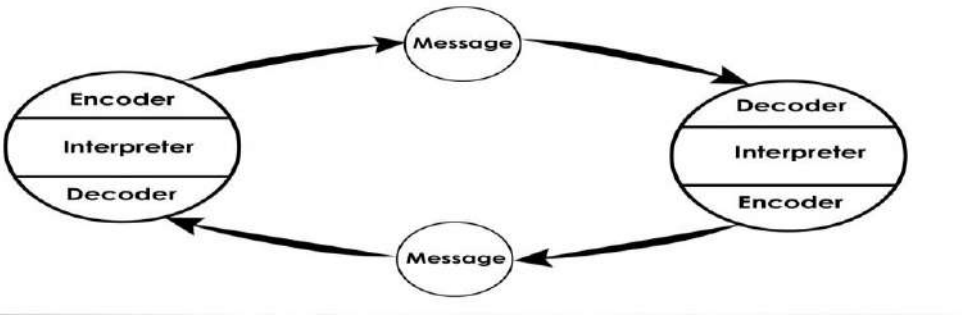

- The De fleur model of communication is **expanded version of Shannon and weaver model of communication**. He also incorporated the concept of "Linear Feedback" from Westley & Maclean model.
- De Fleur proposed his model of communication by inserting the **Mass Media device** and suggested the communication process is circular as well as it gives possible **two way feedback.**
- In this whole communication process, noise may occur and interfere at any stage.

**Defleur Model of Mass Communication System**

- Defleur pictures the source, transmitter, receiver and destination as separate phases of mass communication.
- Defleur's another important suggestion in this model is **"Feedback Device".** This feedback device is helps to analyze the target audience as separate from the receivers. Here, all these receivers are not considering as a target audience because the target audience will make some kind of feedback which will helps to find the target audience by using feedback device.
- One of the important aspects of this communication model is **two way communication process** which is recommended by Defleur and the model is the first one which introduces both **two way feedback and targeted audience** in the communication process.

### 2.2.9. Osgood & Schramm Model

It is a Circular Model, so that communication is something circular in nature.

**Encoder** – Who does encoding or Sends the message (message originates)

**Decoder** – Who receives the message?

**Interpreter** – Person trying to understand (analyses, perceive) or interpret

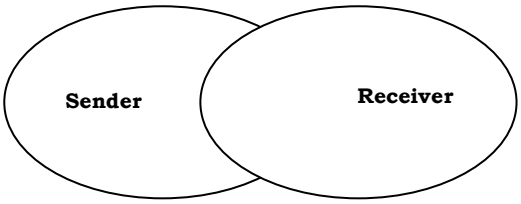

In the model an interpretation is going on from the starting to ending. This model identifies communication in a practical way. Thus each person acts as both sender and receiver and hence use interpretation. The process of encoding, interpreting and decoding takes place simultaneously. The concept of Semantic noise is introduced here as it occurs when sender and receiver apply different meaning to the same message. It happens mostly because of words and phrases for e.g. Technical Language, So certain words and phrases will cause you to deviate from the actual meaning of the communication. When semantic noise takes place decoding and interpretation becomes difficult and people get deviated from the actual message.

**Advantage of Osgood- Schramm model of communication**

1. Dynamic model- Shows how a situation can change.
2. It shows why redundancy is an essential part
3. There is no separate sender and receiver, sender and receiver is the same person
4. Assume communication to be circular in nature and Feedback is its central feature.

**Schramm Field and Experience Model –** This field experience model refers to the accumulated experiences of two individuals trying to communicate with each other. In this model Schramm introduced the notion that only what is shared in the field of experience of both the sources and the destination is actually communicated because only that portion of the signal is held in common to both the source and destination. The field of experience constitutes an individual's experience, knowledge, environment and

socio-cultural background. Consequently, the greater the overlap of the source's and receiver's field of experience, the greater is the probability of successful communication.

**Sender's Field of Experience** **Receiver's Field of Experience**

**Overlap area**

### 2.3. Non-Linear Models of Communication – Convergence Models

The Linear Communication models of 1940's and 1950's laid the foundation for the development of new and significant concepts like 'Non-linear interaction', 'transaction' and 'convergence' in 1980's. The interactive models pointed out that for effective communication both the sender and receiver must be active participants in the communication process and interact through several loops of feedback. Hence communication is 'dialogic' and 'multi -logic'.

**Kincaid (1979)** pointed out seven biases of linear models when applied to human communication. They are

1. Linear models presented a one way act usually vertical and not cyclical or two way process.
2. A source bias based dependency is found in linear models rather than relationship and interdependency between source and receiver.
3. Linear models present the concept of communication in vaccume i.e. isolated from context.
4. Primary focus of communication in liner models is on 'persuasion' rather than on mutual understanding, agreement and collective action.
5. The linear models concentrate on psychological effects of communication on separate individuals rather than the social effects and relationships on individuals.
6. The linear models believe in one way mechanic causation rather than mutual causation.
7. The linear models focus more on 'message' rather than the process.

Kincaid developed the **Concept of Convergence model of Communication in** which he suggests that

- One Cycle of feedback determines the relative position of sender and receiver.
- Two cycles of feedback determines the direction and rate of change of position.
- Three cycles of feedback determines the change in direction and velocity.
- Four cycles of feedback determines the change in acceleration.

Thus the communication is a 'multistage information' and decision process in which all participants may change their relative position overtime , create and share information that can affect their relative position. Thus an effective feedback creates 'Convergence' and ineffective feedback creates 'Divergence'. Thus the convergence and divergence describe a change in the position with respect to pre-determined goals. Mutual understanding is achieved by creating and sharing information. Hence convergence and divergence is a 'Cybernetic Process'.

## Unit-3

### 3. Media Effects Theories

The study of communication and mass media has led to the formulation of many theories:

- **Structural and functional** theories believe that social structures are real and function in ways that can be observed objectively;
- **Cognitive and Behavioural** theories tend to focus on psychology of individuals;
- **Interactionist** theories view social life as a process of interaction;
- **Interpretive theories** uncover the ways people actually understand their own experience.
- **Critical theories** are concerned with the conflict of interests in society and the way communication perpetuates domination of one group over another.

Theories are general statements that summarize our understanding of the way the world works. Theories help to formulate statements or propositions that will have some explanatory power. A theory can be defined as **"a conceptual representation or explanation of a phenomenon".** In a more comprehensive manner a theory can be defined as **"an assumption or system of assumptions, accepted principles and rules of procedure based on limited information or knowledge, devised to analyse, predict or otherwise explain the nature or behaviour of a specified set of phenomenon, abstract or reasoning.**

**Goals of Mass Communication Theories**

The following are some of the goals or objectives of mass communication theories:

1. Explaining the outcome or effect of mass communication
2. Explaining the effect of audience on mass communication
3. Explaining how people learn from Mass Media
4. Explaining the role of mass media in shaping people's values and views.

Thus we have **four basic kinds of mass communication theories**:

**1. Social Scientific Theories**: The theory and its research deal with the nature, working and effects of mass communication.

**2. Normative Theories**: The theories explain how media operates in a specific social, political system and deal with issues related to ownership, laws, press freedom etc.

**3. Operational Theories**: The theories involve how media can present different messages to achieve desired goals.

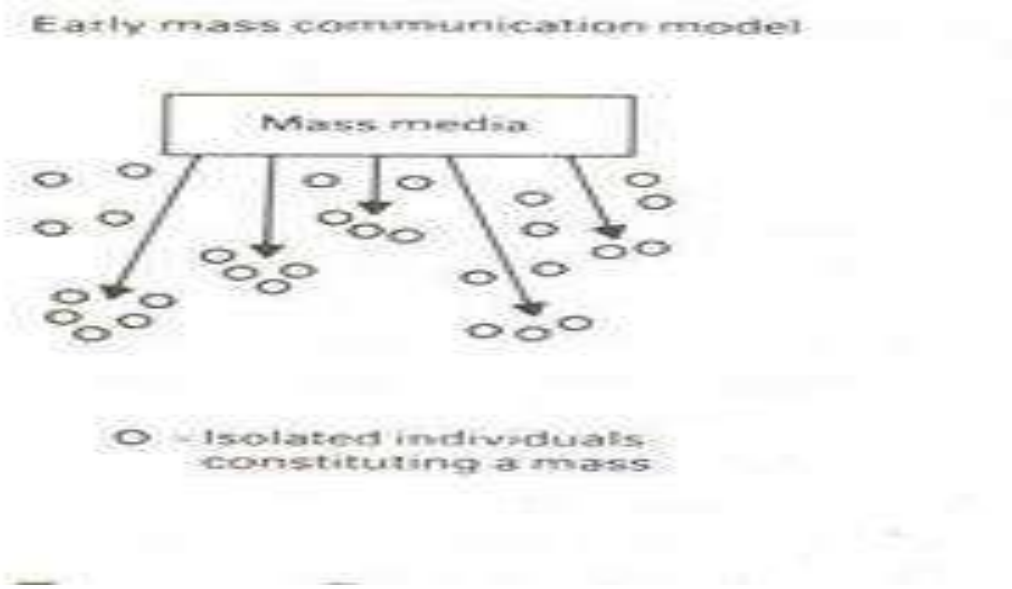

**4**. **Everyday theories**: The theories deal with day to day developments of mass media and its effects on society.

### 3.1. Magic Bullet or Hypodermic Needle Theory of Communication

The **hypodermic needle model** also known as the **hypodermic-syringe model** is a model of communications also referred to as the **"magic bullet"** perspective, or the **transmission-belt model**. Essentially, this model holds that an intended message is directly received and wholly accepted by the receiver. The model is rooted in 1930s **behaviorism** and is largely considered obsolete today. The hypodermic needle theory implied that mass media had a **direct, immediate and powerful effect** on their audiences. The mass media in the 1940s and 1950s were perceived as a powerful influence on behavior change. Several factors contributed to this **"strong effects**" theory of communication, including:

- The fast rise and popularization of radio and television, the emergence of the persuasion industries, such as advertising and propaganda.
- This view of propaganda took root after World War I and was championed by theorists such as **Harold Lasswell** in his pioneering work ***Propaganda Technique in the World War*** **(1927**). He argued that the people had been duped and degraded by propaganda during the war. Lasswell based his work on a **stimulus-response model** rooted in learning theory. Focusing on mass effects, this approach viewed human responses to the media as **uniform and immediate.**
- The **Payne Fund** studies of the 1930s, which focused on the impact of motion pictures on children.
- During second world wars media plays a vital role in both United States and Germany to made influence in the people's mind. The Germany Hitler's Nazi used films for Propaganda and they produced movies about their achievements which made great impact on Germans mind. Later United States also used its own Hollywood and produced films like **"It Happened one night", "It's a wonderful life" and Mr. Smith goes to Washington**" to portrait Germany as Evil force which also made impact in Americans Mind.

The "Magic Bullet" theory graphically assumes that the **media's message is a bullet** fired from the **"media gun"** into the **viewer's "head".** Similarly, the "Hypodermic Needle Model" uses the same idea of the "shooting" paradigm. It suggests that the **media injects its messages** straight into the **passive audience.** This passive audience is immediately affected by these messages. The public essentially cannot escape from the media's influence, and is therefore considered a "sitting duck". Both models suggest that the audience are vulnerable to the messages shot at them because of the limited communication tools and the studies of the media's effects on the masses at the time. The phrasing "hypodermic needle" is meant to give a mental image of the direct, strategic, and planned infusion of a message into an individual. Thus E. D. Martin expressed this approach thus: "Propaganda offers ready-made opinions for the unthinking herd".

But the direct influence effects were not as widely accepted by scholars it was not based on empirical findings from research but rather on assumptions. People were assumed to be "uniformly controlled by their biologically based instincts and react more or less uniformly to whatever stimuli came along. Further research in the area indicated that **media had selective influences on people**.

- In 1930, Newly formed **mercury theater and Orson Wells** join together and created a fake news bulletin about aliens invasion in American city called Grover's Mill, New jersey. They broadcast this news bulletin in between the radio program called **"The War of the Worlds**". The **"Panic Broadcast"** was reached

merely 12 million American people and one million were seriously believed. Due to this broadcast the whole country was in chaos. However, this incident actually sparked the research movement, led by Paul Lazarsfeld and Herta Herzog that would disprove the magic bullet or hypodermic needle theory, and showed that reactions to the broadcast were in fact, **diverse, and were largely determined by situational and attitudinal attributes of the listeners.**

- Lazarsfeld disproved the "Magic Bullet" theory and "Hypodermic Needle Model Theory" through elections studies in **"The People's Choice" in 1944/1968**. Lazarsfeld and colleagues executed the study by gathering research during the election of Franklin D. Roosevelt in **1940.** The study was conducted to determine voting patterns and the relationship between the media and political power. Lazarsfeld discovered that the majority of the public remained unfazed by propaganda surrounding Roosevelt's campaign. Instead, interpersonal outlets proved more influential than the media. Therefore, Lazarsfeld concluded that the media campaign were not powerful to the point where it completely persuaded the audiences. These new findings also suggested that the public can select which messages affect and don't affect them. **Thus Lazarsfeld introduced the idea of the two step flow model of communication in 1944.**
- According to Elihu Katz, Paul Lazarsfeld 1955 the two step flow model assumes that ideas flow from the mass media to opinion leaders and then to the greater public. They believed the message of the media to be transferred to the masses via this opinion leadership. These leaders essentially take in the media's information, and explain and spread the media's messages to others (Katz, 1957). Thus, the two step flow model and other communication theories suggest that the media does not directly have an influence on viewers anymore and interpersonal connections, selective exposure play a larger role in influencing the public in the modern age.

### 3.2. Two-step flow of communication

In 1944 **Paul Lazarsfeld** an American Social Researcher, **Bernard Berelson** and **Hazel Gaudet** introduced The Two-Step Flow of Communication in the book called **“The people’s choice: How the voter makes up his mind in a presidential campaign”.** The purpose of the study was focused on Presidential election Campaign

and the people decision-making process towards the campaign. All three researchers wanted to find out practically whether the mass media messages had any direct influence on the voting decision of the people. Their research indicated that media messages have very less influence than the informal, personal communication on voting behavior. Based on this researched data, The Two Step Flow Communication Theory of Mass Communication was developed by Katz and Paul Lazarsfeld in 1955.

Paul Lazarsfeld (1901 - 1976)

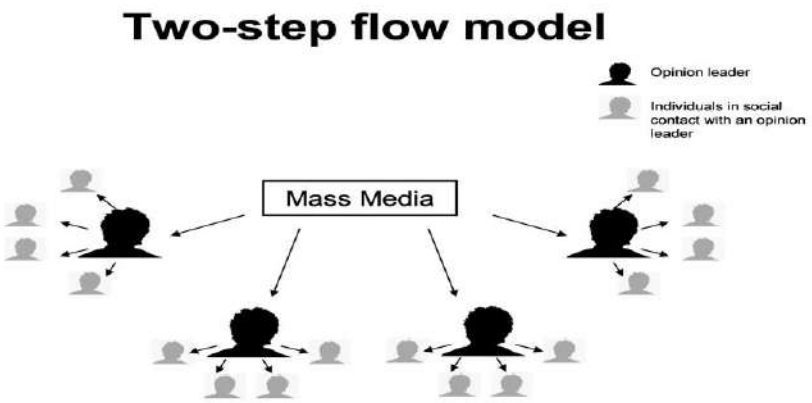

Bernard Berelson ( 1912 - 1979)

Hazel Gaudet

**Theory**

The study revealed that informal social relationships had played a part in modifying the manner in which individuals selected content from the media campaign. The study also indicated that ideas often flowed from the radio and newspapers to certain groups of peoples termed as **"opinion leaders"** and from them to the less active sections of society. Thus, informal social groups have some degree of influence on people and mould the way they select media content and act on it. The opinion leadership consists of the people with more access to media, and having a more literate understanding of media content, explain and diffuse the content to others.

Based on the two-step flow hypothesis, the term **"personal influence"** came to illustrate the process intervening between the media's direct message and the audience's reaction to that message. Opinion leaders tend to be similar to those they influence—based on personality, interests, demographics, or socio-economic factors. These leaders tend to influence others to change their attitudes and behaviors. The two-step theory refined the ability to predict how media messages influence audience behavior and explains why certain media campaigns do not alter audiences' attitudes. This hypothesis provided a basis for the multi-step flow theory of mass communication.

Opinion Leader is a leader for a certain group who gives details and information to lesser active persons in the group. They interpret the information to their own group and are leaders only for their own group, not for all. During the passage or transformation of message, the leaders may add their opinion on the actual content which may affect the low active users. In some cases the Opinion leaders may filter the actual content or get selective.

**Example**:

Carol watching News in ANB Channel they flash the headlines with "Research reveals some toys are leads the children's aggressive and Violent". That day Carol calls her little son and went for shopping and carol warn her son some toys are not good and made skin allergy which leads her son to avoid those toys.

- Opinion leader: Mom
- Audience: Her Son
- Added information in actual content: Skin Allergy

***Criticisms***

- The original two-step flow hypothesis—that ideas flow from the media to opinion leaders and then to less active sections of the population—has been criticized and negated by myriad consequent studies. Findings from **Deutschmann and Danielson** gave evidence that initial mass media information flows directly to people on the whole and is not relayed by opinion leaders.
- Furthermore, the two-step hypothesis does not adequately describe the flow of learning. Everett Rogers' "Diffusion of Innovations" cites one study in which two-

thirds of respondents accredited their awareness to the mass media rather than face-to-face communication.

- However, Lazarsfeld's two-step hypothesis is an adequate description to understand the media's influence on belief and behavior. Research indicates that media exposure starts the first step and introduces the discussion and opinion leaders initiate the second-step i.e. the information flow. These findings also realize opinion leader's decisive role in the **balance theory,** which suggests that people are motivated to keep consistency among their current beliefs and opinions. If a person is exposed to new observations that are inconsistent with present beliefs, he or she is thrown into imbalance. Then the person will seek advice from their opinion leader, to provide them with additional cognitions to bring them back into balance.

**3.3. Opinion leaders / Leadership** Opinion leadership is a concept that arises out of the theory of two-step flow of communication propounded by Paul Lazarsfeld and Elihu Katz. The following are some of the characters of the Opinion leaders.

- The opinion leader is the agent who is an **active media user** and who interprets the meaning of media messages or content for lower-end media users.
- Typically the opinion leader is held in **high esteem** by those that accept his or her opinions.
- Opinion leadership tends to be **subject specific**, that is, a person that is an opinion leader in one field may be a follower in another field. An example of an opinion leader in the field of computer technology, might be a neighborhood computer service technician. The technician has access to far more information on this topic than the average consumer and has the requisite background to understand the information, though the same person might be a follower at another field (for example sports) and ask others for advice.
- Opinion leaders are individuals who obtain **more media coverage** than others and are especially educated on a certain issue. Opinion leaders can change depending on the subject but in general, men tend to be opinion leaders in politics and young women tend to be opinion leaders in fashion for women in general

- In his article "The Two Step Flow of Communication" by Elihu Katz, found opinion leaders to have more influence on people's opinions, actions, and behaviors than the media. Opinion leaders are seen as **trustworthy and non-purposive**. While the media can act as a reinforcing agent, opinion leaders have a more changing or determining role in an individual's opinion or action.

In his article, Elihu Katz answers the question, who is an opinion leader? The three aspects of an opinion leader are related to:

**1) The personification of his/her values (who one is)**

**2) His/her competence (what one knows)**

**3) His/her location (who one knows)**

Example: In a strategic attempt to engage the public in environmental issues and his nonprofit, The Climate Project, Al Gore utilized the concept of opinion leaders. Gore found opinion leaders by recruiting individuals who were educated on environmental issues and saw themselves as influential in their community and amongst their friends and family. From there, he trained the opinion leaders on the information he wanted them to spread and enabled them to influence their communities. By using opinion leaders, Gore was able to educate and influence many Americans to take notice of climate change and change their actions

### 3.4. Multistep Flow Theories – Gate Keeping Theory

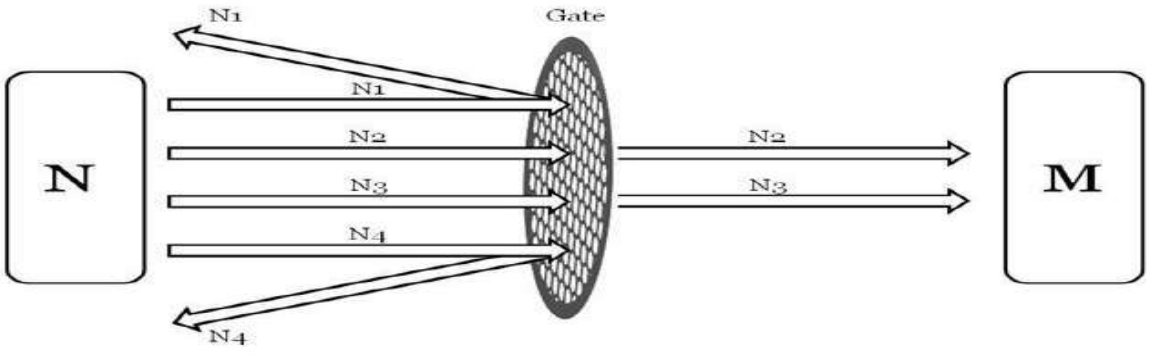

**Kurt Zadek Lewin** (1890-1947), was born in German. He was a great Psychologist and pioneer in Social Psychology. Kurt Lewin coined the word called **"Gate keeping**". It is regarded as the blockage of unwanted or useless things by using a gate. Here the person who makes a decision is called "Gatekeeper". At first it is widely used in the field of psychology and later it occupies the field of communication.

**Concept**:

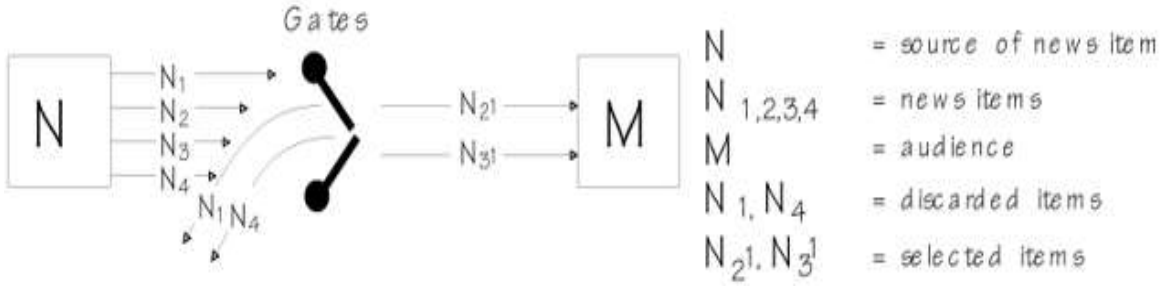

The Gatekeeper decides what information should move to group or individual and what information should not. Here, the gatekeeper are the decision makers who letting the whole social system. The gatekeeper is having its own influence like social, cultural, ethical and political. Based on personal or social influences they let the information to the group. Through this process the unwanted, sensible and controversial information's are removed by the gate keeper which helps to control the society or a group and letting them in a right path.

- Gatekeeper in a social system decides which of a certain commodity – materials, goods, and information – may enter the system.
- Gatekeeper's control the public's knowledge of the actual events by letting some stories pass through the system but keeping others out.
- Gatekeepers can also be seen as institutions or organizations.
- Gatekeepers exist in many jobs, and their choices hold the potential to colour mental pictures that are subsequently created in peoples understanding of what is happening in the world around them.
- The gatekeeper's choices are a complex web of influences, preferences, motives and common values.
- Gate-keeping is inevitable and in some circumstances it can be useful. Gate-keeping can also be dangerous, since it can lead to an abuse of power by deciding what information to discard and what to let pass.

**Gate Keeping Theory**

**White's Selective Gate keeping Model**:

**Source: White (1964)**

**Example**:

An international news channel receives numbers of news items within day like international terror issues, UN discussions, Texas bull fighting and religious abuse on international community. A news channel can't show all those news items to audience because it may affect the channel reputation in public and organizations policy. Here, editor decides the news items especially he can't show the Texas bull fighting because it is not internationally popular story. But the same time the news channel can't show the religious abuses also because it may hurt audience directly and it may affect organizations policy also. But international terror issues and UN discussions are universal common news that won't affect the channel reputation in public and organizations policy. News items: N1: Texas bull fighting, N2: International terror issues, N3: UN discussions, N4: religious abuse on international community

- Gatekeeper: Chief Editor
- Selected News Items: N2: International terror issues, N3: UN discussions
- Discarded News Items: (on popularity): N1: Texas bull fighting.
- Discarded News Items: (on policy): N4: Religious abuse on International community.

In home mother plays the vital role and she has to decide what their kid's needs and what should avoid. In news medium editor play vital role. He has to decide what kind of news items will publish and what should not. Media gate-keeping showed that decision making is based on principles of news values, organizational routines, input structure and common sense. Gate-keeping is vital in communication planning and almost all communication planning roles include some aspect of gate-keeping.

**3.5. Social and Psychological Theories - Diffusion of Innovations Theory**

Multi step flow theory is based on the idea that there are a number of relays in the communication flow from a source to a large audience. Diffusion of Innovations or Multi-step flow theory deals with the adoption of new ideas. Diffusion of Innovations Theory, developed by E.M. Rogers in **1962**, is one of the oldest social science theories. It originated in communication to explain how, over time, an idea or product gains momentum and diffuses or spreads through a specific population or social system. The end result of this diffusion is that people, as part of a social system, adopt a new idea, behavior, or product. Adoption means that a person does something differently than what they had previously i.e., purchase or use a new product, acquire and perform a new behavior, etc. The key to adoption is that the person must perceive the idea, behavior, or product as new or innovative. Adoption of a new idea, behavior, or product is a process whereby some people are more apt to adopt the innovation than others. Researchers have found that people who adopt an innovation early have different characteristics than people who adopt an innovation later. When promoting an innovation to a target population, it is important to understand the characteristics of the target population that will help or hinder adoption of the innovation.

- Diffusion research goes one step further than two-step flow theory and introduces a multi-step flow of communication.
- Diffusion of innovation theory predicts that media as well as interpersonal contacts provide information and influence opinion and judgment. E.M. Rogers proposed that it diffusion is the "process by which an innovation is communicated through certain channels over a period of time among the members of a social system". An innovation is "an idea, practice, or object that is perceived to be new by an individual or other unit of adoption". "Communication is a process in which participants create and share information with one another to reach a mutual understanding".
- It consists of four stages:
    - **Innovation**: It is an idea, practice, or object that is perceived as new by an individual or other unit of adoption.
    - **Communication channels:** It is the means by which messages get from one individual to another.

- **Time:** The innovation-decision period is the length of time required to pass through the innovation-decision process" or the rate of adoption is the relative speed with which an innovation is adopted by members of a social system
- **Social system:** It is the set of interrelated units that are engaged in joint problem solving to accomplish a common goal

**Five stages of the adoption process**

Diffusion occurs through a five–step decision-making process. It occurs through a series of communication channels over a period of time among the members of a similar social system. **Rogers' five stages (steps): awareness, interest, evaluation, trial, and adoption are integral to this theory**. An individual might reject an innovation at any time during or after the adoption process. In later editions of Diffusion of Innovation, Rogers changes his terminology of the five stages to: **knowledge, persuasion, decision, implementation, and confirmation**. However, the descriptions of the categories have remained similar throughout the editions.

| Stage | Definition |
|---|---|
| **Knowledge** | The individual is first exposed to an innovation, but lacks information about the innovation. During this stage the individual has not yet been inspired to find out more information about the innovation. |
| **Persuasion** | The individual is interested in the innovation and actively seeks related information or details. |
| **Decision** | The individual takes the concept of the change and weighs the advantages/disadvantages of using the innovation and decides whether to adopt or reject the innovation. Rogers notes that it is the most difficult stage to acquire empirical evidence due to its individualistic nature. |
| **Implementation** | The individual employs the innovation to a varying degree depending on the situation. During this stage the individual also determines the |

usefulness of the innovation and may search for further information about it.

**Confirmation**

The individual finalizes his/her decision to continue using the innovation. This stage is both intrapersonal and may cause cognitive dissonance and interpersonal, confirmation the group has made the right decision.

**Rate of adoption**

- The rate of adoption is defined as the relative speed at which participants adopt an innovation. Rate is usually measured by the length of time required for a certain percentage of the members of a social system to adopt an innovation.
- The rates of adoption for innovations are determined by an individual's adopter category.
- In general, individuals who first adopt an innovation require a shorter adoption period when compared to late adopters.
- Within the adoption curve at some point the innovation reaches critical mass. This is when the number of individual adopters ensures that the innovation is self-sustaining. Illustrating how an innovation reaches critical mass.

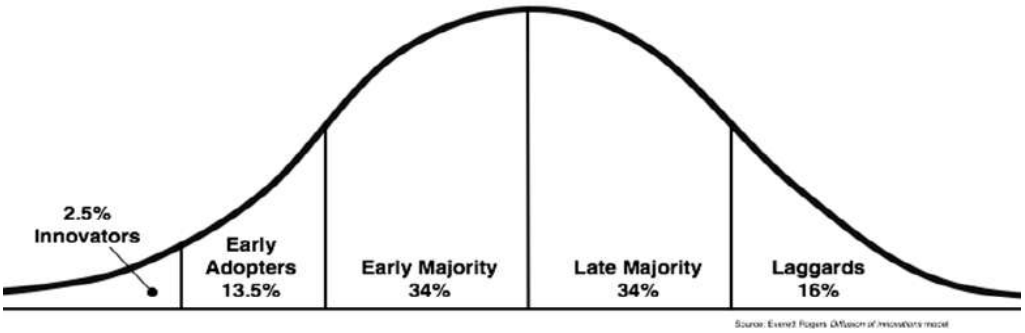

**Diffusion Vs adoption**

- **Adoption is an individual process detailing the series of stages one undergoes from first hearing about a product to finally adopting it.**
- **Diffusion signifies group phenomena, which suggests how an innovation spreads.**

**Adopter categories**

Rogers defines an adopter category as a classification of individuals within a social system on the basis of innovativeness. In the book Diffusion of Innovations, Rogers suggests a total of five categories of adopters in order to standardize the usage of adopter categories in diffusion research. **The original diffusion research was done in** 1903 by the French sociologist **Gabriel Tarde** who plotted the original S-shaped diffusion curve. Diffusion research centres on the conditions which increase or decrease the likelihood that a new idea, product, or practice will be adopted by members of a given culture**.** The adoption of an innovation follows an **S curve** when plotted over a

length of time. The categories of adopters are: **innovators, early adopters, early majority, late majority and laggards**. In addition to the gatekeepers and opinion leaders who exist within a given community, change agents may come from outside the community. Change agents bring innovations to new communities- first through the gatekeepers and then through the opinion leaders, and so on through the community**.**

**The diffusion of innovations according to Rogers indicates that With successive groups of consumers adopting the new technology (shown in blue), its market share (yellow) will eventually reach the saturation level. In mathematics the S curve is known as the logistic function**

| Adopter category | Definition |
|---|---|
| **Innovators** | Innovators are willing to take risks, have the highest social status, have financial liquidity, are social and have closest contact to scientific sources and interaction with other innovators. Their risk tolerance allows them to adopt technologies that may ultimately fail. Financial resources help absorb these failures. |
| **Early adopters** | These individuals have the highest degree of opinion leadership among the adopter categories. Early adopters have a higher social status, financial liquidity, advanced education and are more socially forward than late adopters. They are more discreet in adoption choices than innovators. They use judicious choice of adoption to help them maintain a central communication position. |

| | |
|---|---|
| **Early Majority** | They adopt an innovation after a varying degree of time that is significantly longer than the innovators and early adopters. Early Majority have above average social status, contact with early adopters and seldom hold positions of opinion leadership in a system |
| **Late Majority** | They adopt an innovation after the average participant. These individuals approach an innovation with a high degree of skepticism and after the majority of society has adopted the innovation. Late Majority are typically sceptical about an innovation. They have below average social status, little financial liquidity, in contact with others in late majority and early majority and little opinion leadership. |
| **Laggards** | They are the last to adopt an innovation. Unlike some of the previous categories, individuals in this category show little to no opinion leadership. These individuals typically have an aversion to change-agents. Laggards typically tend to be focused on "traditions", lowest social status, lowest financial liquidity, oldest among adopters, and in contact with only family and close friends. |
| **Leap froggers** | When resistors upgrade they often skip several generations in order to reach the most recent technologies. |

**Characteristics of innovations**

Rogers defines several intrinsic characteristics of innovations that influence an individual's decision to adopt or reject an innovation.

| Factor | Definition |
|---|---|
| **Relative advantage** | How improved an innovation is over the previous generation? |
| **Compatibility** | The level of compatibility that an innovation has to be assimilated into an individual's life. |
| **Complexity or simplicity** | If the innovation is perceived as complicated or difficult to use, an individual is unlikely to adopt it. |

| | |
|---|---|
| **Trialability** | How easily an innovation may be explored. If a user is able to test an innovation, the individual will be more likely to adopt it. |
| **Observability** | The extent that an innovation is visible to others. An innovation that is more visible will drive communication among the individual's peers and personal networks and will, in turn, create more positive or negative reactions. |

**Failed diffusion**

Rogers discussed a situation in Peru involving the implementation of boiling drinking water to improve health and wellness levels in the village of Los Molinas. The residents had no knowledge of the link between sanitation and illness. The campaign worked with the villagers to try to teach them to boil water, burn their garbage, install latrines and report cases of illness to local health agencies. In Los Molinas, a stigma was linked to boiled water as something that only the "unwell" consumed, and thus, the idea of healthy residents boiling water prior to consumption was frowned upon. The two-year educational campaign was considered to be largely unsuccessful. This failure exemplified the importance of the roles of the communication channels that are involved in such a campaign for social change.

**Heterophily & Homophily**

- Lazarsfeld and Merton first called attention to the principles of homophily and it's opposite, heterophily.
- Rogers defines homophily as "the degree to which pairs of individuals who interact are similar in certain attributes, such as beliefs, education, social status, and the like". When given the choice, individuals usually choose to interact with someone similar to themselves, homophilous individuals engage in more effective communication because their similarities lead to greater knowledge gain as well as attitude or behavior change.
- However, most participants in the diffusion of innovations are heterophilous, meaning they speak different languages, so to speak. The problem is that diffusion requires a certain degree of heterophily; if two individuals are identical, no diffusion occurs because no new information can be exchanged. Therefore, an

ideal situation would involve two individuals who are homophilous in every way, except in knowledge of the innovation

**Limitations of Diffusion of Innovation Theory**

There are several limitations of Diffusion of Innovation Theory, which include the following:

- Much of the evidence for this theory, including the adopter categories, did not originate in public health and it was not developed to explicitly apply to adoption of new behaviors or health innovations.
- It does not foster a participatory approach to adoption of a public health program.
- It works better with adoption of behaviors rather than cessation or prevention of behaviors.
- It doesn't take into account an individual's resources or social support to adopt the new behavior (or innovation).

This theory has been used successfully in many fields including communication, agriculture, public health, criminal justice, social work, and marketing. In public health, Diffusion of Innovation Theory is used to accelerate the adoption of important public health programs that typically aim to change the behavior of a social system.

**3.6. Agenda-setting theory**

**Agenda-setting theory** was introduced in **1972 by Maxwell McCombs and Donald Shaw** in their ground breaking study of the role of the media in 1968 presidential campaign in Chapel Hill, North Carolina.

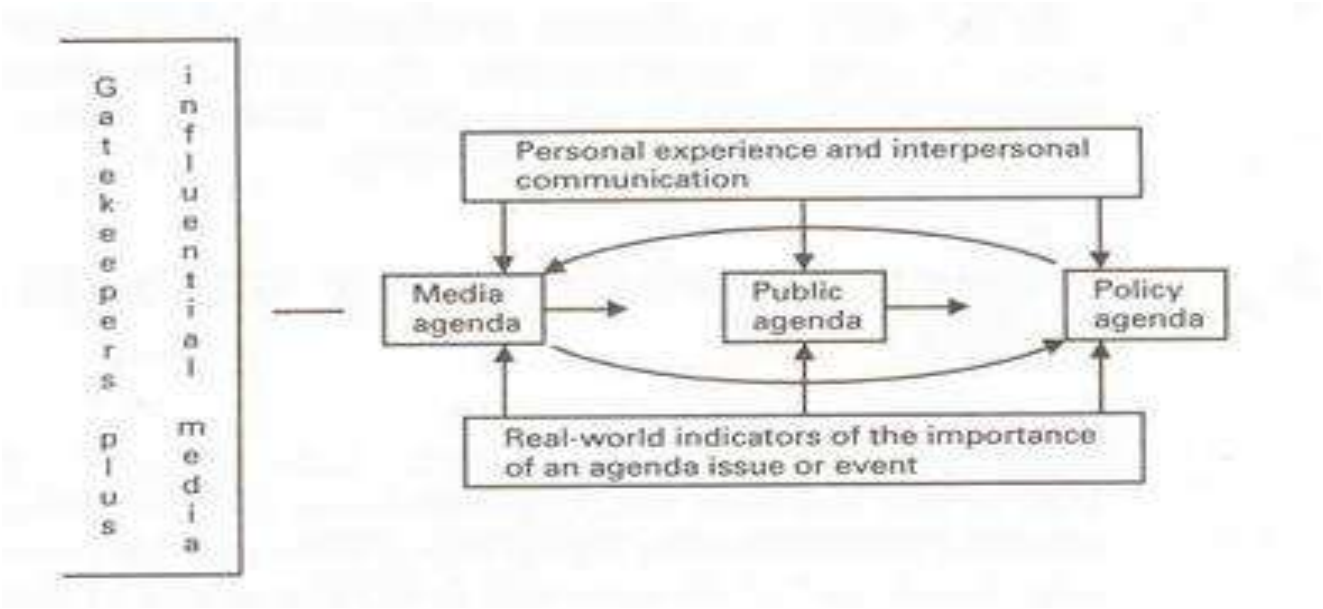

- McCombs and Shaw introduced agenda-setting theory in the *Public Opinion Quarterly*. The theory was derived from their study that took place in Chapel Hill, NC, where the researchers surveyed 100 undecided voters during the 1968 presidential campaign on what they thought were key issues and measured that against the actual media content.
- The ranking of issues was almost identical, and the conclusions matched their hypothesis that the mass media positioned the agenda for public opinion by emphasizing specific topics. The theory explains the correlation between the rate at which media cover a story and the extent that people think that this story is important. This correlation has been shown to occur repeatedly.

The agenda-setting theory is the theory that the mass-news media have a large influence on audiences by their choice of what stories to consider newsworthy and how much prominence and space to give them.

- Agenda-setting theory's main postulate is **salience transfer**. Salience transfer is the ability of the mass media to transfer issues of importance from their mass media agendas to public agendas. The media agenda is the set of issues addressed by media sources and the public agenda which are issues the public consider important.
- The agenda-setting function has **multiple components**:
  - Media agenda are issues discussed in the media, such as newspapers, television, and radio.
  - Public agenda are issues discussed among members of the public.
  - Policy agenda are issues that policy makers consider important, such as legislators.
  - Corporate agenda are issues that big corporations consider important.
  - These four agendas are interrelated.
  - The two basic assumptions that underlie most research on agenda-setting are that the press and the media do not reflect reality, they filter and shape it, and the media concentration on a few issues and subjects leads the public to perceive those issues as more important than other issues.
- The media uses diffusion to spread ideas and aid in its agenda setting. **Opinion Leaders and boundary spanners** are very important to the media at using their networks to pass on the flow of information.
  - An opinion leader is often someone who is thought of by others to know a significant amount of information on a topic or is an "expert". They are often at the center of a social network, more attentive to outside information and capable of influence. Since the opinion leaders are those in a social network who are most likely to watch the news or pay attention to the media, they are an extremely important tool at spreading information to the masses.
  - **Boundary Spanners** are those in a social network who can span across various social networks. They can be essential to the flow of novel

information. Boundary spanners can be used by the media in setting its agenda by getting information and ideas to a variety of social networks, rather than just one.

A study showing the effects of diffusion was *Project Revere*. Sociologists at the University of Washington from 1951 to 1953 would drop leaflets from an airplane onto a town. They then would see how long it would take for the information to pass by word of mouth to those who did not get a leaflet. Their findings showed that children are very effective in the diffusion process, thus proving how easy it is for a child to be affected by the media.

**Levels of agenda setting**

- The **first-level agenda setting** is most traditionally studied by researchers. In this level the media uses objects or issues to influence the public. In this level the media suggest what the public should think about i.e. the amount of coverage.
- In **second-level agenda setting**, the media focuses on the characteristics of the objects or issues. In this level the media suggest how the people should think about the issue.
- There are two types of attributes:
  - **Cognitive** i.e. substantive, or topics and
  - **Affective** i.e. evaluative, or positive, negative, neutral.

- **Inter media agenda setting** involves salience transfer among the media. The theory is used in political advertising, political campaigns, debates, business news and corporate reputation, business influence on federal policy, legal systems, trials, role of groups, audience control, public opinion, and public relations etc.

**Strengths and weaknesses of theory**

- It has an **explanatory power** because it explains why most people prioritize the same issues as important.
- It also has **predictive power** because it predicts that if people are exposed to the same media, they will feel the same issues are important.
- Its meta-theoretical assumptions are balanced on the scientific side and it lays groundwork for further research.
- The theory has **organizing power** because it helps organize existing knowledge of media effects.
- There are also limitations, such as media users may not be as ideal as the theory assumes. People may not be well-informed, deeply engaged in public affairs, thoughtful and skeptical. Instead, they may pay only casual and intermittent attention to public affairs and remain ignorant of the details. For people who have made up their minds, the effect is weakened. News media cannot create or conceal problems, they can only alter the awareness, priorities and salience people attach to a set of problems. Research has largely been inconclusive in establishing a causal relationship between public salience and media coverage.

### *3.7.* Cognitive Dissonance Theory

Early media effects studies postulated by Lazarfled and Berelson showed that political campaigns have very little effect on voters, but instead personal influence like family and friends and cognition plays a major role.

- **Cognition is a term referring to the mental processes involved in gaining knowledge and comprehension, including thinking, knowing, remembering, judging and problem-solving. These are higher-level functions of the brain and encompass language, imagination, perception and planning.**

- The Cognitive effect model found that the media has an indirect influence on an audiences' attitude. A viewer already has set ideas and opinions, the media cannot do much to change those. However by showing certain stories more often than others and shaping the agenda they can shape what an audience puts importance on.
- For example, if the media reports more on the economy than on international news, then people will have more information on the economy and think that the issue is more important than other things that are going on around the world. **Thus the Quote on agenda setting became popular i.e. "The media doesn't tell us what to think; it tells us what to think about"- Bernard C. Cohen (1963)**

Cognitive dissonance is a communication theory adopted from social psychology. The title gives the cognitive is thinking or the mind; and dissonance is inconsistency or conflict. Cognitive dissonance is the psychological conflict from holding two or more incompatible beliefs simultaneously. The theory replaces previous conditioning or reinforcement theories by viewing individuals as more purposeful decision makers; they strive for balance in their beliefs. If presented with decisions or information that create dissonance, they use dissonance-reduction strategies to regain equilibrium, especially if the dissonance affects their self-esteem. The theory focuses on stresses and attitude change. It postulates that behaviours can determine attitudes. **Cognition is defined as an individual's perception of own attitudes, beliefs, behaviours**. Hence Cognitive dissonance is described as the feelings of tension that arise when one is simultaneously aware of two inconsistent cognitions. Most of the Consistency theories hypothesize that, should inconsistencies develop among cognitions, people are motivated to restore harmony.

The following are the key propositions of dissonance theory.

- Dissonance theory says relationships among two cognitions can be consonant, dissonant, and irrelevant. Cognitive dissonance is a noxious state. It produces unpleasant physical arousal.
- Individual will attempt to reduce or eliminate dissonance - and will try to avoid things that increase dissonance. EX: Selective observation.
- Cognitive dissonance can be reduced or eliminated only by

- **Adding new cognitions, or**
- **Changing existing ones**.

EX: Can change our minds. Decide we were wrong. EX: Can "make up" information,

EX: We may seek new information that can restore consonance.

EX: Try to discredit source of dissonance by making up info or seeking counter-evidence.

**Sources of dissonance**

1. **Informational inconsistency**. Receive information that contradicts what they already know or believe. EX: Suppose you believe George Bush did not know about Iran-Contra - and then suppose Oliver North testified that he was the mastermind behind it.
2. **Disconfirmed expectations**. People prepare themselves for an event that never occurs - or even worse, an event whose opposite occurs. EX: You expect to do well on an exam, and you don't. EX: When prophesy fails.
3. **Insufficient justification for behaviour**. People do things which they lack justification.
4. **Post decision dissonance** - after every decision, you feel dissonance because you have rejected some good things and accepted some bad. We tend to become more certain of decisions afterwards.

Not all inconsistencies result in cognitive dissonance. Cognitions may not be important to the individual - hence inconsistency does not produce discomfort. Cognitions may not come in contact with each other - contradictions can go unnoticed. Aversive consequences are not perceived. In order for cognitive dissonance to occur, a product must result from the counter attitudinal behaviour. That product is the bringing about, or possible occurrence, of an aversive event. Aversive event = something that goes against your self interest, or that you would rather not have occur.

**Festigner- Cognitive dissonance:**

Leon Festinger's theory of Cognitive dissonance Explains how people deal with information that is conflicting for them. Cognitive dissonance helps in understanding people's response to persuasive writing. According to Festinger, any two perceptions held by an individual; will have one of three possible responses

- **Irrelevance**. Public relations messages may be irrelevant to some people. Therefore messages must be made relevant for the audience. For e.g.; an overweight person receiving a message from the doctor on TV to exercise more could ignore it and decide it does not concern him and find reason why they cannot exercise decide the message has no credibility as they know several doctors who are overweight.
- **Consonance:** i.e. agreeable to reason in which case the public relations messages reinforcing people's beliefs. Charities for e.g.; regularly issue news releases, annual reports and thank you letters that reinforce the giving behaviour of their donors by explaining how useful their contribution was.
- **Dissonant:** Many PR messages will be dissonant because they seek to change behaviour or attitudes. For e.g. in advertising, which detergent to buy- one that whitens your clothes or one that is colour safe. Dissonant messages may change behaviour or attitude in the direction of the message, but many other things can also happen. People can reduce the dissonance between their life style and message suggesting they change it by avoiding the new information. They seek consonant information to bolster their own position or they can reduce the importance of the overall issue by derogating the message or the message source or by distorting it.

**Example**

1. Consider a driver who refuses to use a seat belt despite knowing that the law requires it, and it saves lives. Then a news report or a friend's car incident stunts the scofflaw into facing reality. Dissonance may be reduced by

   Altering behaviour i.e. start using a seat belt so the behaviour is consonant with knowing that doing so is smart or

   Seeking information that is consonant with the behaviour… air bags are safer than seat belts. If the driver never faces a situation that threatens the decision not to use seat belts, then no dissonance-reduction action is likely because the impetus to reduce dissonance depends on the magnitude of the dissonance held

2. Employees who receive a massage to' work harder' from the management could

   - Ignore the message
   - Decide it doesn't' apply to them

- Find a stronger reason not to work hard ( e.g. health problems, low wages etc)
- Decide the spokesman had no credibility ( because many in the higher ranks do not work hard but are enjoying promotion)

All these tactics will help the workers remain psychologically consistent with the fact that they are not "working harder". Therefore it seems that the chances are limited to achieve an attitudinal change or a behaviour shift. Knowing that people may ignore or distort messages, derogate or down play sources, or seek information that counteracts messages we have to anticipate these behaviours and create messages that minimize the possibility of being ignored or misinterpreted.

**3.8. Cultivation Theory**

The Cultivation theory postulates that Media shapes the concepts of social reality**.** With the decline of hypodermic needle theories a new perspective began to emerge: **the stalagmite theories**. Black et. al. used the metaphor of stalagmite theories to suggest that media effects occur analogously to the slow build up of formations on cave floors, which take their interesting forms after steady dripping of water from the cave ceilings above. One of the most popular theories that fit this perspective is cultivation theory. Cultivation theory sometimes referred to as the cultivation hypothesis or cultivation analysis was an approach developed by Professor George Gerbner, dean of the Annenberg School of Communications at the University of Pennsylvania. He began the 'Cultural Indicators' research project in the mid-1960s, to study whether and how watching television may influence viewers' ideas of what the everyday world is like. **Cultivation research is in the 'effects' tradition. Cultivation theorists argue that television has long-term effects which are small, gradual, indirect but cumulative and significant.**

- Developed by **George Gerbner and Larry Gross** of the University of Pennsylvania, cultivation theory derived from several large-scale research projects as part of an overall research project entitled 'Cultural Indicators'. The purpose of the Cultural Indicators project was to identify and track the 'cultivated' effects of television on viewers.
- Gerbner and Gross (1976) assert that the overall concern about the effects of television on audiences stemmed from the unprecedented centrality of television in American culture. They posited that television as a mass medium of

communication had formed in to a common symbolic environment that bound diverse communities together, socializing people in to standardized roles and behaviors. They compared the power of television to the power of religion, saying that television was to modern society what religion once was in earlier times. Thus television cultivates from infancy the very predispositions and preferences that used to be acquired from other primary sources. The repetitive pattern of television's mass-produced messages and images forms the mainstream of a common symbolic environment"

- Cultivation theory in its most basic form, then, suggests that exposure to television, over time, subtly "cultivates" viewers' perceptions of reality. This cultivation can have an impact even on light viewers of TV, because the impact on heavy viewers has an impact on our entire culture. Television is a medium of the socialization of most people into standardized roles and behaviors. Its function is best described as "**enculturation**". The central hypothesis of cultivation theory is that **"those who spend more time watching television are more likely to perceive the real world in ways that reflect the most common and recurrent messages of the television world, compared with people who watch less television".** The effects of a pervasive medium upon the composition and structure of the symbolic environment is **subtle, complex, and intermingled with other influences.**
- Gerbner argues that the mass media cultivate attitudes and values which are already present in a culture: the media maintain and propagate these values amongst members of a culture, thus binding it together. He has argued that television tends to cultivate middle-of-the- road political perspectives. Gerbner called this effect **'mainstreaming'.**
- Cultivation Theory is a **top down, linear, closed communication model**. It regards audiences as passive, presenting ideas to society as a mass with meaning open to little or no interpretation. The ideas presented to a passive audience are often accepted, therefore influencing large groups into conforming behind ideas, meaning that the media exerts a significant influence over audiences. Audience is seen as very vulnerable and easily manipulated.

- In **1968** Gerbner conducted a survey to demonstrate this theory. From his results he placed television viewers into three categories;
    - **Light viewers (less than 2 hours a day),**
    - **Medium viewers (2–4 hours a day) and**
    - **Heavy viewers (more than 4 hours a day).**
    - There is also a distinction between two groups of television viewers: the heavy viewers and the light viewers. The focus is on 'heavy viewers'. People who watch a lot of television are likely to be more influenced by the ways in which the world is framed by television programs than are individuals who watch less, especially regarding topics of which the viewer has little first-hand experience. Light viewers may have more sources of information than heavy viewers.
- Cultivation theorists distinguish between
    - **'First order' effects** relate to general beliefs about the everyday world, such as about the prevalence of violence and
    - **'Second order' effects** relate to specific attitudes, such as to law and order or to personal safety).
- **'Resonance'** describes the intensified effect on the audience when what people see on television is what they have experienced in life. This double dose of the televised message tends to amplify the cultivation effect.

**Example**

In a survey of about 450 New Jersey schoolchildren, 73 percent of heavy viewers compared to 62 percent of light viewers gave the TV answer to a question asking them to estimate the number of people involved in violence in a typical week. The same survey showed that children who were heavy viewers were more fearful about walking alone in a city at night. They also overestimated the number of people who commit serious crimes. This effect is called **'mean world syndrome'**. One controlled experiment addressed the issue of cause and effect, manipulating the viewing of American college students to create heavy- and light-viewing groups. After 6 weeks of controlled viewing, heavy viewers of action-adventure programs were indeed found to be more fearful of life in the everyday world than were light viewers

### 3.9. Uses and Gratifications theory

The theory gives an explanation media use by the people. The theory originated in 1970 as a reaction to traditional mass communication research that emphasized the sender and the message. The theory focussed on active audience and users and postulated the Psychological orientation taking needs, motives and gratifications of media users. There are three main paradigms in media effects i.e. **hypodermic needle (i.e., direct, or strong effects), limited effects, and the powerful to limited effects**. "Uses and Gratifications" falls under the second paradigm which reached its apex around 1940-1960, when studies helped realize that the first paradigm was inaccurate. Uses and gratifications theory attempts to explain the uses and functions of the media for individuals, groups, and society in general. The following are the core objectives of the theory.

- Uses and Gratifications Theory is a popular approach to understanding mass communication. **The theory places more focus on the consumer, or audience, instead of the actual message itself by asking "what people do with media" rather than "what media does to people" (Katz, 1959).**
- It assumes that members of the audience are not passive but take an active role in interpreting and integrating media into their own lives.
- The theory also holds that audiences are responsible for choosing media to meet their needs. The approach suggests that people use the media to fulfill specific gratifications.
- This theory would then imply that the media compete against other information sources for viewers' gratification.

***Thus the Uses and Gratifications Theory postulates that a medium will be used more when the existing motives to use the medium leads to more satisfaction***.

**Conceptual Model**

- The Uses and Gratifications Theory follows a basic model of an audience-centered approach. When an audience actively seeks out media, they are typically seeking it in order to gratify a need.
- For example, in social situations, people may feel more confident and knowledgeable when they have specific facts and stories from media to add to conversation. **By seeking out media, a person fulfills a need to be informed**.

- Social situations and psychological characteristics motivate the need for media, which motivates certain expectations of that media. This expectation leads one to be exposed to media that would seemingly fit expectations, leading to an ultimate gratification.

Beginning in the 1940s, researchers began seeing patterns under the perspective of the uses and gratifications theory in radio listeners. Early research was concerned with topics such as children's use of comics and the absence of newspapers during a newspaper strike. An interest in more psychological interpretations also emerged during this time.

- In **1974, Katz, Blumler and Gurevitch** realized that most Uses and Gratification studies were most concerned with:

  **1.** ***The social and psychological origins of***

  ***2. Needs which generate***

  ***3. Expectations***

  ***4. Of mass media or other sources, which lead to***

  ***5. Differential patterns of media exposure (or engagement in other activities) resulting in***

  ***6. Need gratifications and***

  ***7. Other consequences, perhaps mostly unintended ones***

- The notion of active audience has conflated an extraordinary range of meanings, including **utility, intentionality, selectivity and imperviousness to influence**.
  - Utility—Mass communication has uses to people.
  - Intentionality—Media consumption is directed by prior motivation.
  - Selectivity—Media behavior reflects prior interests and preferences.
  - Imperviousness—The lessened ability of media to influence an obstinate audience
- In **1948, Lasswell** introduced a **four-functional interpretation** of the media on a macro-sociological level. Media served the functions of surveillance, correlation, entertainment and cultural transmission for both society and individuals. In 1972, Blumler and Brown extended Lasswell's four groups 25 years later. These included four primary factors for which one may use the media:

- **Diversion**—Escape from routine and problems; an emotional release. Personal Relationships—Social utility of information in conversation; substitution of media for companionship.
- **Personal Identity or Individual Psychology**—Value reinforcement or reassurance; self-understanding, reality exploration.
- **Surveillance**—Information about factors which might affect one or will help one do or accomplish something

- **Gurevitch and Haas (1973)** saw the mass media as a means by which individuals connect or disconnect themselves with others. They developed 35 needs taken from the largely speculative literature on the social and psychological functions of the mass media and put them into five categories:
  - Cognitive needs—Acquiring information, knowledge and understanding.
  - Affective needs—Emotion, pleasure, feelings.
  - Personal integrative needs—Credibility, stability, status.
  - Social integrative needs—Family and friends.
  - Tension release needs—Escape and diversion.

**Criticism**

Many people have criticized this theory as they believe the **public has no control over the media and what it produces**. The theory makes the line between gratification and satisfaction blurred calling into question if we only seek what we desire or actually enjoy it. The biggest issue for the Uses and Gratifications Theory is its being non-theoretical, being vague in key concepts, and being nothing more than a data-collecting strategy. Due to the individualistic nature of Uses and Gratification theory, it is difficult to take the information that is collected in studies. Most research relies on pure recollection of memory rather than data

## 3.10. Media Dependency Theory

**Sandra Ball-Rokeach and Melvin DeFleur** proposed the **"Dependency theory" in 1976**. The theory is combined with several perspectives like psycho analytics & social system theory, systematic & casual approach and base elements from uses and gratification theory but less focus on effects. Media Dependency theory is one of the first theory which regards audience as an active part in communication process. The dependency theory is expanded from the theory of Uses and Gratification.

According to this theory, there is an internal link between media, audience and large social system. The audience learning from the real life is limited, so they can use media to get more information to fulfill their needs. An extensive use of media generates dependent relation in audience and also Media can able to creating dependence relationship with target audiences to achieve their goals by using their media power.

**The degree of dependence is directly proportional to**:

- **Individual**: The media have ability to satisfy the audience needs. An individual will become more dependent on media, if the medium satisfy his/her needs. Otherwise the media dependence will become less.
- **Social Stability**: The audience reconsiders their beliefs, practice and behaviors when strong social change, conflicts, riot or election which will force to re-evaluate and make new decisions. During this period media dependency is dramatically increased, because there is a strong need for information, support and advice.
- **Active audience**: In this communication process, the active audience chooses the media dependence on their individual needs and other factors such as economic conditions, society and culture. If alternative source fulfill the audience needs will decrease the media dependence.

**Process of Creating Dependence**:

- Media attracts individuals by offering the content which is able to fulfil the audience needs for understanding, entertainment and information.
- There is different strength in Dependence relationship. Cognitive motivations encourage the individuals to maintain the level of attention and Affective motivation serves the individuals to enhance the level of satisfaction.
- Both Cognitive and Affective motivation are intensifying the audience to higher level of involvement to enable the information process.

**Critics of Media Dependency Theory**:

- It describes the media role during social changes and crisis.
- Theory is more flexible and descriptive.
- Power of media dependency is not clearly described.
- It's difficult to prove scientifically or experimentally.

The media dependency theory has also been explored as an extension to the uses and gratifications approach to media, though there is a subtle difference between the two theories. People's dependency on media proves audience goals to be the origin of the dependency while the uses and gratifications approach focuses more on audience need. Both theories agree that media use can lead to media dependency. The media dependency theory states that the more dependent an individual is on the media to fulfill needs, the more significant the media becomes to that person. DeFleur and Ball-Rokeach illustrated dependency as the relationship between media content, the nature of society, and the behavior of audiences. Littlejohn (2002) also explained that people will become more dependent on media that meet a number of their needs than on media that touch only a few needs.

Dependency on a certain medium is influenced by the number of sources open to an individual. Individuals are usually more dependent on available media if their access to media alternatives is limited. The more alternatives there are for an individual, the less is the dependency on, and influence of, a specific medium. The main idea of the Uses and Gratifications model is that people are not helpless victims of all-powerful media, but use media to fulfill their various needs. These needs serve as motivations for using media.

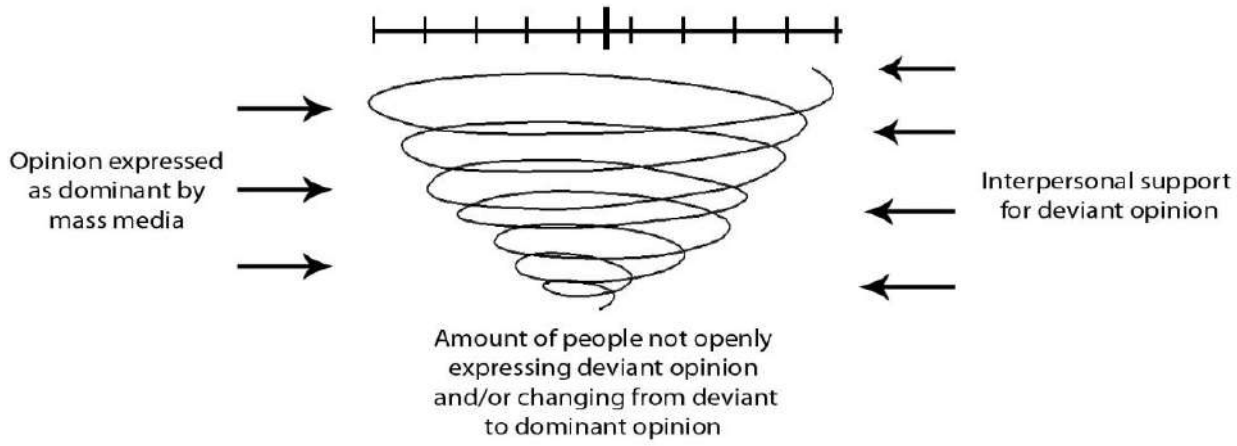

**3.11. Spiral of Silence Theory:**

**Elisabeth Noelle-Neumann (1916 – 2010)**

Elisabeth Noelle-Neumann, the German political scientist contributes the famous model called “Spiral of Silence”. In 1947 Neumann and her husband found “Public Opinion Organization” in German and also she was a President of “World Association for Public Opinion Research” in 1978 to 1980. Through this Spiral of Silence theory Neumann indirectly explains the Jews status during World War II under Nazi’s control.

Here, Adolf Hitler dominated the whole society and the minority Jews became silent due to the fear of isolation or separation. The one view dominated the public scene and others disappeared from the public awareness as it adherents became silent. In other words, the people fear of separation or isolation those around them, they tend to keep their attitudes to themselves when they think they are in the minority. This process is called "Spiral of Silence".

**Elisabeth Noelle- Neumann's Spiral of Silence**

**Example:**

In a company, the managing director decides to increase their working hour from 8 to 10 and send e-mail to all employees. Majority of them accept this time changes and few employees are not satisfied with his decision. But they cannot or ready to express their thought publicly.

**Because**

1. They may feel unsupported by the other employees.
2. "Fear of isolation" like transfer
3. "Fear of Rejection"- Rejecting their personal opinion from the public will help avoiding fight.
4. They may try to save their job by suppressing or avoid personal statement in public.

**Theory frame work based on few assumptions**:

1. Spiral of silence theory describe as a dynamic process, the predication about public opinion in mass media which gives more coverage for the majorities in the society and gives very less coverage for minorities.
2. In this social environment, People have fear of rejection to express their opinion or views and they know well what behaviours will make a better likelihood. It's called "fear of Isolation".
3. Being the part of Minority. People loss their confidence and silent or mute to express their views because of the fear of isolation or they feel alone or unsupported.
4. Sometimes the minorities withdraw their expressed opinion from public debates to secure themselves from the majority.
5. Maximum numbers get more vocal space in the society and lesser number become less vocal space or become silent.

**Advantages and Disadvantages**:

1. Spiral of Silence theory has both micro level and macro level explanatory process.
2. It works well during the public campaign, Senate and Parliament.
3. Spiral of silence theory – which helps to raise question about considering the role and responsibility of media in the society.
4. The theory which is not considering the other explanation of silencing. In some cases the person may feel the majority's ideas or opinion is much better than his own view.
5. It portrait overly negative view of media influence the average people.

### 3.12. Normative Theories

Normative theories were first proposed by **Fred Siebert**, **Theodore Peterson and Wilbur Schramm** in their book called **"Four Theories of the Press" in 1956.** At first the word "Normative Theory" was pronounced in USA during the height of 'cold war' with communism and soviet. Often it called as western theories of mass media. These were termed "normative theories" by **Mc Quail** in the sense that they "mainly express ideas of how the media ought to or can be expected to operate under a prevailing set of conditions and values." Each of the four original or classical theories is based on a particular political theory or economic scenario. A Normative theory

describes an ideal way for a media system to be controlled and operated by the government, authority, leader and public.

These theories are basically different from other communication theories because normative theories of press are not providing any scientific explanations or prediction. At the same these "four theories of the press" were came from many sources rather than a single source. Normative theories are more focused in the relationship between Press and the Government than press and the audience. These theories are more concern about the ownership of the media and who controls the press or media in the country. According to authoritarian theory, the media controlled and censored by the ministries in the country but libertarian is fully free without any intervention of any authority or government, Social responsibility theory – press freedom in one hand but other hand they controlled the press by raising question and Soviet media theory, the whole control of the media is under the leader of the nation.

**The four theories of the Press - 1. Authoritarian theory**

Authoritarian theory stemmed from the **authoritarian philosophy of Plato** (407 - 327 B.C), who thought that the State was safe only in the hands of a few wise men. **Thomas Hobbes** (1588 - 1679), a British academician, argued that the power to maintain order was sovereign and individual objections were to be ignored. **Engel**, a German thinker further reinforced the theory by stating that freedom came into its supreme right only under Authoritarianism.

- Authoritarian theory describe that all forms of communications are under the control of the governing elite or authorities or influential bureaucrats.
- Authoritarians are necessary to control the media to protect and prevent the people from the national threats through any form communication i.e. information or news.
- The press is an instrument to enhance the ruler's power in the country rather than any threats.
- The authorities have all rights to permit any media and control it by **providing license** to the media and make **certain censorship**. If any media violate the government policies against license, then the authority has all right to cancel the license and revoke it.

- The government has right to restrict any sensitive issues from press to maintain peace and security in the nation. A printer was required to get permission and in some cases patent from the monarch or the Government in order to publish. Through the use of **patents, licensing, censorship and self-regulation** through printer's guilds, individuals were prevented from criticizing the Government in power
- In this theory the press supports and advances the Government in power and is regarded as an instrument for furthering Government policy.
- In this system the press may be either be **publically owned or privately owned**.
- The Journalist or any media persons will not have any rights to comment discriminate or stand against the government. The King or the authority has all rights to control the communication and no one can question against the king.

According to this theory, mass media, though not under the direct control of the State, had to follow its bidding. Under an Authoritarian approach in Western Europe, freedom of thought was jealously guarded by a few people (ruling classes), who were concerned with the emergence of a new middle class and were worried about the effects of printed matter on their thought process. Steps were taken to control the freedom of expression. The result was advocacy of complete dictatorship. The theory promoted zealous obedience to a hierarchical superior and reliance on threat and punishment to those who did not follow the censorship rules or did not respect authority. Censorship of the press was justified on the ground that the State always took precedence over the individual's right to freedom of expression. The world has been witness to authoritarian means of control over media by both dictatorial and democratic governments.

**Censorship**:

Censorship is a suppression of any communication which may consider as harmful to the people, King, government and its nation. Especially these censorship methods are much familiar in press which against the freedom of speech and freedom of expression. In some other cases, the censorship helps to protect the rulers and authorities from sensitive issues. There are different types of censors like Political censor, Moral censor, Religious censor, Military censor and corporate censor.

Examples:

- Dictatorship – During the World War II Hitler and Mussolini are the two major authorities who controlled the press in Germany and Italy. Press was under the control of the authority and No press can't question against or publish against these two dictators.
- Few countries blocked wiki leaks website from its country to maintain the internal security because the wiki leaks are not ready to compromise with government censorship and realizing classified documents against the government.

**2. Libertarian theory or Free Press Theory**

This movement is based on the right of an individual, and advocates absence of restraint. The basis of this theory dates back to 17th century England when the printing press made it possible to print several copies of a book or pamphlet at cheap rates. The State was thought of as a major source of interference on the rights of an individual and his property. Popular will i.e. **vox populi** was granted precedence over the power of State.

- Advocates of this theory were **Lao Tzu**, an early 16th century philosopher.
- **John Locke** of Great Britain in the17th century.
- **John Milton**, the epic poet in *Aeropagitica* in 1644, referred to a self-righting process if free expression is permitted ***"let truth and falsehood grapple."***
- **John Stuart Mill**, an essayist ("*On Liberty*") proposed libertarian principles.
- In 1789, the French, in their Declaration of The Rights of Man, wrote "***Every citizen may speak, write and publish freely."*** Out of such doctrines came the idea of a "free marketplace of ideas."
- George Orwell defined libertarianism as "allowing people to say things you do not want to hear".

The theory originally came from libertarian thoughts from 16th century in **Europe**. The theory gained support during the eighteenth century, but was not permitted in the British colonies. The theory was implemented after 1776 with the first amendment.

- Libertarians argued that the press should be seen as the ***Fourth Estate*** reflecting public opinion.
- The libertarian theorists are against the authoritarian thoughts. Liberalism means information is knowledge and knowledge is power.

- Libertarianism is free from any authority or any control or censorship. The libertarianism is an idea of individualism and limited government which is not harmful to another.
- It encourages individual's freedom and free thoughts. It sees people as judges of good ideas from bad.
- The theory says people are rational and their rational thoughts lead them to find out what are good and bad.
- The press should not restrict anything even a negative content may give knowledge and can make better decision whilst worst situation.
- The libertarian thoughts are exactly against or opposite to the authoritarian theory which means the authoritarian theory says "all forms of communication works under the control of government or elite like king".

**Strength and Weakness**:

1. Freedom of press will give more freedom to media to reveal the real thing happening in the society without any censorship or any authority blockades.
2. It gives more values for individuals to express their thoughts in media.
3. Theory excessively positive about media's willing to meet responsibilities which may lead people into negative aspects.
4. Is too positive about individual ethics and rationality.
5. Ignores need for reasonable control of media.
6. Ignores dilemmas posed by conflicting freedoms.

**Example**: Wiki leaks website published all sorts of confidential or restricted files in public space and especially classified documents. These articles are providing brief knowledge about the government and its activities which helps people to identify what is happening in the society and its gives great choices to elect a better president in future.

**3. Communist Media Theory**

This theory is derived from the ideologies of Marx and Engel that **"the ideas of the ruling classes are the ruling ideas"**.

- It was thought that the entire mass media was saturated with bourgeois ideology.

- Lenin thought of private ownership as being incompatible with freedom of press and that modern technological means of information must be controlled for enjoying effective freedom of press.
- The theory advocated that the sole purpose of mass media was to educate the great masses of workers and not to give out information.
- The public was encouraged to give feedback as it was the only way the media would be able to cater to its interests.

After the 1917th revolution, the Soviet Union was restructured with new political system based on the Marxist-Leninist principles. The newly formed communist party by Lenin shows much interest in the media which serves to the working class in the country and their welfares. So the Soviet originates a theory from Marxist, Leninist and Stalinist thoughts, with mixture of Georg Wilhelm Friedrich Hegel ideology is called "**Soviet Media Theory**" is also known as "The **Communist Media Theory**". The same theory was developed and followed by Adolf Hitler's Nazi in Germany and Benito Mussolini in Italy.

- Soviet media theory is imitative of Leninist principles which based on the Carl Marx and Engel's ideology.
- The government undertakes or controls the total media and communication to serve working classes and their interest.
- Theory says the state have absolute power to control any media for the benefits of people.
- They put end to the private ownership of the press and other media.
- The government media provide positive thoughts to create a strong socialized society as well as providing information, education, entertainment, motivation and mobilization.
- The theory describe the whole purpose of the mass media is to educate the greater masses of working class or workers.
- Here, the public was encouraged to give feedback which would able to create interests towards the media.

**Critics of Soviet Media Theory**:

1. Soviet media theory looks similar like authoritarian theory but the core part is different from each other. In authoritarian theory is a one way communication,

there is no feedback allowed from the public but in Soviet media theory is a two way communication at the same time the whole media is controlled or works under the leadership.

2. Private ownership is not allowed which leads the press without any restriction and it can serve people without any authoritative blockades.
3. Soviet media theory allows some restriction based on the nation interest rather than personal.
4. Under communist theories like soviet media theory, the journalist or press should support the leadership rather than a watchdog.

**4. Social responsibility theory**

In mid20th century most of the developing countries and third world nations have used social responsibility theory of press which is associated with "the Commission of the Freedom of Press" in United States in the year 1949. The commission found that the free market approach to press freedom had only increased the power of a single class and has not served the interests of the underdeveloped classes. The theory advocated obligation on the part of the media to society. A judicial mix of self - regulation and state regulation and high professional standards were imperative. Social Responsibility theory thus became the modern variation in which the duty to one's conscience was the primary basis of the right of free expression. Virulent critics of the Free Press Theory like **Wilbur Schramm, Siebert and Theodore Paterson** in their book *Four Theories of Press*, stated "***pure libertarianism is antiquated, outdated and obsolete."*** They advocated the need for its replacement by the Social Responsibility theory.

- Social responsibility theory allows free press without any censorship but at the same time the content of the press should be discussed in public panel and media should accept any obligation from public interference or professional self - regulations or both.
- The theory lies between both authoritarian theory and libertarian theory because it gives total media freedom in one hand but the external controls in other hand.
- The press ownership is private as well as in public sector.

- The social responsibility theory moves beyond the simple “Objective” reporting (facts reporting) to “Interpretative” reporting (investigative reporting with necessary analysis, interpretation and explanations.
- The theory helped in creating professionalism in media by setting up a high level of accuracy, truth, and information.
- The commission of press council also included some tasks based on social responsibility of media, which are as follows:
    1. Formulate the code of conduct for the press.
    2. Improve the standards of journalism.
    3. Safeguarding the interests of journalism and journalist.
    4. Criticize and make some penalty for violating the code of conduct.

**The theory allows** everyone to say something or express their opinion about the media. Community opinion, Consumer action and professional ethics are preferred.

**Two more theories were later added as the "four theories of the press". The two theories are**:

**5. Development Communication Theory**

Development communication is recognizing the power of communication as a catalyst for social development. It is also the utilization of existent communication tools and applicable theories for result-driven strategies for the advancement of society. Development communication is defined as purposive communication intended for a specific target audience that allows for the translation of information into action resulting in a higher quality of life. It is linked with the concept of sustainable development, which can be defined as the improvement of a community using information and technology and the community's ability to maintain created ideal state without compromising its environment and resources. It relies greatly on Community and People Participation, which is the voluntary involvement of a group of people in a development activity with full knowledge of its purpose that will allow them to grow individually and as a community. Development communication is the process of eliciting positive change i.e. social, political, economic, moral, environmental etc. through an effective exchange of pertinent information in order to induce people to action. Development "communication" thus would include:

- Information dissemination on developmental schemes/projects,

- Communication for eliciting positive change,
- Interactivity and feedback on developmental issues,
- Feedback/reverse communication for eliciting change.

**Development support communication** (DSC) can be described as development planning and implementation in which adequate action is taken of human behavioral factors in the design of development project and their objectives. It addresses development planning and the plan of operation for implementation. Development support communication is suggested by UNESCO, UNDP and communication scholars and practitioners worldwide. DSC stands for linking all agencies involved in the planned development works such as political executives, political planners, development administrators, subject specialists, field workers, opinion leaders, media representatives, researchers and the beneficiaries who continue the final delivery points and the consumers of the information. The route of communication envisaged are not only vertical as flowing from upper level to bottom or bottom level to upwards but also horizontal between the institutions and personnel connected with the process of development. Three vital groups are identified in the process.

1. **Innovation or knowledge generators**
2. **Political leaders or government of the state along with the administration**
3. **Users of the knowledge**

A very close interaction is necessary among the three groups as mentioned above, to achieve the success of development support communication. The underlying fact behind the genesis of this theory was that there can be no development without communication. Under the four classical theories, capitalism was legitimized, but under the Development communication theory, or Development Support Communication as it is otherwise called, the media undertook the role of carrying out positive developmental programmes of the State. Hence the theory stresses on "development communication" and "development journalism".

**6. Democratization/Democratic Participant Media Theory**

This theory vehemently opposes the commercialization of modern media and its top-down non-participant character. The need for access and right to communicate is stressed. Bureaucratic control of media is decried. The democratization or democratic participant theory emphasizes and supports the following mentioned thing's

- The media's multiplicity.
- Local nature of media
- Usage of the media in small scale;
- De-institutionalizing media;
- Reciprocal part of recipient or communicator;
- Horizontal media;
- Involvement and interaction.

The principles of the Democratic Participant Media Theories are summarized by Mc Quail, in the year 1987. The principles are mentioned below:

1. Minority-groups and individuals must be capable of enforcing the claims made by them for: Freedom of approaching to media; Freedom of asking for the service against the needs, demanded by them, to the media.
2. Media's organization and message's content should be designed in such a way that it is not affected by the bureaucratic and political control.
3. Media's existence should be proved in respect of the interests and need of the recipients & should not be justified in respect of interests and needs of media entity, professional workers of media or the advertisers.
4. Communities, organizations and groups must own media individually.
5. Participatory, small-scale and interactive types of the media have been considered of more profit in comparison to unidirectional and large-scale media. The later are taken into use by only professional-media-workers.
6. Generally, needs of the society are not taken into consideration by the set media.

Democratic Participant Media Theory considers communication or mass media as very important and should be managed by the professionals. Democratic-participant theory is in the support of following points:

- Freedom to associated local data.
- Freedom for answering back
- Freedom for using new communication means for the purpose of interaction
- Freedom of taking social-action in community, subculture's and interest-group's small-scale settings.

The centralized, uniform, professionalized, commercialized, state-controlled and high-cost media is challenged by this theory. Encouragement should be given to small-

scale, multiple, local, committed or non-institutional media that link the senders with the receivers and favour horizontal interaction. The theory favours alternative or underground press, micro-media's in rural areas, community –cable television, wall posters and media designed for ethnic- minorities and women Interaction and participation are the important concepts of the democratic participant media theory.

## UNIT-4

### 4.1. Major Schools of Communication Studies –

**A. Frankfurt School**

The Frankfurt School was a group of scholars or theorists associated with the **Institute of Social Research** which was located first at the **University of Frankfurt , Goethe (1923-1933), then in Geneva, Switzerland (1933-35), Columbia University in New York (1935-1949), and finally back at the University of Frankfurt, from 1949 to present. Felix Weil** began the Institute of Social Research in **1923**. **Carl Grünberg**, served as director from 1923-1930. **Max Horkheimer** succeeded Grünberg as director and served in that capacity until 1960 and **Theodor Adorno** became director in 1960 until his death in 1969. The **Frankfurt School** was a school of social theory and critical philosophy comprised intellectuals, academics, and political dissidents dissatisfied with the contemporary socio-economic systems capitalist, fascist, communist of the 1930s. The interests of the Frankfurt School theorists in the 1920s and 1930s lay predominantly in a Marxist analysis of social and economic processes, and the role of the individual and the group in relation to these processes. Some of the theorists associated with what became known as the Frankfurt School included

**1. Max Horkheimer 2. Theodor Adorno 3. Herbert Marcuse 4. Walter Benjamin,**

**5. Erich Fromm 6. Leo Lowenthal 7. Friedrich Pollock.**

The **Frankfurt School** is renowned for developing **Critical theory** and popularizing the **Dialectical method of learning** by interrogating society's contradictions. It is most closely associated with the work of **Max Horkheimer**, **Theodor W. Adorno, Erich Fromm, and Herbert Marcuse.** Their particular relevance to communication theory lies primarily in Adorno's idea of the **Culture industry**, and Marcuse's concept of the **"one dimensional"** man.

**B. Birmingham School**

The **Birmingham School popularly known as t**he **Centre for Contemporary Cultural Studies** (**CCCS**) was a research centre at the University of Birmingham England. It was founded in 1964 by **Stuart Hall and Richard Hoggart**, its first director. From 1964 to 2002, the Centre played a "critical" role in developing the field of cultural studies. The Centre was the focus for what became known as the Birmingham

School of Cultural Studies, or, more generally, 'British cultural studies'. After its first director, Richard Hoggart departed in 1968, the Centre was led by Stuart Hall (1969–1979). He was succeeded by Richard Johnson (1980–1987).

The Birmingham CCCS approach to culture and politics evolved from a complex moment within British post-war history: the rise of the anti-Stalinist New Left; the promotion of adult education in Britain after World War II; the "Americanization" of British popular culture and the growth of mass communication in the decades after 1945; the growing multiculturalism of British society; and, the eventual influence within British academia of new critical methods like semiotics and structuralism. Drawing on a variety of influences like feminism, structuralism, Marxism especially the work of Louis Althusser and Antonio Gramsci, sociology, critical race theory, and post-structuralism over the course of several decades the Centre pioneered a variety of approaches to the study of culture, including: ideological analysis; studies of working-class cultures and subcultures; the role of media audiences; feminist cultural research; hegemonic struggles in state politics; and the place of race in social and cultural processes.

Cultural studies can be defined as the study of culture with the intention to understand a society and its politics. Established as a post graduate research institution, the school's main focus was to "contest the cultural elitism of literary theory" and to look deeper into the way culture and the people of society go together. For post-war British democrats, the CCCS provided a "point of focus" for the way the new generation of British democrats interacted with an increasingly affluent culture which was constantly being introduced to new forms of mass media. The teachings here were rooted in the fact that culture was recognized as something that maintained a political order. Other approaches to investigating cultural studies included ideas from Antonio Gramsci, a leader for Mussolini's Communist party who was later jailed by the Fascists and in jail, wrote a book called The Prison Notebooks (1948). In this book he describes the way elites maintain power over society using domination and power to create a sense of obedience and consent among the people. Better known as **hegemony,** this became another main course of study for the CCCS as it turned the focus of study towards mass media and pop culture to study the domination effect that it truly has on society.

**C. Chicago School**

The basic structure of “media studies' were theorised in the Chicago School by the thinkers such as **John Dewey, Charles Cooley and George Mead.** These authors saw American society on the cusp of positive social change toward pure democracy. Mead argued that for an ideal society to exist, a **form of communication must be developed to allow the unique individual to appreciate the attitudes, viewpoints and positions of others unlike himself, and allow him to be understood by others as well**. Mead believed that this "**new media" would allow humans to empathize with others, and therefore moves toward an "ideal of human society.**" Where Mead sees an ideal society, Dewey names it the **"Great Community,"** and further asserts the assumption that humans are intelligent enough for self-government, and that that knowledge is **"a function of association and communication."**

Similarly, Cooley asserts that political communication makes public opinion possible, which in turn promotes democracy. Each of these authors represent the Chicago School's attention to electronic communication as a facilitator of democracy, its faith in the informed electorate, and its focus on the individual as opposed to the mass. The social impact of mass communication has been studied at The New School University in New York since its founding in 1919. The first college course to investigate the motion picture was offered here in 1926. Marshall McLuhan's colleague, John Culkin, brought his Centre for Understanding Media to The New School in 1975 and The New School began offering the Master of Arts degree in Media Studies, one of the first graduate programs of its kind.

One of the great contributions of the Chicago school is **symbolic interactionism** developed by **Mead and expanded by Herbert Blumer in 1969**. Blumer set out three basic premises of the perspective: “Humans act toward things on the basis of the meanings they ascribe to those things.”; “The meaning of such things is derived from, or arises out of, the social interaction that one has with others and the society,” and “These meanings are handled in, and modified through, an interpretative process used by the person in dealing with the things he/she encounters.”

**4. The Toronto School**

**The Toronto School** started with **Eric Havelock and Harold Innis in the 1930s**, and later **added Edmund Snow Carpenter, Northrop Frye and Marshall McLuhan**. After McLuhan’s Understanding Media it evolved into the McLuhan Program

in Culture and Technology. The Toronto School forwarded “the theory of the primacy of communication in the structuring of human cultures and the structuring of the human mind.” It later evolved to focus on communication technologies as key agents in social and historical change. McLuhan famously said **“the medium is the message,”** underscoring the importance of the conveyance of information and the social agency that conveyance, or medium.

**4.2. Role of Ideologies in Understanding Mass Media - <u>A. Critical Theory</u>**

**Critical theory** is an approach to social philosophy that focuses on reflective assessment and critique of society and culture in order to reveal and challenge power structures. With origins in sociology and literary criticism, it argues that social problems are influenced and created more by societal structures and cultural assumptions than by individual and psychological factors. Maintaining that ideology is the principal obstacle to human liberation, critical theory was established as a school of thought primarily by the Frankfurt School theoreticians Herbert Marcuse, Theodor Adorno, Walter Benjamin, Erich Fromm, and Max Horkheimer. Horkheimer described a theory as critical insofar as it seeks "to liberate human beings from the circumstances that enslave them."

In sociology and political philosophy, "Critical Theory" means the Western-Marxist philosophy of the Frankfurt School, developed in Germany in the 1930s and drawing on the ideas of Karl Marx and Sigmund Freud. Modern critical theory has also been influenced by Antonio Gramsci, as well as second-generation Frankfurt School scholars, notably Jürgen Habermas. Concern for social "base and superstructure" is one of the remaining Marxist philosophical concepts in much contemporary critical theory. Max Horkheimer first defined critical theory in his 1937 essay "Traditional and Critical Theory", as a social theory oriented toward critiquing and changing society as a whole, in contrast to traditional theory oriented only toward understanding or explaining it. He described a theory as *critical* insofar as it seeks "to liberate human beings from the circumstances that enslave them."

**<u>Dialectical method</u>**

The Frankfort School reformulated **dialectics into a concrete method of investigation**, derived from the Hegelian philosophy that **an idea will pass over into its own negation, as the result of conflict between the inherently contradictory**

**aspects of the idea.** Hegelian dialectics considers **ideas according to their movement and change in time, according to their interrelations and interactions**. In Hegel's perspective, **human history proceeds and evolves in a dialectical manner**: **the present embodies the rational the synthesis of past contradictions.** Marx inverted Hegel's idealist dialectics and advanced his own theory of **dialectical materialism**, arguing that **"it is not the consciousness of men that determines their being, but that their social being that determines their consciousness**." Marx used dialectical analysis to uncover the contradictions in the predominant ideas of society, and in the social relations to which they are linked – exposing the underlying struggle between opposing forces. Only by becoming aware of the **dialectic i.e. class consciousness)**of such opposing forces in a struggle for power can men and women intellectually liberate themselves, and change the existing social order through social progress. Accordingly, critical theory rejected the historicism and materialism of Orthodox Marxism.

**Culture Industry**

In **1947 Max Horkheimer** and **Theodor Adorno published** *Philosophische Fragmente*, whose title was translated into English in 1972 as ***Dialectic of Enlightenment: Philosophical Fragments*.** One of the sections of this book was concerned with what Horkheimer and Adorno called the **culture industry**. It was their contention that the **culture industry was the result of an historical process that with an increase in technology including mass communication technology there was an increase in the ability to produce commodities, which enabled increased consumption of goods.**

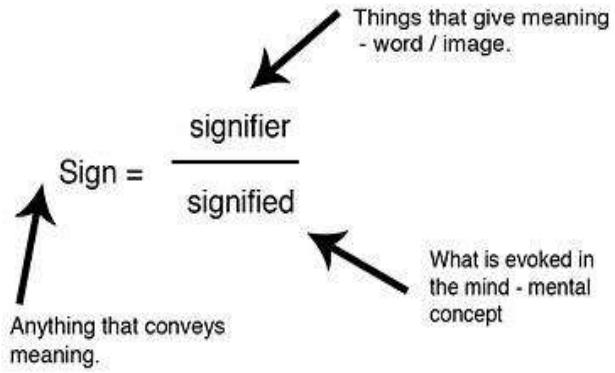

The consumption of mechanically reproduced cultural products—predominantly radio and film—led to formulas of producing them for **entertainment purposes**, and it did not occur to consumers to question the idea that the entertainment presented to them had an **ideological purpose or purposes**. Consumers adapted their needs around these cultural products, and in doing so no longer knew of anything else that they might desire, or that there might be anything else they could desire. **The entertainment that they enjoyed did not reflect their real social, political, or economic interests, but instead blinded them from questioning the prevailing system.** The idea of the culture industry has had an importance in critical theory since its appearance in the

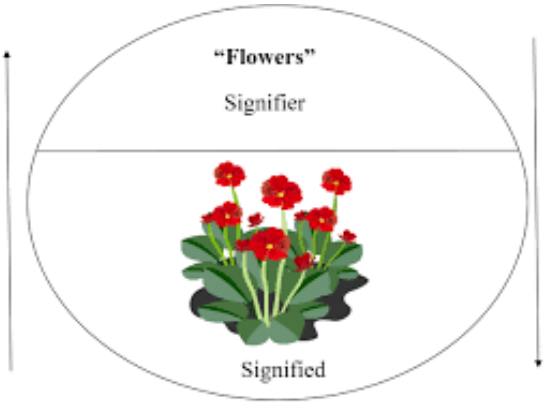

1940s, in that it has led to thought about the **role of mass communications in relation to ideology, and hence, society**.

**B. Structuralism / Post Structuralism**

Structure is made of constituent parts which are sub-serving to the structure as a whole. The constituent parts do not have meaning full existence outside the structure in the same way that it has within. The constituent parts derive their relevance within the structure not because of inherent quality but because of the way they relate to each other. Structures are self-regulated and the relations between constituent parts are guided by the rules that are arbitrary because they are unique to the structure itself and not require any external valuation. Ferdinand de Saussure - 1857-1913 lecture notes was published into a book titled "Course de Linguistics Generale" in 1915 by his students. In this book Saussure posited hat Language operates in a Structure and can be also treated as an aggregate**.** According to Saussure, any language is structured in the sense that its elements are interrelated in non-arbitrary, regular, rule-bound ways; a competent speaker of the language largely follows these rules without being aware of doing so. The task of the theorist is to detect this underlying structure, including the rules of transformation that connect the structure to the various observed expressions.

**Sign:**

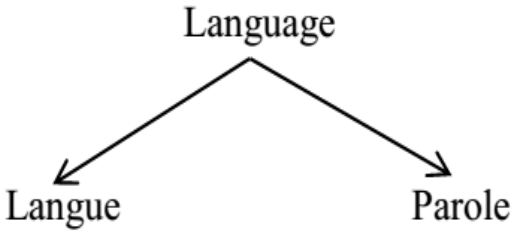

Signifier is able to signify not through its attachment to particular concept or signified but through its relationship with other signifiers within a particular language system. Word sounds derive their meaning through its oppositional relationship with other word sounds. Meaning making ability of the signifier does not depend on the positive relationship with other / outside language structures but with oppositional / negative relationship related to signifier within the language system.

**Diachronic & Synchronic Approach**

A Study of Language would basically mean a study of words as independent entities and how they emerge and change during the course of history – This historical study of language is called – DIACHRONIC APPROACH. Language as a structure is always complete and self-contained at any given point of time. Therefore linguists should study in terms of internal relations that exist at any given moment if time rather than merely in time of its history – This approach is regarded as – SYNCHRONIC APPROACH

**Langue & Parole**

Language has a structure of communication between several individuals. The underlying set of rules and conventions of language that is shared is referred to as LANGUE. The concrete language performance at a given point of time is - PAROLE

**Binary Opposition:**

Structuralism posits the concept of binary opposition, in which frequently-used pairs of opposite but related words (concepts) are often arranged in a hierarchy; for example:

Enlightenment / Romantic, male/female, speech/writing, rational/emotional, signified / signifier, symbolic / imaginary

**Impact of Structuralism on Mass Media**

Structuralism became a major influence particularly on two interrelated forms of media and communication research from the 1960s onward – qualitative textual studies and cultural studies. While research on media texts may be considered the primary inheritor of the analytical principles of Saussurean linguistics, cultural studies incorporated these principles, developing a conception of cultural practices, everyday life, and, indeed, the entire social system *as texts* to be read and interpreted. During the 1960s, literary theory was revitalized by the rediscovery and redevelopment of several linguistic and formalist models of analysis; it was in this shape that literary theory fed into media theory.

- In addition to the work of Saussure, Russian Formalism drove home the point that form carries content – that the structures of narratives and other genres hold meanings. The prototype of such research was offered by Propp (1958) in his study of the constituents and variants of Russian folktales.
- A wide variety of popular media and genres lend themselves to the systematics of formalist analysis, as exemplified by Umberto Eco's (1987) early study of the James Bond stories. Other contributions included A. J. Greimas's structural analysis of semantic units, including those beyond the sentence (Greimas &

Courtés 1982), as well as Roland Barthes's models of meaning and narrative analysis.

- Partly overlapping with the structuralist enterprise, further work in film and other media theory from the 1980s onward explored the interrelations between textual and cognitive structures (e.g., Bordwell 1985).
- As systematic approaches to the texts and genres of media, both structuralist and cognitivist models represented significant advances in *qualitative media text analysis*.
- Summarizing the tradition of *cultural studies*, Hall (1980) identified structuralism as one of its two constitutive paradigms, the other being culturalism. Combining a structural analysis of media texts and a critical, structuralist theory of society with a processual conception of culture, cultural studies has explored the margins of indetermination in the social production of meaning.

**Post - Structuralism**

**Post-structuralism** is a term for philosophical, theoretical and literary forms of theory that rejected the ideas established by structuralism. Post- structuralism emerged in France around 1960. Writers whose works are often characterised as post-structuralist include: Roland Barthes, Jacques Derrida, Michel Foucault, Gilles Deleuze, Judith Butler, Jean Baudrillard and Julia Kristeva etc.

- Post Structuralism rejects the self-sufficiency of structuralism, as well as an interrogation of the binary oppositions that constitute its structures. Accordingly, post-structuralism discards the idea of interpreting media within pre-established, socially constructed structure
- Post-structuralism rejects the structuralist notion that the dominant word in a pair is dependent on its subservient counterpart and instead argues that founding knowledge either on pure experience (phenomenology) or on systematic structures (structuralism) is impossible because history and culture condition the study of underlying structures and these are subject to biases and misinterpretations.

- The poststructuralists attack what they see as a prejudice in favour of presence over absence and speech over writing. We tend to trust speech over writing because of the immediacy of the speaker.
    - But the reason why poststructuralists are in the literary theory business at all is that they see writing, not speech, as more faithful to the metaphysics of true expression.
    - For Barthes, Derrida, and Foucault, writing is better than speech because it is iterable; it is iterable because it is abstract; and it is abstract because it is a **function not of presence but of absence (Metaphysics of Absence) i.e.** the reader's absent when the writer's writing and the writer's absent when the reader's reading.
    - For a deconstructionist, then, a writer's circumstances and intentions are indeed a part of the "context" of a text, but context imposes no real cinctures on the text's meaning because meaning in language requires cultivation of absence rather than presence, involves not the imposition but the erasure of consciousness.

**Impact of Poststructuralism on Mass Media**

In reality, poststructuralist theorists, in particular **Michel Foucault (1926-1984**), proved capable of offering insight that became quite useful to emerging communication theory. Foucault's work concentrated on relationships between discourse, power, and the creation of subject positions. He preferred to analyse speech and writing in terms of their history or genesis—a so-called **"archaeology of knowledge."** Foucault's investigations served to demonstrate how **political power was inextricably intertwined with communication and the development of knowledg**e. Although scorning the concept of an all-embracing theory that would explain reality, Foucault allowed that individual discourses might be understood within their individual social and political contexts.

Even in Derrida's deconstruction of **"logocentrism**" it would not be accurate to conclude that **meaningful communication is utterly impossible**. Derrida does find that the gap between language's signifiers and the meaning that language intends to signify ultimately unbridgeable. Whenever one attempts to track a linguistic sign to its real meaning, he maintains, one finds instead a mere trace of another signifier that had

existed previously. It may be said that establishment of meaning is indefinitely postponed, but not necessarily forever. Language is produced by the constant interaction between differences of spoken and written signs. Derrida calls the on-going negotiating of difference between signs **"arche-writing**." It is this process that makes meaning theoretically possible even if it is concealed.

Poststructuralist philosophy has had an impact upon a broad range of social science and humanities disciplines. Its implications for communication were apparent from its inception, given its interest in language, signification, messages, and meaning. Poststructuralist philosophers addressed these issues as abstract concepts, although rarely venturing into the real world of communicational interaction. Poststructuralism has had a great impact upon the fields of psychoanalysis, cinema, art and art history, linguistics, literature, gender studies, contemporary culture, politics, aesthetics, anthropology, ethnography, sociology, and history.

| Structuralism | Poststructuralism |
|---|---|
| Posits the concept of binary opposition | Rejects the concept of binary opposition |
| Sign is made up of a Signifier and Signified | Reject this notion that dominant word in a pair is dependent on its subservient counterpart |
| Sound or utterance / Speech is given importance | Writing is more important than speech |
| Meaning is stable and constituted through underlying structure or system | Meaning is not stable and is dependent on interpreter rather than structure. |
| There is a single truth / meaning for every sentence | There are multiple truths or meanings for every sentence |
| Search for universal truth and rules governing meaning | Universal truth is not possible and they are interested in differences in truth |

**C. Modernism Vs Post Modernism**

**Modernity** is a time period whereas **modernism** refers to the trends in art, culture and social relations that are characterized by development of a **modern** world. Modern is a word with historic sense. When you do not adhere to values and principles of older times you are regarded as Modern. Hence every generation drifts from previous generations and so every generation in itself is modern. Modernism began in 1910, is a literary and social movement. Modernism is both a philosophical movement that arose from broad transformations in Western society during the late 19th and early 20th centuries. Modernism rejected the certainty of Enlightenment thinking, and the tenants of religious belief. Modernism was essentially based on a utopian vision of human life

and society and a belief in progress, or moving forward. Modernist ideals pervaded art, architecture, literature, religious faith, philosophy, social organization, activities of daily life, and even the sciences.

- Modernism, faced **opposition to the conservatism** that prevailed in the late 19th century and early 20th century, which brought socially progressive trend of thought that encompasses the various culture related movements.
- The reason behind such movement took place in response to the feeling that 'traditional' forms of literature, art, architecture, religion, social and daily life were increasingly **becoming out dated in the new industrialized world.** Set on cultural inclinations towards anything that is modern, be it thought, practice or character, **modernism was a climate of thought**.
- society, valuing cultural works and its makers which was more than a sum of its parts.
- Modernism **questioned all the maxims** which were untouched and were blindly followed, with every aspect of existence, being re-examined ranging from philosophy to commerce including Religion where even the existence of an all-powerful Creator was questioned.
- Modernism saw the rise of the **'self-consciousness'** and this commitment to a principled **self-scrutiny** entailed an exploration of the self. This way of **self - exploration** can be observed in various forms of arts where the attention is on experimenting with the form or on the processes or materials.
- According to modernism, human beings have the power to progress through creating or reshaping the environment through the **use of science, technology and knowledge**.
- Modernism encouraged **impressionism, subjectivity** and focused more on **how perception takes place and not on what is being perceived**.
- Stream-of-conscious writing where words are given to the internal monologue or thoughts of the writer/character are described in detail is an example of this movement. The modernism style of presentation broke away from objectivity that third parties provided or from presenting clearly defined moral positions.
- There was a focus on experimentation, randomness, fragmentation of forms and of narratives that were not continuous. **Formal aesthetics** was rejected as

spontaneity and new discoveries gained importance and **minimalist designs** were embraced.

- The demarcation between **'high' (elitist) and 'low' (popular) cultures** was overcome and there was a cross-over in the production, presentation and consumption of art.

Among the factors that shaped **Modernism** was the development of modern industrial societies and the rapid growth of cities, followed then by the horror of World War. Modernism describes things you do that are contemporary or current. Modernism can describe thought, behaviour, or values that reflect current times, but it can also be used to describe an art and literature movement of the 19th and 20th centuries that intentionally split from earlier conservative traditions.

- Modernism continued to evolve in the 1930s, it influenced the mainstream culture.
- The adoption of technology into the daily life of people in the western society, electricity, and telephone, automobile were all being used.
- The disillusionment that grew out of the **war** contributed to the emergence of **modernism**, a genre which broke with traditional ways of writing, discarded romantic views of nature and focused on the interior **world** of characters
- **Modernist photography** celebrated the **camera** as an essentially mechanical tool. It rejected the soft focus and painterly quality of pictorialism and encouraging straightforward images of modern life.
- Prior to **modernism** in literature, the majority of authors wrote in the third person **perspective**, often utilizing an omniscient narrator. **Modernist** authors, however, preferred to write from a first person **perspective** to get a more personal **view** of the story and tap into the character's thoughts.

**Postmodernism**

Post World War II, modernism started being challenged and criticized.. Modernism shocks its audiences with unpredictable effects so as to counteract normal expectations. The criticism on modernism was **disharmony was used in the modernist music, there were no intelligible plots in movies or books and poetry could not be interpreted clearly**. Modernism slowly slipped from being a revolutionary movement as its institutionalization increased eventually leading to the

birth of **postmodernism.** Postmodernism is a broad movement that developed in the mid-to-late 20th century across philosophy, the arts, architecture, and criticism, marking a departure from modernism. The term has been more generally applied to describe a historical era said to follow after modernity and the tendencies of this era. The term "postmodernism" first entered the philosophical lexicon in 1979, with the publication of *The Postmodern Condition* by Jean-François Lyotard. Postmodernism started in 1945.

The philosophical modernism at issue in postmodernism begins with Kant's "Copernican revolution," that is, his assumption that we cannot know things in themselves and that objects of knowledge must conform to our faculties of representation. Ideas such as God, freedom, immortality, the world, first beginning, and final end have only a regulative function for knowledge, since they cannot find fulfilling instances among objects of experience.

A consequence of achieved modernism is what postmodernists might refer to as **de-realization**. De-realization affects both the subject and the objects of experience, such that their sense of identity, constancy, and substance is upset or dissolved. Important precursors to this notion are found in Kierkegaard, Marx and Nietzsche. Modern society became a network of relations in which individuals are levelled into an abstract phantom known as **"the public**". The modern public, in contrast to ancient and medieval communities, is a creation of the press, which is the only instrument capable of holding together the mass of unreal individuals "who never are and never can be united in an actual situation or organization". In this sense, society has become a realization of abstract thought, held together by an artificial and all-pervasive medium speaking for everyone and for no one. In Marx, on the other hand, we have an analysis of the fetishism of commodities where objects lose the solidity of their use value and become spectral figures under the aspect of exchange value,

The computer age has transformed knowledge into information, that is, coded messages within a system of transmission and communication and analysis of this knowledge calls for a pragmatics of communication insofar as the phrasing of messages, their transmission and reception, must follow rules in order to be accepted by those who judge them. The postmodernism times created a strict inter linkage between the kind of language called science and the kind called ethics and politics" and this inter

linkage constitutes the cultural perspective of the West. Science is therefore tightly interwoven with government and administration, especially in the information age, where enormous amounts of capital and large installations are needed for research.

The postmodernism times resulted in the concept **of Hyper Reality** is regarded as the reality which does not exist. Hyper reality is closely related to the concept of the simulacrum: a copy or image without reference to an original. In postmodernism, hyper reality is the result of the technological mediation of experience, where what passes for reality is a network of images and signs without an external referent, such that what is represented is representation itself

| Modernism | Postmodernism |
|---|---|
| Reaction against Medievalism – 13th, 14th & 15th Centuries and the dominance of Belief, faith Religion & Universal Truth. | Reaction against Modernism. Negated belief of universal truth, role of dominant state, globalised markets, universalization of values |
| Started in 17th Century. Celebrated Humanism – Human being is rational. New Institutions are established in social, cultural and economic areas. | Started from 20th century and continuing till today. Human being is affected by surroundings and situations and can never be rational. Human being gets refined from historical conditions. |
| Heralded an age of Science, Industrial, Constitutional, Human Rights development and concept of Freedom. | Negated the lopsided effects of science, Industrial, Constitutional, Human Rights development and concept of Freedom. |
| Search for solutions of problems – Contradictions must be resolved | Problematize the problem – Contradictions must be encouraged – Multi-ethnicity is welcomed |
| Knowledge and awareness was regarded as key for human development | Knowledge was transformed into information by the digital age and it exploded through different mediums making it superfluous. |
| Projected Reality and truth | Projected Hyper reality and Post Truth |
| Ex: Immanuel Kant – Free and Independent thinking of human being must not be interfered by any external sources | Ex: Faucault: Free thinking is not possible. Human being is a part of the system not the system itself. |

### 4.3. Marshal McLuhan - Medium is the Message

**Herbert Marshall McLuhan** (July 21, 1911 – December 31, 1980) was a Canadian philosopher, whose work is among the cornerstones of the study of media theory. McLuhan studied at the University of Manitoba and the University of Cambridge. He began his teaching career as a professor of English at several universities in the

United States and Canada before moving to the University of Toronto in 1946, where he remained for the rest of his life.

McLuhan coined the expression **"the medium is the message**" and the term **global village,** and **predicted the World Wide Web almost 30 years before it was invented**. Some of McLuhan's main ideas were influenced or prefigured by anthropologist like Edward Sapir and Claude Lévi-Strauss, arguably with a more complex historical and psychological analysis. The idea of the retribalization of Western society by the far-reaching techniques of communication, the view on the function of the artist in society, and the characterization of means of transportation, like the railroad and the airplane, as means of communication, are prefigured in Sapir's 1933 article on *Communication* in the Encyclopaedia of the Social Sciences while the distinction between "hot" and "cool" media draws from Lévi-Strauss' distinction between hot and cold societies.

McLuhan's first book, *The Mechanical Bride: Folklore of Industrial Man* (1951), is a pioneering study in the field now known as popular culture. In the book, McLuhan turns his attention to analysing and commenting on numerous examples of persuasion in contemporary popular culture. *The Mechanical Bride* is composed of a number of short essays that may be read in any order—what he styled the **"mosaic approach**" to writing a book. Each essay begins with a newspaper or magazine article, or an advertisement, followed by McLuhan's analysis thereof. The analyses bear on aesthetic considerations as well as on the implications behind the imagery and text. McLuhan chose these ads and articles not only to draw attention to their symbolism, as well as their implications for the corporate entities who created and disseminated them, but also to mull over what such advertising implies about the wider society at which it is aimed. Roland Barthes's essays 1957 *Mythologies*, echoes McLuhan's *Mechanical Bride*, as a series of exhibits of popular mass culture (like advertisements, newspaper articles and photographs) that are analyzed in a semiological way.

***The Gutenberg Galaxy* (1962)** -

Written in 1961 and first published by University of Toronto Press, *The Gutenberg Galaxy: The Making of Typographic Man* (1962) is a pioneering study in the fields of oral culture, print culture, cultural studies, and media ecology. Throughout the book, McLuhan efforts to reveal how communication technology (i.e., alphabetic writing,

the printing press, and the electronic media) affects cognitive organization, which in turn has profound ramifications for social organization.

McLuhan's episodic history takes the reader from pre-alphabetic, tribal humankind to the electronic age. According to McLuhan, the invention of movable type greatly accelerated, intensified, and ultimately enabled cultural and cognitive changes that had already been taking place since the invention and implementation of the alphabet, by which McLuhan means **phonemic orthography**. Print culture, ushered in by the advance in printing during the middle of the 15th century when the Gutenberg press was invented, brought about the cultural predominance of the visual over the aural/oral. The main concept of McLuhan's argument is that new technologies (such as alphabets, printing presses, and even speech) exert a gravitational effect on cognition, which in turn, affects social organization: print technology changes our perceptual habits—"visual homogenizing of experience"—which in turn affects social interactions—"fosters a mentality that gradually resists all but a…specialist outlook". According to McLuhan, this advance of print technology contributed to and made possible most of the salient trends in the modern period in the Western world: individualism, democracy, Protestantism, capitalism, and nationalism. For McLuhan, these trends all reverberate with print technology's principle of "segmentation of actions and functions and principle of visual quantification."

**Global village**

In the early 1960s, McLuhan wrote that the visual, individualistic print culture would soon be brought to an end by what he called "electronic interdependence:" when electronic media replaces visual culture with aural/oral culture. In this new age, humankind will move from individualism and fragmentation to a collective identity, with a "tribal base." McLuhan's coinage for this new social organization is the *global village*. The term is sometimes described as having negative connotations in *The Gutenberg Galaxy*, but McLuhan was interested in exploring effects, not making value judgments:

Instead of tending towards a vast Alexandrian library the world has become a computer, an electronic brain, exactly as an infantile piece of science fiction. And as our senses have gone outside us, Big Brother goes inside. So, unless aware of this

dynamic, we shall at once move into a phase of panic terrors, exactly befitting a small world of tribal drums, total interdependence, and superimposed co-existence…. Terror is the normal state of any oral society, for in it everything affects everything all the time….In our long striving to recover for the Western world a unity of sensibility and of thought and feeling we have no more been prepared to accept the tribal consequences of such unity than we were ready for the fragmentation of the human psyche by print culture. Key to McLuhan's argument is the idea that technology has no *per se* moral bent—it is a tool that profoundly shapes an individual's and, by extension, a society's self-conception and realization:

Print is the extreme phase of alphabet culture that detribalizes or decollectivizes man in the first instance. Print raises the visual features of alphabet to highest intensity of definition. Thus print carries the individuating power of the phonetic alphabet much further than manuscript culture could ever do. Print is the technology of individualism. If men decided to modify this visual technology by an electric technology, individualism would also be modified. Though the World Wide Web was invented almost 30 years after *The Gutenberg Galaxy*, and 10 years after his death, McLuhan prophesied the web technology seen today as early as 1962: "The next medium, whatever it is—it may be the extension of consciousness—will include television as its content, not as its environment, and will transform television into an art form. A computer as a research and communication instrument could enhance retrieval, obsolete mass library organizations retrieve the individual's encyclopaedic function and flip into a private line to speedily tailored data of a saleable kind". Furthermore, McLuhan coined and certainly popularized the usage of the term *surfing* to refer to rapid, irregular, and multidirectional movement through a heterogeneous body of documents or knowledge. McLuhan's *The Gutenberg Galaxy* won Canada's highest literary award, the Governor-General's Award for Non-Fiction, in 1962.

***Understanding Media* (1964)**

McLuhan's most widely-known work, *Understanding Media: The Extensions of Man* (1964), is a seminal study in media theory. Dismayed by the way in which people approach and use new media such as television, McLuhan famously argues that in the modern world "we live mythically and integrally…but continue to think in the old, fragmented space and time patterns of the pre-electric age." McLuhan proposed

that media themselves, not the content they carry, should be the focus of study—popularly quoted as **"the medium is the message."** McLuhan's insight was that a medium affects the society in which it plays a role not by the content delivered over the medium, but by the characteristics of the medium itself. McLuhan pointed to the light bulb as a clear demonstration of this concept. A light bulb does not have content in the way that a newspaper has articles or a television has programs, yet it is a medium that has a social effect; that is, a light bulb enables people to create spaces during night time that would otherwise be enveloped by darkness. He describes the light bulb as a medium without any content. McLuhan states that "a light bulb creates an environment by its mere presence." More controversially, he postulated that content had little effect on society—in other words, it did not matter if television broadcasts children's shows or violent programming, to illustrate one example—the effect of television on society would be identical. He noted that all media have characteristics that engage the viewer in different ways; for instance, a passage in a book could be reread at will, but a movie had to be screened again in its entirety to study any individual part of it.

**"Hot" and "cool" media**

In the first part of *Understanding Media*, McLuhan states that different media invite different degrees of participation on the part of a person who chooses to consume a medium. Using a terminology derived from French anthropologist Lévi-Strauss' distinction between hot and cold societies,[49][50] McLuhan argues that a **cool medium** requires increased involvement due to decreased description, while a **hot medium** is the opposite, decreasing involvement and increasing description. In other words, a society that appears to be actively participating in the streaming of content but not considering the effects of the tool is not allowing an "extension of ourselves." A movie is thus said to be "high definition," demanding a viewer's attention, while a comic book to be "low definition," requiring much more conscious participation by the reader to extract value:[68] "Any hot medium allows of less participation than a cool one, as a lecture makes for less participation than a seminar, and a book for less than a dialogue." Some media, such as movies, are *hot*—that is, they enhance one single sense, in this case vision, in such a manner that a person does not need to exert much effort to perceive a detailed moving image. Hot media usually, but not always, provide complete involvement with considerable stimulus. In contrast, "cool" print may also occupy visual

space, using visual senses, but requires focus and comprehension to immerse its reader. Hot media creation favour analytical precision, quantitative analysis, sequential ordering, as they are usually sequential, linear, and logical. They emphasize one sense (for example, of sight or sound) over the others. For this reason hot media also include film (especially silent films), radio, the lecture, and photography.

McLuhan contrasts *hot* media with *cool*—specifically, television of the 1960s i.e. small black-and-white screens which he claims requires more effort on the part of the viewer to determine meaning; and comics, which, due to their minimal presentation of visual detail, require a high degree of effort to fill in details that the cartoonist may have intended to portray. Cool media are usually, but not always, those that provide little involvement with substantial stimulus. They require more active participation on the part of the user, including the perception of abstract patterning and simultaneous comprehension of all parts. Therefore, in addition to television, cool media include the seminar and cartoons. McLuhan describes the term *cool media* as emerging from jazz and popular music used, in this context, to mean "detached."

***The Medium Is the Massage* (1967)**

*The Medium Is the Massage: An Inventory of Effects*, published in 1967, was McLuhan's best seller, eventually selling nearly a million copies worldwide. Initiated by Quentin Fiore, McLuhan adopted the term "massage" to denote the effect each medium has on the human sensorium, taking inventory of the "effects" of numerous media in terms of how they "massage" the sensorium.

Fiore, at the time a prominent graphic designer and communications consultant, set about composing the visual illustration of these effects which were compiled by Jerome Agel. Near the beginning of the book, Fiore adopted a pattern in which an image demonstrating a media effect was presented with a textual synopsis on the facing page. The reader experiences a repeated shifting of analytic registers—from "reading" typographic print to "scanning" photographic facsimiles—reinforcing McLuhan's overarching argument in this book: namely, that each medium produces a different "massage" or "effect" on the human sensorium. In *The Medium Is the Massage*, McLuhan also rehashed the argument—which first appeared in the Prologue to 1962's *The Gutenberg Galaxy*—that all media are "extensions" of our human senses, bodies and minds. Finally, McLuhan described key points of change in how man has

viewed the world and how these views were changed by the adoption of new media. "The technique of invention was the discovery of the nineteenth [century]", brought on by the adoption of fixed points of view and perspective by typography, while "[t]he technique of the suspended judgment is the discovery of the twentieth century," brought on by the bard abilities of radio, movies and television.

***From Cliché to Archetype* (1970)**

Collaborating with Canadian poet Wilfred Watson in *From Cliché to Archetype* (1970), McLuhan approaches the various implications of the verbal cliché and of the archetype. One major facet in McLuhan's overall framework introduced in this book that is seldom noticed is the provision of a new term that actually succeeds the global village: the ***global theatre*.**

Another theme of the Wake [*Finnegans Wake*] that helps in the understanding of the paradoxical shift from cliché to archetype is **'past time are pastimes.**' The dominant technologies of one age become the games and pastimes of a later age. In the 20th century, the number of 'past times' that are simultaneously available is so vast as to create cultural anarchy. When all the cultures of the world are simultaneously present, the work of the artist in the elucidation of form takes on new scope and new urgency. Most men are pushed into the artist's role. The artist cannot dispense with the principle of 'doubleness' or 'interplay' because this type of hendiadys dialogue is essential to the very structure of consciousness, awareness, and autonomy. McLuhan relates the cliché-to-archetype process to the **Theatre of the Absurd:**

Pascal, in the seventeenth century, tells us that the heart has many reasons of which the head knows nothing. The Theatre of the Absurd is essentially a communicating to the head of some of the silent languages of the heart which in two or three hundred years it has tried to forget all about. In the seventeenth century world the languages of the heart were pushed down into the unconscious by the dominant print cliché. The "languages of the heart," or what McLuhan would otherwise define as oral culture, were thus made archetype by means of the printing press, and turned into cliché.

The satellite medium, McLuhan states, encloses the Earth in a man-made environment, which "ends 'Nature' and turns the globe into a repertory theatre to be programmed." All previous environments (book, newspaper, radio, etc.) and their

artefacts are retrieved under these conditions ("past times are pastimes"). McLuhan thereby meshes this into the term *global theatre*. It serves as an update to his older concept of the global village, which, in its own definitions, can be said to be subsumed into the overall condition described by that of the global theatre.

***The Global Village* (1989)**

In his posthumous book, *The Global Village: Transformations in World Life and Media in the 21st Century* (1989), McLuhan, collaborating with Bruce R. Powers, provides a strong conceptual framework for understanding the cultural implications of the technological advances associated with the rise of a worldwide electronic network. This is a major work of McLuhan's as it contains the most extensive elaboration of his concept of *acoustic space*, and provides a critique of standard 20th-century communication models such as the Shannon–Weaver model.

McLuhan distinguishes between the existing worldview of *visual space*—a linear, quantitative, classically geometric model—and that of *acoustic space*—a holistic, qualitative order with an intricate, paradoxical topology: "Acoustic Space has the basic character of a sphere whose focus or centre is simultaneously everywhere and whose margin is nowhere." The transition from *visual* to *acoustic space* was not automatic with the advent of the global network, but would have to be a conscious project. The "universal environment of simultaneous electronic flow" inherently favours right-brain Acoustic Space, yet we are held back by habits of adhering to a fixed point of view. There are no boundaries to sound. We hear from all directions at once. Yet Acoustic and Visual Space are, in fact, inseparable. The resonant interval is the invisible borderline between Visual and Acoustic Space. This is like the television camera that the Apollo 8 astronauts focused on the Earth after they had orbited the moon.

**Beyond existing communication models**

"All Western scientific models of communication are—like the Shannon–Weaver model—linear, sequential, and logical as a reflection of the late medieval emphasis on the Greek notion of efficient causality." McLuhan and Powers criticize the Shannon-Weaver model of communication as emblematic of left-hemisphere bias and linearity, descended from a print-era perversion of Aristotle's notion of efficient causality. A third term of *The Global Village* that McLuhan and Powers develop at length is The Tetrad. McLuhan had begun development on the Tetrad as early as 1974.[97] The tetrad an

analogical, simultaneous, four-fold pattern of transformation. "At full maturity the tetrad reveals the metaphoric structure of the artefact as having two figures and two grounds in dynamic and analogical relationship to each other." Like the camera focused on the Earth by the Apollo 8 astronauts, the tetrad reveals figure (Moon) and ground (Earth) simultaneously. The right-brain hemisphere thinking is the capability of being in many places at the same time. Electricity is acoustic. It is simultaneously everywhere. The Tetrad, with its fourfold Möbius topological structure of enhancement, reversal, retrieval and obsolescence, is mobilized by McLuhan and Powers to illuminate the media or technological inventions of cash money, the compass, the computer, the database, the satellite, and the global media network.

**4.4. Jugan Habermas – Public Sphere**

The term was “Public Sphere” originally coined by German philosopher Jürgen Habermas who defined the public sphere as **"made up of private people gathered together as a public and articulating the needs of society with the state". Thus t**he **public sphere** is an area in social life where individuals can come together to freely discuss and identify societal problems, and through that discussion influence political action. Such a discussion is called **public debate** and is defined as the expression of views on matters that are of concern to the public—often, but not always, with opposing or diverging views being expressed by participants in the discussion. **Public debate takes place mostly through the mass media, but also at meetings or through social media, academic publications and government policy documents.** Communication scholar Gerard A. Hauser defines it as "*a discursive space in which individuals and groups associate to discuss matters of mutual interest and, where possible, to reach a common judgment about them*".[3] The public sphere can be seen as "*a theater in modern societies in which political participation is enacted through the medium of talk*" and "*a realm of social life in which public opinion can be formed*".

- Describing the emergence of the public sphere in the 18th century, Habermas noted that the public realm, or sphere, originally was "***coextensive with public authority***" while "*the private sphere comprised civil society in the narrower sense, that is to say, the realm of commodity exchange and of social labor*". Whereas the "sphere of public authority" dealt with the state, or realm of the police, and the ruling class, or the feudal authorities i.e. church, princes and nobility)

- The "authentic 'public sphere'", in a political sense, arose at that time from within the private realm, specifically, in connection with literary activities, the world of letters. This new public sphere spanned the public and the private realms, and "through the vehicle of public opinion it put the state in touch with the needs of society". "This area is conceptually distinct from the state: it is a site for the production and circulation of discourses that can in principle be critical of the state."
- The public sphere "is also distinct from the official economy; it is not an arena of market relations but rather one of the discursive relations, a theater for debating and deliberating rather than for buying and selling". The people themselves came to see the public sphere as a regulatory institution against the authority of the state. **The study of the public sphere centers on the idea of participatory democracy, and how public opinion becomes political action.**

The ideology of the public sphere theory is that the government's laws and policies should be steered by the public sphere and that the only legitimate governments are those that listen to the public sphere. Much of the debate over the public sphere involves what is the basic theoretical structure of the public sphere, how information is deliberated in the public sphere, and what influence the public sphere has over society.

Jurgen Habermas claims "We call events and occasions 'public' when they are open to all, in contrast to closed or exclusive affairs". This 'public sphere' is a "realm of our social life in which something approaching public opinion can be formed. Access is guaranteed to all citizens ". This notion of the public becomes evident in terms such as public health, public education, public opinion or public ownership. They are opposed to the notions of private health, private education, private opinion, and private ownership. The notion of the public is intrinsically connected to the notion of the private. Habermas stresses that the notion of the public is related to the notion of the common. Habermas defines the public sphere as a "society engaged in critical public debate". Conditions of the public sphere are according to Habermas:

- The formation of public opinion
- All citizens have access.

- Conference in unrestricted fashion (based on the freedom of assembly, the freedom of association, the freedom to expression and publication of opinions) about matters of general interest, which implies freedom from economic and political control.
- Debate over the general rules governing relations.

Most contemporary conceptualizations of the public sphere are based on the ideas expressed in Jürgen Habermas' book *The Structural Transformation of the Public Sphere – An Inquiry into a Category of Bourgeois Society*. Habermas stipulates that, due to specific historical circumstances, a new civic society emerged in the eighteenth century. Driven by a need for open commercial arenas where news and matters of common concern could be freely exchanged and discussed—accompanied by growing rates of literacy, accessibility to literature, and a new kind of critical journalism—a separate domain from ruling authorities started to evolve across Europe. In his historical analysis, Habermas argued that the bourgeois society cultivated and upheld these criteria. The public sphere was well established in various locations including coffee shops and salons, areas of society where various people could gather and discuss matters that concerned them. The coffee houses in London society at this time became the centers of art and literary criticism, which gradually widened to include even the economic and the political disputes as matters of discussion. In French salons, as Habermas says, "opinion became emancipated from the bonds of economic dependence". Any new work, or a book or a musical composition had to get its legitimacy in these places. It not only paved a forum for self-expression but in fact had become a platform for airing one's opinions and agendas for public discussion.

The emergence of a bourgeois public sphere was particularly supported by the 18th-century liberal democracy making resources available to this new political class to establish a network of institutions like publishing enterprises, newspapers and discussion forums, and the democratic press was the main tool to execute this. The key feature of this public sphere was its separation from the power of both the church and the government due to its access to a variety of resources, both economic and social. As Habermas argues, in due course, this sphere of rational and universalistic politics, free from both the economy and the State, was destroyed by the same forces that initially established it. This collapse was due to the consumeristic drive that infiltrated society,

so citizens became more concerned about consumption than political actions. Furthermore, the growth of capitalistic economy led to an uneven distribution of wealth, thus widening economic polarity. Suddenly the media became a tool of political forces and a medium for advertising rather than the medium from which the public got their information on political matters. This resulted in limiting access to the public sphere and the political control of the public sphere was inevitable for the modern capitalistic forces to operate and thrive in the competitive economy.

Thus a new sort of influence, i.e. media power, which is used for purposes of manipulation, once and for all took care of the innocence of the principle of publicity. The public sphere, simultaneously restructured and dominated by the mass media, developed into an arena infiltrated by power in which, by means of topic selection and topical contributions, a battle is fought not only over influence but over the control of communication flows that affect behavior while their strategic intentions are kept hidden as much as possible. The public sphere was long regarded as men's domain whereas women were supposed to inhabit the private domestic sphere. A distinct ideology that prescribed separate spheres for women and men emerged during the industrial revolution

The concept of **heteronormativity** is used to describe the way in which those who fall outside of the basic male/female dichotomy of gender or whose sexual orientations are other than heterosexual cannot meaningfully claim their identities, causing a disconnect between their public selves and their private selves. Michael Warner made the observation that the idea of an inclusive public sphere makes the assumption that we are all the same without judgments about our fellows. He argues that we must achieve some sort of disembodied state in order to participate in a universal public sphere without being judged. His observations point to a homosexual counter public, and offers the idea that homosexuals must otherwise remain "closeted" in order to participate in the larger public discourse.

Habermas' argument shows that the media are of particular importance for constituting and maintaining a public sphere. Discussions about the media have therefore been of particular importance in public sphere theory. According to Habermas, there are two types of actors without whom no political public sphere could be put to work: professionals in the media system and politicians. For Habermas, there

are five types of actors who make their appearance on the virtual stage of an established public sphere:

(a) Lobbyists who represent special interest groups;

(b) Advocates who either represent general interest groups or substitute for a lack of representation of marginalized groups that are unable to voice their interests effectively;

(c) Experts who are credited with professional or scientific knowledge in some specialized area and are invited to give advice;

(d) Moral entrepreneurs who generate public attention for supposedly neglected issues;

(e) Intellectuals who have gained, unlike advocates or moral entrepreneurs, a perceived personal reputation in some field (e.g., as writers or academics) and who engage, unlike experts and lobbyists, spontaneously in public discourse with the declared intention of promoting general interests.

**YouTube**

Habermas argues that under certain conditions, the media act to facilitate discourse in a public sphere.[53] The rise of the Internet has brought about a resurgence of scholars applying theories of the public sphere to Internet technologies. For example, a study by S. Edgerly et al. focused on the ability of YouTube to serve as an online public sphere. The researchers examined a large sample of video comments using the California Proposition 8 (2008) as an example. The authors argue that some scholars think the online public sphere is a space where a wide range of voices can be expressed due to the "low barrier of entry" and interactivity. However, they also point at a number of limitations. Edgerly et al. say that the affirmative discourse presupposes that YouTube can be an influential player in the political process and that it can serve as an influential force to politically mobilize young people. The authors mention critiques that say YouTube is built around the popularity of videos with sensationalist content. The research by Edgerly, et al. found that the analyzed YouTube comments were diverse. They argue that this is a possible indicator that YouTube provides space for public discussion. They also found that YouTube videos' style influences the nature of the commentary. Finally, they concluded that the video's ideological stances influenced

the language of the comments. The findings of the work suggest that YouTube is a public sphere platform.

**Limitations of media and the internet**

German scholars Jürgen Gerhards and Mike S. Schäfer conducted a study in 2009 in order to establish whether the Internet offers a better and broader communication environment compared to quality newspapers. They analysed how the issue of human genome research was portrayed between 1999 and 2001 in popular quality newspapers in both Germany and the United States in comparison to the way it appeared on search engines at the time of their research. Their intention was to analyse what actors and what sort of opinions the subject generated in both print and the Internet and verify whether the online space proved to be a more democratic public sphere, with a wider range of sources and views. Gerhards and Schäfer say they have found "only minimal evidence to support the idea that the internet is a better communication space as compared to print media". "In both media, communication is dominated by (bio- and natural) scientific actors; popular inclusion does not occur". The scholars argue that the search algorithms select the sources of information based on the popularity of their links. "Their gatekeeping, in contrast to the old mass media, relies mainly on technical characteristics of websites". For Gerhards and Schäfer the Internet is not an alternative public sphere because less prominent voices end up being silenced by the search engines' algorithms. "Search engines might actually silence societal debate by giving more space to established actors and institutions". Another tactic that supports this view is **astroturfing**. ***The Guardian*** **columnist George Monbiot said that Astroturfing software** "has the potential to destroy the internet as a forum for constructive debate. It jeopardizes the notion of online democracy".

There has been an academic debate about how social media impacts the public sphere. The sociologists Brian Loader and Dan Mercea give an overview of this discussion. They argue that social media offers increasing opportunities for political communication and enable democratic capacities for political discussion within the virtual public sphere. The effect would be that citizens could challenge governments and corporations' political and economic power. Additionally, new forms of political participation and information sources for the users emerge with the Internet that can be used, for example, in online campaigns. However, the two authors point out that social

media's dominant uses are entertainment, consumerism, and content sharing among friends.

Loader and Mercea point out that "individual preferences reveal an unequal spread of social ties with a few giant nodes such as Google, Yahoo, Facebook and YouTube attracting the majority of users". They also stress that some critics have voiced the concern that there is a lack of seriousness in political communication on social media platforms. Moreover, lines between professional media coverage and user-generated content would blur on social media. The authors conclude that social media provides new opportunities for political participation; however, they warn users of the risks of accessing unreliable sources. The Internet impacts the virtual public sphere in many ways, but is not a free utopian platform as some observers argued at the beginning of its history.

**Mediated publicness**

John Thompson criticises the traditional idea of public sphere by Habermas, as it is centred mainly in face-to-face interactions. On the contrary, Thompson argues that modern society is characterized by a new form of **"mediated publicness"** whose main characteristics are:

- Despatialized - People can see more things, as they do not need to share the same physical location.
- Non dialogical - unidirectional. For example, presenters on TV are not able to adapt their discourse to the reactions of the audience, since they are visible to a wide audience but that audience is not directly visible to them. However, internet allows a bigger interactivity.
- Wider and more diverse audiences. The same message can reach people with different education, different social class, different values and beliefs.

**The public service model**

Examples of the public service model include BBC in Britain, and the ABC and SBS in Australia. The political function and effect of modes of public communication has traditionally continued with the dichotomy between Hegelian State and civil society. The dominant theory of this mode includes the liberal theory of the free press. However, the public service, state-regulated model, whether publicly or privately funded, has always been seen not as a positive good but as an unfortunate necessity imposed by the

technical limitations of frequency scarcity. From Garnham's critique, three great virtues of Habermas's public sphere are mentioned. Firstly, it focuses on the indissoluble like between the institutions and practices of mass public communication and the institutions and practices of democratic politics. The second virtue of Habermas's approach concentrates on the necessary material resource base for ant public. Its third virtue is to escape from the simple dichotomy of free market versus state control that dominates so much thinking about media policy.

**4.5. Noam Chomsky- Manufacturing of Consent**

***Manufacturing Consent: The Political Economy of the Mass Media*** is a 1988 book by **Edward S. Herman and Noam Chomsky**. It argues that the mass communication media of the U.S. "are effective and powerful ideological institutions that carry out a system-supportive propaganda function, by reliance on market forces, internalized assumptions, and self-censorship, and without overt coercion", by means of the propaganda model of communication. The title refers to consent of the governed, and derives from the phrase "the manufacture of consent" used by Walter Lippmann in *Public Opinion* (1922).

Herman was a professor of finance at Wharton School at the University of Pennsylvania, and Chomsky is a linguist and activist scholar, who wrote many other books, such as *Towards a New Cold War*. Before *Manufacturing Consent* was published in 1988, the two authors had collaborated on the same subject before. Their book *Counter-Revolutionary Violence: Bloodbaths in Fact & Propaganda*, a book about American foreign policy and the media, was published in 1973. According to Chomsky, "most of the book [*Manufacturing Consent*]" was the work of Edward S. Herman. The main elements of the propaganda model were discussed briefly in volume 1 chapter 2 of Herman and Chomsky's 1979 book *The Political Economy of Human Rights*, where they argued, "Especially where the issues involve substantial U.S. economic and political interests and relationships with friendly or hostile states, the mass media usually function much in the manner of state propaganda agencies." The book introduced the propaganda model of communication, which is still developing today.

The propaganda model for the manufacture of public consent describes five editorially distorting filters, which are applied to the reporting of news in mass communications media. These five filters of editorial bias are:

1. ***Size, ownership, and profit orientation***: The dominant mass-media outlets are large profit-based operations, and therefore they must cater to the financial interests of the owners such as corporations and controlling investors. The size of a media company is a consequence of the investment capital required for the mass-communications technology required to reach a mass audience of viewers, listeners, and readers.
2. ***The advertising license to do business***: Since the majority of the revenue of major media outlets derives from advertising not from sales or subscriptions, advertisers have acquired a "de facto licensing authority." Media outlets are not commercially viable without the support of advertisers. News media must therefore cater to the political prejudices and economic desires of their advertisers. This has weakened the working class press, for example, and also helps explain the attrition in the number of newspapers.
3. ***Sourcing mass media news***: Herman and Chomsky argue that "the large bureaucracies of the powerful *subsidize* the mass media, and gain special access to the news by their contribution to reducing the media's costs of acquiring and producing, news. The large entities that provide this subsidy become 'routine' news sources and have privileged access to the gates. Non-routine sources must struggle for access, and may be ignored by the arbitrary decision of the gatekeepers." Editorial distortion is aggravated by the news media's dependence upon private and governmental news sources. If a given newspaper, television station, magazine, etc., incurs dis-favour from the sources, it is subtly excluded from access to information. Consequently, it loses readers or viewers, and ultimately, advertisers. To minimize such financial danger, news media businesses editorially distort their reporting to favour government and corporate policies in order to stay in business.
4. ***Flak and the enforcers*****:** "Flak" refers to negative responses to a media statement or program (e.g. letters, complaints, lawsuits, or legislative actions). Flak can be expensive to the media, either due to loss of advertising revenue, or due to the costs of legal defence or defence of the media outlet's public image. Flak can be organized by powerful, private influence groups. The prospect of eliciting flak can be a deterrent to the reporting of certain kinds of facts or opinions.

5. ***Anti-communism/war on terror*:** Anti-communism was included as a filter in the original 1988 edition of the book, but Chomsky argues that since the end of the Cold War (1945–91) anticommunism was replaced by the "war on terror" as the major social control mechanism.

   In 2006, Fatih Tas, owner of the Aram editorial house, along with two editors and the translator of the revised, 2001 edition of *Manufacturing Consent* were prosecuted by the Turkish government for "stirring hatred among the public" (per Article 216 of the Turkish Penal Code) and for "denigrating the national identity" of Turkey (per Article 301). The reason cited was that the introduction to this edition addresses the 1990s' Turkish news media reportage of governmental suppression of the Kurdish populace. The defendants were ultimately acquitted.

**4.6. Walter Lipmann – Public Opinion and Democracy**

**Walter Lippmann** was an American writer, reporter and political commentator. With a career spanning 60 years he is famous for being among the first to introduce the concept of **Cold War,** coining the term "**stereotype"** in the modern psychological meaning, as well as critiquing media and democracy in his newspaper column and several books, most notably his 1922 book *Public Opinion*. Lippmann won **two Pulitzer Prizes**, one for his syndicated newspaper column **"Today and Tomorrow" and one for his 1961 interview of Nikita Khrushchev**.

**He has also been highly praised with titles ranging anywhere from "most influential" journalist of the 20th century, to "Father of Modern Journalism" as his book *Public Opinion* is considered as "the founding book of modern journalism" and also "the founding book in American media studies"**. Public Opinion is a book by Walter Lippmann, published in 1922. It is a critical assessment of functional democratic government, especially of the irrational and often self-serving social perceptions that influence individual behaviour and prevent optimal societal cohesion.

- Though a journalist himself, Lippmann did not assume that news and truth are synonymous. For Lippmann, the **"function of news is to signalize an event, the function of truth is to bring to light the hidden facts, to set them in relation with each other, and make a picture of reality on which men can act."**

- A journalist's version of the truth is subjective and limited to how they construct their reality. The news, therefore, is **"imperfectly recorded"** and too fragile to bear the charge as "an organ of direct democracy."
- To Lippmann, democratic ideals had deteriorated: voters were largely ignorant about issues and policies and lacked the competence to participate in public life and cared little for participating in the political process.
- In *Public Opinion* (1922), Lippmann noted that modern realities threatened the stability that the government had achieved during the patronage era of the 19th century. He wrote that a "governing class" must rise to face the new challenges.
- The basic problem of democracy, he wrote, was the **accuracy of news and protection of sources**. He argued that **distorted information** was inherent in the human mind. People make up their minds before they define the facts, while the ideal would be to gather and analyze the facts before reaching conclusions.
- By seeing first, he argued, it is possible to sanitize polluted information. Lippmann argued that interpretation as stereotypes (a word which he coined in that specific meaning) subjected us to partial truths.
- Lippmann called the notion of a public competent to direct public affairs a "false ideal." He compared the political savvy of an average man to a theater-goer walking into a play in the middle of the third act and leaving before the last curtain.
- Lippmann was an early and influential commentator on mass culture, notable not for criticizing or rejecting mass culture entirely but discussing how it could be worked with by a government licensed "propaganda machine" to keep democracies functioning.
- In his first book on the subject, *Public Opinion* (1922), Lippmann said that mass man functioned as a "bewildered herd" that must be governed by "a specialized class whose interests reach beyond the locality." The élite class of intellectuals and experts were to be a machinery of knowledge to circumvent the primary defect of democracy, the impossible ideal of the "omni-competent citizen". This attitude was in line with contemporary capitalism, which was made stronger by greater consumption.

- Later, in *The Phantom Public* (1925), Lippmann recognized that the class of experts were also, in most respects, outsiders to any particular problem, and hence not capable of effective action. Philosopher John Dewey (1859–1952) agreed with Lippmann's assertions that the modern world was becoming too complex for every citizen to grasp all its aspects, but Dewey, unlike Lippmann, believed that the public (a composite of many "publics" within society) could form a "Great Community" that could become educated about issues, come to judgments and arrive at solutions to societal problems.
- From the 1930s to the 1950s, Lippmann became even more skeptical of the "guiding" class. In *The Public Philosophy* (1955), which took almost twenty years to complete, he presented a sophisticated argument that intellectual elites were undermining the framework of democracy. The book was very poorly received in liberal circles.

The main point of "Public Opinion" is to demonstrate the **problem facing democracy** in its original form **"because the pictures inside people's heads do not automatically correspond with the world outside"** and to suggest a remedy based on **organized intelligence and "representation of the unseen facts" of public affairs.**

- Walter Lippmann supports his argument by discussing how public opinions consist of pictures inside men's heads and why the picture "so often misleads men in their dealings with the world outside".
- He reveals how **stereotypes affect public opinions** and how these individual opinions "are crystallized into what is called Public Opinion". Public opinions are the pictures inside men's heads, "the pictures of themselves, of others, of their needs, purposes, and relationship". Public Opinion consists of those pictures collectively acted upon. The world people deal with politically is **"out of reach, out of sight, out of mind".**
- Fictions and symbols become an important part of human communication in a world of complex, distant and unseen events. Man's behavior becomes his response to a pseudo-environment, the environment as he knows it in pictures inside his head. People form mental images of events they do not experience and attach emotions to those images. Casual facts combine with a man's creative imagination and his will to believe to create the fictions on which he acts.

- The analyst of public opinion must thus begin **"by recognizing the triangular relationship between the scene of action, the human picture of that scene, and the human response to that picture working itself out upon the scene of action".** Indirect, imagined, symbolic and stereotyped pictures of facts form the basis of public opinion.

In Part two, Lippmann explores the factors that limit people's access to facts and thus the accuracy of the pictures inside their heads.

- **Censorship and privacy intercept information at its source**, forming barriers between the public and events. **Physical and social barriers, monopolies, low incomes and lack of interest limit the circulation of ideas. Language becomes a limiting factor** as words elicit different mental images and have different meanings for different people. Time constraints, distractions of urban life, emotional conflicts and fatigue also limit access to facts.
- These limitations "combine with the obscurity and complexity of the facts themselves to thwart clearness and justice of perception, to substitute misleading fictions for workable ideas"

In Parts three and four, Lippmann explores how stereotypes and self-interest guide public opinion, how images, preconceptions and prejudices affect incoming messages from the outside.

- People use their prejudices to interpret and fill out these messages. The observer of the outside world is selective and creative, bringing stereotypes and expectations to scenes such that his account of an event "is really a transfiguration of it",
- In a complex world, people perceive events and other people in forms stereotyped for them by their culture. They accept stereotypes as mental shortcuts in order to minimize effort of thought and defend their positions in society and their self-respect.
- Moral codes, social philosophies and political agitations contribute to the stereotyped shapes that influence perceptions. People see those facts that fit their moral philosophy, support their stereotypes and compliment their variable interests.

- Lippmann suggests that public opinion is a “moralized and codified version of the facts” that is personal and variable in each individual.

In part five, Lippmann explores the question of how “great numbers of people feeling each so privately about so abstract a picture” could develop a common will, a collective Public Opinion.

- He discusses the role of vague ideas and universal symbols in uniting deeply felt individual opinions. Public figures use symbols such as Americanism and Progressivism to “amalgamate the emotion of conflicting factions”.
- Lippmann equates this harmonization to a hierarchy of symbols. A higher order symbol collects more diverse ideas into a common emotional response while sacrificing concrete intellectual substance. Each individual gives the symbol his or her own private meaning. As authoritative figures begin to wield uniting symbols, men choose less between true and false and more between trustworthy and untrustworthy. They exercise their independence not through self-sufficiency but in controlling which authorities they listen to. Common symbols and issues constructed from a multitude of private notions limit the direct action of the public to assent or dissent, the simple expression of “yes” or “no.”
- Lippmann writes, “because of its power to siphon emotion out of distinct ideas, the symbol is both a mechanism of solidarity, and a mechanism of exploitation”.

In Part six, Lippmann analyzes democratic theory of public opinion in its traditional and reformed forms. He concludes that in the absence of a simple self-contained community and reliable pictures of the world, democracy suffers from the problem of “turning a self-centered opinion into a social judgment” and good government.

- In popular government, men act without reliable pictures of the world. Lippmann points out that, despite hopes, the press will not provide the spontaneous knowledge of truth and self-governing ability required of the individual in a representative government. The source of the problems of representative government, industry and the press alike is “the failure of self-governing people to transcend their casual experiences and their prejudice, by inventing, creating, and organizing a machinery of knowledge”.

- Lippmann proposes a separate system of intelligence as a remedy to the limitations of the press, a "social organization based on a system of analysis and record". Lippmann proposes that a re-education based on objective methods of expert reporting and information organization "will help to bring our public opinions into grip with the environment".

**4.7. James Bryce – Power of Public Opinion**

In the 1880s, Lord James Bryce travelled extensively throughout the United States to study and write about the American democracy. As part of his multivolume work, he developed a **theory of the nature and power of public opinion** with a central role for the media (newspapers). Today, new communications technologies vastly increase the exposure of politicians and voters to each other, resulting in an increase in the **power of public opinion**. Bryce's theory is formalized into 12 propositions and a theorem is derived that has significant implications for society in the contemporary age of multiple channels of communication. **Democracy is viewed as an elite rule carried out according to the interests of the citizens, and public opinion is viewed as a sum of individual preferences of the voters.**

Public opinion is a nebulous concept that Bryce works to tease out, first by focusing on its creation within an increasingly growing population.

- Bryce describes the first step of one's initial foray into any topic as beginning with a set of **vaguely related impressions** that are formed as one learns about the issue at hand. These are essentially **created on the spur of the moment** and are fleeting notions put together as our mind struggles to make connections between the incomplete data we are presented with and the thoughts we have concerning a variety of other issues.
- Next, as **we gather more details and are permitted the time to reflect upon these**, what was at first fluid and ill-defined comes to be more determined and concrete. One is better able to fit the given issues into a broader context as time and further analysis of details allow for more definite connections, both within our own minds and in the wider social framework in which we operate. This stage also **includes interactions with others and a crystallization of one's own opinion.**

- Bryce's third stage in the formation of public opinion is characterized by **wider interaction with others** as one is in the process of forming their opinions on an issue, it is likely that many others are doing so as well. The internal debate takes on new shapes externally as a more or less widespread discussion in the public sphere. This continues as battle lines are drawn and adherents pick their sides. Despite the more solidly defined positions on an argument, the debate still maintains some fluidity as still further details are discovered and insights are produced.
- Bryce describes something of a definite end to the process when a citizen votes on a given issue. Election day may be a somewhat arbitrary breaking point, especially with newer issues and the increasing use of polling techniques, but by this day, the individual citizen is to have taken stock of all they have gathered on the topic, studied how each side impacts other issues he cares about, and undertakes a definite action to support one particular point of view over all the others. There is a finality of sorts in the fourth stage.
- Elites of various stripes, including political, social, religious, and popular figures, play an integral role in creating the parameters of discussion insofar as they are able to function as a unifying figure. Bryce is careful to again argue that opinion is formed in a **circular manner**. While it may be the case that terms of debate are largely set by elites, they are in turn informed by the types of response they receive from the general population. That which decides whether a speaker stands on a stage or a soapbox is the size of their audience.

This interaction between elites and non-elites is ongoing. As an issue gains attention, individuals work to understand it in relation to their circumstances and world-view. Once beyond the first stage in the formation of public opinion, elites and non-elites work with one another to better comprehend the issue, its context, possible responses, and their ramifications.

Individuals constantly re-evaluate their opinions in light of the changing circumstances, experiences, and insights. Bryce sees the need for an "elite" or "upper" class of individuals who have the time and talents to serve as a source for the distillation of opinions and insights as described above. He sees merit on the part of the general population who looks to those with greater abilities to understand the parameters of a

given issue for guidance and advice because each group, regardless of their degree of comprehension on a given issue, is nonetheless given equal worth when called upon to voice their opinion during an election.

### 4.8. Manual Castles – Networked Society

**Information** has been a central theme in 21st century research, just as capital was in the 20th century. It is frequently said that society is now living in an **information age**, which has provided various information technologies (i.e. the Internet and cellular phones). However the "information age" is also referred to as information society, global village, digital society, wired society, post-industrial society, and network society. Among the numerous scholars trying to define this new society, Manuel Castells is the most foremost and unique.

- He has written over twenty books, published over one hundred academic journal articles, and co-authored over fifteen books. He was a professor of Sociology and City and Regional Planning at the University of California, Berkeley. He has also served on many national and international organizations such as: the Advisory Council to the United Nations Task Force on Information and Communication Technology, the International Advisory Council to the President of South Africa on Information Technology and Development, the United Nations Secretary General's High Level Panel on Global Civil Society and the United Nations, and UNESCO.
- Castells has become one of the most influential theorists over the past thirty years since his wide array of works has provided a unique and critical framework for examining contemporary society. Castells has been called the first great philosopher of cyberspace for his work on the information economy.
- His trilogy published between 1996 and 1998 is recognized as a compendium of his theory about the information age. In the trilogy, consisting of ***The Network Society*****, *The Power of Identity*, and *End of Millennium*,** Castells' analysis of the new economy colligates several strands of the new society: new technological paradigms, globalization, social movements, and the demise of the sovereign nation-state.
    - Network Society deals with the new techno-economic system

- The Power of Identity discusses social movements and politics resisting or adapting to the network society.
- *End of Millennium*, the last work of the trilogy, describes the results of the previous two factors in the world.

- His critical viewpoint toward networks and the information economy has made him more unique than other information economists and sociologists. Castells believes that the dark side of a new economy is embedded in the intrinsic characteristics of new technologies. Thus, Castells maintains a deterministic view of technology, whereas the Utopians regard information technologies as instruments for human evolution.
- **Manuel Castells** defines the network society as a society whose social structure is made up of networks powered by micro-electronics-based information and communications technologies

**Network society** is the expression coined in 1991 related to the social, political, economic and cultural changes caused by the spread of networked, digital information and communications technologies. According to Castells, networks constitute the new social morphology of our societies. According to Castells "network society is a society where the key social structures and activities are organized around electronically processed information networks. So it's not just about networks or social networks, because social networks have been very old forms of social organization. It's about social networks which process and manages information and is using micro-electronic based technologies." The diffusion of a networking logic substantially modifies the operation and outcomes in processes of production, experience, power, and culture. For Castells, networks have become the basic units of modern society.

The network society goes further than the information society that is often proclaimed. Castells argues that it is not purely the technology that defines modern societies, but also cultural, economic and political factors that make up the network society. Influences such as religion, cultural upbringing, political organizations, and social status all shape the network society. Societies are shaped by these factors in many ways. These influences can either raise or hinder these societies. The space of flows plays a central role in Castells' vision of the network society. It is a network of communications, defined by hubs where these networks crisscross. Élites in cities are

not attached to a particular locality but to the space of flows. Castells puts great importance on the networks and argues that the real power is to be found within the networks rather than confined in global cities.

Social networking sites such as Facebook and Twitter, instant messaging and email are prime examples of the Network Society at work. These web services allow people all over the world to communicate through digital means without face-to-face contact. This demonstrates how the ideas of society changing will affect the persons we communicate over time. Network society does not have any confinements and has found its way to the global scale. Network society is developed in modern society that allows for a great deal of information to be traded to help improve information and communication technologies. Having this luxury of easier communication also has consequences. This allows for globalization to take place. This benefits users who have access to the internet, to stay connected at all times with any topic the user wants. Individuals without internet may be affected because they are not directly connected into this society. People always have an option to find public space with computers with internet. This allows a user to keep up with the ever changing system. Network society is constantly changing the "cultural production in a hyper-connected world." Social Structures revolve around the relationship of the "production/consumption, power, and experience." These conclusively create a culture, which continues to sustain by getting new information constantly.

Our society system was a mass media system where it was a more general place for information. Now the system is more individualized and custom system for users making the internet more personal. This makes messages to the audience more inclusive sent into society, ultimately allowing more sources to be included for better communication. Network society is seen as a global system that helps with globalization. This is beneficial to the people who have access to the internet to get this media. The negative to this is the people without access do not get this sense of the network society. These networks, that have now been digitized, are more efficient of connecting people. Everything we know now can be put into a computer and processed. Users put messages online for others to read and learn about. This allows people to gain knowledge faster and more efficiently. Networked society allows for people to connect to each other quicker and to engage more actively.

## 4.9. Digital Convergence

**Digital Convergence** is the **priming** of underlying digital technology components and features such as **voice, texts, video, pictures, broadcasts, presentation, streaming media, global connectivity** and **personalized services**; the combination of all of these features and abilities from multiple electronic systems into a simplified, converged and computer-mediated communication system to enable individuals interact, play, communicate, collaborate and share information in many new and different ways.

Today the world of communications is characterized by the evolution of new technologies which are innovativeness, fast paced, adaptive, rapidly changing and dynamic. The recent years can surely be described this way as witnessed with convergence in technology which has in many ways revolutionized mass media and communication. The rise of digital communication has made it possible for media organizations to deliver video, audio and text material via the same wired, wireless or fibre-optic connections. Today, the world of communications is surrounded by a multi-level convergent media wherein the various modes of information and communication are increasingly integrating into one in order to adapt to the enduring demands of technologies. Convergence of technologies is increasingly changing the way in which we create, consume, learn and interact with one another.

Where the mention of the word "convergence" appeared in the 1980's and early 1990's, it was always in connection with Sculley and Apple. It also appeared in a few of the articles. For example, in 1994, the New York Times, while reporting on the San Jose Mercury News online edition on AOL, had a subheading with the term "media convergence" which forecasted that technological changes were increasingly leading to convergence of all forms of media into one. With the World Wide Web emerging in the mid-1990s, the notion of media convergence was getting more popular and by the time a merger between AOL and Time Warner was announced in the early 2000, the term "convergence" had become a buzzword which was associated with electronic content delivery

- Digital convergence can be defined as the coming together of information content from voice telephony, sound broadcasting, television and print media; into a single application or service (Simpson & Weiner 1989).

- Convergence can also defined as the merging of industries, for example, the merging of traditional media companies with internet companies, such as Time Warner and AOL (Jenkins 2001).
- Ithiel de Sola Pools (1983), coined the term "convergence" to describe a single integrated common carrier that met all the needs of the media.

In the past, communications media were separate and they provided distinct services. Voice telephony, broadcasting and online computer services operated on different platforms. With digital convergence, a new epoch of multimedia has been ushered in where in voice, images and data can be brought together to form a single network that renders more efficient and effective services to the users of information content. This convergence has been made possible through digitization which represents all forms of information in the same abstract form, in digital binary formats. Digitization enables all forms of the media to escape their traditional means of transmission (analog) and be translated into one another, as computer bits migrate merrily. The digital technology is increasingly blurring the boarders between broadcasting, telecommunication, television, publishing and computing services. Digital convergence has become the key factor of change in communication media with it rendering better, more efficient and innovative services to the users of information content. Digital convergence has made it possible for consumers to access content and services regardless of the connection type.

Open standard-based technologies such as IP; radio technologies such as cellular, DVB and WLAN; middleware technologies such as HTML, WAP, MMS, Symbian, XHTML, PoC, Java and DRM; and connectivity technologies such as the Blue tooth, USB 2.0, RFID, and universal plug and play; have all made it possible for consumers to access information content and services without having to worry about interoperability issues

Much of the content that is created today is in the form of a digital format, which give users a range of options to choose from for the content that they want to consume. For example, standardized content formats such as MP3 and MPEG4 can be consumed on a video player, TV or on a smartphone Digitization is increasingly changing the way content is distributed by media organizations. The mass media content is no longer distributed through traditional channels and instead digital content is now delivered via the internet, satellite and through a host of other digital technologies. The content has

been made available 24 hours a day, with media organizations updating their content continuously and reaching out to a worldwide audience.

Convergence of mass media, which has been facilitated by digitization, has become the focus of media organizations. Today, various forms of mass media are converging into a digital nexus with increasing speed. This increasing integration of technologies of computing, telecommunications, broadcasting and print media into a single digital environment is quickly revolutionizing media and journalism.

- Convergent media can thus be seen as a cross-plat form media, one which was conventionally associated with a certain platform or device but through digital convergence can now be accessed and distributed through another platform of device. This convergence represents more than just a one-dimensional technological question as it also incorporates structural changes in the economic field where information services play a significant part and the convergence of industries as well
- Digital convergence is enabling companies to merge and produce much better and efficient services. For example, in 2000, Time Warner, an American film and publishing conglomerate merged with AOL, an internet service provider to become the largest media corporation in the world. The coming together of these two companies represented a new level of convergence of the industrial and economic organization of media production and distribution.
- From the electronic media perspective, digital convergence significantly transforms media communication and changes the way, in which we create, consume, learn and interact with one another. A good example of this digital convergence can be seen with the Mobile TV. Nokia, for example, has produced a range of smartphones embedded with Real One video player, which enables operators and service providers to offer both streaming and live video content such as news, short films, music videos and sports to their customers
- Digital convergence has also enabled the expansion of mobility into the areas of imaging, games, music and media by enabling content to be accessed anytime and from anywhere. Having multiple functionalities such as MP3 players, digital cameras, and PDA functionality in one device (smartphone) brings significant

benefits as consumers need only a single device to perform a number of functions instead of several different ones.

- Digital convergence is also playing an important role in the area of imaging. For example, Nokia is collaborating with imaging industry leaders to create a total imaging experience for its customers. Its collaboration with Hewlett Packard will enable for easier printing of pictures via Bluetooth wireless technology. Nokia is also collaborating with Kodak to enable easy picture sharing with embedded Kodak picture applications in its smartphones (Anon 2004).
- There is no doubt that the increasing convergence of the various modes of information and communication has changed the way in which we interact and communicate with one another. Traditionally, information was communicated via analog mass communication. This was largely one way of reaching out to the audience. The process of analog mass communication was characterized by a relatively large, heterogeneous and anonymous audience. Audiences had relatively fewer means of communicating directly with each other on a mass scale and neither did they have a direct means of communicating with the creators and publishers of the content of mass communication. With digital convergence, communication has become easier and quicker as audiences can communicate directly with each other and with the creators and publishers of mass media content via email, online forums and other interactive media.
- Additionally, the audience can create mass communication content themselves and reach far larger audiences at a relatively lower cost than with the traditional media

Digital convergence is also transforming and setting the course of future of journalism. Among journalists, the idea of reporting a story using multiple media tools has generated a heated debate especially with the print reporters, who often don't carrying audio recorders and video cameras while at work. Due to these concerns, a mobile journalist workstation has been developed by engineers, which strap on to the back of a reporter and which enables him/her to capture multiple types of content from a news event.

- This idea of a backpack journalist, however, did generate strikingly different views. For example, Jane Ellen Stevens, who had worked as a video producer and

newspaper reporter was proud of the idea of a backpack journalist. She opposed against hiring reporters that were computer illiterate and cited an example of Preston Mendenhall of MSNBC.com who spent a substantial amount of time traveling to Afghanistan and sending back written articles.

- It is clear that the number of multimedia reporters will increase in future, and in many ways, the course of journalism is being set by the increasing convergence of the media. Some of the journalists are already gathering information in multiple formats. They are expected, for example, to write news, shoot and edit videos themselves.
- This is in sharp contrast to the traditional media where in reporting, video editing, and news photography were discrete professions. It is feels safe to predict that greater changes are on the way and the future of journalism lie with convergence of all forms of mass media. At minimum, journalists need to have the basic knowledge and understanding of the unique capabilities of different communications media.
- It is however important to note that this convergence doesn't necessarily imply that a single journalist ought to do all the work from reporting, writing, shooting videos and editing them as well taking pictures and presenting their stories on the web. We will always need to have specialists in these specific fields. But in the converged media organizations, journalists who are well equipped with the basic know-how of multiple media are the ones who are most successful and drive the greatest innovations and are the leaders of tomorrow.

Digital convergence conflates the integration of technologies of broadcasting, telecommunications, computing and printing. This concept has in many ways transformed the very nature of mass communication and is quickly revolutionizing media and journalism as various forms of mass media increasingly converge into a digital nexus. The convergence of all forms of mass media is not only setting the course of media and journalism, but is also changing the way in which we create, consume, learn and interact with one another.

**SEMESTER I**

**NR 11065- Computer Applications for Mass Media**

**Unit – 1 Computer:**

Computer is an electronic devise which is used to perform arithmetic and logical operations. The computer treats all data as electronic pulses or changes. They may include numerical data (0-9), alphabetic data (A-Z) and special character data(*,+,_,) represented as pulses in the computer system.

Essentially, a computer performs three functions.

1. It receives data (input)
2. It process *data* by various computations (Processing)
3. It emits data (output)

It accomplish these functions, programmer gives to the computer a program consisting of a set of statement. In the modern digital computer, programmes data are stored held inside the system in the form of electronic pulses while the mathematical operations are being performed the ability to store programmes or instructions internally is the reason for calling it stored computer programmed.

The digital computer may be defined as tool for solving. controlling and instructions internally is the reason for calling it a stored computer program.

A digital computer may be defined as tool for solving. Controlling and investigation any problem, process or concept, which can expressed mathematically.

**History of Computers**

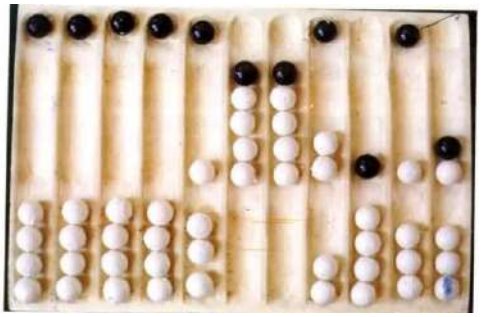

**Abacus**

•An **abacus** is a mechanical device used to aid an individual in performing mathematical calculations.

•The **abacus** was invented in Babylonia in 2400 B.C.

•The abacus in the form we are most familiar with was first used in China in around 500 B.C.

•It used to perform basic arithmetic operations.

Earlier Abacus Modern Abacus

**Napier's Bones**

•Invented by **John Napier i**n 1614.

•Allowed the operator to **multiply**, **divide** and **calculate square** and **cube roots** by moving the rods around and placing them in specially constructed boards.

Napier's Bones

**Slide Rule**

•Invented by **William Oughtred** in**1622**.

•Is based on Napier's ideas about **logarithms**.

•**Used primarily for**

multiplication, division, roots, logarithms, Trigonometry

•Not normally used for **addition** or **subtraction**.

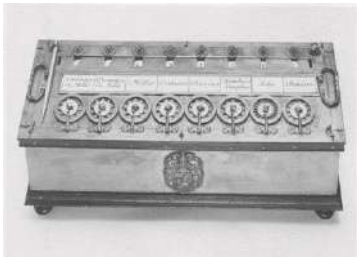

Slide Rule

**Pascaline**

•Invented by **Blaise Pascal** in 1642.

•It was its limitation to addition and subtraction.

•It is too expensive.

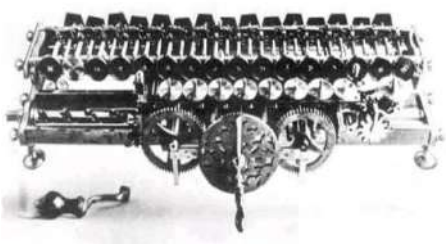

Pascaline

**Stepped Reckoner**

•Invented by **Gottfried Wilhelm Leibniz i**n 1672.

•The machine that can add, subtract, multiply and divide automatically.

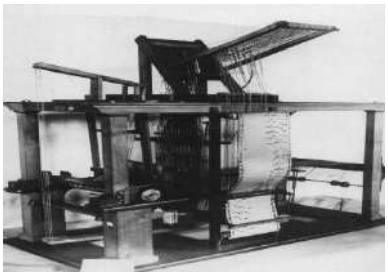

LeibnizStepped Reckoner

**Jacquard Loom**

•The **Jacquard loom** is a mechanical loom, invented by **Joseph-Marie Jacquard** in 1881.

•It an automatic loom controlled by punched cards.

Jacquard Loom

**Arithmometer**

•A mechanical calculator invented by **Thomas de Colmar**in 1820,

•The first reliable, useful and commercially successful calculating machine.

•The machine could perform the four basic mathematic functions.

•The first mass-produced calculating machine.

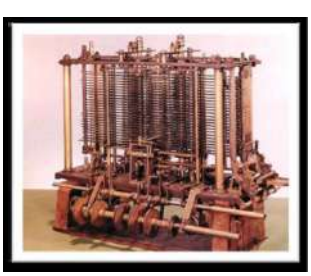

Arithmometer

**Difference Engine and Analytical Engine**

•It an automatic, mechanical calculator designed to tabulate polynomial functions.

•Invented by **Charles Babbage** in**1822 and 1834**

•It is the first mechanical computer

Difference Engine Analytical Engine

**First Computer Programmer**

•In 1840, **Augusta Ada Byron** suggests to Babbage that he use the binary system.

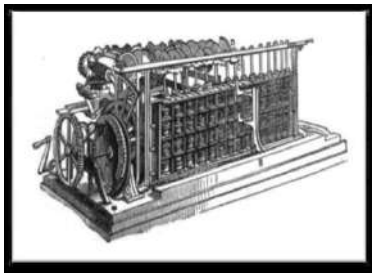

•She writes programs for the **Analytical Engine**.

**Scheutzian Calculation Engine**

•Invented by **Per Georg Scheutz** in 1843.

•Based on Charles Babbage's difference engine.

•The first **printing calculator.**

Scheutzian Calculation Engine

**Tabulating Machine**

•Invented by **Herman Hollerith**in 1890.

•To assist in summarizing information and accounting.

Tabulating Machine

**Havard Mark 1**

•Also known as IBM Automatic Sequence Controlled Calculator (ASCC).

•Invented by **Howard H. Aikenin** 1943

•The first electro-mechanical computer.

Mark 1

**Z1**

•The first programmable computer.

•Created by **Konrad Zuse**in Germany from **1936 to 1938.**

•To program the Z1 required that the user insert punch tape into a punch tape reader and all output was also generated through punch tape.

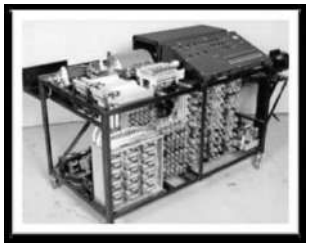

Z1

**Atanasoff-Berry Computer**(**ABC**)

•It was the first electronic digital computing device.

•Invented by **Professor John Atanasoff** and graduate student Clifford Berry at Iowa State University between 1939 and 1942.

AtanasoffAtanasoff-Berry Computer

**ENIAC**

•**ENIAC**stands for **Electronic Numerical Integrator and Computer**.

•It was the first electronic general-purpose computer.

•Completed in 1946.

•Developed by **John Presper Eckert**and **John W. Mauchl**.

ENIAC

**UNIVAC 1**

•The **UNIVAC I**(**UNIV**ersal **A**utomatic **C**omputer 1) was the first commercial computer.

•Designed by **J. Presper Eckert** and **John Mauchly.**

UNIVAC 1

**EDVAC**

•**EDVAC** stands for **Electronic Discrete Variable Automatic Computer**

•**The First Stored Program Computer**

•Designed by Von Neumann in 1952.

•It has a memory to hold both a stored program as well as data.

EDVAC

**The First Portable Computer**

•**Osborne 1**–the first portable computer.

•Released in 1981 by the Osborne Computer Corporation.

Osborne 1

**Generation of Computers**

There are five generations of computer:

•**First generation**–1946 -1958

•**Second generation**–1959 -1964

•**Third generation**–1965 -1970

•**Fourth generation**–1971 -today

•**Fifth generation**–Today to future

**The First Generation**

•The first computers used **vacuum tubes**for circuitry and **magnetic drums** for memory, and were often enormous, taking up entire rooms.

•They were very expensive to operate and in addition to using a great deal of electricity, generated a lot of heat, which was often the cause of malfunctions.

Vacuum tube

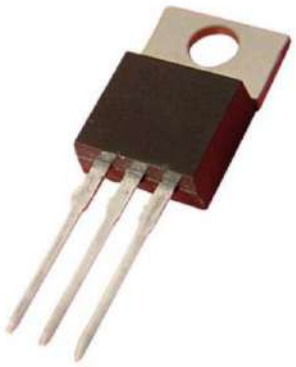

First generation computers relied on machine language, the lowest-level programming language understood by computers, to perform operations, and they could only solve one problem at a time.

•Input was based on punched cards and paper tape, and output was displayed on printouts.

**Examples:** Universal Automatic Computer (UNIVAC), Electronic Numerical Integrator and Calculator (ENIAC), Electronic Discrete Variable Automatic Computer (EDVAC),

**The Second Generation**

•Transistors replaced vacuum tubes and ushered in the second generation of computers.
•One transistor replaced the equivalent of **40 vacuum tubes**.
•Allowing computers to become smaller, faster, cheaper, more energy-efficient and more reliable.
•Still generated a great deal of heat that can damage the computer.

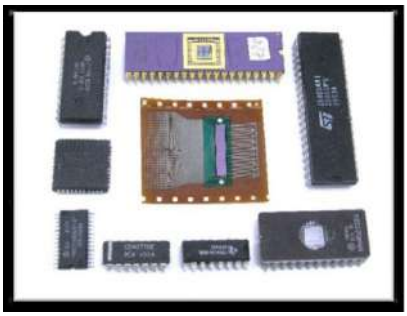

Transistor

Second-generation computers moved from cryptic binary machine language to symbolic, or assembly, languages, which allowed programmers to specify instructions in words.
•Second-generation computers still relied on punched cards for input and printouts for output.
•These were also the first computers that stored their instructions in their memory, which moved from a magnetic drum to magnetic core technology.

**Examples: PDP – 8, IBM 1401, CDC 1604,**

**The Third Generation**

•The development of the **integrated circuit** was the hallmark of the third generation of computers.
•Transistors were miniaturized and placed on silicon chips, called semiconductors, which drastically increased the speed and efficiency of computers.
•Much smaller and cheaper compare to the second generation computers.
•It could carry out instructions in billionths of a second.

Integrated Circuit

Users interacted with third generation computers through keyboards and monitors and interfaced with an operating system, which allowed the device to run many different applications at one time with a central program that monitored the memory.
•Computers for the first time became accessible to a mass audience because they were smaller and cheaper than their predecessors.

**The Fourth Generation**

•The **microprocessor** brought the fourth generation of computers, as thousands of integrated circuits were built onto a single silicon chip.
•As these small computers became more powerful, they could be linked together to form networks, which eventually led to the development of the Internet.
•Fourth generation computers also saw the development of GUIs, the mouse and handheld devices.

Microprocessor

**The Fifth Generation**

•Based on Artificial Intelligence (AI).

•Still in development.

•The use of parallel processing and superconductors is helping to make artificial intelligence a reality.

•The goal is to develop devices that respond to natural language input and are capable of learning and self-organization.

•There are some applications, such as voice recognition, that are being used today.

**TYPES OF COMPUTERS**

There are four types of computers. They are 1.Super Computers 2. Main- frame Computers 3. Mini Computers 4.Micro Computers. These computers are differe in their size and speed.

**1.Super Computers :**

1.These are very large in size.

2.These computers have multiple processors.

3.Super Computers are fastest computers.

4. Super Computers are very expensive

5. These computers are kept only in large air conditioned rooms.

**Uses of Super Computers:** used only in scientific and research purposes like weather forecasting, Nuclear weapon testing, space exploration, earthquake studies.

**2. Main- frame Computers :**

1.Main – frame computers are used in large processing of data.

2. It supports multiple processing simultaneously.

3. These computers are expensive.

4. Main – frame computers are faster computers.

**Uses of Main- frame Computers:** Main frame computers are processing power and used by large organizations like census data processing, consumer statistics, enterprise resource planning, online transaction processing.

**3. Mini Computers:** These computer like between the main frame and micro computers in terms of efficiency, speed, cost and memory. So mini computers are called mid range computers.

**Uses of Mini Computers:** These computers are designed to support large number of users and used database servers, web servers,

**4. Micro Computers:** These computers are used for single user. They are made up of single processor and single memory, minimum input and output devices. These are affordable for personal use.

**Examples:** Desktop, laptop, Notebook PC, Smart T.V., Smart Watches, Smart phones etc.

**An overview of Computer System**

A computer system primarily comprises a central processing unit (CPU), memory, input/output devices and storage devices. All these components function together as a single unit to deliver the desired output. A computer system comes in various forms and sizes. It can vary from a high-end server to personal desktop, laptop, tablet computer, or a smartphone.

**Central Processing Unit (CPU)**

It is the electronic circuitry (route, path) of a computer that carries out the actual processing and usually referred as the brain of the computer. It is commonly called processor also. Physically, a CPU can be placed on one or more microchips called integrated circuits (IC). The ICs comprise semiconductor materials.

The CPU is given instructions and data through programs. The CPU then fetches (get, obtain) the program and data from the memory and performs arithmetic and logic operations as per the given instructions and stores the result back to memory. While processing, the CPU stores the data as well as instructions in its local memory called

registers. Registers are part of the CPU chip and they are limited in size and number. Different registers are used for storing data, instructions or intermediate results.
Other than the registers, the CPU has two main components — Arithmetic Logic Unit (ALU) and Control

Unit (CU). ALU performs all the arithmetic and logic operations that need to be done as per the instruction in a program. CU controls sequential instruction execution, interprets instructions and guides data flow through the computer's memory, ALU and input or output devices. CPU is also popularly known as microprocessor.

**Input Devices**

The devices through which control signals are sent to a computer are termed as input devices. These devices convert the input data into a digital form that is acceptable by the computer system.

**Examples of input devices: keyboard, mouse, scanner, touch screen, etc**.,

Specially designed braille keyboards are also available to help the visually impaired for entering data into a computer. Besides, we can now enter data through voice, for example, we can use Google voice search to search the web where we can input the search string through our voice.

Data entered through input device is temporarily stored in the main memory (also called RAM) of the computer system. For permanent storage and future use, the data as well as instructions are stored permanently in additional storage locations called secondary memory.

**Output Devices**

The device that receives data from a computer system for display, physical production, etc., is called output device. It converts digital information into human understandable form.

**Examples of output devices: Monitor, projector, headphone, speaker, printer, etc.**

**Units of Memory :** A computer system uses binary (duel, double) numbers to store and process data. The binary digits 0 and 1, which are the basic units of memory, are called

bits. Further, these bits are grouped together to form words. A 4-bit word is called a Nibble. Examples of nibble are 1001, 1010, 0010, etc. A two nibble word, i.e., 8-bit word is called a byte, for example, 01000110, 01111100, 10000001, etc.

**Measurement units for digital data**

KB (Kilobyte) 1 KB = 1024 Bytes PB (Petabyte) 1 PB = 1024 TB
MB (Megabyte) 1 MB = 1024 KB EB (Exabyte) 1 EB = 1024 PB
GB (Gigabyte) 1 GB = 1024 MB ZB (Zettabyte) 1 ZB = 1024 EB
TB (Terabyte) 1 TB = 1024 GB YB (Yottabyte) 1 YB = 1024 ZB

**Types of Memory**

Computers have two types of memory — primary memory and secondary memory.

***Primary Memory***

Primary memory is an essential component of a computer system. Program and data are loaded into the primary memory before processing. The CPU interacts directly with the primary memory to perform read or write operation. It is of two types viz. (i) Random Access Memory (RAM) and (ii) Read Only Memory (ROM). RAM is volatile (unstable), i.e., as long as the power is supplied to the computer, it retains the data in it. But as soon as the power supply is turned off, all the contents of RAM are wiped out. It is used to store data temporarily while the computer is working. Whenever the computer is started or a software application is launched, the required program and data are loaded into RAM for processing. RAM is usually referred to as main memory and it is faster than the secondary memory or storage devices.

On the other hand, ROM is non-volatile, which means its contents are not lost even when the power is turned off. It is used as a small but faster permanent storage for the contents which are rarely changed. For example, the startup program (boot loader) that loads the operating system into primary memory, is stored in ROM.

***(B) Cacshe Memory***

RAM is faster than secondary storage, but not as fast as a computer processor. So, because of RAM, a CPU may have to slow down. To speed up the operations of the CPU, a very high speed memory is placed between the CPU and the primary memory known as *cache*. It stores the copies of the data from frequently accessed primary

memory locations, thus, reducing the average time required to access data from primary memory. When the CPU needs some data, it first examines the cache. In case the requirement is met, it is read from the cache, otherwise the primary memory is accessed.

***Secondary Memory***

Primary memory has limited storage capacity and is either volatile (RAM) or read-only (ROM). Thus, a computer system needs auxiliary or secondary memory to permanently store the data or instructions for future use. The secondary memory is non-volatile and has larger storage capacity than primary memory. It is slower and cheaper than the main memory. But, it cannot be accessed directly by the CPU. Contents of secondary storage need to be first brought into the main memory for the CPU to access.

Examples of secondary memory devices include Hard Disk Drive (HDD), CD/DVD, Memory Card, etc., However, these days, there are secondary storage devices like SSD which support very fast data transfer speed as compared to earlier HDDs. Also, data transfer between computers have become easier and simple due to the availability of small-sized and portable flash or pen drives.

## UNIT-2

### MS- OFFICE

**Microsoft Office**, or simply **Office**, is a discontinued family of client software, server software, and services developed by Microsoft. It was first announced by Bill Gates on August 1, 1988, at COMDEX in Las Vegas. Initially a marketing term for an office suite (bundled set of productivity applications), the first version of Office contained Microsoft Word, Microsoft Excel, and Microsoft PowerPoint. Over the years, Office applications have grown substantially closer with shared features such as a common spell checker, Object Linking and Embedding data integration and Visual Basic for Applications scripting language. Microsoft also positions Office as a development platform for line-of-business software under the Office Business Applications brand.

It contains a word processor (Word), a spreadsheet program (Excel) and a presentation program (PowerPoint), an email client (Outlook), a database management system (Access), and a desktop publishing app (Publisher). Office is produced in several versions targeted towards different end-users and computing environments. The original, and most widely used version, is the desktop version, available for PCs running the Windows and macOS operating systems. Microsoft also maintains mobile apps for Android and iOS. Office on the web is a version of the software that runs within a web browser.

Since Office 2013, Microsoft has promoted Office 365 as the primary means of obtaining Microsoft Office: it allows the use of the software and other services on a subscription business model, and users receive feature updates to the software for the lifetime of the subscription, including new features and cloud computing integration that are not necessarily included in the "on-premises" releases of Office sold under conventional license terms. In 2017, revenue from Office 365 overtook conventional license sales. Microsoft also rebranded most of their standard Office 365 editions as "Microsoft 365" to reflect their inclusion of features and services beyond the core Microsoft Office suite. In October 2022, Microsoft announced that it will phase out the Microsoft Office brand in favor of "Microsoft 365" by January 2023. The name will continue to be used for legacy product offerings.

**Core apps and services**

- **Microsoft Word** is a word processor included in Microsoft Office and some editions of the now-discontinued Microsoft Works. The first version of Word, released in the autumn of 1983, was for the MS-DOS operating system and introduced the computer mouse to more users. Word 1.0 could be purchased with a bundled mouse, though none was required. Following the precedents of LisaWrite and MacWrite, Word for Macintosh attempted to add closer WYSIWYG features into its package. Word for Mac was released in 1985. Word for Mac was the first graphical version of Microsoft Word. Initially, it implemented the proprietary .doc format as its primary format. Word 2007, however, deprecated this format in favor of Office Open XML, which was later standardized by Ecma International as an open format. Support for Portable Document Format (PDF) and OpenDocument (ODF) was first introduced in Word for Windows with Service Pack 2 for Word 2007.
- **Microsoft Excel** is a spreadsheet editor that originally competed with the dominant Lotus 1-2-3 and eventually outsold it. Microsoft released the first version of Excel for the Mac OS in 1985 and the first Windows version (numbered 2.05 to line up with the Mac) in November 1987.
- **Microsoft PowerPoint** is a presentation program used to create slideshows composed of text, graphics, and other objects, which can be displayed on-screen and shown by the presenter or printed out on transparencies or slides.
- **Microsoft OneNote** is a notetaking program that gathers handwritten or typed notes, drawings, screen clippings and audio commentaries. Notes can be shared with other OneNote users over the Internet or a network. OneNote was initially introduced as a standalone app that was not included in any Microsoft Office 2003 edition. However, OneNote eventually became a core component of Microsoft Office; with the release of Microsoft Office 2013, OneNote was included in all Microsoft Office offerings. OneNote is also available as a web app on Office on the web, a freemium (and later freeware) Windows desktop app, a mobile app for Windows Phone, iOS, Android, and Symbian, and a Metro-style app for Windows 8 or later.

- **Microsoft Outlook** (not to be confused with Outlook Express, Outlook.com or Outlook on the web) is a personal information manager that replaces Windows Messaging, Microsoft Mail, and Schedule+ starting in Office 97; it includes an e-mail client, calendar, task manager and address book. On the Mac OS, Microsoft offered several versions of Outlook in the late 1990s, but only for use with Microsoft Exchange Server. In Office 2001, it introduced an alternative application with a slightly different feature set called Microsoft Entourage. It reintroduced Outlook in Office 2011, replacing Entourage.
- **Microsoft OneDrive** is a file hosting service that allows users to sync files and later access them from a web browser or mobile device.
- **Microsoft Teams** is a platform that combines workplace chat, meetings, notes, and attachments.

**Windows-only apps**

- **Microsoft Publisher** is a desktop publishing app for Windows mostly used for designing brochures, labels, calendars, greeting cards, business cards, newsletters, web sites, and postcards.
- **Microsoft Access** is a database management system for Windows that combines the relational Access Database Engine (formerly Jet Database Engine) with a graphical user interface and software development tools. Microsoft Access stores data in its own format based on the Access Database Engine. It can also import or link directly to data stored in other applications and databases.
- **Microsoft Project** is a project management app for Windows to keep track of events and to create network charts and Gantt charts, not bundled in any Office suite.
- **Microsoft Visio** is a diagram and flowcharting app for Windows not bundled in any Office suite.

**Mobile-only apps**

- **Office Lens** is an image scanner optimized for mobile devices. It captures the document (e.g. business card, paper, whiteboard) via the camera and then straightens the document portion of the image. The result can be exported to Word,

OneNote, PowerPoint or Outlook, or saved in OneDrive, sent via Mail or placed in Photo Library.

- **Office Mobile** is a unified Office mobile app for Android and iOS, which combines Word, Excel, and PowerPoint into a single app and introduces new capabilities as making quick notes, signing PDFs, scanning QR codes, and transferring files.
- **Office Remote** is an application that turns the mobile device into a remote control for desktop versions of Word, Excel and PowerPoint.

## UNIT - 3

### Photoshop

Adobe Photoshop is a software application for image editing and photo retouching for use on Windows or MacOS computers. Photoshop offers users the ability to create, enhance, or otherwise edit images, artwork, and illustrations. Changing backgrounds, simulating a real-life painting, or creating an alternative view of the universe are all possible with Adobe Photoshop. It is the most widely used software tool for photo editing, image manipulation, and retouching for numerous image and video file formats. The tools within Photoshop make it possible to edit both individual images as well as large batches of photos. There are several versions of Photoshop, including Photoshop CC, Photoshop Elements, Photoshop Lightroom and Photoshop Express, a version of Photoshop for iOS with reduced features.

### How is Photoshop Used?

Adobe Photoshop is a critical tool for designers, web developers, graphic artists, photographers, and creative professionals. It is widely used for image editing, retouching, creating image compositions, website mockups, and adding affects. Digital or scanned images can be edited for use online or in-print. Website layouts can be created within Photoshop; their designs can be finalized before developers move on to the coding stage. Stand-alone graphics can be created and exported for use within other programs.

### What is Photoshop CC?

Adobe Photoshop CC is the Creative Cloud version of Photoshop, available by subscription. It is considered to be the professional-level version of the Photoshop family of products. Photoshop CC is available together with Photoshop Lightroom, or as part of a larger Creative Cloud subscription. Photoshop CC is an advanced imaging software used by designers, web professionals, video editors, and photographers to alter or manipulate digital images. Photoshop is primarily used to edit 2D images, although it does offer some 3D image editing functionality. Photoshop includes image analysis functionality, and can be used to prepare images for use online or in-print.

### Uses of Photoshop?

- Manipulating the color of an image.
- Cropping images.
- Repairing flaws, such as dust on the lens or red eyes.

- Drawing on an image with a pen or pencil.
- Adding text to images.
- Removing people or objects within an image.
- Organizing photos for quick access.
- Publishing images online or send via email.

**Applications of Photoshop**

- Image Writing. Photoshop is named Photoshop for a reason… it's a superb tool for writing photos. ...
- Website Designing. Photoshop is the most popular tool for several net designers. ...
- Project Layout. ...
- Graphics Creation. ...
- Pattern and Texture Styles. ...
- Politics and Social Media. ...
- Brand Style. ...
- Business.

**Adobe Photoshop uses in daily life**

- **Image editing:**

We can use Adobe Photoshop to retouch our scanned or digital photographs. We can improve the color tone and brightness of the pictures into a fresh style. We can also remove the unwanted dots using blur tool, photo filter, and color lookup. In Adobe Photoshop, we can remove or change the backgrounds of our photographs. Changing the color of clothes, hair, and eyes is very simple when you use this software. We can add a person to the photograph and make it look like an original one. Adobe Photoshop helps us to retouch, sharpen and enhance the photos in high quality.

- **Graphic designing:**

Adobe Photoshop is one of the most popular tools for website designers. We can also use it in product photography. We can edit lifestyle and product images which are very helpful for e-commerce websites and online stores. We can also use it to draw maps, satellite views of rivers, grounds, etc. It is most popularly used for creating the graphics and views of the gaming world. By using Photoshop, a web designer can slice up graphics into a set of pictures. In Adobe Photoshop, it is much easier to design individual components like buttons, social media icons, and backgrounds. 3D editing and Video editing are also its main components.

- **Layout of projects:**

Adobe Photoshop is not just for photographs. Layouting of the projects becomes very easy with its help. Editing of patterns and textures work becomes easier with Adobe Photoshop. Designing text, images, and background is much effective in it. The designing of the project layout helps the project team to plan the development of the project.

- **Photoshop uses in social media:**

We see many funny and animated images on social media. Most of these images are designed and edited in Adobe Photoshop. Photoshop harnesses the graphic power of images. It helps us to create promotional material for social platforms.

**Photoshop in brand style and logo design:**

Logo designing for the branding of companies can be done by using Adobe Photoshop. Almost all logo designers use Adobe Photoshop. It also helps in improving the pixels and resizing the logo for various applications.

- **To create passport/stamp size photos at home:**

Using this software we can easily print passport/stamp size photographs at home using a camera of a smartphone and a printer. Cropping, coloring or background replacement of images is much easier in Adobe Photoshop.

**Photoshop in business, career, and jobs:**

We can make different design templates that can be used to promote the business. Graphic designing is continuously in demand. We can easily get online and offline classes. A career in graphic designing is very interesting and challenging. It's important to analyze the market demand and prepare ourselves according to time. Another Adobe Photoshop career opportunity is that good graphic designs can be sold online. We can also provide graphic designing services to customers online in exchange for money. It is also used in the printing industry. Photoshop replaced the 'cut and paste process' in the printing industry. In Adobe Photoshop, we can save images in various formats such as png, .jpeg, .gif, etc.

**Disadvantages of Photoshop**

- Being a high-end software, it may be difficult for some beginners to navigate through the user interface at first. As there are a wide variety of features and functionality, you may want to first identify your purpose in learning Photoshop and then learn features that fulfill your needs.

- Running Photoshop software requires large space in the memory, and has updated system requirements. Photoshopped pictures also require large space for storage. There are performance issues and time lag when the system requirements do not match the graphics needed.
- Continuous untested updates, which sometimes cause errors and bugs, are released which adds an element of uncertainty to the workflow.
- Progress monitoring bars are missing in some features of Photoshop. This affects the productivity of the user.
- Working with vector graphics is sometimes difficult as Photoshop is not compatible with all vector formats.
- It is expensive software and may not fit the budget for many. Moreover, Adobe Creative Cloud is a subscription-based model which means you pay as long as you want to take their service.

## PageMaker

PageMaker is one of the first Desktop Publishing (DTP) software introduced three decades ago. It is a page layout application, commonly used in the Print Media, Publication Industry, Advertising, Graphic Designing and every other domain where paper printing is a common practice. With the help of PageMaker application, complex multiple page books, brochures, and other printable materials can be easily handled by bringing the whole paper layout on a single sheet that dissolves the confusion of managing hundreds of pages. With this publishing, a Text Book, Magazine, Novels or even a single page printable publications or brochures and business cards can be easily handled.

PageMaker leverages our capacity to gain a high-quality output on almost every size of a printer ranging from a personal printer on your desk to the four color publishing printers. You can also save the PageMaker files as HTML documents or PDF documents for further use in the Digital domain. The software provides you optimum control while preparing your designs for print through giving you micro level perfection in the readily available International Paper sizes. Through this advantage, you will know what is the sheet size your document will occupy, eventually you will plan to use the rest of the sheet for your convenience.

**Adobe PageMaker Used For?**

Adobe PageMaker is a software program used to create brochures, flyers, newsletters, reports and a variety of other professional-quality documents used for business or educational purposes. The program makes it easy for users to format documents, adjust their layouts and alter various design details, such as graphics and fonts, prior to printing and distributing the document.

**Disadvantage of PageMaker**

The following are the disadvantages of Adobe PageMaker are:

- only one undo command is possible
- no spreadsheet support
- the Import of Adobe PDF is only possible as a graphic
- the Spell-Checker works in the text mode window only
- generating of bad HTML source code

About the work area: When you create a publication, PageMaker opens a publication window that contains an empty page centered on the pasteboard. The page and pasteboard, where you lay out text and graphics, are similar to the work space used in traditional paste-up

A. Pointer tool to select, move, and resize text objects and graphics.
B. Rotating tool to select and rotate objects.
C. Line tool to draw straight lines in any direction.
D. Rectangle tool to draw squares and rectangles.
E. Ellipse tool to draw circles and ellipses.
F. Polygon tool to draw polygons
G. Hand tool to scroll the page, or to preview and test hyperlinks.
H. Text tool to type, select, and edit text.
I. Cropping tool to trim imported graphics.
J. Constrained line tool to draw vertical or horizontal lines.
K. frame tools to create placeholder shapes.
L. zoom tool to magnify or reduce an area of the page

## UNIT - 4

### QuarkXPress

**QuarkXPress** is a computer application for **creating and editing complex page layouts** in a WYSIWYG environment. It runs on Mac OS X and Windows. It was first released by Quark, Inc. in 1987 and is still owned and published by them.It is noted for its precise typographic control and advanced text and graphics manipulation.The most recent version is QuarkXPress 8 and it allows publishing in English and 36 otherlanguages, including Arabic, Chinese, French, Japanese, Korean, Russian, Spanish and others.

QuarkXPress is used by individual designers and large publishing houses, primarily to produce any kind of layout, from flyers to complex page layouts required by magazines, newspapers, catalogs, and similar printed materials. It is one of two products (the other being Adobe InDesign) that dominate the market space.

### History

The first version of QuarkXPress was released in 1987 for the Macintosh. A Microsoft Windows version followed in 1992. In the 1990s, QuarkXPress quickly became widely used by professional page designers, the typesetting industry and printers. In particular, the Mac version of 3.3 (released in 1996) was seen as stable and troublefree, working seamlessly with Adobe's Postscript fonts as well as with Apple's TrueType fonts.

QuarkXPress early on incorporated an application programming interface called XTensions which allows third party developers to create custom addon features to the desktop

application. Introduced in 1989, Xtensions, along with Apple Computer's Hypercard, were the first examples of a developer allowing others to create software add-ons for their application.

Having gained a marketshare of approximately 90% in the 1990s, Quark was criticized f or having overly long innovation cycles and being too expensive, which encouraged Ado be to launch Adobe InDesign in 1999.

.**Use and features**

- QuarkXPress allows the user to define areas of a document (called "boxes") whic h are to be filled with either text or graphics. Although they are called boxes, they can be created in a wide variety of shapes. The boxes can be reshaped, layered, a nd given varying levels of transparency and runaround.
- The content placed in the text version of the boxes is provided with an array of ty pographic controls as required by professional typesetting businesses. In additio n to the basic functionality of font, alignment, spacing, and color, the package also provides its users with professional level typesetting options like kerning, curvi ng text along a line, and ligatures.
- As the only layout package QuarkXPress offers vertical tracking.The software allo ws both box positioning and graphic or text positioning within a box with an acc uracy of one-thousandth of an inch. Color control allows the full-use of printing press standard Pantone or Hexachrome inks, along with a variety of other color space options.
- Draft output can be printed on conventional desktop printers. For printing-press purposes CMYK separated films can be produced with relative ease. Quark XPress also offers the ability for composite workflows, both with Postscript and PDF output.
- Version 6.5, released at the end of 2004, added enhanced support for the Photos hop format (PSD). The PSD integration and picture manipulation features led to QuarkXPress received number of awards, such as the "Macworld" Editor's Choice for 2004.
- Version 7 added support for OpenType, Unicode, JDF and also PDF/X-export. QuarkXPress 7 also added unique features, such as native transparency a t the color level.QuarkXPress' composition zones feature makes it the only deskt

op application with multiuser capabilities by allowing multiple users to edit diffe rent zones on the same page.

- Composition Zones pushes collaboration a step further than just simultaneous te xt/picture as possible with QuarkCopyDesk since 1991), as it allows also layout a nd graphic elementsto be edited outside the layout application.
- QuarkXPress also allows the ability to preflight a document. It is unique as it wor ks within the layout application itself and allows the user to jump directly to the conflicting object. Also the userdefined rules, output specs and layout specs can a lso be used for intelligent templates and enables resource sharing (e.g. server-based style sheet definitions).
- The current version, QuarkXPress 8, offers a completely otpimized user interface, support for drag and drop, PDF 1.7 import, AI Import and a global file format. De sign grids can be assigned to pages and boxes to allow unlimited baseline grids. Hanging characters cannot only be applied but also customized by character and amount to hang outside the box.
- QuarkXPress 8 is available for Mac OS X v10.4 ("Tiger"), Mac OS X v10.5 ("Leopar d"), Windows XP SP2 and Windows Vista, 32 and 64 Bit. The Mac version is a uni versal binary which runs natively on PPC- and Intel-based Macs.

**CorelDRAW**

CorelDRAW is a vector-based graphics editor, similar to other softwares like Illustrator and photoshop. You can draw pictures in it, edit or color them. CorelDRAW, used for designing a lot of things, is great for vector drawings/designs. From creating beautiful brochures to books, logos, invitation cards, booklets, and flexes, you can draw anything you want in it. It is also for creating illustrations for children's books.

CorelDRAW or Corel graphics suite 1st version was invented around 30 years ago and released in January 1989. **Pat Bernie and Michel Bouillon** developed this software. Its latest version, released in March 2021, includes features like multi-page views, replace colors, perspective drawing, multiple views, multiple asset export, etc. It is available on iPad, web, Windows, and Mac.

**Important tools in CorelDRAW**

1. Pick Tool. This tool allows you to pick or select **the** object and transform it.
2. Shape Tool.
3. Free Transform Tools.

4. Crop Tool.
5. Zoom Tool.
6. Curve Tools.
7. Artistic Media Tool.
8. Rectangle Tool.

- **Pick Tool:** It is actually a select tool and behaves like the Move Tool in Photoshop, to the tool's bottom right corner, you will find various options like freehand pick and free transform. These options let you resize the image that broadens it or narrow it or even create a mirror image with a mouse.
- **Shape Tool:** On the selected image, shape or even text, this tool will give nodes and handles. So once the nodes are selected, that part of the object can be curved into different textures like a smudge, smear, twirl, etc.
- **Freehand Tool:** This tool is where most of the magic happens. This tool has a number of drawing options that let you create and draw any design. So this tool plays a very important role in the first stage of graphic designing.
- **Crop Tool:** As the name suggests, it will help trim the selected image, shape or text. It will also let you cut the image like a knife (divide the shape into different slices that can be separately edited) and even erased (using Eraser).
- **Zoom Tool:** Let's you zoom to any minute part of the shape or text that is being created or edited so that the designer can correct the discrepancies accordingly.
- **Artistic Media Tool:** This tool is like a freehand brush or spray or a pen. So in case, you wish to create Calligraphic Text or Graffiti, this tool will be useful.
- **Rectangle Tool:** This tool will help create the shape of a rectangle. It also has an option of 3 point rectangle. This only means a quick rectangle can be created by simply dragging the mouse once two nodes of a rectangle are drawn.
- **Ellipse Tool:** This tool lets you create an elliptical shape like a circle. It also helps with quick shape making using 3 points Ellipse like the one in the rectangle tool.
- **Polygon Tool:** Basically, the polygon tool is used to create shapes with more than 4 sides. But Corel Draw lets you create a number of readymade shapes like a banner shape, star, spiral shape, arrows, graph paper grid under the same heading.
- **Text Tool:** The text tool here will help create text characters and text boxes. You can edit them using the properties and formatting options displayed in the

toolbar. You can also directly add a table with this tool in case you need to create text in a tabular form.

- **Parallel Dimension Tool:** A lot of civil engineers and architects use Corel Draw. So here's a ready tool to display dimensions in various shapes like this.
- **Straight-line connector Tool:** This tool will help connect different sides in any shape between sides or right angles while keeping the sides separated.
- **Drop shadow Tool:** This is the effect giving tool. It will bevel, emboss, drop shadow, extrude, etc., any part of the selected shape or the text that is being designed.
- **Eye Dropper Tool:** This is the usual color picker tool. The cool part here is the Attributes Eyedropper. So you can also pick thickness, size and all other effects and attributes of the shape and directly copy it into your shape.
- **Interactive Fill Tool:** This is pretty much like a normal fill tool, but options like gradient and all can be applied here, hence the name. This also has a Mesh tool. This tool will create grids around the shape, and then each grid can be colored in case complex coloring or shading is required, for e.g., in a fruit or a scenery painting.
- **Smart Fill Tool:** This tool will help fill color in a shape that is a closed path. Very quick to use. Very similar to the paint bucket tool in MS Paint.

**Features of Corel Draw**

One of the major features, in Corel Draw, is that it provides a friendly User Interface (UI) that can be learned to use quickly, so for beginners can expand their creativity, and professionals can make some awestruck designs and layouts. It has live versatile tools like node shaping and mesh fill etc., which come in handy almost everywhere in designing. Being a vector graphics software does not pixelate its designs which guarantees high-quality printing. Hence many high definition printers are programmed to accept Corel format files for printing. Other features include accepting many file formats to edit, capable of running on all processors and so on.

**USES OF CORELDRAW**

People or businesses who are in the advertising and marketing field use CorelDRAW a lot. They use it to create newsletters, brochures, business cards, etc. Printing media also uses this software a lot for newspapers, magazines, comics, and art

books. Also, working on it is easy as it has a user-friendly interface which lets beginners work on it easily compared to other softwares.

**1. To convert raster images into vector images.**

Raster or bitmap images are pixel-based, which means if you zoom them too much, you can see the pixels, or it starts pixelating. Whereas; vector images are mathematical formulas and, you can zoom them as much as you want. They will not pixelate. If you want to convert your raster image into a vector one, you can use CorelDRAW.

**2. Banners**

Banners are made in softwares like CorelDraw or Illustrator first. Everything from the size to its design and printing. In CorelDRAW, you can select the size, colors, designs, pictures. You can do everything in it.

**3. Business card templates**

Business cards are a must if you are starting or have a small business. It makes people. And on top of that, CorelDraw has business card templates. You can choose any template you like and put in all your details like your company name, contact number, logo, address, any images you want to add, and you are done.

**4. Page layouts**

Page layout is a design of a page. There are different types of page layouts like magazine page layout, comics page layout, landing page layout, the home page layout of a website, yearbook page layouts. You can design these layouts in CorelDraw.

**5. Infographics**

Infographics are a visual representation of data. They are easier to understand and pleasing to the eyes. If you have a website or your business requires explaining a lot of information, then infographics are the way to go. You can select the colors, typography(font or letter) and make it catchy and easy to understand or learn. You do not forget to leave negative space.

**6. Cards and Menus**

You can even make different cards in CorelDraw. Either be it; Birthday cards, Wedding cards, Thank you cards, any kind of invitation card. You can even make menus if you have a restaurant, cake, or coffee shop.

**7. Social Media Graphics**

Creating graphics for your website can be an easy experience with this software. You can make twitter headers or your Facebook cover, website icons, memes, quotes. There

are different file format options like gif, png, jpg. Once you get the hang of the basic tools like shape, pen, color, freehand, polygon, shadow, eyedropper, smart fill, you can design many things like posters, brochures, logos, cartoon stickers, emojis, etc.

**8. Logos and Letterheads**

Logos are a must if you want to create a different identity for your brand and stand apart from your competitors. And the best thing about CorelDraw is that it is easier than Illustrator. Letterheads are also really easy. You just have to select the size letter, add your logo on the top and other text, and tada you are done!

**9. Improve perspective/quality of any image**

With CorelDRAW, also we can improve the quality of the image. You do not need to have photoshop software. Also, it is easier to use than other adobe softwares. You just have to click on the picture – Go to Bitmap – Click on remove jpeg artifacts.

**10. Program page design and QR code**

Corel DRAW has many uses other than designing magazine covers, logos, and illustrations. You can design page layouts, business cards, invitation cards, bulletins, and handouts. On top of these, you can also generate QR codes for your products.

**Disadvantages of CorelDRAW**

1. First of all, the speed is very slow. For example, it takes about half an hour to open a 170m album.
2. High and low version format compatibility is not ideal. Some exports of higher versions cannot be opened in lower versions, while others are the opposite.
3. The color processing is not ideal. Some colors are different from what you see on the monitor. The printed colors have poor smoothness, and the colors are not bright enough.
4. Large file processing speed is slow and unstable. Sometimes when designing a large area image of about 10m, it takes a long time to process each operation. For example, it takes 1 to 10 minutes to get a shadow, and it is easy to collapse.

## Desktop Publishing (DTP)

### Introduction

**Desktop Publishing** (DTP) is the creation of electronic forms of information such as documents, presentations, brochures, books, or even website content using computer programs. DTP has evolved to be an important component of creating and disseminating information as it allows an amalgamation (merger) of various tasks that

are generally performed independently at printing presses such as layouts, typesetting, graphic design, etc.

**Desktop publishing** was pioneered by **Paul Brainerd in 1985** when he released the software Aldus Pagemaker for the Macintosh computer. Desktop publishing is the use of a computer to produce high-quality documents containing text and graphics formatted for a single-page publication. For example, desktop publishing is utilized to create printed material, such as book covers, brochures, catalogs, flyers, magazines, and posters.

**Evolution of DTP Software**

Earlier, DTP was specifically meant to cater to printed matter but modern DTP allows for even more forms of electronic content. A modern DTP software can be your word processor, graphic design tool and publishing tool, all rolled into one package. With the explosive growth of smartphones and mobile PCs, the way people consume information has changed dramatically over the last decade. Modern DTP software enables content output that caters dynamically to all screen sizes, without the need to republish the same for each device or form factor.

**Types of DTP Content**

The content created by DTP software can be broadly classified into two categories –

- Electronic Pages
- Virtual Pages

**Electronic pages** commonly refer to websites, manuals, eBooks, digital archives, presentations, etc. which are normally not printed but are shared digitally. This tutorial is an example of an electronic page which can be opened in a browser.

**Virtual pages** on the other hand are electronic pages created in the DTP software which are eventually published as printed pages. Virtual pages allow the author to visualize exactly how the printed page will look and can help in easy editing. The process is called **WYSIWYG** which stands for, **'What You See Is What You Get'**. This means all the changes and formatting that are made will be exactly replicated in print.

**Features :**

1. It is Dynamic in size.
2. It enables (allow) content output.
3. It helps in printing publications exclusively.
4. It assists the various form of original content.

5. It is better for complex page layouts.

**Uses and Applications of desktop publishing**

Desktop-publishing software can be used to create the layout for a wide range of different publications, such as:

- newspapers and magazines
- brochures, posters, flyer, leaflets and catalogues
- books and e-books
- PDF
- web pages
- banner
- newsletter
- design of resume

**Importance of Desktop Publishing:**

It has become a very important software for creating and disseminating information which helps in allowing the amalgamation of other various tasks like designs, graphics, layouts, typesetting, etc. Desktop Publishing software is being used to create documents like newsletters, brochures, etc. Desktop publishing software is important because it increases productivity, helps in enhancing the appearance of all produced documents, minimized the production cost, easy customization of all kinds of projects, and also in a way to manage the presentation as well as its content. They are potently used to produce physical media like magazines, product designs and packaging, business cards, marketing materials, and outdoor signs as well.

**Functions:**

All of the Below mentioned features help in the creation of a professional document.

1. Formatting the pages
2. Adding the page numbers,
3. Inserting the various illustrations
4. Well organized text columns and rows
5. Header and footer options are available
6. Content indexing and table inclusion are also there.

**Advantages:**

- Helps in increasing productivity,
- It helps in minimizing the production cost,

- It allows in enhancing the appearance of our documents
- It just improves the level of creativity
- It helps in reducing the time taken for producing and printing the documents
- They are frame-based software
- DTP software is very easy to import
- They work in column, frames, and pages
- This software can be set to the automatic restructuring of the other elements around the frame

**Disadvantages:**

- Use Outsourcing to professionals
- These are kind of expensive tools.
- They have a Lack of large scalability.
- Includes high complex projects.

**Aplications of DTP**

Desktop publishing software (DTP) is used to **create documents like leaflets, brochures and newsletters**. Modern word processors have the basic features of DTP software but features such as templates and frames make DTP software better for complex page layouts

**What is an example of DTP software?**

Common examples of desktop publishing software include **Adobe FrameMaker, Adobe PageMaker, Adobe InDesign, Corel Ventura, CorelDraw, Microsoft Publisher, PageStream, and QuarkXPress.**

# NR 11066 - Telugu Journalism

## Origin and development of Telugu press

### Printing in Telugu

The first printing machine in Madras was established in 1711. Printing in Telugu started in Madras and Serampore simultaneously. In 1807, Missionaries of Serampore developed fonts to print Telugu books. But in 1812, the printing press in Serampore was destroyed due to fire accident. But it was restarted in the same year. Danish Father Benjamin Shuij was the first man to print books in Telugu Language. William Carrie's Telugu grammar book "Telugu Vyakaranamu" was printed in the year 1814. In 1805 Missionaries of London namely George Crane and Augustus Digranges came to Visakhapatnam and learnt Telugu. Digranges and after his death Edward Pitchet completed the Translation of bible into Telugu and printed it in the year 1818. Later printing presses were established in Machalipatnam, Kakinada, Nellore, and Rajahmindry. This increased the publication of many books in Telugu. Some of the important books published at that time were

- Telugu Dictionary written by Charles White in 1793.
- Mamidi Venkaiah published "Andhra Deepika" in 1812.
- English version of Yogi Vemana Telugu Poetry printed by C.P. Brown in 1839

### Beginning of Telugu Journals

There were very few towns in Telugu Districts with printing pressed in the first half of nineteenth century. But Bellary and Visakhapatnam were the exceptions. Bellary had its first printing press in 1835 and Visakhapatnam had it in 1854. The Bellary Tract Society published many from 1835 in the Mission Press, Bellary. At least 22 small tracts were published from Bellary. It is estimated that First Telugu Journal was published in Bellary in 1835 by Missionaries and named it as **"Satyadoota"**. It is said that it was published in Colloquial language and had only news and some articles related to the propagation of Christianity.

There is strong evidence related to the publication of Telugu journal **"Vrittantini"**. It was published in Classical Telugu around 1838 by a group of reputed and prominent people under the Editorship of **Mandigala Venkataraya Sastri**, a scholar probably from Cuddapah. The journal is also mentioned in **"Vardhamana Tarangini"** a journal launched in 1842. An article of "Vritantini" related to an article attacking the practice of engaging notch parties, as part of wedding festivals was

included in **"Gadyachintamani"** an anthology of Telugu prose edited by **Gidigu Rammoorthy Pantulu**.

"Syed Rahamtullah" started the journal **"Vardhamana Tarangini"** on **8th June 1842.** It adopted a popular style and carried many features and had many readers. Rahmatullah published the journal from his own press. He wrote that the proprietors and agents of the journal are not very rich and many associates had to incur their personal money to gather the tools and types for the journal. The Christian Missionaries started a monthly Journal **"Hitavadi"** in Machalipatnam, under the edtorship of **Edmond Sharkey** an Anglo-Indian of 27 years age. He ran the monthly journal for 14 years up to 1862. The journal was printed from Madras and published from Machalipatnam. Edmond Sharkey wrote stories in the journal.

**"Dinavarthamani"** a journal started in Tamil in 1855 and was extended in to Telugu in 1856 under the editorship of **Peter Percyval**. It was a weekly published from Madras from Saturdays and lasted up to 1872. The Editor Peter Percyval, who was also a Professor in Presidency College, Madras carried out news on scientific matters, English literature and essays in colloquial Telugu. It was like News digest but basically aimed at propagation of religious news. The journal got financial support from the Government.

**Period from 1863 to 1900**

The period was dominated with journals relating to social issues and literature. The period can be called as the **"Veeresalingam era"** in Telugu journalism. The period saw the rising of social awakening and development of firm resistance against social evils through the movement spearheaded by Kandukuri Veeresalingam pantulu. The period witnessed great ideological battles fought on the social and literary front through the medium of Magazines. The magazines became a means for spreading the new revolutionary ideas like social reforms and the language used in magazines itself became a matter of contention between the reformists like Veeresalingam and orthodox front. The period also witnessed the starting of the first Political Journal in Telugu, a trend that became prominent in the coming period. Some of the important magazines started in this period are as follows.

- **"Sreelakshmi"** a fortnightly was started in 1863, in Bellary with **Tyagaraja Mudali** as Editor.

- **"Sujanranjani"**the first ever-Telugu literary journal started under the proprietorship of Telugu people was started in 1864. B.Seetaramacharyulu and V.Krishnamacharyulu jointly edited it. It was closed in 1867.
- **"Tatvabodhini"** a monthly journal was started by Madras Health Samajam, which later came to be known as "brahmo Samahjam". It fought for social cause and propagated the principles of Brahmosamaj and social reforms. For the first time in history of Telugu Journalism a serried of articles on Widow Remarriage titled "Stree punarvivaha Vishayakopanyasamulu". These articles motivated Kandukuri Veeresalingam to take up social reforms.
- **"Godavari Vidyaprabodhini"** a monthly journal was started in Rajahmundry in 1870 by **Barrow**, the district High school Headmaster of Rajahmundry. Veeresalingam contributed a portion of 'Naishadam' in its pages.
- **"Andhra Basha Sanjeevini"** a monthly journal was started by **Kokkonda Venkataratnam Pantulu** on November 28th 1871. The journal was printed from Sabdaratnakara Press of Madras and published articles on literature, social and political matters apart from literary criticism. The journal used the classical language and the Telugu equivalents of English and technical terms were coined specially. Special supplements with literary articles were published. A portion of Veeresalingam's Mahabharatam's 'Sabha Parvam' was published in it. The journal stopped publishing in 1883. Later differences between Veeresalingam and Venkataratnam Pantulu arose on matters like widow reforms, women's education on social front and on the use of classical language on literary front. The journal was again started in 1892 to counter Veeresalingam's Vivekavardhini.
- **"Purushartha Pradayani"** a monthly magazine was published from Machalipatnam in 1872, under the editorship of **Umaranganayakulu Naidu**. The journal described itself as a compilation of facts and news and intended to be a concise Telugu record of Sciences, Arts, Literature, Mythology, History, Relegion and other human-interest features.
- **"Salalavidyabhi Vardhini"** a journal published from Visakhapatnam by **Paravastu Rangacharya** started in 1875. It published the first translation of 'Sakuntalam' of Kalidas. The journal also published articles on astronomy and medicine.

- **"Janavinidhini"** an educational monthly published from Madras by V.Krishnamacharyulu as editor, started children's literature for the first time in the history of Telugu journalism.
- **"Amudritha Grandha Chintamani"** a monthly journal from Nellore started by **Pondla Ramakrishaniah**. This literary magazine serialized old classics apart from book reviews and contemporary literature. This existed for 20 years.
- **"Andhra Prakasika"** the first political magazine in Telugu, supporting Congress, started in 1885 by A.P.Partha Sarathy Naidu from Madras. It continued for four decades.

**3.2.Period from 1901 to 1947-Telugu press and Freedom Movement**

The period from 1901 to 1947 saw the starting of Political press in Telugu language a trend, which gained strength with the arrival of Mahatma Gandhi in to the National freedom struggle. The period witnessed tremendous growth in Telugu press as new technological advances in printing were adopted and more committed and trained people entered into the profession. The period saw the starting of the great journals in Telugu language like **"Andhra Patrika"** and **"Krishna Patrika"** which later turned in to daily newspapers and laid a firm foundation to Telugu Journalism. The period is known for the starting of the Communist newspapers like **"Prajashakthi"** and **"Visalandhra"**. The period witnessed some of the greatest Telugu origin editors like **Narla Venkateswara Rao, Mutnuri Krishna Rao, M.Chalapathy Rao and Khasa Subba Rao**, who dominating the Telugu and English Language Press. The period saw the rise of Telugu journalism in Telangana region with the arrival of papers like **"Golconda Patrika"** and **"Sujatha"** Some of the important journals, which started during this period, are as follows

- **"Krishna Patrika"**, a weekly journal started from Machalipatnam in 1902 on behalf of Krishna District Association by **Konda Venkatappaiah** and his friend **Dasu Narayana Rao**. They were its first editors. Konda Venkatappaiah took up the responsibility and ran the journal up to 1907. His articles on corruption and criticism on Government policies especially during the Vandemataram movement raised high patriotic fervor in the public. In 1907, **Matura Krishna Rao** took over as the Editor. Under his able editorship Krishna Patria rose to one of the greatest journals in India.

- **"Andhra Patrika"** is a weekly started by **"Kasinadhuni Nageswara Rao"** from Bombay in 1908. Later the publication was transferred to Madras in 1914 and was changed in to a daily newspaper. The paper has the distinction of playing a notable role in the struggle for independence and also in the formation of separate state of Andhra Pradesh. After the formation of the State of Andhra Pradesh the paper was published from Vijayawada. The paper was edited some of the most talented and great editors like **Gadicharla Hari Savothama Rao** and **Challa Seshagiri Rao.**
- **"Bharati"** is a Magazine started by **"Kasinadhuni Nageswara Rao"** from Bombay in 1923. It was devoted to art, culture, literature, culture and history and edited by renowned Telugu scholar **Shivalenka Shambu Prasad**.
- **"Andhra Sachitra Vara Patrika"** is another popular weekly started by **"Kasinadhuni Nageswara Rao"** from Chennai. The magazine serialized popular novels and published many short stories.
- **"The Congress"** a weekly started from Rajahmundry in 1921 by **Madduri Annapoornaiah, Madduri Siva Rama Kistaiah, and Kandrevula Ramachandra Rao, Dronam Raju Chinna Kameswara Rao** and other members of Andhra Yuvajana Swarajya Sabha, a small organization of students who gave up their education during non-cooperation movement. Madduri Annapoornaiah edited the paper. He was prosecuted for Sedition under Section 124-A of Indian Penal Code for an inflammatory article written in "The Congress" and sentenced for one and half years of rigorous imprisonment.
- **"Andhra Prabha"** a sister publication from the Indian Express group of papers, started in 1938 in Madras by **"Ramanatha Goenka"**. It was edited some of the greatest editors in Telugu Journalism like **Khasa Subba Rao** and **Narla Venkateswara Rao.** After the formation of the State of Andhra Pradesh, the paper was published from Vijayawada.
- **"Prajashakthi"** is a Communist weekly, started by Madduri Chandrasekhar Rao in 1941. It was converted into a daily in 1945. The paper was proscribed in 1948. It started again in the year 1951 as a bi-weekly. From 1952 the paper title was changed in to **"Visalandhra"** and published from Vijayawada. Later "Prajashakthi" and "Visalandhra" were published as separate newspapers.

**Period from 1948 to 2000**

The period witnessed the formation of the State of Andhra Pradesh, for which many newspapers gave their support. At the time of formation of the State of Andhra Pradesh it had Seven Telugu Dailies, Fifty-seven Weeklies, Ninety-one Monthlies, Twenty-seven fortnightlies, Two Bi-Weeklies, One Tri-Weekly and Two quarterlies. The period saw the development of Telugu Press into an Industry. New technologies in reporting, editing as well as in printing were introduced. The number of publications also increased during this period. Many path breaking daily newspapers, which are still published **like "Andhra Jyothy", Andhra Bhoomi" and "Eenadu"** were started in these years. The period also witnessed the diversification of Telugu Media as news publications catering to different sections of society were started. The Circulation wars between the dailies started during this period. The paper was published from many centers to cater more regional news and gain readers in order to increase the circulation

- **"Andhra Janata"** a daily newspaper published by **Andhra Pradesh Congress Committee** was started in 1950. It functioned as a mouthpiece of Andhra Pradesh Congress Committee. P.Nageswara Rao edited it.
- **"Andhra Bhoomi"** the daily newspaper published by the owners of "The Deccan Chronicle" was started in 1960 with Gora Sastry as its editor.
- **"Andhra Jyothi"** a daily newspaper was started by **K.L.N.Prasad** with Narla Venkateswara Rao as editor in 1960
- **"Eenadu"** a Telugu daily started from Visakhapatnam, by **C.H.Ramoji Rao** was started in 1974.
- **"Udayam"** the Telugu Daily newspaper started from Hyderabad, by the famous film personality **Dr.Dasari Narayana Rao** in the year 1984.
- **"Vaartha**" daily newspaper started by Sanghi Industries from Hyderabad started in ……with A.B.K. Prasad as editor.
- **Andhra Jyothi** daily news paper was started again by **Vemuri Radha Krishna**

**Telugu News Papers and Social Reforms:**

Telugu Press was forefront in fighting for social reforms. Many great social reformers like Kandukuri Veeresalingam Pantulu, Mir Shujaath Ali etc have used the newspaper to propagate their ideology and strengthen social reforms. It is to be noted that Telugu press became a breeding ground for various news papers which were run to

further a special cause like literary service, language movements as well as religious and social movements.

- The first newspaper started for promoting social reform was '**Vivekavardhini'**. It was stated in 1878 by Kandukuri Veeresal Lingam Pantulu at Rajahmundry. But Kandukuri Veeresalingam also used to write articles in **'Andhrabasha Sanjiviani'** and '**Purusharda Pradayani'**.
- To counter the propagation of Women's education by Kandukuri Veeresalingam through 'Vivekavardhini', Kokkonda Venkataratnam Pantulu stated 'Hasysvardhini'. In reaction to that Veeresalingam stated 'Hasyasanjivini'
- Mir Shujath Ali, a friend of Veeeresaalingam started **'Vidwaanmanoharini'** from Narasapur, but merged it with Vivekavardhini after one year. Veeresalingam used to write in Telugu and Mir Shujath Ali used to write in English. People used to like the articles of both these writers and slowly these papers gained popularity. Once 'Hasysvardhini' lost circulation and was stopped then Veeresalingam merged 'Hasyasanjivini' also in 'Vivekavardhini'.

Vivekavardhini ran for 20 years and was popular among Telugu readers. Veeresalingam used Vivekavardhini to fight against social evils, corruption of officials and to promote language. Hence Vivekavardhini was instrumental in socio-language reforms. Many papers like 'Hindudesabhivardhini' were started to counter social reforms propagated by Vivekavardhi but were failed miserably. The period also witnessed tremendous upheaval in social and religious structure as well as in India as well as in Andhra. Social reforms started and propagated by reformers backed by missionaries were resisted by sections of society. They also started many newspapers to oppose as well as protect the native and colloquial language.

- **'Strutidharma Snajivini'** was started in Vijayawada by Sivapurapu Veerabhadrapakayaji with a motive to protect the Vrnasrama Dharma. The newspaper promoted self inspection and self correction of various dharmas and suggested people not to hate each other religion and to live in harmony.
- **'Kalavathi'** was started in Madras in 1889 by Sripada Krishnamoorthy Sastry. It was started to propagate the richness of Telugu language in the Dravidian areas. The newspapers published Telugu literary classics, drama, stories, history of Telugu Kings as well as astronomical and jyotishya details. It urged people to detest the colloquial language and use the traditional language.

- **Janavani** was the newspaper started by Tapi Dharmarao. It published articles, news and features on various issues in the colloquial language which was unique in that time. Tapi Dharma Rao also started **'Kondegadu'** and **'Kagada'** which ushered in a new era of colloquial language journalism in Telugu press.
- The first and second part of 20th century the evolution of newspapers prophesying social reforms especially cast reforms. Various newspapers like **Samadarshini**, **Reddyrani, Sujatha** were started which wrote against dominant Brahmanism and need for caste reforms.

**Political News Papers in Telugu**

There were very few political newspapers in Telugu in the 19th century. Papers like '**Andhra Prakasika', Desopakary** were a few political newspapers. But the beginning of 20th century ushered in new form of political journalism. Doyens of freedom struggle started many news papers to fight against British imperialism. But most of them did not lost long due to financial problems and pressure from the ruling Government. Some of the important Telugu newspapers which have a small life span were **Desamatha** started by **Chilakamarthy Lakshmi Narasimham**, **Matruseva** by **Gadicherala Harisarvaothamarao**, and **Guntur Patrika by Unnavalakshminarayana**. Newspapers like **Andhravani, Andhrajanani, Andhramata, Andhra Kesari, Andhra Ranjani, Swarajya, Swatantra** were selected for supporting the national cause for freedom. But three newspapers which have completed a century among political newspapers include **Krishna Patrika** started by **Desabhaktha Kondavenkatappaiah, Jameen Ryothu** started by **Venkatarama Naidu** and **Grandhlaya Saraswam.**

Krishna Patrika was started in 1902 by Konda Venkatappaiah Pantulu and his associate Dasu Narrayana Rao in Guntur of Krishna Distict. Mutnuri Krishna Rao joined Krishna Patrika as an Assistant Editor in 1903. Krishna Rao was helped by Bhogaraju Pattabhiseetaramaiah in the early days of his editorship. Krishna Rao became a mouthpiece of Telugu Journalism and played a major role in political awakening of masses in Andhra. Krishna Patrika became a platform for famous writers political writers like Kolavenu Rama Koteswara Rao, Ravuru Satyanarayana Rao, Kmalakar VenkatRao. The editorials of Krishna Patrika were liked by Telugu readers and were a source of awakening, debate and discussions in that period. Krisha Patrika played a

major role in popularizing Gandhian Philosophy especially by analyzing them in public, explaining its importance in the freedom struggle.

Jameen Ryotu was started in **1930 in Nellore District**. It evolved out of the **Farmers association (Ryotu Sangaham)** and their fight against the zamindari system. The Venkatagiri ryotu association was formed in October 1929 and in 1930 Jameen Ryotu was started in Nellore by **Venkatadri Naidu** to protest against the tyranny of zamindars over farmers. He faced many problems to run the paper due to lack of financial and human resources. The paper supported Congress especially N.G.Ranga, who was a popular leader of the farmers movement. After Independence Congress Government abolished zamindari system and the Jameen Ryotu played a major role in creating awareness about the farmer's role in it. Jameen Ryotu inspired farmers all over India to fight farmer's rights. The paper was run successfully by Rama Naidu, later by Sri Rama Murthy. Jameen Ryothu was a paper which adopted and adhered the principle of Journalism in true spirit. It had moral, ethically and emotionally attached and committed editors, reporters and other staff.

'Grandhalaya Saraswam' was started as a **Tri-monthly** newspaper in **1915**. The newspaper catalyzed the **Library Movement** and led it in Andhra**.** The Library movement started in Andhra regionally under the great leader Ayanki Venkata Ramanaiah, The first Library was started in Rajahmundry in 1839 by the then Judge James Thomas. But according to the resources the first Library was started in Visakhapatnam in 1886 by Manthena Adinarayana Moorthy. By 1913 there were 123 libraries in the entire Andhra region. 'Sri Krishna Deva Raya Basha Nilayam' was started in Hyderabad by Kommaraju Lakshman Rao in the first half of 20$^{th}$ century. It played a critical role in bringing political and cultural awareness in Andhra Region. The library movement turned into the language movement and spread all over Andhra region. The movement tried to present the uniqueness of Telugu language by highlighting its cultural and historic importance. In 1925 'Andhra Desa Grandhalaya Sangham' was formed which was changed into 'Andhra Desa Grandalaya Sangaham'. The sangham started Gandhalaya Saraswam as atrimonthly paper, later was a monthly newspaper. The newspaper helped to popularize Andhra Culture, Telugulanguage and Adult Education. Famous leaders like Gadicherla Hari SarvaottamRao, Poturi Nagabhushanam, Vavilala Gopalkrishnaiah etc wrote many articles in 'Grandhalaya Sarasvamu'.

## Personalities in Telugu Journalism

### 1. Kandukuri Veeresalingam

**Kandukuri Veeresalingam** known as **Kandukuri Veeresalingham Pantulu** (16 April 1848 - 27 May 1919) was a social reformer of Andhra Pradesh. He was born in an orthodox Andhra family. He is widely considered as the man who first brought about a renaissance in Telugu people and Telugu literature. He was influenced by the ideals of Brahmo Samaj particularly those of Keshub Chunder Sen. He got involved in the cause of social reforms. In 1876 he started a Telugu journal and wrote the first prose for women. He encouraged education for women, and started a school in Davaleswaram in 1874. He started a social organization called **Hitakarini Samajam**. Son of Subbarayudu and Punnamma, he was born on 16 April 1848 in a Brahmin family at Rajahmundry. When he was six months old, he suffered an attack of small pox, a killer disease in those days, but he survived. His father died when he was four years old and he was adopted and brought up by his paternal uncle, Venkataratnam, as his own son. After a basic grounding in the Indian classics, he joined an English school and attracted attention as a keen scholar with an analytical mind. He was unanimously elected as the best student of the school and was exceptional in his behavior. He mastered both English and Sanskrit. His first job was that of a teacher in Korangi village in 1872. After serving as a teacher and later as the head master for two year at Koranki, he moved on to Davaleswaram as head master in an English medium school. In 1861, he was married to Bapamma Rajyalakshmi. He was then 13 and she was only eight years old. When she grew up, she played an important role in his life, sharing his progressive ideas and extending support to him in his difficult days.

### Newspapers and Journalism

The newspapers / Magazines played a key role in the life of Kandukuri Veeresallingam especially as a tool for fighting against social evils and for disseminating his ideas of social reforms which were considered as revolutionary during his period.

- It is said that Veeresalingam was inspired by series of articles on widow remarriage titled “Stree punarvivaha Vishayakopanyasamulu” published in **“Tatvabodhini”** a monthly journal was started in Madras.
- He also contributed his literary works to many newspapers. He contributed a portion of his novel ‘Naishadam’ to **“Godavari Vidyaprabodhini”.**

- A portion of Veeresalingam's Mahabharatam's 'Sabha Parvam' was published in **"Andhra Basha Sanjeevini".**
- He started a monthly magazine named "**Vivekavardhini"** (Knowledge Improver) at Davaleswaram, in 1874. In this he wrote about women's uplift, criticized superstitious beliefs among people and rampant corruption among officials. Initially he used to get it printed at Chennai but when the magazine picked up in popularity, he set his own press at Rajahmundry. He converted it into a weekly and ran it for 20 years. It soon developed into a powerful weapon to fight many battles including social evils, tyranny of officialdom etc. Unfortunately he had to close Vivekavardhini in **1890**. The journal created history and was instrumental in spreading his message and also mustered big opposition from orthodox people.
- Kokkonda Venkataratnam pantulu, a fierce opponent of Veeresalingam's social reforms started **"Hasya Vardhini"** against **"Vivekavardhini"**. To counter it Veeresalingam started **"Hasya Sanjivini".**
- In 1883, Vereesalingam also launched "**Satihitabobhini"** a special magazine for women. Through it, he enlightened women about their rights and advocated women's education.
- Kasibhatla Ramaiah Sastry, another antagonist of Veeresalingam started **"Aryamata Sodhini"** in Kakinada. In response to that Veeresalingam started **"Satya vardhini".**
- Veeresalingam also inspired many people to start magazines for propagation of his ideas and also collaborated with many other magazines through his writings and helping in editing etc. For some time he edited **"Jamana Patrika"** started by Rayasam Venkata Sivudu.
- He also started **"Chintamani"** in 1881; with Vavilala Vasudeva Sastry was Editor.

**Literature**

Veeresalingam panthulu is popularly called Gadhya Thikkana. He wrote about 100 books between 1869 and 1919 and introduced the essay, biography, autobiography and the novel into Telugu literature.

- His **Satyavathi Charitam** was the first social novel in Telugu.
- He wrote **Rajasekhara Charitamu** inspired by Oliver Goldsmith's The Vicar of Wakefied.

To him literature was an instrument to fight social evils. He was a poet of considerable renown. He was also one of the members of the first Indian National Congress meeting held in 1885. He died on 27 May 1919. A statue of his has been installed on Beach Road, Visakhapatnam.

**2. Kasinadhuni Nageswara Rao**

Kasinadhuni Nageswararao, better known as Nageswara rao pantulu was rare combination of a journalist, nationalist, politician, a staunch supporter of Khaddar movement and an enthusiastic pioneer in library movement in Andhra. His participation in Indian independence movement and in Indian National Congress Party was historical. He was one of the Andhra veterans who took part in Mahatma Gandhi's Civil Disobedience movement through salt satyagraha. It is no wonder that his life-long exertions in such diverse fields in the service of the nation has earned him the honorific prefix '**Desoddharaka'** conferred on him by the people of Andhra Pradesh as a mark of their great respect and appreciation of his services to Andhra and to India and the special title of Kalaprapoorna (doctor of Literature) which was conferred on him by the Andhra University in 1935.

Nageswararao Kasinadhuni, popularly known as Nageswararao Pantulu, was born on May 1, 1867 in Elakurru village, pamarru mandal in Krishna district of Andhra to a Brahmin couple Bucchaiah and Shyamalamba. He received his early education in his native place and later at Machilipatnam. He graduated from Madras Christian College in 1891. There he was under the stewardship of that great educationist, Dr. Rev. Miller, whose ability, high standards and rigid discipline made it a premier institution of the South. Kandukuri Veeresalingam's articles in vivekavardhini Journal influenced him. After a brief stint in business in Madras, he went to Calcutta to work in an apothecary for some time. Later, he went to Bombay to work in an office. But, he couldn't stick around there. He was interested in starting his own business. He founded Amrutanjan Limited in 1893 and invented Amrutanjan pain balm. Within a short time Amrutanjan pain balm became very popular medicine.

**Contribution to journalism**

Sri Nageswara Rao's entry into the challenging field of journalism has taken place at a time when journalism, in this country was undergoing a silent transformation and the then Government did not look upon the 'Native Press' with any sympathy. It needed a competent and fearless man to not only mirror the heritage of the nation but

also interpret the day-to-day political trends. He approached Telugu people in Mumbai, associated with them and worked for the welfare of Telugu people. He attended the National Congress meeting in Surat in 1907 and joined the freedom movement. He recognized the need for a Telugu language journal to campaign effectively for the freedom struggle.

- He took up the challenge and launched **"Andhra Patrika"**, a weekly from the metropolis of Bombay in September, 1908.
- Within a short time Andhra Patrika gained popularity among Telugu speaking people. His publication thrilled the readers, while his forewords reflected scholarship and keen insight into and appreciation of public affairs.
- The papers annual supplements were with plenty of illustrations and with special articles on literature, culture and politics.
- The paper also stood for robust nationalism and played a leading part in the Indian freedom struggle and also in the struggle for formation of the State of Andhra Pradesh.
- In 1914 when the First World War broke out, it was clear that the clamor for political emancipation was gathering momentum. Sri Nageswara Rao wanted to interpret the trends of the time in their own language to the Andhra people, so that they may have an opportunity of playing their role in molding India's future. With this aim in view, he converted Andhra Patrika into a **daily and the first copy was rolled out of the press on April 1, 1914 from Madras.**
- After the formation of the State of Andhra Pradesh, the paper was published from Vijayawada.
- Later, in 1969, Andhra Patrika established its own office in New Delhi with senior Telugu Journalist from Chennai T.V.Krishna taking the lead to set up an office there.
- Andhra Patrika was served by exceptionally talented editors like Gadicherla Harisarvottam Rao, Challa Seshagiri Ra and Nageswara Rao himself for some time. With his undaunted ability he maintained the tempo and made the paper an institution of repute.
- A decade later in January, 1923, he launched a Telugu journal **"Bharati"** which rendered service to the literary and cultural advancement of the Andhra. The magazine was edited by renowned scholar Shivalenka Shambu Prasad.

- He also started a popular illustrated weekly **"Andhra Sachitra Vara Patrika"** from Chennai. The magazine serialized popular novels and published a number of short stories with other interesting features.

**Contribution to Telugu Literature**

His interest in Telugu language, literature and science was quite evident in his untiring efforts in publishing journals such as **Bharati** and **Andhra Patrika**, publications like **Andhra Grandhamala** (garland of Andhra books), and **special editions for Ugaadi** (Telugu New Year).

- Through Andhra Grandhamala, he introduced various texts on language, literature and science and was instrumental in spreading science and literature.
- He published various ancient texts like Basava Puranamu, Panditaradhya Charita, Vijayanagara Charitra, Tanjavoorandhra Rayakula Charitra, and modern texts like Malapilli, Mahatma Gandhi Amakatha, etc.
- He wrote several essays on various topics and introductions and prefaces to various books.
- He also published Komarraju Lakshmana Rao's three volumes of Andhra Vignana Sarvasvamu in 1938.

**Andhra Grantha Mala:**

Besides being a journalist, Sri Nageshwara Rao was also a Telugu literature of repute with a razor sharp intellect and a publisher. In 1926 he launched a publishing house known as the Andhra Grandha Mala. This institution published as many as 20 books besides reproducing many Telugu classics as well as modern writings. With a view to placing the fountain-head of knowledge within easy reach of the common man, he priced his publications very low. Sri Nageswara Rao can be regarded as the **Father of the Library Movement in Andhra**. Because of his exertions during the first two decades of the century, as many as 120 libraries came into being in Andhra districts.

**Desoddhaaraka:**

He was one of the founders of Andhra movement for a separate Andhra state from the Madras Presidency. He published several articles on the need for a separate Andhra state. He was the author of many of these articles. In recognition of his untiring efforts for the all-round development of Andhra nation, Andhra language, and Andhra culture, Andhra people have honored him with title, **desoddhaaraka** (savior of the nation).

**3. Kotamaraju Rama Rao**

Kotamaraju Rama Rao is one of the famous names from the yester years of Indian Journalism. Gandhi called him "My fighting Editor" and Jawaharlal Nehru considered it a privilege to be associated with him for number of years when he was the editor of "National Herald". In a foreword of K.Rama Rao's book Nehru wrote "He struck me as a man of ideals and a mission. He was an outstanding figure in Indian Journalism". He has a rare distinction of working in diverse cultures throughout in India in different languages, which earned him respect for his professionalism in his forty years long journalistic career. Born in a small village Chirala on 9th November 1896 in Andhra Pradesh with mother tongue Telugu, he worked as a journalist in Sindh, Pakistan with Sindhi as local language, in Madras with Tamil as local language, in Bombay with Marathi as local language, in Patna, Lucknow, Delhi where Hindi is spoken in different shades. He had the unique experience of working in both the Anglo-Indian press and the National press, which had two different shades of culture. In his adventurous journey of Journalism Rama Rao worked in more than 25 news papers in different languages, different cultures like Pioneer, Leader, Bombay Chronicle, Indian Daily Mail, Advocate of India, Indian News Chronicle, Times of India, Swarajya, National Herald etc. and injected a spirit of freedom and vitriolic thought to the readers through his blunt and out spoken editorials.

His journalistic career began in "Humanity", a Brahmo Samaj weekly brought out by his brother Kotamaraju Punnaiah in Madras. Rama Rao was helping his brother in advertisement, circulation and in management departments. He also helped in preparing the copy to the press and in editing process. He then joined in "The New Times" at Karachi in 1919, a paper started by T.L. Jaswani as Proprietor-Editor, where he learnt the mastery over the copy editing process by the great practioner of the trade F.E.Holsinger, the then Chief Sub-Editor of the paper. After that he worked in the European owned "Times of India" and in "Evening News of India" and evening newspaper, where he got the opportunity to work with great editors like Sir Francis Low. He worked there for four years and four months i.e. from June 1923 to September 1927. Later he joined "Pioneer" published from Allahabad in July 1928 and worked under the editorship of F.W.Wilson. Rama Rao moved to "Indian Daily Mail" in Bombay as News Editor along with F.W.Wilson in May 1930. But "Indian Daily Mail" was closed in 1931. Rama Rao's joined in Free Press Journal in 1932-34 ran by S. Sadanand. Then

he moved to “Swarajya” founded by T.Prakasam and worked in it for 100 days. He worked with “National Call” in 1934 and for a brief period of six months in “Hindustan Times”

The most important period in Rama Rao’s career was from 1938 to 1946, when he was the Editor of the “National Herald” founded by Jawaharlal Nehru and published from Lucknow. Under his able editorship “National Herald” turned into a symbol of nation’s fight against tyrannies and exploitation and voiced against repression and denial of human rights. His fierce patriotism reflected in his writings. Rama Rao was a crusading Editor. He always wrote with passion and played a key role in arousing masses to follow leadership of Gandhi in the freedom struggle. He exposed abuse of power and Police brutality of a jailer towards the Satyagrahi prisoners. Officials involved him in a defamatory case when the Jailor of the prison filed a libel case against his editorial. He was convicted and sentenced for six months imprisonment His article titled “Gods or Gins?” written on the restrictions on travel to Pashupatinath temple resulted in a warning from the then Press Advisor to Government Desmond Young. In 1940 “National Herald” stopped publishing editorials protesting against the pre-censorship and restrictions on press. Rama Rao had the rare distinction of covering the August 1942 Congress session in Bombay that passed “Quit India” resolution. After the session the mass arrests followed and the National Heralds paper was raided. But before that, Rana Rao was able to publish the editorial headed “Vandemataram”. Police raided his office and seized the machinery. For his writings Rama Rao was put in jail for five months. After Independence, Rama Rao worked in the Congress party journal for some time and joined “Search Light” published from Patna in 1948. He also became a member of upper house of Indian Parliament.

**4. Khasa Subba Rao**

Some of the India’s greatest Journalists have come from the State of Andhra Pradesh. One among them was Khasa Subba Rao. He was a freedom fighter and served in many papers like ‘Swarajya’, Free Press Journal and Indian Express. He was a fire brand Journalist. His editorial was known for emotional and touching language and tone. He did not mince words while criticizing the British Government which resulted in financial loss and frequent forfeitures of newspapers in which he has worked. He switched to different papers in his untiring journalistic career. He actively wrote and participated in Salt Satyagraha and was beaten by Police in Madras.

Khasa Subba Rao was known for his contradictions. He was never afraid of changing opinions about issues and people. If circumstances required he was willing to change his stand but was never away from honesty and truth. In spite of passion for controversy he made many friends and few enemies. When Khasa Subba Rao passed away in June 1961, Rajaji said in a tribute "The world of journalism in India has lost one of the bravest and best veterans. He was a refreshing and rejuvenating personality. H lived every moment of his life. His life is an example for a demonstration of complete surrender to the divine, with a complete affection towards his duty and his goals.

**5. Tapi Dharma Rao**

Tapi Dharma Rao is a luminary in the fields of literature, journalism as well as in films. He served all this fields with dignity and decorum and brought laurels to these fields. His essays like 'sahitya mormoralu', Rallu-rappallu', Kottapali etc are well known in literary world. His scripted films like 'Mohini Rukmanganda' in 1937 to 'Bhishma' in 1963 including 'Ryotu Bidda;, 'Malapilla' are known to be super hits in film industry. He also has a unique distinction of starting papers like 'Janavani', 'Samadarsini' and 'Kagada'. He is considered as one of the first film journalist and had laid down a firm base for film journalism.

**6. Mutnuri Krishnarao**

The political newspapers were not seen in Telugu language in the early years of 19th century. But the final years of 19th century and the beginning of 20th century witnessed beginning of many political newspapers in Telugu Journalism. Among them the most important and the one which had the biggest impact on the readers was 'Krishna Patrika'. It was started in 1902 by Konda Venkatappaiah Pantulu and Dasu Narayana Rao in Guntur of then Krishna District. Mutnuri Krishna Rao joined 'Krishna Patrika' as Assistant Editor in 1903. He was a freedom fighter and writer. He had close relations with many national leaders especially with Bipin Chandra Pal. He participated in many agitations, meetings in Bengal along with Bipin Chandra Pal. He was instrumental in arranging Bipin Chandra Pal's visit to Andhra. By 1907 Krishna Rao became the Editor and owner of Krishna Patrika. Krsihna Patrika was helped by bhogaraju Pattabhi Seetharamaiah in the early days of his editorship. In 1908 Krishna Patrka published an article with the heading 'Tellavanini tupakulato kalchta' i.e. firing the Englishmen with guns, which resulted in the ire of the district collector. The

collector warned Krishna Rao to step down as editor of krisha Patrika. Then Krishna Rao stepped down as Editor and later took the editorial responsibilities in 1911.

Krishna Rao is known for his astute political remarks and is regarded as a guide for running the political news paper in Telugu journalism. He made Krishna Patrika as a public platform and a people's voice by making many of the great leaders to write articles in it and also reflecting people's voices and aspirations. Krishna Patrika created political writers like Koalvennu Ramakoteswara Rao, Ravuri Satyanarayana Rao, Kamalakara Venkata Rao etc. The editorials of Krishna Patrika were liked by Telugu readers and were a source of awakening, debate and discussions in that period. Krishna Patrika played a major role in popularizing Gandhian philosophy especially by analyzing them to the public, explaining its importance in the freedom struggle. Krishna Rao's writing style was popular among the readers and as well as writers. Ravuru Venkata Suryanarayana Rao, the contemporary of Krishna Rao described his writing style as a 'Pearl Design' of ideas, thoughts coupled with a firm and unique action in it. Chella Pilla Venkata Sastry described Krishna Rao as a 'saint and invisible poet'. Krishna Rao made Krishna Patrika as a moputh piece of Indian Freedom Struggle as well as Andhra Struggle. He first used to write in colloquial language, later shifted to the contemporary language. He remained as editor of Krishna Patrika until his death in 1945.

**7. Narla Venkateswara Rao**

The famous editor Khasa Subba Rao called Narla Venkateswara Rao as the "Journalist who knows the world and is renowned in the world". Such was the impact of the Narla Venkateswara Rao popularly called as Narla by his associates and friends. He was a through professional with mastery over his craft and regarded as a literary genius in the Journalism front. He has written dramas, poems, autobiographies, analysis, books and even translated literary articles and stories. Narla was born to Mahalakshamma and Lakshman Rao on December 1st 1908 at Jabalpur, Madhyapradesh. Their family returned to Andhra and settled in Kautaram Village of Krishna District. His father was a Hindi teacher and the entire family sustained with hardly on his income and was struggling every day for sustenance. Narla has his elementary education started in Kautaram village elementary school. With the help of his maternal uncle Narla completed his final year in Guntur High School. In his schooling days Narla developed a liking towards reading and read life histories of 'Veerabrahmam', 'Eeshwara Chandra Vidyasagar' and got influenced by Brahmo Samaj. Narla joined Intermediate in Kakinada

College and studied sciences. Due to lack of interest in sciences he then persuaded History and Economics in Noble College, Bundar. More than is education Narla attained good experience and mastery over English Language by studying different books in library. He was influenced by 'Brahmosmaj' in his childhood days after reading several books written by Eswara Chandra Vidya Sagar. He used to read magazines like 'The Modern Review', 'The Indian Review' and several national and International news papers.

Narla went to Madras in 1935 and met several people like Mutnuri Krishna Rao, Acharya N.G.Ranga, Sivalenkashambu Prasad for a job in the newspaper. His good contacts with the Justice Party associates got him a pet-time job in **'Samadarsini'** newspaper. But his previous background and pressure from Government resulted in Justice Party removing him from the job. On February 25th 1936, he joined 'Swarajya' newspaper as siub-editor and worked under the great editors like Khasa Subba Rao. Under the guidance of Khasa Subba Rao, Narla enriched his experience in reporting, proof reading and editing. When Khasa Subba Rao was arrested he along with his associates used to manage the editorial responsibilities of **'Swarajya'** news paper. But the financial problems of the paper made him leave it. On August 5th 1936 he joined **'Janavani'** a newspaper started by Peoples Party. Soon the paper was closed as People's Party went for the elections and lost the elections. Later Narla joined a Telugu Weekly '**Prajamitra'** started by Gudavalli Ramabrahmam and worked in it up to July 1938. On August 1938, he joined as sub-editor of **Andhra Prabha**. He became the editor of Andhra Prabha in **1942** at the age of 33 years. Due to differences with the owner Ramnath Goenka, Narla left Andhra Prabha and started **Andhra Jyothi** with the financial help pf K.L.N.Prasad in 1960.

Narla turned Andhra Jyothy into a people's voice and it became popular among Telugu readers. Andhra Jyothy became known for its accurate and dispassionate caoverage of news and alos for its high quality literary content. The Sunday supplement carried the serialized novels written by famous writers like Kodavaganty Kutumbarao, Acharya Arudra etc. After tasting tremendous success Narla started a weekly magazine 'Andhra Jyothy Sachitra Vara Patrika' and handled the editorial responsibilities of both the newspaper and magazine. Narla popularized science features in the weekly magazine. He published the famous writings of Nanduri Ram Mohan Rao in the form of a serial.

**Narla's Contribution to Journalism**:

Narla's contribution to Telugu Journalism can be assessed with the remarks made by his contemporaries with whom he worked. Tapi Dharma Rao with whom Narla worked as Sub-Editor wrote in 'Janavani' about him in the following way.

> **"With his nose for news, his gift for apt headlines, his flair for page-makeup, his readiness to learn from everything and everybody and his zest for life was unique"**

Khasa Subba Rao, under whom Narla worked as Sub-Editor in 'Swarajya' news paper commented in the following way about him.

> **"He had two distinct attributes, intellectual and moral, probity and perseverance in the spirit of work. Narla was devil at work and enjoyed his profession in every moment."**

Analysts say the greatest advantage of Narla was that he was a ***Writing Editor.*** He brought with him the power of argument and beauty of words. In him there is a militancy of a crusader and the mellowness of craftsmen. Narla was influenced by Mutnuri Krishna Rao and Khasa Subba Rao with whom he worked and also greatly by British Editors Thomas Bornz, J.A.Spender, W.H.Mmassingaam and C.P.Scott. Narla adopted their attitude, morals and working pattern and evolved his own style. According to Narla Himself, he adopted the following guidelines from Thomas Bornz:

1. The newspapers should not act like a trumpet to Government or its ministers.
2. Newspapers should reflect public opinion and safeguard people's welfare.
3. If necessary the editorial content can be harsh and hard.
4. An editor should have the capability to change and adapt to new values and ideas in changing circumstances.

Narla was also inspired by the work style of J. A .Spender, Editor of the 'West Minister' and has adopted the following from him

1. News writing style should be simple. Language should be clear and natural.
2. An Editor should be firm in expression of ideas and not depend on too many if's and buts'.
3. Any hard news can be given to the public but in small episodes and gaps.
4. Simple language should express complex feelings and convey clear thoughts.

5. Whatever is written should be based on truth and character.

The influence of the great British as well as Indian Editors made Narla a versatile Editor, whose pen wrote volumes of editorials with the same vigor, style and effectiveness. A compilation of Narla editorials from 1944-1974 reveals the following editorial qualities

1. Unique style and lucid expression are part of his editorials.
2. The material used for editorial will be taken from anything ranging from his experiences to an ordinary incident.
3. An elegant analysis of Science and Society can be observed.
4. His editorials reflect truth and prevailing circumstances very harshly.
5. Fearlessness, straight forwardness, logic, humanitarian values are reflected in his writing.
6. Ability to apologize when issues go wrong.

**8. M.Chalapathy Rao**

Manikondala Chalapathy Rao was an eminent editor of India, who stands out as the champion of the Working Journalist movement, for whom he strove to secure the basic rights. He was an uncompromising fighter of free and independent press. M. Chalapathy Rao started his journalism career in 1936 by joining in "Peoples Voice". Later he joined National Herald in 1938. With his phenomenal talent he rose to the number two position in the newspaper. When "National Herald" was closed in 1942, he worked for some time in "Hindustan Times". He was appointed as the Editor of "National Herald" when it was reopened in 1945 and worked for a period of 30 years. He spent almost his entire career in the "National herald".

He had an absolute control and command over language excelled in its mastery. He wrote in heavy granite- like style untouched by poetic feeling. He expressed his opinion with vigor and precision and quoted elusively from literature and history. He was a great journalist and through professional who laid down the basic tenants of Indian Journalism. He was a complete personality with public acumen, flexible outlook, and good character above the reach of opportunities, determined and dedicated to team effort and fought relentlessly to the cause of Indian freedom. According to him "Indian journalism has been one of many forms of expressiveness of Indian nationalism" and has always been a "Fleet street of Ink, a street of adventure and also a street of

perils". M. Chalapathy Rao was an expert in foreign politics. His Sunday articles reviewing the progress of World War II were acclaimed as outstanding pieces. Under his stewardship National Herald contributed its might to the freedom struggle and also played a constructive role in process of Constitution making, integration of the country, in the task of nation building and in the political, economic and cultural integration of people of India. He was deeply committed to the philosophy of Jawaharlal Nehru. The relationship of Nehru and Chalapathy Rao can be regarded as a model of how a political leader and a journalist of integrity should interact in a democracy. Indira Gandhi referred to Chalapathy Rao as "Conscience keeper of Nehru".

He believed in free press and a press free from birth external and internal pressures. Editorial freedom does not only mean the freedom of the editor, but also the freedom and independence with which the editor's staff share with him. Working Journalists will remember him for the dedication with which he worked to gain then a decent wage and recognition. As a member of the First Press Commission, he was instrumental in bringing necessary changes in the working conditions of the journalists. He founded the Federation of Working Journalists in 1950 and was it President for three terms. He said, "Journalism is not a matter of wages and benefits. It is a matter of craft and craftsmanship and journalists are expected to possess not only professional skills but professional pride as well". He led the working journalist's movement not only as a platform to protect the working conditions of Indian journalists but also an organ to defend the freedom of press from proprietor and other vested interests. Chalapathy Rao passed away in 1983 in a road accident.

**Contemporary Telugu Newspapers**

**The History** of newspapers and journals in Telugu, as in other languages, is a saga of sacrifice and devotion to nationalist ideals. Profit or other commercial aspects never were dominant considerations. Even the rare example of a financially successful venture like the Andhra Patrika can be said to have done so more due to the affection of the Andhra people to the newspaper than any other consideration.

**ANDHRA PATRIKA** :

There were some journals earlier but Andhra Patrika, started as a periodical (Publishes every wednes day at 2 Rs cost , Postal charges of 13 annas) in Bombay in 1908 soon became popular because the founder, P. K. Nageswara Rao Pantulu, himself an eminent scholar, sent copies free to libraries and reading rooms all over Andhra. The contents of

the periodical reflect the history of Telugu during the 20th century. The Patrika was shifted to Madras in 1914 and became a daily(7000 loyal subscribers) . On Nageswara Rao's death in 1938, his son-in-law, Sambu Prasad, took over. In 1965 it was again shifted to Vijayawada. The paper was dominant in spreading Gandhiji's ideals in the nooks and corners of Andhra. The memory of Andhra Patrika remains a matter of pride to Telugus.

Apart from nationalist ideals, one other subject that occupied the attention of the founders of Telugu newspapers was the style of the language. There were simple styles as in Vemana's verses or the Sumathi Satakam. Even Pothana's Bhaghavatham can be said to be in a simple style of Telugu, compared to poets like Nannaya, or Srinatha. But grammarians, especially during the 19th century, locked up the language in an ununderstandable literary straight jacket that caused a large-scale revolt in the early 20th century. The most notable of the scholars who led this movement were Gurjada Apparao and Gidugu Ramamurthi. Their main rival was the Parishat Patrika, in which such eminent scholars as Jayanti Ramayya Pantulu, Veeresalingam, Vedam Venkatraya Sastri and others stoutly opposed what they felt was debasing the language in the name of simplification. Their fears to some extent have been justified by the success of the votaries of ``as we speak we write''. Some sort of poetic justice can be seen in the writings of these people which, submerged in an ocean of colloquialism, make little sense to Telugu readers themselves and can be understood only if translated into better Telugu or even into English.

There have been many other newspapers and periodicals that came to prominence in the first half of the 20th century. Some of these are - Krishna Patrika, Golconda Patrika, , Andhra Sahitya Parishat Patrika, and Bharathi (monthly). Nearly a hundred names are to be found in the list of the newspapers and periodicals of the 20th century. It was the Market leader till 1960, 2 place up to 1976,(Andhra Prabha replaced first), lost 2 place with Eenadu in the same year, and in 1978 it lost it s 3rd place to Andhra jyothi. And finally it had been Closed in 1991. In fact some of the newspapers of those days had to be closed for want of funds.

**ANDHRA PRABHA**

Andhra Prabha Daily blossomed on 15th of August, 1938, by Ramnath Goenka which means the glory of the andhras. It's a strange coincidence that exactly after 9 years the tricolour flag of Indian Independence unfurled in the unblemished skies of

free India. Andhra Prabha has been synomous for unbiased news, impartial criticisms and extensive analysis. Andhra Prabha emerged as an ideal example for fearlessness by publishing sensational but factual news. While keeping up its glorious and perennial traditional values, Andhra Prabha has been attaining the most modern trends to blend and amalgamate our ancient culture with the contemporary patterns of the world humanity.

Famous Freedom Fighter, Sri Khasa Subba Rao was the first Editor of the radiant matchless and exquisite Andhra Prabha. This itself denotes the National devotion and dedication of the dazzling Andhra Prabha. Andhra Prabha has always been standing for and in favour of its esteemed and endless readers. In fact, the very name Andhra Prabha was indicated, suggested and proposed by a reader hailing from BELLARY. The then management of Andhra Prabha had awarded him with an auspicious sum of Rs. 116/- in token of their gratitude for suggesting an ever beaming name. Thus, Andhra Prabha has always been placing the people's opinion on the high pedestal by inviting invaluable suggestions from the learned readers. Stalwarts and doyans of Telugu Journalism such as Sri Narla Venkateswararao, Sri Sri, Sri Mallavarapu Visweswararao, Sri Nyayapathi Narayana Murthy, Sri Neelamraju Venkata Seshayya, Sri Vidwan Viswam, Sri Panditaradhyula Nageswararao, Sri Kuchimanchi Satya Subrahmanyam, Sri G. Krishna, Sri Potturi Venkateswararao, had adorned the annals of torch bearing Andhra Prabha and enriched its fame and name. Andhra Prabha has ever been on the forefront to extend moral, social and financial support to the victims of natural calamities like floods, famines etc., by voluntarily raising bulk and hafty

***Contributions** :*

Andhra Prabha, which was lit with the nectar hands of Steel Man of Journalism, Sri Ramnath Goenka, has been successfully steered now by Sri Mootha Gopalakrishna. Indeed, he has injected adrenalin in to the veins of Andhra Prabha and made it Invigourating and youthful. Actually, he has selflessly rededicated Andhra Prabha to the millions of Telugu People

**ANDHRA JYOTHI**

Andhra jyothi started in the year of 1960 from Vijayawada, which means the light of andhra. It has a circulation of over 5,00,000 across Andhra Pradesh and neighbouring states.It has a distinct and unique place of its own in Telugu journalism. It stands aloft on the pedestal of high values and rich professional standards. Andhra

Jyothy was bankrupt once and was shut down in 1999. Vemuri Radhakrishna, who was a journalist in the then team, ventured to buy the bankrupt newspaper and finally could run it into success. Andhra Jyothi editor is K. Srinivas and its Managing Director is Vemuri Radhakrishna

A newspaper wakes you up. A vibrant newspaper shakes your conscience. The need of the hour is beyond this simplification. Hence, the re-launching of, in a way the rebirth of, Andhra Jyothi. Only those who race with the changing times, who use cutting-edge technologies to deliver the goods, and who peep into the distant futures with proper perspectives are the ones who could really strum out the arrows with precision. They are the people who have the ability to hit the bull's-eye. Andhra Jyothi has such greatly committed, well-groomed, exceedingly professional soldiers. They have the guts, and we are proud that they are our commanders who have taken the decisive positions. As you may have noticed the loaded guns of our lieutenants have already triggered off the alphabets that zoomed past like the unfailing bullets. And we assure they will continue to do so.

As has ever been, it will be a battle fought every day on behalf of the people. The essence of any newspaper is to wage that battle rightly. And in a rightful and judicious manner too. If unchecked, half-truths, naked lies and true-lies will sweep the society away into wilderness. If the news smells bias, it only signals the death knell. When a newspaper is suspected of becoming a pamphlet for one group or the other, the scenario becomes gloomy with the readers losing trust. It spells doom. Taking out the arrows, Andhra Jyothi has made its presence against this background on Dasara 2002. On the auspices Aayudha Puja day, it has taken the oath that it would commit itself to every 'letter' that it prints, in true letter and spirit. The true journalistic adage "without fear or favour" is put to test in no uncertain words only to be proved right. As has already been proved, it is a newspaper with renewed energy and vigour. It is a warrior taking on the invisible enemy. It wields sword. In the same breath it plays with fire. Destined by the changing times and the history, Andhra Jyothi is here to create history.

A proven entrepreneur with wisdom. His personality is embedded with adventure, a trait he borrows from his vast experience as a senior journalist. As the Managing Director, the dynamic leadership of this young industrialist is doubtlessly a shot in the arm of the vibrant Andhra Jyothi that is filled with the young blooded journalists. While establishing himself as the force to reckon with, in leading a

hydropower project, he powered Andhra Jyothi, only to help it glow brighter. A man of untiring efforts, and a man with abundance of life-experience, he reaps rich harvest. Uprightness is his quality. Understanding-nature is his special quality. Put together is the secret behind his continued successes.

**ANDHRA JYOTHI a new beginning**

It was just a four-edition strong newspaper before the re-launch. We promised to grow into a sixteen-edition strong when we re-launched the paper with nine editions. We are glad that we could accomplish the task in less than three years and what's more? We are now eighteen-edition strong. Thanks to the continued strong support extended by the people of Andhra Pradesh. Ours is one of the strongest computer networks connecting every nook and corner. We disseminate instant information. As of now, the daily has 20 editions, 18 of which are published from Andhra Pradesh and one each from Bangalore and Chennai. The latest IRS 2006 (R1) figures show Andhra Jyothi to have registered the highest growth in number of readers in the language in Andhra Pradesh. From a base of 21.56 lakh readers in 2005 R2, the daily has added 2.38 lakh readers in the current study.

**ANDHRA BHOOMI**

***Andhra Bhoomi*** is started in the year of 1960 with the publishers of Deccan chronicle (1938), which means land of andhra. It Covers whole of Andhra Pradesh with editions from Hyderabad, Vijayawada, Visakhapatnam, Rajahmundry, Anantapur, Karimnagar, Nellore etc. It also comes with Monthly Magazine named Andhra Bhoomi Sachitra Vaara Patrika. With a circulation of 3,65,794 Covers whole of Andhra Pradesh and some parts of South India with Bangalore(manily). Andhra Bhoomi is a paper from Deccan Chronicle(DC) ,a leading English Daily of Andhra Pradesh.It is the telugu version of English daily Deccan Chronicle.Both newspapers are owned by T Venkatarami Reddy who is the cousin of Congress MP T Subbirami Reddy.

It is generally biased towards congress and slightly against non congress parties like TDP and PRP.In Andhra usually all newspapers are biased.While Deccan Chronicle,Asian Age,Sakshi,Andhra Bhoomi,Vaarta and Andhra Prabha favor Congress other newspapers like Eenadu,Andhra Jyothy etc favor non congress parties.

**EENADU**

***Eenadu*** , headquartered in Hyderabad, India, is the largest circulated Telugu news daily in the state of Andhra Pradesh. According to NRS (National Readership

Studies) 2005 it has got a readership of 1,13,49,000 and is the second most read daily in India, third most circulated regional language daily and 10th most circulated daily in India. *Eenadu* (meaning "Today" in Telugu) was founded by the Indian media baron Cherikuri Ramoji Rao in 1974. It has played a role in both crowning or dethroning governments in Andhra Pradesh. It has also successfully adapted the latest publishing and communication technologies into the Telugu language.

As with any other publication, Eenadu too had its share of struggles. When launched in Vishakhapatnam, it wasn't able to sell more than 3,000 copies a week. Eenadu found itself struggling to become a daily publication ranked amongst other popular rival publications. By 1975, Eenadu managed to achieve its target of becoming a daily publication. However, it was popular in regions and rivalry was still an issue. In a period where the company needed vision to drive and expand it any further. Eenadu hired a new set of directors to be part of its key decision and management group which drove it towards what it is today.

Though Eenadu has brought in lot of changes in telugu media and its functioning, it is accused of being anti-congress and credited to have piloted TDP to attain power in Andhra Pradesh in 1984. Eenadu is often seen as a mouthpiece for the Telugu Desam party even though the newspaper critically panned the party on certain issues in the past. The heart and soul of Andhra Pradesh, it enjoys a circulation of 11, 76,028 copies (July - Dec 2007) per day and is published simultaneously from 23 printing centers. Making it one of the largest circulated newspaper in the country

**A helping hand to the cyclone-hit**

When floods devastated Diviseema, A.P., in 1977, and when the cyclone put an end to many a life in A.P. in 1996, or for that matter when Orissa was devastated by a super cyclone in 1999, and when the Gujarat earthquake brought to halt the human pulse, Eenadu contributed its mite.

**Good Quality**

When it comes to quality, Eenadu has very high standards of commitment and responsibility. This is best illustrated through its Quality Cell. A division whose responsibility is to monitor quality on a daily and ongoing basis.

**About Ramoji groups:**

Apart from the paper, it has the following group of companies.

- **RFC**

The 1666-acre Ramoji Film City, established by the Ramoji Group amid the alluring grandeur of Nature, is the world's largest integrated film studio complex and one of Asia's most popular tourism and recreation centers. For the discerning filmmaker, RFC offers comprehensive and international-standard pre-production, production and post-production resources.

**• Satellite Television (ETV)**

ETV Network - A 12-channel source of rich infotainment, speaking to audiences in the language of their choice.: Telugu, Bangla, Marathi, Kannada, Oriya, Gujarati, Urdu; and Hindi.

The Honourable President of India Dr. A.P.J. Abdul Kalam presented the award at the 51st National Film Awards function to Smt. Nirmala Rani, General Manager Post-Production, Ramoji Film City.

**UDAYAM**

This was started by By Dasari Narayana Rao and Kondapalli Ramakrishna Prasad, grand son of freedom fighter Gottipati Brahmaiah were the chairman and managing director respectively in Dec 29 of 1984. Udayam means morning in Telugu. Due to many reasons it had been closed in 1995.

**VAARTHA**

The National Telugu Daily from Hyderabad Created history in the Media world in a very short span of time compared to any other newspaper. It was inaugurated by PV Narasimha Rao prime minister of India, on January 25, 1996.

*Vaartha* means "News" in Telugu. Vaartha is the firstly daily in Andhra Pradesh to have facilitated Information Technology in publishing all the news that broke as late as 4 a.m in the morning.

This National Telugu Daily is one of the few responsible and fearless Newspapers in India. It is the fastest provider of the happenings across the globe and has always

been in the forefront in providing firsthand news to its readers across the country. Path breaking news, scams, scoops, investigative stories etc... are the forte of Vaartha.

The Quality, layout and design of the newspaper have received many compliments from the reader community. It has been literally proved to be a well-wisher of both people and the government, by pinpointing the defaults in the defaults in the governance and by suggesting measures for the effective working of the government. All these have prompted the newspaper readers to choose Vaartha as the official provider of quality news.

**PRAJASAKTI**

**Prajasakti** started as a daily news paper in the year 1981 with Vijayawada as the centre. Currently it is being published from 9 editions at Hyderabad, Vijayawada, Visakhapatnam, Thirupati, Khammam, Kurnool, Rajahmundry, Srikakulam and Karimnagar. It has got a wide network of over 100 primary news gathering centres across the state. Prajasakti has grown up in leaps and bounds and is the largest circulated progressive daily in the Telugu newspaper industry. On the 20th anniversary of Prajasakti it has gone online and came much nearer to all those who are not within the reach in this global world.

Prajasakti is committed to the cause of oppressed people. At its very inception it was with the peasants struggle in 1981. Prajasakti has always spearheaded the propaganda for secular and progressive values in the society. It strives for the democratic values, and upholds the ardent struggle for democracy and a just living waged against the one sided imperialist globalisation. It comes out with a scientific analysis on all the contemporary, national and international issues. Prajasakti stands for the projection of all the just values and relentlessly fights anti peoples policies, corruption, communalism and many issues that make the life of the poor and middle class worser.

Prajasakti was a borne child of the freedom struggle. It had its inception in the year 1942 and was published as a daily from the year 1945. No sooner it was subjected to repression by the British and banned in the year 1948. It started as a weekly journal in the year 1969 and took the form of a daily in the year 1981 with vijayawada as the edition centre. It had grown in leaps and bounds in the last decade and won the hearts of the toiling masses, workers and the middle class.

It is important to note that Prajasakti forged ahead in an atmosphere when all progressive and democratic forces were facing an uphill task of struggling the onslaughts by imperialism. The second edition started in the year 1997 from Hyderabad, the third edition in 1997 at Visakhapatnam and the fourth edition in 2001 at Thirupati, the fifth edition at Khammam in July 2003 and the sixth edition at Kurnool in Nov 2003, the Seventh Edition at Rajahmundry in May 2005, Eighth Edition at Karimnagar in September 2005,and the Ninth Edition at Srikakulam in 2006.

Prajasakti daily is a part of the Prajasakti Sahithee Samastha with its head quarters at Hyderabad. It has a strong team functioning democratically with hundreds of journalists and professionals from the advertisement team, circulation department, technical department and the editorial board headed by S.Vinay Kumar as editor and V.Krishnaiah as general manager. Prajasakti daily is published at the Prajasakti daily printing press that caters the print requirement. Prajasakti daily extends its support to the Prajasakti Book House and the Prajasakti Publishing House which are the centres for progressive literature.

**SURYA**

**Surya** headquartered in Hyderabad. This newspaper is being promoted by Nukarapu Surya Prakash Rao. This telugu newspaper is being published from seventeen cities in India. Surya -is striking New Standards with an intention to give tough fight to Eenadu and Andhra Jyothi.

**SAKSHI**

**Sakshi** news paper is a telugu daily published in Andhra Pradesh as well as its surrounding states. It is a widely popular news paper that is the rare of its kind. It is still the most successful and popular telugu news paper since its first day of publication.

**YS Jaganmohan Reddy**, son of Andhra Pradesh Ex chief minister Y S Rajasekhara Reddy, has decided to launch a Telugu daily, Sakshi. This new daily – expected to launch in February 2008 – will offer competition to the current market leader, Eenadu.

**Grand launch on - 24 March 2008, Started with a Bang!**

Sakshi is the finest example of a news paper business that is not the rags-to-riches type but the pre-planned and well-executed type of startup business. Governor N.D. Tiwari launched Telugu daily 'Sakshi' brought out in 23 multi-coloured editions by Jagati Publication of which Y.S. Jagan, son of Chief Minister Y.S. Rajasekhara Reddy, is chairman, at an impressive function at HICC on Sunday.

Besides the Chief Minister, B.V. Raghavulu (State CPI-M secretary), K. Narayana (CPI secretary), Bandaru Dattatreya (BJP president), Asaduddin Owaisi, Majlis MP, were among the political leaders who attended. B. Ramalinga Raju, chairman, Satyam Group, launched the daily's web edition. M. Veerappa Moily, AICC general secretary in-charge of Andhra Pradesh, megastar Chiranjeevi, Akkineni Nagarjuna, N. Srinivasan, Vice-chairman and managing director of India Cements, Pullela Gopichand and Mithali Raj launched the political, glamour, women's, business and sports pages respectively of the newspaper. An impressive laser show and a choreographic presentation on evolution of newspapers over the centuries were highlights of the function. Congratulatory messages from Sachin Tendulkar and V.V.S. Laxman were shown on video screen.

The Daily is coming up with flying colors and latest technology used for this purpose. The management is aiming **at No.1 position** for their daily among Telugu readers

Partly this success can be attributed to two things. One is that there was a monopoly by the most popular telugu news paper Eenadu at that time. People are ready to welcome another news source but a big one to compare with Eenadu. Another reason was that the editor of Sakshi paper was the son of Chief Minister of Andhra Pradesh. Being the son of a ruling party minister he had lot of flexibilities and options to launch his new paper in a grand manner. The Sakshi telugh news paper is well received by telugu audience from day 1 and it has been continuing to do so. Its subscription base is also wide across in Andhra Pradesh as well as surrounding states like Karnataka, Maharashtra etc. Sakshi came about in the last one and half year.

## UNIT -2

### Contemporary Telugu News Papers

Andhra's first successful daily paper the Andhra Pathrika, it was started as a weekly from Bombay in 1908 by Kasinadhuni Nageswara Rao Panthulu. He moved the weekly to Madras in 1914 and after few years, converted it in to a daily. After the death of Nageswara Rao in 1938, the pathrika was managed by a trust. It shifted to Vijayawada in 1965 after Andhra province was formed. Latter it started publishing from Hyderabad too. A popular rival of Andhra Pathrika was the Andhra Prabhha, first published in 1938 by the Epress group. The first editor was Khasa Subba Rao, N. Narayana Murthy followed his as the editor. Narla Venkateswara Rao was the most famous editor of Andhra Prabha, who set a high bench mark for Telugu journalism. He loved his freedom. He resigned from the Andhra Prabha and became the editor of Andhra Jyothi. Which was started in 1960 by K.L.N. Prasad at Vijayawada.

The formation of Andhra Pradesh state in 1953 another two dailies started that is Andhra Bhoomi and Vishalandhra. Visalandra daily newspaper established on 22nd June 1952 in Vijayawada. Prajashakti news daily was born child of the freedom struggle. It had its inception in 1942 and was published as a daily from 1945. The Eenadu was launched in Visakhapatnam 10th August 1974 and year later in Hyderabad. Ch. Ramoji Rao, the publisher of Eenadu, single handedly changed way of journalism was practiced in Telugu media. Eenadu daily newspaper is the largest circulated Telugu newspaper in the state of Andhra Pradesh and the state of Telangana of India. Vartha, a daily newspaper was published in 1993 by the Sanghi Group. However, Vartha compensated and filled the Vaccum and void created by the fading out of Udayam at the time.

Then in recent times, 'Sakshi' was launched on 24th March 2008. The first regional newspaper designed by the world-renowned newspaper designer, Mario Gracia, with its colorful get up and makeup of every page broken all the earlier records of circulation. It is the second largest circulating newspaper in Telugu states. Today media is not only giving news but also participating in national development, creating awareness to the society, give the progress policies of Government and eradicating the social evils including other related areas. How Media should give a progressive direction with aspects of Sociologically, Politically, educationally, culturally to the society. In this connection, I would be observed of Telugu press successfully played the role of a watch

dog of the government functionaries and has also aided in participatory communication with special interest.

**Telugu Newspapers and Social Resposiblity**

In Andhra Pradesh, many Telugu language news dailies, corporate media organizations con- ducting many awareness programs, campaigns, rallies and socially responsible activities. For example, in water harvestment, ban to alcohol related issued are enhanced by Telugu news largest daily "Eenadu". It conducted many awareness programmes about above areas. And also, mosquito eradication, abolish of different diseases also take a major responsibility by Eenadu daily. It's taken a role of duty, about Right to information act, it educated to the public through awareness programs entitled "mundodugu".

Another Telugu news daily "Andhra Jyothi" conducted the awareness camps and programmes on AIDS and social evils. This paper wrote slogans, printed by wall posters, arranged the flexi boards in various city junctions. Many Telugu papers, corporate media organizations are participated in different social activities. It plays a key role in the protection to language, culture, traditions of Telugu people. Telugu media has conducted special programs and events like Rangoli, painting festivals. The newspapers like Eenadu, Andhrajyothi, Sakshi, Andhrabhoomi, Vaartha, Visalaandhra, Prajashakthi, Andhra Prabha, Surya, etc., media groups organized programmes for protecting the traditions and culture.

And also, many Telugu newspapers conducting at the time of Gujarat earth-quake, Odissa hurricane, konaseema floods, Krishna floods, Hudhud cyclone. Telugu media groups actively participated and served the suffers and also gathered the amount, cloths, food, medicines from readers and people, and distributed to victims of national calamites. In these incidents, media again proved its social responsibility. Many social problems like sanitation, dowry, raging issue, career development, rural health, girl-child education, road safety, swatch bharat, civil libraries, human rights, and basic facilities and eradicating the bad habits in the society, the Telugu press is working in various useful and inspirable directions.

**Cross-media Ownerhip and Corporitazation in Telugu Press**

The changing face of media ownership has provided several options for political leaders, realtors, businessmen and capitalists. Media organizations in the state of Andhra Praesh and Telangana are often controlled by corporate bodies, real estate

agents, political party leaders, businessmen, chit fund companies, liquor barons and seed companies; societies, trusts, sometimes stockholders and rarely journalist-managers. In India there are no cross-media ownership restrictions; anyone can start and own newspapers, television news channels and FM radio stations.

In India's media landscape, it is said that the number of publications, radio stations, television channels, and internet websites are a guarantor for plurality, diversity, and consumer choice. There were over 82,000 publications registered with the Registrar of Newspapers as on 31 March 2011. There are over 250 FM radio stations in the country though India is the only democracy in the world where news on the radio is still a monopoly of the government. The Ministry of Information & Broadcasting has allowed nearly 800 television channels to uplink or downlink from the country, including over 300 which claim to be television channels broadcasting "news and current affairs". There are also an unspecified number of websites for social media in India. Thus in this country, which is still home to the largest number of illiterates, poor and malnourished on earth, the proliferation of mass media is impressive.

Has this expansion and power of media been translated into the greater public good? Is our democracy more mature now? Is there more informed public discourse on account of the media? Are media still a part of the solution as perceived for decades, or have they become a part of the problem? Are there signs of self-correction/ regulation and growing public-spiritedness or is there more decay and crass consumerism at the cost of rational discourse and public good? Such persistent questions have become relevant. Advertisement revenues in the South Indian states in media industry (FICCI and KPMG; 2012) are: in Tamil Nadu Rs 1,170 crores, in Andhra Pradesh Rs 800 crores and in Karnataka Rs 560 crores. In comparison with the national media (Hindi and English have reached stagnation) the regional languages markets in the South are booming.

Political parties and leaders with political affiliations are increasing their ownership and control of large sections of the television media in Telugu regions. In the case of Ushodaya Enterprises (Eenadu TV Networks) owned by business magnate Ramoji Rao there are on and off alliances with the Telugu Desam Party and significant involvement in its economic interests. Eenadu since it began in 1974 has editorially never been very friendly towards the Congress. Before it supported TDP (formed in 1982) the newspaper was more oriented toward the Kamma dominated communist

party. The Emergency declared during the Congress regime was another anti-Congress rallying point for Ramoji Rao. The paper had championed prohibition in the State in opposition to the Congress that had control of the liquor business. The movement did result in a prohibition policy, but there was no critical reaction from the same newspaper when this policy was lifted by the TDP.

The other important media player with a clear political agenda is the current chief minister K. Chandrasekhara Rao and his son K. Taraka Rama Rao who hail from the Velama community. They own and control and the television channel T-News. The Telangana Rashtra Samithi chief KCR and his family control the channel through the holding company, Telangana Broadcasting Private Limited. TV 5 and N TV management came from the real estate and power businesses. These channels were formed by capitalists with the idea that if they had a television channel in their hands, they could force the government do things that would benefit them. I News channel was established by MRI educational institutions. Studio N channel was backed by a major political party. Recently, the left party, CPI(M), established the TV10 news channel to show their party activities and protests led by them. CPI also started TV99 television news and current affairs channel.

When ETV and MAA TV began, their beginnings were modest starting with one television channel. Soon, they became networks, expanding into other regions. Now their presence in the market has induced them to merge with big companies, turning them into big business corporations, as if following the Rupert Murdoch business model, and having trans-national presence and influencing politics in various regions where they have their business stakes. The case of MAA TV ownership is interesting. Though this is not a news channel, it has stakes in other businesses and political affiliations. The families of the actors Chiranjeevi and Akkineni Nageswara Rao, and Nimmagadda Prasad Rao are stake holders of MAA TV. The film industry and business groups have influenced the growth of the channel and the channel has merged with Sony Pictures Television network. Nimmagadda has shares in Sakshi TV and also other business firms. TV9 has also been in the news for merger with bigger corporations, but so far this has not materialized.

In India and in the world, large media corporations are today clearly playing a bigger role in the political economy as part of forward and backward linkages plans. In India large international television broadcast networks including Turner/CNN,

Viacom/MTV, RIL/ Network 18 and Sony are acquiring or partnering with regional networks. Moreover, a fair degree of consolidation and convergence has already taken place in general across the country and in Telugu regions too. For Example in 2015 Star TV Networks has acquired all MAA TV broadcasting channels.

According to the experts the affordability/low cost will help in widening the media reach. Now one can set up a channel with just 10 crores to 150 crores. Content is primary thing, more important than the technology; the content should be diverse and attractive. But there are always hurdles in reaching the public, and now the distribution system is under the control of a few media houses. We should see the media organisations as business enterprises and so we cannot expect social responsibility from them. In 2014 General Elections, the media's impact on public was 100 percent whereas it was 30 percent in 2009 elections. Now, I think there will be no such influence on the public in the next election to be held in 2019 as the number of channels have increased in AP. There is no chance of deceiving the public. This is good for democracy".

He experts also opinion that diverse views are expressed by Vijay Narra about television journalism in AP, "there is a difference between past and present journalists. Presently, journalists are owned and controlled by media barons and everything goes according to the owners' will in covering the news or its presentation. Journalists freedom is snatched from their control and they do not have right to cover the news at will. Moreover, they have to work as per the policies and principles of the owners"

Regarding cross media ownership:"If there is an information monopoly situation, there is something to worry about. Today Eenadu is a very high ranking newspaper maintaining first position, whereas E TV it is not doing so well. TV9 and TV5 does not have a newspaper but they are doing well in TV Industry and Market. The problem comes when two or three channels get together in support of one political party. That is called information cartelization" said one of the academecians. Explaining cross-media ownership and its impact on the society Madhusudan Pamidikalva says, "Cross-media ownership is always a threat and danger to society in the long run. In the present day scenario, establishing a television channel requires a minimum of 20 crores rupee investment. To start a print media house, 400-600 crores are needed. This can't be done by an individual journalist or even by a group of them where as an MNC or a business syndicate can. When they gain control over three segments of the media i.e TV, radio and news paper, the people have less options to choose from.

**Cross Media Ownership of Media Organisations in Andhra Pradesh**

Source: Table based on Ministry of I & B, field data and secondary sources

On the other hand a few channels like Vissa TV, Zee 24 Gantalu, HYTV, RVS, RK News are using satellite and have incurred financial losses. Asianet, Sitara TV, Satya TV and Tulasi TV have not yet done so. These channels are well supported and can run for 1-2 years in case of the loss but when such channels when a situation arises, they usually tie-up with one of the political parties. Raj TV, N TV, Studio N etc, are channels that may not sustain themselves if become fully commercial. In all our television networks, Zee network is the most profitable one—but as a news channel it is a failure. It is now running on contract basis for a political party. No one can guess the future of the Zee News once the agreement is over. So overall, starting a television channel has become viable and affordable

The corporatization of media and cross-media ownership is a dangerous trend in India. It is a weapon in the hands of corporations for vertical and horizontal spread across the fields in India. Cross-media conglomeration reduces competition and denies entry to newcomers and small entrepreneurs. A report1 recommending restriction on cross-media ownership says there is an "ample evidence of market dominance" in specific media markets and argues in favour of an "appropriate" regulatory framework to enforce cross-media ownership restrictions, especially in regional media markets where there is "significant concentration" and market dominance in comparison to national markets (for the Hindi and English media).

The Standing Committee on IT, headed by Congress MP Rao Inderjit Singh, stressed the critical need for restrictions on cross-media ownership. It urged the Ministry to "formulate" its stand on the issue in coordination with TRAI "after taking into account" international practices. There has been strong resistance on the part of media groups to the idea of restrictions on their sector, arguing that regulation would stifle growth, and that the multiplicity of media and the highly fragmented nature of the Indian market prevents monopolization and further that regulation of the sector amounts to an impingement on the Constitutional right to freedom of speech. However, with this trend, alternative perspectives and media outlets vanish from the mainstream. Media coalesce into a seamless, pervasive, and increasingly homogenized cultural environment that has drifted out of democratic reach. The data suggests that there is a need of broadcast regulation or self-regulation for television in India.

## UNIT-3

## History and Development of Radio and Televison in Telugu

### Television News Channels In Telugu

Most of the private satellite news channels were not able to start news programs sue to the unavailability of unlinking facilities. The first satellite channel to start the up linking facility and to record the news was SUN TV. ETV used to record the news for 'Andhravani' in Chennai and sent the cassettes to Colombo for up linking it to satellite. Later the up linking facility was started in Chennai by Videsh Sanchar Nigam Limited (VSNL). Utilizing this facility ETV used to uplink the programs from Chennai to Colombo and down linked it at Colombo, further up linking it to satellite from Colombo. Gemini TV started news from February 1998. News bulletins were prepared by a private network called APT TV. Gemini TV started own news production from May 1st 1998. Gemini TV used to uplink the program from Chennai to Singapore, down linking it in Singapore and later up linking the same to satellite.

As the non-linear editing facility was not available during that period 4 to 5 types of news items were inserted in one cassette and sent for teleporting to VSNL facility. ETV used its large network of print reporters for preparing news items at Delhi and Chennai. Two news readers used to read the news at Delhi and Chennai separately. Later Government allowed every channel to build its own earth station along with the up linking facility. ETV news returned to Hyderabad where as Gemini TV, Teza News used to record in Chennai up to 2003 and uplinked from Chennai. Teza news shifted to Hyderabad once Satellite News Gathering (SNG) facility became full proof. MAA TV started news in October 2003. ETV became the first Telugu news channel to telecast live news. The onslaught of the 24 hour news channels started as the up linking facility from India became available. ZEE news was started by ZEE television in 1995. ETV-2 was started in December 2003 followed by TV9 in the same month. TV5 was started n 2007, followed by NTV in the same year. ThE YEAR 2009 witnessed the starting of a plethora of 24 hour Telugu news channels like HMTV,ITV, ZEE 24 GHANTALU, SAAKSHI TV, MAHA TV, STUDIO N, TVI and ABN Andhra Jyothi.

In the regional level the early private satellite project in the courntry was Asianet, sponsor by K. Sasikumar,aired entertainmnet programs in Malayalam. The two biggest networks in regional news channel industry are Sun network and ETV network.Sun network has its presence south Indian languages Sun News - Tamil

nadu,Gemini News-Malayalam,Telugu and Udaya News -Kannada.The other major network from south is ETV from EEnadu group.This group first started a Telugu channel and soon spread wings in several North Indian languages. Today offers more than 10 regional language news channels. Another group is TV9 group, promoted by Srini Raju, which spread its network to regional level.

Table1: Management pattern of Telugu Television News Channels

The above table shows different management pattern of investors entered in the media industry. The political parties, , NRI's, media persons, Business entities launched News Channels in Telugu states in order to support their businesses or to promote their political party ideology. At present, there are nearly fifty plus Current Affairs and Non-Current Affairs Satellite channels operating from Hyderabad area. It become common scene in hyderabad that journalists are not well paid, irregular salaries, deprive of basic facilities. Even Major Journalists Associations(Andhra Pradesh Union of working Journalists-APUWJ,Andhra Pradesh Journalist Federation- APJF, Telangana Union of

Working Journalists-TUWJ) unable to solve this issues.. As Television industry come under working Shops & Factories, and Establishment act 1988, the Labour Department, issued notices to the Television managements but delayed salaries practice continues. There are instances that News channels removed journalists without any notice. Many news channels on the rolls to sell their equity or share/channels. The Increase competition, deleting advertising revenue, no upward flow of subscription amount, huge channel carriage fee management attitude, all these factors contribute to incur losses..

## UNIT-4

### Basics of Telugu Translation

At its core, translation is when you transfer the meaning of a written text from one language to another. While the translator will choose just one method for the whole text, there are a number of techniques that can be used for individual words and phrases. By carefully choosing the right technique, the translator can convey each linguistic element in the most accurate way.

Here are ten common translation techniques that we can use to translate your document and achieve the best translation.

**Direct Translation Techniques**

These translation techniques are used when the concepts and structure of the source language can be used in the target language.

**1. Borrowing**

Borrowing is where words or expressions are taken directly from the source text and carried over into the target language. This technique is often used when there is no target language equivalent, such as food or clothing, and can help to preserve the cultural context of the source text.

English is filled with borrowed words that have become part of our everyday language. If the borrowed term has yet to enter common usage, it's usually written in italics.

Example: Café (French), hamburger (German), kimono (Japanese) and kimchi (Korean).

**2. Calque (loan translation)**

This is the literal translation of a phrase from one language into another, coining a new term in the target language. In other words, this is the literal translation of a borrowed word.

Example: The English term 'skyscraper' is translated as 'gratte-ciel' in French.

**3. Literal Translation**

When using literal translation, each word is translated directly. The target text must be idiomatic and retain the same word order, meaning and style as the source text.

This technique can miss the nuances of the original text, and is only possible with languages and cultures that are extremely close.

Example: The English 'I want a glass of water' would be translated literally as 'Je veux un verre d'eau' in French.

**Indirect Translation Techniques**

Indirect or oblique translation techniques are used when the two languages and cultures are further apart. These techniques change structural and conceptual elements in order to preserve the meaning and nuance of the text.

**1. Transposition**

Transposition involves a shift from one grammatical category to another, while still preserving the meaning. This translation technique is often necessary between languages with different grammatical structures**.**

Example: The French sentence, 'Je l'ai vu avant la rentrée' can be rendered in English as 'I saw her before school started.' This changes the noun 'la rentrée' into a verb.

**2. Modulation**

This involves a change of perspective, adjusting what has been written in order to express the same idea and preserve the meaning. This translates the text in a way that conforms to the natural patterns of the target language.

Example: A French speaker will talk about the 'dernier étage' [literally; last stage] of a building, while an English speaker will refer to the 'top floor'.

**3. Equivalence/Reformulation**

Similar to modulation, this allows you to preserve the meaning of an expression, name or proverb by finding a target language equivalent.

Example: The phrase 'être sur son 31' [literally; to be on one's thirty-one] would be the French equivalent to the English phrase 'to be dressed up to the nines'.

**4. Adaptation**

Also known as cultural substitution, cultural elements of the source language are replaced with an equivalent cultural element of the target language. This makes the text more familiar and easier to understand, especially with units of measurement.

Example: Cyclisme (French) = football (UK) = baseball (US).

**5. Compensation**

This technique compensates for being unable to translate a nuance or phrase in one specific place by expressing the information at another point in the document.

Example: While the English language only has one way of saying 'you', French has both 'tu' (informal) and 'vous' (formal). By making specific word choices elsewhere in the text, the translator can compensate for the loss of nuance.

**6. Reduction**

When using reduction, the translator chooses to remove any words forming the original text which are considered redundant in the target language.

Example: The French 'sciences politiques' [literally; political sciences] can be rendered in English as just 'politics'.

**7. Expansion**

The opposite of reduction, this is when words are added in order to preserve meaning. This can be due to differences in sentence structure, grammar or terminology.

Example: The reverse of reduction, 'politics' in English would be rendered as 'sciences politiques' in French. Since French also uses gender articles, expansion is natural when translating from English into French.

**Choosing the right techniques for the best translation**

The right technique will vary on a case-by-case basis, taking into account the text type, target reader and end purpose of your translation. Our team of professional translators will use their experience and expertise in both languages to choose the right technique for your text, giving you the most accurate translation possible.

The Core elements of translation

(i) written texts

(ii) transfer or mediation

(iii) from one natural language to another

It is important to stress that translation deals with the transfer of written text. When the text or the medium is oral, however, the term used is interpreting or interpretation. In lay circles, one can sometimes hear the terms translation and translator being used to refer to interpreting and interpreter, with no distinction being made with regards to medium. In other areas, also, Translation with a capital "T" can be used to refer to both translation and interpreting as forms of mediation, whereas translation with a lower-case "t" means translation. This book follows common usage in T&I, in which the oral vs. written medium establishes a distinction with regard to field and practice. In translating, the language from which a text is translated is known as the source language (SL) and the language of the translated product is the target language (TL). What is also referred to as the original text is generally known as the source text (ST) and the translated text is the target text (TT). For instance, in a translation of Shakespeare's Hamlet into Spanish, the ST would be the English original text and the Spanish translation the TT (see Exercise 3 for more examples of ST and TT). Practice 1.1 contains an example with commentary that will help you test your understanding of the notions SL, TL, ST and TT.

The four most common types of translation services that we see are:

- Literary translation
- Professional translation
- Technical Translation
- Administrative translation

Below, we explain all of these in further detail, so you can get a better understanding of what they are.

### Literary Translation

As the name Literary translation may suggest, this type is all about translating literary works like stories, poems, plays, etc. This type of translation is often considered the hardest or most comprehensive, as the translator not only needs to get the meaning of the words right, but also the context, sound, and feeling behind the words. By this, we're also talking about knowing the culture of both languages well enough to translate any humor, emotions, and any types of similar elements of a piece of work. As you can imagine, this requires extensive knowledge and experience. Plus, it can still be hard even then, as in some cases, there are no suitable translations. For example, in poetry, when the rhyming of words or puns is used for additional wordplay, it often does not work in the target language.

### Professional Translation

The next type of translation is professional translation. Any type of translations that are used for professional purposes, we would usually fit into this category. Some common examples would be a medical translation or a legal translation. Here, the main goal is usually to get all the information translated as accurately as possible. Unlike with a literary translation, documents won't have any wordplay such as puns or rhymes, making it a little easier for the translator. However, accuracy is crucial for any type of professional translation, especially for industries where the consequences of inaccuracies could be huge, such as medical or law with medical translation and legal translation. Like the ones named above, more complex industries will often also require a specialist to ensure accuracy. Of course, this does depend on the subject matter, but the more complex the source language, the more educated the translator must be. This is especially the case if there is a lot of business jargon used or a certified translation required.

### Technical Translation

Technical translations are also technical, as the name suggests. Here, we're usually talking about translating technical content for businesses such as:

- Engineering Documents
- Instruction Manual
- User guides

- Technical Training

These types of documents will usually need technical translation services because the translator has to understand the topic well to ensure that they can tell the user what they should do accurately. Not only this, but they also have to understand the formatting requirements, and sometimes the images have to be changed so that they can be understood in the target language. If you require a technical translation, it's also crucial that you choose a company or transcriptionist who is comfortable and is experienced with your particular industry. The content of a technical translation is usually quite complicated, so if your business ever needs some documents like the ones mentioned above translated, this is the translation type you'll be looking for.

### Administrative Translation

The administrative translation is a translation type used for the documents and management texts of organizations like corporate or regional businesses.

Administrative translations can be considered a sub translation type of professional translations. However, not all professional translations are administrative, so it doesn't quite work, vice-versa.

### Other Types of Translations

As mentioned at the beginning of this article, there are endless ways you can break down the world of translation into different types. Here are some other translation types that we have not yet mentioned but are also quite common:

- Machine translation
- Judicial Translation
- Website Translation
- Script Translation
- Multimedia Localization
- Financial translation
- Commercial Translation (Also overlaps with professional translation)
- Legal translation
- Medical translation

NR – 21061 – RADIO JOURNALISM

UNIT - 1

Unit-1: Definition of Radio*:*

Radio is the wireless transmission of signals by modulation of electromagnetic waves with frequencies those of light. Radio Technology is called as Wireless technology or 'Wireless'. Edward Branly in 1897 used the word 'Radio' for the first time as 'Radio Conductor'. But the Radio word used as noun is coined by Walden Warren, an advertisement expert in 1907. The word Radio was adopted in United States Navy in 1912. Radio Frequency emissions include T.V, Radio, RADAR, cell Phone

- Radio waves are a form of Electromagnetic Radiation created by an electron and acceralating through radio frequency which is a portion of electromagnetic spectrum – 10 Hz to 100 Hz.
- The acceralation is caused by Alternating Current (AC) in the antenna.
- The Electro-magnetic spectrum involves Infrared, Visible Light, Ultra -Violet, x-Rays, Gamma Rays, Radio Frequencies.
- Radio frequencies travel by means of oscillating Electro-Magnetic fields that pass through air and vaccum of space equally and does not require medium of transport.
- When radio waves pass through electrical conductor the oscillating electric or magnetic field induces AC current and voltage in the conductor. This will be transformed into audio or other signals that carry information.

*2. Brief History of Radio Broadcasting in India*

*A. From 1921 to 1947*

The birth of Radio Broadcasting in India has stated on an experimental basis in the year 1921, when Times of India in collaboration with Post and Telegraphs Department broadcasted a Musical program on request of Sir George Lloyd to the concerned companies. In 1923, a broadcasting conference was held in Calcutta. From 1923 'Radio Clubs' proliferated in India. 'Radio Club Calcutta' was started 1923, followed by 'Madras Presidency Radio Club' in 1924. On March 27th 1925, Government officially gave a notification, inviting applications for setting of broadcasting stations in India.

The idea of regular Radio broadcasting service took shape for the first time in 1926 in the form of an agreement entered between Government of India and a private company called 'Indian Broadcasting Company Limited'. The company was started by a

group of businessman, with a meagre capital, inspired by the success of European Broadcasting Under the agreement a license for construction of two stations, one at Bombay and another in Calcutta was granted. The Calcutta station was inaugurated on 23rd July 1927, and Bombay station was inaugurated on 26th August 1927. But in three years they gathered only 7000 listeners and company went into liquidation by 1st March, 1930. In response to the popular demand and lobbying of investors Government decided to acquire the Indian Broadcasting Company Limited on 1st April 1930 and run the Calcutta and Bombay stations experimentally for a period of two years. The name of the company was changed to Indian State Broadcasting Service (ISBS).

After two years on May 1932, Government decided to continue the broadcasting and placed the ISBS under Department of Industries and Labour. But the Government's economizing efforts still reduced the number of listeners. But the starting of BBC's new empire program on shortwave increased the popularity of Radio. There was a rush to buy new Radio sets. Government en cashed it by imposing an extra duty on Radio sets. The purchase of 8000 new radio sets earned Government good revenues. The new earning was used to construct new radio station at Delhi, which was inaugurated in 1936.

A separate Department of 'Controller of Broadcasting' was created to take care of broadcasting operations under the Department of Labour in March 1935. On August 30th 1935, Lionel Fielden was appointed as first Controller of Broadcasting in India. The name of Indian State Broadcasting Service was changed into 'All India Radio' on June 8th 1936. Broadcasting was transferred to the Department of Communication in November 1937 and was later transformed to the Department of Information and Broadcasting in October 1941. The start of World War II catalyzed the growth of radio in India. New high power transmitters were started and external services division, started in 1941 was strengthened to counter the Nazi propaganda. Most of the News Services and the external services were started during the war years. During the war years 27 news bulletins were broadcasted every day.

*B.. From 1947 to 1990*

When India became independent All India Radio was a separate department under Department of Information and Broadcasting. It had six stations at Calcutta, Bombay, Delhi, Lucknow (02-04-1938), Madras (16-06-1938) and at Tiruchirapalli (16-05-1939). It had a total of 18 transmitters, six medium wave and 12 shortwave

transmitters. In 1947, AIR was transmitting programmes in 8 languages i.e. Tamil, Telugu, Gujarati, Marathi, Punjabi, Hindustani, Bengali and in English to 2, 75,000 listeners who were only 11.5% of Indian population residing in 2.5% of total area, predominantly in urban towns. The radio stations located in princely states were taken over by the Government after Independence.

Broadcasting was considered as a key role in the development of the country especially in achieving political integration, economic development and social modernization. Radio was an integral medium of communication and its popularity increased exponentially. From 1957, All India Radio was also called as 'Akashvani'. In the following years All India Radio had a slow but steady development. New broadcasting stations came up in all over India. Radio was instrumental in promoting social change through execution of innovative programmes like Radio rural forums for Agriculture communication in 1960's, promotion of adult literacy in 1980's, Women and legal rights issues in 1990's etc. The advent of regional radio in popularized the medium even more. Local broadcasting reflecting local issues of concern to the community and has taken the Radio to the nook and corner of the Country. By 1990, AIR had 91 broadcasting stations with 167 transmitters, out of which, 130 were of medium wave, 33 shortwave and 4 FM transmitters at Bombay, Calcutta, Delhi and Madras.

*C. At present*

A present AIR has a three tier broadcasting system National Service, Regional Service, Local service. National service reflects the broad spectrum f nation life and acts as complimentary to regional language. The 1000 KW transmitter at Nagpur to which the foundation stone was laid down in 1982 by the then Prime Minister Indira Gandhi along with the Delhi station form the National Channel. The National service was launched on 18th May 1988. National channel broadcasts centrally originated news bulletins in Hindi, English, Music and newsreels. All the existing regional centres form the middle tier. They emphasize the regional programmes in regional languages. The local radio stations form the third tier of broadcasting, catering to the local needs of the community. As on 2010, AIR has 223 broadcasting stations with 358 transmitters including 143 Medium Wave, 54 Shortwave and 161 FM transmitters. AIR covers 91.42% of countries geographic area and caters services to 99.13% of Indian population i.e. 104 million households in 24 languages and 146 dialects. At present there are 111 million radio sets operational in India.

SWOT Analysis of All India Radio

Strengths:

- Recently, the government has agreed upon revenue-sharing model, which is 4 % for the growth of the radio stations. So that they can develop themselves well because this industry is still in an introduction stage. The success of private FM stations, and reveals that radio listenership habits have changed considerably; not only are listeners tuning into it more often but also sticking to radio for longer hours every day. The advertisers, who would depend on word-of-mouth, pamphlets, brochures or ads in local supplements of newspapers, are welcoming the opportunity.
- Radio is considered as a background medium; because people can listen to radio anytime and anywhere they want.
- It is also a free medium. 90% of India has access to radio which is unmatched by any other media. Radio also reaches to uneducated village folk who do not read print publications. At the places where the literacy rates are low where people hardly read newspapers and radio is the only medium that they can understand. They can‘t afford a TV set. Therefore radio is more popular. Radio is the least cost medium and it helps to reach mass audience with various backgrounds. Radio offers its reach frequency and selectivity at one of the lowest costs per thousand and radio production is relatively inexpensive.
- Radio is considered as a medium where the ―Proximity to purchase‖ is very high. Radio is a complement to another media. Therefore, other media or the advertisers or agency can use this medium for brand recall.

Weakness:

- One of the major weaknesses of Radio is that there is very less differentiation in the programs that are aired. Most of the stations plays much of the music that is played consist of Hindi Film songs, and therefore it is difficult to differentiate between the programs of the different channels.
- Fragmented Audience - the large number of the audience in India is fragmented in various remote places and therefore, the percentage of listener tuned to anyone station is likely very small.
- No proper research available - research is very important for any advertising segment. Research is the main base to attract client and get more revenue. But, in India there is

no proper research is available. Many stations are conducting their own research which can be biased.

- Radio-only nature of radio communication is a tremendous creative compromise. An advertiser whose product depends on demonstration or visual impact is at a loss when it comes to radio. And like its radio message creates a fleeting impression that is often gone in an instant. Many advertisers think that without strong visual brand identification the medium can play little or no role in their advertising plans.
- Increase in listenership numbers but no increase in ad revenue. This is the situation that every radio channel is facing.

Opportunities:

- Getting copyright licenses from the government for running mega events which are aired on the AIR radio station and have been restricted to be aired on other private stations.
- Launching a radio station with 24-hour news channel Tie-ups with BEST or railway authority for playing the FM in train and in bus.
- The launch of Private Radio FM has managed to create a set of New Listeners' for the medium The new radio stations which will come in future they can have venture with the college or university campuses. And can play their station which will exclusively provide with the information relating to that university/college campus. With the coming of the many more new players in the radio industry each channels can position themselves quite different from others, like, if some station is targeting the health conscious people then their programming strategy will vary accordingly. And then it is easier for the advertisers also to decide on which channel to advertise.
- Allowing private FM players to start news and current affairs programs. One has to constantly innovate, and that is the challenge. Brand building is thus much more difficult. At the same time, we are very bullish, and gung-ho about this whole enterprise. Leaves huge scope for innovation in local market

Threats

- The biggest threat to private radio industry players is ALL INDIA RADIO. AIR is the biggest player in India because of its reach, low charges, government channel etc… Because of the new government policies there will be more number of stations and then competition will also increase. This is one of the biggest threats it faces. With no particular differentiation in the music. So, there is a fear of losing its brand loyalty.

*Objectives of All India Radio*

Broadcasting in India is a National service. It constitutes the most powerful medium of mass communication. It plays a significant role as a medium of information and education in a developing country like India, where the reach of other communicating media is not extensive. The following are the objectives of All India Radio.

1. All India Radio keeps the people all over the country informed quickly about Government policies, plans, programmes, and achievements through the medium of sound broadcasting by a variety of programmes.
2. It keeps the people informed of the important news and current events of topical interest and provides an appreciable amount of entertaining programmes.
3. Through its broadcasting AIR seeks to promote education, national integration and also develop various aspects of Indian culture.
4. It also gives timely assistance to public and Government departments by quick dissemination of information during national calamities.
5. It helps in promoting sales of goods and services through advertisements from its commercial services.

All India Radio informs, educates and entertains people in different languages through a variety of programmes on cultural, educational, scientific, agricultural, health, hygiene, fine arts, socio cultural themes etc and in turn earns substantial revenue for the Government through commercial broadcasting.

*Characteristics of Radio*

The following are the characteristics of the Radio

1. *Radio is the Medium for Hearing*: The most striking attribute of Radio is that it is an auditory medium. It has no visuals. It is blind. Listeners cannot see its messages. With Radio they can only hear and imagine objects, actions and ideas.
2. *Radio is a mass medium*: It addresses a many at the same time. With distance the contact becomes less personal than in face to face communication. The chance of being misunderstood is great. Also the feedback is not immediate.
3. *Radio lacks permanence*: The audience may not read and re-read messages as the print medium. Radio is a transient medium.
4. *Radio has no Visuals*: There is no image or text in the radio. The receivers cannot see the sender or broadcaster as they do on television or film. Radio is purely auditory i.e. a

predominantly a speech, music, sounds, silence or an auditory medium. The occasion of being misunderstood or of complete communication failure is very high. To use Radio effectively much effort must be expended in order to compensate for lack of visuals.

5. *Radio stimulates imagination*: The listeners or Radio supply the visual data for themselves. They picture the messages suggested by voices, words, sound effects.
6. *Radio is personal and intimate*: Real voices, emotions are passed through radio impulses. Warmth, compassion, anger, pain and laughter rare conveyed more adequately in an audio medium. With accent, pause, hesitation and a variety of emphasis and speed the voice report is able to convey far more than the printed speech. The fact that the radio often reaches the listener during his or her situation of solitude or privacy adds to the intimate character of radio.
7. *Radio listeners do other things*: Radio listeners can be working, travelling, driving, washing or doing other things when listening to Radio. Hence the audience will be half listening and much of the message could be missed. Ignored or misunderstood. The radio cannot command the full attention of the from the listener.
8. *Radio is an inexpensive medium*: Being portable and inexpensive it is an affordable medium to common people than the print or Television medium. The less educated, persons having difficulty in reading or illiterate persons are easily attracted to the radio.
9. *Radio negates geographic or physical boundaries*: Radio reaches the radio listener who could anywhere without any geographical limitations and can bring commonality between people living in different regions, having different cultures, learning and status.
10. *Instantaneous Message Delivery:* The messages given in the Radio are sent to listeners with a speed of light.
11. *Radio can suffer from interference:* The printed page is received exactly in the form in which it is printed but radio is always subjected to interference. What leaves the studio is not exactly what is heard. The intrusion of other stations signals, atmospheric noise, distortions of sound, fading signals all add to the infidelity of the message.

The Basic Elements of Radio

Radio is a medium of sound. While people might hear without trying, they generally do not listen without being stimulate. Hence Radio must stimulate them and trigger their imagination so they can picture the event being described. To do this, a combination of the following three basic elements: Voice, Sound, and Music are used.

- VOICE: The most important element of radio is voice, because it is generally the one used specifically to reach the listener with the desired information.
- SOUND: When used on radio, sound must be distinguished easily so the listener is able to interpret the sound and understand what is being conveyed. The roar of a jet engine and the muffled sounds of other flight deck activity will help the listener to visualize the scene.
- MUSIC: Music has a great suggestive power because it plays on human emotion and colours scenes. It touches the heart and mind and sets a desired mood.

When properly used, these elements should accomplish the following three distinct purposes:

- Attracting immediate interest
- Maintaining that interest through a particular presentation
- Satisfying the audience's attention and curiosity

*Listening to the radio Vs watching television*

The radio is one of the oldest kinds of popular media, widely available since the early 1920s. Today however, television is the most popular form of broadcasting. Despite this, radio has many advantages over T.V. which are easily overlooked.

- The first of these is obvious: cost. Every viewer has to pay more to watch television than a radio.
- Radio caters to a wide variety of tastes, from literature to gardening to all genres of music.
- One obvious drawback of radio is that it cannot provide visual information. However, this is not necessarily a disadvantage: a radio programme allows the listener to carry on with other tasks safely. For example, it would be extremely dangerous to watch television while driving. Listening to the radio is unobtrusive and does not impinge on the driver's observation, making it no less safe to listen to the radio while driving than listening to a favourite album of music.
- Radio is an entirely different medium to television. In some ways it is more demanding: for example, listening to a radio play requires a far greater use of imagination than watching the same performance being acted out.

The medium of radio has frequently been called the *''theatre of mind''*. Radio is

also described as the most pervasive medium of all, reaching more households than any other single medium. Radio is with us every day, whether at home, at the office or in the car. The two factors that contribute to the effectiveness of the spoken word are that the mind holds the spoken word in mental storage much longer and that the tone of the human voice gives words emotional impact that no picture can achieve. The main advantage of radio over other media lies in its accessibility.

Benefits of using radio as a medium:

1. Relatively low cost - It is relatively inexpensive to produce voice commercials for radio.

2. Selectivity - Radio stations broadcast in different formats, ranging from talk radio. This allows for a large degree of selectivity in media planning.

3. Flexibility - Radio has probably got the shortest lead time for material, enabling advertisers to change their messages at the last minute before going on air. In some instances, where disk jockeys read the advertising messages, the message may even be changed to studio.

4. Potential for mental imagery - Back to the concept of the theatre of mind. One of many benefits from using radio in the sense that the listener is able to use his or her imagination when listening to a radio commercial.

5. Integrated marketing opportunities - Many radio personalities and radio stations are used by advertisers in their involvement in local markets and as part of their overall marketing and advertising campaigns.

6. The ability to reach segmented audiences - Owing to the fact that radio comes in so many formats and is sometimes specifically focussed on regional or lifestyle audiences, the potential for successfully reaching specific audiences is greatly enhanced.

Writing for Radio

The writing for Radio differs from other forms of writing as radio is predominantly an audio dominated medium and does not have the support of visual. The following are the characteristics of the Radio

- The radio programming and writing follows a linear pattern i.e. chronological order is followed in describing events, incidents etc.
- Radio production requires special equipment and technical knowhow.
- The radio production equipment is relatively inexpensive.
- The cost for distribution of radio programmes in quite inexpensive.

- Radio is a transient medium i.e. it cannot be paused, playback when necessary.
- The radio programmes has low reference value.

  Writing for Ear

  Writing for radio is regarded as 'writing for ear' as it is predominantly an audio medium. A radio news copy is written for the ear, its style must reflect that fact. In contrast to writing done for the printed page, radio writing is more conversational and informal.
- Elaborately constructed sentences containing highly sophisticated language may effectively communicate to the reader but create problem to the listener, who must digest the text while it is being spoken.
- Whereas the newspaper reader has the luxury of to move along with his or her own pace, the radio listener must go along with the newscaster or miss out on information.
- Radio writing must be accessible and immediately comprehensible
- Moat widely used words need to be used in the radio text as the listener will not have time to consult the dictionary while listening.
- Simple and direct and short sentences, concise and conversational writing is adopted for radio script writing.
- Titles and number should be round off in the script to make it easy for listening.
- The writing for the ear must take care of the visual cues and the writer must get the description of the scene in a simple and understanding language.
- Clarity is utmost importance in the radio writing as there are many sources of disturbances and distractions.

  Radio Reporting

  In addition to getting all the basic information of a story, radio reporters have to make sure they record interesting audio to play in the newscasts. The audio comes in two varieties. write out the name of the news maker who was speaking will be included.

  Actualities:

  Here the actual voice of the newsmakers is recorded. They pass on expert knowledge, subjective comments or eye witness reports. Actualities are recorded for 15-25 seconds. Radio reporters select them from interviews they have recorded with newsmakers either in person or on the phone. The phone recorded voices are called as 'Phoners'. Actualities recorded in the field are often transmitted back to the studio. Then

they are transformed to the newsroom server so that they are played in the newscast. Sometimes these recording are called as 'Carts'. Before an actuality can be played on the newscast a lead is written to introduce it. Then a write out is needed to conclude the story. In the

Voicers:

Here it is the reporters own voice that is heard from the scene of a news event. The voicer may feature a detailed description of the event, analysis or explanation of an event. Voicers are generally 20 to 50 seconds long. They may be recorded at the scene or recited from notes on the phone. Voicers do require lead-in to introduce the story but in most cases do not require write outs.

Radio News releases

News on the radio stations is commonly presented in a ten minute or fifteen minute blocks and aired at the top of bottom of the hour. Sometimes special news bulletins are given for a period of fifteen minutes of half an hour depending on the importance of the event. Usually the ten or fifteen minute news bulletins are divided into segments to accommodate presentation of specific information. Every station has a fixed format that allows for a specifically timed local, regional, national and international story. Usually the sports and weather information is place last in the story. Every newscast has a 30 or 60 second commercial break and it is counted as part of newscast.

The number of the stories in a news cast depends on the information received and the importance of the events. The significance and scope of the stories is taken into account before fixing the slots. Generally each story will be given a fixed time i.e. 15 to 25 seconds and the most important and significant stories will be given more time. Stories are arranged according to their rank of importance with the most important story occupying the top slot. The assembling of the newscast takes skill, speed and accuracy. Stories will be up dated for their last minute developments. The on the scene 'voicers' and 'actualities' received from the news services are slotted in the news cast according to the stories selected. Then the stories along with the script containing the lead-in and write-out are handover to the production for recording or live relay.

Radio Writing Techniques

Radio writing techniques are designed to capture and hold the audience's attention until you have delivered your message. The six techniques which are used as follows:

- Aural sense appeal
- Rapid getaway
- Power of suggestion
- Pacing and timing
- Freedom of movement
- Conflict

Aural Sense of Appeal: Radio depends entirely on the ear; it must work completely on the listener's mental image inspired by sound waves coming from the radio speaker.

RAPID GETAWAY Radio material must capture the attention of the audience within the first few moments of presentation or listeners will be lost. The material must present a challenge, a promise, a suggestion or a conflict to arouse the listener's attention.

POWER OF SUGGESTION The human mind is a vast storehouse of scenery. The radio writer suggests to the audience what the scene should be, and listeners — through their mind's eye — can see anything from a pinhole to Waikiki Beach.

PACING AND TIMING You must prepare the material for delivery within a definite time frame. Within this timeframe, the changes in quality, emotion, thought or feeling of the material are controlled.

FREEDOM OF MOVEMENT As the radio writer, you can take listeners from one point on earth to another, or even into outer space with words, sound effects or the appropriate music.

CONFLICT Radio writers call conflict the backbone of interest in radio writing. Conflict is the ageless formula of hero against villain, good against evil, the fight for survival and the solution to difficult problems.

Radio News Writing

Radio news style, while dictated by the need for getting and holding the attention of an audience, differs from station to station. It is alive and constantly changing along with the broadcast industry itself. As with most areas of journalism, there are few absolutes.

When scripting broadcast copy, you will face many subjective choices that can only be made by using your own common sense. The guidelines presented in this chapter are intended to be consistent with the style recommended by he Associated Press and United Press International. However, keep in mind that these guidelines are just that — guidelines. For your copy to serve any worthwhile purpose, it must be the kind of spots and releases the individual radio stations in your geographical area desire and are able to use. Most local broadcast stations have individual preferences regarding their newscasts and announcements. Broadcast writing is highly personalized — far different from writing for the print media. Broadcast copy is written and designed for the ear. It is personal and has a sense of immediacy. The listener becomes involved and feels as though he is a part of the event being reported. THE SIX Cs: Broadcast copy must measure up to the following six Cs:

- Clear
- Concise
- Complete
- Conversational
- Current
- Correct

Clear:

Clear copy is written in a simple, easy-to- understand manner. It is developed in a logical way, flows smoothly and is easy for the listener to follow. Even the simplest story may be misunderstood on the basis of one hearing. The listener's attention may be divided between any numbers of distractions. Therefore, radio news story should be perfectly clear to avoid misinterpretation Hence jamming of too many thoughts or numbers into one sentence should be avoided. Generally, sentences that are more than 25 words contain more than one thought and should be rewritten into separate sentences. The same principle applies to dependent and independent clauses. Commonly accepted literary techniques, un- usual words and complex phrases, also tend to obscure sentence meaning and you should avoid the use of such. In broadcast writing, simple words say it best. Choose words that everyone will understand the announcer as well as the listener. Do not ignore colourful or descriptive words. However, steer clear of flowery phrases and trite expressions that simply take

up time and are of no value. Avoid slang and always translate military, technical, legal and foreign terms into simple language.

Concise

A concise copy can be written when all unnecessary words have been trimmed away and only those words essential to convey your thoughts remain. It cannot be overemphasized that broadcast writing is writing for the ear. Listeners do not have the opportunity of "rehearing" your copy, so your sentences should be direct and crystal clear. If your copy is long and involved, you put a strain on the listener and hinder comprehension. This does not mean broadcast writing should be kept at a fifth grade level — but given the choice of being complex or simple, you should choose the latter. Your obligation is to put information into meaningful terms that the "average audience" will understand, and more important, want to hear.

Complete

For the broadcast story to be complete, you must include in it at least four of print journalism's five "Ws." Obviously, you will normally state what happened in your lead sentence. Then you will tell to whom it happened, when it happened and where it happened. Why and how generally are not critical, although to be complete, some stories will require this information.

Conversation

Like good conversation, broadcast writing is informal and free-flowing. Write the way you talk. Let the story tell itself. This may sound easy, but it will take some effort in the beginning. A common pitfall is to write a story as it may have been required for an English composition or a print journalism assignment. Broadcast copy is read aloud by the announcer. It is not read by the listener. The twofold objective of the conversational tone is that first, it allows the announcer to pick up the drift of the story and second, it makes the copy sound "right" to the audience. A good broadcast writer "listens" to the story being written. When you have finished writing your copy, take it out of the printer and read it aloud to make sure it sounds conversational. Make sure there are no hard-to-pronounce words or combinations of words that are awkward to the ear. Rid your copy of words that might be unfamiliar to your listeners.

Current

If your story is not current, you do not have "hard" news. News of a perishable nature is usually hard news. If you have a story of immediate news value, you should expedite its completion and delivery to the media. By the same token, if there are new facts or circumstances relevant to your initial release, an update of the initial story should be provided and marked as an update). This will help ensure currency. It is also helpful if the new or changed elements of the story are identified to reduce possible confusion with information in the original release. You will feel the pressure of meeting deadlines, but remember your credibility is on the line.

Correct

The hallmark of journalism as a writing art — either print or broadcast is the accurate presentation of facts. Your finished product must correspond accurately with the facts of the story. In the field you will follow every possible lead to get the facts as well as report them.

Special Audience Programmes

Music Programmes

Akashvani Sangeet Sammelan concerts were organized at 24 Stations of AIR across the country on 20th and 21st October 2007 featuring artists of both Hindustani and Carnatic music. AIR introduced regional Folk & Light Music Festival at par with Akashvani Sangeet Sammelan. The purpose of this regional folk & Light Music Akashvani Sangeet Sammelan is to project, promote & propagate the rich folk cultural heritage of our country. To scout new talent, All India Radio organizes All India Music Competition. AIR music competition is a regular feature of AIR to reach & hunt new talent among youth. This year a number of new talents in the category of Hindustani/Karnatic Music have been added.

External Services Division

External Services Division of All India Radio rank high among the External Radio Network in the World both in reach and range covering about 100 countries in 27 languages, 16 of them Foreign and 11 Indian, with an enormous Programme output of about 70 hrs 30 minutes everyday. All India Radio through its external broadcast keeps the overseas listeners in touch with the Ethos of India and things that are Indian, reflecting the ideas and achievements of India as an open society.

The Foreign languages are Arabic (3 hrs. 15 meters) Baluchi (1 hr) Burmese (1 hr. meters.) Chinese (1 hr. 30 meters) Dari (i hr 45 meters). French (45 Mts) Indonesian

(1 hrs) Nepali (4 hrs) Persian (1 hr. 45 meters.) (Pushtu (2 hrs) Russian (1 hrs) Sinhala (2 hrs 30 meters Swahill (1 hr.) Thai (45 Mts.) Tibetan (1 hr. 15 meters) and English (GOS) (8 hrs. 15 Mts.) The Indian Languages are Hindi (5 hrs. 15 Mts.) Tamil (5 hrs. 30 Mts). Telegu (30 Mts.) Bengali (6 hs. 30 meters) Gujarati (30 Mts.) Punjabi (2 hrs.) Sindhi (3 hrs. 36 Mts.) Urdu ( 12 hrs. 15 Mts.) Saraiki (30 meters) Malayalam (1 hrs.) Kannada (1 hr.) The broadcasts follow a composite partners and generally comprise of News Bulletin, commentaries, current Events and Review of the Indian Press. Besides Newsreel Magazine programme on sports and literature, talks and discussions on social economic, political, historical, scientific and cultural subjects, features on development activities, important events and institutions, classical, folk and modern music of India's diverse regions, form a major part of total programme output.

External Services Division projects the Indian view on matters of national and international importance and stimulates interest in the culture, heritage and socioeconomic milieu of India through its broadcast. The dominant theme of all programmes in External Services Division continue to present the reality of India as a strong Secular Democratic Republic, vibrant, forward looking and engaged in the task of rapid economic, industrial and technological progress. The facts of India's large technical manpower and its achievements and ecological balance, its commitment to restoration of human rights and international peace and its contribution to the creation of a new world economic order are frequently discussed.

External Services Division continues to supply recordings of music, spoken word and composite programmes to about 24 foreign broadcasting organizations under the existing Cultural Exchange programme. External Services Division's transmission directed to SAARC countries, West Asia, Gulf and South East Asian countries continue to carry the 9.00 p.m. National bulletin in English, originally meant for Home Services. This apart, External Services Division continues to beam all across the globe commentaries on contemporary and relevant issues and press reviews in all its transmissions.

Farm & Home Broadcasts

The commitment of All India Radio to the rural audience dates back to more than 50 years. All stations of All India Radio broadcast Farm & Home programmes directed at rural audience. In fact, special programmes have been designed to cater to the day to day seasonal needs of the farming community. To broadcast the latest technology and information for agricultural output is a continuous process of its Farm & Home

programme. These programmes not only provide information about agriculture but also create awareness about the ways and means to improve the quality of their lives. The programmes are broadcast daily in the morning, noon and evening. The average duration of Farm & Home broadcast is 60 to 100 minutes per day. Farm & Home programmes also include programmes for rural women, rural children and rural Youth.

All India Radio provides extensive programmes on land and water conservation, sustainable agriculture, biotechnology, integrated pest management in crops, crop insurance schemes, environment protection, disaster management and role of panchayats in rural development etc. These programmes are produced with the help of subject matter experts. All India Radio maintains a very close liaison with the Ministries and Departments of agriculture & rural development of central and state governments. The programmes are mounted in local and dialect from different stations. Local Radio Stations also broadcast regular programmes on rural development in different formats. Dialogues, discussions, talks, interviews, features, serials, dramas, slogans, jingles, phone-in-programmes, musical features and farm school on AIR etc. are used to convey the message through radio.

AIR has stepped up its activities of Agriculture Broadcast with the launch of exclusive project Mass Media Support to Agriculture Extension with the title Kisan Vani for AIR from 15th February, 2004 in collaboration with Ministry of Agriculture to inform local farmers the daily market rates, weather reports and day to day activities in their area at micro level. Presently, "Kisan Vani" is being broadcast from 96 FM stations of AIR.

Environment Programmes

Keeping in view the importance of the subject, all the AIR stations are broadcasting daily programmes on Environment for 5 to 7 minutes duration and weekly programmes of longer duration for more than a decade. The importance of protecting environment is being discussed in our other programmes i.e. health/ women/ rural women/ youth and children programmes also for making people aware of this serious issue. The AIR stations are broadcasting programmes on the subject on the basis of instructions and guidelines issues by the Directorate. In order to inform and educate the listeners, living both in urban and rural areas, for creating environmental consciousness among them on preservation of environment through development of forest, afforestation, social forestry, far forestry etc., these programmes are mounted in

interesting and imaginative way. All AIR stations in their local languages are broadcasting these programmes in different formats like talks, discussions, features, news, items, sports, serials etc. AIR Stations have been advised and reminded from time to time to intensify and include the programmes on Environment in their schedules.

**Family Welfare Unit**

AIR, with its vast network of about 225 Radio Stations, broadcast programmes on health and family welfare. All AIR Stations broadcast family welfare programmes in the regional languages/ dialects of our country. AIR Stations broadcast maximum number of programmes on health and family welfare. The programme cover general topics as well as special audience programmes in various formats like talks, discussions, features, quiz, jingles, spots, short stories, drama, success-stories, phone in programmes etc. Apart from this rest of AIR stations, including local Radio Stations are also mounting programmes on the theme regularly.

National communication strategy has been sent to all major stations as a resource material to highlight the new communication strategy. Fresh instructions have been issued to all AIR stations to concentrate more on importance of small family size, methods of prevention of pregnancy, sterilization, broadcast of field based programmes (interviews with beneficiaries of family planning), importance of nutrition in food, child care, immunization, breast feeding and rising the age of marriage etc.

Women's Programmes

All Stations broadcast programmes for rural women as well as urban women at the timings convenient for listening by the respective target groups. The programme directed to women listeners cover subjects related to socio- economic development of women, health and family welfare, food and nutrition, scientific home management, women entrepreneurship, education, including adult education, gender issues etc. These Programmes also aim at creating wide social awareness about rights and privileges of women through the propagation of legal literacy.

All India Radio strives, through its programmes, to seek to raise the social consciousness of the country in regard to attitude towards women. Different traditional folk forms are used to communicate specially with the rural women audience.Besides the issue of women forming the main part of the women's programmes, the problems in general faced by women and the need for change in social attitude towards women also forms an integral part of the general broadcast. Special programmes as well as general

audience programmes are being broadcast focusing on the issue to change social attitude and behavioural practices towards women.

**Children's Programmes**

All AIR Stations broadcast programmes for children on regular basis. In the programmes addressed to women and general audiences, stress has been laid on programmes regarding health and care of mother and the child. Programmes dealing with immunization and primary health education form a regular part of our broadcasts.

Programmes are planned keeping in mind the following action points:-

- Protection of rights of children, specially, regarding child labour
- Care and support to disabled children.
- Care and support to children under difficult circumstances.
- Equal status of girls and equal rights to women.
- Universal access to basic education to children and more attention to girl's education.
- Safe motherhood, planning of family size,
- Providing safe and supportive environment to children.
- Improvement in the economic condition of family and self reliant society.
- National and international cooperation for better future of a child.
- Safe drinking water facility and sanitary means of excreta disposal.

Special programmes focusing on the status and importance of the girl child in various formats such as discussion, comparing, talks, short stories, jingles, spots etc. are being broadcast during the transmission on a continuous basis at regular intervals throughout the year to create social awareness. AIR broadcast programmes from almost all its stations for children of three categories, viz. programmes for children between the age of five to seven years & eight to fourteen years and special programmes for rural children. Some of the programmes are broadcast on weekly basis. Plays, short stories, features, choral songs, interviews, stories from epics etc. are part of these broadcasts.

International Relations Unit

International Relations Unit of DG; AIR remained quite active during 2008 in carrying out and coordinating international activities and commitments concerning All India Radio. A number of AIR official participated in the international events abroad. IR Unit also coordinates exchange of radio programmes with other broadcasting organizations of different countries under CEP Agreements signed between Govt. of India and other countries. There are 41 countries at present with whom Government of

India has ongoing 'Cultural Exchange Programmes Agreements' figuring cooperation in the field of Radio' broadcasting. Many high level delegations from many countries visited AIR during the period with the aim to explore avenues for better cooperation with AIR /Prasar Bharati. Many organizations is other countries have also shown interest in AIR 's broadcast comment to use the same in their networks.

5. Radio Bridge:

Radio Bridge is a radio programme based on Information Technology format. Today Radio has taken giant leaps in field of Information technology application in its broadcasts. Radio Bridge means connecting different stations throughout the length and breadth of the country using Phone in technique. In this technique, an expert sitting in one place i.e. in a central radio station interacts with the other news presenters, readers, and common man in other radio stations across India by dialling them and recording their voice or connecting them live. This format was first used by All India Radio for covering election campaigns and results.

Radio Bridge is basically an interactive programming where the listener and the presenter talk to each other through telephone. Their talk goes on air instantly. Such presentation needs advanced publicity, so that the listeners can get ready to air their grievances, queries or requests. They dial up the announced telephone number at a stipulated and get their problems discussed with experts in the studio. Today the phone in format is being used to wide range of programmes like request for film based songs, health related programmes, rural broadcasts etc. The Radio Bridge gives a unique opportunity to interact live with many people in a specified time and place. It is now extensively used during opinion surveys, election programmes as well as during major social and sports events.

Advantages of Radio Bridge:

- The programme gives satisfaction to the listener as his voice is being listened and replied immediately. It installs a sense of participation among the listeners.
- Radio Bridge is regarded as one of the best interactive programming format among the entire range of radio programmes.
- With the increasing telephone density in the country large populations having phone facility can be included in the format making it more participative and interactive.

- Radio Bridge is an immediate feedback device and one of the best methods to dissipate any kind of public information

Disadvantages:

- Radio Bridge is a highly technical oriented programme where in the technical crew needs to be on high alert during programme to avoid any hick ups and breaks.
- It needs good advance publicity and detailed planning to connect various stations in a given specific time period.
- The programme needs to show case varied divergent opinions, issues; otherwise it can become boring and stale.
- The presenter needs to have expertise in dealing with various listeners and behave tactfully in interacting with them keeping the time constraints.

**Trends in Radio Broadcasting**

Broadcasting encompasses much more than transmission of programmes from a radio transmitter. The rapid advancements in technologies and the ever extending areas of broadcasting are leading to a review of the nature, style and content of programming. The entire focus now is on the content presentation in a technologically advanced style, with efforts to see that the message reaches the audience in an interesting way. Broadcasting has evolved from the past many years by adapting to the various innovations and changes brought about by the modern technology, changing tastes of the audiences and requirements. The following are the changing trends observed in the areas of broadcasting.

- Changes in structures
- Changes in regulations.
- Changes in mode of transmission.
- Changes in programme concepts.
- Changes in production and presentation.

**A. Changes in structures:**

The renowned communication specialist Marshal MacLuhan observed that the world has become a 'Global Village'. With the use of technology such as Printing press, high power transmitters and satellites communication has become overly centralised. This has led to the unidirectional flow of messages and the system became immune to the diversified audience and reflecting their opinions. However during the last few

years the trend is seeing a reversal and the communication is now focussed on the local audience and catering to their interests. This trend is also evident in radio broadcasting.

- Broadcasting structures in India has changed from centralised to decentralised structures.
- Five local stations were first established by AIR during the sixth plan. (1980-1985) on an experimental basis. The local radio stations scheme received a massive push from the Government as the experimental stations proved extremely popular.
- Three types of local radio stations were generally conceptualised depending on the type of funding
    1. Public service local radio station catering public service funded by Government.
    2. Commercial local radio station funded by advertisements and commercial ventures.
    3. Community local radio station, a non profit radio station dedicated for providing programming specifically designed to a community with distinct geographical, cultural and linguistic pattern.

**B. Changes in Broadcasting Regulations**:

Broadcasting became a regulated affair in every country and every country started to make its own legislations depending upon its context and need.

- In Germany broadcasting is governed by public law and inter-state agreements.
- In U.K, BBC works under royal charter while the private radio stations were under the control of Independent Broadcast authority.
- In US, the Federal Communications Commission (FCC) was set up under the commission act of 1934 for supervising broadcasting.
- In China it is governed by the Article 22 of the constitution of People s Republic of China.
- In India the Indian Telegraph Act, 1885, Article 19(1)a of Indian Constitution and Prasar Bharati Act regulate the broadcasting.

Apart from regulations many noticeable deregulations were also made to make the system more accessible and to undertake more commercial activities.

- In Japan the Amendment of 1950 broadcast law provided the broadcasting units to take up auxiliary services.

- BBC made necessary changes in its regulations in order to accept commercial advertisements in some of its radio services.
- AIR commercial services which were once limited to Vividh Bharati, now extend to various primary channels.

**C. Changes in mode of transmission**

Medium Wave transmissions supplemented by the shortwave were the preferred mode of transmission in most of the counties. The trend has changed to as transmission in FM mode and further new technological innovations like use of satellites and digital technology had contributed to more advanced form of transmission systems.

- FM Radio: FM is the frequency modulated system of transmitting radio programmes and can reach about 70 kilometres with better audio quality than AM. FM technology was developed in 1933 but the system of broadcasting stabilized in 1960. In India FM radio broadcasts started in 1977 at Madras (Chennai). Large scale expansion of FM broadcasting took place in the VII five year plan.
- Sky Radio: AM and FM technologies are land-based and terrestrial broadcasting systems. Sky radio refers to satellite broadcasting system. The programmes are uplinked to satellite from a central radio transmission centre and the same can be downloaded at the relaying centres using devices for down linking.
- Digital Audio Broadcasting: The method of 'Analog' broadcasting has shifted to 'Digital'. In the analog broadcasting the series of sound waves closely resembling the original sound waves are broadcasted. In digital mode the collection of samples of original sound is translated into a binary computer language. Digital sound enhances the quality of the original sound.

**D. Changes in programme concepts:**

There has been marked change in the approach in programming particularly in area specificity and in participation of listeners in programming process.

- The concept of local radio has introduced an element of participative nature in the programming long with reduced the gap between the broadcasters and public. A down to earth character focussing local news vies and opinions found place in the programming. Ample coverage was given to local events, festivals, fairs, meetings etc.

- With vast and rapid developments in technology, radio reached to the doorsteps of listeners through interactive programming. Programmes like 'Phone –in-radio' 'Radio-on-demand' etc have increased the two way communication between the listener and radio broadcasters. Programmes which provide advices, information, suggestion on a given topic of common interest like health, agriculture, culture etc became very popular in radio. Extending the techniques of 'Phone-in–services' radio stations started to organize 'Radio bridges' i.e. programmes in which the expert placed in studios of different radio stations with a moderator in Delhi can discuss the subjects of importance and also clarifies doubts of listeners in any part of the country by involving them directly into the discussion through phone.
- A new form of conveying the social message i.e. the 'drama format' was started in radio.
- The trend of news reading evolved into news presentation in which the news is analysed and made more understandable to public by discussing all possible angles and sharing opinions.
- New value added services like 'Radio Data System' were started in which programme associated date is presented in the form of text.

**E. Changes in production and presentation**:

- The conventional way of recording and editing was done using cassette recorders, ultra-portable and portable recorders etc. Lately computer hard disc-based recording, editing and playback systems are being introduced to enhance the efficiency and quality of programme production.
- Portable digital news gathering equipment is [provided to the news correspondents to enable them to feed the news from anywhere in the country apart from enhancing the speed and quality of news coverage.
- TRACT (Transportable Communication Terminal) with direct access facility to the satellite is available with the radio networks. This facilitates instant coverage of festivals and happenings, live commentaries of sports and games etc.
- The earlier 'formal', announcement type of radio presentation has given way to a more informal presentation in which the radio presenter discusses the issues with the listeners.

- The news reading concept transformed into ‘compering’ in which news anchors will announce and also establish personal rapport with the listener by involving him in the discussions.
- The presentation has become more of a ‘chat type’ in which two or more presenters discuss the issue.
- The advent of FM channels has created new professions like Disc Jockeys, aho present music with a free style. They provide entertainment inter spread with information on various issues like traffic, weather etc. They personally interact with the listeners over phone and play the music of listener choice adding interesting snippets on music or a joy full comment.

**Community Radio:**

The expression Community Radio has been defined in different ways. It has been called a local radio, people's radio, democratic radio, and so on.

- According to Lewis (1995): "The community radio is a form of local radio which defines itself as an autonomous entity and relies on the community for its survival without any commercial aims or objects."
- According to UNESCO, Community radio is 'a medium that gives voice to the voiceless, that serves as the mouthpiece of the marginalised and is at the heart of communication and democratic processes within societies'.

Community radio is a type of radio service that offers a third model of radio broadcasting beyond commercial and public service. Community stations can serve geographic communities and communities of interest. They broadcast content that is popular and relevant to a local/specific audience but which may often be overlooked by commercial or mass-media broadcasters. Community radio stations are operated, owned, and driven by the communities they serve. Community radio is not-for profit and provides a mechanism for facilitating individuals, groups, and communities to tell their own diverse stories, to share experiences, and in a media rich world to become active creators and contributors of media. In many parts of the world, community radio acts as a vehicle for the community and voluntary sector, civil society, agencies, NGOs & citizens to work in partnership to further community development as well as broadcasting aims. Modern-day community radio stations often serve their listeners by offering a variety of content that is not necessarily provided by the larger commercial radio stations. Community radio outlets may carry news and information programming

geared toward the local area, particularly immigrant or minority groups that are poorly served by other major media outlets.

7.1 Models of community radio

Philosophically two distinct approaches to community radio can be found though the models are not necessarily mutually exclusive. One stresses service or community-mindedness, a focus on what the station can do for the community. The other stresses involvement and participation by the listener. The service model localism is often prized, as a third tier, can provide content focused on a more local or particular community than larger operations. Sometimes, though, the provision of syndicated content that is not already available within the station's service area is seen as a desirable form of service. Within the access or participatory model, the participation of community members in producing content is seen as a good in itself.

Community radio is confined to a small geographical area. It depends on low power transmission covering not more than 20-30 km radius. It serves a community which uses common resources for livelihood, has common development issues and concerns, which are relatively localised, nevertheless connected to national and regional development goals. The concept of community radio developed in the West as an alternative to or a critique of the mainstream broadcast media. Tracing its origins in Europe in the 1960s and 1970s, McCain and Lowe (1990) found "swashbuckling entrepreneurs boarded the airwaves illegally and seized as much of the audiences as they could carry away from the treasure chest monopolies controlled by the State with its public service model of broadcasting." Thus, pirate stations have been a major factor in motivating governments and national broadcasting systems to introduce legitimate local radio in Europe.

**Advantages of Community Radio**

The community radio projects were mostly associated with externally funded development projects which were influenced by the discussions and inclusive concepts of participatory communication for sustainable development and new understanding of communication as a two-way process rather than just communicating 'to' the listener.. The community was treated as the social space within which participation and two-way communication process would occur. This reinforced the need for planning communication strategies to catalyse development efforts in the immediate communities.

- Communities are not monolithic units. They consist of people with different positions, individual/community priorities and varied approaches to their diverse questions and their solutions. There are also different levels of connectors and catalysts within communities. The community radio provides a platform for all segments of population to discuss common issues from different viewpoints in a positive atmosphere.
- All members of the community have to discipline themselves when participating in the programmes of community radio. They are expected to follow certain norms prescribed by the code of conduct of the radio station. In effect, community radio trains the community members in a very practical way for democratic behaviour.
- The community radio mode provides opportunities to project and discuss the community's common issues, helps promote a sense of belonging among community members and strengthens the community bond among individual members. Thus the objective of community radio programming is to promote democratic discussions and a platform for expression of divergent view points.
- Community radio can facilitate contextualising national development programmes within the immediate community and taking national development goals as close as possible to the intended beneficiaries. Through community radio, members are able to feed-forward on local development concerns, giving an opportunity for development agencies and authorities to get involved in a constructive dialogue on development priorities at local levels.
- Similarly, the community radio provides opportunities to the community to make reiterative evaluation of programme implementation and eventually to make development inputs more relevant and efficient. This transparent process makes the community rely more on an integrated national system in which the degree of power sharing between the centre and the periphery is understood by each other.
- The ability of the communities to be involved in shaping programme implementation at the grassroots levels is well assured. A regular community dialogue and feedback facilitates continuous improvement in programme delivery and makes the radio centre more responsive.

- At the same time, community radio helps facilitate self-reliance by mobilising resources readily available with the community. They can analyse their problems and propose their own solutions. This confidence makes them consider themselves as a part of the system they belong to. The very recognition that they have the possibility to influence national policy implementation at grassroots levels makes them feel a part of an inclusive nationhood.

Community radio operations have distinct characteristics which differ from commercial and national Public Service Broadcasters (PSB) in regard to its mission and service. Community radio does not compete with commercial and PSB, rather plays a complementary role. But primarily, community radio is operated by and for the community and owned by the community itself. It is an empowering tool for the community. A nation consisting of empowered communities is more secure as they can make an equitable contribution to nation building.

**Community Radio Initiatives**

The advent of low-cost low-power EM transmission and downsizing of production equipment and the experiences in different parts of the world provided impetus for community radio. Some initiatives were taken to make Community radio as a potential participatory and two way communication tool to support development in rural societies of developing countries.

UNESCO supported community radio projects in Homa-bay in Kenya, and Mahaweli in Sri Lanka, in the early 1980s are among some of the earlier efforts in this direction. But, given the fact that the countries were not yet ready to relinquish their broadcasting monopolies, these early initiatives had to be carried out within the Government-owned broadcasting systems.

**Mahaweli Community Radio: Sri Lanka**

The first Asian community radio was established at Girandumkotte in Sri Lanka in 1986 under the Mahaweli Community Radio project. In fact, the project was started in 1980 as a community programme service, serving the Mahaweli settlements under which nearly 60,000 families were resettled downstream the Mahaweli River. The purpose of this community radio project was to cater to the needs of the newly-settled families. It aimed to help them exchange their settlement experiences, learn new skills from each other, give timely information on day-to-day activities and help in catalysing development in the new communities. It was a new experience where both young and

mature members of the settlers' families functioned as volunteer broadcasters. They identified various settlement issues, animated the community through their own programmes, much of which also related to cultural expressions which they brought from their place of origins. Lively interaction between settlers and field officers responsible for various settlement administration matters were broadcast over the community radio. These broadcasts enabled policy makers and senior officials responsible for settlements to learn about problems and prospects of the settlements. It also helped to establish an all inclusive decisions-making process to solve many important issues such as water distribution, marketing avenues, health, education, etc. The Mahaweli community radio project of Sri Lanka in fact was administratively under the national broadcaster, Sri Lanka Broadcasting Corporation. The unique feature of the Girandumkotte community radio system was the airing of the volunteers' produced programmes. There were the three expert producers assigned to the station by the Sri Lanka Broadcasting Corporation. They were all fresh recruits, specifically trained for community broadcasting and were therefore not highly influenced with the ideas of the so-called professional broadcasting or commercial programming of the urban centres. They acted as technical consultants and trainers of the volunteer broadcasters.

**Thambuli Community Radio: The Philippines**

The first truly community-owned and operated Asian community radio stations were established in the Philippines with UNESCO-supported Thambuli Community radio project. The "Thambuli Community Radio Project" has set up a management and training team that co-operates with communities to organise independent community radio stations in less developed rural areas. So far, twenty two community radio stations have been established in different rural communities. In the project, the thrust is on the local communities to build the radio station. Through focus group discussions, they set the guidelines for the broadcasters; they organise the radio team from all sectors of the village. All team members volunteer to share work. The project provides equlipment, training, facilitates research and helps in identifying community development schemes. Devoid of commercial or sectarian interests, these small radio stations help strengthen the democratic process by providing access to different viewpoints, build tolerance and help animate the local development efforts. For the communities involved, there is a deep sense of pride of being the masters of their own

communication facility that allows correlating their activities with the wider national development goals.

**Radio Sagarmatha: Nepal**

Another independent community radio movement in Asia began in Nepal. Radio Sagarmatha is Nepal's first independent community broadcasting station and represents South Asia's first effort at "independent community radio." The Sagarmatha radio station was established with financial and technical assistance provided under UNESCO's International Programme for the Development of Communication (IPDC). . Under Nepal's National Communication Policy Act (1993), a special task force, Radio Sagarmatha prepared the guidelines for the radio project. Private sector participation in FM broadcasting is one major provision of this act. Radio Sagarmatha has been on air daily on 102.4 FM with its innovative combination of educational, informative and entertaining programming. Radio Sagaramatha's programmes concern vital issues affecting the everyday lives of the citizens of Nepal's capital Kathmandu and its environments. Radio Sagaramatha's programmes have looked at Kathmandu's growing problems such as air pollution, urbanisation and its impact on heritage sites, tourism, threat of HIV / AIDS and garbage disposal. Radio Sagaramatha serves the ethnic, religious and linguistic diversity of over two million people around the Kathmandu valley

Community broadcasting is a relatively new concept in Nepal. Radio Sagaramatha's listeners are mostly urban citizens of Kathmandu which is the nation's social, economic and political centre. Thus, the radio is dealing with an intelligent, informed community. This listener profile is both a challenge as well as an opportunity. Getting attention of this audience demands programming that is competitive, comparable and superior to what already exists. It is an opportunity, because Sagaramatha is dealing with a public that has always influenced Nepal's political and economic decision-making. Thus, the community radio is also in a position to influence change. This environment shapes Radio Sagaramatha's mission. Nepal now has a strong community radio movement with nearly six community radio stations in different parts of the country. Some of them have been established by people who have formed in to community co-operative societies, deemed to be a good model to ensure community ownership.

**Community Radio policy in India**

Community Radio Policy in India, guidelines provided by Ministry of Information and Broadcasting, GoI. In December 2002, the Government of India approved a policy for the grant of licenses for setting up of Community Radio Stations to well established educational institutions including IITs/IIMs. The matter has been reconsidered and the Government has now decided to broad base the policy by bringing 'Non-profit' organisations like civil society and voluntary organisations etc under its ambit in order to allow greater participation by the civil society on issues relating to development & social change. Basic principles of Community Radio policy guidelines in India are provided by Ministry of Information and Broadcasting. An organisation desirous of operating a Community Radio Station (CRS) must be able to satisfy and adhere to the following principles:

- It should be explicitly constituted as a 'non-profit' organisation and should have a proven record of at least three years of service to the local community.
- The CRS to be operated by it should be designed to serve a specific well-defined local community.
- It should have an ownership and management structure that is reflective of the community that the CRS seeks to serve.
- Programmes for broadcast should be relevant to the educational, developmental, social and cultural needs of the community.
- It must be a Legal Entity i.e. it should be registered (under the registration of Societies Act or any other such act relevant to the purpose).

Transmission and power range of Community Radio stations in India

- CRS shall be expected to cover a range of 5-10 km. For this, a transmitter having maximum Effective Radiated Power (ERP) of 100 W would be adequate. However, in case of a proven need where the applicant organisation is able to establish that it needs to serve a larger area or the terrain so warrants, higher transmitter wattage with maximum ERP up to 250 Watts can be considered on a case-to-case basis, subject to availability of frequency and such other clearances as necessary from the Ministry of Communication & IT.
- The maximum height of antenna permitted above the ground for the CRS shall not exceed 30 meters. However, minimum height of Antenna above ground

should be at least 15 meters to prevent possibility of biological hazards of RF radiation.

- Universities, Deemed Universities and other educational institutions shall be permitted to locate their transmitters and antennae only within their main campuses.
- For NGOs and others, the transmitter and antenna shall be located within the geographical area of the community they seek to serve. The geographical area (including the names of villages/institution etc) should be clearly spelt out along with the location of the transmitter and antenna in the application form.

Although letters of intent have been issued to 233 applicants and grant of permission signed with 102, only 71 community radio stations (CRS) are presently functioning in the country. This is a marginal increase over the 57 channels functional by March. A total of 727 applications have been received by the Information and Broadcasting Ministry, of which 264 were from educational institutions. A total of 105 applications were rejected while 389 were under process. Of the operational channels, 52 are educational institutions, 15 are non-governmental organizations, three are Krishi Vigyan Kendras, and one is a State-level Agricultural University. Tamil Nadu leads the country with 13 CRS, followed by Uttar Pradesh with 9, Maharashtra with 7, Karnataka with six and Delhi with five. Sixteen other states have one to four CRS each.

8. FM Radio in India

FM radio appeared in India in a limited scale in 1970's. The application of FM started when AIR opened its first local FM radio station at Nagercoil in Tamilnadu in 1984, to generate programming of local relevance through participation of local communities. When FM technology was introduced it was difficult to buy FM band radios as they were too expensive. FM channel's programming was to address rural, tribal audience but the radio sets were affordable for only rich and upper class households there by creating a mismatch between the content and the audience. The idea of local community participation became gradually diluted.

Today there are 139 FM transmitters all over India. But the FM radio programming is facing problems due to staffing in local stations. The location and deputation of staff to FM radio stations located in remote areas became very problematic for AIR. The FM scene under the State run AIR was stagnating when the commercial industry began interest in FM markets. The commercial FM efforts of Times

Radio, and Radio Mid Day tried to attract younger generations with different music formats. The pressure to open up the FM radio markets increased. The ideology of the post liberalized India also helped in successful entry of private players into the FM market.

The Indian Government took up the expansion of FM market. As it was highly commercial in nature Government imposed hefty licence fee apart from a revenue sharing model in which the operator has to share the profits of the business with the Government. The first phase of expansion ran into trouble with some of the bidders going to court and some others defaulting. Out of 108 licences 86 never went on air. In a bid to revive the expansion scheme, Government recast its policy in September 2005 by announcing a more reasonable one time entry fee and four percent of revenue sharing arrangement and wanted to give out 339 licences to private parties. Educational were allowed to seek FM licences with a bank guarantee of Rs. 50,000. But only very few institutions like Annamalai University, Mudra Institute of Communications have taken licences and gone on air till date. Reacting to the situation, Government once again referred the FM issue to a group of ministries in October 2005. To provide guidelines for licensing

The first phase of private sector involvement in FM radio broadcasting was launched by Ministry of Information and Broadcasting, Government of India vide its notification in year 1999. The objective behind the scheme was to attract private agencies to supplement the efforts of All India Radio by operationalising FM radio stations that provide programs of relevance with special emphasis on local content, increase content generation and improve quality of fidelity in reception. During phase-I, total 108 channels were offered to private agencies in 40 cities. One channel in each of these cities was also earmarked for educational content. However, only 21 private channels could get operationalised during this phase. These 21 FM radio channels have large acceptability from the listeners.

Based on the experience of phase I, Government introduced phase II scheme with certain modifications on 13$^{th}$ July 2005. In this phase 337 channels were put on bid encompassing 91 cities. Letters of Indent (LOI) were issued to 245 channels and 136 channels have become operational till now. Recently government vide its notification dated 8$^{th}$ June 2007 invited bids for 93 vacant slots and four new channels in Dehradun.

It is expected that private FM radio broadcasting will soon be extended covering 92 cities in total.

FM radio broadcasting due to its versatility is considered as main medium to provide entertainment, information and education. The issue is being raised that benefit of such advancements should also be extended to other smaller areas not covered so far. Moreover, demand of the local content is increasing. India is a vast country with mixed population. Demand for additional FM radio channels is picking up. In addition to country wide spread of FM, the subjects relating to FDI, permitting News and current affairs, networking in FM broadcasting, and reduction of license fee in certain identified areas also need to be addressed.

The Union Cabinet is expected to take up the matter soon, and once the green signal is given by it, the bidding process for over 700 new stations, most of which would be located in smaller towns, will begin. Even though the first two phases of FM radio expansion have taken place several years ago, the third phase of the process has been lying in a limbo due to primarily opposition from the industry to certain norms prevalent currently, including royalty to be paid to music companies. Finally, the process has got the green signal from a high level panel appointed to look into the pros and cons of the process. Incidentally, the move forward has happened just days after the Telecom Regulatory Authority of India (TRAI) recommendation that the FDI ceiling in the FM radio sector be increased from the current 20 to 26 per cent, down from its earlier suggested 49 per cent.

The most important development during the third phase expansion will, however, be the permission to the private FM stations to broadcast news, albeit with certain pre-conditions, such as the news content having to be sourced from the All India Radio and Doordarshan. Over 250 FM stations are operational in various parts of the country at present, set up under the first and second phases of FM radio expansion, and the third phase thus would see a much larger expansion than the second which saw licences for over 250 stations in 91 cities given out in 2006. The phase 3 expansion is also expected to see certain changes in the norms, such as permission to private stations to set up their own transmission facilities, unlike the now mandatory co-location of such facilities on Prasar Bharati infrastructure.

It is also likely to see relaxation in the 15 per cent limit on the number of channels an entity can own in the case of Jammu & Kashmir and the North-East.

Third phase of FM Radio to be cleared by Govt this month The new FM Radio policy for phase III, which is going to be cleared this month after a long delay, proposes to allow private FM Radio to generate news content on sporting events, weather and traffic.

For all other news, they will have to draw from All India Radio and Doordarshan.

The broadcasters had made strong bid for being allowed to generate general news, and the Telecom Regulatory Authority of India(TRAI) had in fact recommended that they should be allowed to carry news from national news agencies like UNI and PTI, but the Government rejected the TRAI recommendations on the ground that news was a sensitive matter, and it would be difficult to monitor the content of hundreds of FM Radio that would come up after the Phase III was rolled out. The Foreign investment limit in the sector is also likely to be raised from 20 to 26 per cent, sources in the Ministry of Information and Broadcasting told UNI.

The FM Phase III is coming to the Cabinet by end of this month and auctions would take place in the second part of the year, the sources said. The new policy was likely to reduce by half the annual licence fee for operators in Jammu and Kashmir and the Northeast. This exemption would be for a period of three years. Also these regions have been given some exemption in the number of channels that an entity can own. There will be a limit of 15 per cent at the national level, but in the case radio channels in Jammu and Kashmir and Northeast, one entity can own over and above this cap. The TRAI recommendations had been given in November,2008, after the Ministry sought its fresh response on several issues. Trai's first set of recommendations on the third phase of FM radio had come in February,2008. Currently, there were over 200 private FM radio stations operational in the country, but after the Third phase, the number was likely to reach around 1000. The third phase would focus on small cities and towns, which are uncovered so far.

**FM Radio Industry – Risk Factors**

**1. Decreasing Advertisement Revenues**:

The FM radio industry derives almost all its revenues from advertisements. The radio stations are free to air and do not garner any subscription revenues, thus making them totally dependent on advertisement revenues. Advertising is a discretionary

expenditure and is the first one to be pruned in case of an economic slowdown. Thus, the major marketers advertising on radio may cut their ad budgets in case of an economic downturn. This would adversely affect the radio industry.

**2. Lack of variety in programming content:**

The content played on different FM radio stations is very similar in nature. Most of them play popular film and pop music and very few cater to the niche audience such as English rock music lovers or Indian classical music lovers. This is happening because one player is allowed to own only one station in every city. Thus the FM radio operators are not willing to take a risk by not catering to the mass segment. This is hurting the growth of the FM radio industry as people who prefer niche music genres are not tuning into FM radio. Besides this, people frequently switch between stations leading to listenership fragmentation.

**3. Competition from satellite radio**

Many of the restrictions that apply to FM radio broadcasters do not apply to satellite radio broadcasters. At present, multiple channel ownership by a FM broadcaster in the same city is not permitted; however, the current satellite broadcaster in India is offering multiple channels. FM broadcasters cannot broadcast news and current affairs 24 hrs a day whereas satellite broadcasters can do so through a dedicated station. FM radio is limited to a small range around the transmission site while the satellite signals cover the entire country. Satellite radio broadcasters do not have to pay any license fee whereas FM radio broadcasters have to pay 4% of their gross revenues as license fees. This favourable treatment meted out to satellite broadcasters may adversely affect the growth of the FM radio industry.

However, the satellite radio broadcaster World Space operating in India has not been able to meet with much success. In fact, in India, World Space lost 8,713 net subscribers during 3QFY07, ending the period with 164,902 subscribers. Besides this, satellite radio has high subscription charges whereas FM radio is free to air.

**4. High music royalties**

FM radio broadcasters have to pay high royalties to the music companies for the music content procured from them. However the broadcasters can enter into a voluntary agreement with Phonographic Performance Limited and The Indian Performance Right Society Limited at high rates or under the rates determined by the courts of law to minimize their expenses.

**5. Threat from digital technologies:**

Digital broadcasting technologies like Satellite/Digital Audio Broadcast (DAB) using the FM band and Digital Radio Mondial (DRM) using the AM band are becoming popular worldwide. There is efficient utilization of spectrum in case of digital broadcasting, enabling the broadcast of multiple radio stations. The quality of digital broadcast is better than analog transmission. However, digital receivers are more expensive than analog receivers. In Western Europe, a few countries are looking at a total switch off of analog broadcasting (FM/AM) by 2020 or so. Norway is the only country that has formally announced a cut off date. But with analog TV likely to be switched off in India in the next 5-7 years, radio's turn could come in the next 10-15 years.

**6. Intense competition**

There is intense competition between the FM radio operators operating in the same city. All of them are clamouring for the same advertisers, listeners and need to procure similar content. The number of FM radio stations has increased dramatically leading to a proportionate increase in the demand for trained personnel. Due to this attrition and poaching have become wide spread.

**Future positive trends:**

**1. Growing Indian Economy**

The radio industry recorded a growth of nearly 58% in 2006. The share of radio in the total advertising industry increased from 2.4% to 3.1% during the same year. This is further expected to increase to 5.5% by 2011 as per the FICCI-PwC report on the Indian entertainment and media industry. The size of the radio industry is projected to increase at a CAGR of 28% from Rs 5 bn in 2006 to Rs 17 bn by 2011. The major advertisers on radio are the entertainment channels, real estate firms and retailers. All these industries are expected to witness robust growth in the years to come. More than 90 channels across various languages and genres are being launched this year. Radio industry should be a major beneficiary of the high growth in these sectors.

**2.Demographics**

The target listeners for the radio industry are the youth. 55% of the India population is below 25 years leading to an increase in the audience of the radio industry. The content on radio primarily comprises of film music. The Indian film

industry is getting more organized and receiving more institutional funding. The quality of music produced is improving which enhances the growth of the radio industry.

**3. Reduction in license fees:**

The Phase I policy for the privatization of FM radio had a very high fixed license fee structure with an annual escalation of 15%. In the phase II policy, a revenue sharing formula was introduced whereby radio companies had to pay a fixed annual license fee of 4% of gross revenues or 10% of the reserve OTEF (One Time Entry Fee) whichever is higher. The reserve OTEF was 25% of the highest valid bid for that city.

**4. Availability of listenership data:**

Leading TV viewership research company, TAM, has recently ventured into radio audience measurement through a study called RAMS (Radio Audience Measurement). The study is currently restricted to the cities of Delhi, Mumbai and Bangalore. Research may cover larger number of cities in the years to come. Availability of listenership reports is bound to support and attract larger spends from marketers. Marketers generally wait for adequate research data to emerge before committing large spends to any medium.

**5.Local advertising Globally:**

The local retail segment constitutes a large part of radio's advertising income. As per the CII-KPMG report, while local advertising contributes 70% of radio revenues in the United States of America, in India, the share of local advertising is only about 8% of radio revenues. Ideally, a localized medium like radio can be effectively used for local-level promotions apart from being bundled as part of cross-media promotion strategies. Thus there is huge potential for the radio industry to benefit from an expected increase in the share of local advertisements.

Phase III policy

It is expected that after the completion of Phase II Policy, the Government will open up as many as 700 channels in the Phase III. This phase will witness licenses being awarded in smaller towns. This could result in radio getting a larger share of the advertising spends. Though the radio industry has many growth drivers, there are various risk factors also that could derail the growth of the radio industry.

1. Red FM:

- Red FM is an Indian FM14 radio brand, with stations broadcasting at 93.5 megahertz in the cities of Mumbai, Delhi, Kolkata and Pune in addition to Bhopal, Gwalior, Jabalpur, Indore, Nashik, Aurangabad, Nagpur, Bangalore, Mysore, Mangalore, Gulbarga, Kochi, Trivandrum, Trissur, Kannur, Kozhikode, Hyderabad, Vijayawada, Vizag, Warangal, Rajahmundry, Tirupathi, Ahmedabad, Rajkot, Vadodara, Lucknow, Kanpur, Allahabad, Varanasi, Jaipur, Bhubaneswar, Asansol, Siliguri, Gangtok, Guwahati, Jamshedpur, Shillong and Aizwal.
- It was launched in 2002, playing a mix of Hindi and English songs. However, the programming is now 100% exclusively Hindi.
- The channel is owned by Kalanidhi Maran, with a 48.9% stake, as well as minority holdings of Hyderabad-based IT company Value Labs, NDTV, Astro. It was acquired from India Today promoter Living Media in January 2006.
- Their punch line is 'Bajaate Raho' (Keep Playing). The most widely broadcast shows include "Morning No.1", "Dilse", "Mumbai Local", "One Two ka Four", "Mera Wala Gana", "Superhits Music Show", "RDX", "Indore Beats" and "Nomoshkar Kolkata".

2. Radio Indigo 91.9

- Radio Indigo 91.9 FM15 - The color of music, Soul of Bangalore is the country's first and only international hit station.
- This is a Jupiter Capital venture. Radio Indigo is the only radio station in the country that plays contemporary international music. Playing all the hits all the time, Radio Indigo caters to Bangalore and Goa's long-standing tradition and a vibrant community of music aficionados. The station plays a vibrant array of genres like pop, classic rock, hip-hop, jazz, world music and much more. Having headquarters in Bengaluru.
- The station has today become a house-hold name and those who have grown to love the station are sneaking it in their homes, cars and office. Radio Indigo 91-9 has evolved to brilliance through bigger promotions & prizes.

3. AIR FM Rainbow:

- AIR FM Rainbow, run by All India Radio16 is a national radio station, heard all across India. This government owned enterprise, features Hindi and regional

language songs and occasional English songs along with hourly news bulletins in English, regional language and also in Hindi.

- In Bhopal, it operates on 102.1 megahertz in Hindi and English language covering more than 12 districts of Madhya Pradesh and 21 Suburbs in Bhopal City. In MP, it is also known as "Rainbow FM". In Delhi, it operates on 102.6 megahertz and AIR FM Rainbow Delhi is the only FM Channel to be aired in as many as ten cities. In Mumbai, it operates on 107.1 megahertz. In Lucknow, it uses the 100.7 MHz slot. In vizag, it operates on 102 megahertz. In Hyderabad, it operates on 101.9 megahertz and in Vijayawada it operates on 102.2 megahertz. It operates in Bangalore as well with a frequency of 101.3. It was earlier called FM Metro; the name was changed to FM Rainbow in 2002. The signals of this station are very strong and it catches till the far villages.
- The channel plays various genres of music unlike private channels; it does not stick to music of just one language. It plays ghazals, soundtracks as well as English songs, a rare occurrence in Indian radio channels.
- Rainbow is one of very few Indian radio channels which air Western Music and the western music slots are really popular with listeners. It has many western music programs like Time Out, Take off, Matchless music hours, Live wire Plus, Wicked Hour, Footloose, You asked for it, Just for you, Radio pet house, not only this it also has classical music shows.
- Almost all the radio jockeys on private FM channels once started with FM Rainbow.

4. FEVER 104 FM:

- In 2006, FEVER 104 FM17, India's youngest, and most happening Radio Station that plays more music than any other was launched.
- Fever 104 FM is owned by HT Media Limited. The company entered the private FM radio market in the four main cities of Delhi, Mumbai, Bangalore and Kolkata with the brand Fever 104 FM.
- Fever 104 FM is a contemporary hits music station that plays a mix of regional, national and international hits. It plays the latest hits, all day, all the time across the cities of Delhi, Mumbai, Bangalore and Kolkata, with its signature property of 40 minutes non-stop music.

- Fever 104 FM with its tagline “It's all about the music!” entered the FM radio market in key Indian cities. It is available in Delhi (since October‘06), Mumbai (since January ‘07), Bangalore (since March _07) and Kolkata (January _08). In a short span of three years, the channel's rise has been meteoric. It has gained the No. 1 position in Mumbai and Bangalore leaving behind all the other FM channels in these cities.
- In terms of TSL, Fever 104 FM has surged ahead with a total time spent listening of 386 minutes. It is No.2 FM station in Delhi on the popularity charts.

5. Radio One:

- Radio One18 is a radio station in India. It was launched on June 8, 2006 in Mumbai before going national in 6 more cities.
- It is a joint venture between Mid-day Multimedia and BBC Worldwide and operates in 7 metros namely Mumbai, Delhi, Bangalore, Kolkata, Chennai, Pune and Ahmadabad. Soon the service of Radio One will also be started in Bhopal, Indore, Jabalpur and Jaipur.
- The station broadcasts at 94.3 MHz in all cities except in Ahmadabad where it broadcasts on 95.0 MHz‘s. It was known as Go 92.5 FM and was broadcast on 92.5 MHz in Mumbai till 2006.
- In the city of Bangalore, Radio One and the Bangalore Traffic Police, launched a carpooling drive which is has involved celebrities like Robin Uthappa, and Rahul Dravid encouraging the public to carpool. The initiative got a good response, and by the end of May 2009, 10,000 people are said to have car pooled in the city.

6. Radio Mirchi:

- Radio Mirchi19 is a nationwide network of private FM radio stations in India. It is owned by the Entertainment Network India Ltd (ENIL), which is one of the subsidiaries of The Times Group. it is promoted by Bennett, Coleman & Co. Limited (BCCL) which is one of the largest media and entertainment companies in India, operating in various media segments such as print media and television broadcasting.
- The original avatar of Radio Mirchi was Times FM. Radio Mirchi began operations in 1993 in Indore. The Times Group operated its brand, Times FM, till June 1998. After that, the government decided not to renew contracts given to private operators.

- It's the largest private FM Radio operator in the country in terms of number of operational stations and revenue. As per the Radio Audience Measurement Reports (RAM), Radio Mirchi has been dominating in Delhi & is the leader in Mumbai and Kolkata.
- Playing contemporary hits songs Radio Mirchi has always been the No 1 choice of listeners. IRS 2009 reiterates the same as Mirchi has more than 41 million listeners across 32 stations. Its lead over its nearest competitor is more than double. Its market share in revenue terms remains in excess of 40% of the private FM industry.
- Radio Mirchi is the number 1 radio brand in the private FM space. During the year, it won a plethora of awards. It has been recognition of the brand popularity and the creative talent behind the brand.
- Mirchi was voted the No. 1 media brand, ahead of iconic brands like The Times of India and Star Plus. This unique honor was bestowed on Mirchi by the Pitch-IMRB group's survey of the top service brands of the country. This endorses the vote of trust that the brand has built amongst its listeners.
- As per Brand Reporter October 2009 issue Mirchi was recognized as one of the game changers of the decade in the radio industry. The survey was conducted by Metrix Labs and AC Nielsen. The survey had 1.5 million participants. The success of the website reflects the overall popularity of Mirchi, the brand.
- Over the years Mirchi have established two important landmarks i.e.: The Mirchi Kaan Awards acknowledges and honours the contribution of individuals and organizations that have led the way in developing clutter busting radio advertising. The awards have been instituted to encourage continued creative focus on radio advertising.
- As a part of its CSR Mirchi initiated a program to improve the quality of life of the visually impaired and the company came up with an initiative i.e. —audio books. This initiative has already reached hundreds of schools across the country.

7.Radio City:

- Radio City20 is a FM radio station in India. It broadcasts on 91.1 (earlier 91.0 in most cities) megahertz from Mumbai, where it was started in 2004, Bangalore started first in 2001, Lucknow and New Delhi.
- It plays Hindi songs, English and regional songs.

- It was launched in Hyderabad in March, 2006, in Chennai on July 7th 2006 and in Vishakapatnam October 2007.
- Radio City recently forayed into New Media in May 2008 with the launch of a new mega music portal - PlanetRadiocity.com that offers music related news, videos, songs, and other music-related features.
- Radio City has launched Fun Ka Antenna - Online Radio Station which plays hits across genres including International, Bollywood, Indipop and Sufi among others.
- Radio City Bangalore is India's first private FM radio station and was started on July 3, 2001. It launched with presenters such as Rohit Barker, Darius Sunawala, Jonzie Kurian and Suresh Venkat. Over the years, the station had been steadily losing popularity with the launch of newer stations in Bangalore. The station has been criticized for multiple format changes and presenter line up.
- The Radio station currently plays a mix of Hindi and Kannada music. Recently as of July, 2006 it has announced plans to invest Rs. 700 to 800 million in the current fiscal year to set up 16 FM (Frequency Modulation) stations across India. The Chief Executive Officer is Ms Apurva Purohit.

8. BIG FM 92.7:

- BIG FM 92.7 is a nationwide private FM radio station in India owned by Indian businessman Anil Ambani. It broadcasts at 92.7 MHz (92.7FM). Currently, it covers 45 cities.
- This is the only private FM radio station which is being broadcast from Srinagar and Jammu in Jammu & Kashmir state. It has made an announcement to invest Rs. 4,00 crores dedicated to transmission equipment, infrastructure and licensing; which would make the proposed network the largest ever.
- From July 1, 2008, BIG FM included Singapore, the first city outside India, in its broadcasting network. It broadcasts its programs daily from 5 to 8pm on XFM 96.3, under the name of 'BIG Bollywood 96.3FM‘. Its main tagline is "Suno Sunao, Life Banao".

9.Radio Active:

- It is owned by Jain Group of Institutions is a conglomerate of 35 mission driven institutions that spans the gamut of education, from primary to higher education,

and charitable schooling to professional courses. Its founder and Chairman Mr. R Chenraj Jain.

- The Vision behind Radio Active is to empower every individual in society to become a winner and an achiever by harnessing and nurturing human potential; to sensitize society to global, national and local issues; to use technology and human enterprise in tandem to help create a meaningful and proactive social ambience where interdependence becomes mutually supportive and to focus on a universally responsive India.

In keeping with its tradition of promoting the welfare and betterment of society, JGI has taken the initiative to launch a community radio station serving the cause of progress and development of the community at large. The community radio station, Radio Active will seek to reach out to Bangalore‘s masses on issues concerning health, environment, development, scientific awareness, women, social issues etc, in turn seeking

# NR 21062 - Television Journalism

## Evolution of Television

- The word television is a hybrid word, created from both Greek and Latin. Tele- is Greek for "far", while -vision is from the Latin meaning "vision" or "sight".
- The invention of television is the result of long-term efforts of several men.
- The origins of what would become today's television system can be traced back to the
    - **Discovery of the photoconductivity of the element selenium by Willoughby Smith in 1873**
    - **Invention of a scanning disk by Paul Nipkow in 1884.**
    - **Vladimir Zworykin, and Philo Farnsworth** is associated with the concept of **electronic scanning of images** which forms the bases of modern day television. Both Zworykin and Farnsworth had applied for a patent of the same during the year 1923 and 1927 respectively. But as **Zworykin has filed the patent earlier, he is often termed as the 'father of television'.**
    - In the year 1926 the first demonstration of the mechanical television as given by **John Logie Baird** revealed that the images displayed on the television lacked outlines, were blurred and were also quite small in size.

The history of television can be divided into Mechanical Television era, which primarily comprises a period prior to 1935, and the Electronic Television era, which is the post 1935 period

## Mechanical Television

- The German student **Paul Nipkow** proposed and patented the central elements of electromechanical television systems in 1884. **Nipkow's spinning disk design** is credited with being the first essential step towards practical television.
- **Constantin Perskyi** had coined the word television in a paper read to the International Electricity Congress at the International World Fair in Paris on **August 25, 1900**.
- **John Logie Baird:**

- On **March 25, 1925 Scottish inventor John Logie Baird** gave a demonstration of televised silhouette or still images at Selfridge's Department Store in London.
- On **October 2, 1925** he gave the world's first public demonstration of a working television system to members of the Royal Institution. Baird's vertically scanned image, using a scanning disk embedded with a double spiral of lenses, had only 30 lines, just enough to reproduce a recognizable human face.
- In **1927** Baird transmitted a signal over **438 miles of telephone line between London and Glasgow**.
- In **1928** Baird's company (Baird Television Development Company / Cinema Television) broadcast the **first transatlantic television signal, between London and New York**, and the **first shore to ship transmission**. He also demonstrated an electromechanical colour, infrared (dubbed "Nocto vision"), and stereoscopic television, using additional lenses, disks and filters. In parallel he developed a video disk recording system dubbed **"Phono vision"**.
- Baird continued to refine this system over the next few years, and despite the low number of scan-lines, improved his system to the point where it produced clear and distinct images of various performers, such that by **1930** it could be used to transmit the first television drama, **The Man With a Flower in his Mouth**, by the BBC.
- In **1931** he made the first **live transmission, of the Epsom Derby**. The Baird Company eventually moved beyond its original electromechanical system, switching to an "intermediate film" process in which cine film was scanned electronically, and achieved a peak of 240 lines of resolution on BBC television broadcasts in 1936 before being discontinued in favour of EMI's 405 line all-electronic system.

- In the U.S. **Charles Francis Jenkins** was able to demonstrate on **June 13, 1925**, the transmission of the **silhouette image of a toy windmill** in motion from a naval radio station to his laboratory in Washington, using a lens disk scanner with 48 lines per picture, 16 pictures per second. The low definition silhouettes were the best Jenkins could do, since his bandwidth was limited to 10 kHz, but he

later obtained permission to move to a carrier frequency to 4.95 MHz with a bandwidth of 100 kHz. Jenkins employed a rotating mirror drum rather than a Nipkow disc.

- **AT&T's Bell Telephone Laboratories** transmitted gray scale images of transparencies in May 1925. But Bell Labs gave the most dramatic demonstration of television on April 7, 1927, when it field tested reflected-light television systems using small-scale (2 by 2.5 inches) and large-scale (24 by 30 inches) viewing screens over a wire link from Washington to New York City, and over-the-air broadcast from Whippany, New Jersey.

**Electronic television**

- On September 7, 1927, **Philo Farnsworth's 'Image Dissector camera tube'** transmitted its first image, a simple straight line, at his laboratory at 202 Green Street in **San Francisco.**
- In 1929, the system was further improved by elimination of a motor generator, so that his television system now had no mechanical moving parts. That year, Farnsworth transmitted the first human images by television system, including a three and a half-inch image of his wife with her eyes closed.
- Farnsworth gave the world's first public demonstration of a complete all-electronic television system in **August 1934**, at the **Franklin Institute in Philadelphia, Pennsylvania**. Farnsworth was the first to coordinate both electronically scanned television cameras and electronically scanned television receivers, and present live, moving, gray scale images with them.
- Another engineer in Europe, Russian **Vladimir Zworykin**, was experimenting with the cathode ray tube to create and show images. In **1931** he and his team created the first successful electronic camera tube, dubbed the Iconoscope.
- Later **Isaac Shoenburg** used Zworykin's idea to develop the **Emitron tube**, which formed the heart of the cameras they later designed for the BBC.

**TV as medium of communication**:

- Television as a medium of communication has the most 'massive' reach, and is labeled as a **major medium of entertainment**. It is considered to be the **main source of news and information** and plays the role of a **credible and trusted public informer**. It has also played the role of an educator by facilitating as a **medium for instruction**.

- Television as a medium of communication has made tremendous contribution towards the **integration of technology, culture, commerce and politics**. Television reflects culture or the society through audio-visual codes. I.e. Television through verbal, non-verbal and symbolic codes project elements of culture like artifacts, food, clothing etc. Apart from that it also projects various ideas related to ethos, values, attitudes, belies, politics, religion etc.
- Television has become instrumental in **blurring the geographical and political boundaries**. The growth of television has marked the stage of integration of technology where in the growth of mass medium attained its peak by reaching the households directly.

The following are the key aspects of Television as a medium of communication

- **Very diverse types of content**
- **Audiovisual Channel with high impact.**
- **Close, personal and domestic association with the viewers.**
- **Low intensity and involvement with high entertainment value.**

**Origin and growth of Television in India**

The origin and growth of Television in India can be raced in four phases..

**The period from 1960's to 70's: The Initial phase**

- Terrestrial television in India started with the experimental telecast starting in Delhi on **15th September 1959** with a small transmitter and a makeshift studio with the grants from **UNESCO** and equipment support from **USA and Phillips (India).**
- The first Television centre was started in New Delhi. Television broadcasts started as part of All India Radio's services. Programs were broadcast twice a week for an hour a day on such topics as community health, citizen's duties and rights, and traffic and road sense.
- In **1961** the broadcasts were expanded to include a **school educational television project**. Indian films and programs consisting of compilation of musicals from Indian films joined the program line-up as the **first entertainment programs in 1965**.
- **Programme recording started in 1966** and the first ever programme to be recorded was 'Yuri Gagarin'. A limited number of old U.S. and British shows were also telecast sporadically.

- **The regular daily transmission started in August 1965**. 'Krishi Darshan' programme started for farmers and was telecasted in 80 villages located around Delhi, UP and Haryana.
- By **1965-66 Black and white television sets** entered into the Indian market through Phillips.
- The year **1966 saw the in introduction of 'plays'** in broadcasting like 'Aisa Bhi Hota Hai' and 'Sara Akash'. Apart from that the technical capability were enhanced by taking up the telecasting of **Republic Day parade in the year 1966**. But the lack of trained personnel, good quality software and sufficient entertainment programming halted the development of Television as an effective mass medium.

**The period from 1970's to 80's: The experimentation phase**

- The year **1971** saw the **introduction of news and current affairs programmes in English** language. Later weekly programmes in Hindi like 'Aamne Samne' and 'Desh Videsh' were introduced.
- The first major expansion of television in India began in **1972**, when a second television station was opened in **Bombay**. This was followed by stations in Srinagar and Amritsar (1973), and Calcutta, Madras and Lucknow in 1975. Relay stations were also set up in a number of cities to extend the coverage of the regional stations.
- In **1975**, the government carried out the first test of the possibilities of satellite based television through the **SITE program**. SITE (Satellite Instructional Television Experiment) was designed to test whether satellite based television services could play a role in socio-economic development. Using a **U.S. ATS-6 satellite** and up-link centres at Ahmedabad and Delhi, television programs were beamed down for about 4 **hours a day to about 2,400 villages in 6 states**. The programs dealt mainly with in- and out-of-school education, agricultural issues, planning and national integration. The program was fairly successful in demonstrating the effectiveness of satellite based television in India and the lessons learnt from SITE were used by the government in designing and utilizing its own domestic satellite service INSAT.
- By **January 1976 commercial service was launched** in television broadcasting. The advent of advertising in television in 1976 brought tremendous change in

the revenues. Until that time television had been funded through a combination of television licenses and allocations from the annual budget (licenses were later abolished as advertising revenues began to increase substantially).

- In these early years television, like radio, was considered a facilitator of the development process and its introduction was justified by the role it was asked to play in social and economic development. Television was institutionalized as an arm of the government, since the government was the chief architect of political, economic and social development in the country. By 1976, the government found itself running a television network of eight television stations covering a population of 45 million spread over 75,000 square kilometres. Faced with the difficulty of administering such an extensive television system television as part of All India Radio, the government constituted **Doordarshan in 1976**, the national television network, as a separate Department under the Ministry of Information and Broadcasting, as an attached office under the Ministry of Information and Broadcasting. By 1979 the total television sets in India reached to 0.9 million with 17 transmitters.

**The period from 1980's to90's: The expansion phase**

- In 1982 television began to attain national coverage and develop as the government's pre-eminent media organization. Two events triggered the rapid growth of television that year. **INSAT-1A**, the first of the country's domestic communications satellites became operational and made possible the networking of all of Doordarshan's regional stations. For the first time Doordarshan originated a nation-wide feed dubbed the **"National Programme"** which was fed from Delhi to the other stations from **August 15th 1982**.
- The possibility of reaching a nationwide audience made television look increasingly attractive to advertisers after the introduction of the "National Programme" in 1982. In turn, Doordarshan began to shift the balance of its programming from educational and informational programs to entertainment programs. The commercialization of Doordarshan saw the development of soap operas, situation comedies, dramas, musical programs, quiz shows and the like.
- In **November 1982**, the country hosted the **Asian Games** and the government introduced **colour broadcasts** for the coverage of the games. To increase television's reach, the government launched a crash program to set up low and

high power transmitters that would pick-up the satellite distributed signals and re-transmit them to surrounding areas. The inaugural ceremony of Asian games was covered by Outdoor broadcasting vans on 1st November, 1982. More than 22 sporting events were covered from 18 stadia for the Asian games by Doordarshan.

- JCT-Thapar group started manufacturing colour picture tubes from Chandigarh. 'UPTRON' a government of Uttar Pradesh firm started producing colour television sets in India..
- By **1987** Doodrdarshan programming was extended to **morning as well as in noon**.
- By the late 1980s more and more people started to own television sets. Though there was a single channel, television programming had reached saturation. Hence the government opened up another on **September 17th 1984**, which had part national programming and part regional. This channel was known as DD 2 later DD Metro. Both channels were broadcast terrestrially.
- The 80s was the era of Doordarshan with shows like **Hum Log (1984), Buniyaad (1986-87)** and comedy shows like **Yeh Jo Hai Zindagi (1984)**, Mythological dramas like **Ramayan (1987-88)** and **Mahabharat (1989-90)** glued millions to Doordarshan and later on **Bharat Ek Khoj, The Sword of Tipu Sultan and Chandrakanta**. Hindi film songs based programs like **Chitrahaar, Rangoli, Superhit Muqabla** crime thrillers like **Karamchand, Byomkesh Bakshi**. Shows targeted at children include **Dada Dadi ki Kahaniyan, Vikram Betal, Malgudi Days, Tenali Rama**.
- In 1983 television signals were available to just 28% of the population, this had doubled by the end of 1985 and by 1990 over 90% of the population had access to television signals.
- By 1990 Doordarshan revenues from advertising were about $300 million, accounting for about 70% of its annual expenditure. The total television viewers increased to 8.8 million and transmitters increased to 179 by the end of 90's.

**The period from 1990's to 2000: The satellite television phase**

- By 1991, Doordarshan's earlier mandate to aid in the process of social and economic development had clearly been diluted. Entertainment and commercial programs had begun to take centre stage in the organization's programming

strategies and advertising had come to be Doordarshan's main source of funding. Doordarshan, having a monopoly in Indian market expanded its services and introduced new concepts and programming.

- DD covered the **CHOGAM and NAM** summits and attained international recognition.
- The **Central Production Centre** was started in **February 1989**.
- The **Independence Day of August 15th 1989 was covered live by DD**.
- PAS-1 and PAS-4 are satellites whose transponders help in the telecasting of DD programmes in half the regions of the world.
- An international channel called **DD International was started in 1995** and it telecasts programmes for 19 hours a day to foreign countries-via PAS-4 to Europe, Asia and Africa, and via PAS-1 to North America.
- The year 1991 saw the beginnings of international satellite broadcasting in India and the government launched a major economic liberalization program. Both these events combined to change the country's television environment dramatically.
- International satellite television was introduced in India by **CNN** through its coverage of the **Gulf War in 1991**. Three months later **Hong Kong based Star TV** (now owned by Rupert Murdoch's News Corp.) started broadcasting five channels into India using the ASIASAT-1 satellite. By early 1992, nearly half a million Indian households were receiving Star TV telecasts. A year later the figure was close to 2 million and by the end of 1994, an estimated 12 million households were receiving satellite channels. This increase in viewership was made possible by the 60,000 or so small scale cable system operators who have mushroomed across the country. These systems have redistributed the satellite channels to their customers at rates as low as $5 a month.
- Taking advantage of the growth of the satellite television audience, a number of Indian satellite based television services were launched between 1991 and 1994, prominent among them **Zee TV, the first Hindi satellite channel**. By the end of 1994, 12 satellite based channels were available in India. This number was doubled by the end of 1996, with a number of Indian programmers and international media companies like Turner Broadcasting, Time-Warner, ESPN, and Channel 5 introducing their new satellite television services for India.

**Growth of Cable TV in India**

- Cable TV has its roots in the late seventies. Indian television viewers were looking for entertainment options, apart from what state-owned broadcaster DD was offering. That came their way with the import and manufacture of video cassette recorders permitted domestically. **There was a veritable boom in video cassette recorder sales during this period**. Enterprising individuals in apartment blocks placed a video in their homes or their garages and started offering a cable TV service to people who opted for it. The fare available was Hindi and English movies and pirated western comedies, music and game shows. At this stage, cable TV was restricted to the major metros and towns and the upper crust of society.
- The impetus for its spread came in 1990 with the advent of the Gulf war. **Ted Turner's CNN** started beaming news reports of the bombing of Kuwait by Saddam Hussein and sparked off a demand for satellite dishes. Only the affluent could afford them. Some cable operators who had been running their Hindi and English movie channels added dishes and started relaying CNN into homes. This spurred demand for cable TV, making it a lucrative business and it attracted more individuals to the industry.
- The launch of Star TV and Zee TV further fuelled the spread of cable TV. In the first half of 1992, almost 4,500 households were being given cable programmes daily. That figure increased to 9,450 homes daily in the second half of the year. According to a study conducted by market research firm – According to Frank Small survey for Star TV from a mere 412,000 urban households in January 1992, the number of cable homes went up to 11.8 million out of a total of 32.4 million TV owning homes by the end-1994..
- The business has undergone a transformation too. In the beginning it was small and driven by entrepreneurs. At one time the cable TV operator's population was estimated at a sky high 100,000. In the next three years, large companies have also set up their own cable networks. Among them: In Cable net (managed by the Hinduja group), Siti cable (a joint venture between Zee TV promoter Subhash Chandra and Rupert Murdoch's News Television), Asianet, Hathway Cable & Datcom, Ortel Communications and RPG Netcom (a company promoted by the RPG group). International cable networking companies such as United

International Holdings, TCI and Falcon Cable of the US, have tested the waters: While UIH almost set up a joint venture with the RPG group which did not fructify; TCI/Time Warner discussed possibilities with the Times of India group which were inconclusive. Falcon Cable however, was successful in establishing a joint venture with the Hindustan Times publishing group in New Delhi called India Information Technologies Ltd.

- Following the liberalization of the broadcasting industry, the Hong Kong-based Star TV Network introduced five major television channels into the Indian broadcasting space that had so far been monopolized by the Indian government-owned Doordarshan: MTV, STAR Plus, Star Movies, BBC, Prime Sports and STAR Chinese Channel.
- Soon after, India saw the launch of Zee TV, the first privately-owned Indian channel to broadcast over cable followed by Asia Television Network (ATN). A few years later CNN, Discovery Channel, National Geographic Channel and BBC made their foray into India. Later, Star TV Network expanded its bouquet with the introduction of STAR World India, STAR Sports, ESPN, Channel V and STAR Gold.
- With the launch of the Tamil-language Sun TV (India) in 1992, South India saw the birth of its first private television channel. With a network comprising more than 20 channels in various South Indian languages, Sun TV network recently launched a DTH service and its channels are now available in several countries outside India.
- Following Sun TV, several television channels sprung up in the south. Among these are the Tamil-language channel Raj Television and the Malayalam-language network Asianet Communications Limited, both launched in 1993. These three networks and their channels today take up most of the broadcasting space in South India. In Telugu-language, Telugu daily newspaper Eenadu started with its own channel called ETV in 1995 later diversified into other Indian languages.
- Throughout the 90s, along with a multitude of Hindi-language channels, several regional and English language channels flourished all over India. By 2001, international channels HBO and History Channel started providing service. In

1999–2003, other international channels such as Nickelodeon, Cartoon Network, VH1, Disney and Toon Disney entered the market.

- Starting in 2003, there has been an explosion of news channels in various languages; the most notable among them are NDTV, CNN IBN and Aaj Tak. The most recent channels/networks in the Indian broadcasting industry include UTV Movies, UTV Bindass, Zoom, Colours, 9X and 9XM. There are several more new channels in the pipeline, including Leader TV.

**Conditional Access System**

- **CAS or conditional access system is a digital mode of transmitting TV channels through a set-top box (STB)**. The transmission signals are encrypted and viewers need to buy a set-top box to receive and decrypt the signal. The STB is required to watch only pay channels.
- The idea of CAS was mooted in **2001**, due to a furore over charge hikes by channels and subsequently by cable operators. Poor reception of certain channels; arbitrary pricing and increase in prices; bundling of channels; poor service delivery by Cable Television Operators (CTOs); monopolies in each area; lack of regulatory framework and redress avenues were some of the issues that were to be addressed by implementation of CAS.
- It was decided by the government that CAS would be **first introduced in the four metros**. It has been in place in **Chennai since September 2003**, where until very recently it had managed to attract very few subscribers. It has been rolled out recently in the other three metros of Delhi, Mumbai and Kolkata. **As of April 2008 only 25 per cent of the people have subscribed the new technology**. The rest watch only free-to-air channels. As mentioned above, the inhibiting factor from the viewer's perspective is the cost of the STB.
- ***The information and broadcasting ministry set March 31, 2015 as the deadline for shift from analog to digital systems. Digitization, where the feed will be received through set-top boxes, is expected to be executed in phases and the four metros of Delhi, Mumbai, Kolkata and Chennai have to shift to digital addressability by October 30, 2012. Phase II will include 35 cities with population of more than one million, such as Patna, Chandigarh, Pune and Bangalore by March 31, 2013. All urban areas are expected to digitize by November 30, 2014 and the remaining areas by March 31, 2015***.

**DTH:**

- DTH is defined as the reception of satellite programmes with a personal dish in an individual home. As of July 2011, India had roughly 35 million DTH subscribers.
- Cable TV and DTH are two methods of delivery of television content. CAS is integral to both the systems in delivering pay channels. Cable TV is through cable networks and DTH is wireless, reaching direct to the consumer through a small dish and a set-top box. Although the government has ensured that free-to-air channels on cable are delivered to the consumer without a set-top box, DTH signals cannot be received without the set-top box.
- India currently has 7 major DTH service providers and a total of over 35 million subscriber households in mid 2011. **Dish TV (a ZEE TV subsidiary), Tata Sky, Videocon D2H, Sun Network owned ' Sun Direct DTH', Reliance Digital TV, Bharti Airtel's DTH Service 'Airtel Digital TV' and the public sector DD Direct Plus** offer DTH services in India. As of 2010, India has the most competitive Direct-broadcast satellite market with 7 operators vying for more than 135 million TV homes. India is set to overtake the USA as the world's largest Direct-broadcast satellite market by 2012. The rapid growth of DTH in India has propelled an exodus from cabled homes; the need to measure viewership in this space is more than ever.

**TAM & INTAM**

- In 1994, claiming a heterogeneous and fragmenting television market ORG-MARG introduced **INTAM (Indian National Television Audience Measurement).** Ex-officials of DD (Doordarshan) claimed that INTAM was introduced by vested commercial interests who only sought to break the monopoly of DD and that INTAM was significantly weaker in sample size, rigor and the range of cities and regions covered.
- In 1997, a joint industry body appointed TAM, backed by AC Nielsen as the official record keeper of audience metrics. Due to the differences in methodology and samples of TAM and INTAM, both provided differing results for the same programs.
- In 2001, a confidential list of households in Mumbai that were participating in the monitoring survey was released, calling into question the reliability of the

data. This subsequently led to the merger of the two measurement systems into TAM. For several years after this, in spite of misgivings about the process, sample and other parameters, TAM was the de-facto standard and monopoly in the audience metrics game.

**Characteristics of Television**:

- Television is an Audio-Visual mass medium.
- Television is a transient medium.
- Television is most personal and intimate medium.
- It negates geographical and physical boundaries.
- Television as a medium of communication has an instantaneous message delivery.
- Television suffers from Interface.
- Television is one of the best medium for entertainment, education and dissemination of information.
- Television effects audience psyche, cognosis and mental makeup.

**Stages in TV programme production:**

The four main stages of programme production are as follows**:**

**I. Pre-production**

**1.Research**

**A. Identify the Purpose of the Production**

If there is no clear agreement on the goals and purposes of a production, it will be impossible to evaluate its success. Is the purpose to instruct, informs, or entertain? or maybe to generate feelings of pride or express a social, religious, or political need? Is the real purpose to create a desire in the audience to take some action? The primary goal of most broadcasting is simply to hold the interest of an audience through the intervening commercials. Most productions have more than one goal and we'll elaborate on some of these later

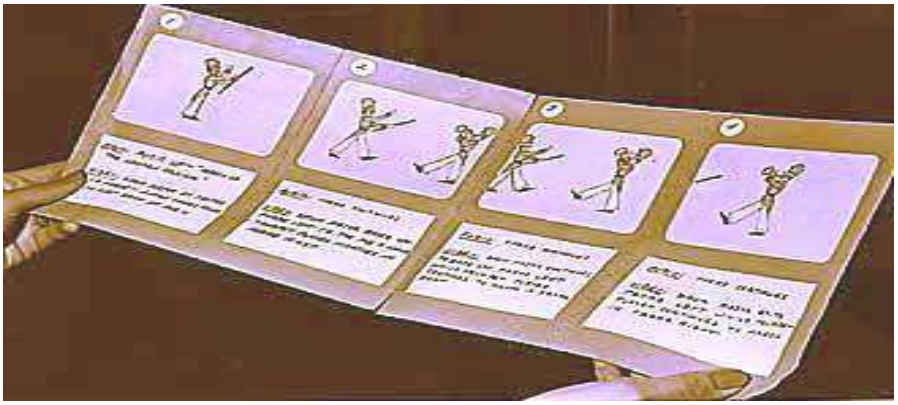

**B. Analyze Your Target Audience**

Based on such things as age, socioeconomic status, and educational level, program content preferences will differ. The audience characteristics are referred to as demographics. The regional demographic variations i.e. the differences in local programming in various areas of the country must be clearly analyzed.

**2. Script writing and storyboard**

**A. Develop a Treatment or Production Proposal**

The treatment and program proposals i.e. the written summaries of proposals are finalized. After the program proposal or treatment is approved, the next step is to write and submit a full script. It will be at this point that any remaining research on the content will be commissioned.

**The Script:**

The script is the most important document produced by the production company as it provides the core upon which the whole production process is based. It will be used throughout the whole production being the most important source of reference. A 'two-column script' is most often used in production i.e. one column containing the visual elements and the other column for the audio content and dialogue. A script can also be of great importance to you as it provides you with a point of quality control.

**The Storyboard:** The storyboard provides a more visual representation of the corporate video It comprises of a series of sketches showing what the shots will look like that make up the video. The storyboard is also a working document which can be referred to when developing the shooting script and even when setting up props and organizing talent on location. It clearly depicts where talent and props should be and also shows the flow of action. Although it can be very useful to have a storyboard to refer to later in the production process, actually developing the storyboard itself is very time consuming.

The first version of a script is often followed by numerous revised versions. Throughout the rewriting process, a number of story conferences or script conferences typically take place. During these sessions audience appeal, pace, and

problems with special interest groups, etc., are discussed. Finally, a script version emerges that is more or less acceptable to everyone. Even this version, however, will probably not be final. In many instances, scene revisions continue right up to the time the scenes are shot. Typically, in a dramatic film production / T.V. series each new script version is issued on a different colour paper so that the cast and crew won't confuse them with earlier versions. Depending on the production, a storyboard is developed. A storyboard consists of drawings of key scenes with corresponding notes on elements such as dialogue, sound effects, and music

**3. Planning i.e. shooting schedule**

**A. Develop a Production Schedule**

Generally, broadcast or distribution deadlines will dictate the production schedule. Schedule is the written timetable listing the time allotted for each production step. Not planning things out carefully might cause you to miss a critical deadline, rendering the production useless. Bring on board the remaining above-the-line production personnel. In addition to the producer and writer, above-the-line personnel include the production manager, director and, in general, key creative team members. Below-the-line personnel, generally assigned later, include the technical staff. If you're not shooting in the studio, *decide on key locations.* In a major production, such as the type we are outlining in this discussion, you will hire a location scout or location manager to find and coordinate the use of the locations suggested by the script. Although it might be easier to shoot in a TV studio, it's been shown that audiences like the authenticity of "real" locations, especially in dramatic productions. Most major cities encourage TV and film production and maintain *film commissions* that supply photos and videotapes of interesting shooting locations in their area. They'll also provide information on usage fees and the names of people to contact. It's often necessary to make changes in the on-location settings. For instance, rooms may have to be repainted or redecorated and visible signs changed.

**B. Select Key Production Personnel**

Depending on the type of production, auditions may take place at this point as part of the casting process i.e. selecting people for the various roles. Once completed, you'll negotiate and sign contracts. Once you decide on the talent, you can begin wardrobe selection. These are suggested by the script, coordinated with the look of the sets and locations, and ultimately approved by the director. After a set designer is hired, he or

she will review the script, possibly do research, and then discuss initial ideas with the director. Once there's agreement, sketches of the sets can be made for final approval before actual set construction starts -- if there *is* any construction. Today, many sets exist only in computers and the actors are electronically inserted into them. If this is the case, the set sketches will be given to a computer artist. Rehearsals are scheduled from initial table readings to the final dress rehearsal. Once the sets are finished, the final blocking and dress rehearsals can get underway.

**C. Decide on the Remaining Production Personnel**

At this point hiring of the key technical personnel, equipment, and facilities is finalised. This includes the rental of both equipment and production facilities. Transportation, catering and on-location accommodations for any overnight stays are arranged.

**4. Securing locations, acquiring permissions**

Obtaining Permits, Insurance, and Clearances is done in this phase**.** In major U.S. cities and in many foreign countries it's not possible just to go to the location of your choice, set up your tripod, and start filming. Except for spot news and short documentary segments, you must *arrange access permits, licenses security bonds, and insurance policies*. Many semi public interior locations, such as shopping malls, require filming permits. Depending on the nature of the production, *liability insurance* and *security bonds* may be necessary because accidents can happen that can be directly or indirectly attributed to the production. In some locations the controlling agency will limit exterior production to certain areas and specific hours. In a street scene where traffic will be affected you'll need to arrange for special police.

## II. Production:

**A. Select Video Inserts**

Arrange to shoot or acquire video and film inserts, still photos, and graphics. To reduce production costs the existing stock footage in film and video libraries around the country is verified and checked. This is generally background footage, such as general exterior scenes of an area that will be edited into the production.. The important decisions on music, including working out copyright clearances and royalties for music and visual insert are finalized

**B. The shoot**

Depending on the type of production, rehearsals may take place either minutes or days before the actual shooting. Productions shot live-on-tape i.e. without stopping, except

for major problems - whether recorded on videotape or another medium will be settled before recording starts. This includes early walk-through rehearsals, camera rehearsals, and one or more dress rehearsals. Productions that are shot single-camera, and recorded one scene at a time

**C. Principal photography**

Principal photography is the actual filming of the episode. Director, actors and crew gather at a television studio or on location for filming or videoing a scene. A scene is further divided into shots, which should be planned during pre-production. Depending on scheduling, a scene may be shot in non-sequential order of the story. Conversations may be filmed twice from different camera angles, often using stand-ins, so one actor might perform all their lines in one set of shots, and then the other side of the conversation is filmed from the opposite perspective. To complete a production on time, a second unit may be filming a different scene on another set or location at the same time, using a different set of actors, an assistant director, and a second unit crew. A director of photography supervises the lighting of each shot to ensure consistency

## III. Post-production

**A. The Post-production stage** Once we have the footage we begin with the post-production. This is probably the most time-consuming part of the whole production process. This will be taken into consideration at the time of scheduling the production. Editing is one of the important post production works. Below are some of the main activities undertaken when editing process is done. The order in which they are completed may vary from one production to another.

**B. Assembly of the rushes:** Once we have all the footage work will begin on one of our edit suites. Assembling the rushes refers to viewing the footage and deciding on the shots to be used. They are assembled in the order they will be viewed in preparation for the editing to commence.

**C. Animations, graphics and titles:** The use of animations, graphics and titles will be placed as discussed in the beginning of the production process.

**D. Music and sound-effects**

There are three main categories to choose from:

- Commercial recordings of popular or classical music requiring copyright clearance.

- Library music where you may suggest the style of music you would like and we can select music fulfilling your requirements from the large selection available.
- Music written for your corporate video according to your specifications.

Once the music is decided then works on soundtrack, checking levels and monitoring the quality using ppm meters and audio vector scopes is done. At Peak Vision TV we have our own recording facilities enabling us to record our own sound effects to add to the sound track on your programme to enhance the images and add to animations where necessary. A good soundtrack is essential to add life and vitality to images, no matter how excellent the images.

**E**. **The voice-over:** We have a variety of voice-over artists available for our corporate productions. The right voice is chosen for every

**F. Rough cut:** This is a rough version of the video with music, sound effects, animation and voice-over. However, it will not look very different from the end product. At this stage there will be an opportunity for feedback and any last small changes to be made to the programme.

**G. Final cut:** Having completed the final edit making any small changes and putting the finishing touches to the production, the Final Cut will be shown for your final approval before beginning work on duplication

**H. Budgets and revenues**

Most television networks throughout the world are 'commercial', dependent on selling advertising time or acquiring sponsors. Broadcasting executives' main concern over their programming is on audience size. Once the number of 'free to air' stations was restricted by the availability of channel frequencies, but cable TV (outside the USA, satellite television) technology has allowed an expansion in the number of channels available to viewers (sometimes at premium rates) in a much more competitive environment.

**I. Deficit financing** is the term used to describe how many scripted network television shows in the Unites States are financed. A studio finances the production cost of a show and a network pays a license fee to the studio for the right to air the show. This license fee does not cover the show's production costs, leading to the deficit. Although the studio does not make its money back in the original airing of the show, it retains

ownership of the show. This ownership retention allows the studio to make its money back and earn a profit through syndication and DVD and Blu-ray disc sales.

**J. Distribution**

After production, the show is turned over to the television network, which sends it out to its affiliate stations, which broadcast it in the specified broadcast programming time slot. If the Nielsen ratings are good, the show is kept alive as long as possible. If not, the show is usually canceled. The show's creators are then left to shop around remaining episodes, and the possibility of future episodes, to other networks.

## 1.6. Duties of the TV crew

Television crew positions are derived from those of film crew, but with several differences.

**Casting Director**: The duty of a casting director is to spot talent and cast. Usually one of the first crew members attached to the project. In fact, when a television pilot is initially cast the Executive Producer and Casting Director are often the only crew members.

**Costume designer**: The Costume Designer makes all the clothing and costumes worn by all the Actors on screen, as well as designing, planning, and organizing the construction of the garments down to the fabric, colors, and sizes. They greatly contribute to the appearance of the production, and set a particular mood, time, feeling, or genre. They alter the overall appearance of a project with their designs and constructions, including impacting on the style of the project, and how the audience interprets the show's characters.

**Director:** A Television Director is usually responsible for directing the actors and other filmed aspects of a television production. The role differs from that of a film director because the major creative control will likely belong to the Producer. In general, the Actor and other regular Artists on a show will be familiar enough with their roles that the Director's input will be confined to technical issues. The Director is responsible for all creative aspects of a movie. The Director would most likely assist with hiring the cast (and possibly the crew). The Director helps decide on the locations, creates a plan of shooting, and sets a mental layout of shot by shot in their minds eye. During shooting, the Director supervises the overall project, manages shots, and keeps the assignment on budget, and schedule. Although the Director holds much power, they are second in command after the Producer, who ultimately hired the Director (unless the Director holds both positions). Some Directors are also the Producers of their television

program, and, with the approval of the funding studio, have a much tighter grip on what makes the final cut than Directors usually have.

**Associate Director (AD)**: An Associate Director in television production is usually responsible for floor directing in the studio and ensuring that the sets, props and technical equipment are safe, ready to use and positioned correctly before filming. Associate Directors are also responsible for communications with the audience and any guests, for example ensuring they are seated in good time, and assisting the Director with production. In scripted television series, an Associate Director will occasionally serve as the episode's Director, in which case someone else will sub for the AD. Until the mid 2000s in the United States, Associate Directors were usually credited as "Technical Coordinators" for most sitcoms were shot on film; ADs are usually not used on drama programs.

**Location Manager**: The Location Manager finds and manages film locations. Most pictures are shot in the controllable environment of a studio sound stage but occasionally, outdoor sequences call for filming on location.

**Make-up artist**: A professional Make-up artist is usually a cosmetology beautician, and applies makeup to anyone appearing on screen. They concentrate on the area above the chest, the face, the top of the head, the fingers, hands, arms, and elbows. Their role is to manipulate an Actor 's on screen appearance whether it makes them look more youthful, larger, older, or in some cases monstrous. There are also Body makeup artists who concentrate their abilities on the body rather than the head. Make-up itself is substances to enhance the beauty of the human body, but can also change the appearance, disguise, or costume someone. Along with the Make-up artists, the Hair stylists, Costume designers, and Dress technicians all combine their effort into transforming an Actor into a character, or a person into a presenter.

**Production designer**: The Production Designer is the person with the responsibility of the visual appearance of a production. They design, plan, organize, and arrange set design, equipment availability, as well as the on screen appearance a production will have. A production designer is often referred to also as the set designer, or scenic designer. They are trained professionals, often with Master of Fine Arts (MFA) degrees in scenic design. The set designer is responsible for collaborating with the Theatre Director to create an environment for the production and then communicating the details of this environment to the Technical Director, charge scenic artist and Property

Master. Scenic Designers are responsible for creating scale models of the scenery as well as scale drawings. The set designer also takes instructions from the Art Director to create the appearance of the stage, and design its technical assembly. The Art Director, who can also be the Production Designer, plans and oversees the formation of settings for a project. They are fully aware and conscious of art and design styles, including architecture and interior design. They also work with the Cinematographer to accomplish the precise appearance for the project.

**Researcher:** Researchers research the project ahead of shooting time to increase truth, factual content, creative content, original ideas, background information, and sometimes performs minor searches such as flight details, location conditions, accommodation details, etc. It is their task to inform the Director, Producer, and Writer of all ideas, and knowledge related to what task is being undertaken, or what a scene/ event/prop/ or backdrop needs to be included to make the show factual and ultimately more believable.

**Set designer**: The scenic designer is responsible for collaborating with the Theatre director and other members of the production design team to create an environment for the production and then communicating the details of this environment to the Technical director, Production manager, Charge artist and Property master. Scenic designers are responsible for creating scale models of the scenery, artistic rendering, paint elevations and scale construction drawings as part of their communication with other production staff.

**Television Producer**: In the entertainment industry, a Television Producer (compare to film producer) is generally in charge of, or helps to coordinate, the financial, legal, administrative, technological and artistic aspects of a production. In television, a television producer can be given one of the following titles:

**Associate Producer**: The Associate Producer performs limited producing functions under the authority of a Producer; often in charge of the day-to-day running of a production. They are frequently a connection between everyone making shooting possible (the production team) and the people involved after filming to finalize the production, and get it publicized (the Post-production team). Occasionally credit for this role is given to the product's financial backer, or the person who originally brought the assignment to the Producer.

**Assistant Producer (AP):** The Assistant Producer is the closest role to that of a film director. An Assistant Producer often doubles as an experienced Researcher, and takes direct charge of the creative content and action within a programme. The title of Television director is usually reserved only for dramatic programming productions and those which bear most similarity to films, or for those who control a multi-camera set up from the *Gallery*.

Co-producer: Typically performs producing functions in tandem with one or more other Co-Producers (working as a team, rather than separately on different aspects of the production).

**Executive producer**: He supervises one or more producers in all aspects of their work; sometimes the initiator of the production; usually the ultimate authority on the creative and business aspects of the production (except to the extent that a Film Director retains creative control). If the title is designated correctly, the Executive Producer would arrange for the project's financial backing and attempt to maintain a well production budget. Far too often, the Executive Producer's role is given falsely to a power player in the equation - sometimes an actor, an actor's agent, or someone else who aided in the production of the project.

**Line producer**: Supervises the physical aspects of the production (not the creative aspects), including personnel, technology, budget, and scheduling. The line producer oversees the project's budget. This involves operating costs such as salaries, production costs, and everyday equipment rental costs. The Line Producer works with the Production manager on costs and expenditure.

**Segment producer**: Produces one or more components of a multipart production.

**Supervising producer**: Supervises one or more producers in some or all aspects of their work; usually works under the authority of an Executive Producer.

**Writer:** The Writer creates and moulds an original story, or adapts other written, told, or acted stories for production of a television show. Their finished work is called a script. A script may also have been a contribution of many writers, so it is the Writers Guild of America's (WGA) task to designate who gets the credit as being 'the Writer'. 'Written By' in the credits, is a Writers Guild of America assigned terminology meaning "Original Story and Screenplay By". A screenplay or script is a blueprint for producing a motion picture, and a teleplay is the replica for a television show. Writers can also come under the category of screenwriters. Screenwriters (also called "script writers"), are

authors who write the screenplays from which productions are made just as a writer does. Many of them also work as script doctors, attempting to change scripts to suit directors or studios; Script-doctoring can be quite lucrative, especially for the better known writers. Most professional screenwriters are unionized and are represented by organizations such as the WGA.

**Head writer:** A head writer is a person who oversees the team of writers on a television or radio series. The title is common in the soap opera genre, as well as with sketch comedies and talk shows that feature monologues and comedy skits, but in prime time series this function is generally performed by an Executive Producer.

**Screenwriter:** Screenwriters or scenarists or scriptwriters are people who write/create the short or feature-length screenplays from which films and television programs are based.

**Story editor**: Story editor is a job title in motion picture filmmaking and television production, also sometimes called "Supervising Producer". A story editor is a member of the screenwriting staff who edits stories for screenplays.

**Production**: Everything while the shooting of the film is in progress is part of the so called “production” stage. The crew of people involved in this stage of production include the Cinematographer, Production Manager, the Technical Director, the Boom Operator, the Gaffer, the Dolly grip, the Key Grip and the Stunt coordinator.

**A2: An A2 (or Audio Assistant**) is a person responsible for placement and interconnection of audio devices, such as microphones and intercom, from the Television Production truck to the venue. Typically in larger productions, there are two or more A2s.

**Boom operator**: The Boom Operator is an assistant of the Sound Engineer or "production sound mixer". The main responsibility of the Boom Operator is microphone placement, sometimes using a "fish pole" with a microphone attached to the end and sometimes, when the situation permits, using a "boom" (most often a "fisher boom") which is a special piece of equipment that the operator stands on and that allows precise control of the microphone at a much greater distance away from the actors. They will also place wireless microphones on actors when it is necessary. The Boom Operator is part of the sound crew, who manages to keep the microphone boom, near to the action, but away from the camera frame, so that it never appears onscreen, but allows the microphone to pursue the actors as they move. They work closely with the

Production Sound Mixer, or Sound Recordist, to record all sound while filming including background noises, dialogue, sound effects, and silence.

**Camera Operator/Cinematographer/Videographer**: As the head member of the camera crew, the camera operator uses the camera as coached by the Director. They are accountable for maintaining the required action is correctly filmed in the frame, and needs to react instinctively as the proceedings take place. If the Camera Operator is also a Cinematographer, they also help establish the theme and appearance of the show. The Cinematographer or Director of photography (DP) regulates the lighting for every scene, is responsible for framing some shots, chooses the lenses to be used, decides on film stock and guarantees that the visual appearance of the project follows to the directors initial foresight. However, the Cinematographer would usually not maneuver the camera on the set, as this is usually the exclusive role of a Camera Operator.

**Floor Manager**: The Floor Manager is the Director's representative on the studio floor, and is responsible for giving instruction and direction to crew, cast and guests. It is closest to the role of an Assistant Director, as the job frequently entails barking orders to keep a production moving to schedule. The Floor Manager is always in direct contact with the Director via *talkback* in the gallery. Also checks that the floor is clear and safe for the performance required; checks that any scenery or set piece is ready to be used as required; turns on the appropriate lights; gives announcements to staff and audience; helps to maintain the set quiet and in order; calls cues to begin the action and prompts talents as required.

**Assistant Floor Manager:** An Assistant Floor Manager (frequently abbreviated to AFM) is responsible for setting a stage and prompting contributors on the studio floor and ensuring that everyone knows their place in the script, freeing the Floor Manager for other duties. They often oversee a team of Runners. Increasingly, Assistant Floor Managers are being asked to assist with the design and preparation of props, as well as setting and resetting the action on the studio floor.

**Graphics Coordinator:** The Graphics coordinator (GC) decides what graphic content should be displayed on-air - such as on a full page (a full-screen graphic) or a lower third (a bar graphic appearing in the lower third of the screen). The GC should not be confused with the Character Generator (CG) Operator, who usually operates a CG and is part of a television crew, or a Broadcast designer who physically creates the graphics.

**Stage Manager:** Stage management is the practice of organizing and coordinating a theatrical production. It encompasses a variety of activities, including organizing the production and coordinating communications between various personnel (e.g., between director and backstage crew, or actors and production management). Stage management is a sub-discipline of stagecraft**.**

**Gaffer:** Gaffer is the head Electrician at the production set, and is in charge of lighting the stage in accordance with the direction of the Cinematographer. In television the term Chief Lighting Director is often used instead of Gaffer, and sometimes the Technical Director will light the studio set. The Gaffer reports to the Director of Photography (DoP), Lighting Director (LD) or Lighting Designer, and will usually have an assistant called a Best Boy and a crew of electricians**.**

**Production Manager:** The Production Manager performs deals concerned with business about the crew, and organizes the technical needs of the production. This would involve many things ranging from gaining the correct equipment with the exact technical requirements; to arranging accommodation for the cast and crew. The Production Manager reports their expenses and needs to the Line Producer**.**

**Production Assistant:** Commonly referred to simply as the *PA*, the Production Assistant assumes a prompting role in the Gallery or Control Room. They are responsible for communication with the broadcasting channel during a live television show, counting down the time before transmission aloud to the crew via the studio microphone. They also count down time remaining for sections of a programme, such as an interview or an advertising break. Prior to a production, the PA is responsible for preparing and timing the script, noting pre-recorded inserts, sound effects and suchlike, and for clearing copyright and other administrative issues.

**Stunt Coordinator:** Where the programme requires a stunt, and involves the use of stunt performers, the Stunt Coordinator will arrange the casting and performance of the stunt, working closely with the Television director**.**

**Technical director:** In a production control room (PCR), the Technical Director (TD) has overall responsibility for the operation of the production. The Technical Director is responsible for the proper working of all the equipment in the PCR. They also match the quality and the output of all the cameras on the studio floor through the camera control units (CCU) (Vision Engineering). It is the responsibility of the TD to supervise all the other crew members working in the PCR. The Technical Director also coordinates the

working of the whole crew and looks into any technical problem which arises before, during or after the shooting of a project.

Television director **-** Unlike the film counterpart, a Director in television usually refers to the Gallery (or Control Room) Director, who is responsible for the creative look of a production through selecting which shots to use at any given moment. The Director views the action on the studio floor through a bank of screens, each one linked to one of the professional video cameras, while issuing instructions down to the Floor Manager. They also control the Gallery area, calling for sound rolls, digital on-screen graphics (*Astons*) and video rolls video tape recorder (*VT's*). Some directors also work more closely with on-camera talent and others also act as both Producer and Director.

**Video Control Operator/Vision Engineering**: A Video Control Operator (typically credited under the title "video control", and sometimes referred to simply as a "Video Engineer" or, a "Video Operator") is responsible for controlling the video console to regulate transmission of television scenes, including test patterns and filmed and live telecasts. Video Control Operators view the action on set through video monitors and sets switches and observes dials on the video console to control contrast, framing, brilliance, color balance, and the fidelity of the transmitted image. They also monitor the program to ensure the technical quality of the broadcast, and review the shot program to determine that the signal is functioning properly and that it will be ready for transmission at the required time. Video Control Operators and Video Tape Operators are used only in television productions recorded on video tape because the growing use of broadcast automation with video servers.

**Video Tape Operator**: The Video Tape Operator (also known as a VT Operator or VTR Operator), cues and prepares video inserts into a program. A VT Operator sets up and operates the video tape equipment to record and play back the program, reads the program log to ascertain when the program will be recorded and when it will be aired. They also select the source, such as satellite or studio, from which the program will be recorded, and selects the videotaping equipment on which it will be recorded. Heavily used in sports programming (though they are used in all videotaped productions, including television news programming, and sometimes sitcoms, if they are shot on video tape), they are also responsible for action replays and quickly editing highlights

while a show is in progress. As the title suggests, video tape operators only are used in videotaped productions.

**Vision Mixer**: The Vision Mixer or Technical Director (TD) in the United States is responsible for the actual switching between different video sources, such as camera shots and video inserts. They also maintain color and contrast balance between the studio cameras. A Vision mixer (Video Switcher) is, confusingly, also the name of the equipment which the Technical Director operates.

**Post-production**: Everything after the shooting of the film is post production. People involved in this stage of production include the Film editor for film editing, the Video editor for video editing the Publicist for publicity, the Sound Editor, the Foley artist, the Composer, the Title Sequence Designer, and the Specialist editors.

**Composer**: A Composer is a person who writes the music for a production. They may also be the conductor of an orchestra who plays the music, or part of the orchestra. The Composer is the originator of the music, and usually its first performer. The Composer occasionally writes the theme music for a television show. A television program's theme music is a melody closely associated with the show, and usually played during the title sequence and end closing credits. If it is accompanied by lyrics, it is a theme song.

**Editor**: The Editor works in tandem with the Director in editing the film that has been shot. The Director has the ultimate accountability for editing choices, but often the editor has substantial contribution in the creative decisions concerned in piecing together a finalized product. Often, the Editor commences their role whilst filming is still in process, by compiling initial takes of footage. It is an extremely long process to edit a television show, demonstrating the importance, and significance editing has on a production. Gradually more Editor are beginning to work on a non-linear editing system (NLE), limiting physical touching of the actual film, decreasing film corruption due to touch. The Editor follows the screenplay as the guide for establishing the structure of the story and then uses their talents to assemble the various shots and takes for greater, clearer artistic effect. There are several editing stages. In the first stage, the Editor is supervised by the Director, who spells their vision to the Editor. Therefore, this first rough cut is created during "Offline editing". After the first stage, the following cuts may be supervised by one or more Television producers, who represent the production company and its investors. Consequently, the final cut is the one that most closely

represents what the studio wants from the film and not necessarily what the Director wants during "Online editing".

**Foley artist**: The Foley artist on a film crew is the person who creates and records many of the sound effects. Foley Artists, Editors, and Supervisors are highly specialized and are essential for producing a professional-sounding soundtrack, often reproducing commonplace yet essential sounds like footsteps or the rustle of clothing. The Foley artist also fabricates sounds that can't be correctly recorded while filming, much like the Sound editor does with digital sound effects.

**Publicist**: A Publicist or advertiser has the task of raising public awareness of a production, and ultimately increase viewers and sales of it and its merchandise. The publicist's main task is to stimulate demand for a product through advertising and promotion. Advertisers use several recognizable techniques in order to better convince the public to buy a product. These may include:

- Repetition: Some advertisers concentrate on making sure their product is widely recognized. To that end, they simply attempt to make the name remembered through repetition.
- Bandwagon: By implying that the product is widely viewed, advertisers hope to convince potential buyers to "get on the bandwagon."
- Testimonials: Advertisers often attempt to promote the superior worth of their product through the testimony of ordinary users, experts, or both. For example using film critics or media personalities. This approach often involves an appeal to authority such as a doctor of media science.
- Pressure: By attempting to make people choose quickly and without long consideration, some advertisers hope to make rapid sales, and a sense of urgency to watch or buy a product.
- Association: Advertisers often attempt to associate their product with desirable things, in order to make it seem equally desirable. The use of attractive models, picturesque landscapes, and other similar imagery is common. "Buzzwords" with desired associations are also used.
- Imagery: Using advertising slogans, logos, or a common image increases familiarity, trust, and personality of a production, and the ability for the show to be remembered.

The Publicist ensures the media are well aware of a project by distributing the show as a trial run, or a “sneak preview”; through press releases, interviews with members of the cast or crew, arranging exclusive public visits onset of the production, and creating media kits, which contain pictures, posters, clips, shorts, and trailers and brief descriptions on the show and the plot.

**Sound editor**: In television, the Sound Editor deals with audio editing, adjusting and fixing of the soundtrack. They usually have a major decision-making and creative role when it comes to sound and audio. A Sound Editor also decides what sound effects to use and what effects to achieve from the sound effects, edits and makes new sounds using filters and combining sounds, shaping sound with volume curves, and equalizing. A Sound Editor takes the Foley artist's sounds and puts them in place so it works with the picture and sounds natural, even if the sound is *un*natural. In many cases, a Sound Editor uses a sound effects library extensively, either self-compiled, bought or both, as many of the sounds don't get enough focus if they were taken straight from the shoot of the show.

**Title sequence designer**: A title sequence, in a television program, is shown at the beginning of the show; which displays the show name and credits, usually including Actors, Producers and Directors. A montage of selected images and a theme song are often included to suggest the essential tone of the series. A title sequence is essential in preparing the audience for the following program, and gives them a sense of familiarity that makes them trust, and feel comfortable with the film. It is up to the Title Sequence Designer to achieve this very goal, and make it catchy, entertaining, and appealing to increase the audiences feeling of positivity towards the show.

**Specialist editors**: **ADR editor**: Automatic dialogue replacement (ADR) is the process of replacing dialogue that was recorded incorrectly during filming, with the actors voices recorded and put into place during editing. The ADR editor oversees the procedure and takes the corrupted dialogue, and replaces it with newly recorded lines to the actor's mouth on film to make it lip sync correctly.

**Blue screen Director/Matte Artist:** Blue screen is the film technique of shooting foreground action against a blue background, which is then replaced by a separately shot "background plate" scene by either optical effects or digital composting. This process is directed and co-ordinate by the Blue screen Director. The matte artist is a part of the special effects department who assists in making scenery and locations that

do not exist. They assemble backgrounds using traditional techniques or computers that mix with the footage filmed to create a false set. Both are fairly alike, but blue screen technology is more modern and more widely used.

**Special effects coordinator**: Special effects (SPFX) are used in television productions to create effects that cannot be achieved by normal means, such as depicting travel to other star systems. They are also used when creating the effect by normal means is prohibitively expensive, such as an enormous explosion. They are also used to enhance previously filmed elements, by adding, removing or enhancing objects within the scene. The Special effects Coordinator implements these effects, and directs them with the help of the visual effects art director. The task of the Effects coordinator differs frequently, and can range from extensive over-the-top special effects to basic computer motion graphics animation

**TV News**

Television news refers to the dissemination of current events via the medium of television. The news programmes are called as 'News Bulletins' or 'News Casts'. They range from seconds to hours and provide updates of worlds, national and regional or local news events. Television News is very much a image based, showing videos of many events as they are reported. Hence T.V news is predominantly visual oriented. News is provided in regular intervals are scheduled programmes, whereas latest information of at most importance is provided as 'news flash'. News broadcasts generally contains various news events and incidents of the day related to the fields like political, financial, crime, sports, weather, traffic movements etc. Apart from that news analysis and commentary on important news is also given as special programmes. The news items are analyzed in the form of debates, panel discussions or informatory features etc. Many private cable networks have started giving news like B.B.C, Al Jazeera, STAR News, and Fox News. Many specialized news reporting channels like ESP News for sports reporting, The Weather Channel for weather news, CNBC, Bloomberg, Fox Business Network are giving financial news.

**Cable News**

Cable news refers to the channels which are devoted to current events and news programming 24 hours a day. The originator of this format is CNN i.e. Cable News Network. In contrast, the traditional television networks broadcasting news is called 'Network News'. Television channels presenting news 24 hours a day such as CNN, Fox

News in U.S, and B.B.C in U.K are also called as 'Rolling News Channels'. Television news is presented in the form of various packages and formats. Packages are generally prerecorded reports lasting form five minutes to half an hour. News reporters gather news, collect interview clips visuals along with their own 'P to C' i.e. Piece to Camera. These stories are edited and a script matching the visuals is written. A voice – over may also be recorded to explain the pictures and to link various elements together. The bits or news items are presented in various formats like 'fast snippet news' with visuals and voice over or in a 'news magazine' format using Anchor, Visuals, Voice over, P to C. Important news items can also be given in 'live' by the reporter directly from the field where in the visuals along with natural sound from the scene can be directly telecasted.

**Evolution of Television News in India**

Television news started in Doordarshan in the year 1965-66, as a 15-20 minute news bulletin in the daily one hour broadcast programme. As a public broadcaster Doordarshan presented news in generalized manner. All controversial issues were pushed under the carpet and ruling government had a strong hold as news was started as to suit party in power. Later New Delhi Television Limited (NDTV) started the programme "The World This Week" in 1988, telecasted on Friday night. The news magazine programme gained popularity and credibility through its presentation and varied coverage on international and national events. In 1989 NDTV produced India's live coverage of countries general elections. The commercial success of the coverage set new standard for Indian Television.

Television became transnational in character through the coverage of Gulf War by CNN. The launch of STAR PLUS and its beaming into Indian sub-continent started the proliferation of satellite channels in India. In October 1992, Zee Television was started by Subhash Chandra followed by Sony and ETV. But majority of the satellite channels were entertainment channels. Due to increased market pressure and to sustain the influx of satellite channels Doordarshan started improving its news programs by outsourcing them to private producers under sponsored category. In February 1995, NDTV became the first private producer of national news titled "News Tonight". Gradually the current affairs programs like 'TV Today' in DD Metro, 'Aaj Tak' presented by Late S.P.Singh, 'Aankhon Dekhi' presented by Nalini Singh and 'The India Show', 'India Business Report' started by Television 18 were started which became very popular. Doordarshan became a popular and most looked out channel for news

programs. The success of television programs in Doordarshan forced the satellite channels to launch news programs and ZEE TV was first to fall in line with the starting of ZEE news in 1995 with a tag line 'Sabse Pehle' meaning 'always first'. Later STAR TV and NDTV entered into a five year contract for starting STAR news in 1998.

The fallout of Kargil conflict made the Indian audience look out for latest and happening news in the war front and television became the major source of war news. 'War time journalism' gave the much needed impetus for television news channels and television journalists like Barkha Dutt became a house hold name. In November 1999, TV 18 entered into joint venture partnership with CNBC to launch CNBC India channel. TV Today group launched the 24 hour Hindi news channel 'Aaj Tak' in December 2000. Within 11 months of the launch Aaj Tak became the number one news channel and was awarded the best news channel in India Television Academy Awards. Mega events like Kandhahar hijack, September 11th attacks, Afghanistan War, attack on Parliament, Iraq war, Godhra riots kept Indian TV news channels busy. As the five years contract of NDTV with STAR TV was over in 2003, NDTV launched the 24 hours English news channel NDTV 24X7 and Hindi news channel NDTV India. The power of television journalism reached its peak with the sting operations like Operation West End and 'casting couch case' involving film actor Shakthi Kapoor.

Sahara Indian Parivar launched 24 hours national Hindi channel 'Sahara Samay' in March 28, 2003. It was the first ever city centric satellite news channel covering 31 cities in India with the city news bulletins. DD Metro was converted into 'DD News' on October 3rd 2003 in which both English and Hindi news were telecasted. 'India TV' was launched by May 20th 2004 by Raj kumar Ilyasi and Tarun Tejpal. NDTV Profit 24 hour business news channel was started in January 17th 2005. CNBC and TV18 launched a 24 hour Hindi consumer information channel 'Awaaz' which gives market and investment news. Jagaran TV Private Limited started Channel 7 on 27th March 2005.

**Some of the Indian prominent news channels are as follows**:

**Doordarshan (DD) News:** DD is the grand old dame of Indian TV news. It was once every Indian's only source of national and international news but its viewership in the metros has fallen since the satellite **Popular shows**: *The News* (8.30pm).

**NDTV 24/7:** NDTV joined forces with both DD and Rupert Murdoch's STAR network before striking out on its own as NDTV 24/7. It was the first channel to introduce western elements such as expert panels, audience polls, exposés, campaigns, and

personality driven news. But most importantly, NDTV was the first real voice of the English-speaking urban middle class. A generation of Indians has grown up watching Prannoy Roy –the mild-mannered, bearded psephologist who founded the channel with his wife to make sense of election results. **Popular shows**: *India Decides @ 9* (9pm on week nights) is good for a news roundup. We The People (8pm, Sunday) is an audience-based show tackling current issues hosted by award-winning journalist Barkha Dutt.

**Times Now:** Brought to you by the same people that publish *The Times of India*, the channel was part of the new wave of private broadcasters that launched after NDTV 24/7. It's known for a loud, brash style and often provokes extreme reactions. You either love it or hate it. A lot of this has to do with the channel's editor-in-chief, Arnab Goswami. His combative style of interviewing and presenting the news is hard to ignore. If you're a 'breaking-news' junkie, Times Now is for you. On the other hand, more delicate viewers will quickly overdose on the constant flashing graphics on screen. What's more, the channel isn't shy of telling you what to make of headlines. **Popular shows**: *Newshour* (9pm, Monday-Sunday) is a nightly round-up of the day's news hosted by Arnab Goswami. Its debates are lively, but can often descend into shouting matches between the anchor and guests.

**CNN IBN:** A US/Indian partnership brings you a channel closely modelled on CNN, with a distinct Indian flavour. Fronted by ex-NDTV anchor Rajdeep Sardesai, it has a good mix of regular news reports along with some offbeat formats including a citizen journalist show and even a spoof news show. **Popular shows**: *Devil's Advocate* (8.30pm, Sunday). Veteran journalist Karan Thapar grills politicians, actors, and other public figures but he often doesn't let guests have their say. *Face The Nation* (Monday - Thursday, 10 pm). Host Sagarika Ghose interviews experts and viewers on a host of current topics. But be warned: the host often dominates her guests.

**Headlines Today:** Part of the India Today group, this channel has a youthful feel and a relatively young team of anchors. It also has a 'hard sell' when it comes to presenting news – dramatic background music accompanies reports and crime re-enactments are common. **Popular shows**: *Grand Stand* (8.30 pm, Monday – Friday

**News X:** The newest kid on the block, News X was created by the INX Network and was recently bought by Indi Media. Visually, it's a refreshing change from its rivals because of a relatively clean look – you won't be straining your eyes while looking at a busy screen. The channel's yellow and black colour scheme also differentiates it from

competitors. In keeping with this tone, the news is also presented in a laid back manner. **Popular shows**: *India Inc* (6.30pm, Sunday) - a business slot that showcases local entrepreneurs and their success.

**Television News Channels In Telugu**

Most of the private satellite news channels were not able to start news programs sue to the unavailability of unlinking facilities. The first satellite channel to start the up linking facility and to record the news was SUN TV. ETV used to record the news for 'Andhravani' in Chennai and sent the cassettes to Colombo for up linking it to satellite. Later the up linking facility was started in Chennai by Videsh Sanchar Nigam Limited (VSNL). Utilizing this facility ETV used to uplink the programs from Chennai to Colombo and down linked it at Colombo, further up linking it to satellite from Colombo. Gemini TV started news from February 1998. News bulletins were prepared by a private network called APT TV. Gemini TV started own news production from May 1st 1998. Gemini TV used to uplink the program from Chennai to Singapore, down linking it in Singapore and later up linking the same to satellite.

As the non-linear editing facility was not available during that period 4 to 5 types of news items were inserted in one cassette and sent for teleporting to VSNL facility. ETV used its large network of print reporters for preparing news items at Delhi and Chennai. Two news readers used to read the news at Delhi and Chennai separately. Later Government allowed every channel to build its own earth station along with the up linking facility. ETV news returned to Hyderabad where as Gemini TV, Teza News used to record in Chennai up to 2003 and uplinked from Chennai. Teza news shifted to Hyderabad once Satellite News Gathering (SNG) facility became full proof. MAA TV started news in October 2003. ETV became the first Telugu news channel to telecast live news. The onslaught of the 24 hour news channels started as the up linking facility from India became available. ZEE news was started by ZEE television in 1995. ETV-2 was started in December 2003 followed by TV9 in the same month. TV5 was started n 2007, followed by NTV in the same year. ThE YEAR 2009 witnessed the starting of a plethora of 24 hour Telugu news channels like HMTV,ITV, ZEE 24 GHANTALU, SAAKSHI TV, MAHA TV, STUDIO N, TVI and ABN Andhra Jyothi.

**1.8. New telecast techniques**

The following are the different types of telecasting techniques:

**1. Terrestrial television**

Terrestrial television is a mode of television broadcasting which involves radio waves through transmitting and receiving antennas or aerials. The term is more common in Europe, while in the United States it is referred to as **broadcast television** or sometimes **over-the-air television**. Terrestrial television broadcasting dates back to the very beginnings of television as a medium itself with the first long-distance public television broadcast from Washington, D.C., on April 7, 1927. The BBC began broadcasting television to the public in 1929, and had a regular schedule programmes in 1930 through terrestrial television broadcasting.

**2. Digital terrestrial television**

Digital Terrestrial Television (DTTV or DTT) is the technological evolution and advance from analogue terrestrial television, which broadcasts through the land based (terrestrial) signals. Digital terrestrial television is characterized by reduced use of spectrum, more capacity than analogue, better-quality picture, and lower operating costs for broadcast. A terrestrial implementation of digital television technology uses aerial broadcasts to a conventional antenna (or aerial) instead of a satellite dish or cable connection. Competing variants of digital terrestrial television technology are used around the world.

- Advanced Television Standards Committee ATSC is the one used in North America and South Korea.
- ISDB-T is used in Japan, with a variation of it used in most of South America.
- DVB-T is the most prevalent, covering Europe, Australia, New Zealand, Colombia and some countries of Africa.
- DMB-T/H is China's own standard including Hong Kong.
- Several European countries have switched from Analogue to Digital terrestrial television, with the rest hoping to have completed the switchover mostly by 2012.

DTTV is transmitted on radio frequencies through terrestrial space in the same way as standard analogue television, with the primary difference being the use of multiplex transmitters to allow reception of multiple channels on a single frequency range such as a UHF or VHF channel. The amount of data that can be transmitted (and therefore the number of channels) is directly affected by the modulation method of the channel. The modulation method in DVB-T is COFDM with either 64 or 16 state Quadrature Amplitude Modulation (QAM). In general a 64QAM channel is capable of

transmitting a greater bitrate, but is more susceptible to interference. 16 and 64QAM constellations can be combined in a single multiplex, providing a controllable degradation for more important programme streams. This is called **hierarchical modulation**. DTTV is received either via a digital set-top box, or integrated receiving device, that decodes the signal received via a standard aerial antenna.

**Advantages**

- Digital presentation tends to be better overall, particularly with a good signal, due to the elimination of visible interference and other effects such as ghosting.
- With a weaker signal there is little perceptible difference in digital presentations.
- It is easier to obtain the optimum digital picture than the optimum analogue picture.
- Many more channels can fit on the same spectrum under digital transmission.
- Interactive services can be provided.

**Disadvantages**

- It can be quite difficult to adjust the antenna, because of the lack of feedback that would be provided by a gradually degraded analog picture. The picture is usually either totally on or totally off, providing no information about which direction to move the antenna. A signal meter provided on most tuners helps considerably with this problem, but some televisions lack a signal meter. The same problem can also make it very difficult to select and test antennas.
- New equipment (Set-top box) may be required.
- Increased electricity consumption by the digital receiving equipment if both TV and additional set-top box is plugged.
- An upgraded antenna installation may be required.
- Analogue requires lower signal strength to get a viewable picture. By extension, digital does not degrade as gracefully as analogue. This is because digital signal transmission suffers from the cliff effect; meaning that once the signal degrades beyond a certain point the receiver fails to decode the signal and cannot present the expected output.
- Switching channels is slower because of the time delays in decoding digital signals.

## 3. Satellite television

Satellite television is television delivered by the means of communications satellite and received by an outdoor antenna, usually a parabolic mirror generally referred to as a satellite dish, and as far as household usage is concerned, a satellite receiver either in the form of an external set-top box or a satellite tuner module built into a TV set. In many areas of the world satellite television provides a wide range of channels and services, often to areas that are not serviced by terrestrial or cable providers. Direct broadcast satellite television comes to the general public in two distinct flavors - analog and digital. This necessitates either having an analog satellite receiver or a digital satellite receiver. Analog satellite television is being replaced by digital satellite television and the latter is becoming available in a better quality known as high-definition television.

The first satellite television signal was relayed from Europe to the **Telstar satellite** over North America in 1962. The first geosynchronous communication satellite **Syncom 2** was launched in 1963.The world's first commercial communication satellite called **Intelsat I nicknamed Early Bird**, was launched into synchronous orbit on April 6, 1965. The first national network of satellite television, called **Orbita**, was created in Soviet Union in 1967, and was based on the principle of using the highly elliptical Molniya satellite for re-broadcasting and delivering of TV signal to ground downlink stations. The first commercial North American satellite to carry television was Canada's geostationary **Anik 1**, which was launched in 1972. **ATS-6** the world's first experimental educational and Direct Broadcast Satellite, was launched in 1974. The first Soviet geostationary satellite to carry Direct-To-Home television, called **Ekran** was launched in 1976.

### Technology

Satellites used for television signals are generally in either naturally highly elliptical **Molniya orbit or geostationary orbit 37,000 km (22,300 miles)** above the earth's equator. Satellite television, like other communications relayed by satellite, starts with a transmitting antenna located at an uplink facility. Uplink satellite dishes are very large, as much as 9 to 12 meters (30 to 40 feet) in diameter. The increased diameter results in more accurate aiming and increased signal strength at the satellite. The uplink dish is pointed toward a specific satellite and the uplinked signals are transmitted within a specific frequency range, so as to be received by one of the

transponders tuned to that frequency range aboard that satellite. The transponder 'retransmits' the signals back to Earth but at a different frequency band i.e. through a process known as **translation**, used to avoid interference with the uplink signal, typically in the **C-band (4–8 GHz**) or **$K_u$-band (12–18 GHz)** or both. The leg of the signal path from the satellite to the receiving Earth station is called the downlink.

A typical satellite has up to **32 transponders for Ku-band** and up to **24 for a C-band.** Typical transponders each have a bandwidth between **27 MHz and 50 MHz.** Each geo-stationary C-band satellite needs to be spaced 2 degrees from the next satellite to avoid interference. For $K_u$ the spacing can be 1 degree. C-band transmission is susceptible to terrestrial interference and is adversely affected by ice crystals in thunder clouds, while $K_u$-band transmission is affected by rain as water is an excellent absorber of microwaves at this particular frequency. The down linked satellite signal, quite weak after traveling the great distance can be collected by using a parabolic receiving dish, which reflects the weak signal to the dish's focal point. Mounted on brackets at the dish's focal point is a device called a **feed horn**. This feed horn is essentially the flared front-end of a section of waveguide that gathers the signals at or near the focal point and 'conducts' them to a probe or pickup connected to a **low-noise block down converter or LNB**. The LNB amplifies the relatively weak signals, filters the block of frequencies in which the satellite TV signals are transmitted, and converts the block of frequencies to a lower frequency range in the L-band range. The amplified signal was then fed via coaxial cable to an indoor receiver.

**Standards**

Analog television distributed via satellite is usually sent scrambled or unscrambled in NTSC, PAL, or SECAM television broadcast standards. The analog signal is frequency modulated and is converted from an FM signal to what is referred to as baseband. This baseband comprises the video signal and the audio subcarrier(s). The audio subcarrier is further demodulated to provide a raw audio signal. If the signal is a digitized television signal or multiplex of signals, it is typically QPSK. In general, digital television, including that transmitted via satellites, is generally based on open standards such as MPEG and DVB-S or ISDB-S.

**Categories of usage**

There are three primary types of satellite television usage: reception direct by the viewer, reception by local television affiliates, or reception by head ends for

distribution across terrestrial cable systems. Direct to the viewer reception includes direct broadcast satellite or DBS and television receive-only or TVRO, both used for homes and businesses including hotels, etc.

**Direct broadcast via satellite**

Direct broadcast satellite, (DBS) also known as "Direct-To-Home" can either refer to the communications satellites themselves that deliver DBS service or the actual television service. DBS systems are commonly referred to as "mini-dish" systems. DBS uses the upper portion of the $K_u$ band, as well as portions of the $K_a$ band. Modified DBS systems can also run on C-band satellites and have been used by some networks in the past to get around legislation by some countries against reception of $K_u$-band transmissions. Most of the DBS systems use the DVB-S standard for transmission. With Pay-TV services, the data stream is encrypted and requires proprietary reception equipment. While the underlying reception technology is similar, the Pay-TV technology is proprietary, often consisting of a Conditional Access Module and smart card. This measure assures satellite television providers that only authorized, paying subscribers have access to Pay TV content but at the same time can allow free-to-air (FTA) channels to be viewed even by the people with standard equipment (DBS receivers without the Conditional Access Modules) available in the market.

**Direct to Home television**

Many satellite TV customers in developed television markets get their programming through a direct broadcast satellite (DBS) provider. The provider selects programs and broadcasts them to subscribers as a set package. Basically, the provider's goal is to bring dozens or even hundreds of channels to the customer's television in a form that approximates the competition from Cable TV. Unlike earlier programming, the provider's broadcast is completely digital, which means it has high picture and stereo sound quality. Early satellite television services broadcast in C-band - radio in the 3.7 Giga Hertz (GHz) to 4.2 GHz frequency range. Digital broadcast satellite transmits programming in the $K_u$ frequency range (10 GHz to 14 GHz. Programming sources are simply the channels that provide programming for broadcast. The provider (the DTH platform) doesn't create original programming itself. The broadcast center is the central hub of the system. At the broadcast center, the television provider receives signals from various programming sources, compresses these signals using digital compression (encryption if necessary), and sends a broadcast signal to the proper satellite

**Digital television (DTV**) is a system of producing, transmitting, storing, and displaying television programmes in digital codes. Until the late 1980s it was considered impossible to convert a TV signal into digital code because of the amount of information needed to represent a visual image. However, the development of data compression techniques made it possible to develop a digital technology in the 1990s that offered sharper and wider pictures with superior image quality. A common world standard for DTV, the MPEG-2, was agreed in April 1993 at a meeting of engineers representing manufacturers and broadcasters from 18 countries. The advent of DTV constitutes a revolutionary overhaul of television, making a wider variety of programming available and improving the quality of image and sound. It is expected that DTV will have superseded the analog television system by 2006. By this time, industry experts hope, 'multiplexing' (where more than one television program can share the same bandwidth) of both HDTV and SDTV (standard definition) programs will have been widely adopted, as will the broadcast of non television data, such as Web content and stock-market information.

Traditional television broadcasts since the inception of the television have been "**Linear**." A person viewing a linear broadcast has no control over what is being viewed other than to be able to change channels and adjust the volume and display settings. Everyone watching a particular linear broadcast will see the same thing at the same time. To this day, the majority of television broadcasts are linear.

**Pay TV** is a form of linear broadcast channel that is only available to paying customers. Pay TV channels are available to cable and Satellite customers on top of their basic channels, for an additional subscription fee (on top of whatever fee they may be paying for their basic access. A new technology called "**Pay Per View**" (PPV) or "**Conditional Access"** was first introduced in the 1970s and became commonly available on cable and satellite networks in the early 1990s. Pay per View allows the viewer/customer to select a particular show and watch it on their television set for a fee. The channel containing the Pay per View feed is then unlocked, permitting the viewer/customer to watch the broadcast for a limited amount of time (generally the running time of the broadcast). In all other aspects, Pay per View is in fact a linear broadcast, with a set broadcast schedule.

**Video on Demand** (VOD), is a newer technology first introduced in 1990 and only available on digital cable and satellite networks. VOD works similarly to PPV such that

viewers/customers may select a particular show and watch it on their television for a fee. Unlike PPV, VOD is however not a linear broadcast, the viewer may select when the showing will begin, they may pause, rewind and fast-forward the viewing. VOD networks typically operate on one of three business models, or a mixture of these.

- Free on Demand is a free offering from your cable provider, it may or may not be ad sponsored like regular broadcast TV.
- Subscription VOD (SVOD) costs a flat monthly fee regardless of how many shows you watch. Similar to pay TV.
- Transactional VOD charges a viewing fee for each show that a viewer "purchases." Similar to pay per view.

Some networks charge both a subscription fee and viewing fee. However, most VOD providers permit the viewer to view a show as many times as they want during a 24-hour period, while PPV only permits one viewing.

**1.9. Programs for special audience - women - youth - children - farmers – students**

**The various programming content in television i.e. scripted entertainment are as follows.**

- Animated
- Award shows (partially scripted)
- Drama—which includes:
    - Action-adventure or Thriller
    - Comedy-drama
    - Family drama
    - Legal drama
    - Medical drama
    - Police procedural
    - Political drama
    - Science-fiction / Fantasy / Horror / Supernatural drama
    - Serial drama
    - Soap opera
    - Teen drama
- Miniseries and Television movies
- Comedy
    - Mockumentary

- Satire
- Sitcom
- Sketch comedy

**Unscripted entertainment**

- Game shows
- Reality
- Talk shows

**Informational**

- Infomercials—paid advertising spots that are up to an hour long
- News programs
- Documentaries
- News magazines—dealing with current affairs

**Panel discussion interviews**

Some panels crackle with energy, elicit fresh ideas, and bring the audience into the discussion. Others plod along, and by the fifteen-minute mark the audience is checking Blackberries and thumbing through the program.

**Length and panel size:** The ideal length for a panel discussion is 45 minutes to one hour. The ideal number of participants is 4-5, plus moderator.

**Choosing a moderator:** Every panel discussion needs a strong moderator. The role of the moderator is very different from the role of a panelist. The best moderator is someone who has moderated panels in the past, understands the subject matter, knows a bit about the panelists, and realizes that he / she is there to guide the conversation - not to impress the audience with her brilliance. The moderator is there to make the speakers look good and make sure that they connect with the audience. Moderators also need an innate sense of pacing i.e. how long each panelist should talk, and how long she should dedicate to each topic before moving on and a smooth approach to weaving in questions from the audience.

**Panelist guidelines and advance preparation:** Once a panelist has signed on, send a confirmation for agreeing to be part of the event, along with the date/time/location of the event. The communication must also inform the panelist's details about the topics/themes of the session, and what you hope to achieve.

**Everyone needs a microphone:** It can be a clip-on lavalier mic, or a handheld, or a mic perched on an adjustable stand, but forcing everyone to share a single mic means that

there will be long stretches of dead air as your panelists hand the mic back and forth. This slows down the pace of the discussion, and often it prevents panelists who have something to say from jumping in, because someone else will hijack the mic while it is traveling down the line. The best option is to having mics for everyone.

Panel discussions on Indian television have come a long way from the sleepy and monotonous sessions of the Doordarshan era. Back then, the static camera and uninspired presentation of views actually killed the informed arguments of the panelists. With the media boom, the picture has changed considerably. Apart from the lively involvement of audience and the eloquence of media-savvy panelists, technology also ensured the involvement of speakers from across time zones, promising a deeper, broader and more enlightened discourse on issues. Not only are today's newsmakers and commentators seemingly more open to instant reactions to their views, they are also well versed - in varying degrees - with the dynamics of live media. First, television news, as the cliché goes, is no more just news today. It is entertainment. It is competition. It is also often a direct response mechanism that gives panelists the first taste of public sentiments. Given this scenario, most Indian panelists – very often regular fixtures on particular channels – look to make the most out of their 30-60 minute daily airtime quota to ensure that they are heard. For such a desperate lot, it is irrelevant whether a fellow-panelist is making a pertinent point, answering specific questions or stating facts that could give the discussion a fresh perspective.

## Television technology

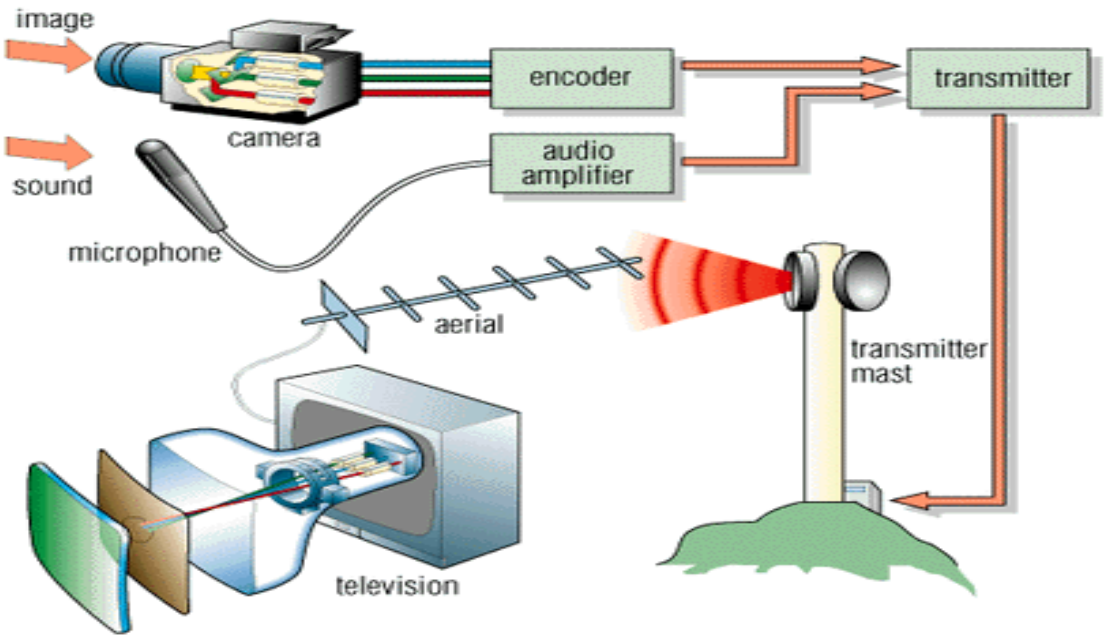

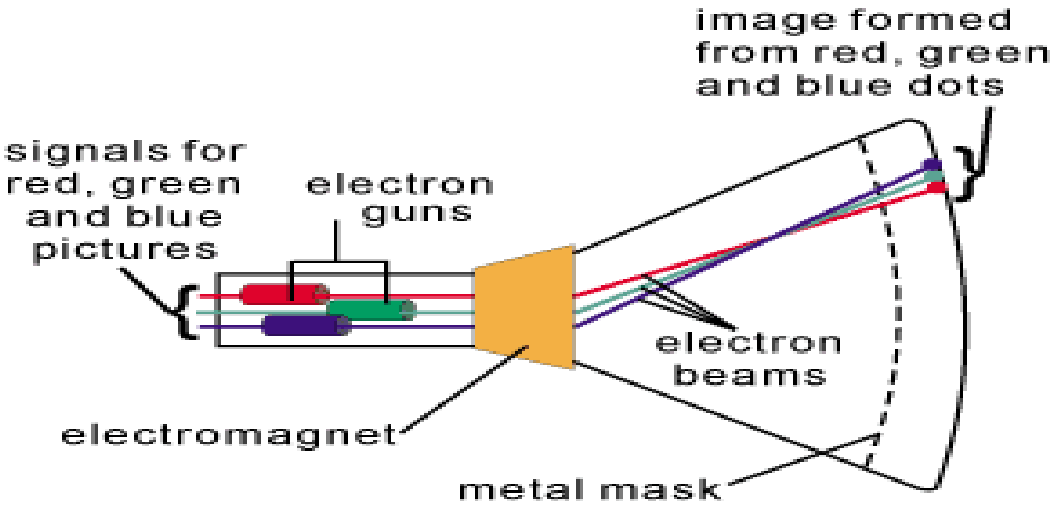

**Diagram of a color television system – transmitting and receiving**.

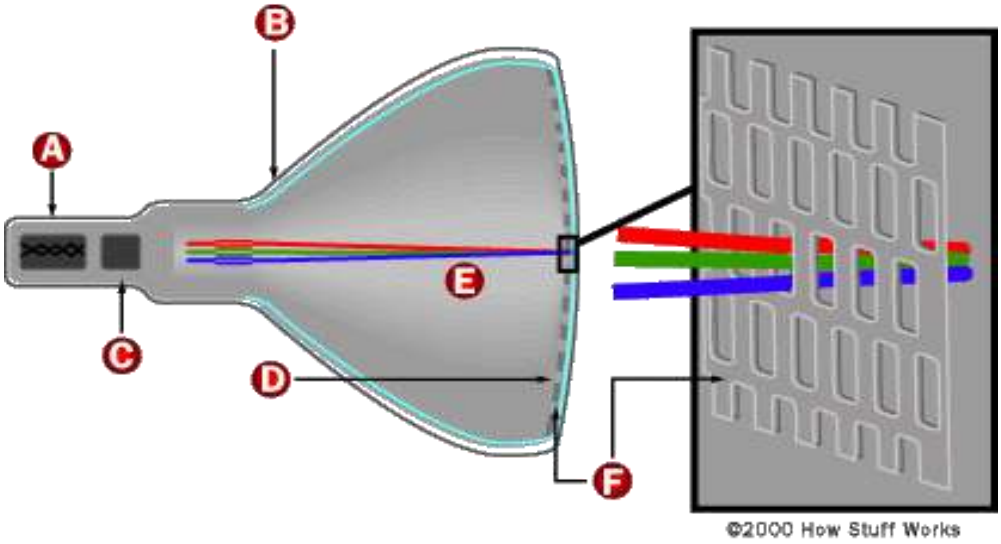

- The camera separates the picture into three colors – red, blue, green – by using filters and different camera tubes for each color.
- The audio signal is produced separately from the video signal. Both signals are transmitted from the same aerial using a special coupling device called a **diplexer**.
- There are four sections in the receiver: the aerial, the tuners, the decoders, and the display. As in the transmitter, the audio and video signals are processed separately. The signals are amplified at various points.
- For transmission, a television camera converts the pattern of light it takes in into a pattern of electrical charges. This is scanned line by line by a beam of electrons from an electron gun, resulting in variable electrical signals that represent the picture. These signals are combined with a radio carrier wave and broadcast as **electromagnetic waves**.
- The receiving 'aerial' or antenna or satellite dish picks up the wave and feeds it to the receiver i.e. TV set. This separates out the vision signals, which pass to the display device.

- A television itself is a **cathode ray tube**, with three electron guns at the back, ejecting electrons to the screen. The color we see on the screen with our naked eyes is a mixture of red, green and blue. There are three different fluorescence powders on the screen corresponding to the three colors. When electrons are ejected to the fluorescence powder, light is given out, forming a visible image.
- The electrons are ejected to their suitable fluorescence powder, for example, an electron that represents blue will only hit blue fluorescence powder but not the red one, or else a strange color will appear. This is done by placing a specially made **metal mask** between the screen and the electron guns. As the electron guns eject electrons in different directions, the electrons will reach different fluorescence powders after passing through the metal net. The result is a recreation of the pattern of light that entered the camera

**Human Vision**:

- Both television and computer screens as well as newspaper and magazine photos rely on this fusion-of-small-colored-dots capability in the human brain to chop pictures up into thousands of individual elements. On a TV or computer screen, the dots are called **pixels**. If you divide a moving scene into a **sequence of still pictures** and show the still images in **rapid succession**, the brain will **reassemble** the still images into a **single, moving scene**. By putting together 15 or more subtly different frames per second, the brain integrates them into a moving scene. Fifteen per second is about the minimum possible -- any fewer than that and it looks jerky.

A Cathode
B Conductive coating
C Anode
D Phosphor-coated screen
E Electron beams
F Shadow mask

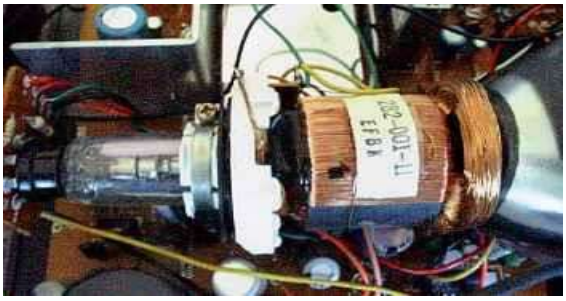

**The Cathode Ray Tube:**

- Almost all TVs in use today rely on a device known as the **cathode ray tube**, or **CRT**, to display their images.
- The terms **anode** and **cathode** are used in electronics as synonyms for positive and negative terminals. The "cathode" is a heated filament placed is in a vacuum created inside a glass "tube." The "ray" is a stream of electrons that naturally pour off a heated cathode into the vacuum. Electrons are negative. The anode is positive, so it attracts the electrons pouring off the cathode.
- In a TV's cathode ray tube, the stream of electrons is focused by a focusing anode into a tight beam and then accelerated by an accelerating anode. This tight, high-speed beam of electrons flies through the vacuum in the tube and hits the flat screen at the other end of the tube. This screen is coated with phosphor, which glows when struck by the beam.

**TV Steering Coils**:

- The steering coils are simply copper windings. These coils are able to create **magnetic fields** inside the tube, and the electron beam responds to the fields.
- One set of coils creates a magnetic field that moves the electron beam vertically, while another set moves the beam horizontally. By controlling the voltages in the coils, you can position the electron beam at any point on the screen.

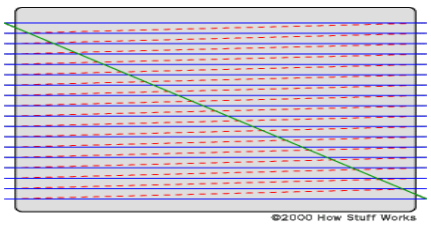

**The large black electrode hooked to the tube near the screen is connected internally to the conductive coating.**

**TV Phosphors**

- A **phosphor** is any material that, when exposed to radiation, emits visible light. The radiation might be ultraviolet light or a beam of electrons. Any fluorescent color is really a phosphor -- fluorescent colors absorb invisible ultraviolet light and emit visible light at a characteristic color.
- In a CRT, phosphor coats the inside of the screen. When the electron beam strikes the phosphor, it makes the screen glow. In a black-and-white screen, there is one phosphor that glows white when struck. In a color screen, there are three phosphors arranged as dots or stripes that emit red, green and blue light. There are also three electron beams to illuminate the three different colors together.

**The Black-and-White TV Signal**

- In a black-and-white TV, the screen is coated with white phosphor and the electron beam "paints" an image onto the screen by moving the electron beam across the phosphor a line at a time.
- To "paint" the entire screen, electronic circuits inside the TV use the magnetic coils to move the electron beam in a "**raster scan**" pattern across and down the screen. The beam paints one line across the screen from left to right. It then quickly flies back to the left side, moves down slightly and paints another horizontal line.

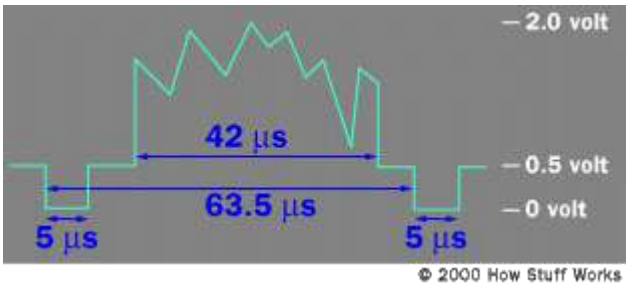

- In this figure, the blue lines represent lines that the electron beam is **"painting"** on the screen from left to right, while the red dashed lines represent the beam flying back to the left. When the beam reaches the right side of the bottom line, it has to move back to the upper left corner of the screen, as represented by the green line in the figure. When the beam is "painting," it is on, and when it is flying back, it is off so that it does not leave a trail on the screen. The term **horizontal retrace** is used to refer to the beam moving back to the left at the end of each line, while the term **vertical retrace** refers to its movement from bottom to top.
- As the beam paints each line from left to right, the intensity of the beam is changed to create different shades of black, gray and white across the screen. Because the lines are spaced very closely together, your brain integrates them into a single image.

**Painting the TV Screen**

- Standard TVs use an **interlacing** technique when painting the screen. In this technique, the screen is painted half of the lines per frame. The beam paints every other line as it moves down the screen -- for example, every odd-numbered line. Then, the next time it moves down the screen it paints the even-numbered lines, alternating back and forth between even-numbered and odd-numbered lines on each pass. **The entire screen, in two passes, is painted 30 times every second.**
- The alternative to interlacing is called **progressive scanning**, which paints every line on the screen 60 times per second. Most computer monitors use progressive scanning because it significantly reduces flicker.
- The TV station or VCR therefore sends a well-known signal to the TV that contains three different parts:
    1. **Intensity information** for the beam as it paints each line
    2. **Horizontal-retrace signals** for moving the beam back at the end of each line
    3. **Vertical-retrace signals** for moving the beam from bottom-right to top-left
- A signal that contains all three of these components -- intensity information, horizontal-retrace signals, and vertical-retrace signals -- is called a **composite video signal**.

## Black and White T.V.Signal

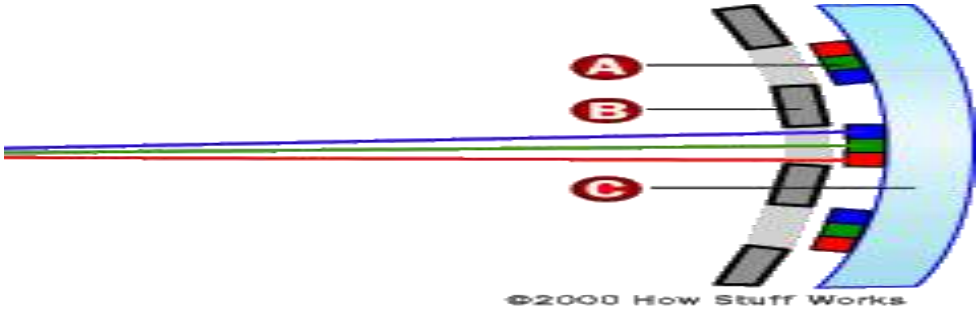

- The horizontal-retrace signals are **5-microsecond pulses** at zero volts. The actual signal for the line is a varying wave between 0.5 volts and 2.0 volts, with 0.5 volts representing black and 2 volts representing white. This signal drives the intensity circuit for the electron beam. In a black-and-white TV, this signal can consume about **3.5 megahertz (MHz)** of bandwidth, while in a colour set the limit is about **3.0 MHz**.
- A vertical-retrace pulse is similar to a horizontal-retrace pulse but is 400 to 500 microseconds long. The vertical-retrace pulse is **serrated** with horizontal-retrace pulses in order to keep the horizontal-retrace circuit in the TV synchronized.

## Color TV Screen

A color TV screen differs from a black-and-white screen in three ways:

- There are three electron beams that move simultaneously across the screen. They are named the red, green and blue beams.
- The screen is not coated with a single sheet of phosphor as in a black-and-white TV. Instead, the screen is coated with red, green and blue phosphors arranged in dots or stripes. If you turn on your TV or computer monitor and look closely at the screen with a magnifying glass, you will be able to see the dots or stripes.
- On the inside of the tube, very close to the phosphor coating, there is a thin metal screen called a **shadow mask**. This mask is perforated with very small holes that are aligned with the phosphor dots (or stripes) on the screen.

Ⓐ Phosphors
Ⓑ Shadow mask
Ⓒ Glass

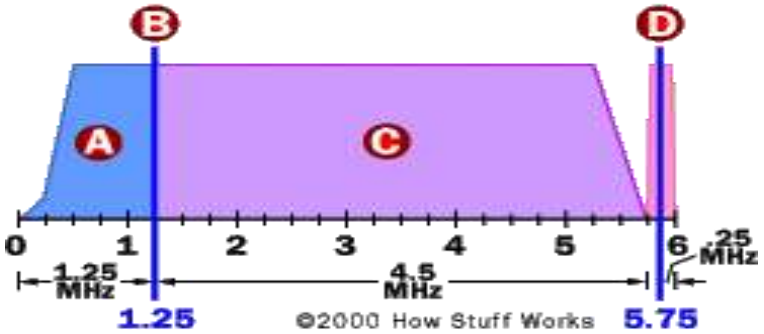

- When a colour TV needs to create a red dot, it fires the red beam at the red phosphor. Similarly for green and blue dots.
- To create a white dot, red, green and blue beams are fired simultaneously -- the three colours mix together to create white.
- To create a black dot, all three beams are turned off as they scan past the dot.
- All other colours on a TV screen are combinations of red, green and blue.

**Color TV Signal**

- A colour TV signal starts off looking just like a black-and-white signal. An extra **chrominance** signal is added by superimposing a 3.579545 MHz sine wave onto the standard black-and-white signal.
- Right after the horizontal sync pulse, eight cycles of a 3.579545 MHz sine wave are added as a **colour burst**.

- The composite video signal is amplitude-modulated into the appropriate frequency, and then the sound is frequency-modulated.

Ⓐ Vestigial picture sideband
Ⓑ Video carrier
Ⓒ Fully transmitted picture sideband
Ⓓ Sound carrier

- To the left of the video carrier is the **vestigial lower sideband** (0.75 MHz), and to the right is the full upper sideband (4 MHz).
- The sound signal is centred on 5.75 MHz.

- For example, if a program is transmitted on channel 2, it has its video carrier at 55.25 MHz and its sound carrier at 59.75 MHz.
- A typical TV signal 4 MHz of bandwidth. By the time the sound, is added as a **vestigial sideband** and a little buffer space, a TV signal requires **6 MHz of bandwidth**.

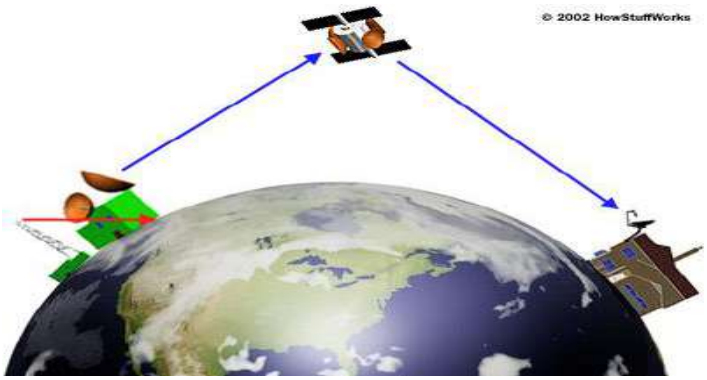

**TV Broadcasts**

There are five different ways to get a signal into your TV set

- Broadcast programming received through an **antenna**
- Cable TV arriving in a **set-top box** that connects to the antenna terminals
- Large i.e. 6 to 12 feet satellite-dish antenna Small (1 to 2 feet) satellite-dish antenna arriving in a set-top box that connects to the antenna terminals

**Satellite TV Signals**

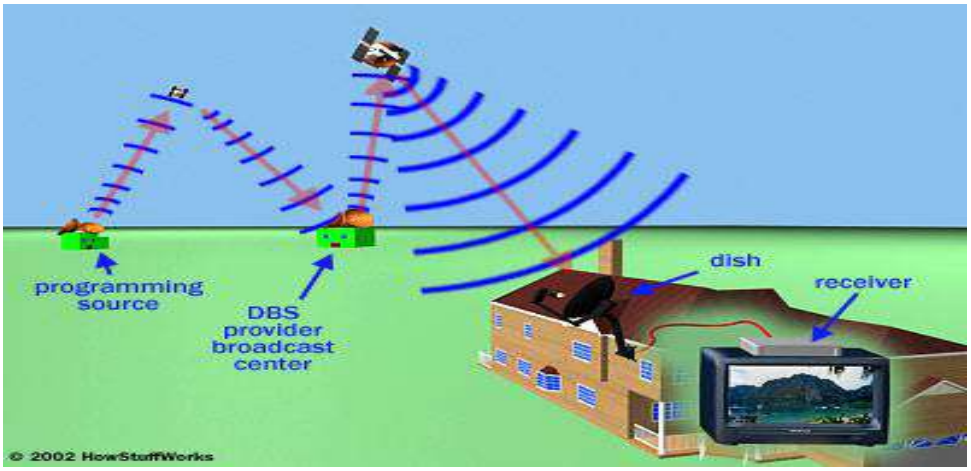

- Satellites are high in the sky, there are a lot more customers in the line of sight. Satellite TV systems transmit and receive radio signals using specialized antennas called **satellite dishes**.
- **Large-dish satellite antennas** pick off un encoded or encoded signals being beamed to Earth by satellites. First, the dish to a particular satellite, and then a particular channel is selected for transmitting.
- The set-top box receives the signal, decodes it if necessary and then sends it to channel..
- The TV programs are encoded in MPEG-2 format and transmitted to Earth. The set-top box decodes MPEG-2, then converts it to a standard analog TV signal and sends it to TV

**Satellites are higher in the sky than TV antennas, so they have a much larger line**

**of sight range.**

- The TV satellites are all in **geosynchronous orbit** i.e.they stay in one place in the sky relative to the Earth. Each satellite is launched into space at about 7,000 mph (11,000 kph), reaching approximately 22,200 miles (35,700 km) above the Earth. At this speed and altitude, the satellite will revolve around the planet once every 24 hours -- the same period of time it takes the Earth to make one full rotation.
- Today, most satellite TV customers get their programming through a **direct broadcast satellite** (DBS) provider, such as DirecTV or DISH Network. The provider selects programs and broadcasts them to subscribers as a set package.
- Early satellite television was broadcast in **C-band radio** -- radio in the 3.7-gigahertz (GHz) to 6.4-GHz frequency range. Digital broadcast satellite transmits programming in the **Ku frequency range** (11.7 GHz to 14.5 GHz ).

There are five major components involved in a **direct to home** (DTH) or **direct broadcasting** (DBS) satellite system: the **programming source, the broadcast center, the satellite, the satellite dish and the receiver.**

- **Programming sources** are simply the **channels** that provide programming for broadcast.
- The **broadcast center** is the central hub of the system. The broadcast center receives signals from various programming sources and beams a broadcast signal to satellites in geosynchronous orbit.
- The **satellites** receive the signals from the broadcast station and rebroadcast them to Earth.

- The viewer's **dish** picks up the signal from the satellite and passes it on to the receiver in the viewer's house.
- The **receiver** processes the signal and passes it on to a standard TV.

Satellite TV providers get programming from two major sources: International or transnational channels, national **channels** and various **local or regional channels**.

**Satellite TV Signal**

- Satellite signals contain such high-quality digital data, it would be impossible to transmit them without **compression**. Compression simply means that unnecessary or repetitive information is removed from the signal before it is transmitted. The signal is reconstructed after transmission.
- Satellite TV uses a special type of video file compression standardized by the **Moving Picture Experts Group (MPEG)**. With MPEG compression, the provider is able to transmit significantly more channels. There are currently five of these MPEG standards, each serving a different purpose.
- Some of the major satellite TV providers once used **MPEG-2**. In this the 270-Mbps stream is reduced to about 5 or 10 Mbps depending on the type of programming. MPEG-2 is better equipped to analyze static images, like those you see on a talk show or newscast, than moving, dynamic images.
- At present **MPEG-4** compression is used. Because MPEG-4 was originally designed for streaming video in small-screen media like computers, it can encode more efficiently and provide a greater bandwidth than MPEG-2. MPEG-4 can produce a better picture of dynamic images through use of spatial (space) and temporal (time) compression. This is why satellite TV using MPEG-4 compression provides high definition of quickly-moving objects that constantly change place and direction.

**MPEG Standards**

- MPEG-1: the original standard for encoding and decoding streaming video and audio files.
- MPEG-2: the standard for digital television, this compresses files for transmission of high-quality video.
- MPEG-4: the standard for compressing high-definition video into smaller-scale files that stream to computers, cell phones and PDAs

(personal digital assistants).

- MPEG-21: also referred to as the Multimedia Framework. The standard that interprets what digital content to provide to which individual user so that media plays flawlessly under any language, machine or user conditions.

**Satellite TV Encoding and Encryption**

- At the broadcast centre, the high-quality digital stream of video goes through an MPEG encoder, which converts the programming to MPEG-4 video of the correct size and format for the satellite receiver in your house.
- Encoding works in conjunction with compression to analyze each video frame and eliminate redundant or irrelevant data and extrapolate information from other frames. This process reduces the overall size of the file. Each frame can be encoded in one of three ways:

1. As an **intra frame**, this contains the complete image data for that frame. This method provides the least compression.
2. As a **predicted** frame, which contains just enough information to tell the satellite receiver how to display the frame based on the most recently displayed intra frame or predicted frame. A predicted frame contains only data that explains how the picture has changed from the previous frame.
3. As a **bidirectional** frame, this displays information from the surrounding intraframe or predicted frames. Using data from the closest surrounding frames, the receiver **interpolates** the position and color of each pixel.

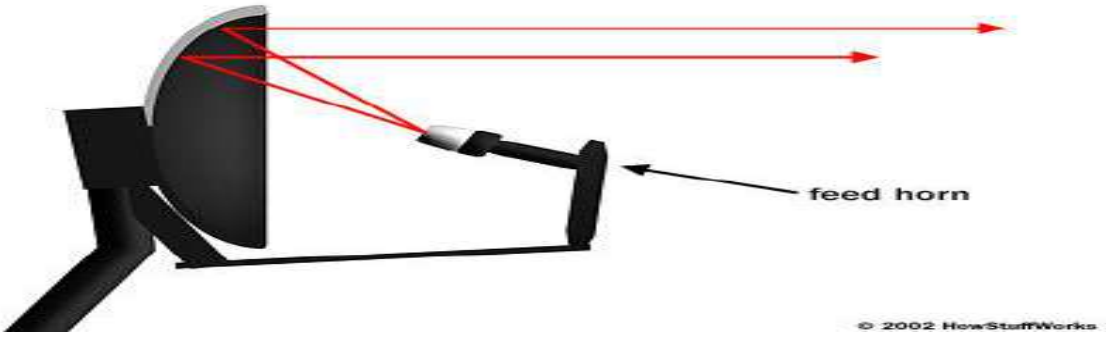

- After the video is compressed, the provider encrypts it to keep people from accessing it for free. Encryption scrambles the digital data in such a way that it can only be **decrypted** i.e. converted back into usable data only if the receiver has the correct decryption algorithm and security keys.
- Once the signal is compressed and encrypted, the broadcast centre beams it directly to one of its satellites. The satellite picks up the signal with an onboard dish, amplifies the signal and uses another dish to beam the signal back to Earth.

**Satellite Dish**

- The signal is captured by the satellite dish. A satellite dish is just a special kind of antenna designed to focus on a specific broadcast source. The standard dish

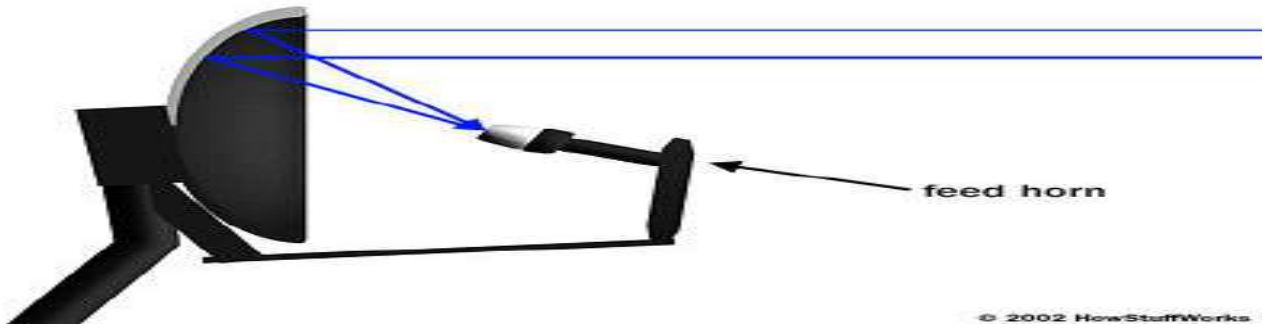

consists of a **parabolic** (bowl-shaped) surface and a central **feed horn**. The central element in the feed horn is the **low noise block down converter**, or **LNB**. The LNB amplifies the radio signal bouncing off the dish and filters out the **noise** i.e. those radio signals not carrying programming. The LNB passes the amplified, filtered signal to the satellite receiver inside the viewer's house.

- To transmit a signal, a controller sends it through the horn, and the dish focuses the signal into a relatively narrow beam.

**Transmitting Dish: Dish reflects energy from the feed horn, generating a narrow beam.**

- The dish on the receiving end can't transmit information; it can only receive it. The receiving dish works in the exact opposite way of the transmitter. When a beam hits the curved dish, the parabola shape reflects the radio signal inward onto a particular point, just like a concave mirror focuses light onto a particular point.

**Receiving Dish: Dish focuses incoming radio waves onto the feed horn.**

**Satellite Receiver**

The end component in the entire satellite TV system is the **receiver**. The receiver has four essential jobs:

- **It de-scrambles the encrypted signal.** In order to unlock the signal, the receiver needs the proper decoder chip for that programming package. The provider can communicate with the chip, via the satellite signal, to make necessary adjustments to its decoding programs. The provider may occasionally send signals that disrupt illegal de-scramblers as an **electronic counter measure** (ECM) against illegal users.
- **It takes the digital MPEG-2 or MPEG-4 signal and converts it into an analog format that a standard television can recognize.**
- **It extracts the individual channels from the larger satellite signal.** When you change the channel on the receiver, it sends just the signal for that channel to your TV. Since the receiver spits out only one channel at a time, you can't tape one program and watch another. You also can't watch two different programs on two TVs hooked up to the same receiver.
- **It keeps track of pay-per-view programs and periodically phones a computer at the provider's headquarters to communicate billing information.**

Most local stations don't transmit their programming to satellites. As the provider includes local programming in a particular area, they will have a small local facility consisting of a few racks of communications equipment. The equipment receives local signals directly from the broadcaster through **fibre-optic cable** or an antenna and then transmits them to the central broadcast centre. The broadcast centre converts all of this programming into a high-quality, uncompressed digital stream. At this point, the stream contains a vast quantity of data at about **270 megabits per second (Mbps**) for each channel. In order to transmit the signal from there, the broadcast centre has to **compress** it. Otherwise, it would be too big for the satellite to handle,

With emerging technologies in each service, the hardest decision in TV viewing is no longer just what channel to watch -- it's what service to choose.

- **Cable advantages:** Advancements in digital cable provide improved audio and picture quality with additional channels at a lower cost than satellite. You can also access cable channels from multiple rooms in your house fairly easily.
- **Cable disadvantages:** Cable has limited access in rural areas, and you should prepare for increased service costs as your provider updates its equipment. Your service costs are also

subject to local taxes.

- **Satellite advantages:** Satellite offers movie-quality audio and picture display with hundreds of channels. This service is readily available in rural and urban areas and provides access to more digital and high definition programming.
- **Satellite disadvantages:** It is expensive to purchase all the equipment at the outset (and you can't typically rent it). If you want to access satellite TV in multiple rooms, be prepared for extra fees. Also, satellite TV is subject to weather-related malfunctions.

**Analog Television**:

- A video camera takes a picture of a scene. It does this at a frame rate of 30 frames per second.
- The camera **rasterizes** the scene. That is, the camera turns the picture into rows of individual dots called pixels. Each pixel is assigned a color and intensity.
- The rows of pixels are combined with synchronization signals, called **horizontal sync** and **vertical sync** signals, so that the electronics inside a TV set will know how to display the rows of pixels.
- This final signal, containing the colour and intensity of each pixel in a set of rows, along with horizontal and vertical sync signals, is called a **composite video signal**.
- Sound is completely separate. When you look on the back of your VCR and you see the yellow plug, that's the plug for composite video. Sound is either a white plug or a red plug and a white plug.

The main problem with the Analog television is the **resolution**.

- The resolution of the TV controls the crispness and detail in the picture you see.
- The resolution is determined by the number of **pixels** on the screen.
- An analog TV set can display 525 horizontal lines of resolution every 30th of a second. In reality, however, an analog TV displays half of those lines in a 60th of a second, and then displays the other half in the next 60th, so the whole frame is updated every 30th of a second. This process is called **interlacing**.
- The lowest-resolution computer monitor displays 640 x 480 pixels.
- Because of the interlacing, the effective resolution of a TV screen is perhaps 512 x 400 pixels.

**Digital TV**

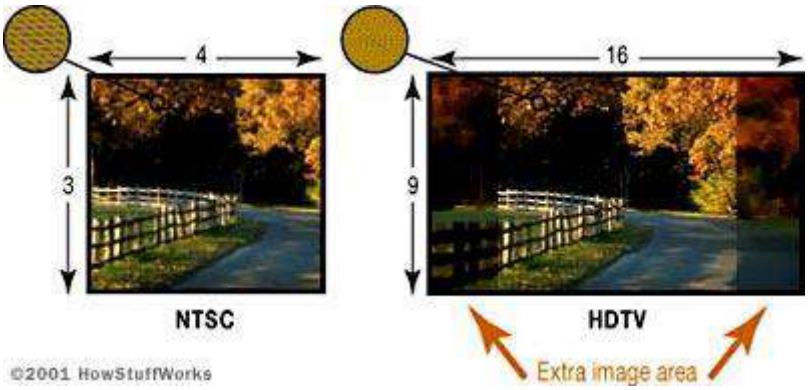

- **Digital TV**, also known as DTV or HDTV (high-definition TV). True digital TV is completely digital and involves:
    1. **Digital cameras** working at a much higher resolution than analog cameras
    2. **Digital transmission**
    3. **Digital display** at a much higher resolution
- DTV uses MPEG-2 encoding just like the satellite systems do, but digital TV allows a variety of new, larger screen formats. The formats include:
    1. **480p** - 640x480 pixels progressive
    2. **720p** - 1280x720 pixels progressive
    3. **1080i** - 1920x1080 pixels interlaced
    4. **1080p** - 1920x1080 pixels progressive

**Advantages of Digital television**:

- A digital TV decodes the MPEG-2 signal and displays it just like a computer monitor does, giving it incredible resolution and stability.
- The digital channel carries a 19.39-megabit-per-second stream of digital data that your digital TV receives and decodes.
- Each broadcaster has one digital TV channel, but one channel can carry multiple **sub-channels** if the broadcaster chooses that option. On its digital channel, each broadcaster sends a 19.39-megabit-per-second (Mbps) stream of digital data. Broadcasters have the ability to use this stream in several different ways. For example:
    1. A broadcaster can send a single program at 19.39 Mbps.
    2. A broadcaster can divide the channel into several different streams like four **streams of 4.85 Mbps each**. These streams are called **sub-channels**, and this type of broadcasting is called **multicasting**. For example, if the digital TV channel is channel 53, then 53.1, 53.2 and 53.3 could be three sub-channels on that channel. Each sub-channel can carry a different program.
- The reason that broadcasters can create sub-channels is because digital TV standards allow several different **formats**. Broadcasters can choose between three formats:

1. **480i** - The picture is 704x480 pixels, sent at 60 interlaced frames per second (30 complete frames per second).
2. **480p** - The picture is 704x480 pixels, sent at 60 complete frames per second.
3. **720p** - The picture is 1280x720 pixels, sent at 60 complete frames per second.
4. **1080i** - The picture is 1920x1080 pixels, sent at 60 interlaced frames per second (30 complete frames per second).
5. **1080p** - The picture is 1920x1080 pixels, sent at 60 complete frames per second.

- The "p" and "i" designations stand for "progressive" and "interlaced." In a progressive format, the full picture updates every 60th of a second. In an interlaced format, half of the picture updates every 60th of a second.
- The 480p and 480i formats are called the **SD** (standard definition) formats, and 480i is roughly equivalent to a normal analog TV picture. When analog TV shows are up converted and broadcast on digital TV stations, they're broadcast in 480p or 480i.
- The 720p, 1080i and 1080p formats are **HD** (high definition) formats.
- The HD formats of digital TV have a different **aspect ratio** than analog TVs. An analog TV has a 4:3 aspect ratio, meaning that the screen is 4 units wide and 3 units high. For example, a "25-inch diagonal" analog TV is 15 inches high and 20 inches wide. The HD format for digital TV has a 16:9 aspect ratio, as shown below:

- If a station wants to broadcast a sporting event, where there is lots of movement in the scene at 1080i, the entire 19.39 megabits per second is needed to get a high-quality image.
- On the other hand, a newscast showing a newscaster's head can use a much lower bit rate. A broadcaster might transmit the newscast at 480p resolution and a 3-Mbps bit rate, leaving 16.39 Mbps of space for other sub-channels.
- It's very likely that broadcasters will send three or four sub-channels during the day and then switch to a single high-quality show that consumes the entire 19.39 Mbps at night. Some broadcasters are also experimenting with 1- or 2-Mbps data channels that send information and Web pages along with a show to provide additional information.
- **Aspect ratio** - Standard television has a 4:3 aspect ratio -- it is four units wide by three units high. HDTV has a 16:9 aspect ratio, more like a movie screen.
- **Resolution** - The lowest standard resolution (SDTV) will be about the same as analog TV and will go up to 704 x 480 pixels. The highest HDTV resolution is 1920 x 1080 pixels. HDTV can display about ten times as many pixels as an analog TV set.
- **Frame rate** - A set's frame rate describes how many times it creates a complete picture on the screen every second. DTV frame rates usually end in "i" or "p" to denote whether they are interlaced or progressive. DTV frame rates range from 24p (24 frames per second, progressive) to 60p (60 frames per second, progressive).

**The 18 Primary DTV Standards**

| | Resolution | Aspect Ratio | Frame Rate (i = Interlaced, p = Progressive) |
|---|---|---|---|
| HDTV | 1920 x 1080 | 16:9 | 24p, 30p, 60i |
| | 1280 x 720 | 16:9 | 24p, 30p, 60p |
| SDTV | 704 x 480 | 16:9 | 24p, 30p, 60i, 60p |
| | 704 x 480 | 4:3 | 24p, 30p, 60i, 60p |
| | 640 x 480 | 4:3 | 24p, 30p, 60i, 60p |

**Working of Cable Television:**

- Today, cable systems deliver hundreds of channels to millions of homes. The earliest cable systems were, in effect, strategically placed **antennas** with very

long **cables** connecting them to subscribers' television sets. Because the signal from the antenna became weaker as it travelled through the length of cable, cable providers had to insert **amplifiers** at regular intervals to boost the strength of the signal and make it acceptable for viewing.

- In a cable system, the signal might have gone through 30 or 40 amplifiers before reaching your house, one every 1,000 feet or so. With each amplifier, you would get noise and distortion and if one of the amplifiers failed, you lost the picture.
- The addition of **CATV** (community antenna television) stations and the spread of cable systems ultimately led manufacturers to add a **switch** to most new television sets. Later, when the growing popularity of television necessitated additional channels, frequencies in the **ultra-high frequency** (UHF) portion of the spectrum were allocated
- Cable equipment is designed to **shield** the signals carried on the cable from outside interference, and televisions are designed to accept signals only from the point of connection to the cable or antenna; but **interference** can still enter the system, especially at connectors. When the interference comes from the same channel that's carried on the cable, there is a problem because of the difference in broadcast speed between the two signals.
- Radio signals travel through the air at a speed very close to the speed of light. In a **coaxial cable** like the one that brings CATV signals to your house, radio signals travel at about two-thirds the speed of light. When the broadcast and cable signals get to the television tuner a fraction of a second apart, you see a double image called "**ghosting**."
- Later cable system in Wilkes-Barre, PA, began offering the first "pay-per-view" channel. The customers would pay to watch individual movies or sporting events. The cable systems receiving the signals used dish antennas 10 meters in diameter, with a separate dish for each channel. With the beginning of satellite program delivery to cable systems, the basic architecture of the modern cable system was in place. As the number of program options grew, the **bandwidth** of cable systems also increased. Early systems operated at 200 MHz, allowing 33 channels. As technology progressed, the bandwidth increased to 300, 400, 500 and now 550 MHz, with the number of channels increasing to more than 100. Two additional advances in technology -- fiber optics and analog-to-digital

conversion -- improved features and broadcast quality while continuing to increase the number of channels available.

- In 1976, a new sort of cable system debuted. This system used **fibre-optic cable** for the **trunk cables** that carry signals from the CATV head-end to neighbourhoods. The **head-end** is where the cable system receives programming from various sources, assigns the programming to channels and retransmits it onto cables. The great advantage of fibre-optic cable is that it doesn't suffer the same signal losses as coaxial cable, which eliminated the need for so many **amplifiers**. In the early fiber-optic cable systems, the number of amplifiers between head-end and customer was reduced from 30 or 40 down to around six.
- Another benefit that came from the move to fibre-optic cable was greater **customization**. Since a single fibre-optic cable might serve 500 households, it became possible to target individual neighbourhoods for messages and services. In the 1990s, cable providers found this same neighbourhood grouping to be ideal for creating a local-area network and providing Internet access through cable modems.

**LCD, LED and Plasma TV**

- LCD stands for **Liquid Crystal Display**. An LCD TV has liquid crystal between the display panel of the TV, which gets activated when an electric current is supplied to it.
- The LED TV works on the same liquid crystal platform, but **light-emitting diodes** (LED) are used as the back-light for this TV, while the normal LCD TV uses a CCFL back-light.
- A plasma TV works on a completely different platform. A plasma TV has a sheet of individual plasma cells, which get activated when electricity is passed to the TV.

**Working of Plasma TV**:

Plasma technology uses a rectangular array of gas plasma cells, with electrical voltages that are precise, to create a crystal clear picture. In Plasma TVs, the display is a wide range of rich colors, with a low-luminance black. In this technology, the pixels are individually lit, which allows you to attain a higher contrast ratio.

- The display panel of a plasma TV implements a kind of flat panel display. Several tiny cells located between two glass panels hold a mixture of noble gases. This inert mixture is converted electrically into plasma. It excites phosphors, thus emitting light.
- The numerous cells placed between two glass plates contain **xenon and neon**. Long electrodes are placed in front of and behind the cells. The control circuitry produces a charge on the electrodes resulting in a potential difference. The difference in voltages causes the gases to ionize and form plasma. When the gas ions move towards the electrodes and collide, photons are emitted.
- Plasma displays have a wide color gamut and a low luminance black level. The amount of power consumed by plasma displays is comparable to that used by CRTs. However, brighter scenes take up more power than the darker ones. Plasma screens generally consume 400 watts for a 50-inch screen.
- The modern-day plasma displays are expected to remain functional for a period of around 27 years, assuming a daily use of 6 hours. At the end of this period of life expectancy, the picture brightness is estimated to decline to half of its original value.
- The secret of the refined picture quality of plasma displays lies in its technology. A thin screen, production of bright images and a wide viewing angle are among the other advantages of plasma TVs.

  Over the years, this technology has become increasingly popular in large HDTVs.
    - **PROS**: Apart from the contrast ratio, screen sizes in plasmas can be very large, which are useful in very large houses. Viewing plasmas from different angles in a room is a treat. The aspect of wide angle viewing is an enjoyable feature in plasma technology. Plasmas produce deep rich color and brightness. Due to the high contrast ratio, the darkest and brightest part of an image is realistic in terms of appearance. The display of the color black is vivid in Plasmas.
    - **Cons**: Although the picture quality in this technology is astounding, the life of a plasma television is less as compared to LCDs. If the screen size is very large, wall mounting becomes difficult. These television sets use glass in their screen makeup, which can reflect light and make viewing

problematic. Moreover, glass screens are fragile and need to be handled with care.

**LCD TV:**

**Liquid Crystal Display**, commonly known as LCD, is popular among most users all over the world. It consists of layers of liquid crystal, sandwiched between two glass plates. The images created, depend on the amount of electrical charge applied. LCDs are preferred by individuals for their sharp picture and low consumption of power.

- **Pros**: In a room with lots of light, LCDs help in reducing the glare, which in turn makes viewing easy. The life span of these televisions is longer as compared to plasmas. LED-back-lighting in the form of 'direct' and 'edge' back-lighting, has significantly improved images in LCDs. Screen burns which result in ghost images, occur when an image is left for a relatively long time. This is a common problem with plasmas, which is not the case with LCDs.
- **Cons:** Viewing LCDs from different angles can be a pain, as images sometimes appear to be dark and hazy. This can cause a problem when large families scattered in different areas of a room view television. The level of brightness in LCD is less, compared to a Plasma. The response time in these televisions is longer as compared to Plasmas. Objects moving at a rapid speed exhibit a blur in this technology. Another drawback in some LCDs is, the inability to display very low resolution, due to scaling limitations. Although LCDs are less expensive than Plasmas, the features included are less as compared to their counterparts.

**LED TV:**

The LED TV is simply an LCD TV with LED back-lights. When the first Liquid Crystal Display (LCD) TV came out, a lot of questions were asked about the display output that it gave, the contrasts and their display of blacks and brighter colors. The LCD TV came with what was known as the CCFL back-light which left much to be desired, when it came to the display brighter colors and more contrast. **LED is the acronym for light-emitting diode**. This is a popular technology when it comes normal lighting and when the LED lights was inserted in place of the CCFL back-lights, the result being fabulous. LED back-light was quite the panacea which the existing LCD TV owners were looking for. Thus, the Plasma and LCD technologies are completely different, while the difference between the LCD and LED is only the back-light, which they use.

- The LED TV comes at a pretty high price as it does not enjoy the economies of large scale production. While, the normal LCD TV is produced on quite a large scale, which gives it a price advantage. But the LED back-lit one is still in its nascent stage, which is not much in demand, and hence is produced less, which makes it a more expensive TV. LED is almost twice as expensive as its CCFL back-lit counterpart.
- The other problem with the LED TV is that it comes in a very large size. Most LED TVs produced are above 40" and hence are too large and too expensive for many people. The normal LCD TV on the other hand comes in all sizes.

**LCD Vs LED**:

- On the **display** parameter, LED completely outstrips the competition. The LED back-light shows great sense when it comes to blacks, and twists the crystals into a closed position, giving a more realistic black color and better overall contrast.
- When it comes to **color** display, one cannot see too much of a difference between the LCD and the LED TV.
- **Viewing angle** was another drawback which the LCD TV suffered from but it has been corrected to a good measure. But still, the LED TV gives a much better display when viewed from odd angles.
- **Looks**: An LED TV is slimmer and lighter, making it beautiful to the eyes and much lighter in weight.
- The **power consumption** of the LCD TV is also higher than the LED TV because CCFL lights consume more electricity than LED back-lights

**LCD vs. LED vs. Plasma Debate**

**Point #1: Contrast Ratio:**

A contrast ratio is the ability of the TV to show the high-contrast areas on the screen. The high contrast areas are the blacks and the whites in the picture. If a TV has a good contrast ratio, it means that it shows the differences between the darker and lighter areas of the screen remarkably well. The acid test of a TV's contrast ratio is in the dark scenes, where it needs to differentiate the shades of black.

- It's a well accepted fact that plasma TV's generally have better contrast ratios than LCD and LED TVs. This is because plasma TV's has individual plasma cells, which automatically turn themselves off on the darker parts of the screen.

- LCD TV's on the other hand have a single liquid crystal and when the TV has to show the dark pictures, the CCFL back-light of the LCD only dims itself and hence the blacks aren't very convincing.
- LCD TV's powered with an LED back-light have a slight edge as the individual LEDs twist themselves into an 'off' position in the dark parts of the screen thus giving a more convincing black than the LCD TVs.

**Verdict**: On the contrast ratio parameter, the plasma TV clearly has the upper hand. The LED TV comes next in the race and the LCD TV comes last.

**Point #2: Viewing Angle:**

A viewing angle is the angle from which the image on the TV can be viewed. All TVs can be viewed when you are right in front of it, but since all viewers cannot sit right in front of the TV and have to sit around it, the viewing angle parameter becomes very important.

- The winner for this point again is the plasma TV. The image of the plasma TV remains good and solid for viewers at almost any angle.
- LCD TVs fall back in the race again as there is often a loss of color and detail, when the TV is viewed from an odd angle.
- The LED TV minimizes this problem faced by the LCD TV due to its decentralized back-lights and hence has a much wider viewing angle.

**Verdict**: On the viewing angle parameter, the plasma TV is the winner again, followed by the LED TV in second place and the LCD TV in the last place.

**Point #3: Color**

It is pretty clear that good and bright colors of the TV will be an important consideration in the mind of the TV buyer. But there is no clear winner on this parameter as all the TVs seem to show a good quality picture, when it comes to the color. Differences may exist between two TV models of the same type or two different TV brands - a higher priced model showing better colors - but the picture quality remains largely similar.

- It is said that if the LED TV has a colored back-light, it will show the best picture of them all, but this point remains contentious.

**Verdict:** All the TVs rank similar on this point, but the discussion may be given a twist by introducing the colored back-lit LED TV in the mix.

**Point #5: Power Consumption**

- The plasma TV comes out to be the clear winner in this debate, but this is one of its most telling fall-points. The plasma TV consumes a lot more power than the LCD TV, as every sub-pixel on the screen needs to be lit.
- The LCD TV needs much lesser power to light up the back-light.
- But the LED TV is the clear winner for this point as its LED back-light is more power efficient and needs lesser electricity to light up.

**Verdict:** The LED TV is the winner on this point, followed by the LCD and the plasma.

**Point #6: TV Lifespan:**

- The quality and brightness of the plasma screen takes a beating in a very short time.
- The lifespan of the LCD and the LED TV depends largely on the lifespan of its back-light, but on an average the lifespan of these TVs is supposed to be more than that of the plasma TV.
- Another point to consider for TV lifespan is screen burn-in. Here again, the plasma TV has had a few problems, as there is a higher rate of screen burn-in in these TVs..

**Verdict:** On this point, the LCD TV has been a winner, while the lifespan of the LED back-light remains untested, as it's a relatively new technology. But the plasma is trying to extend its lifespan to somewhere close to that of the LCD TVs.

**Point #7: Price:**

- The plasma has enjoyed a much lower price as compared to the LCD, but as the production size and demand for the LCD increases, the price of the LCD is set to become more and more competitive with the plasma.
- The LED TV is a clear loser on this point as it is one of the most expensive TVs around; with some models priced at almost double that of LCDs of the same size. This is because the LED is a new technology and it is not produced at the same volume as the LCD.

**Verdict:** Plasma is number 1 at the moment, but faces fierce competition from the LCD in the future. LED is still very far behind in the pricing race**.**

**Analog broadcasting standards – PAL – NTSC-SECAM**:

There are three main analog television standards in use around the world,

- PAL (Phase Alternating Line)
- NTSC (National Television System Committee) and

- SECAM (Sequentiel Couleur Memoire—Sequential Color with Memory).

Digital television broadcasting standards, such as **ATSC, DVB-T, DVB-T2, and ISDB**, have superseded these analog transmission standards in many countries.

**NTSC**:

**NTSC**, named for the **National Television System Committee**, is the analog television system that is used in most of **North America**, parts of **South America.** The following countries still has NTSC system: **Canada, Chile, Costa Rica, Cuba, Dominican Republic, Ecuador, Japan, Mexico, Nicaragua, Panama, Peru, Philippines, Puerto Rico, South Korea, Taiwan, Myanmar**.The first NTSC standard was developed in **1941** and had no provision for color television. In **1953** a second modified version of the NTSC standard was adopted, which allowed color television broadcasting compatible with the existing stock of black-and-white receivers. NTSC was the first widely adopted broadcast color system and remained dominant where it had been adopted until the first decade of the 21st century, when it was replaced with digital ATSC. NTSC is the video system or standard used in North America and most of South America. In NTSC, 30 frames are transmitted each second. Each frame is made up of 525 individual scan lines. The National Television System Committee was established in **1940** by the United States **Federal Communications Commission (FCC)** to resolve the conflicts that arose between companies over the introduction of a nationwide analog television system in the United States. In March 1941, the committee issued a technical standard for black-and-white television that built upon a 1936 recommendation made by the Radio Manufacturers Association (RMA). Technical advancements of the vestigial sideband technique allowed for the opportunity to increase the image resolution.

- The NTSC selected **525 scan lines** as a compromise between RCA's 441-scan line standard and Philco's and Du Mont's companies desire to increase the number of scan lines to between 605 and 800. The standard recommended a frame rate of **30 frames (images) per second**, consisting of two interlaced fields per frame at 262.5 lines per field and 60 fields per second. Other standards in the final recommendation were an **aspect ratio of 4:3**, and frequency modulation (FM) for the sound signal.
- In January 1950, the Committee was reconstituted to standardize color television. In **December 1953**, it unanimously approved what is now called the ***NTSC* color television standard** (later defined as RS-170a). The "compatible

color" standard retained full backward compatibility with existing black-and-white television sets. Color information was added to the black-and-white image by adding a color subcarrier of approximately 3.58 MHz to the video signal. To reduce the visibility of interference between the chrominance signal and FM sound carrier required a slight reduction of the frame rate from 30 frames per second to approximately 29.97 frames per second, and changing the line frequency from 15,750 Hz to approximately 15,734.26 Hz.

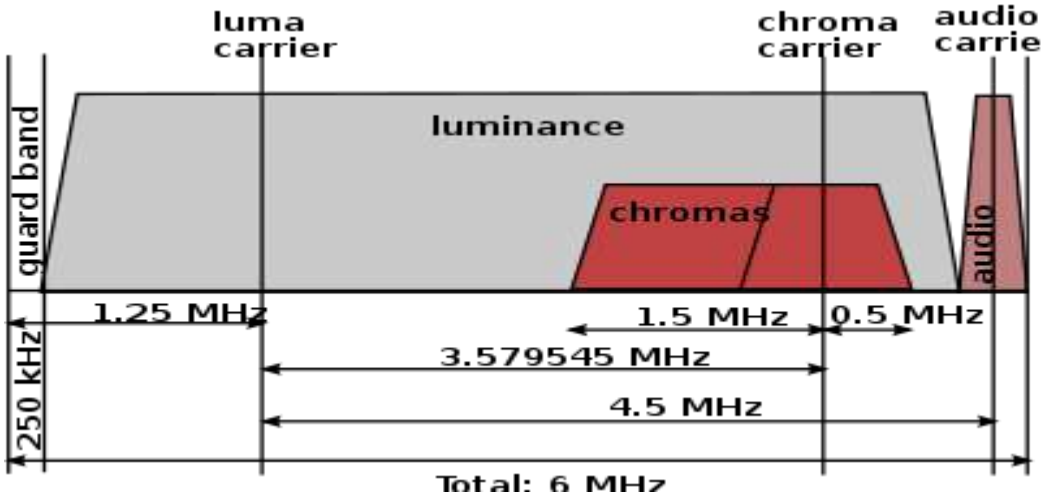

- The NTSC standard has been adopted by other countries, including most of the Americas and Japan. With the advent of digital television, analog broadcasts are being phased out. Most NTSC broadcasters were required by the FCC to shut down their analog transmitters in 2009.

**Lines and refresh rate**

- NTSC color encoding is used with the television signal, which consists of 29.97 interlaced frames of video per second.
- Each frame is composed of two fields, each consisting of 262.5 scan lines, for a total of 525 scan lines. 483 scan lines make up the visible raster. The remainder is used for synchronization and vertical retrace. This blanking interval was originally designed to simply blank the receiver's CRT to allow for the simple analog circuits and slow vertical retrace of early TV receivers. However, some of these lines may now contain other data such as closed captioning and vertical interval time code (VITC).
- The NTSC field refresh frequency in the black-and-white system originally exactly matched the nominal 60 Hz frequency of alternating current power used in the United States. Matching the field refresh rate to the power source avoided inter modulation (also called *beating*), which produces rolling bars on the screen. When color was added to the system, the refresh frequency was shifted slightly downward to 59.94 Hz to eliminate stationary dot patterns in the difference frequency between the sound and color carriers, as explained below in "Color encoding". Synchronization of the refresh rate to the power incidentally helped kinescope cameras record early live television broadcasts, as it was very simple to synchronize a film camera to capture one frame of video on each film frame by using the alternating current frequency to set the speed of the synchronous AC

motor-drive camera. By the time the frame rate changed to 29.97 Hz for color, it was nearly as easy to trigger the camera shutter from the video signal itself.

**Transmission modulation scheme**

- An NTSC television channel as transmitted occupies a total bandwidth of 6 MHz. The actual video signal, which is **amplitude-modulated**, is transmitted between 500 kHz and 5.45 MHz above the lower bound of the channel.
- The video carrier is 1.25 MHz above the lower bound of the channel. Like most AM signals, the video carrier generates two sidebands, one above the carrier and one below. The sidebands are each 4.2 MHz wide.
- The color subcarrier, as noted above, is 3.579545 MHz above the video carrier, and is **quadrature-amplitude-modulated** with a suppressed carrier.
- The audio signal is **frequency-modulated**, like the audio signals broadcast by FM radio stations in the 88–108 MHz band, but with a ±25 kHz maximum frequency swing, as opposed to ±75 kHz as is used on the FM band. The main audio carrier is 4.5 MHz above the video carrier, making it 250 kHz below the top of the channel.

**Phase Alternating Line**

**PAL**, short for **Phase Alternating Line**, is an analogue television color encoding system used in broadcast television systems in many countries. In PAL, 25 frames are transmitted each second. Each frame is made up of 625 individual scan lines. The following countries follow the PAL system: Afghanistan, Algeria, Argentina (N),Austria, Australia, Bangladesh, Belgium, Brazil (M), China, Denmark, Finland, Germany, Hong Kong, Iceland, **India**, Indonesia, Iraq, Ireland, Israel, Italy, Jordan, Kenya, Kuwait, Liberia, Malaysia, Netherlands, Nigeria, Norway, New Guinea, Pakistan, Singapore, South

Africa, South W. Africa, Sudan, Sweden, Switzerland, Thailand, Turkey, Uganda, United Kingdom, United Arab Emirates, Yugoslavia, Zambia.

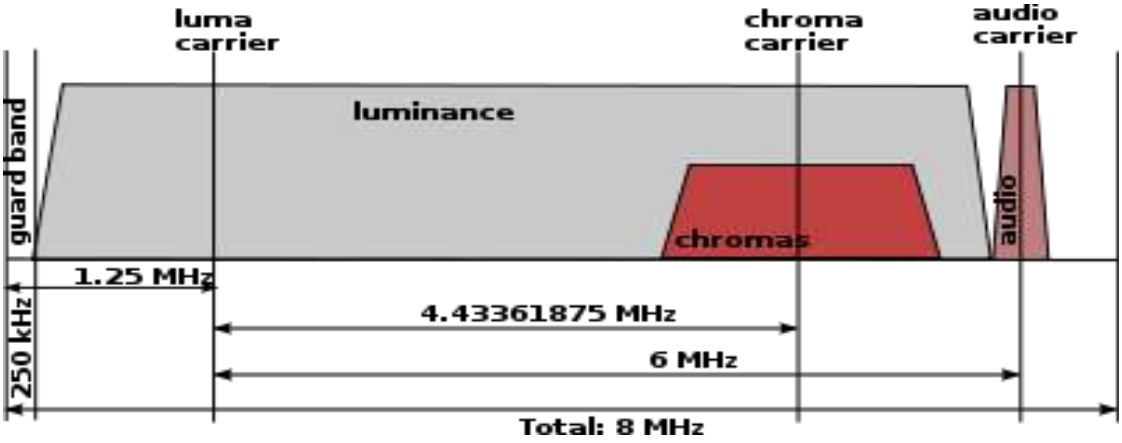

- In the 1950s, the Western European countries commenced planning to introduce color television, and were faced with the problem that the NTSC standard demonstrated several weaknesses, including **color tone shifting** under poor transmission conditions.
- To overcome NTSC's shortcomings, alternative standards were devised, resulting in the development of the PAL and SECAM standards. **The goal was to provide a color TV standard for the European picture frequency of 50 fields per second (50 hertz), and finding a way to eliminate the problems with NTSC.**
- PAL was developed by **Walter Bruch at Telefunken in Germany**. The format was unveiled in **1963**, with the first broadcasts beginning in the United Kingdom and West Germany in 1967, the one BBC channel initially using the broadcast standard was BBC2 which had been the first UK TV service to introduce "625-lines" in 1964.
- Telefunken PAL color 708T was the first PAL commercial TV set. It was followed by Loewe S 920 & F 900. Telefunken was later bought by the French electronics manufacturer Thomson.
- Thomson also bought the *Compagnie Générale de Télévision* where **Henri de France** developed SECAM, the first European Standard for color television.
- **The term PAL is often used informally and somewhat imprecisely to refer to the 625-line/50 Hz (576i) television system in general, to differentiate from the 525-line/60 Hz (480i) system generally used with NTSC**.

**Color encoding**

- Both the PAL and the NTSC system use a **quadrature amplitude modulated** subcarrier carrying the chrominance information added to the luminance video signal to form a composite video baseband signal.
- **The frequency of this subcarrier is 4.43361875 MHz for PAL, compared to 3.579545 MHz for NTSC**. **The SECAM system, on the other hand, uses a frequency modulation scheme on its two line alternate color subcarriers 4.25000 and 4.40625 MHz.**
- The name "Phase Alternating Line" describes the way that the phase of part of the color information on the video signal is reversed with each line, which

automatically corrects phase errors in the transmission of the signal by cancelling them out, at the expense of vertical frame color resolution. Lines where the color phase is reversed compared to NTSC are often called PAL or phase-alternation lines, which justifies one of the expansions of the acronym, while the other lines are called NTSC lines.

- Early PAL receivers relied on the human eye to do that cancelling; however, this resulted in a comb-like effect known as **Hanover bars on larger phase errors**. Thus, most receivers now use a chrominance delay line, which stores the received color information on each line of display; an average of the color information from the previous line and the current line is then used to drive the picture tube. The effect is that phase errors result in saturation changes, which are less objectionable than the equivalent hue changes of NTSC.
- A minor drawback is that the vertical color resolution is poorer than the NTSC system's, but since the human eye also has a color resolution that is much lower than its brightness resolution, this effect is not visible. In any case, NTSC, PAL, and SECAM all have chrominance bandwidth (horizontal color detail) reduced greatly compared to the luminance signal.

The 4.43361875 MHz frequency of the color carrier is a result of 283.75 color clock cycles per line plus a 25 Hz offset to avoid interferences. Since the line frequency (number of lines per second) is 15625 Hz (625 lines × 50 Hz ÷ 2), the color carrier frequency calculates as follows: 4.43361875 MHz = 283.75 × 15625 Hz + 25 Hz. The original color carrier is required by the color decoder to recreate the color difference signals. Since the carrier is not transmitted with the video information it has to be generated locally in the receiver. In order that the phase of this locally generated signal can match the transmitted information, a 10 cycle burst of color subcarrier is added to

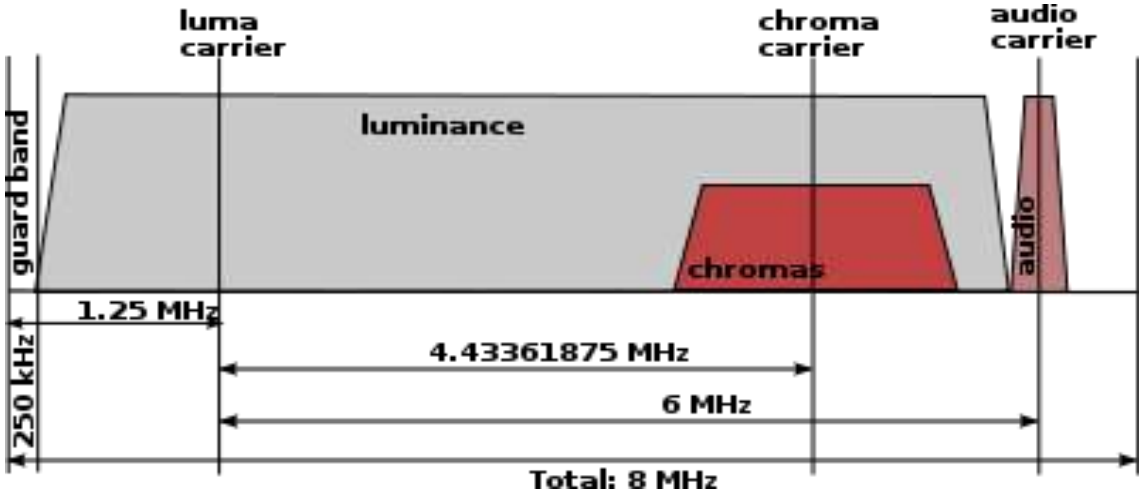

the video signal shortly after the line sync pulse, but before the picture information, during the so called back porch. This color burst is not actually in phase with the original color subcarrier, but leads it by 45 degrees on the odd lines and lags it by 45 degrees on the even lines. This swinging burst enables the color decoder circuitry to distinguish the phase of the R-Y vector which reverses every line.

**SECAM**

SECAM, also written SECAM (*Séquentiel couleur à mémoire*, French for "**Sequential Color with Memory**", is an analog color television system first used in France. A team led by **Henri de France** working at *Compagnie Française de Télévision* later bought by Thomson, now Technicolor invented SECAM. It is, historically, the first European color television standard Technical details. Work on SECAM began in **1956**. The technology was ready by the end of the fifties, but this was too soon for a wide introduction. Initially, a version of SECAM for the French 819-line television standard was devised and tested, but not introduced. Following a pan-European agreement to introduce color TV only in 625 lines, France had to start the conversion by switching over to a 625-line television standard, which happened at the beginning of the 1960s with the introduction of a second network. The first proposed system was called **SECAM I in 1961**, followed by other studies to improve compatibility and image quality. These improvements were called SECAM II and SECAM III with the later being presented at the **1965** CCIR General Assembly in Vienna. Further improvements were SECAM III A followed by SECAM III B, the adopted system for general usage in **1967**.

SECAM was inaugurated in France on October 1, 1967, on *la deuxième chaîne* (the second channel, now called France 2. In 1967, CLT of Lebanon became the third television station in the world after the Soviet Union and France to broadcast in color, utilizing the French SECAM technology. The first color television sets cost 5000 Francs. Color TV was not very popular initially; only about 1500 people watched the inaugural program in color. A year later, only 200,000 sets had been sold of an expected million. This pattern was similar to the earlier slow build-up of color television popularity in the USA. SECAM was later adopted by former French and Belgian colonies, Greece, the Soviet Union and Eastern bloc countries (except for Romania and Albania), and Middle Eastern countries. However, with the fall of communism, and following a period when multi-standard TV sets became a commodity, many Eastern European countries decided

to switch to PAL. Other countries, notably the United Kingdom and Italy, briefly experimented with SECAM before opting for PAL.

- Just as with the other color standards adopted for broadcast usage over the world, SECAM is a standard which permits existing monochrome television receivers predating its introduction to continue to be operated as monochrome televisions. Because of this compatibility requirement, color standards added a second signal to the basic monochrome signal, which carries the color information. The color information is called **chrominance or C** for short, while the black and white information is called the **luminance or Y** for short. Monochrome television receivers only display the luminance, while color receivers process both signals.
- Additionally, for compatibility, it is required to use no more bandwidth than the monochrome signal alone; the color signal has to be somehow inserted into the monochrome signal, without disturbing it. This insertion is possible because the spectrum of the monochrome TV signal is not continuous (for most typical video content), hence empty space exists which can be utilized. This typical lack of continuity results from the discrete nature of the signal, which is divided into frames and lines.
- In all cases, the color signal is inserted at the end of the spectrum of the monochrome signal, where it causes less visual distortion

- In order to be able to separate the color signal from the monochrome one in the receiver, a fixed frequency sub carrier is used, this sub carrier being modulated by the color signal.
- The color space is three dimensional by the nature of the human vision, so after subtracting the luminance, which is carried by the base signal, the color sub carrier still has to carry a two dimensional signal. Typically the red (R) and the blue (B) information are carried because their signal difference with luminance (R-Y and B-Y) is stronger than that of green (G-Y).

**SECAM differs from the other color systems by the way the R-Y and B-Y signals are carried**.

- First, SECAM uses frequency modulation to encode chrominance information on the sub carrier.
- Second, instead of transmitting the red and blue information together, it only sends one of them at a time, and uses the information about the other color from the preceding line. It uses an analog delay line, a memory device, for storing one line of color information. This justifies the "Sequential, With Memory" name.
- Because SECAM transmits only one color at a time, it is free of the color artifacts present in NTSC and PAL resulting from the combined transmission of both signals..
- FM modulation of the color information allows SECAM to be completely free of the dot crawl problem commonly encountered with the other analog standards. SECAM transmissions are more robust over longer distances than NTSC or PAL. However, owing to their FM nature, the color signal remains present, although at reduced amplitude, even in monochrome portions of the image, thus being subject to stronger cross color even though color crawl of the PAL type doesn't exist.

SECAM development predates PAL. NTSC was considered undesirable in Europe because of its tint problem requiring an additional control, which SECAM and PAL solved. The joke was that "SECAM" stood for "*Something exceedingly Contrary to the American Method*" versus NTSC "*Never Twice the Same Color*" whilst "*Peace At Last*" or "*Perfection At Last*" could only be obtained through the PAL system. (But another version of the joke expands PAL as "*People Are Lavender*", "*Picture Always Lousy*", or "*Pay Another License*"). Nonetheless, SECAM was partly developed for reasons of

national pride. Henri de France's personal charisma and ambition may have been a contributing factor. PAL was developed by Telefunken, a German company, and in the post-war De Gaulle era there would have been much political resistance to dropping a French-developed system and adopting a German-developed one instead.

**Analog broadcasting standards: -ATSC, DVB-T, DVB-T2, and ISDB**

**ATSC**

**ATSC** is a set of standards developed by the **Advanced Television Systems Committee** for digital television transmission over terrestrial, cable, and satellite networks. The ATSC standard was developed in the early **1990s by the Grand Alliance, a consortium of electronics and telecommunications companies** that assembled to develop a specification for what is now known as HDTV. ATSC formats also include standard-definition formats, although initially only HDTV services were launched in the digital format.

- The high definition television standards defined by the ATSC produce wide screen 16:9 images up to 1920×1080 pixels in size — more than six times the display resolution of the earlier standard. However, many different image sizes are also supported.
- The reduced bandwidth requirements of lower-resolution images allow up to six standard-definition "sub channels" to be broadcast on a single 6 MHz TV channel.
- ATSC standards are marked A/*x* (*x* is the standard number) and can be downloaded freely from the ATSC's website at ATSC.org.
- ATSC Standard A/53, which implemented the system developed by the Grand Alliance, was published in 1995; the standard was adopted by the Federal Communications Commission in the United States in 1996. It was revised in 2009. ATSC Standard A/72 was approved in 2008 and introduces H.264/AVC video coding to the ATSC system.
- ATSC also boasts 5.1-channel surround sound using the Dolby Digital AC-3 format. Numerous auxiliary data casting services can also be provided.

ATSC replaced much of the analog NTSC television system in the United States[ on June 12, 2009 and will replace NTSC by August 31, 2011 in Canada, December 31, 2015 in Mexico and January 1, 2019 in El Salvador. Broadcasters who use ATSC and want to retain an analog signal must broadcast on two separate channels, as the ATSC system requires the use of an entire channel.

- Dolby Digital AC-3 is used as the audio codec, though it was officially standardized as A/52 by the ATSC. It allows the transport of up to five channels of sound with a sixth channel for low-frequency effects (the so-called "5.1" configuration).
- MPEG-2 audio was a contender for the ATSC standard during the DTV "Grand Alliance" shootout, but lost out to Dolby AC-3.
- The ATSC system supports a number of different display resolutions, aspect ratios, and frame rates. The formats are listed here by resolution, form of scanning (progressive or interlaced), and number of frames (or fields) per second.
- There are three basic display sizes for ATSC. Basic and enhanced NTSC and PAL image sizes are at the bottom level at 480 or 576 lines. Medium-sized images have 720 scan lines and are 1280 pixels wide. The top tier has 1080 lines 1920 pixels wide.
- The different resolutions can operate in progressive scan or interlaced mode, although the highest 1080-line system cannot display progressive images at the rate of 50, 59.94 or 60 frames per second, because such technology was seen as too advanced at the time and the image quality was deemed to be too poor considering the amount of data that needs to be transmitted.
- A terrestrial (over-the-air) transmission carries 19.39 megabits of data per second.
- ATSC signals are designed to use the same 6 MHz bandwidth as analog NTSC television channels. Once the digital video and audio signals have been compressed and multiplexed, the transport stream can be modulated in different ways depending on the method of transmission.

**DVB-T**

**DVB-T** is an abbreviation for **Digital Video Broadcasting — Terrestrial**; it is the DVB European-based consortium standard for the broadcast transmission of digital terrestrial television that was first published in 1997 and first broadcast in the UK in 1998.This system transmits compressed digital audio, video and other data in an MPEG transport stream, using **coded orthogonal frequency-division multiplexing (COFDM or OFDM) modulation**.

**Basics of DVB-T**

- Rather than carrying the data on a single radio frequency (RF) carrier, OFDM works by splitting the digital data stream into a large number of slower digital streams, each of which digitally modulate a set of closely spaced adjacent carrier frequencies.
- In the case of DVB-T, there are two choices for the number of carriers known as 2K-mode or 8K-mode. These are actually 1,705 or 6,817 carriers that are approximately 4 kHz or 1 kHz apart.
- DVB-T has been adopted or proposed for digital television broadcasting by many countries using mainly VHF 7 MHz and UHF 8 MHz channels whereas Taiwan, Colombia, Panama, Trinidad and Tobago and the Philippines use 6 MHz channels..
- DVB-T has been further developed into newer standards such as DVB-H (Handheld), now in operation, and DVB-T2, which was recently finalised.

**DVB-T2**

**DVB-T2** is an abbreviation for **Digital Video Broadcasting – Second Generation Terrestrial**. It is the extension of the television standard DVB-T, issued by the consortium DVB, devised for the broadcast transmission of digital terrestrial television. This system transmits compressed digital audio, video, and other data in "physical layer pipes" (PLPs), using OFDM modulation with concatenated channel coding and interleaving. The higher offered bit rate, with respect to its predecessor DVB-T, makes it a suited system for carrying HDTV signals on the terrestrial TV channel (though many broadcasters still use plain DVB-T for this purpose). It is currently broadcasting in UK (Free view HD, four channels), Italy (Europa 7 HD, twelve channels) and since November 1, 2010 in Sweden (five channels).

- In March 2006 DVB decided to study options for an upgraded DVB-T standard. In June 2006, a formal study group named TM-T2 (Technical Module on Next Generation DVB-T) was established by the DVB Group to develop an advanced modulation scheme that could be adopted by a second generation digital terrestrial television standard, to be named **DVB-T2**.
- When the digital terrestrial HDTV service Free view HD was launched in December 2009, it was the first DVB-T2 service intended for the general public. As of November 2010, DVB-T2 broadcasts were available in a couple of European countries.

- The earliest introductions of T2 have usually been tied with a launch of high-definition television. There are however some countries where HDTV is broadcast using the old DVB-T standard with no immediate plans to switch those broadcasts to DVB-T2. Among countries using DVB-T for nationwide broadcasts of HDTV are France, Italy, Norway and Denmark. Countries where DVB-T2 is in use include:

1. United Kingdom: soft launch in December 2009, full launch in April 2010.
2. Italy: one multiplex, soft launch in October 2010
3. Sweden: two multiplexes, full launch in November 2010
4. Finland: five multiplexes, soft launch in January 2011, full launch in February 2011
5. Ukraine: soft launch in September 2011, full launch in November 2011

**ISDB**

**Integrated Services Digital Broadcasting (ISDB)** is a Japanese standard for digital television (DTV) and digital radio used by the country's radio and television stations. ISDB replaced the previously used MUSE "*Hi-vision*" analogue HDTV system. A derivative of ISDB, *ISDB-T International*, was developed by the Brazilian government and is being widely adopted in South America. ISDB is maintained by the Japanese organization ARIB. The standards can be obtained for free at the Japanese organization DiBEG website and at ARIB.

- The core standards of ISDB are ISDB-S (satellite television), ISDB-T(terrestrial), ISDB-C (cable) and 2.6GHz band mobile broadcasting which are all based on MPEG-2 video and audio coding as well as the transport stream described by the MPEG-2 standard, and are capable of high definition television (HDTV). ISDB-T and ISDB-Tsb are for mobile reception in TV bands. 1seg is the name of an ISDB-T service for reception on cell phones, laptop computers and vehicles.
- The concept was named for its similarity to ISDN, because both allow multiple channels of data to be transmitted together a process called multiplexing. This is also much like another digital radio system, Eureka 147, which calls each group of stations on a transmitter an ensemble; this is very much like the multi-channel digital TV standard DVB-T. ISDB-T operates on unused TV channels, an approach taken by other countries for TV but never before for radio.

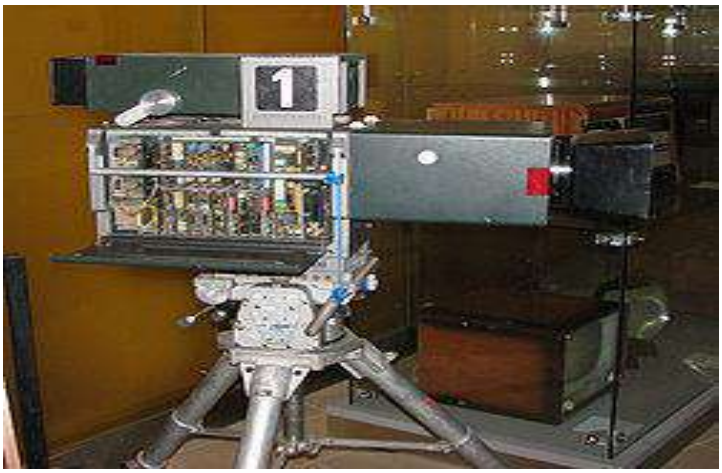

- The various flavours of ISDB differ mainly in the modulations used, due to the requirements of different frequency bands. The 12 GHz band ISDB-S uses PSK modulation, 2.6 GHz band digital sound broadcasting uses CDM and ISDB-T (in VHF and/or UHF band) uses COFDM with PSK/QAM.

**Production equipment – Cameras – Microphones –Lights**

**Professional video cameras**

A **professional video camera** often called a **television camera** is a high-end device for creating electronic moving images (as opposed to a movie camera that records the images on film. Originally developed for use in television studios, they are now commonly used for corporate and educational videos, music videos, and direct-to-video movies. There are two types of professional video cameras:

1. **High end portable recording cameras** essentially, high-end tapeless camcorders used for Electronic news gathering (ENG) and Electronic field production (EFP) image acquisition, and
2. **Television studio cameras** which lack the recording capability of a camcorder, and are often fixed on studio pedestals. Portable professional cameras are generally much larger than consumer cameras and are designed to be carried on the shoulder.

**Professional television camera history has two main lines**:

1. The gradual shrinking of the camera as it became more versatile and self contained; and a

2. Progression of sensors from large insensitive tubes to smaller, much more sensitive tubes and finally to very small, very sensitive solid state **charge-coupled device (CCD**) and **active pixel sensor (CMOS) imagers**.

- 1926 to 1933 "cameras" were a type of flying spot scanner using mechanical disk.
- 1936 saw the arrival of RCA's iconoscope camera.The RCA TK-30 (1946) was widely used as a Field Camera.
- The 1948 Dumont Marconi MK IV was an Image Orthicon Camera.
- Marconi's first camera was shown in 1938. EMI cameras from the UK, were used in the US in the early 1960s, like the EMI 203/4.Later in the 60s the EMI 2000 an EMI 2001.
- In 1950 the arrival of the Vidiocon camera tube made smaller cameras possible.
- 1952 saw the first Walkie-Lookie "portable cameras". Image Orthicon tubes were still used till the arrival of the Plumbicon.
- The RCA TK-40 is considered to be the first color television camera for broadcasts in 1953. RCA continued its lead in the high-end camera market till the (1978) TK-47, last of the high-end tube cameras from RCA.
- Ikegami introduced the first truly portable hand-held TV camera in 1962.
- Philips' line of Norelco cameras were also very popular with models such as PC-60 (1965), PC-70 (1967) and PCP-90 (1968 Handheld). Philips/BTS-Broadcast Television Systems Inc. later came out with an LDK line of camera, like its last high end tube camera the LDK 6 (1982).
- Philips invented the Plumbicon pick up Video camera tube in 1965,that gave tube cameras a cleaner picture. BTS introduced its first HandHeld Frame transfer CCD- Charge-coupled device-CCD camera the LDK90 in 1987.
- Bosch Fernseh marketed a line of high end cameras (KCU, KCN, KCP, KCK) in the US ending with the tube camera KCK-40 (1978). Image Transform (in Universal City, California) used specially modified 24 frame KCK-40 for their "Image Vision" system. This had a 10 MHz bandwidth twice NTSC resolution. This was a custom pre HDTV video System. At its peak this system was used to make "Monty Python Live at the Hollywood Bowl" in 1982. This was the first major high-definition analog wideband videotape-to-film post production using a film recorder for film out.

**Technology**

- Most professional cameras utilize an optical prism block directly behind the lens. This prism block (a trichroic assembly comprising two dichroic prisms) separates the image into the three primary colors, red, green, and blue, directing each color into a separate charge-coupled device (CCD) or Active pixel sensor (CMOS image sensor) mounted to the face of each prism. Some high-end consumer cameras also do this, producing a higher-resolution image, with better color fidelity than is normally possible with just a single video pickup.
- In both single sensor and triple sensor designs, the weak signal created by the sensors is amplified before being encoded into analog signals for use by the viewfinder and monitor outputs, and also encoded into digital signals for transmission and recording.
- The analog outputs are normally in the form of either a composite video signal, which combines the color and luminance information to a single output; or an R-Y B-Y Y component video output through three separate connectors.

**Studio cameras**

- Most studio cameras stand on the floor, usually with pneumatic or hydraulic mechanisms called **pedestals** to adjust the height, and are usually on wheels.
- Any video camera when used along with other video cameras in a multiple-camera setup is controlled by a device known as **CCU (camera control unit**), to which they are connected via a Triax, Fibre Optic or the almost obsolete multi core cable. The CCU along with gen lock and other equipment is installed in the **production control room (PCR)** often known as the Gallery of the television studio.
- When used outside a formal television studio in **outside broadcasting (OB)**, they are often on tripods that may or may not have wheels (depending on the model of the tripod).
- Initial models used analog technology, but are now obsolete, supplanted by digital models. Studio cameras are light and small enough to be taken off the pedestal and the lens changed to a smaller size to be used on a Multiple-camera setup's shoulder, but they still have no recorder of their own and are cable-bound.

- Cameras can be mounted on a tripod, a dolly or a crane, thus making the cameras much more versatile than previous generations of studio cameras. These cameras have a tally light, a small signal-lamp used that indicates, for the benefit of those being filmed as well as the camera operator, that the camera is 'live' - i.e. its signal is being used for the 'main program' at that moment.

**ENG cameras**

**Sony camera head with Betacam SP dock recorder.**

- Though by definition, **ENG (Electronic News Gathering)** video cameras were originally designed for use by news camera operators, these have become the dominant style of **professional video camera** for most video productions, from dramas to documentaries, from music videos to corporate video training.
- ENG cameras are larger and heavier, and usually supported by a shoulder stock on the cameraman's shoulder, taking the weight off the hand, which is freed to operate the lens zoom control. The weight of the cameras also helps dampen small movements.
- 3 CCDs are used instead of one, one for each primary color.
- They have interchangeable lenses.
- All settings, white balance, focus, and iris can be manually adjusted, and automatics can be completely disabled.
- The lens is focused manually and directly, without intermediate servo controls. However the lens zoom and focus can be operated with remote controls in a studio configuration.

- A complete time code section is available, allowing time code presets; and multiple cameras can be time code-synchronized with a cable.
- Recording is to a professional medium like some variant of Betacam or DVCPRO or Direct to disk recording or flash memory. If as in the latter two, it's a data recording, much higher data rates (or less compression) are used than in consumer devices.
- The camera is mounted on tripods and other supports with a quick release plate.
- Controls that need quick access are on hard physical switches, not in menu selections. Gain Select, White/Black balance, color bar select, and record start controls are all in the same general place on the camera, irrespective of the camera manufacturer.
- Audio is adjusted manually, with easily accessed physical knobs.

**EFP Camera operator at a baseball game.**

**EFP Cameras**

- **Electronic Field Production cameras** are similar to studio cameras in that they are used primarily in multiple camera switched configurations, but outside the studio environment, for concerts, sports and live news coverage of special events.
- These versatile cameras can be carried on the shoulder, or mounted on camera pedestals and cranes, with the large, very long focal length zoom lenses made for studio camera mounting.
- These cameras have no recording ability on their own, and transmit their signals back to the broadcast truck through a triax, fiber optic or the virtually obsolete multi core cable.

**A remote-controlled camera mounted on a miniature cable car for mobility**.

**Remote cameras**

- Remote cameras are typically very small camera heads designed to be operated by remote control. Despite their small size, they are often capable of performance close to that of the larger ENG and EFP types.
- "Lipstick cameras" are so called because the lens and sensor block combined are similar in size and appearance to a lipstick container. These are either hard mounted in a small location, such as a race car, or on the end of a boom pole. The sensor block and lens are separated from the rest of the camera electronics by a long thin multi conductor cable. The camera settings are manipulated from this box, while the lens settings are normally set when the camera is mounted in place.
- Block cameras are so called because the camera head is a small block, often smaller than the lens itself. Some block cameras are completely self contained, while others only contain the sensor block and its pre-amps, thus requiring connection to a separate camera control unit in order to operate. All the functions of the camera can be controlled from a distance, and often there is facilities for controlling the lens focus and zoom as well. These cameras are mounted on pan and tilt heads, and may be placed in a stationary position, such as atop a pole or tower, in a corner of a broadcast booth, or behind a basketball hoop. They can also be placed on robotic dollies, at the end of camera booms and cranes, or "flown" in a cable supported harness, as shown in the illustration

**Microphones**

The first decision is which type of microphone best suits your situation.

1. **Hand-Held Mics:** Hand-held mics are versatile and relatively easy to use. They are well-suited to mobile interviews, and to situations where the interviewer needs to direct the talking i.e.people can only speak when the interviewer points the mic at them.

**2. Lapel Mics:** Lapel (lavalier) mics create high quality, consistent sound. Each person has their own mic, the mics are (theoretically) always in the correct position and unwanted noise is rejected well. The disadvantage is that they are slower and more difficult to set up, especially if there are a number of guests coming in and out of the IV setting. Also, if the mic position does happen to go awry, you have to interrupt the interview to fix it.

**Lapel Mics** **Boom Mics**

**3. Boom Mics:** Microphones placed on a boom arm are also very versatile and are used in both studio and mobile settings. The main advantage is that the IV participants don't need to be rigged for audio or worry about mics, and the sound operator is in full control. The microphone is usually a shotgun (very directional) mic which can easily be pointed to any speaker (or other sound if required). The boom operator and camera operator need to work together to make sure the mic stays out of camera shot.

**4. PZM (Pressure Zone) Mics:** PZM mics are useful when a number of participants are seated around a table. The mic is placed in the middle of the table and can pick up all speakers.

**5. Radio Mics:** Any type of microphone can be plugged into a small battery-powered radio transmitter and sent to a receiver at the recording end. This frees the interviewer and guest from the restraints of audio cables. It also means the participants can be a long way from the camera (which would obviously be on a long zoom).

**6. Built-in Camera Mic:** The mic which is built into the camera can also be used for recording the sound. However this is unlikely to produce good interview sound.

**Lighting:**

**The Standard 3-Point Lighting Technique**

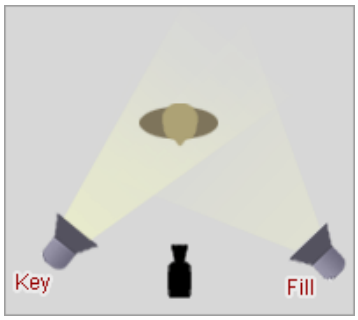

The *Three Point Lighting Technique* is a standard method used in visual media such as video, film, still photography and computer-generated imagery. It is a simple but versatile system which forms the basis of most lighting. Once you understand three point lighting you are well on the way to understanding all lighting. The technique uses three lights called the **key light**, **fill light** and **back light**. Naturally you will need three lights to utilise the technique fully, but the principles are still important even if you only use one or two lights. As a rule:

- If you only have one light, it becomes the key.
- If you have 2 lights, one is the key and the other is either the fill or the backlight.

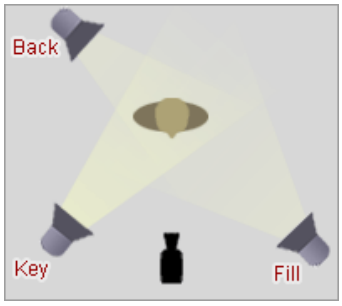

**Key Light**

This is the main light. It is usually the strongest and has the most influence on the look of the scene. It is placed to one side of the camera/subject so that this side is well lit and the other side has some shadow.

**Fill Light**

This is the secondary light and is placed on the opposite side of the key light. It is used to fill the shadows created by the key. The fill will usually be softer and less bright than the key. To achieve this, you could move the light further away or use some spun. You might also want to set the fill light to more of a flood than the key.

**Back Light**

The back light is placed behind the subject and lights it from the rear. Rather than providing direct lighting (like the key and fill), its purpose is to provide definition and subtle highlights around the subject's outlines. This helps separate the subject from the background and provide a three-dimensional look.

If you have a fourth light, you could use it to light the background of the entire scene.

**TV Studio lay out**

A **television studio** is an installation in which video productions take place, either for the recording of live television to video tape, or for the acquisition of raw footage for post-production. The design of a studio is similar to, and derived from, movie studios, with a few amendments for the special requirements of television production. A professional television studio generally has several rooms, which are kept separate for noise and practicality reasons. These rooms are connected via intercom, and personnel will be divided among these workplaces.

**Studio floor**

The studio floor is the actual stage on which the actions that will be recorded take place. A studio floor has the following characteristics and installations:

- decoration and/or sets
- professional video camera (sometimes one, usually several) on pedestals
- microphones
- Stage lighting rigs and the associated controlling equipment.
- several video monitors for visual feedback from the production control room (PCR)
- a small public address system for communication
- a glass window between PCR and studio floor for direct visual contact is usually desired, but not always possible

While a production is in progress, people composing a television crew work the studio floor.

- The on-screen "talent" themselves, and any guests - the subjects of the television show.
- a floor manager, who has overall charge of the studio area stage management, and who relays timing and other information from the television director.
- One or more camera operators who operate the professional video cameras, though in some instances these can also be operated from the PCR using remotely controlled robotic pan tilt zoom camera (PTZ) heads.
- possibly a teleprompter operator, especially if this is a live television news broadcast

**Production-control room**

The **studio control room** (SCR) is the place in a television studio in which the composition of the outgoing program takes place. The production control room is occasionally also called a studio control room (SCR) or a "gallery" - the latter name comes from the original placement of the director on an ornately carved bridge spanning the BBC's first studio at Alexandra Palace which was once referred to as like a minstrels gallery.[1] Master control is the technical hub of a broadcast operation common among most over-the-air television stations and television networks. Master control is distinct from a PCR in television studios where the activities such as switching from camera to camera are coordinated. A transmission control room (TCR) is usually smaller in size and is a scaled down version of central casting.

Facilities in a PCR include:

- A video monitor wall, with monitors for program, preview, VTRs, cameras, graphics and other video sources. In some facilities, the monitor wall is a series of racks containing physical television and computer monitors; in others, the monitor wall has been replaced with a virtual monitor wall (sometimes called a "glass cockpit"), one or more large video screens, each capable of displaying multiple sources in a simulation of a monitor wall.
- A vision mixer, a large control panel used to select the multiple-camera setup and other various sources to be recorded or seen on air and, in many cases, in any video monitors on the set. The term 'vision mixer' is primarily used in Europe, while the term 'video switcher' is usually used in North America.
- A professional audio mixing console and other audio equipment such as effects devices.
- A character generator (CG), which creates the majority of the names and full digital on-screen graphics that are inserted into the program lower third portion of the television screen
- Digital video effects, or DVE, for manipulation of video sources. In newer vision mixers, the DVE is integrated into the vision mixer; older models without built-in DVE's can often control external DVE devices, or an external DVE can be manually run by an operator.

- A still store, or still frame, device for storage of graphics or other images. While the name suggests that the device is only capable of storing still images, newer still stores can store moving video clips and motion graphics.
- The technical director's station, with waveform monitors, vector scopes and the camera control units (CCU) or remote control panels for the CCUs.
- In some facilities, VTRs may also be located in the PCR, but are also often found in the central apparatus room
- Intercom and IFB equipment for communication with talent and television crew
- A signal generator to gen lock all of the video equipment to a common reference that requires color burst [edit] Master-control room

The Master control (**MCR**) room houses equipment that is too noisy or runs too hot for the **Production control room** (**PCR**). It also makes sure that coax cable and other wire lengths and installation requirements keep within manageable lengths, since most high-quality wiring runs only between devices in this room. This can include the actual circuitry and connections between

- character generator (CG)
- camera control units (CCU)
- digital video effects (DVE)
- video servers
- vision mixer (Video Switcher)
- VTRs
- patch panels

The Master control room in a US television station US, is the place where the on-air signal is controlled. It may include controls to play out television programs and television commercials, switch local or television network feeds, record satellite feeds and monitor the transmitter(s), or these items may be in an adjacent equipment rack room. The term "studio" usually refers to a place where a particular local program is originated. If the program is broadcast live, the signal goes from the PCR to MCR and then out to the transmitter.

**Studio and field production**

Television Studios come equipped with multiple cameras and microphones. Lights are attached to the ceiling on a grid. There is a control room with switchers and controllers. You set it up once and leave everything in place ready to go. Everything in a studio is controllable i.e. the lights, the sound, the action. The action is rehearsed and then done once, using multiple cameras. In the control room, the director switches the

cameras and sound sources as the action is happening. In a well-arranged studio, everything exists for the sole purpose of taking action and getting it on tape.

Field production means you're anywhere but a studio. Field production is always dependent upon the characteristics of your location. Every location has a different circumstances and different situation calls for unique methods Field production usually requires a lot of setting up and tearing down the equipment.

| Studio Production | Field Production |
|---|---|
| **Controlled Light** | **Realistic Environment** |
| **Controlled Sound** | **Unrestricted Sound environment** |
| **Restricted Movement** | **Unrestricted Movement** |
| **Single location** | **Flexibility of movement** |
| **Controlled Environment** | **Difficult to reproduce environment** |

**Script writing**

Screenplays have been the key element of filmmaking since the earliest days of motion pictures. Although movies are a visual medium, they typically begin with words on a page, a literary blueprint. In addition to expressing visual ideas on paper, the writer must create engaging characters and an airtight structure. There is little room for error. As legendary filmmaker **Frank Capra** once said, **"Scriptwriting is the toughest part of the whole racket…the least understood and the least noticed".**

**Types of screenplays**

Screenplays can generally be divided into two kinds; a 'speculative' screenplay, and a commissioned screenplay.

- A speculative screenplay is a script written with no upfront payment, or a promise of payment. The content is usually invented solely by the screenwriter, though spec screenplays can also be based on established works, or real people and events.

A commissioned screenplay is written by a hired writer. The concept is usually developed long before the screenwriter is brought on, and usually has many writers work on it before the script is given a green-light

**Structure of a good script / screenplay**

A good screenplay has a **protagonist, antagonist and conflict**. Without these three elements, a screenplay can become boring. However, the antagonist does not have

to be a person. The main character could be an animal or even his own mind, provided there is a character with which viewers can easily relate and conflict, the screenplay can develop into an interesting story.

**1. Characters**

- Always invent your characters and place them in an environment instead of the other way around. Even the best told stories will fail if the characters seem more like objects than interesting people.
- Characters should change as the story progresses.
- Always research the characters.

**2. Format and Development**

- When writing your script, use **capital letters** for both the headings and the character names. While the **dialogue should be centered** on the page, the heading is a location descriptive instruction and should be on the left. Include camera angles where necessary.
- Many scripts are written in **three act structural development**. Most writers choose to do so by using the **beginning of the story for back story and character introduction, the middle for conflict and the end for resolution**. To accomplish this, they introduce the main character early and allow time for the reader to understand how the character thinks and reacts to different situations. The antagonist may be introduced immediately after the expository material or wait to introduce more secondary characters.
- The conflict portion of this script is typically placed in the middle and should be the longest part of the script. While introductions and resolutions are interesting, the real material possibilities are almost always with the protagonist's conflict. Most screen writers will use their introduction material to continually set up the beginning of conflict. In this way, readers can see how a series of events lead to conflict rather than just introducing a problem with no reasoning behind it.

**3. The Premise**

In his book *The Art of Dramatic Writing* (1977), teacher and playwright Lajos Egri discusses at length how premises work. Egri states: ***"Everything has a purpose, or premise. Every good play must have a well-formulated premise No idea, and no situation, was ever strong enough to carry you through to its logical conclusion without a clear-cut premise".*** The premise should be the driving force behind every

event in your screenplay. A good premise is derived from emotions--love, hate, fear, jealousy, desire, etc.--and revolves around a character, a conflict and a conclusion.

If your story does not have a clear premise, it will lack focus and drive. For example, if a story is more "illustrative" than dramatic, presenting ideas rather than conflict, it may not maintain an audience's interest. If a story has more than one premise, or if the premise changes along the way, it will confuse and bore the audience. Either way, the script won't work. However, some screenplays succeed with multiple story lines and points of view. This is because while these movies may seem at first to be without a premise, in fact, each separate storyline has its own clear premise

**4. Character Development**

Emotions are at the heart of every good film. The story must bleed out of your characters' psyches. The most successful screenplays are **character-driven**, even those with complex plots. In solid, character-driven scripts, all action, or plot, is **organic**; that is, it flows logically from the characters' needs and desires. Every good script starts with a protagonist, or pivotal character. The protagonist "is the one who creates conflict and makes the play move forward. A pivotal character must not merely desire something. He must want it so badly that he will destroy or be destroyed in the effort to attain his goal.

The antagonist is the one against whom the protagonist "exerts all his strength, all his cunning, all the resources of his inventive power." A good antagonist must be as strong and willful as the protagonist. Machines, animals and monsters can be effective antagonists only if they are capable of independent thought or emotion. Rarely does a movie succeed without an antagonist. Even disaster and man-against-nature stories need a human opponent.

**5. Creating compelling characters**

Every character in the script should be special in some way. The characters need to be engaging, but should have qualities or quirks that set them apart, and make them memorable. Characters define themselves through large and small actions, through their words and their deeds. As in real life, movie characters also have a private and public side, the face they see in the mirror and the one they present to the world. The behaviour of l characters should be based on the knowledge of human psychology. The biographical information and background details of the characters like physiology age, overall appearance physical traits, social and economic background like place of birth,

occupation, education, race, religion, hobbies, and psychology i.e. temperament, abilities, taste, ambitions, moral standards, etc. should be sketched. The backgrounds and personalities of the characters should be consistent with the roles they play on the screen

**6. Good Dialogues**:

It is vital to create a voice, a way of speaking, for each character. The best dialogue starts with everyday speech and strains out the redundancies and incoherencies. Every scene has its own rhythm or tempo, and dialogue is often its drumbeat. Scenes with long stretches of dialogue, or monologues, are necessarily slower paced. Tension can be heightened by quickening the tempo of an exchange with shortened responses or regular interruptions. Many exchanges of dialogue are like an interrogation, with one character trying to extract information or concessions out of another. Questions tend to create more tension than statements, because by posing them, a character can force an issue, demanding an answer from the other party

**7. Putting in the stops**

The basic story of the main character should have a conflict and a resolution. The conflict needs to be presented in the form of the **"stops"** or obstacles you want your protagonist to face on the path from the conflict to the resolution. The screen play must have powerful stops in order to alleviate the protagonist and create public acceptance of the character.

**8. The three-act structure**

Most screenplays employ a three-act structure. Originating in ancient Greek drama, the three-act structure became standard in American theatre in the early twentieth century and soon after was adapted for film. In **Act One**, characters and conflict are introduced. The conflict deepens in **Act Two** until it reaches a climax or breaking point. In **Act Three**, the conflict resolves and leads to a *denouement*, or conclusion. As a general rule, Act Two is the longest and Act three the shortest. Applying the three-act structure to a two-hour, or 120-page script (one script page is roughly equal to one screen minute), Act One will run about 40 pages; Act Two, 50-60 pages; Act Three, 20-30 pages.

**9. Sub-plots**

Sub-plots contain all the same elements as the main plot--character, conflict and resolution. Although it used to be common to see sub-plots functioning only as comic

relief, with little connection to the rest of the story, they now are expected to parallel and advance the main plot. Sub-plots involve secondary characters interacting with the protagonist or the antagonist. However the sub plot must not overwhelm the main plot.

**10.Scene structure**

Just as the screenplay has a structure, so should be the individual scenes. Although a screenwriting rule of thumb stipulates that scenes should not run much more than two minutes (two full script pages), you should still regard them as mini-dramas. Some short scenes, called **transitional scenes**, merely connect one place or time to another like a bridge and don't require special treatment. Each character in a scene should have an objective, or need, and the tension created by these needs should rise throughout the scene

**11. Back story**

The facts about the characters that are made known first and which later become important are called "back story" or exposition. They are elements of the character's biography that the screenwriter has deemed crucial to the storytelling. Every screenplay contains back story because every character brings a certain amount of baggage to a drama. Some facts about a person can be revealed through props, costumes, makeup and behavior. Most back story, however, is conveyed through dialogue. Good exposition doesn't stick out and is presented in a believable context. Most back story tends to be revealed early in the script, but certain facts may be withheld for dramatic effect. Secrets are the most powerful form of back story, and whole dramas can revolve around them. Knowing how and when to expose details about a character's past is a trial-and-error process and may require several rewrites to nail

**12. Set-ups and pay-offs**

Set-ups and pay-offs are narrative devices commonly used in screenplays. As the word suggests, a set-up introduces a bit of action or gag that will become significant later on and lead to a pay-off. Set-ups, which usually are found in the first half of a script, should appear tacked-on or inconsequential. The first time when the set –up is mentioned, the situation must benign, but when the moment it becomes crucial in the end then it pays-off.

**Outline**

**Difference between an outline, Synopsis and a treatment**

- A synopsis is generally defined as a one-to-four page narrative description of what happens in your story, told with some sizzle, since it will likely be used as a selling tool -- to entice an agent, publisher or producer to take a look at your manuscript.
- A film treatment used to consist of 20 to 40 or more pages of narrative. But today the treatments have become so brief that the line between them and synopses is blurred.
- **An outline is a scene-by-scene breakdown of your story, written in narrative form**. For TV and film scripts that are written on assignments the outline will invariably be read by producers and often by non-writers, such as studio or network executives, and should, therefore, be written with such exposure in mind.

Outline can be written by narrating the scenes in four or five sentences. The following are the important advantages of writing outlines.

- By writing the outlines the story can be easily deconstructed or reconstructed.
- It will enable to look critically at each scene, each situation, to judge how it fits into the whole of your story.
- The pace of the story can be judged i.e. where it sags, where it needs to be tightened.
- Discoveries about the characters can be made. It will to maintain balance and objectivity.
- We can also observe whether the consecutive scenes are too much alike or too jarringly different

**Treatment**

A **film treatment** is a piece of prose, typically the step between scene cards and the first draft of a screenplay for a motion picture, television program, or radio play. It is generally longer and more detailed than an outline (or one-page synopsis), and it may include details of directorial style that an outline omits. They read like a short story, except told in the present tense and describing events as they happen. There are two types: the original draft treatment, created during the writing process, and the presentation treatment, created as presentation material.

**Original draft treatment**

The original draft treatment is generally long and detailed. It consists of full-scene outlines put together. These are usually more than about 30 standard letter size/A4 pages (Courier New 12 point), less than about 80 pages, and an average of about 40 pages.

**Presentation treatment**

Generally the scene card descriptions are written out in order. These only have the essential and important story events that make up the scenes. It's the full story in its simplest form. Usually starting with the concept, then the theme, then character, and also the detailed synopsis of about 4–8 pages of master scenes. This is either to show how the production notes have been incorporated into the screenplay for the director and production executives to look over, or to leave behind as a presentation note after a sales pitch. This would be the treatment to send if a script submission requires one. These are usually more than about 3 pages, less than about 30 pages and an average of 7–12 pages.

Treatments are widely used within the motion picture industry as selling documents, whereas outlines are generally produced as part of the development process. Screenwriters may use a treatment to initially pitch a screenplay, but may also use a treatment to sell a concept they are pitching without a completed screenplay.

It is useful to write a script treatment before writing a screenplay. The treatment provides a rough overview of the screenplay and is stylistically similar to a short story. A treatment is usually several pages long and describes the main action sequences. Brief lines of dialogue can be included in these sequences to emphasize key moments of action. When outlining your treatment, list and describe the most important elements of your story:

1. The main conflict.
2. The person, place, or thing that is the subject of your story.
3. Each action sequence.
4. The main characters.
5. The climax, which is the confrontation between the hero and the villain.
6. The resolution of the main conflict.

**Visualization- Pre-visualization**

**Pre-visualization** can be any technique that attempts to visualize scenes in a movie before filming begins. The term is applied to techniques such as storyboarding, either by

hand drawn sketches or the use of digital technology in the planning and conceptualizing of movie scenes and sequences.

- The advantage of pre-visualization is that it allows directors to experiment with different staging and art direction options – such as lighting, camera placement and movement, stage direction and editing - without having to incur the costs of actual production.
- On larger budget project, the director works with artists in a visual effects department or with dedicated pre-visualization service companies.
- Pre-visualizations can include music, sound effects and dialogue to closely emulate the look of fully produced and edited sequences, and are usually employed for complex or difficult scenes that involve stunts and special effects.
- Digital video, photography, hand-drawn art, clip art and 3D animation have all been used either singly or in combination to preview sequences.

**Shooting script**

A shooting script is the version of a screenplay used during the production of a motion picture. Shooting scripts are distinct from spec scripts in that they make use of scene numbers and they follow a well defined set of procedures specifying how script revisions should be implemented and circulated.

- When a screenplay is approved for production, the scenes are assigned numbers which are included in the script alongside the scene headers. The numbers provide a convenient way for the various production departments to reference individual scenes.
- After a shooting script has been widely circulated, page numbers are locked, and any revisions are distributed on revision pages. Thus the production office might issue a revision containing new pages 3, 9, 17 and 45. This avoids having to print and distribute an entirely new draft for every set of revisions, which would entail crew members having to transfer all their handwritten notes to a new script.
- If scenes on page 45 become longer, they will be continued on new pages 45A, 45B and so on;
- If the scenes on page 45 are all eliminated, a new page 45 will be issued with the word "OMIT" as the absence of a page 45 might look like an error.
- Revision pages are distributed on colored paper, a different color for each set of revisions, with each changed line marked by an asterisk in the right margin of

the page. The progression of colors varies from one production to the next, but a typical sequence would be: white, blue, pink, yellow, green, gold, salmon, cherry, white (this time known as "double white"), and back to blue ("double blue"). When the Assistant Director believes that there are more changed pages than are worth swapping out, the Script Coordinator may issue an entirely fresh script in the appropriate revision color. In some cases, usually before the start of principal photography, an entirely new "white draft" will be distributed in lieu of colored revision pages. The pages in a white draft are renumbered from scratch, while the original scene numbers are maintained.

**Preserving scene and page numbers**.

- When revisions are made to a shooting script, they must be accomplished in a way that doesn't disturb the pre-existing scene numbers. For example, if a new scene is to be inserted between scenes 10 and 11, the new scene will be numbered 10A. For some productions, it may be necessary to insert a scene between 10 and 10A - this scene is then numbered 10aA (a scene between 10 and 10aA would be numbered 10aaA and so on). Every scene thus retains its own unique number throughout the course of the production.
- When a scene is omitted, its number is preserved in the script along with the phrase (OMITTED). This effectively retires the number so that it can't be reused by a new scene inserted later at the same location.
- Page numbers in a shooting script are handled in a similar way. When revision pages are distributed, the page numbers must flow sequentially into the pre-existing page numbers. For example, if page 10 is revised such that it now occupies a page and a half, the revisions will be distributed on two pages numbered 10 and 10A. These two pages will replace page 10 in the outstanding drafts. Conversely, if pages 15 and 16 are shortened such that they now occupy a single page, the revisions will be distributed on a single page numbered 15-16.

**Scene continued**

When a numbered scene is split across pages, (CONTINUED) appears at the bottom of the prior page, and CONTINUED: appears at the top of the subsequent page. This *continued indicator* appears along with the number of the scene being continued and a bracketed count of how often the scene has been continued thus far, e.g. 107 CONTINUED: (2). The number is usually omitted when it's equal to one.

**Dialogue continued**

When dialogue is split across pages, (MORE) appears below the portion of dialogue on the first page, similar to a *parenthetical* but indented the same as the character's name. On the subsequent page, the remaining dialogue is headed by the character's name, which is extended by an abbreviated *continued indicator*, e.g. JOHN (CONT'D). When a character speaks more than once consecutively, with only action separating the speeches, *(continuing) parenthetical* can be used in the subsequent speeches. *(Continuing) parenthetical* are positioned the same as standard ones: below the character's name and indented from the dialogue. Some writers indicate consecutive dialogue by including (CONT'D) beside the character's name (the same as for dialogue split across pages). Many writers choose not to indicate consecutive dialogue at all.

**The revision slug**

A slug (header) appears at the top of every revision page, aligned vertically with the page number. The revision slug typically includes the date the revisions were circulated, the color of the pages in parentheses, and usually, the name of the production or some other descriptive information. Every set of revisions is distributed along with a title page that includes a list of the revision slugs for every set of revisions distributed thus far.

**Revision marks**

Script revisions are marked with asterisks in the right hand margins of the revision pages. When many revision marks are present on a single page, or within a single paragraph or scene, the marks may be consolidated into a single mark. For example, if all the lines in a given passage of dialogue are marked, the marks can be consolidated into a single mark appearing alongside the name of the speaker above the dialogue. In the case of scenes, this single "consolidation mark" appears alongside the scene header. For pages, the consolidation mark appears beside the page number.

**NR – 21063 - Digital Media**

**Unit- 1**

**Introduction to Digital Media**

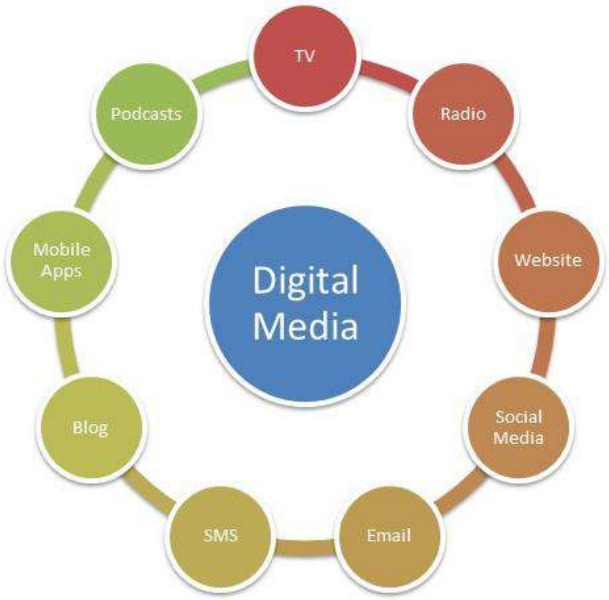

## 1. Concept of Digital media

### What is Digital Media

Another term for Digital media is **new media or social media**.

Digital media is a way to express opinions or ideas in digital form through the Internet, accessible on any digital devices. It is a quick, easy, and effective way of communication and distribution of the content. This includes text, audio, video, and graphics that are transmitted over the internet or through other digital mediums such as television, radio. Digital media content can be created, viewed, distributed, and modified via digital devices, which is something that differentiates it from traditional media.

- **What are examples of digital media?**
- Digital photographs.
- Digital books (e books)
- Websites and Blogs.
- Social Media
- (Facebook, Twitter)
- Mobile Phone Apps
- online newspapers
-

### What is Digital Device

**Digital Device** means an electronic device that can create, generate, send, share, communicate, receive, store, display, or process information, and such electronic devices shall include, but not limited to, desktops, laptops, tablets, peripherals, servers, mobile telephones, smartphones, and any similar storage device which currently exists or may exist as technology develops or such comparable items as technology develops.

## 2. Internet and its functioning

### What is the Internet

The Internet is a global collection of computer networks that are linked together by devices called routers and use a common set of protocols for data transmission known as TCP/IP (transmission control protocol / Internet protocol).

**The primary purpose of the Internet is to facilitate the sharing of information.** There are many different tools used on the Internet to make this possible. Some of the more common tools include email, list servers, newsgroups, telnet, gopher, FTP, and the World Wide Web. Probably the most popular of all Internet tools is the World Wide Web. Internet comprises of various networks that include public, private, government, business, and academic sectors linked together using different electronic technologies. It interconnects global networks with local and vise-versa.

### Functions of Internet:

The Internet is a global network of **physical cables**, which can include copper telephone wires, TV cables, and fiber optic cables. Even wireless connections like Wi-Fi and 3G/4G rely on these physical cables to access the Internet. When you visit a website, your computer sends a request over these wires to a **server**. A server is where websites are stored, and it works a lot like your computer's hard drive. Once the request arrives, the server retrieves the website and sends the correct data back to your computer. What's amazing is that this all happens in just a few seconds!

**Role (function) of Internet**

1.Communication 2. Online transaction 3.Entertainment 4.Gather information 5.Map navigation 6.Weather forecasting information 7.News 8.Data interchange 9.Shopping 10. Professional Business

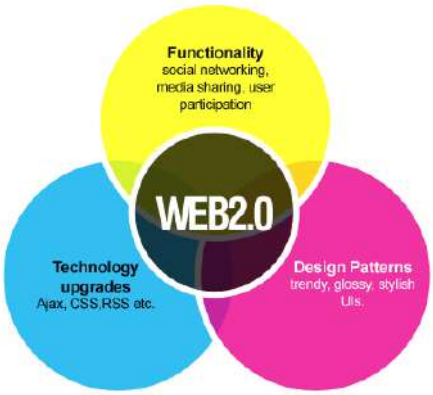

## 3. Concept of Web 2.0

Web 2.0 is the second generation of the World Wide Web. It focuses on the web as a platform and offers more opportunities for collaboration, functionality, various applications, and user-generated content. It is the World Wide Web as it is used today.

Web 2.0, or participative/participatory and social web, "refers to websites that emphasize user-generated content, ease of use, participatory culture, and interoperability for end users." Web 2.0 is a relatively new term, having only come into popular use about twenty years ago, in 1999.

**The word web 2.0 was first coined by Darcy DiNucci and then became popularized by Tim O'Reilly and Dale Doughtery at a conference in 2004.**

**It's important to note that Web 2.0 frameworks only deal with the design and use of websites, without placing technical demands on designers.**

**Characteristics of Web 2.0**

One of the main characteristics of a Web 2.0 site is that users are encouraged and invited to contribute content, instead of simply reading what's already there. **An example of a Web 2.0 site is Medium, a blogging platform where users contribute articles that they have written**, as well as interact with content that other users have shared. Social networking sites, such as Facebook and Instagram, are also great examples of Web 2.0.

**Concepts of Web 2.0**

Web 2.0 might sound complex and overwhelming, but it is easily broken down into three technologies: Rich internet application, web-oriented architecture, and social web. We'll explain each of these in a little more depth later on in this section. Because of these technologies, Web 2.0 combines client and server side software to "provide users with information storage, creation, and dissemination capabilities. None of these things were available in Web 1.0.

First, rich internet application is defined as the user experience from desktop (or laptop) to browser, from both a graphics standpoint and an interactivity point of view. Second, web-oriented architecture relates to the functionality of Web 2.0 applications to leverage a much richer set of applications. An example of web-oriented architecture is RSS feeds, which is a method of aggregating information, such as a blog or podcast feed. Third, social web works to make the end user feel like they are a part of the community. This sense of community can be accomplished via social networking sites like Facebook and Instagram, where users interact with each other, or via the comment sections on news sites, where users can respond to articles that have been posted, creating discussion among all users of the site.

**Comparison between Web 1.0, Web 2.0 and Web 3.0**

Web 1.0 was all about fetching, and reading information. Web 2.0 is all about reading, writing, creating, and interacting with the end user. It was famously called the participative social web. Web 3.0 is the third generation of the World Wide Web, and is a vision of a decentralized web which is currently a work in progress. It is all about reading, writing, and owning. Let's dive deeper to know better about web 1.0 and web 2.0 and the need for web 3.0.

**Web 1.0**

Web 1.0 refers to the first stage of the World Wide Web evolution. Earlier, there were only a few content creators in Web 1.0 with a huge majority of users who are consumers of content. Personal web pages were common, consisting mainly of static pages hosted on ISP-run web servers, or free web hosting services.

**In Web 1.0 advertisements on websites while surfing the internet are banned.** Also, in Web 1.0, Ofoto is an online digital photography website, on which users could store, share, view, and print digital pictures. Web 1.0 is a content delivery network (CDN) that enables the showcase of the piece of information on the websites. It can be used as a personal website. It costs the user as per pages viewed. It has directories that enable users to retrieve a particular piece of information. The era of Web 1.0 was roughly from 1991 to 2004.

**Four Design Essentials of a Web 1.0 Site Include:**

- Static pages.
- Content is served from the server's file system.
- Pages built using Server Side Includes or Common Gateway Interface (CGI).
- Frames and Tables are used to position and align the elements on a page.

**Web 2.0**

2004 When the word Web 2.0 become famous due to the First Web 2.0 conference (later known as the Web 2.0 summit) held by Tim O'Reilly and Dale Dougherty, the term was coined by Darcy DiNucci in 1999. Web 2.0 refers to worldwide websites which highlight user-generated content, usability, and interoperability for end users. **Web 2.0 is also called the participative social web.** It does not refer to a modification to any technical specification, but to modify the way Web pages are designed and used. The transition is beneficial but it does not seem that when the changes occur. Interaction and collaboration with each other are allowed by Web 2.0 in a social media dialogue as the creator of user-generated content in a virtual community. Web 2.0 is an enhanced version of Web 1.0.

**Five Major Features of Web 2.0:**

- Free sorting of information, permits users to retrieve and classify the information collectively.
- Dynamic content that is responsive to user input.
- Information flows between the site owner and site users using evaluation & online commenting.
- Developed APIs to allow self-usage, such as by a software application.
- Web access leads to concerns different, from the traditional Internet user base to a wider variety of users.

**Usage of Web 2.0:** The social Web contains several online tools and platforms where people share their perspectives, opinions, thoughts, and experiences. Web 2.0 applications tend to interact much more with the end user. As such, the end-user is not only a user of the application but also a participant in these 8 tools mentioned below:

- Podcasting
- Blogging
- Tagging
- Curating with RSS
- Social bookmarking
- Social networking
- Social media
- Web content voting

**Web 3.0**

It refers to the evolution of web utilization and interaction which includes altering the Web into a database, with the integration of DLT (Distributed Ledger Technology blockchain is an example) and that data can help to make Smart Contracts based on the needs of the individual. It enables the up-gradation of the backend of the web, after a long time of focusing on the frontend (Web 2.0 has mainly been about AJAX, tagging, and other front-end user-experience innovation). Web 3.0 is a term that is used to describe many evolutions of web usage and interaction among several paths. In this, data isn't owned but instead shared but still is, where services show different views for the same web / the same data.

The Semantic Web (3.0) promises to establish "the world's information" in a more reasonable way than Google can ever attain with its existing engine schema. This is particularly true from the perspective of machine conception as opposed to human understanding. The Semantic Web necessitates the use of a declarative ontological language like OWL to produce domain-specific ontologies that machines can use to reason about information and make new conclusions, not simply match keywords.

**Main features of Web 3.0**

- **Semantic Web:** The succeeding evolution of the Web involves the Semantic Web. The semantic web improves web technologies in demand to create, share and connect content through search and analysis based on the capability to comprehend the meaning of words, rather than on keywords or numbers.

- **Artificial Intelligence:** Combining this capability with natural language processing, in Web 3.0, computers can distinguish information like humans to provide faster and more relevant results. They become more intelligent to fulfill the requirements of users.
- **3D Graphics:** The three-dimensional design is being used widely in websites and services in Web 3.0. Museum guides, computer games, e-commerce, geospatial contexts, etc. are all examples that use 3D graphics.
- **Connectivity:** With Web 3.0, information is more connected thanks to semantic metadata. As a result, the user experience evolves to another level of connectivity that leverages all the available information.
- **Ubiquity:** Content is accessible by multiple applications, every device is connected to the web, and the services can be used everywhere.
- **DLT and Smart Contracts:** With the help of DLT, we can have a virtually impossible-to-hack database from which one can have value to their content and things they can own virtually, this is the technology that enables a trustless society through the integration of smart contracts which does not need to have a middle man to be a guarantor to make that contract occur on certain cause its based on data from that DLT. It's a powerful tool that can make the world a far better place and generate more opportunities for everyone on the internet. Hence, these were the major difference between Web 1.0, Web 2.0, and Web 3.0 having their own uniqueness. All three were used at their respective time and revolutionized the world of the web accordingly

**4. Concept of interactivity**

- The word interactivity is related to and stems from the term interaction used by sociologists, which is **the actions of at least two individuals who exchange or interplay**. It requires levels of messages that respond to previous messages. Interactivity also refers to a communication systems ability to "talk back".

- The Oxford English Dictionary defines **"Interactivity"** in regards to new media as "**allowing a two-way flow of information between it (a computer or other electronic device) and a user, responding to the user's input**."

## Difference Between Web 1.0, Web 2.0, and Web 3.0

| S. No. | Web 1.0 | Web 2.0 | Web 3.0 |
|---|---|---|---|
| 1. | Mostly Read-Only | Wildly Read-Write | Portable and Personal |
| 2. | Company Focus | Community Focus | Individual Focus |
| 3. | Home Pages | Blogs / Wikis | Live-streams / Waves |
| 4. | Owning Content | Sharing Content | Consolidating Content |
| 5. | WebForms | Web Applications | Smart Applications |
| 6. | Directories | Tagging | User behavior |
| 7. | Page Views | Cost Per Click | User Engagement |
| 8. | Banner Advertising | Interactive Advertising | Behavioral Advertising |
| 9. | Britannica Online | Wikipedia | The Semantic Web |
| 10. | HTML/Portals | XML / RSS | RDF / RDFS / OWL |
| 11. | Data was not Focused. | Data of many was controlled by some mediatory. | Data was personalized and no use of mediatory. |
| 12. | Information sharing is the goal. | Interaction is the goal. | Immersion is the goal. |
| 13. | It connects information as its primary goal. | It aims to connect people. | Focuses on relating knowledge. |
| 14. | Static websites | Introduction of web applications | Intelligent web-based functions and apps |
| 15. | A simpler, more passive web. | An enhanced social Web | A semantic web exists. |
| 16. | Web and File Servers, HTML, and Portals are technologies connected to Web 1.0. | AJAX, JavaScript, CSS, and HTML5 are examples of related technology. | Web 3.0 technologies include blockchain, artificial intelligence, and decentralized protocols. |
| 17. | **Associated Technologies** | **Associated Technologies** | **Associated Technologies** |

| S. No. | Web 1.0 | Web 2.0 | Web 3.0 |
|---|---|---|---|
| | • Web and File Servers<br>• Search Engines (including AltaVista and Yahoo!)<br>• E-mail accounts (Yahoo!, Hotmail)<br>• Peer-to-Peer File Sharing (Napster, BitTorrent) and others. | • Frameworks for Ajax and JavaScript<br>• Microsoft.NET<br>• Blogs<br>• Wikis and others. | • Searching Using Semantics<br>• Databases of Information<br>• Ontologies<br>• Intelligent Digital Personal Assistants and others. |

**5. . Mobile 2.0**

- An umbrella term for advanced services on mobile phones. The suffix 2.0 in technology implies that a product is new and improved, reinvented to be better and maybe even more relevant. It describes the convergence of mobile and web services, adding portability, ubiquitous connectivity and location – aware services to add physical context to information found on the web.
- Mobile 2.0, refers to **a perceived next generation of mobile internet services that leverage the social web.**

**Characteristics of Mobile 2.0**

- The social web meets mobility
- Extensive use of User-Generated Content, so that the site is owned by its contributors
- Leveraging services on the web via mashups
- Fully leveraging the mobile device, the mobile context, and delivering a rich mobile user experience
- Personal, Local, Always-on, Ever-present

**6. Social networking websites**

A social networking site is also known as a social networking website or social website. A social networking site is an online platform that allows users to create a public profile and interact with other users. Social networking sites usually allow a new user to provide a list of people with whom they share a connection, and then allow the people

on the list to confirm or deny the connection. After connections are established, the new user can search the networks of connections to make more connections.

Social networking can have a social purpose, a business purpose, or both, through sites with like-minded individuals, peers, friends and family. Popular social networking sites -- such as Facebook, Yelp, Twitter, Instagram and TikTok -- enable individuals to maintain social connections, stay informed and access, as well as share, a wealth of information. These sites also enable marketers to reach their target audiences. Popular examples for social media include **Facebook, Instagram, Twitter, Yelp and Myspace**. Professional connections. Geared toward professionals, these social networking sites may include a general forum where professionals can connect with co-workers or offer an exclusive platform based on specific occupations or interest levels

**What is the purpose of social networking?**

Social networking fulfills the following four main objectives:

1. **Sharing.** Friends or family members who are geographically dispersed can connect remotely and share information, updates, photos and videos. Social networking also enables individuals to meet other people with similar interests or to expand their current social networks.
2. **Learning.** Social networks serve as great learning platforms. Consumers can instantly receive breaking news, get updates regarding friends and family, or learn about what's happening in their community.
3. **Interacting.** Social networking enhances user interactions by breaking the barriers of time and distance. With cloud-based video communication technologies such as WhatsApp or Instagram Live, people can talk face to face with anyone in the world.
4. **Marketing.** Companies may tap into social networking services to enhance brand awareness with the platform's users, improve customer retention and conversion rates, and promote brand and voice identity.

**Social Media vs Social Networking**

**The difference between the two things is that social media is mainly used for communications, while social networking is used to build that network of people.** Some people also consider "social media" to be a noun, just like digital media or print media, and "social networking" to be a verb.

So the social networking part of Facebook would be its groups, where people add each other in a grouped network deliberately. The social media component would be someone's page or wall where the communications are evidently public and accessible to all users without a specific network in mind. So again, a social networking site has the prime objective of allowing an inherently limited group of individuals to connect in a special way—not just a platform for someone to build a profile and advertise something to the world. In light of this, LinkedIn works much more as a hybrid than just a social networking site, although it is still widely considered the primary social networking site for professionals.

On LinkedIn, networking connections work much as described above: the individual can request that another user be added to his or her network, and then that other person can verify or deny the connection. The networking also happens when someone sends or receives a LinkedIn mail message, or adds an individual to their list of network contacts or endorsers. The social media component on LinkedIn is all of the public information on the individual's profile, like the resume, education history and employment history. That information is freely available to any user, no matter who he or she is, so creating it doesn't really consist of social networking behavior.

**7. Concept of media convergence**

Media Convergence simply refers to **the merging of different types of mass media such as Traditional Media, Print Media, Broadcast Media, New Media and the Internet as well as portable and highly interactive technologies through digital media platforms.** Media convergence is the process by which multiple media technologies are brought together into one computerized device. For example, smartphones can do the jobs which newspapers, GPS's, and telephones used to accomplish separately.

This results in the combination of 3Cs, i.e. Communication, Computing and Content as all three are integrated through technology. The most **relevant example of media convergence is a Smartphone** that blends together various media, i.e. print media (e-books, news apps), broadcast media (streaming websites, radio, music apps) as well as

new media (the internet) into a single device that performs various functions from calling and texting to photography, videography, gaming and so much more.

### Advantages of Media Convergence

Media convergence has had major effects on all sorts of media: entertainment media, news media, social media, etc. Some of these effects are positive, especially as concerns convenience, accessibility, and access to information:

- Simplifies media content production
- Speeds up and expands possibilities of media content distribution
- Users can access multiple types of media on one device
- Democratization of media (anyone can produce media on a social media website)
- Expands access to information (anyone with an internet connection can listen to open courses from American universities, for example)

### Disadvantages of Media Convergence

- Creates a divide between those with access to computer technology and those without.
- Tracking of computer programs threatened personal privacy and had led to greater surveillance.
- Digital content can be easily pirated and leaked.
- Music, film, television, and publishing industries have suffered economically due to copyright infringement and loss of audience.
- Digitalization facilitates fake news and manipulative media content.

There are two sides to every coin, and media convergence is no exception. While almost all people experience major benefits from the convenient services offered by converged digitalized technologies, they also experience decreased levels of personal privacy and increased exposure to fake media content.

## 8. Four types of convergence in media: Technological, Business, Professional, Content

## Technological Convergence

The definition of **technological convergence**, as its name implies, is the convergence of previously separate physical technologies (print newspapers, television, CDs) into single devices. Smartphones, tablet computers, smart televisions, and even automobiles now provide people with access to media content that was previously available only through separate channels. Technological convergence is also sometimes referred to as digital device convergence.

Many media corporations have developed cross-media content to adapt to this new technological reality. For example, newspapers often offer digital versions with videos and weblinks. Now, readers of these newspapers can comment on an article and express their opinion. Moreover, technological convergence has seen the rise of social media journalism. This has made it harder for media companies to control the news narrative, which has led both to expose new, true information to the public and the propagation of fake and manipulative content.

## Advantages of Technological Convergence

Technological convergence simplifies the production of media content. It also expands, accelerates and facilitates its distribution, often with associated cost savings. A digital photograph, for example, can be shot and circulated globally within seconds via the Internet. There is no need for film processing, printing and physical distribution. Similarly, consumers can access multiple forms of media content on a single device whenever they choose, often for free. With technological convergence, the electronic transmission of data can be exponential. This replaces the more singular, physical transportation of material goods.

Convergence has also made it easier to produce media. Digitization allows consumers of media content to produce and distribute their own content. They could be everyday people using social media sites. Or they could be professionals (e.g., designers, filmmakers, musicians, writers, etc.) working in their field. Some analysts see this as a democratization of media. Anyone with access to digital media and a computer network can produce, consume and circulate media content.

**Disadvantages (Drawbacks) of Technological Convergence**

- Not everyone has ready and affordable access to digital media, or the skills to employ them.
- A connection to computer networks (and the literacy required to navigate them) is increasingly vital. It creates a digital divide between haves and have-nots.
- Also, the tracking capacity of computer programs has resulted in increased surveillance. This has prompted concerns about personal privacy and security.

**Content Convergence**

**Content** in media convergence ensures that people are reached with the right message, individual, and time. Content must be well to get people engaged. Today, every act of communication in media is accomplished through content. One way that content has engaged with media convergence is through storytelling; users can use their content to tell stories across various platforms. Content is a source of brand extension, reaching a new audience, profit and revenue generation, and increased product sales for media and other business corporations. Rich and narrative content engages with media consumers.

**8. What is Multimedia Content?**

Multimedia content is any type of content that uses a combination of text, images, audio, and video to deliver information. It can serve for entertainment, education, or marketing purposes. The term **multimedia** was **coined by** singer and artist **Bob Goldstein** (later 'Bobb Goldsteinn') to promote the July 1966 opening of his "Lightworks at L'Oursin" show in Southampton, Long Island.

**Benefits of Multimedia**

There are many benefits of using multimedia content

**More engaging than text-only content**

Multimedia content is more likely to capture attention and hold interest than text-only content. This is because it uses multiple senses to engage the viewer or reader.

**Memorable**

Because multimedia content engages multiple senses, it is also more likely to be remembered than text-only content. This can be helpful if you want your audience to remember key information from your content.

**Has a wider reach**

Multimedia content can help you reach a wider audience with your message. This is especially true if you share your content across multiple channels, including social media, email, and your website.

**Good for SEO**

Including multimedia content on your website can actually help boost your SEO efforts. This is because search engines favor websites that offer a variety of content types, including images, videos, and infographics.

**Boosts social shares**

If your multimedia content is truly captivating, it's more share-worthy across social media platforms. This can help increase your reach and exposure, and it can also lead to more inbound traffic to your website.

**Can be repurposed easily**

Unlike text-based content, multimedia content is easy to repurpose across digital channels. For example, you could turn a blog post into an infographic or a video. This can help you get more mileage out of your content and save time in the long run.

**It's just more fun to create!**

Let's be honest – multimedia content is just more fun to create than text-based content. If you're looking for a way to inject some creativity into your content marketing strategy, multimedia content is the way to go.

**Disadvantages of Multimedia Content**

While there are many benefits of using multimedia content, there are also a few potential disadantages to consider.

**More time-consuming to create**

Depending on the type of multimedia content you want to create, it can take more time to produce than text-based content. For example, creating an infographic or a video requires more planning and production than a blog post.

**Can be more expensive to produce**

If you outsource the creation of your multimedia content, it can be more expensive than creating text-based content yourself.

**It might not be appropriate for all types of content**

Not all types of content are well-suited for a multimedia format. For example, a news article might be better presented as text only, while an instructional guide could be more effectively conveyed through an infographic or video.

**Harder to track performance**

Multimedia content can be more difficult to track and measure than text-based content. This is because it's often shared across multiple channels and platforms, making it hard to determine where it originated.

**May not be compatible with all devices.**

Some types of multimedia content, such as video, might not be compatible with all devices. This can limit your audience and make it more difficult to reach everyone you want to target.

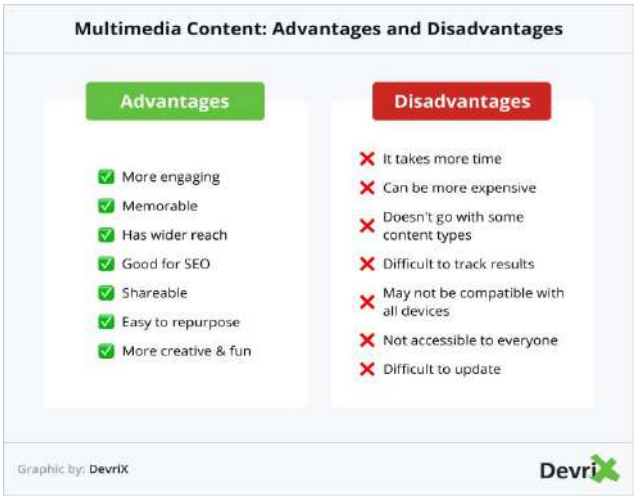

**It may not be accessible to everyone.**

Some people, such as those with visual or hearing impairments, might not be able to access multimedia content. This is something to consider if you want to ensure that your content is accessible to as many people as possible.

**Harder to update.**

Once you've published multimedia content, it can be more difficult to update than text-based content. This is something to keep in mind if you need to make changes or corrections after your content has been published. Also, it's advisable to save your media files in case they need edits in the future. Otherwise, when you update your articles, your graphic designers would have to start from scratch.

Advantages and Disadvantages of Multimedia Content in a simple form:

## 9. Web Browser

**Definition:** A web browser is a kind of software that allows you to go through all the information provided on the world wide web. By using a web browser anyone can search for any type of web page and the web browser opens the page of the particular website which is searched by a searcher.

In simple words when you type any **URL** i.e. address of any website( for example you type www.facebook.com) on the address bar of any web browser then the web browser asks the server to provide information about that website using **http** (hypertext transfer protocol).

A URL is simply an address of a website in a server. Where the server and web browser communicate with each other via **http** .

There are many browsers available like – **internet explorer, Google Chrome, UC browser, firefox, opera,** There are some common web browsers that are mostly used by people, etc.

### Common features of Web Browser

All Web Browsers have some basic features in it. Following are some main characteristics carried by all web browsers

**1. An address bar:** It is the place where you type an address of a website

**2. Refresh button:** It is used to reload the web page.

**3. Stop button:** This button is used to stop the communication between browser and server.

**4. Home button:** It is used to reach the home page quickly

**5. Tabbed browsing:** This is a feature that is used to open multiple websites in a single window. By this feature, you can open many tabs in a window and also open a website in each particular tab.

**6. Integrated search:** This feature allows you to choose your favorite search engine and do a search in them.

**Advantages and Disadvantages of Web Browser:**

Here we will discuss some of the **benefits (advantages)** of using a web browser:

**1**. If any programmer wants to develop a program then the programmer can easily test his/her program on the internet.

**2**.Now a day you can store data on the internet by using a web browser.

**3.** Today's web browser provides many facilities where you can download any file in any folder you want with the help of today's web browser.

**4**. By using a web browser, the ability to reach anyone in the world became easy. Now you can easily reach a person sitting in America from any remote part of India.

**5**. Today's web browser is safer to use and protect your device from the viruses ( especially opera )

**6.** web browsers are available for 24/7 use and we can use them whenever we want.

**The following are disadvantages of web browser :**

Web browsers can take your privacy away as there is the possibility of hacking so hackers can know all the things you do on the internet and can misuse your private information.

Kids also can see any type of content by using a web browser and there is an abundance of adult and violent content which is not good for kids.

Using a web browser for a long time can harm your eyes and brain, a study shows that it affects your concentration power and also decreases your patience.

To work on the internet you have to sit for a long time which increases your obesity.

**10. RSS Feed**

RSS stands for **Really Simple Syndication**, feed is an online file that contains details about every piece of content a site has published.

Each time a site publishes a new piece of content, details about that content—including the full-text of the content or a summary, publication date, author, link, etc.—are automatically generated in the file and displayed in reverse chronological order method

that can help you stay up-to-date with your favorite newscasts, blogs, websites, and social media channels.

RSS is a way for website authors to publish notifications of new content on their website. This content may include newscasts, blog posts, weather reports, and podcasts.

**How does RSS Feed Works?**

An RSS feed is read by an RSS reader or a feed reader, which can be either Web based, a standalone desktop application or a mobile application. To publish these notifications, the website author creates a text file with the XML file extension for the RSS feed that contains the title, description, and link for each post on the site. Then, the website author uses this XML file to add an RSS feed to web pages on the site. The XML file automatically syndicates new content through this RSS feed in a standard format that displays in any RSS reader. When website visitors subscribe to this RSS feed, they read the new website content in an RSS reader.

These RSS readers collect content from multiple XML files, organize the information, and display the content in one application. An RSS feed consolidates information sources in one place and provides updates when a site adds new content. With social media, all you see is the favorite stuff that people share. With an RSS feed, you see everything a website publishes. To find an RSS feed on a website, look on the site's main or home page. Some sites display their RSS feed as an orange button that may contain the acronyms RSS or XML. Not all RSS icons look alike. RSS icons come in different sizes and colors. Not all these icons contain the acronyms RSS or XML. Some sites use a Syndicate This link or another type of link to indicate an RSS feed.

**Before RSS Feed?**

Before the advent of RSS feeds, websites sent subscribers email notifications regarding new content. This was not optimal (best), however, as some emails could end up in the junk folder or mixed with other emails, plus the fact that the emails are formatted differently. In contrast, an RSS reader presents all the feeds using its own interface.

**History of RSS Feed**

RSS was originally introduced in 1999 by the American Internet-services company Netscape Communications Corp., for use with its MyNetscape portal. After Netscape abandoned the standard, software maker UserLand picked up development. With the 2002 release of the RSS 2.0.1 specifications, UserLand froze the standard and assigned the copyright to Harvard University's Berkman Center for Internet & Society.

**12. Digital Journalism in India**

Digital journalism, also known as Netizen journalism or Online journalism, is **a contemporary form of journalism where editorial content is distributed via the Internet, as opposed to publishing via print or broadcast**. Digital journalism is widely recognised as being any form of journalist content that is posted on the internet. It could be in text, audio or video form and because it does not have to print and distribute content, it is much faster than traditional journalism. People can use the internet to access news and events 24 hours a day. They also like to fit their reading into busy lives, so content is shorter than it used to be: Articles are not as long, GIFs can be glanced at in a few seconds and places such as the BBC now offer 15 second snippets of longer interviews.

Web journalism entered India about twenty two years ago. Initially, it had to affect the pressures posed by the post-liberalization era. The deteriorating plight of web journalism led one to question its very survival. But some companies decided to remain it out, come rain or shine and availed, during the quantity 2000- 2002, the services provided by the search engines like Google. Thereafter, different websites like Yahoo, Google, Indiatimes and similar portals started causation news on-line. The net revolution started shortly thenceforth, with newspapers launching their net editions. With magnified use of computers and broadband, internet journalism has full grown by leaps and bounds. With increase in mobile services, that provides property to the web through GPRS, the role of internet journalism has become important. Though the country possesses to beat the barriers expose by inadequate and poor quality power, high rentals related to broadband services, the affordable computers have supported the dissemination of Internet-based news.

Foreign majors like Yahoo, Google and MSN additionally compete the role of anchor. These portals additionally recognized the importance of Hindi and different regional languages. The regional newspapers have additionally started their portals for the users. Aside from the Hindi language newspapers of just about each scheduled language have their on-line editions. The linguistic purity related to internet journalism remains a debated topic. It ought to be unbroken in mind that news is browse from a newspaper, detected over radio and viewed on electronic media. However with internet journalism we'll browse, hear and take into account news, all at an equivalent time. E-journalism is probably an awfully spectacular medium.

However it's not right to infer that internet journalism involves piece of writing and writing of stories alone. If we glance into the contents of these news portals we'll find that, the authorities aren't so serious about the news items. Some portals like Rediff.com and Sify.com are among the few internet sites in India which have some original news contents. But during a number of the portals the primary content is diluted. However, such portals are good within the short run, but are poor players within the top of the day. Websites are assisted by news agencies associated with the print and electronic media.

**Interactive journalism**

People can now react to journalism in a way that was impossible before the internet. Articles have a 'comments' section where people can get involved and give their opinion. For journalists, this allows feedback they would not have had with traditional journalism, but it also means that content is harder to control.

**13. What is e-newspaper?**

An online newspaper is the online version of a newspaper, either as a stand-alone publication or as the online version of a printed periodical.

**Who invented Epaper?**

Electronic paper was first developed in the 1970s by **Nick Sheridon** at Xerox's Palo Alto Research Center.

**Which is the first e-newspaper in India?**

"The Hindu" is the first E-newspaper in India which was launched in 1996. The e-Paper has been developed by Summit Information Technologies Ltd. using state-of-the-art technology and offering responsive, high resolution and versatile features. Whole pages, articles, photographs, and other images can be viewed in .pdf and .jpg format, and articles can also be read as text. Publishers have been switching to e-newspapers for a long time. The reasons why publishers switch to e-newspapers are because it is more convenient, cost-saving, and reduces environmental impact. They save money by only having to pay for electronic devices rather than physical printing equipment such as paper machines.

Publishers switch to e-newspapers because they reduce the environmental impact due to them using fewer trees and other natural resources needed in paper production that contributes to climate change. And the most important reason is that people use electronic devices to read news such as tablets and mobile phones so it is more convenient for them. They are newspapers that are published digitally for anyone to read, instead of in print. They may be found in the form of online print publications, additional or complementary content to printed online material, or original Internet publications.

**Advantages of E-newspapers**

E-newspapers provide many advantages over traditional newspapers such as:

**Ability to store online for later reading:** One of the advantages of E-newspapers is that you can store your news for later if you happen to not have an internet connection. You can read these newspapers later when you are online and want to read them again.

**Ability to search by keyword or browse headlines:** E-newspapers are stored in a database where publishers can choose which articles to show to users based on their queries. You can find any story that is about what you want to read, even if it's in a different country.

**No need for paper:** E-newspapers are a great alternative to traditional newspapers because they save trees and money. Publishers can now publish their content online instead of printing it onto paper, which saves a lot of money as electronic devices are much cheaper than the cost that is needed to produce print newspapers. Can be accessed anywhere anytime

one of the major advantages of E-newspapers are that news can be accessed anywhere anytime
from all over the world!

**Cost-efficient publishing**

Publishers are able to publish content in different countries for a cheaper price with e-newspapers because they do not have to pay for printing. The publishing of e-newspapers is highly cost-efficient because they do not have to pay for physical print devices.

**Users can comment on articles**

People can also express their opinions on articles through comments on E-newspapers which gives readers a different perspective on the story which is very convenient.

**Media-rich Content**

An article is shown to users not only text but also charts, images, video, and other multimedia content which can be highly engaging for users.

**Conclusion**

Overall, E-Newspapers are an incredible platform that can be used to share news worldwide without the use of trees and print devices. They are easily accessible by all allowing you to stay up-to-date on current events, even if you are not near a newspaper stand.

**History of Online Newspaper**

An early example of an "online-only" newspaper or magazine was *(PLATO) News Report*, an online newspaper created by Bruce Parrello in 1974 on the PLATO System at the University of Illinois. Beginning in 1987, the Brazilian newspaper Jornaldodia ran on the state-owned Embratel network, moving to the Internet in the 1990s. By the late 1990s, hundreds of U.S. newspapers were publishing online versions but did not yet offer much interactivity. One example is Britain's Weekend City Press Review, which provided a weekly news summary online beginning in 1995. The first newspaper to go online was The **Columbus Dispatch** on July 1, 1980.

## Emergence of online news portals

### What is a News Portal

News portal is a platform, primarily web-based, that collects facts from selected authentic sources. It targets specific individuals and works to gain customers by providing credible and legitimate information, to aid their perspective. With time, simple web portals have advanced into complex portal structures that enormously facilitate buyer engagement and retention. It consists of a customised website theme design that is really creative and includes some good features that allow smooth surfing. News Portal is an e-learning platform where one can share news from numerous categories, like administration, art, movies, music, market trends, technology etc. This news is updated in real time and is easily accessible. By the very nature of its online presence, it is location-independent and time-saving. It may include images, videos, blogs, etc.

**Key characteristics of News Portals :**

- Allows you to create unlimited content categories, sub-categories and articles.
- Upload photos, videos or document files using the media manager tool.
- Ability to add content from frontend.
- Download or read document files directly.
- Content search function.
- Content archiving.
- Review feature for articles and posts.
- Multilingual support.
- Full access to the administration.
- Users and users groups management feature.
- Create a subscription model for Newsletters.
- Contact form.
- Sitemap for SEO and easy navigation experience.
- Encourages Social Sharing.

## Unit- 2

## Digital Story Telling

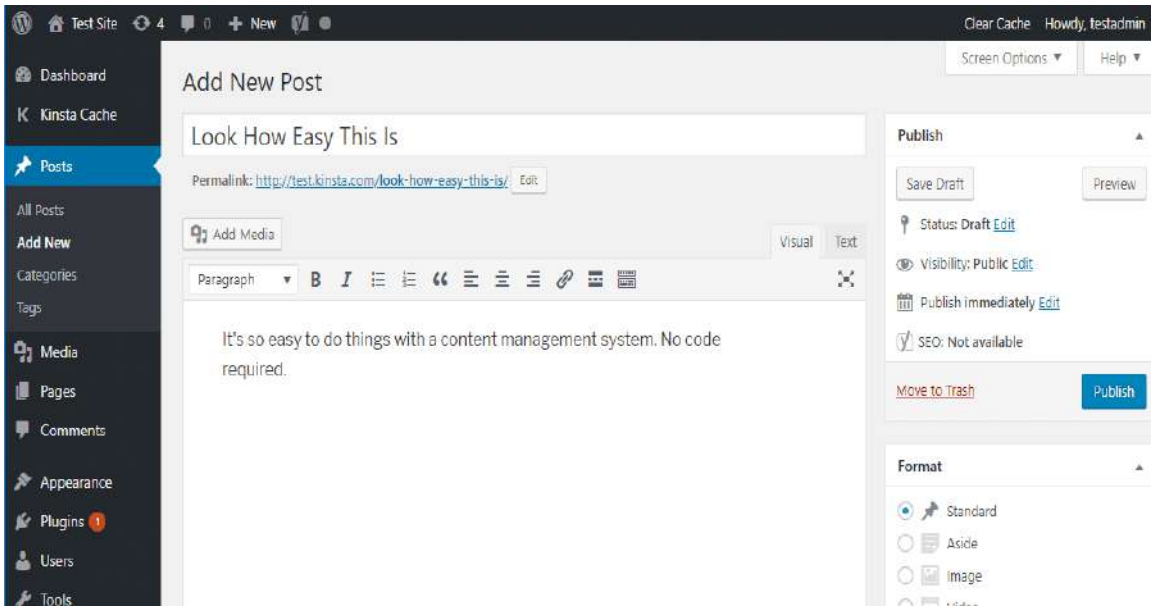

### Introduction to cross-media news production processes

- Cross-media production is **the coordinated reporting of events in several media outlets** (press, radio, television, Internet, mobile phones, and other mobile devices).

- The production can occur at a single integrated newsroom or involve collaboration among newsrooms from different media products systematically designed for and delivered in different media formats.
- The first newsroom-wide tests of cross-media production began as media businesses adopted digital technologies in daily news production and tended to concentrate in big multimedia conglomerates in the late twentieth century.
- The starting point in many cases was the exploration of a tighter relationship between the production of the newly developed Internet outlets and traditional formats (press, radio, television).
- The greatest challenge for cross-media production, nonetheless, is coordinating the different journalistic cultures of print and broadcast newsrooms.
- 
- **What Is a Content Management System (CMS)?**
- 
- A content management system, often abbreviated as **CMS**, is software that helps users create, manage, and modify content on a website without the need for specialized technical knowledge.
- 
- In simpler language, a content management system is a tool that helps you build a website without needing to write all the code from scratch (or even know how to code at all).
- 
- Instead of building your own system for creating web pages, storing images, and other functions, the content management system handles all that basic

infrastructure stuff for you so that you can focus on more forward-facing parts of your website.

- 
- Beyond websites, you can also find content management systems for other functions – like document management.
- 
- **How Does a Content Management System Work?**
- To give you an idea of how a content management system works, we're going to take a whirlwind tour of the WordPress interface (WordPress is a good example of a content management system).
- 
- Let's start with creating a piece of content. **Without** a content management system, you'd need to write a static HTML file and upload it to your server (*sounds complicated, right?*).
- 
- **With** a content management system like WordPress, you can just write your content in an interface that looks a good bit like Microsoft Word.

**Multi-media content generation techniques**

- **What is multimedia content?**

- Multimedia is a combination of various content like audio, text, pictures, video, and animations within a single shot presentation.
- That is different from the traditional mass media, like audio recordings and printed stuff.
- With time, the hypermedia extensions have taken multimedia to the next level. That is, WWW- World Wide Web.

**Multi-media content generation techniques**

- **A**.One popular way to use multimedia content is to create an explainer video. This format is typically short, engaging, and informative. It can be used to introduce a new product or service, explain how to use a specific feature, or even just entertain viewers.

  **B.**Another form of multimedia content is the infographic. Infographics are a great way to take complex information and present it in a visually appealing and easy-to-understand way.
  They can be used to explain data or statistics, share tips or advice, or even just tell a story.

**Interactive content generation**

**Interactive Content** is content that requires the audience to interact or engage with the content piece. It's more like a two-way conversation between you and your audience. *It requires active participation from both sides*.

**News stories with audio-visual inputs**
**Audio-visual inputs**:

1. LCD project 2.Film projector 3. TV 4. Computer 5.VCD player 6.Virtual Classroom 7. Multimedia etc.

1. By using Audio-visual inputs we can make a news story very effective and impressive.
2. People get attracted with Audio-visual inputs.
3. News stories with Audio-visual inputs make people to remember for a long time.
4. You will feel the live presence of the incident.

**Call-to-action (CTA) enabled script writing and its importance**

- 
- **What Is a Call to Action?**
  A call-to-action, or CTA, is a marketing term referring to a piece of content, such as an image, a button, or a line of text, intended to prompt users to perform a specific action.

  It typically takes the form of an instruction or directive using action verbs ("buy", "sign up", "register", "follow", etc.) and leading the consumer to the next step of a sales funnel or process.

  The call to action is a key element on a webpage, acting as a signpost that lets the user know what to do next.

  Without a clear CTA, the user may not know the next steps to take to purchase a product or sign up for a newsletter and is likely to leave the site without accomplishing their task.

  Calls to action are most commonly used in sales and marketing to solicit the desired action from leads and customers. For example, a CTA can be used to grow your email list ("Sign up to our newsletter"), promote a special offer ("Claim your voucher code"), or a piece of content ("Download our new eBook").

A tantalizing CTA is a sum of various different elements:

**Attention grabbing design:** One thing you should remember about CTA is that they need to stand out and make an impact. Don't follow the standard design rules when you

are crafting a CTA button or image. It should not blend in with the rest of your page design. You can combine the elements that match your style, such as fonts and brand colours but make sure the final CTA really pops from the rest of the page. A highly contrasting design is key to an eye – catching call – to – action.

**Action Focused Copy:** Finding the right balance between simple, clear instruction and enticing jargon – free copy that utilizes action words like "download", "register", or "start" can require quite a bit of iteration and creativity. Browse leading brand websites to see what kind of actionable copy they are using and let your inner copywriter emerge.

**A Sense of Urgency:** Adding the element of urgency is one of the best ways to keep you visitors focused on the action you want them to take. Is it a limited period? Is the promotion expiring soon? Let the people know to prompt them to act now rather than put it off for later.

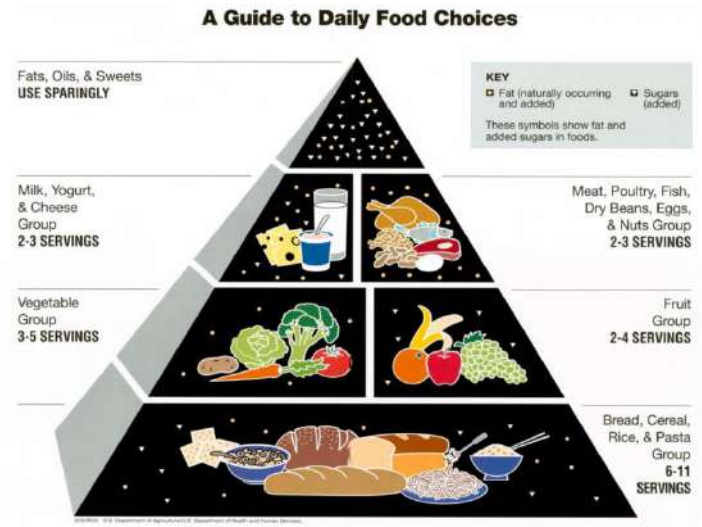

**A clear promise:** Keep your CTAs informative and ensure the copy explicitly tell to the people what they are expecting to do from them. Will they be signed up to your newsletter or taken to a new page to complete the help? Focus on communicating the benefits of clicking on your CTA.

**A Logical path to conversion:** Map put your path to conversion to ensure a smooth and logical flow that will make your CTAs more effective. Its important to align your CTAs with specific stages in the sales cycle in order to make relevant support.

**Use of interactive info-graphics**

- **What is interactive info-graphics**
- An interactive infographic is simply an infographic that has some element of interactivity, such as animation effects triggered by the reader clicking and scrolling.
- These are a form of interactive marketing that requires human engagement to initiate action.

- An infographic (static or interactive) condenses complex data or information into an easy-to-digest visual.
- Infographics can help people understand complex concepts by using visual aids such as charts, graphs, or diagrams.
- They can use both images and text in a visual format to explain concepts.
- The FDA's food pyramid could be considered a very rudimentary(simple) infographic.

**Use of Crowd sourcing and aggregation**

- **What is Crowdsourcing?**
-
- Crowdsourcing involves seeking knowledge, goods, or services from a large group of people.
- These people submit their ideas in response to online requests made either through social media, smart phone apps, or dedicated crowdsourcing platforms.
- The term crowdsourcing is a combination of crowds and outsourcing.
- The term crowdsourcing was coined in 2006 by ***Wired*** magazine author **Jeff Howe** in his article **"The Rise of Crowdsourcing".**

- Some of those involved in crowdsourcing are paid freelancers, but depending on the nature of the knowledge or services requested, most people perform these tasks on a voluntary basis.
-
- **Example for Crowdsourcing**
- A great example of crowdsourcing is online reviews.
- If you've ever reviewed a restaurant, gym, or bar on Google, congratulations! You're a productivecrowdsourcing contributor.
-
- **Different types of crowdsourcing**
-
- **Crowdsourcing can be used to find solutions to all kinds of tasks.** This includes small things like a band asking its fans which cities they should play on their next tour, to ambitious projects like genetic researchers asking for help in sequencing the human genome.
- The breadth and diversity of social media also offer huge potential for crowdsourcing, such as the Obama administration using Twitter to canvas questions for town hall debates, and football clubs asking fans to vote for the team's starting lineup ahead of each match.
- Crowdsourcing can also take the form of idea competitions such as Ideas for Action, a forum for students and young professionals to submit solutions to global innovation challenges.
- Hackathons are another popular form of crowdsourcing, often hosted by tech companies to find inventive solutions to challenging problems.
- And let's not forget perhaps the most prominent modern example of crowdsourcing: Wikipedia, the user-moderated online encyclopedia.

**Use of Social Media platforms**

**What is social media?**

Social media is an internet-based form of communication. Social media platforms allow users to have conversations, share information and create web content. There are many forms of social media, including blogs, micro-blogs, wikis, social networking sites, photo-sharing sites, instant messaging, video-sharing sites, podcasts, widgets, virtual worlds, and more.

**What is the purpose of social media platforms?**

Social media platforms **allow users to have conversations, share information and create web content**. There are many forms of social media, including blogs, micro-blogs, wikis, social networking sites, photo-sharing sites, instant messaging, video-sharing sites, podcasts, widgets, virtual worlds, and more

**Popular Social Media Tools and Platforms:**

- **Blogs:** A platform for casual dialogue and discussions on a specific topic or opinion.
- **Facebook:** The world's largest social network, with more than 1.55 billion monthly active users (as of the third quarter of 2015). Users create a personal profile, add other users as friends, and exchange messages, including status updates. Brands create pages and Facebook users can "like" brands' pages.
- **Twitter:** A social networking/micro-blogging platform that allows groups and individuals to stay connected through the exchange of short status messages (140 character limit).
- **YouTube/Vimeo:** Video hosting and watching websites.
- **Flickr:** An image and video hosting website and online community. Photos can be shared on Facebook and Twitter and other social networking sites.
- **Instagram:** A free photo and video sharing app that allows users to apply digital filters, frames and special effects to their photos and then share them on a variety of social networking sites.
- **LinkedIn:** A place where groups of professionals with similar areas of interest can share information and participate in a conversations.

## Use of hyperlinks and related data while writing and presenting a new story

### What Does Hyperlink Mean?

A hyperlink is an element in an HTML document that links to either another portion of the document or to another document altogether. **On webpages, hyperlinks are usually colored purple or blue and are sometimes underlined.**

Hyperlinks can assume any of the following appearances:

- Text
- Images
- URLs
- Controls (for example, a button)

Hyperlinks are common in news websites. They can help site visitors find more information and learn more about important issues. What affects whether a person clicks on a link? Certainly the topic matters, as does where a link appears on a page. Prompts and labels that introduce hyperlinks also can have an effect. Labeling links as "Most Popular," for instance, encourages people to click on the links to see what others find interesting.

### Other places hyperlinks are found

Hyperlinks are not exclusive to Internet browsers. Many programs and operating systems also use hyperlinks. For example, electronic documents, PDFs, and Windows 10 all feature hyperlinks that open other files, documents, and web pages.
Hyperlinks can also be made into a QR code, placed on products, and scanned by a smartphone to open a web page without entering the URL.

### Use of Hyperlinks in a News Story

Everyone has different preferences on how they would like to read content. Some prefer lots of links in an article, in order to further explore the subject and learn more detail. Others find links distracting, and would rather read print-like plain text. Even when it

comes to citations, people prefer different footnote styles, and there has always been a lot of debate.

Hyperlinks can be organized and labeled in many different ways. Take *The Washington Post*, for example. Opinion columns are categorized on left- and right-leaning opinion pages. The opposing partisan pages are hyperlinked, with the following prompt introducing the link: "Disagree with our opinions here? Check out our (left-leaning / right-leaning) opinions."

## Unit-3

## Mobile Journalism

### Features of Smart- phones

**Smartphone:** A smartphone is a cellular telephone with an integrated computer and other features such as an operating system, web browsing, and the ability to run software applications.

Smartphones can be used by individuals in both a consumer and a business context, and are now almost integral to everyday modern life.

**Important features**

One of the most important elements of a smartphone is its connection to an app store. An app store is a centralized portal where users can search for and download software applications to run on their phones. A typical app store offers thousands of Mobile apps for productivity, gaming, word processing, note-taking, organization, social media and more.

The following are some of the other key features of a smartphone:

- Internet connectivity.
- A mobile browser.
- The ability to sync more than one email account to a device.
- Embedded memory.
- A hardware or software-based QWERTY keyboard.
- Wireless synchronization with other devices, such as laptop or desktop computers.
- The ability to download applications and run them independently.
- Support for third-party applications.

- The ability to run multiple applications simultaneously.
- Touch screen.
- Wi-Fi.
- A digital camera, typically with video capability.
- Gaming.
- Unified messaging.
- GPS.

A smartphone also has the ability to support accessories, including Bluetooth, headphones, power charging cables and extra speakers. Because of the fragile outer casing of most smartphones, users often also purchase screen protectors and more durable cases to put their phones in.

Because they run an OS and applications, smartphones get consistent software updates. Vendors update their mobile OSs a few times a year. Individual mobile apps in an app store also get constant software updates that users can either choose to install or ignore.

**Telling compelling stories**

**What does compelling writing mean?**

Compelling writing is about **expressing your thoughts, using as few words as possible**. So, if you're planning on writing a sentence with an opening that reads, "At the same time, it is very important to note that," think again.

**1.Show,Don'tTell**

When you're trying to hook your audience, it's no good *telling* them how your character feels. *Show*them, with a description that's loaded with opportunities for your reader to slip into your character's shoes and immerse themselves in the story.

**2. Shock and Surprise**

Startle your readers with something they weren't expecting. Marketers do this a lot - aiming for the shock factor - but it's just as important if you're writing a short story or novel. Make it truly shocking and unexpected and you'll have your readers right where you need them.

### 3. Relatability

Compelling writing is real, gritty, and doesn't pull any punches. If you want to keep your readers on the hook, they have to be able to relate to what's happening in your story.
To master relatability, you have to know your audience inside out. What problems do they have? What in their lives causes them the most pain.
If your reader encounters a character they can relate to, who has problems as they do, they're automatically more engaged. Your readers care about the characters they can relate to. They don't care about the characters they have nothing in common with.

### 4. Raise The Stakes

You're writing about real situations (or situations that could be happening to your readers) - but that doesn't mean you have to confine yourself to strict realism. Your readers have put themselves in your character's shoes, been shocked by something, and can relate to the problem - so now you have to raise the stakes.

### 5. Mining The Depths

When you're creating content - whether fiction or non-fiction - You have to bring your characters to life - so it feels like they're living, breathing people bursting off the page.
You bring your characters to life by creating layer after layer of details. To do that, *you* need to know everything about your character's backstory. Anchor them in real-life events that have enough detail to make it sound like you're giving eyewitness testimony in the courtroom. Names, places, feelings, sensations, emotions - build the details until *you* start to feel like you *are* giving eyewitness testimony.

### 6. Make It Memorable

Compelling writing leaves a lasting impression on your reader - which makes them remember *you*. Whether you're a novelist or a social media marketer, your goal is to *ensure* that your reader remembers you. Compelling writing inspires loyalty in your readers, building an audience that is already primed to sign up for your mailing list or like your Facebook page.

## Storytelling Methods for Mobile Consumers

**The Story Focus**

Having a story focus enables the mojo to choose the right gear. For example, shooting sport may require a hybrid DSLR and long lens kit to be able to shoot the required shots from a distance. Conversely, in war-torn Yemen, a small mojo kit can make a journalist less of a target.

So, how do you find the story? First, you need to follow your passion, then you decide if you have an audience for your idea, next you need to know who the good guys and bad guys are, understand their journey and have access to all the players.

Before you develop your idea choose a topic, know your market and ask the following:

- Who's the audience? Why is the story being told, who's watching, what is the demographic, what's the political and the cultural imperative?
- What's the angle? What's the focus and how will this be best achieved creatively and editorially?
- What's the style? Is it a current affairs form, a series of short stories, a long investigative exposé, and is it narration, or interviewee-driven?
- What's the structure? What is the beginning, middle and end; who will speak when and what elements will be required to support the story structure?

As the concept gets more of a story focus, complete a more specific **SCRAP** check list:

- **Story:** what is it and why is it being told?
- **Characters:** who is best to tell it and why?
- **Resolution:** what's the structure and why?
- **Actuality:** what will be filmed, when and why?
- **Production:** where is it happening, what are the logistics and how will I produce it?

SCRAP helps answer journalism's 5Ws — who, what, when, where, why and how. To better understand these relationships between your story and its audience, consider the following:

- Currency of the story.
- Significance of the story will be impacted by its Currency.

- Proximity of the story will impact Significance.
- Prominence of story talent can trump Proximity.
- Human interest can increase with Prominence.

**A Character Focus**

Mojo news stories may be breaking and unplanned, so it's even more important to quickly determine a story focus and the best characters/interviewees to help tell the story. Knowing who to film is important when planning a mojo video production. Unlike print, you can't just call everyone on the phone — mojos need pictures. For example, we can't ring someone for a quick phone interview — they need to be on camera, so managing time and expectations is critical.

For example, who do I interview at the scene of an accident and, importantly, who do I interview first? Can I ask the ambulance driver for a comment while he is inserting an IV line into an injured person's arm? If not, how do I cover this as B roll, so that I can ask my questions when the paramedic is free? What's most relevant in a breaking story at a Bosnian war grave? More bodies, longer interviews with a witness, or the man with photographs of his missing family, who he believes are among the dead? Do I need it all? If so, how will I record it all and how will I include it all in a short video story? The best way to decide who's relevant is to:

- Map your potential interviewees against your structural plan (see below) and your audience expectation.

Once you firm up interviewees, you might need to rejig your structure and how you will use your talent:

- Will the story begin with actuality from the interviewee or B roll with narration?
- When in the story will we hear from the main interviewee?
- Who will I use to tell the climax and how will I create and build to this?
- Who will I use to close the story?
- Do I have clearances?
- Do I have B roll to introduce my interviewees and cover their edited interview moments and my narration?

**Structural Focus**

Now, create a simple five-point structural road map of how my story might go. This guide does three important things:

(a) it articulates the various plot points

(b) acts as a story and character checklist

(c) is the beginning of my edit plan.

Because real research happens on the ground, and because story changes, you need to understand your options and be prepared to shift your views on location. That's where a simple structural plan helps. Rather than being prescriptive, a plan keeps the story focused and the mojo open to new ideas. A plan is also a checklist to help decide if everything is covered before wrapping location

**The Story Character Matrix**

Story is built around an EVENT that impacts our CHARACTER. Through a CHARACTER'S eyes we witness action, strife, emotion, visual and dramatic development corralled in the place holder we call an EVENT.

Video works best when it's centred around EVENTS (that provide currency), told through the eyes of a CHARACTER (that makes it real, personal and emotive), who RISKS losing everything (the stakes and the drama).

**Tools for editing and posting videos for mobile platforms**

- **What is a Mobile Platform?**
- 
- Mobile platforms are basically those that allow software and services to be run on devices.
- Examples of mobile platforms include Palm, BlackBerry, iPhone, Android and Windows Mobile.
- Mobile operating systems provide tools that allow application to share data and services.

- Examples of mobiles OS includes Palm OS, Symbian, Windows Mobile, Mac OS X and Android.

Videos you watch on TikTok, Instagram, Facebook, and YouTube are often produced on full-size PCs, but now that mobile video editing apps are more capable than ever, plenty of people edit videos right on their mobile devices.

A multitude of impressive apps for making video magic are available for Android and iOS. Some of the apps are template-based, requiring you to do no more than select photos and video clips to produce a compelling final product. Others give you nearly as much control as a sophisticated desktop video editing App with tools for overlays, time remapping, motion effects, and audio editing. Some have free versions, though it's worth paying a few dollars to get the best features.

**1. Videoshop**

Videoshop is a video editing app that is fast and easy to use, with all the basic features that web publishers need for producing professional quality video. Journalists can integrate music into their videos, they can edit interviews for length, and they can add subtitles to make their videos easier for viewers to understand. Videoshop also gives users the ability to merge multiple clips into one video, which is a useful feature for digital publishers. The Videoshop mobile app is available on iOS and Android.

**2. Inshot**

Inshot has all the features users expect when they evaluate video editing tools for digital journalists, including freeze-frame, background options, and the ability to shift between ratios to optimize video for different social networks. It’s also easy to use, fast, and very user-friendly. Being user-friendly is an important benefit for anyone who is not experienced in video editing on mobile. In addition to editing basic video to post online, digital journalists can also use Inshot to do photo editing and create collages.

**3. Square Fit**

Publishers who post extensive video on Instagram will want to invest in a mobile app like Square Fit. A dedicated tool for posting video on social channels, Square Fit gives mobile users a straightforward way to post full size videos on Instagram without

cropping. High-resolution videos can be rotated, flipped, and scaled. Users also have the ability to add text, filters, and stickers to their videos. Videos that have been edited with Square Fit are saved to the user's camera roll, where they can then be uploaded to social media channels like Instagram, Facebook, and Twitter.

### 4. WeVideo

A cloud-based video editing platform with free and paid versions, WeVideo was designed to help people make great videos. The platform is more robust than some others on this list, with upgraded features like green screens and built-in stock content. Journalists can use WeVideo to sharpen up most basic video content, like digital video news reports or interviews. WeVideo helps users add logos and create branded templates, which saves time for publishers who upload multiple videos each week. The platform is available via desktop or mobile apps for Android and iOS devices.

### 5. YouTube

The simplest way for digital publishers to get started posting video content is by using YouTube's basic video editing program. Included for free as part of the YouTube platform, this video editor is bare bones. However, it's also free and very easy to use. With YouTube's video editor, journalists can trim video clips and add transitions set to music. One important caveat is that YouTube's video editor only works for videos that you have uploaded to YouTube, so if you plan to use a different video upload site this will not be a viable option.

## Mobile Journalism and its advantages

### What is Mobile Journalism?

Mobile journalism or MOJO can be defined as the process of gathering and delivering news and content creation using a smartphone or tablet. It is a trend in news covering and broadcasting and has the potential to become the new standard in journalism practice, especially to report breaking news.

With the proliferation of smartphones, this new, quick way of journalism is now accessible to all. Photos, videos and audio can be recorded, created and edited on the phones and uploaded to servers which can be accessed by news channels or directly

uploaded to even social media platforms. It is basically close to having an entire production studio in your pocket.

**Advantages of Mobile Journalism**

- **It's cheap:** As almost everybody owns a smart phone now anyway, Mobile journalism apps and other features that are freely available make this medium extremely accessible and cost-effective for journalists who are on the go.

- **MoJo is for everyone**: The biggest advantage of mobile storytelling is that the user interface for this medium can be any smartphone and apps which can assist beginners as well as professionals. There are apps that are specifically designed for MoJo which makes editing, photography and news packaging easier.
- **Accessibility**: The production, coverage, creation, and distribution have evolved and cater to the mobile audience, which means that today's content can be created from a mobile device and then consumed by other mobile device users. This adaptability helps immeasurably and allows the world to indeed be at your fingertips.
- **Flexibility**

Avoiding carrying lots of equipment also helps to reduce the bulk of responsibilities. It provides a flexible space where you can work with fewer people or even individually. It could just be the reporter along with their smartphones. It also assists with carrying out interviews alongside story coverage in spaces that wouldn't usually support a full-blown production without hindering the quality of the content created.

**On the move**: As the name goes, since most of it is done using a mobile phone, this setup is easily portable.

Even with the aforementioned hardware, this entire setup can easily fit in one bag. Imagine the mobility and

portability that provides without hampering the quality of the shoot.

**It's user-friendly**

It's considerably easier to navigate around mobile devices. Having larger and heavy-duty equipment can be a big burden for movement and logistics. Mobile devices are also far less intimidating – people may be more open to speaking into or around a

phone than a camera. And of course, having your CMS on your mobile phone, in addition to all this, would then allow you to record live and publish with ease.

**Mobile Journalism advantages in brief:**

- It can disseminate news and make it viral within minutes.
- It is cheaper than traditional journalism.
- MoJo can cover events and news in distant places.
- The tools used are flexible and easy to use; no expert skills are required.
- It is safer in some incidents such as war coverage, sting operations, etc.

**Drawbacks of Mobile Journalism**

1.Despite all the benefits of Mobile Journalism, questions of privacy, ethics, and truthfulness remain potential drawbacks of its evolution.

2. Social media can easily become flooded with uncredible or misleading information.

3. Anybody today may film or record audio on a smartphone — but the ability for anybody to post, tweet, or share information creates a lack of control over what is created and disseminated.

4. The accessibility of mobile journalism also means that sensitive or violent content may be released.

5. Moreover, the quick dissemination of information can be dangerous for people living in countries where free speech is restricted or controlled.

6. Hong Kong protestors must fight to stay anonymous as the Chinese government deems every protest against Chinese rule to be an illegal assembly.

7. So much as being caught on camera could result in extrajudicial punishment. Those caught so far have been met with arrest, violence, and online harassment.

**Skills required for mastering in mobile journalism**

Here is the list of skills that you must have or need to cultivate to become a mobile journalist:

- Adventurous nature
- Passion for journalism
- Readiness to travel and work extra hours
- Confidence, passion, and fearless nature
- Investigative brain Smartphones usage expertise

**1. Learn to plan a mobile-produced story:** This applies to live streaming too. Just as planning is needed for TV broadcasts and news reports, you need to prepare yourself and know how to approach the story before going on location. Create a rough storyboard. Strong visuals and short, clear scripts are must-haves when producing for digital audiences.

**2. Learn to shoot and edit video packages in the field with a smartphone:** This involves, among other skills, like, Create news packages at a faster pace than traditional news reports. A true mobile journalist shoots and edits on the go. Master the mobile device camera. Use the right software to add lower thirds, incorporate sound and transitions, etc. Learn best practices for producing pieces to camera and interviews. Find suitable solutions to store and share content while in the field.

**3. Adapt to multi-platform mediums and different screens:** Be able to produce tailored content for each medium. Understand that audience switch from radio to Twitter, from newspapers to YouTube, from YouTube to TV, and at the same time they might open Facebook and Instagram. Differentiate content and learn narrative and visual styles suitable for each screen and platform. Understand that each social platform is a separate and unique online community and learn why and when to use them.

**4. Adapt fast-changing mobile technology:** Have a mindset of adapting to and embracing the fast-changing mobile technology environment.

**Managing the journalistic work flow with Mobile**

The workflow to create a story with a smartphone is no different from that followed when reporting conventionally. Some additional considerations have to be taken into account—such as battery life, memory capacity and file formatting—but the general steps for putting together a story remain the same. Also, mobile journalism requires the reporter to work at a faster pace, given that you might share your news report directly to social platforms.

**Planning**

Story angle, Potential sources, and/or interviewees, Potential shots, Script ideas

**News gathering**

Research, Find sources, Collect and verify data

**Shooting, Scripting, Editing**

Shoot still photo/video, Extract stills from video footage, Capture audio, Write for pic/video, Edit images, audio and video, Format files

**Share, Publish or Broadcast**

Digital Platforms, TV

## Unit- 4

## Business of Digital Journalism

**Impact of social media on journalism**

**1. Social media offers journalists increased access to content**

Thanks to social media, journalists have unprecedented access to their audience, putting them closer than ever to the content and story ideas that their readers/listeners care about. Audiences are no longer passively waiting for a news anchor to tell them the news. They're on Twitter or Facebook, sifting through content and sharing stories from their friends and family, sometimes before a journalist has even picked it up.

**2. Journalists are responsible for sharing their stories**

Social media is full of clutter. With active usership in the billions, word travels quickly and then gets lost in the shuffle. Consider that roughly 6,000 tweets are shared per second (per second!) on Twitter. And that's just one of many social networks.

While that makes it a highly effective tool for communicating breaking news, it also makes the lifespan of a news story much shorter than it used to be.

Reports are now responsible for sharing their stories far and wide, and making sure it stays in the news cycle for as long as possible.

**3. The "fake news" phenomenon makes reporting more challenging than ever**

New data from the Pew Research Center shows 45 percent of American adults consume news on Facebook and half of news consumers on Facebook depend solely on that site for news.

While the reach of social media is great, it lacks a method of policing content and sources to prevent completely fictitious stories from spreading.

As Facebook and Twitter draw fire from federal lawmakers over fake Russia-spawned content published ahead of the 2016 presidential election and President Trump continues to arbitrarily slander all kinds of news reports as being fake, reporters are forced to defend themselves and their stories against an increasingly cautious public.

**4. Interaction with the people:** Social media brings new characteristics like interactive dialogue and social interactions. Journalists can now have real conversations with their audience. Online debates have also been put into place so that everyone can express themselves (when comments are enabled of course). Traditional one-way communication is turning into two-way conversations. Social media has given a real meaning to what freedom of speech is.

5. Twitter is also a good way to get breaking stories as soon as they happen. Journalists often use twitter personally to show the audience that they are humans.

6. A new problem social media has raised, is that there is too much news. The audience cannot always figure out the veracity of the news they see on social media. Which news organisation should they trust ? People will continue trusting the big news agencies they have always trusted, but what about the next generation? They will have never

trusted any news organisations and could be lost among the fake news. The 2014 Irish Social Journalism Survey published the statistic that 64% of Irish journalists said that information on social media can't be trusted.

7. News companies can now use live videos. The viewers can be with the journalist somewhere in the world instantly. The use of Facebook live is changing the relationship between the journalist and the viewer because there is no editing.

If a journalist uses Facebook live for their audience, while covering Syria for example, while reporting on bombing, shocking images could traumatise people. Facebook should have an editing role and not only be a platform. News publishers have lost control over distribution. Social media and platforms took over the role of publishers and now the news is filtered through algorithms. And these algorithms are unpredictable.

**Emerging trends related with business of digital platforms**

**What is a Digital Platform?**

- A digital platform is the software and technology used to unify and streamline business operations and IT systems. A digital platform serves as a company's backbone for operations and customer engagement.
-
- **Social media platforms** like Facebook, Twitter, Instagram, and LinkedIn
- **Knowledge platforms** like StackOverflow, Quora, and Yahoo! Answers
- **Media sharing platforms** like YouTube, Spotify, and Vimeo
- **Service-oriented platforms** like Uber, Airbnb, and GrubHub

**Economics of digital journalism**

- The Internet has marked a shift in the production of news, making it difficult for newspaper producers to remain profitable and retain readers. For hundreds of years the newspaper industry has built its business on offering news and articles to readers and exposure to advertisers. The producers of newspapers have had control over the production, distribution and relationships with customers. But

the recent years are marked by a smaller number of subscribers and lower income from advertising.

- The previous ten years show a constant reduction in the number of subscribers, indicating that the printed newspaper is nearing its end. (Suijkerbuijk, 2014) In 2009, for the New York Times, printing the newspaper on a yearly basis would cost twice as much as it would cost to present every subscriber an e-reader. We can understand that the absence of paper with the digital newspapers reduces costs, or that delivery through digital channels reduces delivery costs made for delivering printed newspapers. So, the most important costs can be avoided when moving to digital journalism. (Suijkerbuijk, 2014) It is clear now that Newspapers can gain from going digital.
-
- Economically, we can distinguish between three levels within the informative process that have been clearly affected by recent technological developments in the field of communication:
- **Production:** Production has contributed to a significant reduction in costs. Higher consumption of information material is not followed by higher costs, as costs are limited only to the first version charged. Increasing the economic return once digital information material is consumed, which is an intangible asset that is consumed and whose quality is not affected by frequent cloning. (economics of Arabic Digital Media, 2017) .
- **Distribution:** New information technology has introduced a distinctive distribution pattern that can overcome geographical barriers because electronic journalism spreads in Web space of a global nature, whatever appears over the Web remains available to the recipient anywhere in the world where the Internet is available, 24 hours a day.
-
- **The profit:** The media investment has changed from the difficulty of creating media enterprises and the long time to reach the profit point, to the ease of posting over the Web (ranging from near-free to cost requiring institutional capital), and the speed to spread and make profits.

**Understanding the business models for digital platforms**

- The traditional press relied on advertising as a primary source of income, but with the emergence of digital journalism, which did not attract advertising, it became necessary to find new sources of income, and new business models, including the following:

- **Crowdfunding:** Crowdfunding are increasingly common in media ventures. Like in traditional media, it is about readers wanting to pay for journalism although in a more modern way. Today, A vaster number of online publications now rely on (regular) payments or donations. This has become a way of funding particularly for nonprofit organisations – and less for individual journalists, although there are few successful examples (Bitnner, Digital journalism and the new business model, 2019)
- **Donor funding:** This type of funding comes in Three forms, including philanthropic backing, government funding and corporate responsibility.
- **a. Philanthropists backing:** generally give generous donations to promote good journalism. One example is eBay founder Pierre Omidyar, who through his philanthropic firm has made a US$100 million commitment to support investigative journalism and fight disinformation or so-called fake news.
- **b. Government funding:**A number of governments still fund national or public newspapers. ome examples include countries like France and Norway, which directly fund for-profit media companies. In Austria, an instrument called ressef rderung (press promotion) is in place to support the distribution of press products. Those models are always prone to be instrumentalised by governments to discipline" the press.
- **c. Corporate responsibility:** is another form of funding that newspapers can seek out. Three ambiguous examples are Facebook, Google or large corporations, such as Amazon with The Washington Post, funding journalism as part of their corporate responsibility. The main challenge would be for these corporations to provide funding without seeking to exert influence. (Bitnner, Digital journalism and the new business model, 2019).
-

- **Subscriptions:** Someone has to pay for journalism, or journalism will have to pay for it" is a popular argument among publishers whenever there is talk of free news content. Newspapers which are wholly based on a subscription model, have shown media companies can still survive on this model. Although some organizations can get significant revenue from subscriptions, major media outlets like The New York Times cannot be sustained by subscriptions alone. Subscription models are also largely dependent on targeting audiences that not only value the content produced, but are also willing to pay for it. (Mandla chinula, 2017).
- 
- **Micropayments:** With micropayments, readers pay small amounts to access a single article. Blendle, a Dutch journalism start-up with support from The New York Times Company and Axel Springer, is currently running on this model, with individual stories costing between 10 cents and 90 cents. There are no ads, no paywalls and users only pay for articles they like. If an individual does not like the article that they have read, they can simply ask for their money back. (Bitnner, Digital journalism and the new business model, 2019).
- 
- **Sponsored content:** Sponsored content refers to original, authentic stories written to promote or advertise a company. Since sponsored content is quite similar to journalistic storytelling, the former is usually tagged with a sponsored content" label. Media houses are able to leverage their reputations to create branded stories that audiences are more likely to take seriously. This has in part has attracted companies to advertise with news organizations, and has largely worked for larger publications and non-legacy media. (Mandla chinula, 2017).
- 
- **Live journalism:** Thanks to Facebook Live, Periscope and other platforms, journalists are now being given the opportunity to present their stories in front of a live audience. Live journalism allows journalists to present the news in new and interactive ways. Examples of media companies that are involved in live journalism include The Boston Globe's Globe live and Gannett with its Arizona storyteller project Although some revenue comes from ticket sales, sponsorships seem to generate the most. (Mandla chinula, 2017) Live journalism has become

essential to advancing stories across platforms and the stage has been set". (Patel, Live journalism come of age, predictions for journalism 2018)

**Corporate and their interests in Digital Journalism:**

**Face book Journalism Project**

Facebook announced a new component of its "facebook journalism project on January 2018: a partnership with CNN and other media outlets to produce news shows specifically for Facebook.

To support high-quality journalism, the Facebook Journalism Project works to create strong ties with the news industry by building community through news by training journalists and publishers around the world, and by working with partners to support quality news.

Goal for this programme is to help news media organisations improve how they market their journalism to existing audiences and unlock new sources of revenue from outside their traditional market.

This is a one-of-a-kind programme for executives in news organisations to improve their digital marketing strategy, help them build their news brands, and find new and valuable ways to engage with audiences across digital platforms.

It will consist of "deeper collaboration with news organizations across the spectrum" (presumably the ideological spectrum). The company wants to involve publishers in the creation of new products and help with subscription revenue and new business models.

- **Facebook Journalism Project will work in three ways:**
- **Collaborative news development:** Facebook's news organizations to create news stories in new storytelling formats such as Instant Articles, Live video, and 360 video. Facebook is also committed to supporting local and independent news outlets, and will meet regularly with publishers across the globe.
- **Tools and training for journalists:** Journalists can learn more about Facebook's products and services through a series of e-learning courses and newsroom training in partnership with established news and media institutions such as the Knight

Foundation, Local Independent News Online, and Institute for Journalism in New Media, among others. Facebook has also announced new Live features that would greatly help publishers.

- **Tools and training for everyone:** Users can now report suspected fake news stories that appear on their News Feed and Facebook will send these stories to third-party fact checking organizations. If these stories are found to be fake, they will be flagged as disputed.

**Corporate and their interests in Digital Journalism:**

**Google News Initiative**

The Google News Initiative is a journalism training and funding project of Google, the California-based multinational technology company and subsidiary of Alphabet, Inc.

The Google News Initiative was launched in 2018 and has provided over $189 million in funding to news organizations and journalist training programs. The project offers a variety of training tools centered around using technology and journalism.

The project provides online and in-person training programs, fellowships, journalism school programs, and provides free data tools and cloud computing services to news organizations. The project partners with the Society of Professional Journalists (SPJ), a membership organization for journalists, as well as the Columbia University School of Journalism.

**Key points**

- The Google News Initiative is a journalism-focused program that will help publishers earn money and fight false news.
- It will offer publications another monetization model online called Subscribe with Google, as well as work with established universities and groups to combat misinformation.
- It will also introduce an open-source tool called Outline, which will make it easier for news organizations to set up secure access to the internet for their journalists.

**Activity**

As of late 2020, the Google News Initiative reported distributing more than $189 million to 6,250 news organizations in 118 countries.
The project also reported that the COVID-19 pandemic sped up the need for journalists to use online tools.

While Google as a search engine and tech giant has a complicated history of cooperation and competition with news providers, the company operates the initiative to support national and local media outlets and to combat the impression that Google is a "profits thief" of news organizations.

The Google News Initiative has stated that in the future, the program will employ data and artificial intelligence tools to support more projects such as the initiative's Local News Experiments Project, which funds and supports local news operations.

**Partnerships**

The Google News Initiative works directly with national and local news outlets across the United States and internationally. The project also partners directly with many news industry organizations and nonprofits.

Among its partners is the Society of Professional Journalists, an individual membership organization for journalists. The project also partners with national organizations including the National Association of Black Journalists, the National Association of Hispanic Journalists, the Native American Journalists Association, and the Asian American Journalists Association.

The project also partners with the Poynter Institute for Media Studies, a nonprofit that publishes the *Tampa Bay Times* and operates the controversial left-of-center PolitiFact fact-checking organization, which has received steady criticism for its left-leaning bias.

The project has additionally partnered with several other left-leaning news organizations such as Vox Media and *The Guardian*. The Google News Initiative published a case study praising Vox's use of Google Earth Studio.

**Social impacts of Digital Journalism**

The world as we know is something that changes daily, there is always something new happening. And the electronic devices which are connected to the internet constantly supply the information we need and it is not just restricted to the internet.

All the applications and multimedia stored in the device's storage and drives keep us engaged all the time. It has both a negative and positive effect on our society.

**Positive Effects of Digital Media**

**Ability to Learn New Skills**

The internet has been a blessing since its beginning for learners, now if you have a smartphone or any other digital device connected to the internet.

Then you can learn anything from cooking to coding, you just need curiosity and consistency in your efforts. Most importantly it is self-paced and you can choose from the tons of learning resource available.

Digital media has an important role in the field of education. When it comes to interactive learning that is actively used in modern education structures.

Digital media enhances a child's learning process. Even with digital devices, user interface and interactive applications assist in one's motor skills and application skills.

And we all know how an interactive application is much better at user interaction and feedback than a book.

Just imagine if the internet wasn't there in this critical time of coronavirus pandemic. How effectively it helped people to remain connected with their loved ones virtually and in learning when school and colleges were closed.

**Ability to Communicate**

Because of the internet, anyone can express their experiences or knowledge with everyone around the globe thanks to the Internet. Bloggers can develop highly engaged readers who trust them.

Other platforms like social media have enabled people to communicate with a much greater number of people on a global scale, which allowed diverse people to meet in one place.

It also allowed people to raise their voice against social issues, they can directly communicate with big organization and personalities that cause the problem in people life.

**Opportunity to do Business Digitally**

If you have an idea to sell something it could be a product or service that adds value in people's lives. Through your website, you can sell it anywhere in the world.

When it comes to the marketing of your product, even that can be done digitally by leveraging Digital Marketing strategies like search engine optimization, social media marketing, and email marketing.

The Internet provides the advantage to promote your business online through paid advertising.

**Real-Time Information**

Also, the importance of digital media cannot be neglected in the field of journalism and mass communication. In a competitive and speedy world, it is vital for a news agency and broadcasting channels to get maximum coverage.

For instance, if you're a die heart fan of football, due to your busy working schedule you cannot follow all the important matches, all around the world.

You can catch up on all live updates on your phone or you can record the complete match on your device so that you can watch it later at your convenience.

**The Decrease in Print Media**

Newspapers are sometimes said to be 'silly in their method'. In print sheets a lot of paper is used excessively which is made from trees, ink is overused in the printing process, all just to provide news of the previous day.

However, its working is questioned furthermore by the advancements digital media has made. Why read yesterday's news while you can catch breaking news on a news channel or get the latest news stories on your smartphone?

Digital media has been an indispensable catalyst in technological advancement and human growth. We can now sit at home, read all about any event, from any corner of the world, and the choice is all ours too.

## Negative Effects of Digital Media

### Addiction to Digital Media

Addiction is an engagement in behaviors that become compulsive and often continue despite having harmful effects.

Increasingly, addiction to mobile devices, addiction to social networking sites, such as Facebook, Instagram are prevalent in our society. Excessive usage of these leads to withdrawal symptoms such as feeling anger, tension, and depression when Internet access is not available. This makes individuals dependent on the internet.

We all have heard how playing games on a computer or a gaming console harms our eyesight or does nothing to produce any physical work. How we are addicted to checking messages and taking social feeds on websites.

### Negative Effects on Cognitive Development

New generation children get in touch with internet-connected devices early in their development that certainly has a significant effect on their cognitive development if they use these technologies in excess.

Like it's found in children with excessive involvement with these activities having diminished ability to read, loss of analytical thinking, inability to remember things, decreased attention span, and slow information processing while learning something new.

From these facts, we need to be a little aware before using them as the old saying goes that excess on anything is harmful. Keep it in moderation for your mental and physical well-being.

### Information Overload

There is an almost infinite amount of information available on the internet. Estimates are that the big four (Google, Amazon, Microsoft, and Facebook.) store at least 1,200 petabytes between them. That is 1.2 million terabytes (one terabyte is 1,000 gigabytes).

As a result, it makes it difficult for a decision-maker when he faces a variety of information on the same topic that contributes to confusion rather than clarity and makes it difficult to choose better in important situations of life.

Apart from that, digital media's impact has been worthy to take note of. It has not only provided a new dimension to our lifestyle, but has also lead to the development of communication skills, and worldwide accessibility.

Digital media has also provided a thousand more ways of entertainment and recreation. Amidst the criticism that it allows little or no physical exertion, there have been applications and devices created to provide physical and fitness development.

So the good rule of thumb is keeping a healthy balance between real and virtual life, we need to learn, how to use it effectively instead of getting used by it

**The Political Impact of Digital Communication**

Digital communications are a growing part of local, national, and global political conversations. Learn how the use of digital forms of communications are having both positive and negative impacts on elections, policymaking, and global politics.

1. The communication barriers that did not allow people to interact with the leaders have reduced significantly because of social media.

2. Politicians are reaching out to their supporters on social media.

3. They are making sure to keep the public in the loop through their engagements and posts on social media.

4. It has increased the ability for ordinary citizens to take part in the political process.

5. Besides this, social media has been actively used for influencing diplomatic relations between India and its friendly countries.

6. Data analytics has evolved itself to become the brain of every election campaign. It helps the election campaign committee understand the voters better and align their policies to their needs.

7. As the reach of technology has expanded, with over two-thirds of the world's population now having a mobile phone, so has involvement of general citizens in the political process.

8. Social media platforms including Facebook, YouTube, and Twitter have all become key mediums in the global political landscape. They are seen as leveling the political playing field because of their low cost, easy access, and global reach.

9.Politics and policy have long been subjects of public discussion. Until the 20th century, face-to-face or printed materials were the only form of political communications. Information and discussions were therefore limited to a few hundred or a few thousand people at a time.

10.Politicians use social media to engage with their constituents and promote policies and positions, as well as their own election!

The following are the specific social media platforms for political communication

**Facebook**

Candidates, advocacy groups, political parties, and government entities have all created Facebook pages, and citizens interact directly with each of those groups. In fact, Facebook has become the most common source for political and government news among Millennials.

As Facebook has become an integral part of the lives of adults, it's seen as not just timely but also influential. Research into the intersection of digital communications and politics via Facebook has demonstrated that it has a direct, measurable effect on not just self-expression but voting participation.

**Twitter**

While daily news seems to revolve increasingly around the use of Twitter by politicians, as a news source it ranks well behind Facebook, with around 10 percent of adults seeing it as a news source compared to at least 60 percent for Facebook.

With only 280 characters, tweets must be short and to the point. The democratic, open access nature of the medium and the exchanges have been compared to town hall meetings, but with millions participating instead of hundreds. The downside of Twitter is its no-holds-barred approach with no mediating forces of context and factual support.

**YouTube**

Traditional video forms of political communication such as television have rapidly been overtaken by YouTube. The ability to post online political content, videos of current events, and political messages has brought the world onto everyone's mobile device.

It has also created much higher levels of transparency when statements and events can be filmed and posted in near real time. For governments and politicians it has proven to be a powerful means of targeting video messages to specific demographics and territories at a fraction of the cost of traditional television advertising.

**Digital Journalism and digital social movements**

**What is a Social Movement**

Social movement may be defined as an organized effort by a large number of people to bring about or impede social, political, economic, or cultural change. social movements often work *outside the system* by engaging in various kinds of protest, including demonstrations, picket lines, sit-ins, and sometimes outright.

**The term "social movements" (SM) was introduced in 1850 by the German Sociologist Lorenz von Stein in his book "History of the French Social Movement from 1789 to the Present".** Since then, the term has taken different meanings and interpretations.

The following are the famous digital movements in India:

**1. Anna Hazare-Anti Corruption movement**

Social worker and anti-corruption crusader from Maharashtra, Anna Hazare started the national movement for a strong anti-corruption law. He and some likeminded people from different parts of India came together to form a loose consortium to protest against the 2011 central government's anti-corruption Lokpal bill which was to be discussed in parliament. The protesters felt that the Lokpal bill was too weak and needed much more executive power to become effective in curbing corruption. The protest climaxed with a fast unto death at Delhi by Anna Hazare.

All along the mass media were highlighting the sequence of the protests and lot of discussions were on in social media with netizens giving opinions in chat rooms or having petitions circulated and signed. 'The question is whether mainstream media helped in giving shape for a huge movement or media had no choice than establishing its credentials in a democratic set up to claim for its continuous guardian and fourth pillar status. Some scholars also believe that it was the social media which provided momentum for a huge movement that the main stream media could not ignore. As a result the subsequent intervention of electronic and print media has made the agitation into a mass movement.' (Mohapatra, 2013).

**2. Swachh Bharat Campaign**

Just after the election of 2014, a campaign was launched by Prime Minister of India which a huge popularity in the audience. The main aim of this campaign is to influence people to make their surroundings neat and clean, clean up the streets, roads and infrastructure of Indian cities, towns and rural areas. Cleanliness was very close to Mahatma Gandhi therefore it was launched on his birth anniversary. Social Media has a great influence on Swachh Bharat mission. In the starting PM Modi give the statement that "I have invited 9 people and asked them to come to public places and work towards a clean India. I ask them to invite 9 more people too." After that people started tagging their friends by using many hashtags such as **#SwachhBharatMission, #MyIdeaofSwachhBharat** and a most trending hashtag which brought a big change in people's mindset is **#MyCleanIndia.**

**3. #Me Too movement**

Tarana Burake an African American Women Activist understood the power of Social Media and started # Me Too Movement in 2006 to increase awareness about sexual harassment and sexual assault (Braileanu et al.,2020; Jaffe, 2018; Mendes, Ringrose, & Keller, 2018). The movement took speed in October 2017 when Alyssa Milano an American Actress posted "#Me Too" on social media platform „Twitter" ("Vision," 2018; Zarkov & Davis, 2018). The actress act increases the popularity of "#Me Too movement" among victims and it encourage the survivors to share their stories on social media. The movement immediately became global. The "#Me Too movement" initiated critical and political discussions about the relationship between power and sex (Gill, 2016; Gill &

Orgad, 2018; Jaffe, 2018). The movement revealed that sexual harassment is more about dominance and power than the sexual attraction between the two genders (Jaffe, 2018).Since October 2017 the people of 85 countries participated in the movement (Gill & Orgad, 2018). Some researchers found that #Me Too raises consciousness and solidarity.

**# Me Too movement in India**

The **"#Me Too movement"** was initiated in 2018 September in India when Tanushree Dutta accused Nana Patekar for his inappropriate behavior on film set of film 'Horn Ok Pleassss' (Roy,2019). Later, a list of females came forward to discuss sexual assault incidents happened to them through "#Me Too movement". All of them are very famous personalities and keep a very powerful position in Indian Society after the sexual allegations Mr. MJ Akbar has resigned from his post and Sajid Khan must step down from his upcoming big budget venture Housefull part 4. Indian women have shared their painful stories. They have also mentioned the detailed accounts of alleged molestation and sexual harassment done by their former bosses and colleagues (Kazmin, 2018).

## NR- 11065- MEDIA LAWS AND ETHICS

### 1.1. Constitution:

A **constitution** means a document having a special legal sanctity which sets out the frame work and principal functions of the government, constitution of a country gives idea about basic structure of the political system under which its people are to be governed. It defines the powers of the main organs of the state, demarcates their responsibilities and regulates their relationships which each other and with the people. It can also be termed as "Fundamental Law" of a country which reflects people's faith and aspirations.

A **constitution** is an aggregate of fundamental principles or established precedents that constitute the legal basis of a polity, organization or other type of entity and commonly determine how that entity is to be governed.

**Historical Background of Indian Constitution**

**Regulating Act of 1773**

- The first step was taken by the British Parliament to control and regulate the affairs of theEast India Company in India.
- It designated the **Governor** of Bengal (Fort William) as the **Governor-General (of Bengal).**
- Warren Hastings became the first Governor-General of Bengal.
- Executive Council of the Governor-General was established (Four members). There wasno separate legislative council.
- It subordinated the Governors of Bombay and Madras to the Governor-General of Bengal.
- The Supreme Court was established at Fort William (Calcutta) as the Apex Court in 1774.
- It prohibited servants of the company from engaging in any private trade or acceptingbribes from the natives.
- Court of Directors ( the governing body of the company) should report its revenue.

**Pitt's India Act of 1784**

- Distinguished between commercial and political functions of the company.
- Court of Directors for Commercial functions and Board of Control for political affairs.
- Reduced the strength of the Governor General's council to three members.

- Placed the Indian affairs under the direct control of the British Government.
- The companies territories in India were called “the British possession in India”.
- Governor’s councils were established in Madras and Bombay.

**Charter Act of 1813**

- The Company’s monopoly over Indian trade terminated; Trade with India open to allBritish subjects.

**Charter Act of 1833**

- **Governor-General (of Bengal)** became the Governor-General of India.
- First Governor-General of India was Lord William Bentick.
- This was the final step towards centralization in British India.
- Beginning of a Central legislature for India as the act also took away legislative powers ofBombay and Madras provinces.
- The Act ended the activities of the East India Company as a commercial body and itbecame a purely administrative body.

**Charter Act of 1853**

- **The legislative and executive functions of the Governor-General’s Council wereseparated**.
- 6 members in Central legislative council. Four out of six members were appointed by theprovisional governments of Madras, Bombay, Bengal and Agra.
- It introduced a system of open competition as the basis for the recruitment of civilservants of the Company (Indian Civil Service opened for all).

**Government of India Act of 1858**

- The rule of Company was replaced by the rule of the Crown in India.
- The powers of the British Crown were to be exercised by the Secretary of State for India
- He was assisted by the **Council of India**, having 15 members
- He was vested with complete authority and control over the Indian administration through the Viceroy as his agent
- The Governor-General was made the Viceroy of India.
- Lord Canning was the first Viceroy of India.
- Abolished Board of Control and Court of Directors.

**Indian Councils Act of 1861**

- It introduced for the first time Indian representation in the institutions like Viceroy's executive legislative council (non-official). **3 Indians entered the Legislative council**.
- Legislative councils were established in Center and provinces.
- It provided that the Viceroy's Executive Council should have some Indians as the non-official members while transacting the legislative businesses.
- It accorded statutory recognition to the portfolio system.
- Initiated the process of decentralization by restoring the legislative powers to the Bombay and the Madras Provinces.

**India Council Act of 1892**

- Introduced indirect elections (nomination).
- Enlarged the size of the legislative councils.
- Enlarged the functions of the Legislative Councils and gave them the power of discussingthe Budget and addressing questions to the Executive.

**Indian Councils Act of 1909**

1. This Act is also known as the Morley- Minto Reforms.
2. Direct elections to legislative councils; first attempt at introducing a representative andpopular element.
3. It changed the name of the Central Legislative Council to the Imperial Legislative Council.
4. The member of the Central Legislative Council was increased to 60 from 16.
5. Introduced a system of communal representation for Muslims by accepting the concept of'separate electorate'.
6. **Indians for the first time in Viceroys executive council**. (Satyendra Prasanna Sinha, asthe law member)

**Government of India Act of 1919**

- This Act is also known as the Montague-Chelmsford Reforms.
- The Central subjects were demarcated and separated from those of the Provincial subjects.
- The scheme of dual governance, 'Dyarchy', was introduced in the Provincial subjects.
- Under the dyarchy system, the provincial subjects were divided into two parts –

transferredand reserved. On reserved subjects, Governor was not responsible to the Legislativecouncil.

- The Act introduced, for the first time, **bicameralism at the center**.
- **Legislative Assembly** with 140 members and **Legislative council** with 60 members.
- Direct elections.
- The Act also required that the three of the six members of the Viceroy's Executive Council (other than Commander-in-Chief) were to be Indians.
- Provided for the establishment of the Public Service Commission.

**Government of India Act of 1935**

- The Act provided for the establishment of an All-India Federation consisting of the Provinces and the Princely States as units, though the envisaged federation never came into being.
- Three Lists: The Act divided the powers between the Centre and the units into items of three lists, namely the Federal List, the Provincial List and the Concurrent List.
- The Federal List for the Centre consisted of 59 items, the Provincial List for the provinces consisted of 54 items and the Concurrent List for both consisted of 36 items
- The residuary powers were vested with the Governor-General.
- The Act abolished the Dyarchy in the Provinces and introduced 'Provincial Autonomy'.
- It provided for the adoption of Dyarchy at the Centre.
- Introduced bicameralism in 6 out of 11 Provinces.
- These six Provinces were Assam, Bengal, Bombay, Bihar, Madras andthe United Province.
- Provided for the establishment of Federal Court.
- Abolished the Council of India.

**Indian Independence Act of 1947**

- It declared India as an Independent and Sovereign State.
- Established responsible Governments at both the Centre and the Provinces.
- Designated the Viceroy India and the provincial Governors as the Constitutional (normalheads).
- It assigned dual functions (Constituent and Legislative) to the Constituent

Assemblyand declared this dominion legislature as a sovereign body.

**Formation of the Constitution of India**

- **6 December 1946:** Formation of the Constitution Assembly (in accordance with French practice). The constitution of India was framed by a constituent assembly setup under the Cabinet Mission Plan OF 1946.
- **9 December 1946:** The first meeting was held in the constitution hall (now the Central Hall of Parliament House). The 1st person to address was J. B. Kripalani, Sachchidananda Sinha became temporary president.
- **11 December 1946:** The Assembly appointed Rajendra Prasad as its president, H. C. Mukherjee as its vice-chairman and B. N. Rau as constitutional legal adviser.
- **13 December 1946:** An 'Objective Resolution' was presented by Jawaharlal Nehru, laying down the underlying principles of the constitution. This later became the Preamble of the Constitution.
- **22 January 1947:** Objective resolution unanimously adopted.
- **22 July 1947:** National flag adopted.
- **29 August 1947:** Drafting Committee appointed with B. R. Ambedkar as its Chairman. The other 6 members of committee were Munshi, Muhammed Sadulla, Alladi Krishnaswamy Iyer, N. Gopalaswami Ayyangar, Khaitan and Mitter.
- **26 November 1949:** The Constitution of India was passed and adopted by the assembly.
- **24 January 1950:** Last meeting of Constituent Assembly. The Constitution was signed and accepted. (with 395 Articles, 8 Schedules, 22 Parts)
- **26 January 1950:** The Constitution came into force. (The process took 2 years, 11 months and 18 days - at a total expenditure of ₹6.4 million to finish. the assembly held eleven sessions in 165 days.)
- G. V. Mavlankar was the first Speaker of the Lok Sabha (the lower house of Parliament) afterIndia turned into a republic.
- Sir Benegal Narsing Rau, a civil servant who became the first Indian judge in the International Court of Justice and was president of the United Nations Security Council, was appointed as the assembly's constitutional adviser in 1946. Responsible

for the constitution's general structure, Rau prepared its initial draft in February 1948. The draft of

B.N. Rau consisted of 243 articles and 13 schedules which came to 395 articles and 8 schedules after discussions, debates and amendments.

- At 14 August 1947 meeting of the assembly, committees were proposed. Rau's draft was considered, debated and amended by the eight-person drafting committee, which was appointed on 29 August 1947 with B. R. Ambedkar as chair.
- Before adopting the constitution, the assembly held eleven sessions in 165 days. On 26 November 1949, it adopted the constitution, which was signed by 284 members. The day is celebrated as National Law Day, or Constitution Day. The day was chosen to spread the importance of the constitution and to spread thoughts and ideas of Ambedkar.
- The assembly's final session convened on 24 January 1950. Each member signed two copies of the constitution, one in Hindi and the other in English. The original constitution is hand-written, with each page decorated by artists from Shantiniketan including Beohar Rammanohar Sinha and Nandalal Bose. Its calligrapher was Prem Behari Narain Raizada. The constitution was published in Dehradun and photolithographed by the Survey of India. Production of the original constitution took nearly five years. Two days later, on 26 January 1950, it became the law of India. The estimated cost of the Constituent Assembly was ₹6.3 crore (million). The constitution has had more than 100 amendments since it was enacted.
- The constitution has a preamble and 470 articles, which are grouped into 25 parts. With 12 schedules and five appendices, it has been amended 104 times; the latest amendment becameeffective on 25 January 2020.

**Salient Features of the Indian Constitution**

The Constitution of India became effective on 26 January 1950. B. R. Ambedkar was the chairman of the drafting committee. It lays down the fundamental political code, structure, procedures, powers, and duties of government institutions. Also, it sets out fundamental rights, directive principles, and the duties of citizens. It is the supreme law of India. The features of Indian constitution are:

**a. Lengthiest constitution**

The Indian constitution is one of the bulkiest constitutions of the world**,** comprising of 395 articles**,** 22 parts **and** 12 schedules**.** So far the constitution underwent 100 amendments (28 May, 2015).

**b. Parliamentary Form of Government**

The Indian Constitution chose the Parliamentary form of government. In a Parliamentary form of government executive is part of the legislature and there is a collective responsibility of the council of ministers to the legislature.

**c. Independent judiciary**

The constitution provides an **independent judiciary** (Article 76) which ensures that the government is carried on in accordance with the provisions of the constitution and acts as a guardian of the liberties and fundamental rights of the citizens.

As per the Indian constitution, a single system of judiciary prevails in India. The Supreme Court is at the top, the High Courts at the state level and district and other subordinate courts are below and are subject to the supervision of the High Courts.

**d. Rigidity and flexibility**

The Indian constitution is **combination of rigidity and flexibility**, which means some parts of it can be amended by the Parliament by a **simple majority**, whereas some parts require a **two-third majority** as well as not less than one-half of the state legislatures.

**e. Fundamental rights and fundamental duties**

The Indian constitution provides an elaborate list of **Fundamental Rights** to the citizens of India, which cannot be taken away or abridged by any law made by the states (Article 12–35).

Similarly, the constitution also provides a list of 11 duties of the citizens, known asthe **Fundamental Duties** (Article 51A).

**f. Directive principles of state policy**

The Indian constitution mentions certain **Directive Principles of State Policy** (Article 36–51) which that government has to keep in mind while formulating new policy. The Directive Principles of State Policies in Part IV of the Constitution intends to

make India a welfare state. The Directive Principles are not enforceable by the courts for their violation.

**g. Single citizenship**

The Indian constitution provides a **single citizenship** for all the people residing different parts ofthe country and there is no separate citizenship for the states (Article 5–11).

**h. Bicameral legislatures**

The Indian constitution provides bicameral legislatures at centre consisting of **Rajya Sabha (Council of States)** and **Lok Sabha (House of the People)** (Article 79).

**i. Emergency powers**

The constitution vests extraordinary powers, known as **Emergency Powers** in the President during emergencies out of armed rebellion or external aggression or due to failure of constitutional machinery in the state (Article 352–360).

**j. Special provisions for minorities**

The constitution makes **special provisions for minorities**, Scheduled castes, Scheduled Tribes, etc. by granting them certain special rights and provisions.

**k. Sovereign, Socialist, Secular, Democratic Republic**

Sovereign-India is free from all external controls. No other country can dictate their policies to us. Every Indian anywhere is citizen of India. Socialist-India is a socialist state. India is economically developed country. Secular-Every person is free to follow his or her own religion. No discrimination is based on the grounds of religions. Democratic - India is democratic as every citizen who is above 18 years of age can vote and choose representative of their wish. Right to vote is given. Republic - India is republic as head of state is not hereditary. England is democratic but notrepublic as head of state is hereditary king or Queen.

**l. Adult Franchise**

Adult Franchise means all adult citizens of the country should have the right to vote without anydiscrimination of class, caste, class, religion, or gender. It is based on the basic principle of democracy, which we call equality. It stresses that the right to vote should be equally available toall. It is the bedrock of a democratic system. It enables all citizens to be involved in the governance of their state.

## 1.2. Fundamental Rights

**Fundamental rights in India** are the rights guaranteed under Part III (Articles 12-35) of the Constitution of India. There are six fundamental rights (Article 14 - 32) recognized by the Indian constitution : the right to equality (Articles 14-18), the right to freedom (Articles 19-22), the right against exploitation (Articles 23-24), the right to freedom of religion (Articles 25-28), cultural and educational rights (Articles 29-30) and the right to constitutional remedies (Article 32 and 226).

Seven fundamental rights were originally provided by the Constitution .However, the right to property was removed from Part III of the Constitution by the 44th Amendment in 1978. Originally the constitution also included **Right to property (Article 31).** However, it was deleted from the list of Fundamental Rights by the **44th Amendment Act, 1978.**

- Right to equality (Articles 14–18)
- Right to freedom (Articles 19–22)
- Right against exploitation (Articles 23–24)
- Right to freedom of religion (Articles 25–28)
- Cultural and educational rights (Articles 29–30)
- Right to constitutional remedies (Article 32-35)

**General**

Article-12. Definition (Constitution).

Article-13. Laws inconsistent with or in derogation of the fundamental rights.

**(1). Right to Equality (14-18)**

**Article-14. (Equality before law).**

Article 14 says that no person shall be denied treatment of equality before the law or the equalprotection of the laws within the territory of India.

**Article-15.(Prohibition of discrimination).**

Article-15 provides that no citizen shall be discriminated on grounds only of religion, race, caste,sex or place of birth.

**Article-16. (Equality of opportunity in matters of public employment)**.

Article 16 of the Indian constitution provides for equality of opportunity for all citizens inmatters of employment or appointment to any public office.

**Article-17.(Abolition of Untouchability)**.

Article 17 abolishes 'untouchability' and forbids its practice in any form. The enforcement of any disability arising out of untouchability shall be an offence punishable in accordance with law.

A person convicted of the offence of 'untouchability' is disqualified for election to the Parliament or state legislature. The acts of offences include**:**

- Preaching untouchability directly or indirectly.
- Preventing any person from entering any shop, hotel, public place of worshipand place of public entertainment.
- Refusing to admit persons in hospitals, educational institutions or hostels established for public benefit.
- Justifying untouchability on traditional, religious, philosophical or other grounds.
- Insulting a person belonging to scheduled caste on the ground of untouchability.

**Article-18. (Abolition of titles).**

Article 18 of the constitution of India abolishes titles and makes four provisions in that regard:

- It prohibits the state from conferring any title on any citizen or a foreigner (except a military or academic distinction).
- It prohibits a citizen of India from accepting any title from any foreign state.
- A foreigner holding any office of profit or trust under the state cannot accept any title from any foreign state without the consent of the President of India.
- No citizen or foreigner holding any office of profit or trust within the territory of India can accept any present, emolument or office from or under any foreign State without the consent of the president.

**(2). Right to Freedom (19-22)**

**Article 19** guarantees to all citizens the six rights of freedom including

**Article-19(1) (a) - Freedom of speech and expression**

Expressing one's own views, opinions, belief and convictions freely by word of mouth, writing, printing, picturing or in any other manner.

**Article-19(1) (b) - Freedom of assembly without arms**

- Includes the right to hold public meetings, demonstrations and take out processions which can be exercised only on public land.
- It does not protect violent, disorderly and riotous assemblies or strike.

**Article-19(1) (c) - Freedom of association**

It includes the right to form (and not to form) political parties, companies, partnership firms, societies, clubs, organizations, trade unions or any body of persons.

**Article-19(1)(d) - Right to move freely throughout the territory of India**

The freedom of movement has two dimensions, viz, internal (right to move inside the country) (article 19) and external (right to move out of the country and right to come back to the country) (article 21).

**Article-19(1)(e) - Right to reside and settle in any part of the territory of India**

The right of outsiders to reside and settle in tribal areas is restricted to protect the distinctive culture and customs of scheduled tribes and to safeguard their traditional vocation and properties against exploitation.

**Article-19(1)(g)- Right to practice any profession or to carry on any occupation, trade orbusiness.**

It doesn't include the right to carry on a profession that is immoral (trafficking in women or

children) or dangerous (harmful drugs or explosives, etc,).

**Article-20. Protection in respect of conviction for offences**

**Article 20** grants protection against arbitrary and excessive punishment to an accused person, whether citizen or foreigner or legal person like a company or a corporation. It provides that:

- No person shall be convicted of any offence except for violation of a law in force at the time of the commission of the act or subjected to a penalty greater than that prescribed by the law.
- No person shall be prosecuted and punished for the same offence more than once.
- No person accused of any offence shall be compelled to be a witness against himself.

**Article-21. Protection of life and personal liberty**

Article 21 declares that no person shall be deprived of his **life or personal liberty** except according to procedure established by law. This right is available to both citizens and non-citizens.

The right to life is not merely confined to animal existence or survival but also includes the right to live with human dignity and all those aspects of life which go to make a man's life meaningful, complete and worth living.

**Article-21A. Right to education.**

Article 21 (A) declares that the State shall provide free and compulsory education to all children of the age of six to fourteen years.

This provision was added by the 86$^{th}$ Constitutional Amendment Act of 2002.

**Article- 22. Protection against arrest and detention in certain cases**

Article 22 grants protection to persons who are arrested or detained. Article 22 deals with the ordinary law and includes:

- Right to be informed of the grounds of arrest.
- Right to consult and be defended by a legal practitioner.
- Right to be produced before a magistrate within 24 hours, excluding the journey time.
- Right to be released after 24 hours unless the magistrate authorizes further detention.

**(3). Right against Exploitation (23-24)**

**Article-23**. Prohibition of traffic in human beings and forced labour.

**Article- 24.** Prohibition of employment of children in factories, etc.

**(4). Right to Freedom of Religion (25-28)**

**Article-25**. Freedom of conscience and free profession, practice and propagation of religion.

**Article-26.** Freedom to manage religious affairs.

**Article-27**. Freedom as to payment of taxes for promotion of any particular religion.

**Article-28**. Freedom as to attendance at religious instruction or religious worship in certaineducational institutions

**(5). Cultural and Educational Rights (29-30) Article-29**. Protection of interests of minorities.

**Article- 30**. Right of minorities to establish and administer educational institutions.

**Article-31**. [Omitted.](Property Right)

**(6). Right to Constitutional Remedies (32-35)**

**Article-32**. Remedies for enforcement of rights conferred by this Part.

**Article-33**. Power of Parliament to modify the rights conferred by this Part in their application toForces, etc.

**Article-34**. Restriction on rights conferred by this Part while martial law is in force in any area.

**Article-35**. Legislation to give effect to the provisions of this Part.

**<u>Article 19(1)(a) or Freedom of Speech and Expression</u>**

Article 19(1)(a) in the Constitution of India

All citizens shall have the right

(a). to freedom of speech and expression;

(b). to assemble peaceably and withou rms;

(c). to form associations or unions;

(d). to move freely throughout the territory of India;

(e). to reside and settle in any part of the territory of India;

and(f). omitted

(g). to practise any profession, or to carry on any occupation, trade or business

**Definition**: The freedom of speech under Article 19(1)(a) includes the right to express one's views and opinions at any issue through any medium, e.g. by words of mouth, writing, printing, picture, film, movie etc.

- Freedom of speech and expression is a natural right, which a human being acquires on birth. It is therefore, a basic right. "Everyone has the right to freedom of opinion and expression; the right includes freedom to hold opinions without interference and to seek and receive and impart information and ideas through any media and regardless offrontiers" proclaims the Universal Declaration of Human Rights (1948). The people of India declared in the preamble of the constitution, which they gave unto themselves their to secure to all the citizens liberty of thought and expression.
- The right to freedom of speech and expression is subject to limitations imposed under article 19(2).
- Public order as a ground of imposing restrictions was added by the constitution (first amendment) act 1952, public order is something more than ordinary maintenance of law and order. Public order in the present context is synonymous with public peace, safetyand tranquility.
- Article 19(1)(a) of Indian constitution says that all citizens have the right to freedom of speech and expression. Freedom of speech and expression means the right to express one's own convictions and opinions freely by words of mouth, writing, printing, pictures or any other. It thus includes the expression of one's idea through any communicable medium or visible representation, such as gesture, signs and the like.
- This expression connotes also publication and thus the freedom of press is included inthis category. Free propagation of idea is the necessary objective and this may be done on the platform or through the press. This propagation of ideas is secured by freedom of circulation, liberty of circulation is essential to that freedom as the liberty of publication. Indeed, without circulation the publication would be of little value. The freedom of speech and expression includes liberty to propagate not

one's views only. It also includes the right to propagate or publish the views of other people, otherwise this freedom would not include the freedom of press. Freedom of expression has five broad special purposes to serve:

1. It helps an individual to attain self-fulfillment
2. It assists in the discovery of truth.
3. It strengths the capacity of an individual in participating in decision making.
4. It provides a mechanism by which it would be possible to establish a reasonable balance between stability and social change.
5. All members of society would be able to form their own beliefs and communicate them freely to others.

- The fundamental principle involved here is the people's right to know. Explaining the scope of freedom of speech and expression Supreme Court has said that the words "freedom of speech and expression" must be broadly constructed to include thefreedom to circulate one's views by words of mouth or in writing or through audiovisual instrumentalities. It therefore includes the right to propagate one's views through the print media or through any other communication channel e.g radio andthe television. Every citizen of this country therefore has the right to air his or their views through the printing or the electronic media subject of course to permissible restrictions imposed article 19(2) of the constitution.

**Case: Maneka Gandhi Vs Union of India (1978)**

The Supreme Court considered whether Article 19(1)(a) of Indian Constitution was confined to Indian territory and held that the freedom of speech and expression is not confined to National boundaries. The petitioner (Maneka Gandhi) was a journalist whose passport was issued on June 1, 1976, under the Passport Act, 1967. Later on July 2nd, 1977, the Regional Passport Officer, New Delhi, had ordered the petitioner to surrender her passport by a letter posted. On being asked about the reasons for her passport confiscation, The Ministry of External Affairs declined to produce any reasons "in the interest of the general public." Therefore, the petitioner had filed a writ petition under Article 32 of the Constitution of India stating the seize of her passport as the violation of her fundamental rights; specifically Article 14 (Right to Equality), Article 19 (Right to Freedom of Speech

and Expression) and Article 21 (Right to Life and Liberty) guaranteed by the Constitution of India. The respondent counterfeited stating that the petitioner was required to be present in connection with the proceedings which was going on, before a Commission of Inquiry.

**Case: Bijoe Emmanuel Vs State of Kerala (1986)**

Right not to speak or Right to silence is also included in the Right to speech and expression. In the case of National Anthem, three students were expelled from the school for refusal to sing the national anthem. However, the children stood up in respect when the national anthem was playing. The validity of the expulsion of the students was challenged before the Kerala High Court and they upheld the expulsion of the students on the ground that it was their fundamental duty to sing the national anthem. However, on an appeal being filed against the order of the Kerala High Court before the Supreme Court, it was held by the Supreme Court that the students did not commit any offence under the Prevention of Insults to National Honour Act, 1971. Also, there was no law under which their fundamental right under Article 19(1) (a) could be curtailed.

**Freedom of the Press**

Freedom of speech and expression includes right to impart and receive information which includes freedom to hold opinions." In India, freedom of press is implied from the freedom of speech and expression guaranteed under **Article 19**(1)(a) of the Constitution of India.

**Freedom of the press** or **freedom of the media** is the principle that communication and expression through various media, including printed and electronic media, especially published materials, should be considered a right to be exercised freely. Such freedom implies the absence of interference from an overreaching state; its preservation may be sought through constitution or other legal protection and security.Democracy thrives through vigilant eye of Legislature, care and guidance of public opinion and press par excellence. Freedom of speech include right to propagate one's views through print media or any other communication channel e.g radio, television subject to reasonable restrictions imposed under Article 19(2).

The fundamental right of the freedom of the press implicit in the right the freedom of speech and expression is essential for political liberty and proper functioning of democracy. American press commission has said, "Freedom of the press is essential to political liberty. When man cannot freely convey their thoughts to one another, no freedom is secured where expression exists the beginning of a free society and means for very retention of liberty are already present, free expression is therefore, unique among liberties". The Indian press commission has also expressed a similar view. It says that "Democracy can thrive not only under the vigilant eye of its legislature, but also under are and guidance of public opinion and the press is par excellence the vehicle through which opinion can become articulate". Unlike the American Constitution, article 19(1)(a) of the Indian constitution does not expressly mention the liberty of the press but it has been held that liberty of the press is included in the freedom of speech and expression. The press has no special rights which are not to be given or which are not to be exercised by the citizen in his individual capacity. The editors of a press or the manager are merely exercising the right of the expression, and therefore, no special mention is necessary of the freedom of the press.

The liberty of the press as defined by Lord Mansfield "consists in printing without any license subject to the consequences of law". Thus the liberty of the press means liberty to print and publish what one pleases, without previous permission. The freedom of the press is not confined to newspapers and periodicals. It includes also pamphlets and circulars and every sort of publication which affords a vehicle of information and opinion. Freedom means absence of control, interference or restriction. Hence the expression 'freedom of the press' means the right to print and publish without interference from the state or any public authority. But, as will be seen presently, this freedom, like other freedoms, cannot be absolute but this subject to well known exceptions acknowledge in the public interest, which in India are enumerated in article 19 of the constitution.

**Cases related to Freedom of the Press**

**Case: 1: K.A.Abbas Vs Union of India (1970)**

Khwaja Ahmad Abbas, a Bollywood film director was also a member of the GD Khosla Committee on Film Censorship formed in 1969. His movie, A Tale of Four Cities, better known as "Char Sheher Ek Kahaani" was based on the contrasting lifestyles in four of the most

prominent cities of India at the time, Bombay, Delhi, Calcutta, and Madras. The movie was at loggerheads with the Censorship Committee's liberalist claims. It also createda shock wave in the judiciary by questioning the relationship between fundamental rights granted by the constitution and the Cinematograph Act, 1952. The film had portrayed the scenes of Bombay's red-light districts which proved to be a hard nut to crack for both the CensorshipBoard and the Judiciary. The director was very much adamant that the scenes had to be shown, atleast with a 'U' certificate, if not without any restrictions at all.

The Censor Board's Examining Committee said that a 'U' certificate can be granted to a film only if the public viewing was restricted to an audience above the age of 18. An appeal was filed in the supreme court of India, to which the court responded with an order recommending a 'U' certificate if some scenes portraying the red-light area, which depicted immoral trafficking, economic exploitation of women, and prostitution, were cut from the actual film.

The petitioner filed a petition arguing that his freedom of speech and expression guaranteed by the constitution of India was denied, that the provisions of the Cinematograph Act, 1952 were unconstitutional and void, and that he was denied the 'U' certificate that his film was entitled to. However, the Central Government allowed granting the 'U' certificate without demanding any cuts or changes to be made in the film.

The director then requested to be allowed to amend his petition in light of the altered situation, which was accepted by the court. The petitioner then asked that the provisions of the Act and the power is given to various authorities and bodies under the Act were vague, arbitrary, and indefinite and also questioned the purpose of pre-censorship only in films excluding dailyprograms and news.

**Judgment**

As held in the leading case of **K. A. Abbas Vs Union of India**, Chief Justice Hidayatullah, Justice Shelat, Mitter, Vidyialingam and Ray delivered their judgment and stated that the court does not accept the distinction between pre-censorship and censorship in general and observed that both are to be governed by the standard of reasonable restrictions within the Article 19(1) of Indian Constitution. The Constitution has makes it clear that freedom of speech and expression is not an absolute right and reasonable restrictions can be imposed on it. Pre-Censorship was permitted under the

Constitution for public order and to uphold the rule of law the court observed. The Judiciary is regarded as a legal protector in preserving public interest and ensure justice and Fairplay for all. Concerning the issue of insufficient guidelines in the Act, the court held that guidelines as provided within Article 19(1) of the Constitution clearly states the provisions and are sufficient. But the thin line of distinction between artistic and non-artistic expression in assessing obscenity needs better understanding and clarity. The Court observed he cannot be the whole reason to strike down the provisions of the Act.

Thus, the Supreme Court of India upheld that the restrictions on public exhibition under the Cinematograph Act, 1952 and thereby rejected the petition that challenged the power of censorship and stated that pre-censorship fell under the reasonable restrictions permitted under freedom of speech and expression and that the Act provides the means and provisions to avoid arbitrariness in the exercise of the powers conferred.

**Case: 2: Brij Bhushan Vs State of Delhi, (1950)**

The **facts** of the case are as follows: The petitioners in the present case approached the Supreme Court under Article 32 of the Indian Constitution. Mr.Brij Bhushan is the printer and publisher and K.R. Halkani is the editor of an English weekly of Delhi, called the **'Organizer'**. On 2nd March, 1950 the Chief Commissioner of Delhi issues an order against the petitioners under Section 7(1) (c) of the East Punjab Safety Act, 1949. The order states that the petitioners are required to send a duplicate copy of all the communal matter and news and views about Pakistan including photographs and cartoons other than those derived from official sources or supplied by news agency, before publication for the purpose of scrutiny. According to the respondents the articles published in the Organizer harms the public safety and public order in the state. The petitioners claim that the order violates the fundamental right of speech and expression and the order passed by the respondent does not come under the reasonable restrictions enshrined under Article 19 (2) of the Indian Constitution. Thus, the petitioners had approached the court to issue of writs of certiorari and prohibition to the respondent and to examine the legality of the order made by the respondent.

**Case: 3: Ramesh Thappar Vs State of Madras (1950)**

**Ramesh Thapar v/s State of Madras**,4 Patanjali Shastri,CJ, observed that "Freedom of speech & of the press lay at the foundation of all democratic organization, for without free political discussion no public education, so essential for the proper functioning of the process

of popular government, is possible." In this case, 5 entry and circulation of the English journal "Cross Road", printed and published in Bombay, was banned by the Government of Madras. The same was held to be violative of the freedom of speech and expression, as "without liberty of circulation, publication would be of little value".

The Supreme Court held that the freedom of speech and expression included freedom of circulation. Liberty of circulation was essential to that freedom of liberty of publication. Hence , that the order of Government of Madras would violation of the right under article 19(1)(a). Hence, freedom of expression includes liberty to print and publish and also circulation without previous permissions.

**Case: 4: Indian Express Vs Union of India, (1985)**

Indian Express vs. Union of India, (1985) it has been held that the Press plays a very significant role in the democratic machinery. The courts have duty to uphold the freedom of press and invalidate all laws and administrative actions that abridge that freedom. Freedom of Press includes freedom of publication, freedom of circulation and freedom against pre-censorship.

Indian Express vs. Union of India, speaking about the utility of freedom of the press the court observed. The expression 'freedom of the press' has not been used in article 19 but it iscomprehended within article 19(1)(a). The expression means freedom from interference from authority which would have the effect of interference with the **content and circulation** of newspapers. There cannot be any interference with that freedom to the name of public interest. The purpose of the press is to advance the public interest by publishing facts and opinions without which a democratic electrorate cannot make responsible judgments. Freedom of the press is the heart of social and political intercourse. It is the primary duty of the courts to uphold the freedom of the press and validate all laws or administrative actions which interfere with it contrary to the constitutional mandate.

**Case: 5: In Sakal Papers Ltd. Vs Union of India, (1962)**

In **Sakal Papers v/s Union of India**,9 the Daily Newspapers (Price and Page) Order, 1960, which fixed the number of pages and size which a newspaper could publish at a price was held to be violative of freedom of press and not a reasonable restriction under the Article 19(2).

**Case: 6: Bennett Coleman and Co. Vs Union of India (1973)**

Bennett Coleman and Co. vs. Union of India, the validity of the Newsprint Control Order, which fixed the maximum number of pages, was struck down by the Supreme Court of India holding it to be violative of provision of Article 19(1)(a) and not to be reasonable restriction under Article 19(2). The Court struck down the Government's stand that it would help small newspapers to grow.

**Case: 7: In Tata Press Ltd. Vs. Mahanagar Telephone Nigam Ltd**.,

The Supreme Court held that a commercial advertisement or commercial speech was also a part of the freedom of speech and expression, which would be restricted only within the limitation of Article 19(2). Supreme Court held that advertising, which is no more than a commercial transaction, is nonetheless dissemination of information regarding the product advertised. Public at large are benefited by the information made available through the advertisements. In a democratic economy, free flow of commercial information is indispensable.

**Restrictions on Freedom of Press before and after Independence**

The freedom of speech & expression is subject to reasonable restrictions and Supreme Courtof India has included following aspect in the meaning of reasonable restriction.

A. Security of the state

B. Friendly relation with foreign state

C. Public order

D. Decency and morality

E. Contempt of court

F. Incitement to an offence

G. Sovereignty and Integrity of India.

**Security of the State**: Reasonable restrictions can be imposed on the freedom of speech and expression, in the interest of the security of the State. The term security of state has to be distinguished from public order. For security of state refers to serious and aggravated forms of public disorder, example rebellion, waging war against the state [entire state or part of the state], insurrection etc.

**Friendly relations with foreign States**: This ground was added by the Constitution (First Amendment) Act of 1951. The State can impose reasonable restrictions on the freedom of

speechand expression, if it hampers the friendly relations of India with other State or States.

**Public order:** This ground was added by the Constitution (First Amendment) Act, 1951 in order to meet the situation arising from the Supreme Court's decision in Romesh Thapar's, case (AIR 1950 SC 124). As per hon'ble Supreme court, public order is different from law and order and security of state [Kishori Mohan v. State of West Bengal]. The expression 'public order' connotes the sense of public peace, safety and tranquillity. Anything that disturbs public peace disturbs public order [Om Prakash v. Emperor, AIR 1948 Nag, 199].But mere criticism of the governmentdoes not necessarily disturb public order.A law, which punishes the deliberate utterances hurting the religious feelings of any class has been held to be valid and reasonable restriction aimed to maintaining the public order

**Decency and Morality**: Decency and morality section 292 to 294 of the Indian Penal Code provide instances of restrictions on the freedom of speech and expression on the grounds of decency and morality, it prohibits the sale or distribution or exhibition of obscene words. The standard of morality changes with changing times.

**Contempt of court:** The constitutional right to freedom of speech would not allow aperson to contempt the courts. The expression Contempt of Court has been defined Section 2 of the Contempt of Courts Act, 1971. The term contempt of court refers to civil contempt or criminal contempt under the Act.

**Defamation**: The clause (2) of Article 19 prevents any person from making any statement that defames the reputation of another. Defamation is a crime in India inserted into Section 499 and 500 of the I.P.C. Right to free speech is not absolute.

**Incitement to an offense**: This ground was also added by the Constitution (First Amendment) Act, 1951. The Constitution also prohibits a person from making any statement that incites people to commit offense.

**Sovereignty and integrity of India**: This ground was added subsequently by the Constitution (Sixteenth Amendment) Act, 1963. This is aimed to prohibit anyone from making the statements that challenge the integrity and sovereignty of India.

## UNIT-2

## 2.1. Copy Right Act

**Introduction:**

Definition: Copyright is an intellectual property right. Intellectual Property Rights protects works that are created by a person's skills, labour and investment of time and money.

The copyright law tries to make sure that people who create intellectual products receive the economic benefit from selling, leasing, renting or licensing their inventions.

India is one of the largest producers and exporters of copyright materials. In order to protect the authors and performers government enacted Copyright Act - 1957 (amended in 1999), the Copyright Rules - 1958 (amended in 1995), and the International Copyright Order, 1999.

Copyright is a legal right to creators of literary, dramatic, musical and artistic works and producers of cinematograph films and sound recordings. It gives them a blanket right over the production, reproduction, adaptation and translation of the work. It also gives broadcasting organizations 'broadcast reproduction right' and bestows on performers 'performer's right'.

Copyright piracy is a theft of the intellectual properties of a person, and therefore is a crime. According to the National Crime Records Bureau there is a rise of awareness and action against infringement of copyrights in India.

**What constitute copyright work?**

**Original literary work**

This includes almost any words written down or recorded such as newspapers, magazine articles or features, books, plays, song lyrics, poems, film scripts, articles or features, published on the internet.

**Dramatic work**

This includes plays, choreographed work, dances, stage musicals etc.

**Musical work**

This includes original musical works if music is recorded without being written down it may only be protected as a sound recording.

**Artistic work**

This includes graphic work, photographs, sculpture or collage, painting, architecture, drawings, diagrams, maps, charts or plans, models of buildings cartoons and other works of artistic craftsmanship.

**Sound recordings, films and broadcasts**

This includes a recording of sounds, any recorded moving images as a film, video recordings. Video piracy is therefore an infringement of copyright.

**Ownership of the Copyright:**

Generally the author of a work shall be the first owner of the copyright.

The author of a work has the right to claim authorship of the work and to restrain or claim damages in respect of any distortion, mutilation, modification or other acts in relation to the said work which is done before the expiration of the term of copyright if such distortion, mutilation, modification or other act would be prejudicial to his honour or reputation. Moral rights are available to the authors even after the economic rights are assigned.

The owner may assign anyone or any organization the copyright partially or wholly, the full or part term, with the territorial extent. The assignment of copyright in any work shall also specify the amount of royalty payable, if any, to the author or his legal heirs during the currency of the assignment and the assignment shall be subject to revision, extension or termination on terms mutually agreed upon by the parties. If no specifics are mentioned in the terms, the copyright is understood to be given for five years and within India.

The Copyright Board may cancel an agreement, if there is a complaint from the original author, and it is proven that the person who has the copyright has not exercised the rights and broke the terms.

The author of a work may relinquish all or any of the rights comprised in the copyright in the work by giving notice in the prescribed form to the Registrar of Copyrights.

The owner of the copyright shall have a resale share right, a percentage fixed either by theparties involved or by the Copyright Board.

**Term of copyright:**

Copyright is protected for a limited period of time. The general rule is that copyright lasts for 60 years. In the case of original literary, dramatic, musical and artistic works the 60-year period is counted from the year following the death of the author. In the case of cinematograph films, sound recordings, photographs, posthumous publications, anonymous and pseudonymous publications, works of government and works of international organizations, the 60-year period is counted from the date of publication.

**Infringement of Copyright:**

Any person who without a license obtained from either the owner of the work or the Registrar of Copyrights, who permits any place for communication of a copyrighted material for profit, knowing that it is an infringement, hires, rents, sells or buys or except for personal use is a violation of copyright.

The following are some of the commonly known acts involving infringement of copyright:

Ø Making infringing copies for **sale or hire** or selling or letting them for hire;

Ø permitting any place for the performance of works in public where such **performance** constitutes infringement of copyright;

Ø Distributing infringing copies for the purpose of trade or to such an extent so as to affect prejudicially the interest of the owner of copyright;

Ø Public exhibition of infringing copies by way of trade; and

Ø Importation of infringing copies into India.

**Defenses for copyright:**

News Reporting

Criticism or review

Research and private study

Incidental inclusion

Spoken words

Judicial proceeding

**Punishment:**

The minimum punishment for infringement of copyright is imprisonment for six months with the minimum fine of Rs. 50,000/-. In the case of a second and subsequent conviction the minimum punishment is imprisonment for one year and fine of Rs. one lakh.

### 2.2. Press and the Registration of Books Act 1867

There shall be kept at such office and by such officer as the state govt shall appoint in this behalf , a book to be called a catalogue of books printed in India , where in shall be registered a memorandum of every book which shall have been delivered of this act. Such memorandum shall contain the following particulars:

- The title of the book and content of the title page
- The language in which the book in written

**Provident fund**

**Wage board**

Chairman

Supreme court or high court judge

**2.4. <u>Press Council Act</u>**

The press has to be free and responsible in a democracy. The process of ensuring these by government intervention would be disastrous. Therefore an alternate system was needed. The

best way is to let the peers of the profession, assisted by a few discerning laymen to regulate it through a properly structured representative impartial machinery. Thus, the Press Council was set up. The first of its kind was established in Sweden in 1916. Soon it spread to other countries. The First Press Commission (1954) suggested setting up of a Press Council to "safeguard the freedom of the press", " to ensure on the part of the Press the maintenance of High standards of public taste and to foster due sense of both the rights and responsibilities of citizenship" and " to encourage the growth of sense of responsibility and public service among all those engaged in the profession of journalism." The Commission had concluded that the best way of maintaining professional ethics in journalism would be to bring into existence a body with statutory authority, of people principally connected with industry.

As a result of the Press Council Act, 1965, Press Council of India was constituted on 4th July, 1966 as an autonomous, statutory, quasi-judicial body, with Shri Justice J R Mudholkar, then a Judge of the Supreme Court, as Chairman. The Press Council of India is a statutory quasijudicial body.

There were two Acts that established the Press Council. The 1965 Act established the Press Council, and the 1978 Act reestablished it.

The Press Council Act, 1965 The Act's goal was to establish a Press Council for the purpose of preserving the freedom of the Press and of maintaining and improving the standards of Newspapers in India. Effective from 12th Nov. 1965. It extends to the whole of India except the State of Jammu and Kashmir.

**Brief Study of the Act** The Council consists of a Chairman and twenty-five other members. The Chairman shall be a person nominated by the Chief Justice of India. The members include thirteen working journalists, of whom not less than six shall be editors of newspapers, six from the management section of the newspapers, three subject experts, two from the House of the People nominated by the speaker and one from the Council of States, chosen by its Chairman.

**Amendments on the Act**

Acting on grievances, composition of the nominating committee was changed by an amendment of the said Act in 1970, according to which the Chairman and the members from the press were to be nominated by a Nominating Committee consisting of the Chairman of the Rajya Sabha, the Chief Justice of India and the Speaker of the Lok Sabha.

The amending Act of 1970 introduced several other provisions in the Act. The manner of

selection of persons of special knowledge or practical experience was specified. It provided that of the three persons to be nominated from among such people, one each shall be nominated by the University Grants Commission, the Bar Council of India and the Sahitya Academy. Out of the six seats for proprietors and managers of newspapers, two each were earmarked for big, medium and small newspapers. The membership of the Council was raised by one to provide a seat for persons managing the news agencies.

No working journalist who owned or carried on the business of management of newspapers could now be nominated in the category of working journalists. Also, it was specified that not more than one person interested in any newspaper or group of newspapers under the same control, could be nominated from the categories of editors, other working journalists, proprietors and managers.

The Nominating Committee was empowered to review any nomination on a representation made to it by any notified association or by any person aggrieved by it or otherwise. The amended Act also barred re-nomination of a retiring member for more than one term. Where any association failed to submit a panel of names when invited to do so, the Nominating Committee could ask for panels from other associations or persons of the category concerned or nominate members after consultation with such other such individuals or interests concerned as it thought fit.

Under the original Act, the Chairman was nominated by the Chief Justice of India. But, after this amendment, nomination of the Chairman was also left to the Nominating Committee. The Council set up under the Act of 1965 functioned till December 1975. During the Internal Emergency, the Act was repealed and the Council abolished.

**The Press Council Act - 1978**

A fresh legislation providing for the establishment of the Council was enacted in 1978 and the institution came to be reviewed in the year 1979 with the very same object of preserving the freedom of the press and of maintaining and improving the standards of Press in India. The present Council is a body corporate having perpetual succession.

Objective of the Act is to establish a Press council for the purpose of preserving the freedom of the Press and of maintaining the standards of newspaper and news agencies in India. Effective from 7th Sept. 1978. The revived Press Council was set up on March 1st, 1979.

The council shall consist of a chairman and twenty-eight other members. The chairman is

nominated by a Committee consisting of the chairman of the council of states (Rajya Sabha), the Speaker of the Houses of the People (Lok Sabha) and a person elected by the members of the council, and the nomination so made shall take effect from the date on which it is notified by the Central Government in the Official Gazette.

The members include thirteen working journalists, of whom not less than six shall be editors of newspapers, six from the management section of the newspapers (two each from big, medium and small newspapers), three subject experts (one each is nominated by UGC, Bar Council of India, and Sahitya Academy), one representing the news agencies, three from Lok Sabha nominated by the speaker and two from Rajya Sabha, chosen by its Chairman.

The Press Council Act empowers the Press Council to make observations in respect of conduct of any authority including Government, if considered necessary for performance of its functions under the Act. It can warn, admonish or censure the newspaper, the news agency, the editor or the journalist or disapprove the conduct of the editor or the journalist if it finds that a newspaper or a news agency has offended against the standards of journalistic ethics or public taste or that an editor or a working journalist has committed any professional misconduct.

**Functions**

- to help newspapers to maintain their independence;
- to build up a code of conduct for newspapers news agencies and journalists in accordance with high professional standards;
- to ensure on the part of newspapers news agencies and journalists, the maintenance of high standards of public taste and foster a due sense of both the rights and responsibilities of citizenship;
- to encourage the growth of a sense of responsibility and public service aiming all those engaged in the profession of journalism;
- to keep under review any development likely to restrict the supply and dissemination of news of public interest and importance;
- to keep under review cases of assistance received by any newspaper or news agency in India from any foreign source including such cases as are referred to it by the Central Government or are brought to its notice by any individual, association of persons or any other organization: Provided that nothing in this clause shall preclude the central Government from dealing with any case of assistance received by a

newspaper or news agency in India from any foreign source in any other manner it thinks fit;

- to undertake studies of foreign newspapers, including those brought out by any embassy or other representatives in India of a foreign state, their circulation and impact.
- to promote a proper functional relationship among sell classes of persons engaged in the production or publication of newspapers or in news agencies:
- to concern itself developments such as concentration of or other aspects of ownership of newspapers and news agencies which may affect the independence of the Press;
- to indurate such studies as may be entrusted to the council and to espousers its opinion in regard to any matter referred to it by the central government;
- to do such other acts as may be incidental or conductive to the discharge of the above functions.

**Powers**

Every inquiry held by the Council shall be deemed to be a judicial proceeding. Where, on receipt of a complaint made to it or otherwise, the Council has reason to believe that a newspaper has offended against the standards of journalistic ethics or public taste or that an editor or a working journalist has committed any professional mis-conduct or a breach of the code of journalistic ethics, the Council may, after giving the newspaper, the editor or journalist concerned an opportunity of being heard, hold an inquiry in such manner as may be provided by regulations made under this Act and, if it is satisfied that it is necessary so to do, it may, for reasons to be recorded in writing, censure the newspaper, the editor or journalist, as the case may be.

If the council finds there is no sufficient ground for holding an inquiry the petition is dropped. The decision of the Council shall be final and shall not be questioned in any court of law.

**General powers**

Every inquiry held by the Council shall be deemed to be a judicial proceeding. The general powers include:

- summoning and enforcing the attendance of persons and examining them on oath;
- requiring the discovery and production of documents;

- requisitioning any public record or copies thereof from any court or office;
- receiving evidence on affidavits; ÿ issuing commissions for the examination of witnesses or documents. ÿ any other matter which may be prescribed.

## 2.5. Cinematography Act 1952

The CBFC is a statutory body which regulates the public exhibition of films in India according to the provisions under the Cinematograph Act, 1952.

The Cinematograph Act of 1952 enshrines certain guidelines that tame the public expression of ideas, opinions and imagination via films by filmmakers. Cinema has opened up to new possibilities and debatable themes in the social and political arenas. With the rapid technological advancement, it is easy to abuse the wonders of technology and portray themes that are hurtful to social conformations.

### Film censorship and Legislative development in India

The film censorship is technically a Colonial concept. Initially in British India silent films were a source of private entertainment. However, with the passage of time cinema became an Indian fancy. Thus, regulations had to be put on the exhibition of films. The first Cinematograph bill was proposed in 1917 with the purpose of protecting public morality from the exhibition of objectionable films.

It is interesting to note that the Indian legislative Council opposed the passage of such a bill for the sake of liberty. Regardless, the colonial state approved the *Cinematograph Act in 1918*. This Act came into effect from 1 August 1920 and it inaugurated the concept of film censorship in India. The 1918 Act dealt with two issues:

1. the licensing of cinema houses.
2. the certification of films according to its suitability for public exhibitions.

A separate authority was set up; without the authority's permission, no film could be exhibited.

Post India's independence in 1947, the new government felt the necessity to retain film censorship. However, few amendments were made to the Cinematograph Act 1918 in 1949. Two categories of film certification were created, '**A'** certificate for restricting viewership to adults and **'U'** certificate for an unrestricted exhibition. The 1949 amendment also provisioned for the setting up of a central censorship board instead of a regional one. In 1951 the Central Board of Film Censor was formed by the Ministry of Information and broadcasting.

Subsequently, a consolidated statute, the Cinematograph Act was enacted in 1952 which

empowered the central government authority to constitute a censorship board.

**Formation of CBFC**

The Central Board of Film Censors was renamed into the Central Board of Film Certification on June 1, 1983. This board implements and follows the provisions under the Cinematograph Act, 1952. The chairperson and other members are appointed by the Central Government.

Board certifies films without which they are not eligible for public exhibition. *Section 5B(1)* of the CA, 1952 empowers the CBFC to examine and implement principles of sovereignty and integrity of India while certifying a film. It also requires the board to check works against the security of the States, friendly relations with foreign States etc.

Objectives of Film Certification

*Section 5B(2)* lays down the principles to be followed by the CBFC while sanctioning films. The guidelines require the CBFC to ensure that-

1. the medium of film conforms to the values of the society.
2. creative freedom or artistic expression shall not be unreasonably curbed.
3. the certification must be responsive to social change.
4. the film must provide clean and healthy entertainment.
5. the film must be cinematical of a decent standard and is of aesthetic value.
6. The CBFC must judge the film in its entirety and not from a one-track biased perspective.

Organizational setup of CBFC

The CBFC is a bi-level association. It is headquartered at Mumbai and has 9 Regional Offices. These Regional Offices assist in the examination of films.it is interesting to note that the members of the Advisory Panel are from different walks of life who are nominated by the Central Government.

**Board of CBFC**

The actual statutory power to certify films lies with the Board of CBFC. The main CBFC Board consists of a Chairman and other members 12 to 25 in the number who are appointed by the Central Government. It is interesting to note that there are no prescribed minimum qualifications required to be a member of the CBFC as under the Cinematograph Act. Tenure of members is also very flexible and no maximum or minimum tenure is set. The tenure is in fact subjected to the pleasure of the Central Government. The Central Government can terminate

tenure whenever possible on reasonable grounds. The chairman, however, holds office for a period of 3 years only. On exception, the chairman continues until his successor is appointed.

**Regional Offices of CBFC**

The nine Regional Offices have a particular regional officer who supervises it. They are situated at Kolkata, Bangalore, Chennai, Guwahati, Cuttack, Mumbai, Hyderabad, New Delhi and Thiruvananthapuram.

**Judicial Pronouncements**

1. In the criminal appeal *Raj Kapoor v. State [AIR 1980 SC 285]*, the Apex Court laid down by that if film certificate is granted by the censor board under *Section 6* of the CA, 1952, the court shouldn't disregard the decision because of the fact that an expert committee judges the suitability of films for the audience. The expert committee knows better and their understanding of the principal ingredients of the obscenity would also be better.
2. In the landmark case of *K.A Abbas v. Union of India [AIR 1971 SC 481]*, the Delhi High Court explained the broad legal governing principles on the censorship issue related case *Srishti School of Art, Design and Technology v. Chairman, CBFC [2011 IIIAD (Delhi) 289]*. the following points were summarised in 2011 by the Delhi HC:

- Reasonable standards must be adopted while judging.
- The onus of proof of obscenity must be provided by the petitioner (Government).
- The film must be judged in its entirety in order to determine whether a particular scene in it offends Cinematograph guidelines or not.
- The Petitioners must also prove the proximate and direct nexus of the film to endangering public order
- The courts shouldn't ordinarily disregard CBFC's decisions regarding film certification unless it is proven to be unreasonable.

3. In *S. Ranga Raan v. P. Jagjivan Ram [(1989) 2 SCC 574]*, the issue raised was whether the Tamil Film 'Ore Oru Gramathile' should be granted the "U" certificate. The film apparently deprecated the exploitation of people on the basis of their caste.

The Supreme Court held that as long as there is no utterance in the film that threatens to overthrow the government by unconstitutional means and there is no indication as to impairment in the integration of the country the U certificate can be conferred.

4. In *Gita Ram v. State of HP [AIR 2013 641]*, the appellants were caught while showing the blue film named "size matter" to young men in their premises. The wrongdoers were convicted and sentenced accordingly for an offence punishable under *Section 292* r/w *Section 34* of the Indian Penal Code. They were also subjected to *Section 7* of the Cinematograph Act.

**Need for reform in the CBFC and the Statute**

In recent times it has been debated that the CA, 1952 is a pretty outdated statute. The colonial-era Statute needs to be updated as the societal mindset has changed and the standard of visual entertainment has also changed. Famous director Rakeysh Omprakash Mehra has stated that society has adapted itself to a different world and therefore, it is high time that things go to the next level. With the advancement in technology and the amount of connectivity and information available nowadays benefits the film industry in more ways than one. However, the age-old statute restricts a few of the creative possibilities due to its backwardness. An immediate change is the need of the hour. The time when the act was passed cannot be applied to the present.

The *Mudgal Committee* has recommended a few important changes. One of the most important recommendations was the need for change in name of the 'advisory panel' to 'screening panel'. The committee also recommended that the panel must consist of 9 members in such a manner in order to ensure language diversity via representation. At least 2 lady members must be included. The Mudgal committee also mentioned that the present method of appointment is more political than practical. It is also observed that the CBFC often contains members who have little knowledge of the intricacies of Indian cinema and the real societal standards.

Another suggestion was to widen the scope of jurisdiction of the Film Certificate Appellate Tribunal. The suggestion is that tribunals can hear cases regarding objection in the film rather than courts. This would save time and resources a bit more than the usual tedious court procedure.

**2.6. Censorship**

CENSORSHIP OF FILMS IN INDIA

I. Introduction

Censorship is defined by the Oxford Dictionary as the *'prohibition or suppression of any part of the news, books, films, etc. that are considered politically unacceptable, obscene, or a threat to*

*security.'* Films are considered an excellent medium of communication with the general public. The evolution of technology has brought a sea of change in the way films have been able to reach the public in every corner of India. Additionally, it has boosted the power of films to significantly contribute to the cultural and social development of the country. Generally, Press and Films enjoy the same right and status as far as the constitution freedom related to expression and spreading of an idea is concerned. **Article 19(1)** of the ***Constitution of India*** guarantees freedom of speech and expression. Hence, both Press and Films are regulated under this provision. It is pertinent to note that the above right is not absolute and has certain limitations. Matters that are against foreign relations, public policy, integrity and sovereignty of the State, decency and morality, public order, etc. are certain limitations to the above, as mentioned in the **Article 19(2)** of the Constitution of India.

II Censorship of Films

The ***Cinematograph Act, 1952*** (the Act), ensures that films fulfill the objectives prescribed by law. In the Act is a provision for the establishment of a *Central Board of Film Certification* (the Board). This is the regulatory body in India that issues a certificate to the makers of films for public exhibition. Once the Board has examined a film, the Board can:

- Sanction the film for unrestricted exhibition;
- Sanction the film for public exhibition limited to adults;
- Direct such modifications and excisions in the film before sanctioning the film to any of the above;
- Refuse to sanction the film for exhibition completely.

One of the first cases where the issue of censorship of film was raised is ***K A Abbas v Union of India***, where the Supreme Court of India considered the vital question related to pre-censorship of cinematography in relation to the freedom of speech and expression that is guaranteed under the Constitution of India. It was held by Hidayatullah, C.J, that censorship of films which includes pre-censorship was constitutionally lawful. Though, he added, that unjustified restriction on freedom of expression by the Board should not be exercised. In the case of ***S. Rangrajan v Jagjivan Ram***, Supreme Court faced a similar question, and was of the view that *'if the exhibition of the film could not be validly restricted under **Article 19(2)**, risk of procession and demonstration was not a valid ground to suppress the same.'* The Supreme Court added that it was the State's duty to protect the freedom of expression. The Supreme Court of India in giving

its judgement in the case of ***Bobby Art International v Om Pal Singh Hoon*** was of the opinion that, a film must be judged in its entirety. The court added that where the theme of the film is to condemn violence and degradation, scenes of expletives to advance the message, which was the main intention of the film, is permissible.

III Types of Certifications

There are mainly four kinds of certifications given by the Central Board of Film Certification:

*1.Universal (U)*

This type of certifications is the Unrestricted Public Exhibition, and the same holds no limitations for the age groups that may watch the same. They could be family, educational or social oriented themes. This category has fantasy violence and minimal foul language. When a movie is being certified U by the Board, it must ensure that the movie is suitable for a family to watch it together including the children.

*2.Parental Guidance (UA)*

This type of certification explains that the film is appropriate for all age groups. However, it is in the interest of the children below the age of 12 to be accompanied by their parents. The reason could that the theme of the movie may not be the most appropriate for the child without the guidance of their parents.

*3.Adults Only (A)*

As the certification suggests, this type of film is restricted to adults only. Persons above the age of 18 are adults, for the meaning of this certification. The theme may contain disturbing, violent, drug abuse and other related scenes which are not considered suitable for viewing by children who may be influenced by the same negatively. Films that meet the requisites of the abovementioned criteria but are not suitable for exhibition to children or those below the age of 18 shall be certified A.

*4.Restricted to Special Class of Persons (S)*

This is the last type of the certifications under the board, and the same explains that the films which are rated S are meant for a special class of persons only. For example, doctors. If the Board is of the opinion the with regards to content, nature and the theme of the film is to be restricted to members of a class of persons or any profession, the above certification shall be given to such film.

## IV OBJECTIVES OF FILM CERTIFICATION

*A.**The main objectives of the Board for the above are as follows***:

1. To ensure that the medium of the film responsible. Additionally, to safeguard the sensitivity of standards and value of the society.
2. To ensure that creative freedom and expression are not unjustifiably curbed.
3. To ensure to adapt to the social changes.
4. To ensure the theme of the film provides a healthy and clean entertainment.
5. To ensure that the film is of cinematically an adequate standard and aesthetic value.

*B.**In pursuance of the above, the Board must ensure that***:

1. Activities that anti-social such as violence are not justified or glorified;
2. The way criminals are depicted, and other related words or visuals must not incite the commission of any kind of offence;
3. The scenes showing ridicule and abuse of mentally and physically handicapped, cruelty or abuse of animals, involving children as victims of violence and abuse must not be presented needlessly;
4. Avoidable or pointless scenes of cruelty, horror and violence that are intended to provide entertainment but may have the effect of dehumanizing or desensitizing people are not shown;
5. Scenes that glorify or justify drinking are not shown;
6. Scenes that tend to justify, glamourize or encourage drug addiction are not shown. Additionally, similar scenes for the consumption of tobacco or smoking must not be shown;
7. Human susceptibilities are not offended by obscenity, vulgarity or obscenity;
8. Words with dual meanings that cater to dishonourable instincts are not used;
9. Scenes denigrating or degrading women in any manner is not shown;
10. Scenes that involve sexual violence against women in the form of rape or any other form of molestation are avoided. If the theme of the movie requires so, the same must shall be reduced to a minimum and no details are to be shown. The same goes for scenes that involve sexual perversion;
11. Words or visuals contemptuous of religious, racial or other groups must not be presented;

12. Words or visuals that promote obscurantist, communal, anti-national and anti-scientific attitude are not shown;
13. The integrity and sovereignty of the country is not called in question;
14. The security of the country is not endangered or jeopardized;
15. Relations with foreign states are not overwrought;
16. Public order is maintained, and not hindered;
17. Words or visuals involving defamation of a body or an individual, or contempt of court are not shown;
18. National emblems and symbols are not presented except according to the provisions of Emblems and Names (Prevention of Improper Use) Act, 1950 (12 of 1950).

***C.*The Board shall additionally ensure that a film:**

1. Is judged as a whole from the perspective of its overall impact; and
2. Is inspected in the light of the period illustrated in the film along with contemporary standards of India and the people who the movie is related to, to ensure that the firm does not corrupt the morality and ethics of the audience.

Applying to all of the above categories, the Board shall ensure the titles of each film is carefully scrutinized to ensure they are not vulgar, violating, provocative or offensive to the guidelines mentioned above.

V. Constitution

The Board consists of a Chairman and non-official members, all of whom are appointed by the Central Government. It is headquartered in Mumbai, Maharashtra. Additionally, it has nine Regional offices, namely, Chennai, Bangalore, Hyderabad, New Delhi, Guwahati, Cuttack, Kolkata and Thiruvananthapuram.

Regional Offices, as mentioned above, are assisted by the Advisory Panels. The Advisory Panels, like the Board, is selected by the Central government. The members chosen for the panel are from different walks of life, and they are chosen for a period of 2 years.

It has a two-tier jury system, the Examining Committee and the Revising Committee.

VI. Common Reasons for Censorship or Banning of a Film

In light of the history of why a film has been banned, or parts of it are censored, the main categories for why the same is done are as follows:

1. **Sexuality**: A rigid social structure has been followed in Indian society. Hence, a medium which portrays sexuality regardless of the audio, written or visual form, which has not been fathomed by the society and is concerned a social stigma is banned on the grounds that it might have the effect of undignified morals of Indians.
2. **Politics**: The isolation of political forces is not far when one talks about censorship. The description of an allegorical political scene, directly or indirectly, is banned by the authorized party to it. Overt political overtones are not appreciated by the government and hence is a common reason why certain films are either entirely banned, or such scenes are censored or removed.
3. **Communal Conflict**: Under a heterogeneous nation like India, if a film incites or spurs any type of communal conflict, the same is censored. The aim is to avoid the consequences such a film would have on the audience it intentionally or unintentionally targets. If the state believes that a movie would open a window for riots by a community for the way they have been portrayed in the film, the same is banned by the Board or censored.
4. **Incorrect Portrayal:** Sometimes, a situation arises where a well-known personality objects his own depiction in a medium which would be exhibited, and consequently goes for censoring the same. For more clarity, in a situation where the medium is of biographical nature, and the person on whom it is based does not approve the authenticity of the same, there have been times when the person has sued for the medium not to be released, or be edited and released upon approval of such person.
5. **Religion:** Religion does not appreciate any type of defiance or disobedience towards the values it proliferates. Hence, any medium which directly or indirectly distorts any aspect of the religion including its preaching, values, idols, to name a few, is highly criticized and therefore, censored.
6. **Extreme Violence:** Indubitably, the portrayal of extreme gore and violence may meddle and disturb the human mind. Viewing such scenes may have a negative psychological effect on the mind. If the Board of a similar opinion that such a scene through any medium may have an underlying negative impact on the viewer, contrary to the entertainment or knowledge such scene tries to bestow, the same may be banned, edited or censored by the Board in public interest.

VII. Conclusion

In India, the basis on which a film is censored or banned has been evidently traditional norms. That being said, what is censored today, may not be censored tomorrow. The socio-economic dynamics of a country is continually evolving. Hence, all regulations must try to adapt to the same. The Constitution of India guarantees freedom of speech and expression with justifiable limitations on certain expressions like contempt of court, morality and decency, the security of the State, public order, incitement to an offence, defamation, etc. and rightly so

**2.7. <u>Prasara Bharathi Act 1990</u>**

Media have to be free to be credible, and competent. Too much political pressure and intervention usually makes the media to be a puppet in the hands of politicians and pressure groups. Media in a democracy at the same time should not be that free to do anything that may go against the concept of a welfare state.

Therefore, the question autonomy with accountability, or accountability without autonomy, or autonomy without accountability is of prime importance. India needs a free and objective media. Greater accountability increases political involvement, and greater autonomy may decrease credibility

With the technological development government's ability to enforce regulations, is weakening. Technology challenges, defeats broadcasting controls and regulations. With the advent of cable TV, Direct-to-home TV, the Internet and a convergence in communication modes, there is no foolproof way to control the movement of data, information and entertainment.

All India Radio and Doordarshan were under direct control of the government between 1959-1997. The 1990 Prasar Bharati Act was implemented in 1997 via an ordinance by the UF government's Jaipal Reddy. But in May 1998, it was allowed to lapse by his successor, Sushma Swaraj, demanding more accountability. Swaraj's successor, Mahajan, stayed with her decision. Since then, Prasar Bharati has acting CEOs. Other vacancies on the Board exist from the summer of 1998 — including the vital posts of chairman, and member finance. There are no director generals for AIR or DD either. Prasar Bharati struggles to live.

The problem lies with not 'accountability. Because, there is an I&B nominee on the Board and an I&B parliamentary standing committee; an annual report has to be submitted to Parliament; and there's always the Comptroller and Auditor General. Problem lies with political interference in appointments.

**Brief Study of the Prasar Bharati Act, 1990**

The Prasar Bharati Act aims at establishing a Broadcasting Corporation for India, to be known as Prasar Bharti. All property, assets, debts, obligations and liabilities incurred, all contracts entered into, cases of akashvani and Doordarshan, shall be transferred to management of the corporation. The corporation is free of Income tax.

The corporation shall function under the government, functioning under its directions, submitting information to government whenever asked for, accounts are auditable by government, and government grants are assured.

The primary duty of the corporation is to organize and conduct public broadcasting service to inform, educate and entertain the public and to ensure a balanced development of broadcasting on radio and television;

- upholding the unity and integrity of the country and the values enshrined in the constitution;
- safeguarding the citizen's right to be informed freely, truthfully and objectively on all matters of public interest, national or international, and presenting a fair and balanced flow of information including contrasting views without advocating any opinion or ideology of its own;
- paying special attention to the fields of education and spread of literacy, agriculture, rural development, environment, health and family welfare and science and technology;
- providing adequate coverage to the diverse cultures and languages of the various regions of the country by broadcasting appropriate programmes;
- providing adequate coverage of sports and games so as to encourage healthy competition and the spirit of sportsmanship;
- providing appropriate programmes keeping in view the special needs of the youth; informing and stimulating the national consciousness in regard to the status and problems of women and paying special attention to the upliftment of women;
- promoting social justice and combating exploitation, inequality and such evils as untouchability and advancing the welfare of the weaker sections of the society;
- safeguarding the rights of the working classes and advancing their welfare;
- serving the rural and weaker sections of the people and those residing in border regions, backward or remote areas;

- providing suitable programmes keeping in view the special needs of the minorities and tribal communities;
- taking special steps to protect the interests of children, the blind, the aged, the handicapped and other vulnerable sections of the people;
- promoting national integration by broadcasting in a manner that facilitates communication in the languages in India; and facilitating the distribution of regional broadcasting services in every state in the languages of that state;
- providing comprehensive broadcast coverage through the choice of appropriate technology and the best utilization of the broadcast frequencies available and ensuring high quality reception;
- promoting research and development activities in order to ensure that radio and television broadcast technology are constantly updated; and
- expanding broadcasting facilities by establishing additional channels of transmission at various levels.

**2.8. Cable T.V. Act -1995**

Before the introduction of cable television in India, broadcasting was solely under the control of the State. The Government of India was caught unprepared with the emergence of cable networks and broadcasting through satellites in the early 1990s. The Government was not able to put a check on transmission and broadcast of television through foreign satellites.

The necessity of procuring licence for operating cable networks was first mentioned by the Rajasthan High Court in the case of *Shiv Cable TV System v. State of Rajasthan*. In this case, the district magistrate ordered a ban on cable networks as they were being operated without licence. Subsequently the order of the district magistrate was challenged in the Rajasthan High Court on the ground that the order was in violation of fundamental right to freedom trade and profession. The high court held that there was no violation of the right to freedom of trade because cable networks fall within the definition of "wireless telegraph apparatus" under the Indian Wireless Telegraphy Act and therefore it necessary to have licence to operate such network. This highlighted the need for having a framework for the regulation of cable networks in India which led to the enactment of the Cable Television Networks (Regulation) Act, 1995.

**Object of the Act**

The object of the Act was to regulate the 'haphazard mushrooming of cable television networks'. Due to the lack of licensing mechanism for cable operators; this resulted in large number of cable operators, broadcasting programmes without any regulation. The Act aimed at regulating content and operation of cable networks. This was due to the availability of signals from foreign television networks via satellite communication. The access to foreign television networks was considered to be a "cultural invasion" as these channels portrayed western culture. It also wanted to lay down the "responsibilities and obligations in respect of the quality of service both technically as well content wise, use of materials protected under the copyright law, exhibition of uncertified films, and protection of subscribers from anti-national broadcasts from sources inimical to national interests".

There were three amendments made to the Act.

The Act is divided into five chapters. The first chapter discusses the scope and extent of the Act and meaning of the terms used in the Act. The second chapter deals with "Regulation of Cable Television Network". The third chapter relates to "Seizure and Confiscation of certain Equipments". The fourth chapter focuses on "Offences and Penalties". The fifth chapter covers other miscellaneous provisions.

**Regulation of Cable Television Network**

The regulation of cable television network under the Act is ensured through a two step process. In order to keep track of cable operators, it has mandate a compulsory registration for cable operators. It also lays down provisions to regulate content to be broadcasted by the cable operator.

**Registration of Cable Operators**

In order to regulate cable television networks, it was made mandatory for cable television network operators to be registered. Procedure for registration is laid down is section 5 of the Act. Any person who is operating or desires to operate a cable network may apply for registration to the registering authority.

An application for registration of cable operator has to be made under Form 1 along with the payment of fees of Rs.50 to the head post master within whose territorial jurisdiction the office of cable operator is situated. The registration certificate which is issued by the registering authority after inspection is valid for 12 months and can be renewed.

The registering authority may also refuse the registration of a cable operator. The reason for such refusal has to be recorded in writing and communicated to the applicant.

Section 4A was inserted into the Act by the TRAI (Amendment) Act, 2002. Section 4A deals with "transmission of programmes through addressable system". [Refer to section on "2003-Amendment to the Cable Television Networks (Regulation) Act, 1995 (Amendment Act)"].

**Content Regulation**

The Central Government, in public interest can put an obligation on every cable operator to transmit or retransmit a programme of any pay channel through addressable system. In public interest the central government may also 'specify one or more free-to-air channels to be included in the package of channels' (basic service tier). The Central Government may also, in public interest specify the maximum amount which can be charged by the operator to the subscriber for receiving the programmes transmitted in the basic service tier provided by such cable operators. The cable operators have to publicize to subscribers the subscription rates of each pay channel at regular intervals.

Sections 5 and 6 of the Act deal with advertisement code and programme code. All cable services should be in conformity with the codes. Under section 7, cable operators have to maintain a register as to the content transmitted or retransmitted. All cable operators shall compulsorily re-transmit Doordarshan channels.

Section 9 of the Act mandates 'use of standard equipment in cable television network'. It is the duty of the cable operator to make sure that the cable television networks do not interfere with authorized telecommunication systems.

**Offences and Penalties**

Section 11 gives power to the authorized government authority to seize any cable operator's equipment, if such officer has reason to believe that the cable operator is using the equipment without proper registration.

Sections 16, 17 and 18 of the Act deal with offences under the Act. They lay down punishments for any act which is in contravention with the provisions of the Act.

Section Ingredients of the Offence Penalty/ Fine

| | | |
|---|---|---|
| 16 | Anyone who is held to be in violation of the provisions of this Act | For the first offence: Imprisonment for a term which may extend to 2 years or with fine which may extend to Rs. 1000 or with both.<br>For every subsequent offence: Imprisonment for a term which may extend to 5 years and with fine which may extend to Rs. 5000. |

Section 17 deals with when an offence under this Act is committed by a company; in this case the person in charge will be liable.

The Act also gives power to the authorized officer to prohibit the transmission of certain programmes in public interest under section 19 of the Act.

Under section 20 of the Act, the Central Government in public interest may prohibit the operation cable television network. The Central Government may make such an order in the interest of the (i) sovereignty and integrity of India; or (ii) security of India; or (iii) friendly relations of India with any foreign state; or (iv) public order, decency or morality.

### 2.9. Conditional Access System (CAS)

**Conditional access** (abbreviated **CA**) or **conditional access system** (abbreviated **CAS**) is the protection of content by requiring certain criteria to be met before granting access to the content. The term is commonly used in relation to digital television systems and to software.

In order to protect the content and rights, digital TV operators turn to the technology known as conditional access or CA. Conditional access, as the name itself suggests, provides the service of controlling the access to digital television to people who are or are not subscribers. Their end goal is simple and clear – encrypting the channel signal and decrypting it only for the viewers who meet the required conditions. Besides the most common use by digital TV operators, conditional access can also be applied to digital radio and data broadcasts, non-broadcast information and interactive services. The equipment and software required for the system is supplied by the CAS provider, so that the broadcasters can incorporate it in their own equipment.

Every CA system is made up of the following fundamental components: a Subscriber Management System, a Subscriber Authorization System, a security module and a set-top box.

Even though securing the content is of outmost importance to pay TV operators, the development and maintenance of a conditional access system can be extremely time consuming and ineffective. That is why operators entrust the safety of their content to companies specializing in pay TV protection technology.

We, ASI, offer the extensive set of features which make up Conax Contego's sophisticated platform as well as the set top box itself.

Conax Contego unifies all DVB, IPTV and OTT clients in one security management system. Keeping up with the wide array of content offered, as well as ways and devices to access it by, presents an ongoing challenge of securing the whole of the pay TV eco-system. Conax Contego provides solutions for secure eco-systems through support for linear, time shifting and on demand content viewed on every available consumer device, from smart TVs to smart phones, laptops and tablets. The service presents high flexibility to the size and settings of any business model and operation requirement, allowing remote activation of new features and increasing of capacity and performance.

### 2.10. Convergence Bill

The dawn of the 21st century marked the end of Gutenberg era and a sea change in the field of technology, entertainment and media as a new platform was created through convergence. "Convergence" in respect of media and entertainment, in its simplest form, means the combination of new media and old media within a single piece of media work, bringing together different media products and technology.

In other words, convergence means the coalescence and merging of traditionally separated technologies and forms of communication into one, as far as possible.

**Some examples**

This can be illustrated by the following example: Mobile phones were devised only to make and receive calls and send instant text messages. However, with the evolution of technology, mobile phones now perform several other functions, doubling as cameras, video recorders, radios and mp3 players, and providing access to games and the internet.

his is a result of the convergence of many technologies, which allows one media product to perform many different tasks. A similar example is that of a television which, in addition to its traditional use for watching programmes or movies, is now used to play games through Xbox, PlayStation, etc.

Convergence has been most apparent in the environment of digital communications, with the merging of the television, computer and telecommunications industries. This has taken place to cater to consumer demand for access to content any time and anywhere.

The changing times have brought trans-media exploitation of branded properties including Star Wars, Pokémon and Harry Potter from Hollywood, Tare Zameen Par and Ra-One from Bollywood, and many others. To expand their potential audience and market, such brands have associated other forms of media with their original product.

The level of uncertainty has increased as a result of the drift in technology and the rise of new media markets. Moving to convergent media may prove to be expensive, unpredictable and uncertain in the beginning, but it will open many possibilities and lead to more personalized content, tailored to users' needs and wants.

**Scenario in India**

The birth of the 21st century had a magical effect on India. The country entered into a new digital era in which three vital ingredients – communication, information and entertainment – would be the prime drivers of the economy.

In 2000, the government of India introduced a proposed Communication Convergence Bill (known as the Convergence Bill), with the objective of establishing a converged regulatory framework to promote and develop the communications sector (including broadcasting, telecommunications and multimedia) in an environment of increasing convergence of technologies, services and service providers.

The regulatory framework aims to keep pace with the convergence of telecom, internet and broadcasting services, which is taking place all over the world. The Communication Bill is expected to repeal legislation such as the Indian Telegraph Act, 1885; the Indian Wireless Telegraphy Act, 1933; the Cable Television Networks (Regulation) Act, 1995; and the Telecom Regulatory Authority of India Act, 1997.

**Bill's objectives**

The main objectives of the Convergence Bill are:

(a) To facilitate the development of a national communications infrastructure, in order to provide a wide choice of services to consumers;

(b) To establish a regulatory framework that addresses the convergence of technologies, and defines the powers and roles of a single regulatory and licensing authority for broadcasting, telecommunications and multimedia;

(c) To establish a basis for codes and standards for broadcasting content.

The bill proposes to achieve these objectives by establishing a new regulatory body, to be known as the Communications Commission of India. The commission would replace the Telecom Regulatory Authority of India, and would become the sole regulator of the broadcasting, telecommunications and multimedia sectors.

**Conclusion**

Convergence in the media and entertainment sector is at a nascent stage in India. Technological changes at every level are required to make it a reality. The Convergence Bill is a significant step towards the development of future-oriented vision with regard to India's information technology, broadcast, communications and entertainment industries.

### 2.11. Cyber Laws

Cyber Laws of India

---

In Simple way we can say that cyber crime is unlawful acts wherein the computer is either a tool or a target or both. Cyber crimes can involve criminal activities that are traditional in nature, such as theft, fraud, forgery, defamation and mischief, all of which are subject to the Indian Penal Code. The abuse of computers has also given birth to a gamut of new age crimes that are addressed by the Information Technology Act, 2000.

Cyber law, also known as Internet Law or Cyber Law, is the part of the overall legal system thet is related to legal informatics and supervises the digital circulation of information, e-commerce, software and information security. It is associated with legal informatics and electronic elements, including information systems, computers, software, and hardware. It covers many areas, such as access to and usage of the Internet, encompassing various subtopics as well as freedom of expression, and online privacy.

Cyber laws help to reduce or prevent people from cybercriminal activities on a large scale with the help of protecting information access from unauthorized people, freedom of speech related to the use of the Internet, privacy, communications, email, websites, intellectual property,

hardware and software, such as data storage devices. As Internet traffic is increasing rapidly day by day, that has led to a higher percentage of legal issues worldwide. Because cyber laws are different according to the country and jurisdiction, restitution ranges from fines to imprisonment, and enforcement is challenging.

Cyberlaw offers legal protections for people who are using the Internet as well as running an online business. It is most important for Internet users to know about the local area and cyber law of their country by which they could know what activities are legal or not on the network. Also, they can prevent ourselves from unauthorized activities.

The Computer Fraud and Abuse Act was the first cyber law, called CFFA, that was enacted in 1986. This law was helpful in preventing unauthorized access to computers. And it also provided a description of the stages of punishment for breaking that law or performing any illegal activity.

**We can categorize Cyber crimes in two ways**

- The Computer as a Target :-using a computer to attack other computers. e.g. Hacking,Virus/Worm attacks,DOS attack etc.
- The computer as a weapon :-using a computer to commit real world crimes. e.g. Cyber Terrorism, IPR violations,Credit card frauds,EFT frauds, Pornography etc.
- Cyber law (also referred to as cyberlaw) is a term used to describe the legal issues related to use of communications technology, particularly "cyberspace", i.e. the Internet. It is less a distinct field of law in the way that property or contract are as it is an intersection of many legal fields, including intellectual property, privacy, freedom of expression, and jurisdiction. In essence, cyber law is an attempt to integrate the challenges presented by human activity on the Internet with legacy system of laws applicable to the physical world.

Cyber Law in INDIA

---

*Why Cyberlaw in India ?*

When Internet was developed, the founding fathers of Internet hardly had any inclination that Internet could transform itself into an all pervading revolution which could be misused for criminal activities and which required regulation. Today, there are many disturbing things

happening in cyberspace. Due to the anonymous nature of the Internet, it is possible to engage into a variety of criminal activities with impunity and people with intelligence, have been grossly misusing this aspect of the Internet to perpetuate criminal activities in cyberspace. Hence the need for Cyberlaws in India.

*What is the importance of Cyberlaw ?*

Cyberlaw is important because it touches almost all aspects of transactions and activities on and concerning the Internet, the World Wide Web and Cyberspace. Initially it may seem that Cyberlaws is a very technical field and that it does not have any bearing to most activities in Cyberspace. But the actual truth is that nothing could be further than the truth. Whether we realize it or not, every action and every reaction in Cyberspace has some legal and Cyber legal perspectives.

Importance of Cyber Law

Cyber laws are formed to punish people who perform any illegal activities online. They are important to punish related to these types of issues such as online harassment, attacking another website or individual, data theft, disrupting the online workflow of any enterprise and other illegal activities.

If anyone breaks a cyber law, the action would be taken against that person on the basis of the type of cyberlaw he broke, where he lives, and where he broke the law. It is most important to punish the criminals or to bring them to behind bars, as most of the cybercrimes cross the limit of crime that cannot be considered as a common crime.

These crimes may be very harmful for losing the reliability and confidentiality of personal information or a nation. Therefore, these issues must be handled according to the laws.

- When users apply transactions on the Internet, cyber law covers every transaction and protect them.
- It touches every reaction and action in cyberspace.
- It captures all activities on the Internet.

*Does Cyberlaw concern me ?*

Yes, Cyberlaw does concern you. As the nature of Internet is changing and this new medium is being seen as the ultimate medium ever evolved in human history, every activity of yours in Cyberspace can and will have a Cyberlegal perspective. From the time you register your Domain Name, to the time you set up your web site, to the time you promote your website, to the time when you send and receive emails , to the time you conduct electronic commerce transactions on the said site, at every point of time, there are various Cyberlaw issues involved. You may not be bothered about these issues today because you may feel that they are very distant from you and that they do not have an impact on your Cyber activities. But sooner or later, you will have to tighten your belts and take note of Cyberlaw for your own benefit.

## Advantages of Cyber Laws

The IT Act 2000 attempts to change outdated laws and provides ways to deal with cyber crimes. We need such laws so that people can perform purchase transactions over the Net through credit cards without fear of misuse. The Act offers the much-needed legal framework so that information is not denied legal effect, validity or enforceability, solely on the ground that it is in the form of electronic records.

In view of the growth in transactions and communications carried out through electronic records, the Act seeks to empower government departments to accept filing, creating and retention of official documents in the digital format. The Act has also proposed a legal framework for the authentication and origin of electronic records / communications through digital signature.

- From the perspective of e-commerce in India, the IT Act 2000 and its provisions contain many positive aspects. Firstly, the implications of these provisions for the e-businesses would be that email would now be a valid and legal form of communication in our country that can be duly produced and approved in a court of law.
- Companies shall now be able to carry out electronic commerce using the legal infrastructure provided by the Act.
- Digital signatures have been given legal validity and sanction in the Act.

- The Act throws open the doors for the entry of corporate companies in the business of being Certifying Authorities for issuing Digital Signatures Certificates.
- The Act now allows Government to issue notification on the web thus heralding e-governance.
- The Act enables the companies to file any form, application or any other document with any office, authority, body or agency owned or controlled by the appropriate Government in electronic form by means of such electronic form as may be prescribed by the appropriate Government.
- The IT Act also addresses the important issues of security, which are so critical to the success of electronic transactions. The Act has given a legal definition to the concept of secure digital signatures that would be required to have been passed through a system of a security procedure, as stipulated by the Government at a later date.
- Under the IT Act, 2000, it shall now be possible for corporates to have a statutory remedy in case if anyone breaks into their computer systems or network and causes damages or copies data. The remedy provided by the Act is in the form of monetary damages, not exceeding Rs. 1 crore.

Areas involving in Cyber Laws

These laws deal with multiple activities and areas that occur online and serve several purposes. Some laws are formed to describe the policies for using the Internet and the computer in an organization, and some are formed to offer people security from unauthorized users and malicious activities. There are various broad categories that come under cyber laws; some are as follows:

**Fraud**

Cyber laws are formed to prevent financial crimes such as identity theft, credit card theft and other that occurring online. A person may face confederate or state criminal charges if he commits any type of identity theft. These laws have explained strict policies to prosecute and defend against allegations of using the internet.

**Copyrighting Issues**

The Internet is the source that contains different types of data, which can be accessed anytime, anywhere. But it is the authority of anyone to copy the content of any other person. The strict

rules are defined in the cyber laws if anyone goes against copyright that protects the creative work of individuals and companies.

**Scam/ Treachery**

There are different frauds and scams available on the Internet that can be personally harmful to any company or an individual. Cyber laws offer many ways to protect people and prevent any identity theft and financial crimes that happen online.

**Online Harassment and Stalking**

Harassment is a big issue in cyberspace, which is a violation of both criminal laws and civil. In cyber laws, there are some hard laws defined to prohibit these kinds of despicable crimes.

**Data Protection**

People using the internet depends on cyber laws and policies to protect their personal information. Companies or organizations are also relying on cyber laws to protect the data of their users as well as maintain the confidentiality of their data.

**Contracts and Employment Law**

When you are visiting a website, you click a button that gives a message to ask you to agree for terms and conditions; if you agree with it, that ensures you have used cyber law. For every website, there are terms and conditions available that are associated with privacy concerns.

**Trade Secrets**

There are many organizations that are doing online businesses, which are often relying on cyber laws to protect their trade secrets. For example, online search engines like Google spend much time to develop the algorithms that generate a search result. They also spend lots of time developing other features such as intelligent assistance, flight search services, to name a few and maps. Cyber laws help these organizations to perform legal action by describing necessary legal laws for protecting their trade secrets.

## 2.12. Information Technology Act 2000

Aim of the Act is to provide legal recognition for transactions carried out by means of electronic data interchange and other means of electronic communication, commonly referred to as "electronic commerce", which involve the use of alternatives to paper-based methods of communication and storage of information, to facilitate electronic filing of documents with the Government agencies and further to amend the Indian Penal Code, the Indian Evidence Act, 1872, the Bankers' Books Evidence Act, 1891 and the Reserve Bank of India Act, 1934 and for

matters connected therewith or incidental thereto.

The Act is adapted from the UN Model Law on Electronic Commerce agreed upon by nations 30th January, 1997.

**Brief Study of the Act**

Information Technology Act, 2000 extends to whole of India and under certain situations, to outside India. It came into effect 9th June, 2000.

Subscribers may authenticate an electronic record by affixing his digital signature through asymmetric crypto system and hash function which envelop and transform the initial electronic record into another electronic record. ("hash function" means an algorithm mapping or translation of one sequence of bits into another, generally smaller). If information or matter is authenticated by means of digital signature affixed in such manner as may be prescribed by the Central Government, it legally accepted.

Where any law provides that information or any other matter shall be in writing or in the typewritten or printed form, then, notwithstanding anything contained in such law, such requirement shall be deemed to have been satisfied if such information or matter is rendered or made available in an electronic form; and accessible so as to be usable for a subsequent reference.

Payment applications licenses etc. could be done electronically, in accordance with the prescription of the government.

Documents could be retained in electronic form for reference, and evidence.

Any matter could be published for the public in electronic form. However, it is not mandatory to do all transactions of publication in electronic form.

Prove for a transfer of electronic matter or document is when there exists an acknowledgement either electronic or in any other form.

Where any security procedure has been applied to an electronic record at a specific point of time. then such record shall be deemed to be a secure electronic record from such point of time to the time of verification.

A Controller of Certifying Authorities and deputies to be appointed by government to manage these processes. The Controller may perform all or any of the following **functions,** namely:—

1.exercising supervision over the activities of the Certifying Authorities;

2. certifying public keys of the Certifying Authorities;

3. laying down the standards to be maintained by the Certifying Authorities;

4. specifying the qualifications and experience which employees of the Certifying Authorities should possess;

5. specifying the conditions subject to which the Certifying Authorities shall conduct their business;

6. specifying the contents of written, printed or visual materials and advertisements that may be distributed or used in respect of a Digital Signature Certificate and the public key;

7. specifying the form and content of a Digital Signature Certificate and the key,

8. specifying the form and manner in which accounts shall be maintained by the Certifying Authorities; 9. specifying the terms and conditions subject to which auditors may be appointed and the remuneration to be paid to them;

10. facilitating the establishment of any electronic system by a Certifying Authority either solely or jointly with other Certifying Authorities and regulation of such systems;

11. specifying the manner in which the Certifying Authorities shall conduct their dealings with the subscribers;

12. resolving any conflict of interests between the Certifying Authorities and the subscribers;

13. laying down the duties of the Certifying Authorities;

14. maintaining a data base containing the disclosure record of every Certifying Authority containing such particulars as may be specified by regulations, which shall be accessible to public.

**Offences and Penalties**

If any person without permission of the owner or any other person who is in charge of a computer, computer system or computer network, access, changes, copies, destroys, virus, etc, shall be liable to pay damages by way of compensation not exceeding one crore rupees to the person so affected.

Those who fail to furnish any document, or report to the Controller or the Certifying Authority as required, shall be liable to a penalty not exceeding one lakh and fifty thousand rupees for each such failure.

Whoever contravenes any rules or regulations of this Act, for which no penalty has been separately provided, shall be liable to pay a compensation not exceeding twenty-five thousand

rupees to the person affected by such contravention or a penalty not exceeding twenty-five thousand rupees

Whoever knowingly or intentionally conceals, destroys or alters or intentionally or knowingly causes another to conceal, destroy or alter any computer source code used for a computer, computer programme, computer system or computer network, when the computer source code is required to be kept or maintained by law for the time being in force, shall be punishable with imprisonment up to three years, or with fine which may extend up to two lakh rupees, or with both.

Whoever with the intent to cause or knowing that he is likely to cause change information residing in a computer resource (hacking) shall be punished with imprisonment up to three years, or with fine which may extend upto two lakh rupees, or with both.

Whoever publishes or transmits or causes to be published in the electronic form, any material which is lascivious or appeals to the prurient interest or if its effect is such as to tend to deprave and corrupt persons who are likely, having regard to all relevant circumstances, to read, see or hear the matter contained or embodied in it, shall be punished on first conviction with imprisonment of either description for a term which may extend to five years and with fine which may extend to one lakh rupees and in the event of a second or subsequent conviction with imprisonment of either description for a term which may extend to ten years and also with fine which may extend to two lakh rupees.

Whoever makes any misrepresentation to, or suppresses any material fact from, the Controller or the Certifying Authority for obtaining any licence or Digital Signature Certificate, as the case may be. shall be punished with imprisonment for a term which may extend to two years, or with fine which may extend to one lakh rupees, or with both.

Any person who secures access to any electronic record, book, register, correspondence, information, document or other material without the consent of the person concerned discloses such electronic record, book. register, correspondence, information, document or other material to any other person shall be punished with imprisonment for a term which may extend to two years, or with fine which may extend to one lakh rupees, or with both.

Any unauthorized person who publishes digital signature certificates shall be punished with imprisonment for a term, which may extend to two years, or with fine which may extend to one lakh rupees, or with both.

Whoever knowingly creates, publishes or otherwise makes available a Digital Signature Certificate for any fraudulent or unlawful purpose shall be punished with imprisonment for a term, which may extend to two years, or with fine which may extend to one lakh rupees, or with both.

The provisions of this Act shall apply also to any offence or contravention committed outside India by any person irrespective of his nationality.

Any computer, computer system, floppies, compact disks, tape drives or any other accessories related thereto, in respect of which any provision of this Act, rules, orders or regulations has been or is being contravened, shall be liable to confiscation.

Police officer not below the rank of Deputy Superintendent of Police shall investigate any offence under this Act. Authorized by the Central Government in this behalf may enter any public place and search and arrest without warrant any person found therein who is reasonably suspected or having committed or of committing or of being about to commit any offence under this Act.

No person providing any service as a network service provider shall be liable under this Act, rules or regulations if he proves that the offence or contravention was committed without his knowledge or that he had exercised all due diligence to prevent the commission of such offence or contravention.

The government can make laws with regard to the Act, direct and guide state governments in effecting the provisions. It can make necessary amendments.

No suit, prosecution or other legal proceeding shall lie against the Central Government, the State Government, the Controller or any person acting on behalf of him, the Presiding Officer, adjudicating officers and the staff of the Cyber Appellate Tribunal for anything which is in good faith done or intended to be done in pursuance of this Act or any rule, regulation or order made.

**Unit-3**

**3.1. Indian Penal Code**

A Code is a synthesis of a heterogeneous mass into a comprehensive system. Indian Penal Code is a comprehensive piece of legislation that provides for a large variety of offenses. Separate enactments cover the offences that are not covered in the Code. From the very olden times, the rule of Dharma guided the justice process. There were different justice systems according to the caste system. Women and Brahmins were exempted from capital punishment. With the advent

of Muslim rule judicial process were according to the Muslim laws. During the colonial period the judicial regulations of Lord Cornwallis (1793) formed the foundations of Indian judicial system. Regulating Act of 1773 formed the supreme Court of India. Indian Councils Act 1861 prepared separate short codes for judicial administration. During British rule, the English Criminal law with some modifications was in effect in the Presidency towns of Bombay, Culcutta and Madras. In all other places Muslim Criminal Law was in effect. Indian Penal Code was drafted by the First law Commission headed by Lord Macaulay. It was approved on Oct. 6, 1860, and came into effect on Jan 1, 1862. After the independence it was revised.

### 3.2. Cr.PC sections relevant to media

### 3.3. Prevention of Publication and Objectionable Matter Act, 1955

**PREVENTION OF PUBLICATION OF OBJECTIONABLE MATTER ACT, 1976**

The Act was passed along with amendment to Article 19 (2) of the Constitution. The Act empowered the government to demand and forfeit security for publication of "objectionable matter". Aggrieved owners and printers were given right to demand trial by jury. It remained in force till 1956.

An Act to provide against the printing and publication of incitement to crime and other objectionable matter Be it enacted by Parliament in the Twenty-seventh Year of the Republic of India as follows : Prefatory Note- Statement of Objects and Reasons-A publication in print has a more lasting and widespread effect than other forms of communication. Press (Objectionable Matter) Act, 1951 was enacted to penalise the abuse of the freedom of the press by publication of matter involving encouragement of violence or sabotage or incitement to certain other very grave offences. The Press Commission which submitted its Report in 1954 accepted the possibility of existence of irresponsible elements who needed to be curbed through special legal measures. The Commission recommended the setting up of a Press Council which would, inter alia, safeguard the liberty of the press and evolve and maintain standards of journalistic ethics. The Commission hoped that as the Press Council "grows in strength and prestige the necessity of having resort to such measures as the Press (Objectionable Matter) Act will gradually disappear". In the hope that the press would evolve its own internal control. Government allowed Press (Objectionable Matter) Act, 1951, to expire on the 1st February, 1956. Later, in accordance with the recommendations of the Press Commission, Press Council Act, 1965, was

enacted. The experience of the system of Press Council has not, however, been satisfactory. It did not serve to deter those elements which were in a position to use the printed medium in an- undesirable way, for spreading hatred, for character assassination and undermining the people's morale and taste. In view of the need for urgent action in the matter, the. President promulgated on the 8th December, 1975, the Prevention of Publication of Objectionable Matter Ordinance, 1975. 2. The Ordinance provided for the prohibition of the printing or publication of any, specified matter for a temporary period not exceeding two months where such prohibition is necessary for preventing or combating any activity prejudical to the interests of sovereignty and integrity of India, security of the State, friendly relations with foreign States, public order, decency or morality or any activity involving or likely to involve, or culminate in, incitement to offences. The Ordinance also provided for demanding security from keepers of presses and publishers and editors of newspapers found guilty of being concerned in the publication of objectionable matter as defined in the Ordinance. Provisions were also made in the Ordinance for preventing the circulation and distribution of objectionably matter. The main purpose of the Ordinance was to prevent the use of the Press for encouragement of violence, sedition and other offences and for the publication of obscene or securrilous matter and the definition of "objectionable matter" has been strictly confined to this purpose. 3. The Bill seeks to replace the Ordinance. The Notes on Clauses explain the provi- sions of the Bill.

### 3.4. Press and Publication (Parliamentary Proceedings) Act, 1976 - Constitutional amendment Article 361 (Protecting the publication of Parliament and Legislature)

In order to strengthen the basis of democratic Government which is the Parliament and opinion of the people therein, it is of paramount importance that proceedings in Parliament shall be communicated to the public. For this purpose, newspapers and other mass publicity media should be afforded the privilege of publishing substantially true reports of proceedings in Parliament without being exposed to any civil or criminal action.

Under this Act no person shall be liable to any proceedings, civil or criminal, in any court in respect of the publication in a newspaper of a substantially true report of any proceedings of either House of Parliament unless the publication is proved to have been made with malice.

This Act shall apply in relation to reports or matters broadcast by means of a wireless telegraphy as part of any programme or service provided by means of a broadcasting station

situate within the territories to which this act extends as it applies in relation to reports or matters published in a newspaper.

### 3.5. Contempt of Court

Origin of the law of contempt in India can be traced to the English law, where courts punished those who scandalized the court or the judges. The first Indian statute on Contempt of Courts Act was passed in 1926. The Act aimed at limiting the powers of certain courts in punishing contempt of courts.

The Act and all such Acts of Contempt of Court that were in effect in some of the States were replaced by the Contempt of Courts Act, 1952.

Lok Sabha in 1960 decided to scrutinize the Act so as to see it in light of Freedom of Expression of the Individual and of the need for safeguarding the status and dignity of courts and interests of administration of justice.

Accordingly a committee was set up on July 29, 1961 under the chairmanship of the late H N Sanyal, and it submitted its report on February 28, 1963. The Joint Select Committee of Parliament on Contempt of Courts examined the issue in detail and a new bill, the Contempt of Courts Bill, 1968 was prepared by the committee.

The Contempt of Courts Act, 1952 was repealed, and the Contempt of Courts Act, 1971 was passed by the Parliament in December 1971 and it came into force December 24, 1971. It extends to the whole of India, except to the state of Jammu and Kashmir, except to the extent to which the provisions of this Act relate to contempt of the Supreme Court.

**Brief Study of the Act**

Contempt of Courts Act empowers the courts to punish any willful disobedience to, or disregard of, a court order or any misconduct in the presence of a court; action that interferes with a judge's ability to administer justice or that insults the dignity of the court.

The objective of the Act is to keep the administration of justice pure and undefiled. While the dignity of the court is to be maintained at all costs, the contempt jurisdiction, which is of a special nature, should be sparingly used.

The Act differentiates Civil and Criminal Contempt of Court. 'Civil contempt' means willful disobedience to any judgment, decree, direction, order, writ or other process of a court or willful breach of an undertaking given to a court. 'Criminal contempt' means the publication (whether by words, spoken or written, or by signs, or by visible representation, or otherwise) of

any matter or the doing of any other act whatsoever which scandalizes or tends to scandalize, or lowers or tends to lower the authority of, any court, or prejudices, or interferes or tends to interfere with the due course of any judicial proceeding, or interferes or tends to interfere with, or obstructs or tends to obstruct, the administration of justice in any other manner.

Any willful or deliberate or reckless disobedience to the orders of the court to do or abstain from doing any act or breach of any undertaking given to the court is prima-facie civil contempt. Non caring of the warrant issued by the criminal court amounts to criminal contempt. Breach of an injunction, or breach of an undertaking given to a court by a person in a civil proceeding amounts to contempt.

A judge, magistrate or other persons act in judicially shall also be liable for contempt of his own court or of any other court in the same manner as any other individual.

Any contempt of Nyaya Panchayats or other village courts, by whatever name known, for the administration of justice, established under any law, is not punishable with this Act.

**Guidelines to Media Professionals**

The law relating to contempt of court is well settled. Any act done or writing published which is calculated to bring a court or a judge into contempt, or to lower his authority, or to interfere with the due course of justice or the lawful process of the court, is a contempt of court.

Comment on pending case or abuse of a party may amount to contempt when the case is tried by a judge. Judges by reason of their office are precluded from entering into any controversy in columns of the public press. There is no special principle attached to the press to comment, criticize or investigate the facts of any case of the prejudice of the trial of the case. No editor has a right to assume the role of investigator to try to prejudice the court against any person.

Contempt by speech or writing may be by scandalising the court itself, or by abusing parties to actions, or by prejudicing mankind in favour of or against a party before the cause is heard. It is incumbent upon courts of justice to preserve their proceedings from being misrepresented, for prejudicing the mind of the people against persons concerned as parties in causes before the cause is finally heard has pernicious consequences.

Speech or writings misrepresenting the proceedings of the court or prejudicing the public for or against a party or involving reflections on parties to a proceeding amount to contempt. To make a speech tending to influence the result of a pending trial, whether civil or criminal is a grave contempt. Comments on pending proceedings, if emanating from the parties or their lawyers,

are generally a more serious contempt than those coming from independent sources.

If a person was ignorant that the proceeding was pending, and commit an act that amounts contempt of court, he shall not be guilty. A comment, when the civil or criminal proceeding is not pending at the time of publication shall not be deemed to constitute contempt of court. Any one who distribute any publication without knowing that it contained matters amounting to contempt of court is not guilty.

A person shall not be guilty of contempt of court for publishing a fair and accurate report of a judicial proceeding or any fair comment on the merits of any case which has been heard and finally decided. It is essential for the healthy administration of justice.

Thus,

It is to be noted that the liberty of free expression is not to be compounded with a license to make unfounded allegations of corruption against judiciary. If it is, it is abuse of that right.

A defence of truth or justification is not available to the publisher of a newspaper in proceedings for contempt of court.

Court and legal reporting must be true, accurate and without malice.

While reproducing the court proceedings, no words may be added, omitted or substituted.

Criticism has to be reasonable and offered for the public good. The criticism of a judge must take the form of reasonable argument or exploitation; must be made in good faith and free from the imputation of improper motives. Criticism on judgments must be done without casting aspersions on the judges and the courts and without adverse comments amounting to scandalizing the courts.

A complaint or report about a judicial officer of his dishonesty, partiality or other conduct unbecoming of a court, made to an authority to whom it is subordinate, is not contempt of court if all reasonable care is taken by the makers to keep it confidential. Immunity is provided to a citizen making such complaints in good faith to the high court.

A person shall not be guilty of contempt of court for publishing a fair and accurate report of judicial proceedings before any court sitting in chambers or in camera except when prohibited by the Court.

**Exceptions to Contempt of Court**

Making a statement without knowing that the case was pending with the court.

Making a statement on a case that is not pending in the court,

A Fair criticism on the judicial proceedings

Distributing material without knowing that it contains a contempt for the court,

A true report on the judicial proceedings

Complaint against the presiding officers of subordinate courts to superior courts in good faith.

**Contempt Procedure**

When it is alleged, or appears to the Supreme Court or the High Court upon its own view, that a person has been guilty of contempt committed in its presence or hearing, the court may cause such person to he detained in custody, and, at any time before the rising of the court, on the same day, or as early as possible thereafter, shall-

(a) Cause him to be informed in writing of the contempt with which he is charged.

(b) Afford him an opportunity to make his defence to the charge,

(c) After taking such evidence as may be necessary or as may be offered by such person and after hearing him, proceed, either forthwith or after adjournment, to determine the matter of the charge, and

(d) Make such order for the punishment or discharge of such person as may be just.

**Punishment for contempt of court**

Person alleged with contempt of court is informed, given opportunity for defense, punished or discharged.

Every case of criminal contempt under section 15 shall be heard and determined by a bench of not less than two judges. However, a single judge can also deal with criminal contempt's committed in facie curium; In re: court on its own motion.

No court shall initiate any proceedings if contempt, either on its own motion or otherwise, after the expiry of a period of one year from the date on which the contempt is alleged to have been committed.

The court is guided by its own procedure to be followed in the facts and circumstances of each individual case and to see that the condemner is getting full opportunity to make his defence.

A contempt of court may be punished with simple imprisonment for a term which may extend to six months, or with fine which may extend to two thousand rupees, or with both.

**Apology**

The accused may be discharged or the punishment awarded may be remitted on apology being made to the satisfaction of the court. The court can, even when accepts the apology, commit an

offender to prison or otherwise punish him.

### 3.6. Indecent Representation of Women Prohibition Act

Indecent Representation of Women (Prohibition) Act, 1986 was enacted on 23rd December 1986. It covers the whole of India except the State of Jammu and Kashmir. It aims at prohibiting indecent representation of women in advertisements or in publications, writings, paintings, figures or in any other manner.

The Act defines "Indecent representation of women" as the depiction in any manner of the figure of a woman, her form or body or any part thereof in such a way as to have the effect of being indecent, or derogatory to, or denigrating, women, or is likely to deprave, corrupt or injure the public morality or morals.

Brief study of the Act

The Act states that no person shall publish, or cause to be published, or arrange or take part in the publication or exhibition of, any advertisement, which contains indecent representation of women in any form.

No person shall produce or cause to be produced, sell, let to hire, distribute, circulate or send by post any book, pamphlet, paper, slide, film, writing, drawing, painting, photograph, representation or figure which contains indecent representation of women in any form. Except when the goal of such action is for the public good, in the interest of science, literature, art, or learning or other objects of general concern; or used for religious purposes.

Any authorized government official can search any place in relation to violation of this act, if needed with force, seize materials or documents without warrant. However search in a private dwelling house needs a warrant. No suit, prosecution or other legal proceeding shall lie against the Central Government or any State Government or any officer of the Central Government or any State Government for anything which is in good faith done or intended to be done under this Act. The official has to report it to the Report nearest Magistrate and take his orders as to the custody of the seized materials.

Anyone who violates this act, may be imprisoned up to two years, fined up to two thousand rupees. In the event of a second or subsequent conviction, imprisonment between six months to five years and a fine between ten thousand rupees to one lakh rupees. The offence is boilable.

### 3.7. Drug and Magic Remedies Act or

**What is a Magic Remedy?**

"Magic remedy" as defined in the Act includes a talisman, mantra, kavacha and any other charm of any kind which is alleged to possess miraculous powers for or in the diagnosis, cure, mitigation, treatment or prevention of any disease in human beings or animals or for affecting or influencing in any way the structure or any organic function of the body of human beings or animals.

**Objectives:**

- To control the advertisement of drugs in certain cases.
- To prohibit the advertisement of remedies alleged to possess magic qualities

**Applicability:**

The Drugs and Magic Remedies (Objectionable Advertisement) Act was enacted in 1954.

- to regulate the method of advertisement of medicines
- to prohibit the advertisement of treatments which are supposed to hold magic qualities,
- to prevent self-medication of harmful drugs. The Act lists the diseases and disorders in respect of which advertising is banned.

**Penalties:**

In case of offense under the act, the punishment includes:

- in the case of a first conviction, with imprisonment for maximum upto 6 months or with fine, or with both and
- in the case of a subsequent conviction, with imprisonment which may extend to 1 year, or with fine, or with both.

or

The Drugs and Magic Remedies (Objectionable Advertisements) Act, 1955

This is an Act to control, the advertisement of drugs in certain cases, to prohibit the advertisement for certain purpose of remedies alleged to possess magic qualities and to provide for matters connected therewith.

This Act defines drugs and registered medical practitioners besides defining magic remedy. According to Act the Magic remedy includes a talisman mantra kavacha and any other charm of any kind which is alleged and possess miraculous powers for or in the diagnosis, cure,

mitigation treatment or prevention of any disease in human beings or animals or for affecting or influencing in any way the structure or any organic function of human beings or animals.

No person or company shall take any part in the publication of any advertisement referring to any drug that is used for:

a) the miscarriage in woman,

b) maintenance or improvement of the capacity of human beings for sexual pleasures,

c) correction of menstrual disorder in women, and

d) the diagnosis, cure, mitigation, treatment or prevention of any disease.

No person or company will take part in advertisement which give false impression or makes a false claim for the drug or mislead the people. Whosoever contravenes any of the provision of this Act shall be punishable with imprisonment extended to six months or with fine, or with both for first time conviction. It may extend to one year imprisonment or with fine or with both on subsequent convictions.

The schedule for diseases specified under the Act are: appendicitis, atherosclerosis, blindness, blood poisoning, Bright's disease, cancer, cataract, deafness, diabetes, brain diseases or disorder, uterus diseases, disorder of menstrual flow, disorders of nervous system, prostatic gland disorders, dropsy, epilepsy, female disease (in general), fever (in general), Fits, Forms and structure of the female breast, gall bladder stones, kidney stones, bladder stones, gangrene, glaucoma, goiter, heart diseases, high or low blood pressure, hydrocele, hysteria, infantile paralysis, insanity, leprosy, leucoderma, lock jaw, locomotors ataxia, lupus, nervous debility, obesity, paralysis, plague, pleurisy, pneumonia, rheumatism, rruptures, sexual impotence, small pox, stature of person , sterility of women, trachoma, TB, tumours, typhoid fever, ulcers of GI tract, venereal diseases including, AIDS.

### 3.8. Defamation – Libel and slander

Defamation is an infringement on the Right to Reputation of an individual or group of people.

Every person in modern society has an inviolate right to the preservation of his reputation in the society. Therefore any person who intentionally defames him and communicate such matter to a third person infringes his right for social reputation. An injury to reputation is more damaging and disturbing than loss of wealth or property.

Reputation is a part of the personal property of a person. In the case of Kanwar vs State the

court observed that, “Nobody can use his freedom of expression as to injure another’s reputation or to indulge in what may be called character assassination.”

Defamation is an intentional false communication, either published or publicly spoken, by words, signs or visible representations, that injures another’s reputation or good name. Section 499 of the Indian Penal Code defines Defamation as; “Whoever by words, either spoken or intended to be read, or by signs or by visible representations, makes or publishes any imputation concerning any person intending to harm, or knowing or having reason to believe that such imputation will harm, the reputation of such person, is said except in specified cases, to defame the person.

” Defamation is distinct from insult, and abuse. Because, insult or abuse is not communicated to a third person with the intention of bringing the other’s reputation in public. Some wrongful actions like a banker “dishonouring its customer’s cheque in spite of being in funds is not counted as defamation.

**Types of Defamation**

Defamation is classified into **libel and slander**. When some defamatory material is written, printed or published, with words, photos, etc, it is libel. When it is communicated through words of mouth, gestures, facial expressions, body movements it is slander.

**Privilege**

Statements of some people made in some occasions, however defamatory they might seem to be, may not be considered as a violation of the defamation law.

**Absolute Privilege**: There are certain occasions on which the law regards freedom of speech as essential, and provides a defence of absolute privilege which can never be defeated, no matter how false or malicious the statements may be. The following communications are ‘absolutely privileged’ and protected from defamation proceedings:

- Statements made in either House of Parliament.
- Statements made in the course of judicial proceedings or quasi-judicial proceedings.
- Communications between lawyers and their clients.
- Statements made by officers of state to one another in the course of their official duty.

**Qualified Privilege**: Qualified privilege operates only to protect statements, which are made without malice (ie, spitefully, or with ill-will or recklessness as to whether it was true or false).

- Statements made in pursuance of a legal, moral or social duty, but only if the party making the statement had an interest in communicating it and the recipient had an interest in receiving it.
- Statements made in protection of an interest, eg public interests or the defendant's own interests in property, business or reputation.
- Fair and accurate reports of parliamentary proceedings.

**3.9. RTI Act 2005 or FREEDOM OF INFORMATION ACT, 2005**

Revolutions in democracies are bloodless and take place in the confines of Legislatures - RTI 2005 is one of them. It is a law enacted by the Parliament of India and aimed at giving access to records of Central and State governments. All the States and Union Territories, except Jammu & Kashmir come under this Act. J&K is covered by a state-level law.

- Any citizen of India, including from J&K can seek information from a public authority under this law. A public authority means any authority or body or institution of self-government, established or constituted by or under the Constitution of India, by any other law made by Parliament or State Legislatures. Reply should be given expeditiously or within 30 days.

The Act requires the public authority to computerise their records for wide dissemination. Parliament passed the RTI Bill on June 15, 2005. It came into force on Oct 13, 2005. Disclosure of official information was prevented by OSA 1923 and various other special laws. RTI Act has relaxed this.

In 1975, the Supreme Court of India issued a judgment on the citizen's right to know. This was a major turning point and it awaited the citizens to their right to know. OSA 1923 which was modeled on the British law of OSA 1899 kept a lid on people's right to know. This lid was blown off. OSA prohibited disclosure of information related to security of the State, sovereignty of the country, friendly relations with foreign states, non-classified information, etc. Besides OSA, Civil Service Conduct Rules and Indian Evidence Act give ample powers to keep away information from people. In 2000, the NDA government had passed Freedom of Information Bill 2000. This was based on an extremely diluted form of a draft prepared by veteran civil right's activist, H D Shourie. This eventually became a law know as Freedom of Information Act 2002. This act came under fire from various quarters as it gave too many exemptions. These included not only the usual exemptions on the grounds of national security and sovereignty, but also requests such as disclosure of information regarding disproportionate diversion of the resources of a public

authority for example. Similarly, there was no upper limit on the charges that could be levied for seeking information. Also there were no penalties prescribed to impose on government officials for not complying with the request for information. So FOI Act never became an effective force.

RTI activists kept pressure on the Central Government to come up with a better version of this Act replacing the toothless FOI Act 2002. The first draft of the RTI Bill was presented to Parliament in December 2004 during the UPA rule. It is applicable to all constitution authorities, executive, legislature, and judiciary, any institution or body established or constituted by an Act of Parliament or a State Legislature, or bodies owned, controlled or substantially financed by government or nongovernment organisations substantially financed directly or indirectly by funds provided by the government. Private bodies are not directly under the Act. However, information that can be accessed 5 under any other law in force by public authority can also be requested for. Privatized Pubic Utility companies (though they are privatized), have been brought under the RTI Act by Central Information Commission under the verdict. The Act overwrites OSA 1923.

The RTI Act specifies that the citizen's have a right to request and obtain any information as defined; take copies of documents; inspect documents, works and records; take certified samples of materials of work; obtain information from printouts, disks and floppies, tapes and video cassettes, or in any other electronic mode. The Act prescribes that all those authorities covered by it must appoint a Public Information Officer (PIO). Any citizens can submit a request to the PIO in writing for any information. It is the duty of the PIO to provide this information. If the request concerns some other Public Authority, it is the responsibility of the PIO to transfer or forward the request to his counterpart within five days. PIO will be assisted by Asst. PIOs. The citizen who wants information needs to disclose only his name and contact details; the citizen doesn't need to disclose the reason for seeking information.

**Time limit for replying:**

If the request is made to the PIO, the reply should be given within 30days of receipt. If it is made to the APIO, the reply should be given within 35 days of receipt. If the PIO transfers the request to any other Public Authority, the reply should be given within 30 days from the receipt of transfer by the PIO concerned.

- Information concerning corruption and Human Rights violation by scheduled security

agencies (CSF, BSF, etc.) is to be provided within 45 days, but with prior approval of the Central Information Commission (CIC).

If life or liberty of any person is involved, the PIO should reply within 48 hours.

- The applicant has to deposit an amount for obtaining the information.

**Fee:**

Initially for Central Departments, the fee fixed for filing of a request was Rs.10/-, Rs.2/- per page of information, Rs.5/- for each hour of inspection after the first hour. There will be no fee for BPL persons (who have to produce their ID). If information is not provided within the stipulated time, it is treated as refusal. Refusal with or without reason could be the ground for filing an appeal or complaint.

**Sub-section 7(3)** of the Act permits the PIO to demand unprescribed further fees or additional fees from the applicants for providing information. This had generated a heated debate and a raging controversy.

**Section 8** of the Act gives exemption from disclosure of information…

disclosure of which would be prejudicially affect the sovereignty and integrity of India; the security, strategic, scientific or economic interest of the state; relations with foreign states, or lead to incitement of the offence

- (ii) Information which has been forbidden to be published by any court of law or tribunal or the disclosure of which may constitute contempt of court

- (iii) information, the disclosure of which would cause a breech of privilege of Parliament or the State Legislature

(iv) information including commercial confidence, trade secrets, or intellectual property, the disclosure of which would harm the competitive position of a third party, unless the competent authority (PIO / CIC) is satisfied that larger public interest warrants the disclosure of such information

- (v) Information received in confidence from a foreign government

- (vi) Cabinet members including records of deliberations with the council of ministers, secretaries and other officers.

**There are (x) such items regarding exemption from disclosure…**

In terms of the Section 2(f) of the Act, information has been defined as any material in any form including records, documents, memos, emails, opinions, advises, press releases, circulars,

orders, log books, contracts, reports, papers, samples, models, data material held in any electronic form and information relating to any private body which can be accessed by a public authority under any other law.

**Organizations exempted from rti:**

Scheduled Central Intelligence and Security Agencies like: Intelligence Bureau, Research Analysis Wing, Directorate of Revenue Intelligence, Central Economic Intelligence Bureau, Directorate of Enforcement, Narcotics Controlled Bureau, Central Investigation Bureau are excluded from the ambit of RTI Act. However, their exclusion is not absolute. They have an obligation to provide information related to 'corruption' and 'human rights violations', information regarding violation of Human Rights could be given after the prior approval of the Central or State Information Commission.

**Section 11**: If a request is made by a citizen for the disclosure of confidential information given by a third party, the Central or State Information Officers can oblige if it is in the public interest and the same outweighs in importance and any possible harm or injury to the interest of such third party. In the case of trade or commercial secrets protected by law such third party information would not be disclosed. Within 5 days of a request of this kind, the third party who gave the confidential information should be issued a written notice and his submission should be taken into account.

**Section 12 & 15 and their sub-sections**: deal with Central and State Information Commissions, terms of office and conditions, service, and removal of Chief Information Commissioners.

**Section 20**: Imposes penalties on Central or State PIOs for not accepting applications or for not replying within the stipulated time or for giving incomplete or misleading information or for destroying information. It shall impose a penalty of Rs.250/- each day till the application is received or information is furnished. However, the total amount of such penalty shall not exceed Rs.25, 000/-.

**Section 26**: calls upon the Central and State governments excluding J&K tom promote RTI Act through wide publicity and educational programmes. According to unofficial sources, in the first year of RTI Act about 42,000 applications for information were filed by citizens to Central government authorities.

RTI Act, as it is stated in its introduction itself was intended "to secure access (to citizens) to

information under the control of public authorities in order to promote transparency and accountability in the working of every public authority…" The Right to Information Movement and its culmination – the RTI Act, were the result of this. Though it may still need some fine-tuning, it is a vital piece of law.

### 3.10. Right to Privacy, Data Privacy – Personal Information Security

Privacy is a fundamental human right, enshrined in numerous international human rights instruments.1 It is central to the protection of human dignity and forms the basis of any democratic society. It also supports and reinforces other rights, such as freedom of expression, information and association.

Activities that restrict the right to privacy, such as surveillance and censorship, can only be justified when they are prescribed by law, necessary to achieve a legitimate aim, and proportionate to the aim pursued.

As innovations in information technology have enabled previously unimagined forms of collecting, storing and sharing personal data, the right to privacy has evolved to encapsulate State obligations related to the protection of personal data.3 A number of international instruments enshrine data protection principles,4 and many domestic legislatures have incorporated such principles into national law.5

## Unit-4

### 4.1. Defining Media Ethics

The word 'Ethics' stems from the term 'ethos', which for Aristotle, was "the speaker's personal character when the speech is so spoken as to make us think him credible." Ethics is concerned with principles and ideas that regulate an individual's behavior.

The Macquarie Dictionary defines ethics as, "A system of moral principles by which human actions and proposals may be judged good or bad or right or wrong." The Webester's New Collegiate Dictionary defines ethics as "a set of principles ... conforming to accepted professional standards of conduct."

Another definition of ethics is, "A set of standards by which a particular group decides to regulate its behavior — to distinguish between what is legitimate or acceptable in pursuit of their aims and what is not."

Ethics refers to principles that define behavior as right, good and proper. Such principles do not always dictate a single "moral" course of action, but provide a means of evaluating and deciding

among competing options.

### 4.2. Media Ethics in India

- Ethical communication is that which allows others to grow to their fullest potential, in which value of the other individual is emphasized and felt, and in which both parties in the communication exchange are trusted, respected and appreciated, and a positive communication climate is established.
- Ethical Communication is fair, accurate, honest, truthful, responsible, independent and decent. Truth is its guiding principle. The message is presented in a fair, accurate and unbiased manner.
- Ethical communication is telling the whole truth fairly, freely and fearlessly.
- Being ethical does not mean passive, but dynamic. They criticize the government society constructively to make them better.
- Being ethical is not being completely open. At times the source of news has to be kept confidential when there is a clear reason to do so.
- Being ethical as a communicator is to tell the truth as it is, not manipulated by technology, personal interest or biased by pressure groups, impartially, with professional disinterestedness.
- Being ethical also mean thinking universally. Some information if it does eternal good for the entire society has to be kept hidden, according to the social commitment.
- Being ethical means accepting nothing of value from news sources or others outside the profession. Gifts and free or reduced-rate travel, entertainment, products and lodging should not be accepted. Expenses in connection with news reporting should be paid by the newspaper.
- Being ethical means remaining free of associations and activities that may compromise integrity or damage credibility.
- Communication action should not primarily be aimed at for rewards.
- Communication shall not degrades individuals and humanity through distortion, intimidation, coercion, and violence and through the expression of intolerance and hatred.
- Ethical communication respects privacy and confidentiality.

- Communicators with ethics take responsibility for the short- and long-term consequences of their own
- Avoid undercover or other surreptitious methods of gathering information except when traditional open methods will not yield information vital to the public. Use of such methods should be explained as part of the story
- Avoid stereotyping by race, gender, age, religion, ethnicity, geography, sexual orientation, disability, physical appearance or social status.
- Give voice to the voiceless; official and unofficial sources of information can be equally valid.
- Be sensitive when seeking or using interviews or photographs of those affected by tragedy or grief, victims of sexual crimes, especially when they are minors. Be cautious about identifying juvenile suspects or victims of sex crimes.
- Journalists are accountable to their readers, listeners, viewers and each other. Admit mistakes and correct them promptly. A journalist shall rectify promptly any harmful inaccuracies, ensure that correction and apologies receive due prominence and afford the right of reply to persons criticized when the issue is of sufficient importance.
- A journalist shall strive to ensure that the information he/ she disseminates is fair and accurate, avoid the expression of comment and conjecture as established fact and falsification by distortion, selection or misrepresentation.
- The press must not, even where the law does not prohibit it, identify children under the age of 16 who are involved in cases concerning sexual offences, whether as victims or as witnesses. The journalist shall do the utmost to rectify any published information which is found to be harmfully inaccurate.

### 4.3. Code of ethics in News Profession

**Professional Codes of Ethics**

PREAMBLE. The First Amendment, protecting freedom of expression from abridgment by any law, guarantees to the people through their press a constitutional right, and thereby places on newspaper people a particular responsibility. Thus journalism demands of its practitioners not only industry and knowledge but also the pursuit of a standard of integrity proportionate to the journalist's singular obligation. To this end the American Society of Newspaper Editors sets

forth this Statement of Principles as a standard encouraging the highest ethical and professional performance.

ARTICLE I - Responsibility. The primary purpose of gathering and distributing news and opinion is to serve the general welfare by informing the people and enabling them to make judgments on the issues of the time. Newspapermen and women who abuse the power of their professional role for selfish motives or unworthy purposes are faithless to that public trust. The American press was made free not just to inform or just to serve as a forum for debate but also to bring an independent scrutiny to bear on the forces of power in the society, including the conduct of official power at all levels of government.

ARTICLE II - Freedom of the Press. Freedom of the press belongs to the people. It must be defended against encroachment or assault from any quarter, public or private. Journalists must be constantly alert to see that the public's business is conducted in public. They must be vigilant against all who would exploit the press for selfish purposes.

ARTICLE III - Independence. Journalists must avoid impropriety and the appearance of impropriety as well as any conflict of interest or the appearance of conflict. They should neither accept anything nor pursue any activity that might compromise or seem to compromise their integrity.

ARTICLE IV - Truth and Accuracy. Good faith with the reader is the foundation of good journalism. Every effort must be made to assure that the news content is accurate, free from bias and in context, and that all sides are presented fairly. Editorials, analytical articles and commentary should be held to the same standards of accuracy with respect to facts as news reports. Significant errors of fact, as well as errors of omission, should be corrected promptly and prominently.

ARTICLE V - Impartiality. To be impartial does not require the press to be unquestioning or to refrain from editorial expression. Sound practice, however, demands a clear distinction for the reader between news reports and opinion. Articles that contain opinion or personal interpretation should be clearly identified.

ARTICLE VI - Fair Play. Journalists should respect the rights of people involved in the news, observe the common standards of decency and stand accountable to the public for the fairness and accuracy of their news reports. Persons publicly accused should be given the earliest opportunity to respond. Pledges of confidentiality to news sources must be honored at all costs,

and therefore should not be given lightly. Unless there is clear and pressing need to maintain confidences, sources of information should be identified.
These principles are intended to preserve, protect and strengthen the bond of trust and respect between American journalists and the American people, a bond that is essential to sustain the grant of freedom entrusted to both by the nation's founders.

**What Are the Standard Ethical Principles for Journalists?**

There are several key ethical standards that appear across global news organizations. At the highest level, they call on journalists to seek the truth, act in the public interest, and minimize harm.

- **Honesty**. Journalists have an obligation to seek out the truth and report it as accurately as possible. This requires diligence: this means making every effort to seek out all the facts relevant to a story. Journalists should also corroborate any information with multiple sources.
- **Independence**. Journalists should avoid taking political sides and should not act on behalf of special interest groups. Any political affiliations or financial investments that might constitute a conflict of interest with the subject they are writing about should be declared to editors and readers. Some organizations characterize this principle as "objectivity," while others, especially non-profit civic journalism projects, reject this term, as they position themselves explicitly on the side of public interest.
- **Fairness**. In addition to being independent, journalists should show impartiality and balance in their reporting. Most news stories have more than one side, and journalists should capture this. That said, they should not place two different perspectives on equal footing where one is unsupported by evidence. The exception to the impartiality rule is opinion writing, as well as "gonzo" journalism and creative nonfiction.
- **Public accountability**. News organizations should listen to their audience. To enable the public to hold them accountable, journalists should write under their own bylines and accept responsibility for their words. When news outlets publish factual errors, they need to issue a correction.
- **Harm minimization**. Not every fact that can be published should be published. If the amount of harm that could come to private individuals—particularly children—as a result of disclosure exceeds the public good that would come of it, then news outlets

might choose not to publish the story. This is less of a consideration when it comes to public figures. It is huge, however, in matters of national security, where lives could be on the line.

- **Avoiding libel**. This is a legal as well as a moral imperative for journalists. Journalists cannot print false statements that damage a person's reputation. In most jurisdictions, true statements cannot be libelous, so journalists can protect themselves by rigorously checking facts.
- **Proper attribution**. Journalists must never plagiarise. If they use information from another media outlet or journalist, they need to attribute it to them.

### 4.4. Press Council of India guidelines

Section 13 of the Press Council Act, 1978, suggests formulation of a guide for the journalists. Accordingly in 1984 and 1986 two sets of codes were formulated. In 1992, the Council brought out "A Guide to Journalistic Ethics" containing principles of journalistic ethics.

The Guide suggests a way of steering safely and responsibly through the minefield of legal, moral and ethical problems which confront the editors, journalists and owners of newspapers. It is not a compilation of cast-iron principles but contains broad general principles, which, if applied with due discernment and adaptation to varying circumstances of each case, will help the journalists to self-regulate the conduct of their profession along the path of professional rectitude. These are by no means exhaustive nor are they meant to obtain a rigidity which could hinder the unfettered working of the Press.

The fundamental objective of journalism is to serve the people with news, views, comments and information on matters of public interest in a fair, accurate, unbiased, sober and decent manner. Towards this end, the press is expected to conduct itself in keeping with certain norms of professionalism universally recognised. The norms enunciated below and other specific guidelines appended thereafter, when applied with due discernment and adaptation to the varying circumstance of each case, will help the journalist to self-regulate his or her conduct.

Some of the broad principles evolved by the Council in course of its adjudication on various subjects both in respect of standards of journalism and the freedom of the Press are summarized below:

**Accuracy and fairness**: The press shall eschew publication of inaccurate, baseless, graceless, misleading or distorted material. All sides of the core issue or subject should be reported.

Unjustified rumours and surmises should not be set forth as facts.

**Pre-publication verification**: On receipt of a report or article of public interest and benefit containing imputations or comments against a citizen, the editor should check with due care and attention its factual accuracy - apart from other authentic sources with the person or the organisation concerned to elicit his / her or its version, comments or reaction and publish the same with due amendments in the report where necessary. In the event of lack or absence of response, a footnote to that effect should be appended to the report.

**Caution against defamatory writings**: A newspaper should not publish anything which is manifestly defamatory or libellous against any individual organisation unless after due care and checking, they have sufficient reason to believe that it is true and its publication will be for public good.

**Right to privacy**: The press shall not intrude or invade the privacy of an individual unless outweighed by genuine overriding public interest, not being a prurient or morbid curiosity. So, however, that once a matter becomes a matter of public record, the right to privacy no longer subsists and it becomes a legitimate subject for comment by press and media among others. Explanation: Things concerning a person's home, family, religion, health, sexuality, personal life and private affairs are covered by the concept of privacy excepting where any of these impinges upon the public or public interest.

**Recording interviews and phone conversation**: The press shall not tape-record anyone's conversation without that person's knowledge or consent, except where the recording is necessary to protect the journalist in a legal action, or for other compelling good reason.

**Corrections**: When any factual error or mistake is detected or confirmed, the newspaper should publish the correction promptly with due prominence and with apology or expression of regrets in a case of serious lapse.

**Right of reply**: The newspaper should promptly and with due prominence, publish either in full or with due editing, free of cost, at the instance of the person affected or feeling aggrieved / or concerned by the impugned publication, a contradiction / reply / clarification or rejoinder sent to the editor in the form of a letter or note. If the editor doubts the truth or factual accuracy of the contradiction / reply / clarification or rejoinder, he shall be at liberty to add separately at the end a brief editorial comment doubting its veracity, but only when this doubt is reasonably founded on unimpeachable documentary or other evidential material in his / her possession.

This is a concession which has to be availed of sparingly with due discretion and caution in appropriate cases.

**Letters to editor**: An editor who decides to open his columns for letters on a controversial subject, is not obliged to publish all the letters received in regard to that subject. He is entitled to select and publish only some of them either in entirety or the gist thereof. However, in exercising this discretion, he must make an honest endeavour to ensure that what is published is not one-sided but represents a fair balance between the views for and against with respect to the principal issue in controversy.

**Obscenity and vulgarity to be eschewed**: Newspapers / journalists shall not publish anything which is obscene, vulgar or offensive to public good taste.

**Violence not to be glorified**: Newspapers / journalists shall avoid presenting acts of violence, armed robberies and terrorist activities in a manner that glorifies the perpetrators' acts, declarations or death in the eyes of the public.

**Glorification / encouragement of social evils to be eschewed**: Newspapers shall not allow their columns to be misused for writings which have a tendency to encourage or glorify social evils like sati pratha or ostentatious celebrations.

**Headings not to be sensational / provocative and must justify the matter printed under them**: In general and particularly in the context of communal disputes or clashes - a. Provocative and sensational headlines are to be avoided; b. Headings must reflect and justify the matter printed under them; c. Headings containing allegations made in statements should either identify the body or the source making it or at least carry quotation marks.

**Caste, religion or community references**: In general, the caste identification of a person or a particular class should be avoided, particularly when in the context it conveys a sense or attributes a conduct or practice derogatory to that caste.

**Investigative journalism**, **its norms and parameters**: Investigative reporting has three basic elements. a. It has to be the work of the reporter, not of others he is reporting; b. The subject should be of public importance for the reader to know; c. An attempt is being made to hide the truth from the people.

**Confidence to be respected**: If information is received from a confidential source, the confidence should be respected.

**Advertisements**: Commercial advertisements are information as much as social, economic or

political information. What is more, advertisements shape attitude and ways of life at least as much as other kinds of information and comment. Journalistic propriety demands that advertisements must be clearly distinguishable from editorial matters carried in the newspaper.

**4.5. Paid News**

Paid news in India is the practice of cash payment or equivalent to journalists and media organizations by individuals and organizations so as to appear in their news articles and to "ensure sustained positive coverage".

**Definition of 'paid news':** The Committee acknowledged challenges in defining and determining what constitutes or qualifies as 'paid news'. It cited advertisements camouflaged as news, denial of coverage to select electoral candidates, exchanging of advertisement space for equity stakes between media houses and corporate and the rise in paid content as manifestations of paid news.

The Committee asked the Ministry of Information and Broadcasting (MoIB) to formulate a comprehensive legal definition of 'paid news' in consultation with stakeholders and suggest measures for usage of 'circumstantial evidence' in indentifying paid news.

**4.6. Ethics in Reality T.V**

Reality television connects people to the real world. Shows like Survivor, Amazing Race and The Bachelor have captivated audiences all around the world with its drama and raw emotions of ordinary people and not of paid actors. Adults, teens and even children as young as five years old are glued to their television as soon as these reality shows air. Reality shows, just like any other television programs has its ethics that needs to be responsibly preserved and honored.

**4.7. Ethics related to Sting Journalism**

**Meaning of Sting Operation**

A sting operation is a deceptive operation designed to catch a person committing a crime. Often Sting operation is referred to investigative journalism. Sting operations are deep investigation which are kept very confidential and are usually carried out to obtain information not easily accessible by people. They are generally undercover operations to unveil the information that have been concealed actively by people or have been kept suppressed under some political, monetary or other force.

**Types of Sting Operations**

Based on the purpose that they are meant to serve sting operations are classified into two types : Positive Sting operations : these sting operations are meant for public purposes and are based on issues that are very important in public domain these are generally related to government functionaries or activities by government . Another type of sting operations are Negative Sting Operations: are not meant to serve the public domain. They encroach upon the privacy of the person who has been caught upon the camera and can even be harmful for society and its people.

**Sting Operation in India**

The sting operations conducted in India are generally categorized as positive sting operations which are carried out with the motive to maintain public order and to target acts of individuals which are against public order but they may also turn out to be negative sting operations at times. These sting operations are also targeted to make the government more accountable. As democracy cannot survive without accountability and it is important that citizens are kept informed about government to retain this accountability.[1] India is a democratic country and thus being a democracy it is important that nothing in the country operates behind the scenes. Everything has to be crystal clear and informed to the citizens. Media being the biggest channel of communication plays a vital role of spreading and informing the citizens about what policies are being made and what the government is doing and acts as the strongest fourth pillar in a democracy. The efficiency of democracy is checked on the lines of freedom its press enjoys. In India freedom of press is impliedly incorporated under Article 19(1) (a) of Indian Constitution.[2]

Also people's right to know has been recognized important by judiciary under article 19(1) (a) where it has been held by Supreme Court that freedom of speech and expression includes freedom of press and circulation.[3]Justice Mathews while speaking on the necessity of sting operation told, certainly the public need to be informed about the acts of government and the public functionaries. This right to be informed is a part of freedom of the press.[4] Thus in India despite the absence of specific laws for sting operations, it is generally covered under Article 19(1) (a) of the Indian Constitution, 1950 with reasonable restrictions.

**Legality of Sting Operation in India**

In India there are no specific laws regarding sting operations. It is however dealt in under different provisions of different statutes. There has been a conflicting opinion of judiciary on sting operations and their legality. It has been widely analyzed that sting operations intervene in individual's privacy and thus violates article 21 under the Indian Constitution. Also they are seen violating public order and are a threat to decency and morality and thus are contrary to the provisions of article 19(2) of Indian Constitution.

The Courts in many cases have dealt with the problems pertaining to the legality of Sting operations and have decided upon it in accordance with the facts of the case. In a sting operation carried out by "LIVE INDIA" it was alleged that Ms. Uma Khurana, a teacher, was involved in forcing the girls for prostitution. These allegations resulted in anger amongst the mob consequently leading to physical attacks on the teacher. The investigation carried out on the orders of the court however clearly stated that the allegations made under the sting operation were false and the teacher was falsely alleged of being a part of act. The court in this matter stated that spreading information in the society is important beyond doubt but cases of entrapment like these should not be permitted.

However in another instance the legality of sting operations was upheld by Delhi High Court which was conducted to expose corruption in union parliament by Annirudha Bahal and Suhasini Raj. Courts in India have generally been of the opinion that sting operations are deceiving in nature. They are fake promises of confidentiality made by a person to trap the other for committing an act. They were declared illegal by Supreme Court and also a warrant was issued against those who conducted it. The Supreme Court has also stated that person who conducts the Sting operation can be held liable under section 12 of Prevention of Corruption Act for abatement of offence. Indian Courts on admissibility of sting operations have treated them as extra judicial confessions in certain cases like Naroda Patiya Massacre case where the sting operation was carried out by Ashish Khaitan and the operation has a high probative value and was accepted by court.

This ambiguity in the legality of sting operation needs to be clarified. A separate clause must be added stressing upon the difference between the sting operations that are genuine and those that encroach upon the privacy of others by Union Information and Broadcast Ministry. As Indian judiciary has always remained inclined towards the Right to life and liberty of

individuals. It has been said by Supreme Court that publishing anything relating to the privacy of individual without his consent would be violation of right to privacy under article 21 irrespective of the fact that whether the content published is true of false. This is also important because the Indian judiciary from time to time has laid down the importance of circulation of information in a democratic country like India.

Sting operation and freedom of press is one of the modes of this information circulation thus those sting operations which deal with genuine matters and are not against public order, decency and morality cannot be banned. It has become important to lay down rules and limitations governing the extent to which media can interfere in one's privacy because in the present scenario the sting operations are mainly carried out on topics which can attract the masses and increase channel TRPs. Thus it is an issue of immense importance that stricter and proper laws must be enacted to establish the definite legal status of sting operations in India and also to prevent the misuse of freedom of press by carrying out sting operations which disrespect the duty of maintaining others privacy. The laws must make sure that sting operations are carried out for the purpose that they are meant to serve that is public awareness and spreading information to citizens and do not become a threat to and individual by imposing false allegations and by collapsing his dignity , reputation in the society.

**Comparison of Sting Operations in India and Other Countries**

In countries like United States sting operations are considered to be legal and are treated as the bread and butter of the organizations. Entrapment is considered illegal in these countries. It has been clearly stated that prosecution based on entrapment is the abuse of courts process. Also defense of entrapment has not been considered as a substantive defense.

It is considered to be a clear and effective mode of crime prevention. These operations need to be carried out by approval of authorities like FBI. The Courts in US also opine that freedom of speech to press is not for the benefits of press but it is for the benefit of citizens. However sting operations are not permitted in country like Sweden. In India however the position and legality of sting operation is subject to various conflicted opinions. Delhi High Court has upheld right to Sting as integral part of freedom of speech and expression to establish a corruption free society. However on contrary Supreme Court held that Sting operations cannot be deemed lawful method for law enforcement.

**Drawbacks of Sting Operations**

The issue of sting operations is always seen surrounded by questions of morality, legality and ethics. The foremost concern arising out of sting operations is the violation of privacy of an individual. Where on one hand sting operations are a part of freedom of speech and expression under article 19(1)(a) of India Constitution on contrary they contravene the provisions of article 21 which provides right to life with dignity by collapsing the reputation and profession of a person on whom sting operation in targeted. It also encroaches upon his dignity as an individual.

The 17th Law Commission has even presented its recommendations to stop media interference in individual privacy through its 200th report.There are cases when these stings bring into limelight those individuals who are actually innocent but due to the influential nature of media the people tend to believe what is shown. It has also been found out in a survey that 72% viewers believe that sting operations serve the purpose. People tend to get influenced with the operations conducted as sting operations usually cover topics and target individuals about whom citizens are not aware and hence they are left with no option rather than to believe and get easily convinced. One of the major drawbacks of sting operations is that they do not reduce the rate of crime in any manner.

**Actions That Can Be Brought Against Sting Operations**

Sting operations have always been in question for their validity. In the absence of any proper laws governing it the actions can be brought under the provisions of different laws prevailing in the country. They are:

1) Violation of right to life under Article 21 of the Indian Constitution.

2) Violation of right to privacy under article 19(2) of the Indian Constitution regarding acts which are against public order, decency and morality.

3) For abatement of offence under Article 12 of Prevention of Corruption Act

4) For unlawful invasion under tort claim for damages can be made.

**Conclusion**

The coin of democracy when flipped results in right to privacy on one side and informed citizens on the other and media acts as a medium between the both. There may arise situation where conflict arises between both the sides of the coins as sting operations intervene into privacy of individuals to provide information to the citizens. To balance both there needs to be a

proper set of rules or guidelines which govern the sting operations conducted by media and defines unambiguously the extent of their legality and boundaries of their operation. The American distinction between entrapment and sting operations can also be considered in India.

**4.8. Ethics in Advertising, Public Relations and Social Media**

Ethics means a set of moral principles which govern a person's behavior or how the activity is conducted. And advertising means a mode of communication between a seller and a buyer.

**Thus ethics in advertising means a set of well defined principles which govern the ways of communication taking place between the seller and the buyer**. Ethics is the most important feature of the advertising industry. Though there are many benefits of advertising but then there are some points which don't match the ethical norms of advertising.

**Ethics also depends on what we believe**. If the advertisers make the ads on the belief that the customers will understand, persuade them to think, and then act on their ads, then this will lead to positive results and the ad may not be called unethical. But at the same time, if advertisers believe that they can fool their customers by showing any impractical things like just clicking fingers will make your home or office fully furnished or just buying a lottery ticket will make you a millionaire, then this is not going to work out for them and will be called as unethical.

Recently, the Vetican issued an article which says ads should follow three moral principles - Truthfulness, Social Responsibility and Upholding Human Dignity.

Generally, big companies never lie as they have to prove their points to various ad regulating bodies. Truth is always said but not completely. Sometimes its better not to reveal the whole truth in the ad but at times truth has to be shown for betterment.

Pharmaceutical Advertising - they help creating awareness, but one catchy point here is that the advertisers show what the medicine can cure but never talk about the side effects of that same thing or the risks involved in intake of it.

Children - children are the major sellers of the ads and the product. They have the power to convince the buyers. But when advertisers are using children in their ad, they should remember not to show them alone doing there work on their own like brushing teeth, playing with toys, or infants holding their own milk bottles as everyone knows that no one will leave their kids unattended while doing all these activities. So showing parents also involved in all activities or things being advertised will be more logical.

Alcohol - till today, there hasn't come any liquor ad which shows anyone drinking the original

liquor. They use mineral water and sodas in their advertisements with their brand name. These types of ads are called surrogate ads. These type of ads are totally unethical when liquor ads are totally banned. Even if there are no advertisements for alcohol, people will continue drinking.

Cigarettes and Tobacco - these products should be never advertised as consumption of these things is directly and badly responsible for cancer and other severe health issues. These as are already banned in countries like India, Norway, Thailand, Finland and Singapore.

Ads for social causes - these types of ads are ethical and are accepted by the people. But ads like condoms and contraceptive pills should be limited, as these are sometimes unethical, and are more likely to loose morality and decency at places where there is no educational knowledge about all these products.

Looking at all these above mentioned points, advertisers should start taking responsibility of self regulating their ads by:

- design self regulatory codes in their companies including ethical norms, truth, decency, and legal points
- keep tracking the activities and remove ads which don't fulfill the codes.
- Inform the consumers about the self regulatory codes of the company
- Pay attention on the complaints coming from consumers about the product ads.
- Maintain transparency throughout the company and system.

When all the above points are implemented, they will result in:

- making the company answerable for all its activities
- will reduce the chances of getting pointed out by the critics or any regulatory body.
- will help gain confidence of the customers, make them trust the company and their products.

**Importance of Ethics in Advertising**

The main aim of any business, big or small, is to increase sales, gain more consumers, and to improve its visibility in the market. In a nutshell, the business owners are looking for ways to make money and grow. The startups, on the other hand, have an additional responsibility to benefit their stakeholders.

Business owners want to increase the market share of their products. The first thought that comes to their mind is to advertise the products and services. They want their team to come up

with the most creative ways to promote their products to attract customers to them. Every advertiser wants to showcase their product as one of the best with unique qualities that none of the competitors possess.

Advertising is one of the essential tools for success in any business. However, in the fierce battle of brands, advertisers sometimes forget ethics and mislead the customers with false claims. Thus advertisements can be both helpful and harmful. The debate between ethical and unethical advertising begins here, although the line between the two is blurry and ill-defined.

**Few Examples of Unethical or Misleading Advertisements**

**Zomato** received a backlash when they used Hindi expletives, MC, and BC in bold and put thousands of hoarding across India to sell Mac-n-Cheese and Butter Chicken.

**Dabur Chyawanprash** ad, which claimed that it could boost the immunity of the children three times more and help them fight diseases, was slammed by the ASCI for the unsubstantiated claims.

**Arnica hair oil** ad claims, "Prevents hair fall and increases hair growth" and "It gives cooling to the brain and better sleep", were misleading and unsubstantiated according to ASCI.

HUL for its lever Ayush soap claimed 'based on 5,000-year-old Ayurved scriptures with 15 ayurvedic herbs'. The Customer Complaints Council (CCC) found that these claims besides other claims were inadequately substantiated and are misleading.

"The visual of the celebrity (Akshay Kumar) when seen in conjunction with the claims are likely to mislead consumers regarding the product efficacy and contravened ASCI's guidelines for celebrities in advertising," ASCI said.

**Rules and Regulations of Advertising**

In India, we have Advertising sector watchdog, Advertising Standards Council of India (ASCI), that investigates complaints against false and misleading advertisements

Established in 1985, ASCI is a voluntary self-regulatory organization of the advertising industry in India. The non-Government body is, committed to the cause of self- regulation in advertising, ensuring the protection of the interest of consumers.

The Ministry of Consumer Affairs, Food and Public Distribution (Department of Consumer Affairs) has launched a portal called "Grievance Against Misleading Advertisements (GAMA)". It is dealing with complaints relating to misleading advertisements. Under an MoU, the Department has assigned the task of processing the complaints received through the GAMA

portal to the Advertising Standards Council of India (ASCI) as per its code. ASCI evaluates any complaint regarding misleading or unethical ad received at GAMA. If the claim is true, ASCI asks the advertisers to modify or withdraw the misleading advertisements. In case of non-compliance, ASCI forwards such complaints to the Regulators concerned to take necessary action.

**Ethics in Public Relations**

Although each PR practitioner will decide which ethics they ultimately put into practice, the PR code of ethics maintained by the Public Relations Society of America (PRSA) is a useful starting point for ethically responsible decision-making.

These six provisions constitute its core code of conduct:

1. **Free flow of information**: Communications should be accurate and honest in order to maintain high-integrity relationships with the media and other stakeholders. Practices such as gift-giving must be handled with care.
2. **Competition**: PR practitioners should avoid deliberately undermining competitors and engaging in practices that damage the entire industry. Hiring should follow open and ethical standards.
3. **Disclosure of information**: All information necessary for informed decision-making should be disclosed to clients or employers. Sponsors and financial interests should be revealed to avoid deception.
4. **Safeguarding confidences**: Confidential, privileged, or otherwise private data should be kept safe. It is unethical to take such information to another job and use it to undermine a previous client or employer, or to leak it.
5. **Conflicts of interest**: "Real, perceived and potential" conflicts of interests should be avoided. PR professionals can better serve their clients and employers when their personal and business interests don't clash with their PR work.
6. **Enhancing the profession**: It's important to build trust in the PR profession among the public. When PR practitioners follow and self-enforce the PRSA code of conduct, they increase the overall credibility of public relations practice.

PRSA members should consult the organization's guidance on ethics in public relations, not only to avoid conflicts of interests and other improprieties but also to maintain public trust in the overall practice of public relations.

**Ethics in Social Media**

The concept of social networking pre-dates the Internet and mass communication as people are said to be social creatures who when working in groups can achieve results in a value greater than the sun of its parts . The explosive growth in the use of social media over the past decade has made it one of the most popular Internet services in the world, providing new avenues to "see and be seen",. The use of social media has changed the communication landscape resulting in changes in ethical norms and behavior.

Social media sites can be described as online services that allow users to create profiles which are "public, semi-public" or both. Users may create individual profiles and/or become a part of a group of people with whom they may be acquainted offline . They also provide avenues to create virtual friendships. Through these virtual friendships, people may access details about their contacts ranging from personal background information and interests to location. Social networking sites provide various tools to facilitate communication. These include chat rooms, blogs, private messages, public comments, ways of uploading content external to the site and sharing videos and photographs. Social media is therefore drastically changing the way people communicate and form relationships.

Today social media has proven to be one of the most, if not the most effective medium for the dissemination of information to various audiences. The power of this medium is phenomenal and ranges from its ability to overturn governments (e.g., Moldova), to mobilize protests, assist with getting support for humanitarian aid, organize political campaigns, organize groups to delay the passing of legislation (as in the case with the copyright bill in Canada) to making social media billionaires and millionaires. The enabling nature and the structure of the media that social networking offers provide a wide range of opportunities that were nonexistent before technology. Facebook and YouTube marketers and trainers provide two examples. Today people can interact with and learn from people millions of miles away. The global reach of this medium has removed all former pre-defined boundaries including geographical, social

and any other that existed previously. Technological advancements such as Web 2.0 and Web 4.0 which provide the framework for collaboration, have given new meaning to life from various perspectives: political, institutional and social.

**Social media**. Currently, the use of social media has become the part of human's life everywhere. It allows the users to get and share information all over the world in a very short time.

Unfortunately, the consequences of social media abuse in spreading information also affect the number of users who enter the legal domain resulting from the information spread on social media that is unethical.

As an effort to reduce the problem in using social media, ethical conduct is needed to prevent from mutually insult or accuse others for no apparent reason. As a matter of fact, these matters will lead the users into law for being careless in spreading information on the internet.

**ETHICS IN SOCIAL MEDIA**

The fast moving era also influence the technology growth. Nowadays almost everyone can share information and communicate directly by using social media through internet which saves more time and cost.

Indeed, users have freedom in using social media to communicate with anyone. What is ignored here is the ethics in using it. It would much better if users know what ethics should be noticed when using social networking.

The lack of public awareness related to ethics in social media will trigger some social problems. Mostly the users are blinded by the hoax news on social media. Here are some important things related ethics in using social media.

1. Ethics in Communication

   Mostly occurred, ethics is ignored during the communication through social media. The most common case appear is many abusive words during a conversation through social networking, both intentionally and unintentionally.It would be nice if communications on the Internet is using polite and proper words. Always use the correct language when we communicate to anyone through social media.

   2. Avoid Spreading race, pornography and violence issues

It would be wise if we do not spread information relates certain race or religion. Share useful information only and avoid conflict to others and uploading violent photos such as traffic accident photo or other violent images.

3. Check the news validity

Nowadays it is very common to find out a news that disfigure other parties in social media. Some parties did this to impose the competitors by sharing hoax news. Therefore, social media users should be more intelligent in capture any information. Before you share the news, it will be wiser to check the news validity first.

4. Appreciate other's works

When sharing information in the form of photographs, writings or videos which belong to others, make sure to mention the source to show your appreciation to other's works. Never copy-paste any contents without showing the source .

5. Do not share personal information too much

It would be wiser for you to restrict your personal life in using social media. Do not share your personal information such as phone number or home address. There will be possibility that other contacts on your list will use the information to harm you.

# NC 21066 – Basics in Photography-

## Unit-1

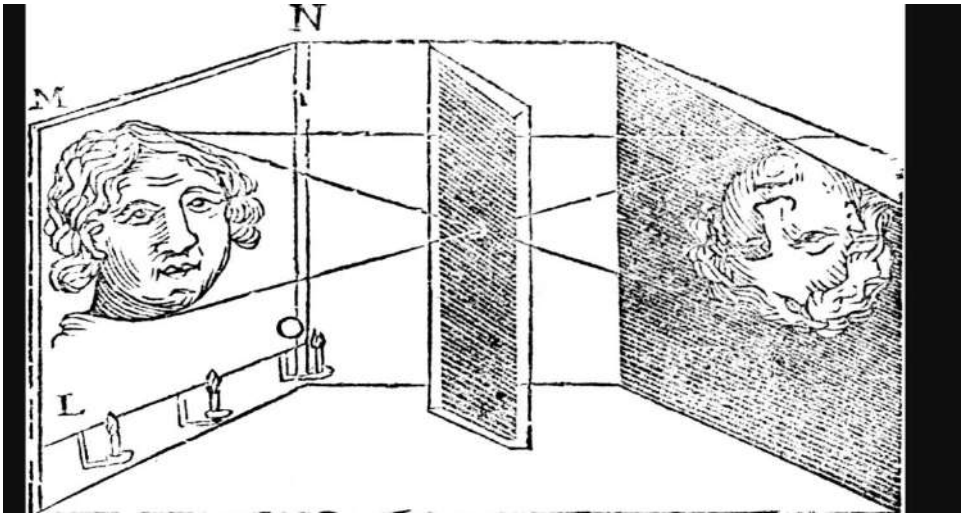

### 1. History and Evolution of photography

Photography **is regarded as the method of recording the image of an object through the action of light, or related radiation, on a light-sensitive material. The word, derived from the Greek *photos* ("light") and *graphein* ("to draw"), was first used in the 1830s**. As a means of visual communication and expression, photography has distinct aesthetic capabilities.

**Important Characters of a Photograph:**

- One of the most important characteristics is **immediacy.** Usually, but not necessarily, the image that is recorded is formed by a lens in a camera. Upon exposure to the light forming the image, the sensitive material undergoes changes in its structure, a latent (but reversed) image usually called a **negative** is formed, and the image becomes visible by development and permanent by fixing with sodium thiosulfate, called **"hypo."** The essential elements of the image are usually established immediately at the time of exposure. This characteristic is unique to photography and sets it apart from other ways of picture making. The seemingly automatic recording of an image by photography has given the process a sense of authenticity shared by no other picture-making technique. The photograph possesses, in the popular mind, such apparent accuracy that the adage **"the camera does not lie"** has become an accepted norm.
- The photographer perceives the essential qualities of the subject and interprets it according to his or her judgment, taste, and involvement. **An effective photograph can disseminate information about humanity and nature, record the visible world, and extend human knowledge and understanding. For all these reasons, photography has aptly been called the most important invention since the printing press.**

**Principle of the camera obscura**

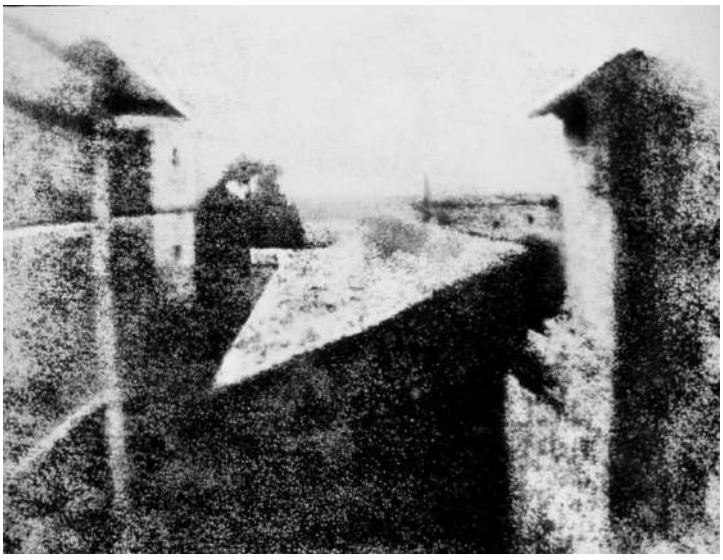

The forerunner of the camera was the **camera obscura,** a dark chamber or room with a hole in one wall, through which images of objects outside the room were projected on the opposite wall. The principle was probably known to the Chinese and to ancient Greeks such as Aristotle more than 2,000 years ago. Late in the 16th century, the Italian scientist and writer **Giambattista della Porta** demonstrated and described in detail the use of a camera obscura with a lens.

In **1727 the German professor of anatomy Johann Heinrich Schulze** proved that the darkening of silver salts, a phenomenon known since the 16th century and possibly earlier, was caused by light and not heat. His discovery, in combination with the camera obscura, provided the basic technology necessary for photography. It was not until the early 19th century, however, that photography actually came into being.

## A. Heliography

- **Nicéphore Niépce**, an amateur inventor living near Chalon-sur-Saône, a city 189 miles southeast of Paris, was interested in lithography, a process in which drawings are copied or drawn by hand onto lithographic stone and then printed in ink,
- Niépce oiled an engraving to make it transparent and then placed it on a plate coated with a light-sensitive solution of **bitumen of Judea (a type of asphalt)** and **lavender oil** and exposed the setup to sunlight.

- After a few hours, the solution under the light areas of the engraving hardened, while that under the dark areas remained soft and could be washed away, leaving a permanent, accurate copy of the engraving.
- Calling the process **heliography ("sun drawing"),** Niépce succeeded from 1822 onward in copying oiled engravings onto lithographic stone, glass, and zinc and from 1826 onto pewter plates.
- ***In 1826/27, using a camera obscura fitted with a pewter plate, Niépce produced the first successful photograph from nature, a view of the courtyard of his country estate, Gras, from an upper window of the house. The exposure time was about eight hours, during which the sun moved from east to west so that it appears to shine on both sides of the building.***

**View from the Window at Le Gras** **Cardinal d' Amboise**

- Niépce produced his most successful copy of an engraving, a portrait of **Cardinal d' Amboise**, in 1826. It was exposed in about three hours and in February 1827 he had the pewter plate etched to form a printing plate and had two prints pulled.
- Paper prints were the final aim of Niépce's heliographic process, yet all his other attempts, whether made by using a camera or by means of engravings, were underexposed and too weak to be etched. Nevertheless, Niépce's discoveries showed the path that others were to follow with more success.

## B. Daguerreotype:

**Louis-Jacques-Mandé Daguerre** **View of the Boulevard du Temple**

- **Louis-Jacques-Mandé Daguerre** was a professional scene painter for the theatre. Daguerre made preliminary sketches by tracing the images produced by both the camera obscura and the camera lucida, a prism-fitted instrument that was invented in 1807. In 1829 he made partnership with Niépce and worked with him for four years.
- By 1835, three years after Niépce's death, Daguerre had discovered that a latent image forms on a plate of **iodized silver** and that it can be **"developed"** and made visible by exposure to **mercury vapor**, which settles on the exposed parts of the image. **Exposure times could thus be reduced from eight hours to 30 minutes**.
- By 1837 Daguerre was able to fix the image permanently by using a solution of table salt to dissolve the unexposed silver iodide. That year he produced a photograph of his studio on a silvered copper plate, a photograph that was remarkable for its finer detais. Also that year, Niépce's son Isidore signed an agreement with Daguerre affirming Daguerre as the inventor of a new process, **"the daguerreotype."**
- Daguerre wrote a booklet describing the process, ***An Historical and Descriptive Account of the Various Processes of the Daguerreotype and the Diorama***, which at once became a best seller and 29 editions and translations appeared before the end of 1839.

## C. Calotype

- **William Henry Fox Talbot,** trained as a scientist at the University of Cambridge, could not draw his scientific observations, even with the aid of a camera lucida; this deficiency inspired him to invent a photographic process..
- He made paper light-sensitive by soaking it alternately in solutions of **common salt (sodium chloride) and silver nitrate**. Silver chloride was thus produced in the fibers of the paper. Upon exposure to light, the silver chloride became finely divided silver, dark in tone. Theoretically, the resulting **negative**, in which tonal and spatial values were reversed, could be used to make any number of **positives** simply by putting fresh sensitized paper in contact with the negative and exposing it to light.

**William Henry Fox Talbot** **Portrait of Two Men**

- Talbot's method of fixing the print by washing it in a strong solution of sodium chloride was inadequate, however, and the process was not successful until February 1839, when his astronomer friend **Sir John Herschel** suggested fixing the negatives with **sodium hyposulphite** (now called sodium thiosulfate) and waxing them before printing, which reduced the grain of the paper.
- Talbot, convinced of the value of duplicability, continued to work to improve his process. **On September 21–23, 1840**, while experimenting with **gallic acid**, a chemical he was informed would increase the sensitivity of his prepared paper, Talbot discovered that the acid could be used to develop a latent image. **This discovery revolutionized photography on paper as it had revolutionized photography on metal in 1835. Whereas previously Talbot had needed a**

**camera exposure of one hour to produce a negative, he now found that one minute was sufficient.**

- Talbot named his improved negative process the **calotype,** from the Greek meaning "**beautiful picture,"** and he protected his discoveries by patent.

**D. Development of the wet collodion process**

**Frederick Scott Archer**

**Ambrotypes**

- Photography was revolutionized in 1851 by the introduction of the wet collodion process for making **glass negatives**.
- This new technique, invented by the English sculptor **Frederick Scott Archer,** was 20 times faster than all previous methods
- **Paper prints** could easily be made from glass-plate negatives. The process had one major drawback: the photographer had to sensitize the plate almost immediately before exposure and expose it and process it while the coating was moist.
- Collodion is a solution of **nitrocellulose (guncotton) in alcohol and ether**; when the solvents evaporate, a clear plastic like film is formed.
- The wet collodion process was almost at once universally adopted because it rendered detail with great precision that rivaled that of the daguerreotype.
- It reigned supreme for more than 30 years and greatly increased the popularity of photography, despite the fact that it was unequally sensitive to different colors of the spectrum.
- The wet collodion process was also used to produce positive images on glass called **ambrotypes,** which were simply underexposed or bleached negatives that appeared positive when placed against a dark coating or backing.

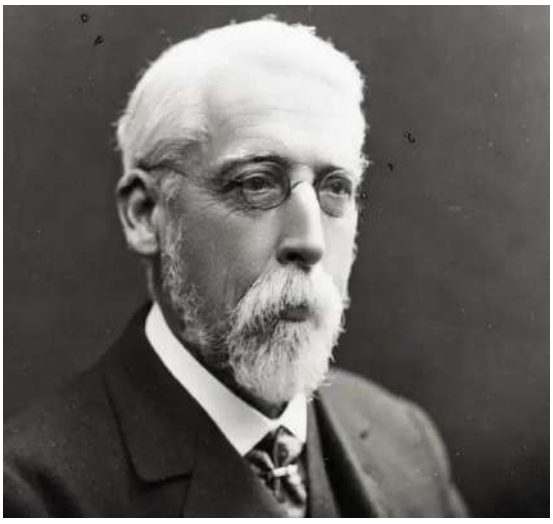

- **Tintypes, first known as ferrotypes or melainotypes,** were cheap variations of the ambrotype. Instead of being placed on glass, the collodion emulsion was coated on thin iron sheets that were enameled black. Easy to make and inexpensive to purchase, tintypes were popular among soldiers in the Civil War and remained a form of folk art throughout the 19th century.

**F. Development of the dry plate**:

- In the 1870s many attempts were made to find a dry substitute for wet collodion so that plates could be prepared in advance and developed long after exposure, which would thereby eliminate the need for a portable darkroom.
- In 1871 **Richard Leach Maddox**, an English physician, suggested suspending silver bromide in a gelatin emulsion, an idea that led, in 1878, to the introduction of factory-produced dry plates coated with gelatin containing silver salts. This event marked the beginning of the **modern era of photography.**
- Gelatin plates were about 60 times more sensitive than collodion plates. The increased speed freed the camera from the tripod, and a great variety of small hand-held cameras became available at relatively low cost, allowing photographers to take instantaneous snapshots.

**Dry Plates – Gelatin Process**

**Richard Leach Maddox**

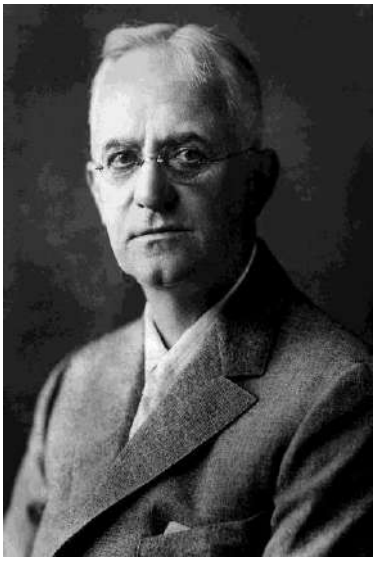

**G. Kodak Camera**

- Of these, the most popular was the **Kodak camera**, introduced by **George Eastman in 1888**. Its simplicity greatly accelerated the growth of amateur

photography, especially among women, to whom much of the Kodak advertising was addressed. In place of glass plates, the camera contained a roll of flexible negative material sufficient for taking 100 circular pictures, each roughly 2.5 inches (6 cm) in diameter.

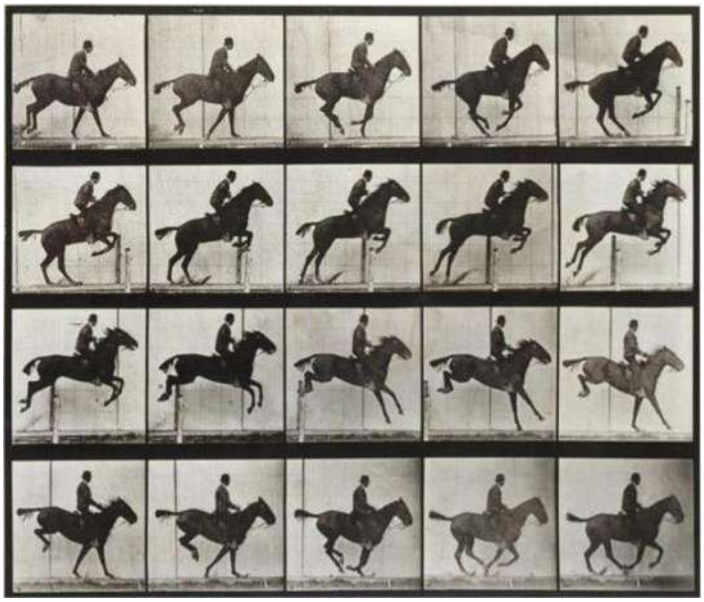

- After the last negative was exposed, the entire camera was sent to one of the Eastman factories in Rochester, New York, or Harrow, England where the roll was processed and printed;

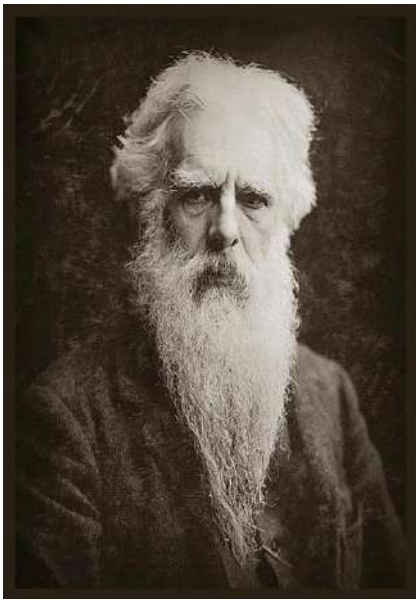

**Kodak camera – 1888** **George Eastman**

**H. Eadweard Muybridge: photographic study of a man jumping a horse**

**Eadweard Muybridge: *Figure Hopping***

- A few years before the introduction of the dry plate, the world was amazed by the photographs of horses taken by Eadweard Muybridge in California. To take these photographs, Muybridge used a series of 12 to 24 cameras arranged side by side opposite a reflecting screen. The shutters of the cameras were released by the breaking of their attached threads as the horse dashed by.
- Through this technique, Muybridge secured sets of sequential photographs of successive phases of the walk, the trot, and the gallop. When the pictures were published internationally in the popular and scientific press, they demonstrated that the positions of the animal's legs differed from those in traditional hand-drawn representations.

- To prove that his photographs were accurate, Muybridge projected them upon a screen one after the other with a lantern-slide projector he had built for the purpose; the result was the **world's first motion-picture presentation**. This memorable event took place at the San Francisco Art Association in 1880.

**I. Color Photography**

**Kodachrome film** **Leopold Godowsky, Jr., and Leopold Mannes**

- In the 1880s **photochromes,** colour prints made from hand-coloured photographs became fashionable, and they remained popular until they were gradually replaced in the first decades of the 20th century by **Autochrome plates.**
- The Autochrome process, introduced in France in 1907 by Auguste and Louis Lumière, was the first practical colour photography process. It used a colour screen a glass plate covered with grains of starch dyed to act as primary-colour filters and black dust that blocked all unfiltered light) coated with a thin film

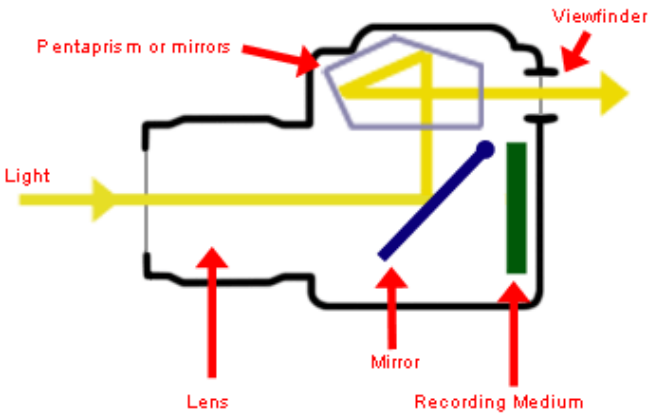

of panchromatic i.e., sensitive to all colours emulsion, and it resulted in a positive colour transparency.

- In 1935 **Leopold Godowsky, Jr., and Leopold Mannes**, two American musicians working with the Kodak Research Laboratories, initiated the modern era of colour photography with their invention of **Kodachrome film**.
- In 1942 Kodak introduced the **Kodacolor negative-positive** film that 20 years later—after many improvements in quality and speed and a great reduction in price—would become the most popular film used for amateur photography.

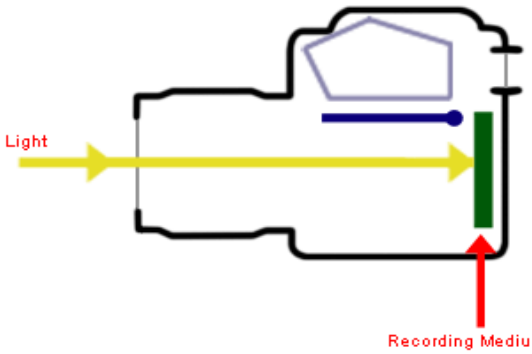

**2. Types of Cameras**-

**A. Single Lens Reflex - (SLR):**

- The most popular type of general-purpose camera for enthusiasts and professionals is the **single lens reflex (SLR).**
- This type of camera has a **moveable mirror** behind the lens which reflects an image through a **five-sided prism (pentaprism)** or pair of mirrors, onto a glass screen or the viewfinder). This means the photographer sees exactly the same image that will be exposed on the recording medium. .

- When you press the shutter button, the main mirror is flipped out of the way so the light passes straight through to the recording medium as pictured below. As you do this, you notice the image briefly disappear from the viewfinder. There is also the familiar sound of the **"camera click"** as the whole mechanism works.

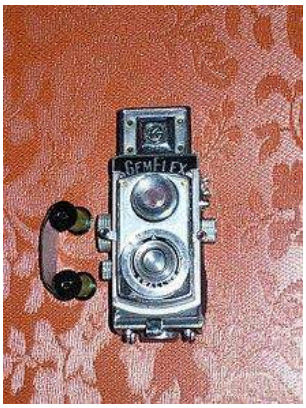

- The obvious advantage of this system is accuracy. SLR cameras also work well with different lenses. Since you are seeing exactly what the lens sees, you can swap lenses as required and always be confident of what you are capturing.
- There are also some disadvantages of this system:
    - SLR cameras tend to be bulkier and heavier than viewfinder cameras.
    - SLR cameras tend to be noisier than other types because of the physical mechanism.

**B. Twin Lens Reflex (TLR)**

- A **twin-lens reflex camera** (**TLR**) is a type of camera with two objective lenses of the same focal length. One of the lenses is the photographic objective or "taking lens" (the lens that takes the picture), while the other is used for the viewfinder system, which is usually viewed from above at waist level.
- In addition to the objective, the viewfinder consists of a 45-degree mirror , a matte focusing screen at the top of the camera, and a pop-up hood surrounding it.
- The two objectives are connected, so that the focus shown on the focusing screen will be exactly the same as on the film.
- TLR cameras ended after the arrival of digital cameras.
- Examples of TLR – **Kinaflex, Instantflex TL70, Gemflex**, **Rolleiflex**

## C. Rangefinder Cameras

- A **rangefinder camera** is a camera fitted with a **rangefinder** which is a range-finding focusing mechanism is allowing the photographer to measure the subject distance and take photographs that are in sharp focus.
- Most varieties of rangefinder show two images of the same subject, one of which moves when a calibrated wheel is turned; when the two images coincide and fuse into one, the distance can be read off the wheel.
- Cameras without built-in rangefinders could have an external rangefinder fitted into the accessory shoe. Earlier cameras of this type had separate viewfinder and rangefinder windows; later the rangefinder was incorporated into the viewfinder.
- More modern designs have rangefinders coupled to the focusing mechanism so that the lens is focused correctly when the rangefinder images fuse; compare with the focusing screen in non-autofocus SLRs.

  Example : **Foca Camera, Leica Camera, Contax Camera**

**Polaroid Cameras**

- Polaroid Camera is a **instant camera** is a camera which uses self-developing film to create a chemically developed print shortly after taking the picture. Polaroid Corporation pioneered and patented consumer-friendly instant cameras and film, and was followed by various other manufacturers.
- The invention of commercially viable instant cameras which were easy to use is generally credited to American scientist **Edwin Land**, who unveiled the first commercial instant camera, the model 95 Land Camera, in 1948 a year after he unveiled instant film in New York City.
- In February 2008, Polaroid discontinued the production of its instant films and cameras, shut down three manufacturing facilities as the sales of analog film by all makers dropped by first decade of the 21st century.
- In 2009, Polaroid was acquired by PLR IP Holdings LLC, which uses the Polaroid brand to market various products often relating to instant cameras. Among the products it markets are a Polaroid branded Fuji Instax instant camera, and various digital cameras and portable printers.

  Example: **Polaroid SX-70, Polaroid 635 Supercolor**,

**D. Super wide-Angle Camera**

- An ultra wide-angle Camera has a lens whose focal length is shorter than that of an average wide-angle lens, providing an even wider view.
- Many smart phones also have wide angle cameras. Example: Samsung Galaxy s 22 etc. It has a 50MP main camera wih a Field of View of 585 degrees.
- Some ultra wide angel cameras offer a 120 degree filed of view

**E. Panoramic Camera:**

- Panoramic cameras give you wide-area coverage with just one camera. You can use them to monitor activities and detect incidents in large areas, track the flow of people, and improve area management. And because just one camera plays the role of many, your installation and system costs are kept lower.
- Panoramic cameras are used for taking panoramic pictures by revolving a lens so that the film is exposed through a narrow vertical slit so that adjacent areas of the film are exposed consecutively. **It gives a wide and unobstructed, so as to take in an extensive area in all directions**
- **Panoramic photography** is a technique of photography, using specialized equipment or software that captures images with horizontally elongated fields of view. It is sometimes known as **wide format photography**.

- An image showing a field of view approximating, or greater than, that of the human eye – about 160° by 75° – may be termed panoramic

F. **Aerial Camera**

- Aerial cameras are **highly specialized instruments developed to enable accurate and consistent imagery of the below surface to be obtained from an aircraft**.
- Commonly used cameras are **Zeiss EMKA 15/23 and Wild RC-8**. These work on both panchromatic and colored films.
- Aerial photographs are simply pictures taken from above. There are two types of aerial photograph – **vertical and oblique**
- Aerial imagery is an indispensable tool for **topographical mapping and the interpretation of places, objects, and features**. The remote sensing method collects vital information that can be used for land use, agricultural management, forestry, conservation, urban planning and more

**G. Sub-miniature Camera:**

- A subminiature camera is a class of camera that is very much smaller than a "miniature camera". Cameras that used film smaller than 35mm were referred to as "sub-miniature"

- The smallest of these are often referred to as "ultra-miniature
- The smaller subminiature cameras, called ultraminiature cameras, particularly Minox, are associated with spying.
- **Subminiature photography** uses film such as 16mm, 9.5mm, 17mm, or 17.5mm films. It is distinct from photomicrography, photographing microscopic subjects with a camera which is not particularly small.
- There are many subminiature cameras Example: **Minox, followed by Tessina, GaMi, Rollei, Yashica, Mamiya, Gemflex and Minolta**

**Minolta 110 Zoom SLR**

**Russian KMZ Narciss 16mm SLR**

I. **Digital Photography**

- **Digital photography** uses cameras containing arrays of electronic photo detectors interfaced to an analog-to-digital converter (ADC) to produce images focused by a lens, as opposed to an exposure on photographic film.
- The digitized image is stored as a computer file ready for further digital processing, viewing, electronic publishing, or digital printing.
- Any electronic image sensor can be digitized; this was achieved in 1951. The modern era in digital photography is dominated by the semiconductor industry, which evolved later.
- An early semiconductor milestone was the advent of the **charge-coupled device (CCD) image sensor**, first demonstrated in April 1970; the field has advanced rapidly and continuously ever since, paced by concurrent advances in photolithographic fabrication.
- DSLR - digital single-lens reflex camera (DSLR) and most of the digital cameras now come with an electronic viewfinder, which approximates the final

photograph in real time, which can also review and adjust or delete a captured photograph within seconds, making this a form of instant photography, as compared to most photochemical cameras from the preceding era.

- Image sensors are arrays of electronic devices that convert the optical image created by the camera lens into a digital file that is stored in some digital memory device, inside or outside the camera. Each element of the image sensor array measures the intensity of light hitting a small area of the projected image i.e. a pixel and converts it to a digital value.
- The two main types of sensors are **charge-coupled devices (CCD), in which the photo charge is shifted to a central charge-to-voltage converter, and CMOS or active pixel sensors.**

## UNIT-2: Components of DSLR Camera

### 2.1 Key components of DSLR Camera

DSLR stands for Digital Single Lens Reflex. Digital stands for the sensor, single-lens means that the camera uses one only lens for different particular operations, and reflex stands for the system of the mirror in the camera. The following are the different parts of the DSLR Camera.

- **Viewfinder**: Viewfinder is a camera component that shows the photographer the area of the subject that will be included in a photograph. In modern cameras it usually is part of a direct visual- or range-finder focusing system and may also be used to display exposure settings or meter information.

- View Finder shows exactly what is going to be photographed. Most DSLR cameras have **optical TTL (through the lens**) viewfinders, which allow you to look through the lens.
- Photographers look through the viewfinder to get a better view of what they are shooting. It enables the photographers to frame or crop a particular scene to arrange their composition.
- Viewfinders reduce image distortion and capture an accurate image.

A major difference between basic compact cameras and Digital SLR cameras is that Digital SLR cameras use a mirror and **pentaprism system** to reflect the light coming through the lens directly to the eye level viewfinder. When the shutter release button is pressed the mirror flips up so that the light can reach the image sensor. The mirror system found in Digital SLR cameras is a major reason for its larger size. It also contributes to the higher price of the camera

- **LCD Screen**: LCD stands for **Liquid Crystal Display**. It is the display technology used to create the screens embedded in the back of nearly all digital cameras.
  - LCD works for reviewing photos, displaying menu options and serving as a live viewfinder.
  - All digital cameras contain full-color display screens. It is the display of the camera, in which we will be able the pictures, the settings or what we have captured and how does it look as a final thing.
  - Unlike the optical viewfinder, the LCD screen displays the entire frame that the sensors capture. Optical viewfinders, even on a professional level DSLR, only show 90-95% of the image.
- **Lens**: Lens brings light to a fixed focal point and it allows you to control the amount of light that is coming at your camera. Convex lens are used in photographic camera so that real image formed can be taken on screen as concave mirror does not form real image. The purpose of the camera lens is to focus and direct the incoming light.

  The camera lens consists of one or more precisely shaped pieces of glass or plastic called **elements.** The light coming through the elements is "bent" or directed to the image sensor where the information about the light is captured. The camera lens is an extremely important part of the camera. That is because the type of lens and the quality of the lens being used will contribute greatly to the sharpness and overall appearance of the picture. There are various types of

camera lenses available. The most common types of lenses are Wide Angle, Standard, Telephoto, and Zoom lenses. Lenses on Basic Compact Cameras are fixed and cannot be changed. Lenses for Digital SLR Cameras and Compact System Cameras can be removed and changed to better suit a particular photo shooting situation.

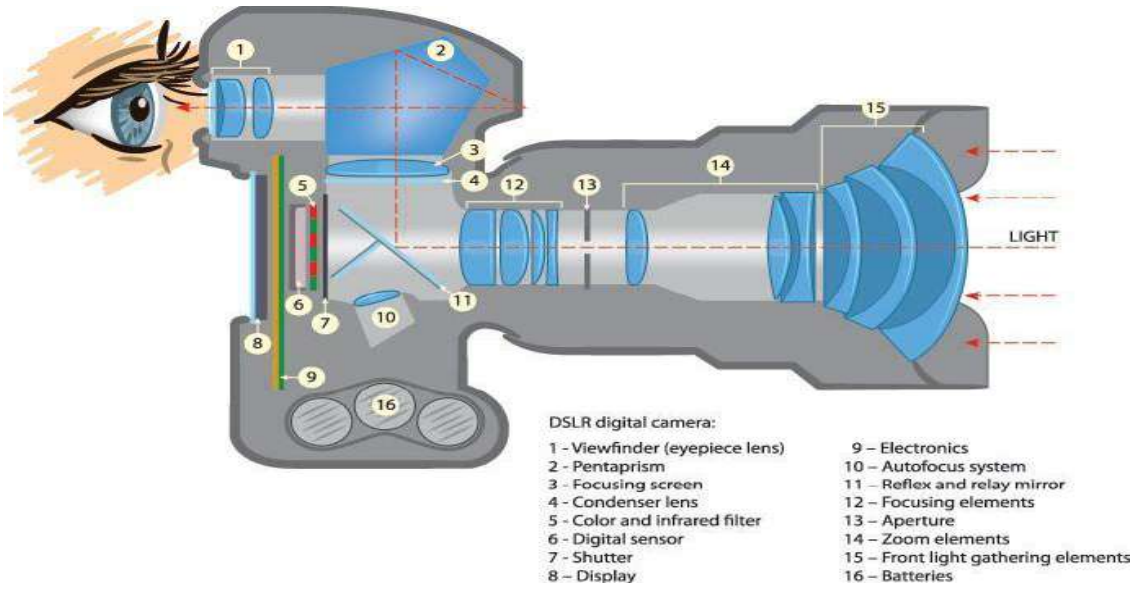

- **Flash:** A flash is a device used in photography that produces a brief burst of light typically lasting 1/1000 to 1/200 of a second at a color temperature of 5500 K to help illuminate a scene. A major purpose of a flash is to illuminate a dark scene. There are Built-in flash which comes out as a pop-up. Besides having a built-in flash, you can also add an external flash or otherwise, known as a speedlite
- **Mode Dial**: A mode dial or camera dial is a dial used on digital cameras to change the camera's mode. Most digital cameras, including DSLR and SLR-like cameras, support modes, selectable either by a **rotary dial** or from a menu.
    - Mode dial in a DSLR camera helps to change the mode that you are shooting or taking a picture of. In most DSLR cameras you will find the mode dial as a wheel.
    - Shooting modes fall into three categories: auto, scene, and P, S, A, and M modes.
        - In auto and scene modes the camera controls shutter speed and aperture.
        - P, S, A, and M mode are known as exposure modes and give photographers a choice as to which elements of exposure—aperture or shutter speed—they wish to control.
        - Represented by the letters “P” - Programmed auto), “S” - Shutter-priority auto), “A” - Aperture-priority auto), or “M” - Manual
        - In M mode (manual exposure), the photographer is able to adjust the aperture, shutter speed and sensitivity. In P, A, and S modes the camera determines the optimal exposure (image brightness), but in M mode, the user settings determine the exposure.
- **Shutter Release Button**: When pressed, the shutter of the camera is "released", so that it opens to capture a picture, and then closes, allowing an exposure time as determined by the shutter speed setting. Some cameras also utilize an electronic shutter, as opposed to a mechanical shutter. In DSLR camera, without

the shutter release button picture cannot be taken. This button is placed in the top right of the camera. The digital cameras have a two step shutter button that's designed to help with focusing and framing the image

- **Mirror**: The mirror's job is to "guide" or direct the light from the lens into the viewfinder. It does a click once we take the picture. That click is the movement of the mirror on your DSLR camera
- **Sensor**: A sensor in a camera is added to receive the information that comes from the viewfinder and the lens. The sensor is the main part that turns that information into an image. There are two main types of sensors that a DSLR camera works with.
    - CCD charge-coupled device
    - CMOS complementary-metal-oxide semiconductor.

The focused light coming through the lens is directed to the digital camera's image sensor. That focused light is "captured" or read by the sensor prior to being stored in the cameras memory card. The image sensor has a grid with millions of microscopic light information gathering elements called **"photo-sites."** Each one of these photo-sites are better known as **pixels.** There are one million pixels in a Megapixel. Each photographic image consists of millions of pixels. In general, the more pixels in a picture, the better the quality of the image. The size of the camera's image sensor is also a factor in the quality of an image. Larger sensors have larger pixels and are able to reproduce colors as well as shadow areas more accurately. The image sensors in Digital SLR cameras are much larger than those in basic compact cameras.

**Working of DSLR Camera**

As the camera starts focusing, the camera begins to read the light that is coming in. The ambient light falls on the lens and it flows through the aperture. Depending on the size of the aperture that particular amount of light will pass to the shutter. The Shutter will decide how long this amount of light should be let in on the sensor. Once the shutter release button is pressed it will snap open and shut at the set speed and slice the light that is coming in. This incoming sliced light will fall in on the light sensor and then on the digital film; thus burning the image on it

**2.2. Autofocus:**

Autofocus (AF) is the feature of a camera that tries to ensure that the chosen subject is sharp within the photo. Sensors detect how far away the subject is from the camera, and this information is relayed to the lens, which then uses an electronic motor to adjust the focal distance of the lens. All DSLRs cameras have the option to disable AF if desired.

The first autofocus cameras were developed in the late 1970's and their speed and accuracy has been improved greatly since that time. The latest cameras have incredibly complex, dedicated AF sensors that analyze the scene through the viewfinder and predict what it is that you are trying to focus on. Once they have locked onto a subject, focus can be maintained on a moving target which makes it particularly useful for sports photography. Thus autofocus is the system that automatically adjusts camera focus. Cameras typically have a two-stage shutter-release button:

- First stage in which the shutter-release button is lightly pressed halfway, and a
- Second Stage in which the shutter-release button is pressed the rest of the way down.

The following are the main camera Autofocus modes in photography:

- Single autofocus mode (AF-S / One-Shot AF) Single autofocus mode (AF single) is the most basic option available. ...
- Continuous autofocus mode (AF-C / AI Servo) ...
- Hybrid autofocus mode (AF-A / AI Focus AF)

**2.3. Light controls- Aperture, Shutter and Exposure**

The following are the three different ways to control how much light you camera takes in. They are the **ISO**, the **Aperture**, and the **Shutter Speed**.

**A. ISO - International Organization for Standardization**

The Two film standards called **ASA and DIN** were combined into ISO standards i.e. International Organization for Standardization in 1974. Although ISO initially was defined only for film sensitivity, it was later adopted by digital camera manufacturers with the purpose of maintaining similar brightness levels in film.

- ISO is simply a camera setting that will brighten or darken a photo. As you increase your ISO number, your photos will grow progressively brighter.
- A photo taken at too high of an ISO will show a lot of grain, also known as **noise,** and might not be usable.
- ISO should be raised only when we are unable to brighten the photo via shutter speed or aperture
- A lower ISO value means less sensitivity to light, while a higher ISO means more sensitivity.
- Best ISO Settings
    - ISO 100-200: Best for bright daylight.
    - ISO 200-400: Slightly less ambient light, such as indoors during the daytime or outdoors in the shade.
    - ISO 400-800: Indoors, with a flash.
    - ISO 800-1600: Low light indoors or at night when you can't use a flash.

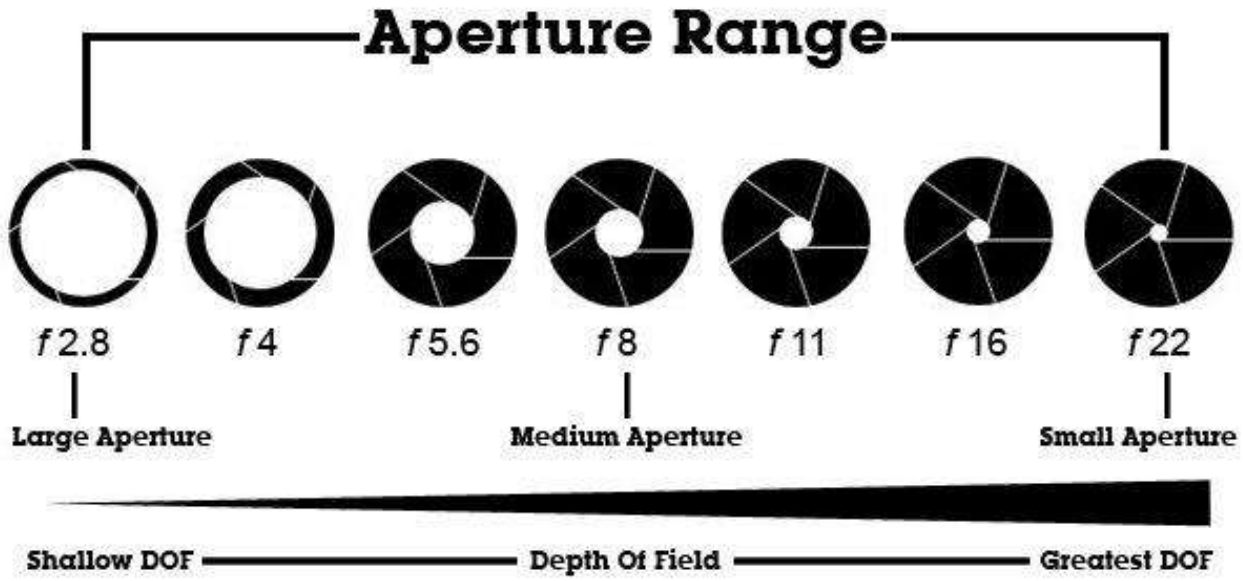

The lowest ISO (base ISO) of the camera is typically ISO 100 or 200 can be used in plenty of light and to minimize the appearance of noise as much as possible. ISO should be increased only when there is not enough light for the camera to capture a sharp, bright photo any other way. When the photos are taken in indoors without a

flash, or capturing ultra-fast action higher ISO number is set to take the photos without introducing blur

**B. Aperture**:

Aperture is defined as a space through which light passes in an optical or photographic instrument. The aperture setting determines how much light hits your sensor. Aperture refers to a hole in your lens through which light enters the camera.

- The aperture of a lens is the diameter of its opening.
- Aperture is expressed as f/stop.
- The smaller the f/stop number or f/value the larger the lens opening (aperture).
- **F-stop values: f/2, f/2.8, f/4, f/5.6, f/8, f/11, f/16, f/22etc.**

## Depth of the Field

Depth of field is how much of your image is in focus. In more technical terms, depth of field is the distance in an image where objects appear "acceptably in focus" or have a level of "acceptable sharpness." Depth of the Field helps distinguish the foreground from the background to create a focal point that draws the eye and tells it where to look.

- Depth of field refers to the range of distance that appears acceptably sharp. It varies depending on camera type, aperture and focusing distance, although print size and viewing distance can also influence our perception of depth of field.
- **The aperture** is the opening created by a set of overlapping metal blades, known as the diaphragm, inside a photographic lens. This opening controls the amount

of light coming through the lens. The Depth of the field is controlled by the aperture.

- Depth of field is the area of acceptable sharpness in front of and behind the subject which the lens is focused. It refers to how blurry or sharp the area is around your subject. A shallow depth of field refers to a small area in focus. Often the subject is in focus, while the background is blurred.
- A higher depth of field would see the whole image from foreground to background sharp and in focus, a lower depth would result in blurry backgrounds and blurred elements in the foreground too
- ***The smallest f-numbers correspond to the large apertures and therefore the shallowest depth of fields.***
- ***And the larger f-numbers correspond to the smallest apertures and therefore the deepest depth of fields.***

| f- Number | Aperture | Depth of the Field |
|---|---|---|
| **SMALL - f/2, f/2.8, f/4, f/5.6** | **LARGE Aperture** | **SHALLOW Depth of Field** |
| **LARGE - f/11, f/16, f/22** | **SMALL Aperture** | **DEEP Depth of the Field** |

## C. Shutter Speed

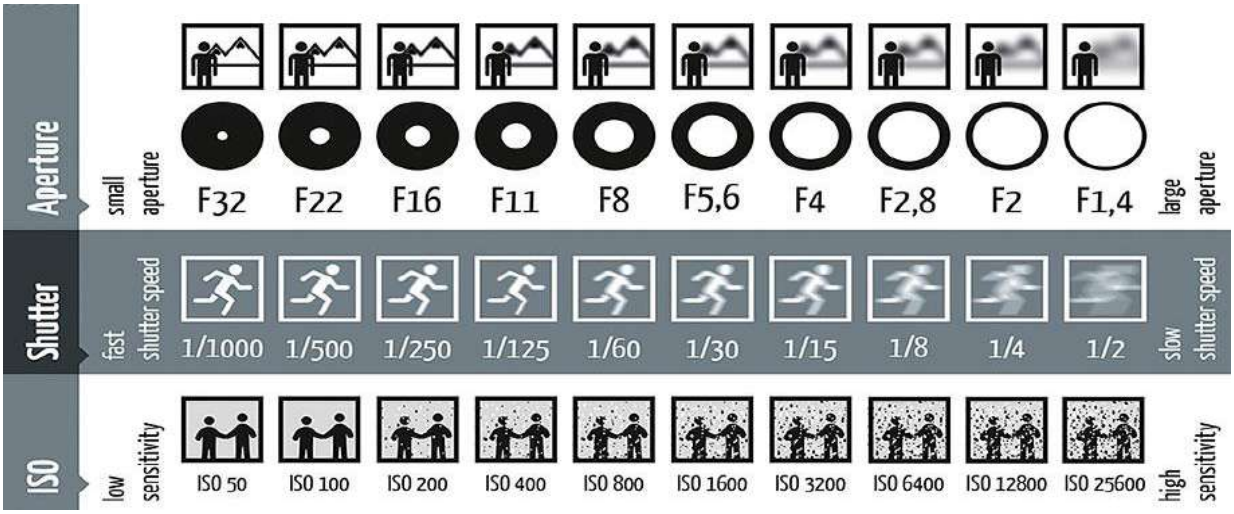

Shutter speed is the *length of time* the camera shutter is open, exposing light onto the camera sensor. It indicates how long is the camera spending in taking the photo.

- Shutter speed is **the speed at which the shutter of the camera closes**.
- Shutter speeds are typically measured in fractions of a second when they are under a second. For example, 1/4 means a quarter of a second, while 1/250 means one-two-hundred-and-fiftieth of a second (or four milliseconds). Most modern DSLRs and mirror less cameras can handle shutter speeds of 1/4000th of a second at the fastest, while some can handle even quicker speeds of 1/8000th of a second and faster
- A fast shutter speed creates a shorter exposure — the amount of light the camera takes in — and a slow shutter speed gives the photographer a longer exposure.
- With higher shutter speed, the less time you leave the shutter open and the less is exposed to light. In general, higher shutter speeds are better for daytime

photography. With low shutter speed, the more time you leave the shutter open and the more is exposed to light. In general, low shutter speeds are better for nighttime photos.

- **The effect of shutter speed is on exposure, which relates to the brightness of an image. If you use a long shutter speed, your camera sensor gathers a lot of light, and the resulting photo will be quite bright. By using a quick shutter speed, your camera sensor is only exposed to a small fraction of light, resulting in a darker photo**
- Shutter speed can be a vital tool to capture a photo of the proper brightness. On a sunny day, you may need to use a fast shutter speed so that your photo isn't overexposed. Or, if it is dark out, a long shutter speed may be necessary to avoid a photo that is too dark
- A fast shutter speed is typically whatever it takes to freeze action. If you are photographing birds, that may be 1/1000th second or faster. However, for general photography of slower-moving subjects, you might be able to take pictures at 1/200th second, 1/100th second, or even longer without introducing motion blur.
- Long shutter speeds are typically above 1 second – at which point, you will need to use a tripod to get sharp images. You would use long shutter speeds for certain types of low-light / night photography, or to capture movement intentionally. If anything in your scene is moving when you use long shutter speeds, it will appear very blurry.
- **A fast shutter speed - freezes action. Example - If you are photographing birds, which may be 1/1000th second or faster.**
- **Slow Shutter Speed – Slower Moving Objects - For slower-moving subjects, you might be able to take pictures at 1/200th second, 1/100th second, or even longer without introducing motion blur.**
- **Long Shutter Speed – Low Light / Night Photography - Long shutter speeds are typically above 1 second – at which point, you will need to use a tripod to get sharp images. You would use long shutter speeds to capture movement intentionally.**

- Cameras handle shutter speeds automatically by default. When the camera is set to "AUTO" mode, the shutter speed, aperture and ISO is selected by the camera. To set the shutter speed manually – we can set the camera to "SHUTTER PRIORITY" and choose the shutter speed, and the camera automatically selects the aperture. By setting the camera to "MANUAL" mode we can choose both shutter speed and aperture manually. Within both of these modes, you can choose to set ISO manually or automatically.

| LIGHT FACTOR | METHOD |
|---|---|
| **ISO** | Amount of light by the sensitivity of the sensor |
| **Shutter Speed** | Amount of light by the length of time |
| **Aperture** | Amount of light by the intensity by a series of different sized openings |

## 2.4. Lenses – Zoom - Use of Lenses

There are two basic categories of camera lenses:

1. **Prime lenses**. Primes have a fixed lens focal length, making them faster and sharper. While prime lenses are less flexible due to the fixed focal length, they are also fast and lightweight, making them easy to travel with.

**2.** **Zoom lenses**. They use a series of lenses to allow different focal lengths from a single lens, making them more flexible but not as fast. They contain more glass, which aids in their flexibility, but they also tend to be bigger and heavier than prime lenses.

Within both prime and zoom types of lenses, there are a lenses with different focal lengths**.**

1. **Macro Lenses** - This type of camera lens is used to create very close-up, macro photographs. They produce sharp images at extremely close range. These lenses are used in Nature Photography

2. **Telephoto Lenses** - Telephoto lenses are a type of zoom lens with multiple focal points. These types of lenses are great for isolating a subject that is far away with a narrower field of view. A telephoto lens is used for focusing in on distant objects. Eg. Sports Photographers. They are quite large, heavy, and expensive,

3. **Wide Angle Lenses** - Wide angle lenses are ideal for fitting a large area into your frame. This is especially useful for landscape photography or street photography.

4. **Standard Lenses**: Standard lenses can be used for a variety of different types of photography. Their focal lengths are from 35mm and 85mm.

**5.** **Specialty Lenses**

- **Fisheye lens**. A fisheye lens is an ultra-wide-angle lens that can take in a full 180 degree radius around it. Fisheye lenses are so named because they distort an image's field of view, making even a room in a house look like a bubble.

- **Tilt shift lens**. A tilt shift lens distorts perspective, making things look smaller than they really are—almost as if they are toys.
- **Infrared lens**. These lenses play with light rather than perspective, filtering out all light waves except infrared for a unique visual effect

| Focal Length | Type of Lens | What is it used for? |
|---|---|---|
| 4mm - 14mm | Fisheye | Abstract, creative |
| 14mm - 35mm | Wide angle | Landscape, architecture |
| 35mm - 85mm | Standard | Street, travel, portrait |
| 85mm - 135mm | Short telephoto | Street photography and portraits |
| 135mm+ | Medium telephoto | Sports, wildlife, action |
| 300mm+ | Super telephoto | Sports from a distance, nature and astronomy |
| 35mm - 200mm | Macro | Close-up shots |

Thus Zoom lenses are 70-200 mm lens. Prime lenses have a fixed focal range - Can't zoom in or out. The main advantage of prime lenses is that they specialize in just one focal length. Prime Lenses produce much higher quality images than a zoom lens in general. Telephoto Lens has a range of 100mm up to 600mm, sometimes even more. Telephoto lenses are bulky and may require a tripod to support them

**2.5. Using of Camera Accessories – Filter, Reflector, Lens hood, Tripod**

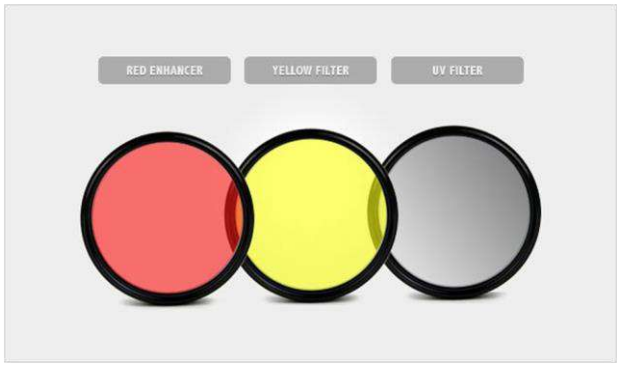

**A. Filters:**

Lens filters are transparent or translucent glass or gelatin elements that attach to the front of a lens. They protect the camera lens. They alter the characteristics of light passing through the lens or add special effects and colors to an image. The filter can be of a square or oblong shape and mounted in a holder accessory, or, more commonly, a glass or plastic disk in a metal or plastic ring frame, which can be screwed into the front of or clipped onto the camera lens. Filters, in photography are used to selectively modify the component wavelengths of mixed (e.g., white) light before it strikes the film. Filters change the dynamics of the light entering the lens and usually are altered with exposure to compensate for this fact. This is called the Filter Factor and each filter has a specific filter factor. Basing on the type of fitting filters are of two types:

- **Screw-in filters** - Screw-in filters fit directly onto your lens, in the threads at the edge of the lens barrel. Each screw-in filter is a specific width, so the more

lenses of different widths may need more filters. Screw-in filters are ideal and make polarizers and UV filters easy to swap in and out

- ***Slot-in filters***, a *filter* holder is placed on the lens' adapter ring and *filters* are dropped into the holder. The holder usually has interchangeable ...

**Screw-in filters** ***Slot-in filters***

Basing on the type of filters used there are three types of filters. They are uv Filters, P**olarizing Filters and Neutral Density filters**

# Unit-3 – Notes

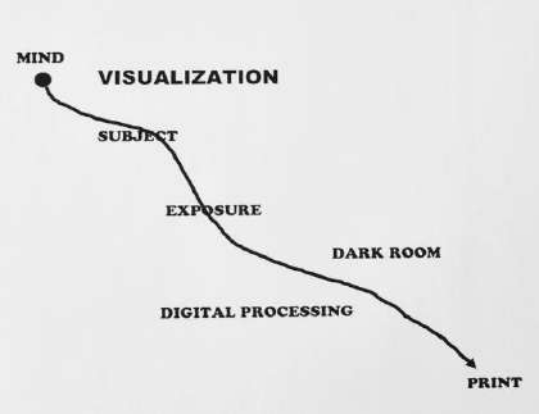

## UNIT - 3: DSLR Camera Photographs and Editing

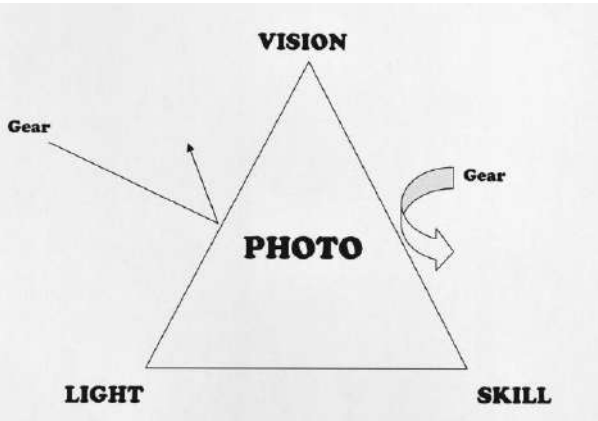

### 3.1. Visualization of a Photograph

Visualization is a conscious process of projecting the final photographic image in the mind before taking the first steps in actually photographing the subject. The term visualization refers to the entire emotional-mental process of creating a photograph, and as such, it is of the most important concepts in photography." "To visualize an image (in whole or in part) is to see it clearly in the mind prior to exposure, a continuous

projection from composing the image through the final print." Visualization is more accurately viewed as an attitude toward photography. Thus Photographic visualization is the confluence of imagination and technique. It is the ability to picture the essence of the final print in your mind before releasing the shutter.

The first step towards visualization – and hence toward expressive interpretation – is to become aware of the world around us in terms of the photographic image. A photographer must explore what lies before our eyes for its significance, substance, shape, texture, and the relationship of tonal values. Hence visualization is all about the perception of the surroundings and aesthetic persuasions. Visualization is a conscious process of projecting the final photographic image in the mind before taking the first steps in actually photographing the subject. The term visualization refers to the entire emotional-mental process of creating a photograph, and as such, it is of the most important concepts in photography." "To visualize an image is to see it clearly in the mind prior to exposure, a continuous projection from composing the image through the final print." Photographic visualization is the confluence of imagination and technique. It is the ability to picture the essence of the final print in your mind before releasing the shutter.

Ansel Adams said I use my mind to direct the shot, the camera and everything else follows. Ansel Adams wrote and instructed extensively on the process of visualization. He deemed it to be a conscious, intuitive, and expressive process that begins as an artistic construct in the mind that the photographer deliberately and physically translates into a visual and tangible expression of that construct. Adams writes much more on visualization and concentrates heavily on the appreciation of structure, shape, and form as well as technical manipulations of the tools of the trade that culminates in the print, the end product of visualization. According to him the three things that determine the success in making a compelling photograph are

- Artistic vision,
- The light, and
- Skill of the photographer.

He also maintained that the triad above is impervious to the essential gear that one carries: the camera and lens. In the words of Ansel Adams, the composition card is elegantly defined and described: *"Visualizing photographs can be carried a step further by using a black cut-out card … The frame is cut to the proportions of the film format and held at the approximate distance from the eye to approximate the image area. The card helps in isolating and seeing more acutely the relationships of subject elements …"* The power of the composing card are that it trains the mind and the eyes to visualize the composition out of the relative "vastness" of the scene before the photographer makes the exposure. With practice and experience, the potential exists for the photographer to become more skilled to recognize and "filter out" out the extraneous elements and include only what is desired and needed for the photograph.

**Photo Composition - Shapes**

Photo composition is how a photographer arranges visual elements within their frame. It's a placing and organization of objects in a pleasing style says photographer Adam. Long. **The points relevant for all forms of photography are**

1. **Lines**: Lines will help to balance the photo, direct the viewer's eye, and comprise the overall message of the photograph. Strong lines within a photograph also make an image pop. The understanding of the concept of leading lines gives the photographer control on the subject and the direction of the viewer's eye.
2. **Shapes**: Every element within the frame has a shape and each shape will have a varied effect on the viewer. A circle, for example, can create a calm and harmonious

feeling while helping direct the viewer's eye around and inside the circular shape. On the other hand, a triangle will make your photo appear much sharper and geometric. It will also point the viewer's eye in a specific direction which makes intention and planning a necessity when featuring this shape.

3. **Depth:** The three dimensional effect in the photograph is called depth. An image without depth will appear flat and dull and will not inspire the viewer. Depth is created by elements such as lighting and the position of the subjects. To create depth photographer must use the shadows and angles created by your light source.

Thus in a photograph the LINES are used to direct your viewers' attention to the main subject. Various shapes are used to create setting in the photo. The light is used to create depth and add additional dimension to the photograph.

### 3.2. Characteristics of A Photograph – Visual Elements

Visual elements are the devices and techniques applied by photographers while taking a photograph to ensure a pleasing and aesthetic outcome. The visual elements are like a set of tools that can be used to construct a great image.

**A. Light quality** describes the source, amount, and direction of lighting in a photograph. Light can come from natural sources, like the sun. It can be altered or created by humans, by using such things as flash bulbs or lamps. It can also be diffused by clouds or by humans putting a veil of cloth over a lamp. The direction of light is also important when looking at photographs: it can come from above, behind, or from one side. *Bright, dim, cloudy, directional, diffused*, and *flash* are some terms used to describe lighting.

**B. Texture** is how the surface of an object appears to feel or actually feels to the touch. Texture can be described as rough, smooth, soft, etc. Texture is shown in photographs by the way the light falls on an object and through value changes. The paper on which the photograph is made also determines texture

**C. Focus** is the sharpness or clarity of subjects in the photographic image. Soft focus is created when a photographer manipulates the camera to achieve blurry, gentle edges. Photographers use the aperture and limitations of the lens to create sharp detail, soft edges, or both; this is called selective focus.

D. **Color**: Artists use color to achieve many effects. Color gives viewers a sense of mood, place, and time of year. Color can also move your eye around a composition and create a sense of space on a flat surface. Some artists achieve very saturated (strong, intense)

color in their images, while others intentionally use subdued or muted colors in their subject matter.

**E. Angle of view or Point of View** is the position from where the photographer took the picture. A photographer can point the camera from below, above or straight at an object. In other artistic media, this is often called point of view. When looking for subjects, especially in nature, a photographer often shifts the angle of view to make interesting images. Angle of view can also express emotion or mood. It can give the viewer a sense of being small if looking up, or a sense of being big if looking down.

**Angle of view or Point of View** in photography simply means the position from which the camera sees the scene. The way the camera is looking at the subject i.e. looking down, looking up, how close we are to the subject make about point of view and will change how viewer sees the photo. Thus 'point of view' refers to the position the camera while viewing a scene. It is the position from which the camera sees the scene.

- Juxtaposition: Shooting a subject from an unexpected angle is regarded as Juxtaposition. It will have more impact than the viewing angle encountered in everyday life.
- A powerful point of view involves "becoming the subject." This means that shooting the photo from the angle of the subject. These shots allow the viewer to feel like they are experiencing the event first hand.
- Shooting a photo from the eye level of the subject is the quickest way to help the viewer's connects emotionally with a photo subject. By literally putting those at the photo subject's level can create an instinctual response. Shooting at eye level also allows you to see more of the subject than shooting downward or upward. This straight-on angle also helps to prevent distortion caused by perspective or angle of view.
- When you shoot a photo from below a subject, you can make the viewer feel as though the subject is in control of a situation. The simple act of looking up at a subject can impart a feeling of smallness, loss of control or a sense that the subject is unobtainable.
- Shooting from above a subject allows the viewer to feel superior to the subject or convey a sense of protectiveness of the subject.

**F. Framing** is how a photographer carefully presents a subject. Unlike painters, who usually begin with a blank canvas, photographers begin with everything in front of

them. Once a subject is found, a photographer decides what to include in the picture frame. The photographer then composes the image to draw a viewer's attention to the subject in a way that best expresses the artist's idea of it.

- Framing in photography refers to **the process of composing a picture**. It involves choosing what you'll include in the frame and what you'll leave out. The goal is to create a pleasing composition that directs the viewer's attention to the subject matter. Framing is essential in photography because **it helps you to create the desired response when a viewer looks at the image**. It can also help you to convey a specific message through the photo
- Framing can **make an image more aesthetically pleasing and keep the viewer's focus on the framed object(s)**. It can add depth to an image, and can add interest to the picture when the frame is thematically related to the object being framed. Thus Framing is **the act of manipulating context to make consumers more receptive to your product or service**
- A framing object refers to anything in the scene that can be used to form a visual frame around the subject or focal point. Frames will add wonderful visual interest to an image, as well as context and depth. They're also perfect for drawing the viewer's eye into the scene toward the focal point. A frame can go around all four edges of the composition, or it might just creep around one or two edges of the scene.
- The simple act of taking a few steps back, or changing your shooting position and viewpoint, can result in you being able to include a framing object in your photo. A framing object is typically something in the foreground that you shoot through, such as an open window or an archway. But background elements can also be used as a frame, such as the trees behind the people in the photo below. One of the main benefits of using frames is that they add context to your photo. By including the framing object in the foreground the viewer will get extra information about the scene.
- Frames provide your audience with an insight into the immediate surroundings of your location. They tell the viewer exactly where you

were standing when you took the photo. Frames are wonderful compositional elements for drawing attention to the main subject or focal point. Surrounding the subject with a frame helps to draw the viewer's eye into or through the frame, directly to the point of interest. Not only does the frame obscure some of the busy or empty surroundings, but it essentially tells the viewer where to look. Frames don't always have to be foreground objects that you shoot through. They can also be elements in the background or next to the subject.

**G. Centre of Interest** is that part of the picture which attracts the mind. A focal point is that area of a picture that attracts the eye. This area is more important when compared to the other objects or elements in a composition. This can be by contrast of values, more colors, and placement in the format. It is the point in the image where the photographer hopes to focus the attention of the viewer. Another word for "center of interest" is Emphasis. Emphasis is done to show the importance or special importance given to something that is the same as the center of interest. Most often it is good for the picture to have only one principal idea, topic, or center of interest to which the viewer's eyes are attracted. Subordinate elements within the picture should support and focus attention on the principal feature so it alone is emphasized.

A picture without a dominant center of interest or one with more than one dominant center of interest is puzzling to a viewer. Subsequently, the viewer becomes confused and wonders what the picture is all about. When the picture has one, and only one, dominant "point of interest," the viewer quickly understands the picture. When there is nothing in the image to draw attention to a particular area or object, the eyes wander through the scene. The focus can be a single object or several arranged to draw attention to a specific area. When the center of interest is a single object that fills most of the picture area or one that stands out boldly, attention is attracted immediately to it, but, not all subjects are as simple to arrange or as bold and impressive. A photographer usually has at his disposal many factors or elements that can be used and arranged within the picture area to draw or direct attention to the primary idea of the picture. Some of these elements are lines, shapes, human figures, tone, texture…

**H. Horizontal Line, Vertical Lines in Photography:**

Horizontal lines are lines drawn from left to right or right to left and are parallel to the x-axis. Vertical lines are lines drawn up and down and are parallel to the y-axis.

Horizontal lines and vertical lines are perpendicular to each other. Horizontal lines create a sense of calmness, while vertical lines convey a sense of structure and strength. Diagonal lines convey energy, movement, and direction. Curved lines can create a sense of softness or elegance. Vertical lines in a photograph add tension to the scene. They also show strength and stability. Horizontal lines provide a sense of calm. Diagonals impart energy and a sense of dynamics to the frame

## I. Near-Far Relationship

The Near/Far technique is essentially a method of putting the foreground as close to the lens as you can to create an almost 'in your face' composition. By doing this you are telling the viewers to 'look here' as that is the part of the scene that is most interesting. But you want to make sure you don't get so close you are losing focus in either the foreground or background.

### 3.3. Editing Photographs- A. Transferring Photographs to a personal Computer

The photos from the camera can be transferred to a personal by using a

- A USB cable can be used to connect the camera directly to the computer. The Drag and drop function can be used to transfer the images from the camera to the desktop.
- Every camera will have an SD Card as a storage device for storing the photos. The SD Card can be removed from the camera slot and it can be aligned with the computer and used to transfer the image files from the card to the computer.
- The latest DSLR cameras have Wi-Fi feature in it. The Wi-Fi facility can be turned on and the computer can be aligned with the camera from the transfer of the photos from camera to the cloud and access your cloud account

## Image File Formats

An Image file format is a format of the photo for a digital image. The data stored in an image file format may be compressed or uncompressed. If the data is compressed, it may be done so using Lossy compression or the Lossless Compression. Thus the Image files are composed of digital data and the data can be displayed on a digital display or printed out using a printer. The following image file formats are used in photography.

1. **TIFF**: TIFF or Tagged Image File Format are lossless images files meaning that they do not need to compress or lose any image quality or information allowing for very high-quality images but also larger file sizes. TIFF images are Lossless as they are not compressed. TIFF is used for taking Very high-quality images and are best for High quality prints, professional publications and archival copies
2. **Bitmap**: BMP or Bitmap Image File is a format developed by Microsoft for Windows. There is no compression or information loss with BMP files which allow images to have very high quality, but also very large file sizes. Due to BMP being a proprietary format, it is generally recommended to use TIFF files. BMP files do not have any compression and is used for high quality scans and archival copies
3. **JPEG**: JPEG which stands for Joint Photographic Experts Groups is a "lossy" format meaning that the image is compressed to make a smaller file. The compression does create a loss in quality but this loss is generally not noticeable. JPEG files are very common on the Internet and JPEG is a popular format for digital cameras - making it ideal for web use and non-professional prints. JPEG has Lossy Compression i.e. some file information is compressed or lost. It is used for Web Images, Non-Professional Printing, E-Mail, Power point

   JPEG is the Joint Photographic Expert Group, which works on the standards for compression of still digital images. MPEG is the Moving Picture Expert Group, which works on the standards for compression of digital movies. JPEG is intended for compressing images that will be Still images / only one frame. MPEG achieves high compression rate by storing only the changes from one frame to another, instead of each entire frame.
4. **GIF**: GIF or Graphics Interchange Format files are widely used for web graphics, because they are limited to only 256 colors and can be animated. GIF files are typically small is size and are very portable. GIF has a lossless Compression i.e. compression without loss of quality. GIF formats are used for Web Images and can be used for animations.
5. **PNG**: PNG or Portable Network Graphics files are a lossless image format originally designed to improve upon and replace the gif format. PNG files are able to handle up to 16 million colors, unlike the 256 colors supported by GIF. PNG

files have lossless - compression i.e. without loss of quality. They are used for Web Images.

6. **RAW Image Files**: RAW images are images that are unprocessed that have been created by a camera or scanner. Many digital SLR cameras can shoot in RAW. These RAW images are the equivalent of a digital negative, and hold lot of image information and are processed in an editor such as Adobe Photoshop or Lightroom. RAW images do not have any Compression. They are used for Photography and are also used to save metadata having unprocessed and lots of information

**B. Cropping of Photos**

Cropping is done to the photographs to

- Convert photos from horizontal to vertical and vice versa; The most basic cropping option is to convert a horizontal image to a vertical and vice versa. This type of cropping is extremely easy to perform as the cropping tool can be used to drag a rectangle inside the image that is opposite to the original image's layout
- Cropping is done to show a different perspective in the photos. Different perspective can be achieved by cropping various angles of the photo.
- Cropping is done for close ups and to fulfill rule of thirds. Cropping is an useful tool for cutting out close ups from different photos.. It can also be performed for fulfilling rule of thirds and for achieving balance and unity in the photos
- Cropping is done to remove distractions that creep knowingly or unknowingly into the photos. The crop function allows to cut out a portion of the image or change the image dimensions without distorting the image
- Cropping is also done to remove unused space or free the cramped photos for creating space.

**C. Scaling and toning of Photos**

Scale is the ratio of the distance between two points on an image to the actual distance between the same two points on the ground. In computer graphics and digital imaging, image scaling refers to the resizing of a digital image. The magnification of digital material is known as up-scaling or resolution enhancement. The most common side effect of scaling an image larger than its original dimensions is that the image may appear to be very fuzzy or pixelated. Scaling images smaller than the original dimensions does not affect quality as much, but can have other side effects.

- Proportional Scaling is done when we scale an image to size while maintaining the correct proportions of the image. Whereas the Resizing the image changes the dimensions of the image without applying a transformation to the existing contents. Scaling the image will stretch the existing contents to the new dimensions.
- Smooth Scaling is done to better the color quality by blending neighboring colors.

Toning is a method of changing the color of black- and-white photographs. In analog photography toning is a chemical process carried out on silver-based photographic prints.

There are three main types of tone:

- The dark tone: the photography is rather dark with low lights or dark colors. Low key black and white photos are dark toned photos.
- The clear tone: the photography is rather clear with high lights or bright colors. ...
- The neutral tone: the photography is neither dark nor clear.

### 3.4. **Photo Editing Software:**

The following are some of the Proprietary or paid Photo Editing Software:

- Adobe Photoshop - Best Overall Photo Editor for Mac and PC
- Corel Paint Shop Pro - Best Easy Photo Tool for Beginners
- Skylum Luminar - Best HDR and Filters for Photographers.
- Adobe Lightroom - Best Online Photo Editing Tool
- Skylum Aurora HDR
- Canva
- Stencil
- Pic Monkey

The following are some of the free Photo Editing Software

- Adobe Photoshop Express
- GIMP –GNU Image Manipulation Programme
- Paint . NET
- Pixlr E
- Photoscape X
- Fotor
- Photos Pos Pro

- In pixio

The following is the procedure followed for using a Photo Editing Software

1. **Choose a photo editing program**: Depending upon the availability and affordability choose a photo editing programme.
2. **Use filters and presets**: Many photo editing software's include filters. Also known as presets, filters are like photo editing recipes that mix up a combination of settings to give your photos a certain look
3. **Take advantage of automatic modes:** Every Photo editing programs have algorithms for automatically post-processing images. These allow the program to analyze an image and make suggested changes in the name of AUTO / ENHANCE. If the results are not acceptable we can always undo the changes as the original photo is never really changed.
4. **Crop the scene:** Cropping is removing the unwanted edges of an image, making the image smaller and allowing the main subject of your photo to take a larger portion of the frame. Cropping improves the balance, and order of the photos. For doing cropping we must click on the corners and pull from the top, the bottom, and both sides of my frame. The distracting elements must be removed and the main subject must be made the main focus of the image.
5. **Straighten lines**: The lines depicted in the photo must be straightened and this can be done using the photo editing software. First any one dominating line in the photograph must be selected and it should be made straight. The most common line that needs straightening is the horizon.
6. **Bring colors to life**: Some photographers like a lot of bright colors, while others prefer a more muted color scheme. Regardless of that adjusting colors will make photos look more professional. Contrast, saturation and vibrance options can normally be adjusted in photo editing programs. Contrast visually alters colors, as it determines the relative difference between lights and darks in your image
7. **Adjust the white balance**: White balance of images determines how warm or cool the light is. Warmer light has a yellow, or sunny look, while cooler light results in blue tones. In most photo editing programs, white balance is edited with a tool called temperature. Move the temperature slider right for warmer tones or left for cooler tones.

8. **Remove spots and clutter**: In order to ensure a perfect image certain spots / background clutter must be removed. Spots are easy to remove in most photo editing programs by using spot removal tools. To clean up background clutter the photo can be cropped accordingly.

**The following are some of the basic steps used to edit a photo.**

**1. Crop and Clean Up Your Images**

**A. Straighten images:** The horizon must be horizontal when you shoot. If not then the first editing step is to straighten it.

**B. Crop images:** Cropping the image is the second step. Cropping improves the compositional details by removing the distracting and unwanted elements in the frame. It also repositions the subject

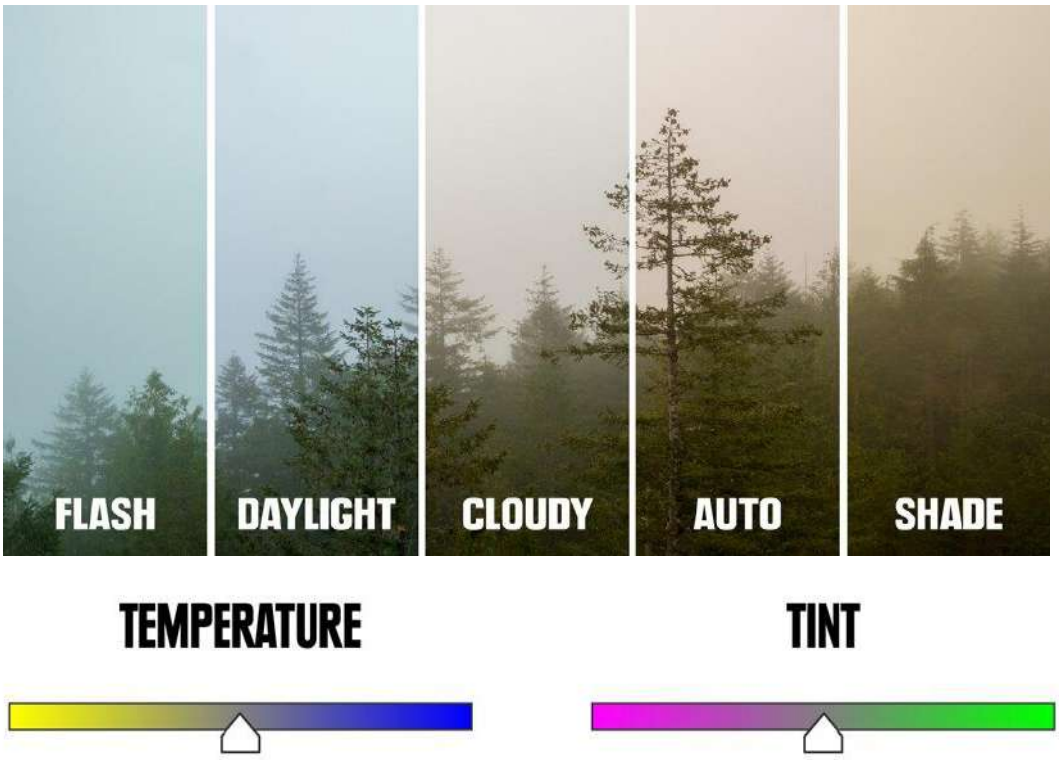

**C. Spot-clean images:** The outdoors is a dusty place and nature's gritty elements have a way of finding their way onto your camera lens, and then onto your photos. Most editing programs have a spot-removing tool. Use the tool for spot cleaning of the images

**2. Adjust the White Balance**

White balance relates to color levels, not exposure levels. If the image has an overall color tone that is displeasing or unnatural we can adjust white balance to fix it. The JPG files capture far less digital data than RAW files hence they offer a minimal amount of white balance adjustment during editing. Most editing programs have the modes like "flash," "daylight" or "cloudy" to better calibrate the image for the lighting conditions when it was shot. In addition, many have both a "temperature" and a "tint" slider that can used to fine-tune the overall lighting cast on an image

.

**3. Adjust Exposure and Contrast**

**A. Adjusting exposure:** The correct exposure can be achieved by adjusting as bright or dark as you want.

**B. Adjusting contrast:** Contrast is the range of dark to light tones. When it's extra high, we get stark image, where all tones, regardless of color, are either very dark or very light. When it's extra low we see a flat image where no elements in the frame stand out. Typically a middle contrast that avoids either of those extremes must be selected.

**3. Adjust Color Vibrancy and Saturation:** Once white balance is adjusted, we can further refine colors in the photos with the saturation and vibrancy controls. The distinction between the two is subtle:

- Increasing vibrancy increases color intensity in neutral color tones and maintains color intensity in the brighter colors.
- Increasing saturation makes all colors throughout the frame more intense. When bright colors pop, it can give the photo a more dramatic look

**5. Adjust Sharpness:** Sharpening an image gives it a crisper, cleaner look. Many programs offer multiple sharpening tools. Begin by adjusting the overall amount of sharpness (on a scale from 0 to 100). Start at 50 percent, then adjust the level up or down to get the sharpness you prefer.

Thus photo-editing techniques include:

1. **Noise reduction:** smoothing the picture out, typically accomplished by reducing the pixel size
2. **White balance:** the color of the light in the image
3. **Contrast:** higher contrast makes an image more punchy, while lower contrast makes it flatter in color
4. **Exposure:** the brightness of the photo
5. **Color adjustments:** change the color of an item or element in the photo

**Resizing and cropping:** adjust the dimensions of the image

**********

# Unit-4 – Notes

## 4.1. Picture Composition

### A. Picture Composition

A camera can't record the context and mood that made the scene exciting: the feel, the smell, the action. It also doesn't record the depth and range of color the eye can interpret. Hence we need to recreate them through composition. Composition is the way the elements in a photo are arranged. A photographer must choose the following like Center of interest, Depth of field, Exposure and cropping to make the photograph more interesting and appealing.

### B. Composition Techniques:

A photographer must only consider what he sees through a camera. The human eye can see almost 180 degrees but even a very wide-angle camera lens can see up to perhaps only 84 degrees. A camera does records everything in its plane of view to be in focus, Human vision with one eye closed is more like a camera lens. It records on a two-dimensional plane and because of stereoscopic vision we cannot delineate subjects from the background. Hence photos come with distracting backgrounds.

When a photographer takes a picture we tend to focus on two types of spaces in the photo

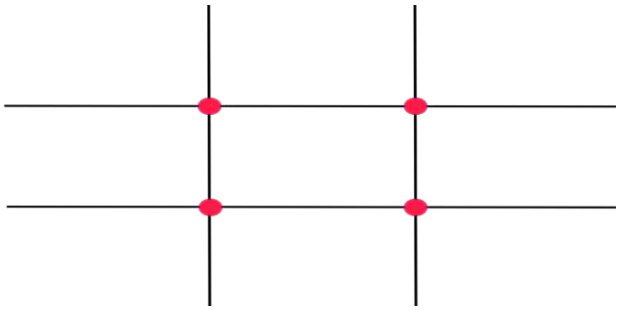

1. **Positive Space**- Space occupied by the subject
2. **Negative Space**- The area not occupied by the subject.

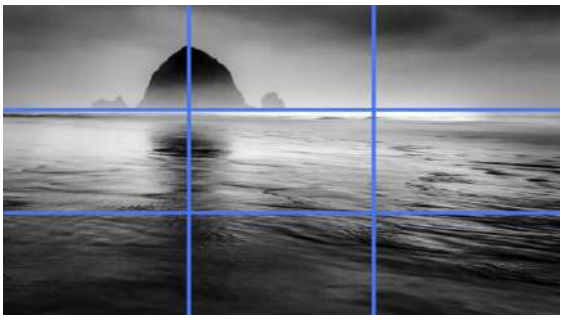

The photographer must improve the Positive space of the subject and neglect the negative space i.e. the area not occupied by the subject. Hence a photographer must notice and control that negative space. Every photo has a background and it carries visual weight. For example a particularly bright area, even if out of focus, will draw attention from the subject. Hence unnecessary bright objects in the background need to be avoided.

### C. Rule of Thirds -

Rule of thirds is a composition technique. It is primarily intended to divide the frame into three equal horizontally and vertically segments using two pairs of equidistant straight lines. The points of interest are then placed along those lines or their intersections, so as to make the resulting image look more balanced, dynamic and overall aesthetically pleasing to the eye. The Principle of Rule of Thirds emphasizes that the center of interest or subject

of a photo generally should not be in the exact center of the picture because it looks static and dull. Hence the center of interest must be placed at the intersection of imaginary thirds in order to avoid a static center.

The "Rule of Thirds" is a concept borrowed from the Art of Painting. **John Thomas, in the year 1797** was the first person who used this phrase in his book ***Remarks on Rural Scenery***. He proposed the idea of dividing the space of the frame into three equal parts, instead of placing the subject dead center in the frame and breaking up the space into two. The formula was a much more harmonizing proportion than precise half

Depending upon the elements in the scene and the camera orientation the grid can be divided into three equal parts. The four points of intersection between the vertical and horizontal lines are actually the **'hot spots'** or the prime points where we humans tend to focus more. Think of these points like a visual magnet always trying to pull our attention. The 'rule' suggests that instead of dividing the frame in two by say placing the primary subject in the middle and creating two negative spaces on either side, the image looks far better when the subject is placed near the edge of the frame and there is one large negative space instead of two. Thus the "Rule of thirds" was made to make our images more balanced, dynamic and harmonizing. To better and creatively use the negative spaces and take the most advantage of the 'visual hotspots'

**Application of Rule of Thirds**

- Place people's eyes and heads on the horizontal lines depending on how close up you are shooting.

- Use vertical grid lines for things like trees, buildings, or wider shot of a person with a background behind them
- In landscape photography use the horizontal grid lines for things like horizons and where water meets land
- An average landscape contains a certain part of land and sky OR water and sky. Using the Rule Of Thirds to break up your composition into three equal pieces you can devote the lion's share of the pie to the particular element that you want to amplify more than the other.
- **Get the specific focal points of the photo onto the corners of that middle square**

**D. Headroom, Nose Room**:

In photography **head room** is a concept of aesthetic composition that addresses the relative vertical position of the subject within the frame of the image. Headroom refers specifically to the distance between the top of the subject's head and the top of the frame. The amount of headroom that is considered aesthetically pleasing is a dynamic quantity and it changes relatively to how much of the frame is filled by the subject. Too much room between a subject's head and the top of frame results in **dead space.**

**Nose Room:**

It is also called as **lead room, nose room or 'looking room** to include the sense of space on both sides of the image. The lead room principle in photography is a simple, but essential composition technique. The lead room principle means that when framing a subject, a well-composed image will have a negative space in the direction that the subject is facing. In the case of moving objects, this will be in front of and in the direction that the object is moving.

- If a character is looking screen-left, certainly it's most common to place them on the right of frame – giving them lead room or *nose room* or *looking space* on the left, but that is not the only option.
- In certain situations it's more appropriate, or simply more aesthetically pleasing, to place them on the left, or in the centre. And although the rule of thirds suggests how *far* to the left or right they will commonly be placed.

**C. Depth of field & Depth of Focus techniques**

The simplest definition for depth of field is the area of your image that is in focus. More specifically, the distance between the nearest and the farthest object that are in focus. The shallowness of the depth of field depends of the f/stop also known as

aperture, the focal length of the lens, the size of the camera sensor and distances between you, the subject and the background.

- The aperture of a lens is the diameter of its opening. Aperture is expressed as a f/stop. The smaller the f/stop number (or f/value), the larger the lens opening (aperture). Depth of field depends of the size of the opening of the aperture. The larger the aperture opening is the more shallow the depth of field will be and opposite vice versa.
- The next thing that defines depth of field is focal length. If you have zoom lens or two prime lenses that are different in focal length you can test this yourself. The basic idea is that the longer the focal length is, the shallow the depth of field will get. And of course, the opposite is true when we have short focal lengths

The amount of a photo that's sharp is a *key artistic component of photography*. Whether your image has a shallow depth of field or a deep depth of field can make a huge difference. If you're photographing a portrait subject with a distracting background, failure to create a shallow depth of field will often result in a very snapshot, mediocre photo. And if you're photographing a landscape with a beautiful foreground, a stunning mid ground, and a jaw-dropping background, failure to use a deep depth of field will prevent the viewer from appreciating the entire scene.

## 4.2 Branches of Photography

### A. Nature Photography:

Nature photography is a wide range of Photography taken outdoors and devoted to displaying natural elements such as landscapes, Wildlife and Plants and close-ups of natural scenes and textures. Nature photography tends to put a stronger emphasis on the aesthetic value of the photo than other photography genres. Nature photography" overlaps the fields of—and is sometimes considered an overarching category including – Wild Life Photography, Landscape Photography.

**Wild Life Photography,**

- The world's three largest photography organizations, like Photographic Society of America, The Federation Internationale de l'Art Photographique and Royal Photographic Society have adopted a common definition for nature and wildlife photography to govern photography competitions.
- Nature photography is restricted to the use of the photographic process to depict all branches of natural history, except anthropology and archaeology in such a

fashion that a well-informed person will be able to identify the subject material and certify its honest presentation.

- The story telling value of a photograph must be weighed more than the pictorial quality while maintaining high technical quality.
- Human elements shall not be present, except where those human elements are integral parts of the nature story such as nature subjects, like barn owls or storks, adapted to an environment modified by humans, or where those human elements are in situations depicting natural forces, like hurricanes or tidal waves.
- Scientific bands, scientific tags or radio collars on wild animals are permissible.
- Photographs of human created hybrid plants, cultivated plants, feral animals, domestic animals, or mounted specimens are ineligible, as is any form of manipulation that alters the truth of the photographic statement
- No techniques that add, relocate, replace, or remove pictorial elements except by cropping are permitted.
- Techniques that enhance the presentation of the photograph without changing the nature story or the pictorial content, or without altering the content of the original scene, are permitted including HDR, focus stacking and dodging/burning. Techniques that remove elements added by the camera, such as dust spots, digital noise, and film scratches, are allowed.
- Stitched images are not permitted. All allowed adjustments must appear natural.
- Color images can be converted to grey scale, monochrome.
- Infrared images, either direct- captures or derivations are not allowed.

**Wild Life Photography** is all about capturing animals in their natural habitats. The animals are often photographed in action, such as eating, fighting, or in flight. Alternatively, more static portraits may be used to show detail of the animal or to depict it in its environment. Captive or controlled animals are often photographed instead of true wild specimens, although it is arguable as to whether this constitutes true wildlife photography.

Images used in Nature Photography competitions may be divided in two classes: **Nature and Wildlife.**

- In Nature sections Photography of landscapes, geologic formations, weather phenomena, and extant organisms is the primary subject matter.

- This includes images taken with the subjects in controlled conditions, such as zoos, game farms, botanical gardens, aquariums and any enclosure where the subjects are totally dependent on man for food.
- Images entered in Wildlife sections meeting the Nature Photography Definition above are further defined as
    - Extant zoological or botanical organisms free and unrestrained in a natural or adopted habitat.
    - Landscapes, geologic formations
    - Wildlife is not limited to mammals, birds and insects. Marine subjects and botanical subjects including fungi and algae taken in the wild are suitable wildlife subjects, as are carcasses of extant species.
    - Photographs of zoo or game farm animals, or of any extant zoological or botanical species taken under controlled conditions are not eligible in Wildlife sections

The techniques of wildlife photography differ greatly from other forms of photography. Wide apertures are used to achieve a fast shutter speed, freeze the subject's motion, and blur the backgrounds. Wildlife is also usually shot with long Telephoto lenses from a great distance by using a tripod. Many wildlife photographers use Blinds, Camouflage.

**Ethical rules of wildlife photography:**

1. **Nature comes first** - Animals and the natural environment first, and photography second
2. **Wildlife conservation** should be an aim of wildlife photography
3. **Be respectful of your subjects**.- No threat of physical harm, predation, anxiety, or impairment of reproduction to wild life.
4. **Minimize disturbances** The photographer should take every effort to minimize the disturbances that could occur before shooting, during shooting, or even after shooting is done. Avoiding direct flash is recommended, especially when shooting small mammals. If using an artificial light source, keep it as far away from the animal as possible
5. **Do your research**- The wildlife photographer should be knowledgeable about flora and fauna, natural history, and related subjects such as

geology and zoology. At the very least, the wildlife photographer needs a working knowledge of the animals they're shooting

6. **Treat all wildlife with equal respect** -Common or rare, endemic or migratory, all wild animals and flora have equal rights. It is not acceptable to disturb the common species to shoot the rarer species
7. **Know the rules** - The wildlife photographer should understand the rules and regulations relating to the wildlife and nature of the country they are in before going out in the field
8. **Ask before shooting** - When preparing to shoot in a certain location, the photographer should check if permission is required to shoot there, and obtain permission from the relevant authority
9. **Don't interfere with your subjects**.- It is not appropriate to manipulate wildlife or their surroundings for the sake of a photo
10. **No feeding of animals**.- Attracting animals by baiting is not recommended, and using live baits is not appropriate, nor is feeding animals
11. **Leave no traces**. - The photographer should be aware not to damage or disturb any of the natural habitats around them while shooting
12. **Approach only with caution**- Approaching a wild animal must be done with great care, and should be undertaken by only those with a good knowledge of the behavior of the animal in question

## Landscape Photography:

Landscape photography is a type of photography that captures the beauty of nature, bringing the viewers into the scenery, setting, and mood in these outdoor locations. We don't need a model, props, or people in the shot for capturing landscapes & nature. While landscapes can sometimes include people in the scene, the art form is generally characterized by its absence of people. Landscape photography is a subset of nature photography. Whereas nature photography focuses on sequential and in-focus shots that may also be close-ups of both flora and fauna. Landscape photography focuses on wide-angle shots of mountains, rivers, estuaries, seas, city skylines. Landscape architecture can be summed up under three main elements: **Greenscape, Hardscape and Waterscape**

- **Nature Landscape Photography**. Nature Landscape photography focuses on capturing wide scenic images of natural landscapes
- **Astrophotography.** - Astrophotography, also known as astronomical imaging, is the photographs of astronomical, celestial objects, events.
- **Impressionistic Landscape Photography**.- It is an image with a dreamy, blurry quality. Rather than detail of a single moment, multiple moments in a single image is captured
- **Representational Landscape Photography**.- It is the most natural and realistic out of all the styles of landscape photography
- **Minimalist Landscape Photography**. – It is a form of photography that is distinguished by extreme, austere simplicity. It emphasizes spareness and focuses solely on the smallest number of objects in the composition process**.**
- **Abstract Landscape Photography**. - abstract landscapes is to essentially present the landscape in a way in which is different from how a human would normally perceive a landscape.
- **Aerial Landscape Photography** - Aerial photography typically refers specifically to bird's-eye view images that focus on landscapes and surface objects
- **Urban landscape photography** - Buildings can be major or minor elements or merely incidental in the background of a "traditional" landscape photo

## B. Still Photography

Shooting images of items that are non-moving is called as Still Photography. A lot of things qualify for such a genre. Everyday household items like flower vases, pencils, coloring tools, watches, electronic items, utensils etc qualifies as still photography subjects.

There are many different kinds of still photography.

- **Product photography:** Much of the technique used in still photography is also used in commercial photography, such as product photography. The method is used to photograph small items like watches, smart phones etc. Although the photography technique might be similar, the lighting technique isn't. It depends on the exact product you're photographing, its nature of light reflectance, and how it can best be represented to determine how the product needs to be lit and photographed. Lights play an essential role in the whole setup of product

photography. It would help with a multiple light setup, modifiers, and diffusers to ensure that the product is appropriately lit. There is a whole wide world of abstract photography done with small items such as pieces of rock, collectibles, and odd items of everyday use.

- **Food photography: T**he second most important still life photography genre is food photography. Food photography is a booming business, and skilled food photographers are highly demanded. Food photography demands that the product, which is a plate of food, must look good in the photograph. Often food photographers hire specialist food stylists to help them make a platter presentable before photographing for their clients. Food photography is mainly done with a high-key lighting effect. Everyone loves a brightly lit photograph of a food plate that clearly shows the details and is tempting. That said, some food items can also be given a low-key effect for the best results

Some simple tips to shoot still life photography

- Composition: The first thing you need to pay attention to is the composition part. One of the primary things about still life photography is that you can and have to do many experiments. If you ever wanted to try out all the rules of photography, still life photography is one genre that allows you to do that—changing things around, playing with the positioning of the object being photographed, and so on.
- Lighting: Whether you're shooting with natural or artificial lights, you can change and experiment with things. In terms of lighting, you can play around with shadows, textures, and shapes. The option to change things around will be more if you're using artificial lighting. If you can afford one or more lights, you can experiment with them. Use one as the key light and the second as the fill, rim, or background light. Additional lights will help you to create depth and dimension in your photos. This is what allows you to create an interesting image.
- Camera angle: Still, life photography has evolved, and so have the camera angles used to shoot still life photography. Previously, during the golden days of film photography, still, life photos were shot entirely from a tripod set up with the object set on a table or bench. The standard camera angle was straight on. The camera angle would rarely change. Things have evolved since those times. Still, life photographers are experimenting with the camera angle and coming up with new approaches to shooting. A tripod is an excellent tool to have, along with a

PTZ head, to exploit different camera angles. Some tripods like this Neewer 72.4-Inch Aluminum Camera Tripod comes with a 360-degree rotatable center column.

## C. Architecture Photography

Architecture refers to the design, engineering, and construction of manmade structures, as well as the final structures themselves. While it's possible to simply point a camera at a building or a bridge and snap a picture, there is an art to photographing architecture. Famous architectural photographers include Albert Levy, who began photographing older buildings in the 1870s, and American mid-century modernist Julius Shulman, who became popular after photographing modern buildings. Thus Architecture photography (also referred to as building photography or structure photography) generally means photography that focuses on buildings. It can include shooting building exteriors and interiors, as well as bridges, other structures, and cityscapes.

Architecture photography has a long history. In fact, the world's oldest surviving photo, *View from the Window at Le Gras*, is an example of architectural photography—and it was taken in the 1820s. The medium has remained popular for all these years, and that's no surprise when you consider the significance of architecture. Buildings do much more than provide us with shelter. They are also works of art and long-lasting cultural symbols. Building photography may have first taken off as a way to document buildings, but along the way, it has evolved into its own diverse art form. Architecture photography has two distinct types: exterior, and interior.

1. **Exterior architecture photography**. This refers to photographs of the outside of a structure. Exteriors benefit from a wealth of natural light, which makes them easier to photograph. Depending on the whims of nature, exteriors may also produce wildly varying, moody, and dramatic results.
2. **Interior architecture photography**. This refers to photographs of a structure's interior. Interiors are often more challenging to capture: ambient light available through windows or skylights is often limited, and sometimes filtered, as

through colorful stained glass windows in churches. Supplemental lighting in the form of a flash helps accurately capture interiors**.**

Once you've chosen architecture interior or exterior to photograph, follow these simple guidelines to capture it effectively.

1. **Do your research**. Every architectural structure has a story. Research the architect and his or her influences as a starting point, along with the style and the date the building was constructed or renovated.
2. **Get a first impression**. When standing in front of or inside a structure, first look around and take stock of everything you see. What do you notice first? Where is your eye drawn? Let your gut be your initial guide to what's interesting about your architectural subject.
3. **Zoom in on details**. If you've done your research, you may notice small details that line up with the narrative of your architectural subject. Consider the shape of the roof or the materials of the ceiling or floor. Look for repeating design elements or unusual symbols. Architecture photography is as much about capturing the details as it is about documenting the whole.
4. **Zoom out on the landscape**. It is also important to survey the landscape and place the architecture in context. If there is a body of water nearby, try capturing the reflection of the building alongside the building itself.
5. **Incorporate other structures or rooms**. If there are other structures that contrast nicely with your subject, try incorporating them into the frame. For interiors, try capturing your subject from an adjoining hallway or room that offers a different perspective. Photographing these details provides an additional layer of complexity and interest to architecture photography.
6. **Shoot from every angle**. Look for different angles, perspectives, and vantage points that may offer a fresh take. Can you shoot an interior from above, or through a window? What does that bridge look like from underneath? Is that building as impressive from the air as it is from the street?
7. **Shoot at different times and conditions**. What does your exterior subject look like on a rainy day? How does the light of a desk lamp on a dark night affect the feel of an interior? Different times of day and weather conditions can add a unique atmosphere to your architectural photos

**Tips and Techniques: Follow these tips to get the most out of your architectural photography.**

1. **Position matters**. The simplest way to achieve a stunning photo is to position the camera perpendicular with the vertical lines of a building. Produce a visually arresting image by controlling the perspective and adjusting the focal plane to capture multiple parallel vertical lines.
2. **Keep an eye out for dynamic shapes**. Clean lines set against a clear sky highlight the symmetry of a structure, but keep an eye out for curves or other dynamic shapes that add a sense of movement to an otherwise still image.
3. **Find the right light**. Wait for the light to shift and capture the change in shadows stretching off windows or columns. If the light is not ideal, adjust your shutter speed and aperture (or, on a smart phone, your exposure setting) with the aim of grabbing three shots: underexposed, automatically exposed, and overexposed.
4. **Play with your camera settings**. Since each scene is different, play with shutter speed and aperture for the three shots above, capturing one that is darker than you'd like, one that is brighter, and one that seems fine, but could use some work. Perfection does not matter at this point in the process, as you'll be merging these three images during post-processing to produce a final, balanced image.

## D. Wedding Photography

Wedding photography is a specialty in photography that is primarily focused on the photography of events and activities relating to weddings. It may include different types of photography like Portrait Photography of the couple before the official wedding day, such as a pre-wedding engagement session On the official wedding day, the photographers will attempt to provide documentary photography coverage to document the different wedding events and rituals throughout the wedding day(s).

**Four approaches to wedding photography**

- Traditional wedding photography provides for more classically posed images and a great deal of photographer control during the ceremony.
- Photojournalist style of wedding photography takes its cue from editorial reporting styles and focuses more on candid images with little photographer interaction - Shooting images quickly using available light or on-camera flash rather than formal posing techniques and studio lights.

- Contemporary/fashion-based wedding photography, a photographer will combine candid images of the events of the day with posed images that are inspired by latest fashion. This style often involves more innovative and dramatic post-processing of images.
- A fourth style that is popular is wedding studio photography where couples make an appointment with a studio for an in-studio or a location shoot, with support from a hair stylist and make-up artist in addition to the photographer and the couple. The couple will go through many changes of clothing and backgrounds in a similar manner to the fashion based approach

## E. Sports Photography

Sports photography refers to the genre of Photography that covers all types of Sports, Games and associated activities. The word "sports photography" encompasses a wide range of activities. The main application of professional sports photography is for editorial purposes. Dedicated sports photographers usually work for newspapers, sports magazines. The aim of sports photography is to promote sports and games.

- Equipment used for sports photography includes a DSLR Camera with interchangeable lenses ranging from 14mm to 400mm or longer in focal length depending on the type of sport.
- The proper lenses are very important as they allow the photographer to reach closer or farther as quickly as possible to keep up with the game play.
- Essential accessories include a Monopod or Tripod for stability and extra batteries.
- Longer focal length lenses are typically used to photograph action in sports such as football, while wide angle lenses can be used for sideline and close-up athlete photos.
- The preferred camera bodies for modern sports photography have fast auto focus and high burst rates, typically 8 frames per second or faster. The current flagship sports

**OUTDOOR SPORTS PHOTOGRAPHY**

Outdoor sports the distances are greater and light brighter, while in indoor sports the distances are lesser and the light dimmer. Outdoor sports long focus lenses with slower apertures are used. For indoor sports shorter lenses with faster apertures are used. Both zoom and prime lenses are used; zoom lenses generally in the 70–200,

75–300, 100–400 or 200-400 range allow a greater range of framing; primes are faster, cheaper, lighter, and optically superior, but are more restricted in framing. Apertures of f/2.8 or faster apertures are used, though f/4 is also found, particularly on brighter days. This varies with sport and preference – Example Golf photographers may prefer to use a 500mm f/4 as opposed to a 400mm f/2.8 as it is a lighter lens to be carried around all day.

**INDOOR SPORTS PHOTOGRAPHY**

Indoor sports photography has less distance between the action and photographer and extreme lighting. Photographers will be close to the action while looking upwards directly into harsh stage lighting against a black background. Prime lens named "nifty fifty“ can be used. The shutter speed is extremely fast while still setting the aperture to bring in enough light. In this scenario a budget telephoto lens would produce both dark and blurry images. Using a prime 50mm lens is a good option for many indoor events.

Location is often important for sports photography. At big events, professional photographers often shoot from VIP spots with the best views, usually as close to the action as possible. Most sports require the photographer to frame their images with speed and adjust camera settings spontaneously to prevent blurring or incorrect exposure. Getting to know your subjects is critical in capturing emotion. Understanding who athletes are makes a better photo. Knowing the game is very essential in sports photography. Predicting what happens next in a sports game is critical in understanding how to compose your shot. The action moves fast so you take the time to prepare yourself before going out and taking photos.

- Sports photography is often done in Shutter Priority mode or manual. A frequent goal is to capture an instant with minimal blur, in which case a minimal shutter speed is desired, but in other cases a slower shutter speed is used so that blur shows to capture the motion, not simply the instant.
- A particular technique is Panning, where the camera uses an intermediate shutter speed and pans with the subject, yielding a relatively sharp subject and a background blurred in the direction of motion, yielding a sense of speed
- ISO speed is often high to allow faster shutter speeds and may be left in auto.

- Photos are often taken in burst mode to capture the best moment, sometimes in combination with JPEG rather than RAW shooting (JPEG files being smaller, these allow longer bursts)..

**Tips for taking perfect sports photos**

1. Know the Rules of the Game and the Camera Interface
2. Don't Waste Your Time Chimping
3. Go Flash less, Use Shutter Priority Mode
4. Get the Best Access You Can and Shoot the Entire Event, Not Just the Action
5. Tell the Story of the Game, Capture the Emotion of the Game
6. Play with a Few Wide Angle Shots and always protect your equipment
